

THE ENCYCLOPAEDIA OF ISLAM

NEW EDITION

PREPARED BY A NUMBER OF LEADING ORIENTALISTS

EDITED BY

C. E. BOSWORTH, E. VAN DONZEL, B. LEWIS AND CH. PELLAT

ASSISTED BY F. TH. DIJKEMA AND Mar S. NURIT

UNDER THE PATRONAGE OF THE INTERNATIONAL UNION OF ACADEMIES

VOLUME V

KHE-MAHI

E. J. BRILL 1986

EXECUTIVE COMMITTEE:

Members: C. C. Berg, C. E. Bosworth, J. T. P. de Bruejn, Cl. Cahen, A. Dias Farinha, E. van Donzel, J. van Ess, F. Gabrieli, E. García Gómez, A. K. S. Lambton, G. Lecomte, T. Lewicki, B. Lewis, Fr. Meier, Ch. Pellat, F. Rosenthal, F. Rundoren, A. L. Udovitch, F. C. Wieder.

Associated members: Najt al-Assl, A. S. Baener Anbari, Halti İnalcek, Ibrahim Madkour, S. H. Nasr, M. Talbi, E. Tvan,

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government, and from Mr. Gerald L. Parsky.

The articles in this volume were published in double fascicules of 128 pages, the dates of publication being:

1979: Fascs. 79-80, p. 1-128 1980: Fascs. 81-84, p. 129-384 1981: Fascs. 85-86, p. 385-312

1982: Fascs, 87-88, p. 513-640

1983: Fases. 89-92, p. 641-896 1984: Pases. 93-94, p. 897-1024 1983: Pases. 93-98, p. 1025-1263

ISBN 90 04 07819 |

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic

appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the mum of the original author.

IRSAN Annas, American University, Beirut. 553. Z. ABRAHAMOWICZ, University of Cracow. 723, 767. Aziz Ahmad, University of Toronto. 6. S. Magnut Arman, University of Kashmir, Srinagar.

ADDENDA AND CORRIGENDA

VOLUME I

P. 972b, AL-BALADHURI, add to Bibliography: Khalil Athamina, The sources of al-Baladhuri's Ansab al-ashraf, in ISAI v (1984), 237-62.

VOLUME II

P. 18. CAGHĀNIYĀN, add to Bibliography: C. E. Bosworth, The rulers of Chaghāniyān in early Islamic times, in Iran, Inal. of the Brit. Inst. of Pers. Studies, xix (1981), 1-20.

P. 75b. DADALOGHLU, add to Bibliography: K.-D. Wannig, Der Dichter Karaca Oflan. Studien zur türkischen Liebeslyrik, Freiburg i.Br. 1980. (Studien zur Sprache, Gesch. und Kultur d. Türkvölker, i).

P. 571bl., DJUDDA, see now G. R. Hawting, The origin of Jedda and the problem of al-Shu'ayba, in Arabica xxxi (1984), 318-26, who finds no sound evidence that Djudda existed in pre-Islamic times or that the exact location of its predecessor as the port of Makka, al-Shu'ayba, can be pinpointed with any certainty.

P. 385°, DIUGHRAFIYA, 1, 5., instead of 56/1166 sead 561/1166

P. 7215, EXISTENCE, to reference add and ANNIYYA.

P. 840b, FATHPÜR-SİKRİ, add to Bibliography S. A. A. Rizvi and V. J. A. Flynn, Fathpur-Sikri, Bombay 1975.

VOLUME (II

P. 217b, AL-HARRA, add to Bibliography: M. J. Kister, The Battle of the Harra. Some socio-economic aspects, in Studies in memory of Gaston Wiet, ed. M. Rosen-Ayalon, Jerusalem 1977, 33-49.

P. 679*, IBN 'ABD AL-ZÄHIR, II. 19-14 from bottom, instead of the sentence beginning He composed the genealogy of al-Hākim... read He composed the genealogy of al-Hākim, which was confirmed by the kādī, and read it in the assembly of dignitaries; he also composed the 'akd of al-Nāṣir Kalāwūn [q.v.], see Kalkashandī, Subā al-a'shā, x. 116 ii.

VOLUME IV

P. vo 1. 24, instead of J. W. ALLEN . . . 1105 read [J. ALLAN, London], 1105
1. 19 from below, instead of Princeton University read Hebrew University, Jerusalem

P. xt, enstead of Taeschner... Cotha 1926 read Taeschner, Wegenetz - Franz Taeschner, Das anatolische Wegenetz nach osmanischen Quellen, 2 vols., Leipzig 1924-6.

P. 18th, ISHBILIYA, add to Bibliography: Cronica del Moro Rasis, ed. D. Catalán and Maria Soledad de Andrés, Madrid 1974, 91-6, 305-6; Ibn Hazm, Djamharat al-anedb, Cairo 1962, Index; Ibn al-Khatib,

A mal, index.

- P. 1376, At-ISKANDARIYYA, add to Bibliography: Numerous pieces of information about the working of the port of Alexandria are given in the Minhådi of al-Makhaumi, in the parts translated and commented upon by Cl. Cahen, Douanes et commerce dans les poris méditerranéens de l'Égypte médiévale, in JESHO (1965), reproduced in idem, Makhaumiyyát, Leiden 1978. Furthermore, the author called al-Nuwayri, Muhammad b. Kásim, author of the Ilmām al-a'lām, should be clearly distinguished from his homonym, the celebrated author of the Nihâya. The Ilmām, written in regard to the attack, on Alexandria by Peter of Cyprus in 1367 and from which come the extracts studied in the articles of Combes cited in the Bibl., has now been edited by A.S. Attya in 4 vols. in the Haydarābād Series, 1968-72.
- P. 322h, KA'BA, add to Bibliography: G. R. Hawting, "We were not ordered with entering it but only with circumambulating it," Hadith and figh on entering the Ka'ba, in BSOAS xivil (1984), 228-42.

P. 471⁶, KALAM, add to Bibliography: C. E. Bosworth, A medieval Islamic prolotype of the fountain-pen?, in JSS xxvi (1981), 229-34.

P. 501, AL-KALI, 1. 1, instead of 189 read 289

II. 10-12, instead of from memory . . . into account read from memory in his new home, or he made critical observations and commentaries, following the "Irakl tradition which he knew, upon I. 25 from below, after 1392/1972 add (cf. MMM*A xx/2 (1974), 49-130)

P. 546°, KANNANÜR, add # Bibliography: G. Bouchon, Manuale de Cananor, un adversaire de l'Inde portugaise (2507-1528), Hautes études islamiques # orientales d'histoire comparée 7, Paris 1975.

- P. 599*, KARADJA OGHLAN, add to Bibliography: K.-D. Wannig, Der Dichter Karaca Oglan. Studien zur türkischen Liebeslyrik, Freiburg i.Br. 1980. (Studien zur Sprache, Gesch. und Kultur d. Türkivölker. i).
- P. 733', KASRAWI TABRIZI, add to Bibliography: E. Jung, Ahmad Kasrawi. Ein Beitrag sur Ideengeschichte Peesiens im 20. Jahrhundert, Diss. phil. Freiburg i.Br. 1976.

P. 757*, KATIB, J. 24, instead of M. Kanter read M. Carter

P. 7720, KATRAN, 1. 35 from below, instead of neste, read nesofa; instead of haariya read hadriya

P. 8148.0, KAY KA'OS B. ISKANDAR, last para and Bibl. Five completely independent Old Ottoman versions of the Kābūs-nāma have in fact survived, the best known of which is that of Merdjürnek Abmed [9,0]. The version at Kazan in 1882, 1889, etc. [and not in 1298/1880-1] is not by this last Ottoman author, but is a version in what is called by H. F. Hofman [Turkish literature, a biobibliographical survey, Section III, Part 1 v 6, p. 65] "Old Tatar", possibly via an Ottoman intermediary.

```
P. 870°, KEMAKH add to Bibliography: R. H. Unal, Monuments salguques de Kemah (Anatolie orientale).
        in REI, xxxv (1967), 149-72.
```

P. 902b, AL-KHADIR, add to Bibliography: H. Schwarzbaum, in Fabula, ili (1959), 151 ff. P. 910*, KH*AF, add to Bibliography: J. Aubin, Un santon gühistänt de l'époque ilinorride, in REI. XXXV (1967). 185-216.

P. 914", KHAFD, add to signature and O. Meinardus.

P. 962a, AL-KHALIL B. AHMAD. I. 39 from below, instead of AL-FARABIDI read AL-FARABIDI

1. 17 from below, instead of Falknerliteratur read Falknercülteratur

P. 9620, 1. 36, instead of ibn Ahmad read ibn-Ahmad 1. 37, instead of Sibawayhs read Sibawaihs

> 1. 18 from below, instead of 266 read 366 1. 14 from below, instead of 4075 if. read 4075 f.

P. 963b, l. 32 instead of Fa'id read Fa'il

i. 18 from below, after author add, a pseudo-al-Khalil, P. 963°, 1. 19, instead of 303 read 304.

l. 22, after 67-80 add; A. Spitaler, in DLZ 81 (1960), 512-16; cf. J. Fiick, in ZDMG 111 (1961), 464-60. Arabic tr. in MML A (Cairo) 18 (1964), 33-47

Il. 34 and 37, instead of if. read i. 1. 22 from below, instead of 37-9 read 37-42

I. 17 from below, after 1960; add H. Fleisch, Traité de philologie arabe, Beirut 1961, i, index; A. 21-Zubaydl, al-Khalil al-müsikär, in al-Maurid iv/4 (1975), 23-29; 1. 2 from below, after 1373/1954 add, 43-9

P. 9644, KHALIL B. ISHAK, I. 14, instead of born in Cairo read died in Caire

P. 10348, AL-KHARADJ, L. 32, add: R. S. Cooper, The assessment and collection of bhurai tax in medieval Egypt, in JAOS 96 (1976), 365-82 (important). P. 10900, KHASL last line, after 123 add; this belief has been affirmed by Muslim law; see R. Brunschvig.

Averrois juriste, in Études d'orientalisme . . . Lévi-Provençal, Paris 1962, i, 65, n. 79 = Études d'Islamologio, Paris 1976, ii, 197, n. 79.

P. 10996, AL-KHASSA WA-1-CAMMA, I. 30 from below, after mischief-makers. add (It should be noted. however, that the Shifftes applied the term famma disparaginaly to the Sunnites; see R. Brunschvig, Figh fatimide et histoire de l'Ifriqiya, in Mdunges . . . G. Marquis, Algiers 1957, ii, 13 - Études d'Islamologie, Paris 1976, i, 64.)

P. 1211 AL-KHATIB AL-BAGHDADI, 1. 18 from below, after health add (ibid., i. 417)

I, 17 from below, after Kufa add (Yakut, Udaba), i, 246) 1. 14 from below, after Nishapur add (Ta'rikh Baghdad, v. 67; x. 383)

1. 12 from below, after Rayy add (ibid., xi, 115) 1. 8 from below, instead of 1922 read 1911.

1. 6 from below, after Dinawar add (Subki, Tabakât, iii, 12; 2iv, 29)

P. IIIIb, l. 20, instead of Udaba' i., read Udaba', i, 1. 25, instead of 210-17 read 210-27.

l. 25 from below, instead of 1974, i, 69-73 read 1976, i, 70-74

I. 17 from below, after Baghdad add a year later

P. III24, l. 22, instead of Ilahiyat read Ilahiyat

l. 27, after 1971; add *Beirut 1974;

1. 23 from below, instead of 69-73 read 70-74

 22 from below, after 'l-tafrik, add a work about traditioners with similar names and their identification.

1. 18 from below, after 175 ff. add; printed Beirut 1975

I. 17 from below, after al-'annal add, a small paraenetic book concerning nor ahadith abyat and abwal by well-known individuals, named and anonymous poets, prophets and sages (e.g. quotations from the Torah), on both concepts 'ilm and 'amal, always introduced by isnads

after by al-Albani, add Beirut 1386/1966, 11389/1969,

P. 11126, l. 12, after 13 add; liv, 33. P. 1155 KHAYR AL-DIN PASHA, I. 13-14 from below, instead of G. S. van Krieken read idem

I. 11 from below, instead of idem read G. S. van Krieken

- P. 1231b, At-MAHDI, 1. from below, add to end of paragraphs: The Companion Abd Allah b. Buse al-Kaysi, who died in Hims between 88/707 and 96/715, attributed the following tradition to Ka'b al-Abbar: "The Mahdi will send (an army) to fight the Rûm, will be given the knowledge (fish) of ten and will bring forth the Ark of the Divina Presence (tabel el-sakina) from a cave in Antioch in which are the Torah which God sent down to Moses and the Gospel which he sent down to Jesus; and he will rule among the People of the Torah according to their Torah and among the People of the Gospel according to their Gospel."
- P. 1232h, R. 8-19, replace by: The theme was evidently adopted from the tradition ascribed to Ka'b by 'Abd Allah b. Busr in Hims.
- P. 1238, add to Bibliography: W. Madelung, The Sufyani between tradition and history (forthcoming).

SUPPLEMENT

- P. 343h, Al-HÅKIM Al-DJUSHAMÎ, add to Bibliography: 'Adnan Zatzür, al-Hākim al-Djushaml wamanhadjuh fi tafsīr al-Kur'ān, Beirut 1972.
- P. 393³. MIKSAM, add to Bibliography: A. Jeffery, The Qur'an readings of Ibn Migsam, in Ignaz Goldziher memorial volume, i, Budapest 1948, 1-38.

CONTINUATION

KHEMSHIL [See KERMSHIN].

KHEMSHIN (other designation, Khemshili), a numerically small group of Muslim (Sunni) Armenians who had been converted from Christianity in the beginning of the 18th century. In the U.S.S.R. (population 629, according to the 1926 Soviet census), they now inhabit the Black Sea coast near the Turkish border. In Turkey they live in compact settlements along the Firtipl and Karadere rivers (Bash Khemshin) and in the mountains not far from Hope (Hope Khemshin). The traditional economy is based on sheep and goat herding, and related activities. The Khemshin dialect (like the Erzurum, Cilicia and Islanbul dialects) is part of the western dialect group of the Armenian language. The Khemshin have been, to a great extent, assimilated by the Turks, nor have they been listed in either the 1959 or 1970 Soviet censuses). (R. WIXMAN)

KHERLA, a fortress of mediaeval India, lying to the south of Mālwa and east of Khāndesh [g.vv.], and in the extreme northern part of Berär [g.v.], just to the south of the headwaters of the Tāpti River. It is in fact come 50 miles west of modern Deogath; in British India it fell within the Central

Provinces, now Madhya Pradesh.

The foundation of the fortress is attributed to a Radiput radia, the last of whose line is said to have been killed by a commander of the Dihli Sultans, perhaps in the time of 'Ala' al-Din Khaldi; but the fortress as it stands today is Islamic in construction. During the revolt of the Deccan in the latter years of Muhammad b. Tughluk, it fell into the hands of a local Gond dynasty. In the early 9th/15th century, the Good ruler Narsingh was made subject to the ruler of Malwa, Hushang b. Dilawar Khan Ghuri (808-38/1405-35), appointed to Malwa by the Tughlukids. It now became a subject of discord and covetousness between the rulers of Malwa and the Bahmani sultans of the northern Decean [see BAHMANIS]; thus in 831/1428 Hushang suffered a crushing defeat st Kherla at the hands of Ahmad Shah Bahmani. Forty years later, in 871/1467, there again fighting over possession of Kherla between Mahmud Shah Khaldil of Malwa (840-73/1436-69) and the Bahmani Muhammad Shah III Lashkari, but Mahmüd managed to retain Khērla and possibly northern Berār as far as Elicour [e.v. in Suppl.]. In 994/1586 the Mughal governor Malwa, A'zam Khan, attempted to take over Berar; he failed to capture Khërla, but plundered the capital Elicpur before being repelled by combined forces of Khandesh and the Nigarn-Shāhis of Ahmadaagar (q.e. and Nizāk-Shānis). Berår subsequently came under Mughal rule, and the A'in-i Akbari, tr. Blochmann and Jarrett', Calcutta

1939-48, if, 237, lists Kherla as a sarkar of the suba of Berar with a revenue of 174 million dams.

Bibliography: Sir Wolseley Haig, in Camb. hist. of India, iii, index. (C. E. Bosworth)

EHIDAB (A.), me term denoting the dyeing of pertain parts of the body (and especially, in regard to men, the beard and hair) by means of henna [see #INNA*] or some similar substance. It is still used in this sense today, but is used moreover for the items of make-up and cosmetics employed by modern women; the reader may find under MAR*A information about those items of cosmetics used by women attached to the traditional usages. (Ed.)

KHJDÁSH (or Khaddásh, cf. Wellhausen, 509; his real name was probably 'Ammar or 'Umara b. Yazīd) one of the leaders of the early Hashimiyya movement in Khurasan, Having played a part unacceptable to the 'Abbasids in the formative stages of their da'wa in Khurasan, the official 'Abbasid propaganda later obliterated as much as possible of his memory, minimised his part in the da wa and presented him = a heretic. This propaganda succeeded to such a degree that his life and achievements are hardly mentioned in the Arabic sources and doubt was even cast as to his real name. Consequently, orientalist scholarship, in those few cases when it mentions him, is highly influenced by this. Wellhausen, with his unusual historical instinct, was the first to understand his significance in the 'Abbasid daspa, and B. Lewis also mentions his role as one of the first emissaries of the Hashimiyya in Khurāsān [see 'ABBASIOS], Cl. Cahen and Lewis both tend to accept at least some of the accusations of the Abbasid propaganda, namely that III was I Khurrami, and they raise doubts to whether Khidash was an 'Abbasid emissary at all (Cahen, Point de vue sur la révolution Abbaside, 324-5). However, with the discovery and publication of the anonymous Akhbās al-Abbās (ed. Dūri and Muttalibi under the title Akhbar ad-dasela al-labbāsiyya), a fresh study is possible, based on new material which permits reconsideration of the already-known traditions about him.

According to the 'Abbāsid tradition, Khidāsh was a nickname derlved from his-d-sh "to tear apart", "to scratch" because "he has torn religion to pieces" (khadasha al-dīn) (Tabarī, il, 1503; Balādhurī, Ansdb, f. 292b). This is molear indication of the efforts made on the part of the 'Abbāsids to blacken his name, especially after his death. In another tradition, however, Tabari says that it was Khidāsh who adopted this man whereas his real name was 'Ammār or 'Umāra b, Yazīd 'ii, 1588, cf. Ansāb, f. 292a, inf.; Ibn al-Athīr, Kāmii, Beirut 1965, v. 144). As far as the

many is concerned, Khidāsh is not an uncommon name in Arabic, derived from the third form of the verb &h-d-ek (cf. Lane's Lexicon and LA, s.v. and Agains, xix, 52 and index). It is quite possible that the 'Abblaids added their interpretation to the name later, when already there existed a tradition according to which the Prophet disliked the ____ Khaddash. (Ibu Wahb, Diāmi', Cairo 1939, 97, cf. Kister, "Call yourselves by graceful names", in Lectures in memory of Prof. Martin M. Plessner, Jerusalem 1975. 22). However, whether Khidash his name or not, it does not make much difference to the fact that his activities in Khurāsan for over eight years - head of the Hāshimiyya [q.v.], caused so much trouble to the 'Abbasids that his memory was almost completely obliterated from the records of the 'Abbasid da'wa.

In order to understand the enigmatic personality of Khidāsh, one must remember that in the early phases of the da'wa the contacts between the centre of its activity in Khurasan and the parallel centre in Kûfa were, for security reasons, very weak. The same considerations necessitated extreme caution in the contacts between the Khurasanis and the 'Abbasid Imam in Humayma. Although the sources say that the propagandists in Khurasan acted in the name of the 'Abbasids, it is highly improbable that Umayyad intelligence failed to uncover this connection or to discover the identity of the Imam until the very end. The contents of the dates teachings were extremely ambiguous throughout, and its propagandists spoke in general terms about the rights of Ahl al-bays (cf. al-'Imrăni, al-Inbā', ed. Samarral, Leiden 1973, 571 L 18) a term which was accepted to mean the family of the Prophet (cf. M. Sharon, The 'Abbasid da'un re-examined, 9, n. 23). Thus through most of its paases, the da'wa in Khurasan was, in fact, nothing but an extension of the Hā<u>sh</u>imiyya of Küfa. It is thus highly possible that even the leaders did not known what exactly were we essential ideas that differentiated their activities from those of the other Shi'is in Khurasan, and especially those in Nishapur and its environs.

The only information about Khidash supplied by Tabari and Baladhuri is m follows. After Asad b. Abd Allahal-Kasri had killed several of the first propagandists of the dates in Khurasan, headed by Abû Tkrima, and had severely punished some of the others, another leader was sent from Kûfa to Khurasan. The new leader - Abu 'l-Husaya Kathir b. Said. As he was m uneducated man (if the term ummi in Taban's account is to be understood thus), Khidash was able to overcome him and assume the leadership (Tabari, ii, 1503, Ansáb, f. 292a).

In another tradition there is some more and rather different information about Khidash. According to this tradition, it was Bukayr b. Mahan, one of the veteran adherents of the Hāshimiyya who, in 118/ 736 sent 'Ammar b. Yazid E Khurasan as a "leader of the Shi'a of Banu 'l-Abbas" (Waliyan 'ald shi'ati bani 'l-'abbāsi). IIII resided in Marw and changed his name to Khidash (a custom current to the early adherents of the dains, who for reasons of secrecy, used to adopt new hunyas once initiated into the movement (see KARTABA). He began making propaganda for Muhammad b. 'Ali, in which he was very successful. According to another tradition in the Ansab, it was Muhammad b. 'All who nominated him. Sometime later, however, Khidash changed his original propaganda and "turned away from the Imam's instructions and began to teach improper and disgraceful ideas. Therefore, the adherents of Muhammad b. 'Alt fell upon him and killed him. Some say that it was Asad b. 'Abd Allah al-Kasri that killed and crucified him" (Baladburl, Analb, L. 292a). The "disgraceful ideas" according to Tabari (loc. oil.) were those of the Khurramiyya [q.v.]. His execution by Asad took place, according to Tabari, in 118, during the governor's second term of office (il, 1588-9; Wellhausen, 510). Although these traditions reflect clearly the later 'Abbasid distortion in the Information about Khidash, it is possible, however, to build the following picture, from the combination of the above narrations with the information transmitted in the Ahhbar. Khidash's predecessor as the leader of the Hashimiyya in Khurasan, Kathir b. Sa'd, led the movement in Marw from ca. 108/726 for three years until ca. 111/729. It was probably in that year that Khidāsh arrived from Nishāhpūr, a centre of Hāshimī activity, and took over. For at least seven years, until his execution in 128/736, he me the leader (sakib) of the Hashimiyya there (Tabari, ii, 2589, l. c) and the one responsible for creating its sound organisation, - Wellhausen rightly observes. He was first to achieve a real and enduring success and to gain wide support among both Arabs and manuall. The lists of the leaders of the de we in his time show people from Tamim, Rabi'a, And and other Arab tribes, including Sulayman b. Kathir of Khusa'a, who later to replace him (Wellhausen, 514, Tabari, ii. 1586-7, Akhode, 216-22). There is no neutral evidence whatsoever that he was Khurrami, though Wellhausen, Cahen and Lewis tend to accept 'Abbasid traditions which attributed to him Khurrami and Mazdakite theories (this tradition is presented in its complete form by al-Nashi' al-Akbar, ed. J. van Ess, Beirut 1971, 32-5, cf. Wellhausen, 515-18; Cahen, Point de vue ..., 324-5). Caben, however, points out that many people who fell out of favour were accused of zandaga, and this is clearly true of Khidash; ■ tradition which presents him as a Christian from Hira should be understood also as representing the same trend (Ansab, ios cit.). From a unique tradition in the Akhbar, we know exactly the nature and content of his propagands, and this also explains why *Abbäsids later hated him. This tradition speaks of a group of Khidash's adherents in Nishapur, called the Khalidiyya after its leader, a certain Abû Khalid. The group soted against the 'Abbasids from the very beginning of their reign, and in the time of Abû Die lar al-Mansier changed its name and became the Fatimiyya. They argued that, since after the death of Ibráhim al-Imám (q.v.) a new imám was not nominated in the way of mariyya, the imama must return the 'Alids, now already represented by the descendents of Patima (Ahibar, 403-4).

From the statement that the Khalidiyya-Fatimiyya continued the former Khidishiyya, it is clear that Khidash as a Hashimi leader furthered the

cause of the 'Alids.

Having worked for while in Nishapur, Khidash seized the opportunity ||| the growing activity of the Hāshimiyya in Marw in order to meet there in 111/ 730, and being intellectually superior to Kathir b. Said, he was able to depose him and take over the leadership of the movement there. For the Hāshimiyya of Marw, both his leadership and ideology were congenial. After the death of Abū Hāshim, the original Hashimiyya continued in general terms support the sum of the House of the Prophet, which because and more identified with the Fitimid 'Alkis. This development disturbed Muhammad be 'All, and on one occasion he is said to have warned one of his early emissaries to Khurāsān, the Kulan leader Abû 'Ikrima, about the 'Alid leaders in Night-

pur, whose mine include one Abu Khālid al-Djawāliki (Abibar, 204, of. Ihn. Khaldun, Thar, ed. Bulik, iii, ros). His influence in Khurāsān, however, was too slight to act against Khidash, and he may have had to give his tacit approval to the latter's position. Khidash built strong centre in Khurasan which was completely independent and detached from both Kûfa and Humayma.

During the seven years of his activity, the 'Alid cause gained wide support there, while the 'Abbāsid I mam we kept completely in the shade. Khidash spoke in favour of al-Radi min Al Muhammad or al-Kā'im min ahl al-bayt, stogens which were common to all the 'Alid adherents in Khurasan and the early

da wa.

Khidash's independent ideas, which were inconsistent with the aims and aspirations of the 'Abbasid Imam, are explicitly indicated in Tairish al-Khulafa', ed. Griaznevitch, ff. 252b l. 18-253a l. 6, and especially in a unique note on the margin of the manuscript, 1. 253a, which is the key for m understanding of the whole problem. It runs = follows: Khidāsh, radjulun intahala mahalatan bi-Khurasana wa-intasaba ila l-kā³imi min ahli bayti rasēli allāhi fa shtubiha ^calā³ l-shi ati amruku.

Muhammad b. 'All understood that the new independent centre in Khurāsān had to be connected directly with him and not through Kufa, but - long as Khidash was alive this was impossible, and it was difficult even after Khidash's death in 118/736.

The new leader, Sulayman b. Kathir, went to the Imam in Humayma in 120/739, but this meeting led to a crisis. Muhammad b. 'All tried to reproach the Khurāsānī for accepting Khidāsh's wrong ideas, but Sulayman and the Khurasani could not see what was wrong in pure 'Alid-Hāshimi Ideology, and for over five years the relations between Khurasan and the 'Abbasid imam were almost non-existent (Tabari, ii, 1640, 1727, 1769, Baladhuri, f. 292b).

Only in 126/744 were relations restored, and the centre in Khurasan acknowledged the leadership of the new Imam, Ibráhim b. Muhammad (Muhammad died in 125/743). Sulaymän welcomed Bukayr b. Māhān in Marw and sent money with him to the Imam (Tabari, il, 1869, Baladhuri, loc. cit. This improvement in the atmosphere was due to the great crisis in the Shira that followed in the wake of the collapse of Zayd b. 'Ali's revolt in Kufa in 122/740 and the execution of his son Yahya in 125/743. The messianic expectations of the Shife which were connected with these two were replaced by the usual feelings of sorrow and repentance after their death. This feeling was especially acute in Khurasan, where black garments were worn everywhere in a sign of mourning for the dead 'Allds and where newborn children mamed Zayd and Yahya after them (Mas'udi, Murudi, Beirnt 1965, iii, 212-13). This was also the moment when a new leader was needed to avenge their blood. The circumstances were, therefore, ripe for coming to terms with the 'Abbasid india and for turning the dafted into an 'Abbasid one. Even so, this change was not easily accepted. Not only did the pro-'Alid Khidashiyya continue to exist under a leader, but also (as Balidhuri reports, Ansab. f. 305a), Muhammad the son of Sulayman b. Kathir was himself as adherent of the Khidashiyya who was opposed to the transference of the movement in Khurāsān to Abū Muslim, Because of the activities of Khidash we can now understand that it was not until 126/744 that the dates in Khurāsān was changed from purely 'Alid one to an 'Abbasid one. But the 'Abbāsids, even after reaching power, knew, m alMangur is reported once to have said, that "the love for the Al Abi Talib in the hearts of the people of Khurāsān is mixed with the love for us" (Pragmenta,

ed. De Goeje, 246).

KHIDÂSH B. ZUHAYR AL-AŞGHAR B. RABI'A B. 'AMR B. 'AMIR B. SA'SA'A AL-'AMIRI, mukhadram poet who is said to have attacked Kuraysh because his father had been killed in the War of Fidjar [q.v.]: It is possible that he himself took part in this struggle, and it is precisely in the chapter devoted to this war that the Aghani (ed. Beirut, axil, 70 ff., cf. iii, 219) cites him at greatest length, since several pieces of his are given there, was of them considered as a basida munșifa (see Ch. Peliat, in Mélanges Marcel Cohen, 279.80), but he boasts there of a victory of the Hawazin over Kuraysh which seems to be an invention. All the same, it is not impossible that these verses, and also a kasida in praise of Kuraysh (Aghdal, xxii, 76), where allusion is made to Muhammad's presence amongst the combattants, were written at a later date and by another poet. Khidash still a pagan at the Battle of Hunayn (q.v.). Ibn Sallam (Tabakat, 119-22) classes him in the fifth jabaka and cites a certain number of his verses. An edition of his diwan has been put together and is being prepared in Baghdad.

KHIDHLAN (A.), nomen actionis from the root hi-dh-l, "to leave in the lurch", a technical term in Islamic theology, applied exclusively to Allah when He withdraws His grace or help from man. The disputes regarding it first appear in connection with the quarrel over kadas [q.v.]. A starting point is found in Sura 111, 154/160: "but if He abandon you to yourselves (yakhdhul-kum), who will help you after Him? Let the faithful therefore trust in God". On this al-Răzi observes: "The Companions deduce from this verse that belief is exclusively a result of Allah's help (cf. John, vi, 65), while unbelief is a result of His khidhlan. This is obvious, as the verse points out that the matter is entirely in God's hands".

A more detailed exposition is given by Ibn Hazm (iii, 50 f.) "Right guldance and assistance consist in God's preparing (taysts) the believer for the good for

which He has created him; while !iidhlaw consists in His preparing the fasis for the evil for which He has created him. Linguistic usage, the Kur'an, the force of logic, and the attitude of the fukaka and those in the past who handed down traditions and of the Companions and Successors as well as of those who came after them and of the whole body of Muslims with the exception of those whom God has led astray as regards their intelligence, namely such as belong to the followers of slanderers and outcasts, like al-Nazzām, Thumāma, al-Callāf and al-Diāhiz, are all unanimous". Then follows this reasoning: Aliah has given man two forces, hostile and opposed to one another, tamyiz (power of discrimination) and hand (passion, desire). When Allah protects the soul, tomvis prevails by His help and power. But when He leaves the soul to itself (khadhala). He strengthens the hama with a strength which amounts to leading astray (idlal).

Knidhlan is therefore, according to the blatm, the opposite of hudd and taufik and the conception approaches that of idid. The Mu'tazilis (as already indicated by the Hazm's words) see in it a contradiction to Allah's justness: according to them, Allah does not urge a man to evil. In their terminology, highlan therefore means the refusal of divine grace (man' al-luif), while, according to the Agh'arts. Bhidhlan is "the creation of the ability to disobey".

(A. J. WENSINCK)

KHIDIW, Kurbive, title of the rulers of Egypt in the later 19th and early 20th centuries, deriving from Persian khidiw, khadiw "lord, prince, ruler". The use of the Arabic form of the title khidewi "khedlval" is associated with Isma'il Pasha [q.v.], will or viceroy of Egypt 1863-79, me though his predecessors, 'Abbas I Pasha (1848-54) and Safid Pasha [1854-63] used it unofficially on occasion. Certain government departments, in particular the Department of the Interior, even under Isma'il's grandfather, Muhammad 'All the Great (1805-49), founder of the dynasty, were known as dimin alkhidžul. In way, it was a unique title among the vessels of the Ottoman Sultan, which the ambitious vicercy of Egypt sought precisely in order to himself apart and above many other governors and viceroys of Ottoman dominions. Closely related to his efforts to render his rule more secure within his family was Isma'Il's ambition to acquire the more formal accourrements of sovereignty in relation to his master in Istanbul and the European powers. After lavish gifts in Istanbul, the distribution of outright bribes to influential courtiers and vast expenditure in supplying troops to help his sovereign suppress a rebellion III Ctete, the title III khuliw was formally conferred by the Sultan upon Isma'll in a firman issued on | June 1867, two years before the formal opening of the Suez Canal. From a mere wall, viceroy of the Sultan in Egypt, Isma'll assumed a rank which elevated his standing to a position closer to royalty. A more important concession which Isma'il received along with this title was the virtual independence of Egypt and her right to enter into special treaties and agreements governing posts, customs and trade transit. These provisions were to give Isma'il freedom in the financial, administrative and judicial arrangements of the country. The title remained in use until 1914, and was assumed by Ismāfil's son Tawfik Patha (1879-94), and Tawfil's son 'Abbās II Gilmi (1892-1914) [qq.w.]. When soon after the outbreak of the Great War Egypt was declared

British Protectorate and 'Abbās II was deposed, his successor, his uncle Husayn Kāmil, assumed the title of Sultan of Egypt.

(P. 1. Vatikiotis)

KHIDR BEG, Ottoman scholar and post of the 9th/s5th century, and the first beds of Istanbul. The unique source for his biography is the Arabic original of al-Shakâ'ik al-nu'māniyya by Tashköprüzade who, however, distorts the chronology of an otherwise convincing account of his mareer by an implausible anecdote which would place his first important appointment as late as the beginning of the reign of Mehemmed II (ca. 855/1451). Disregarding this, and an equally suspect interpolation made by Medidi in his translation of the work in which his mother is identified as the daughter of the legendary Turkish jester, Nașr al-Din Khwidia (Nasreddin Hoca), the details of his life are as follows: He was born in Sivrihisar, where his father, Dialal al-Din, was kadi-though the fact that the latter was, also, known as Amir 'Arif would suggest that he was a dervish rather than a member of the learned profession-and a source used by Brockelmann dates the birth to I Rabit al-Awwal 810/6 August 1407. He completed his studies in Bursa under IIII famous scholar Mollà Yegan, whose daughter he married, and is then said to have returned to Sivribisar as a teacher. He acquired such a reputation for learning that he was appointed to the madrasa of Mebernmed I in Bursa with an increase in stipend, and certain of his pupils here were subsequently to become scholars of great eminence. Next he taught at the madeasa of Bayezid I in Bursa, again with mincreased stipend. and in addition was appointed said of Inegal. From here he moved to the newest III the two madrases in the Uc Sherefell mosque in Edirae, and thence to Yanbolu (in present-day Bulgaria) = \$44f. After the conquest of Islanbul in 857/1453, he was appointed its first kādi, in which post he remained until his death # 863/1458-9. He is buried in the Zeyrek quarter of Istanbul ("Otherdall sall'allifleri, 1, 200), where he also built the mosque later attributed to a certain Hadidil Kadla (Hadikat al-djawdmi', 1, 86). His three sons, Yatkub Pasha, Multi Ahmad Pasha and Sinan Pasha, were also notable scholars, the latter being the author of the famous Tadarrufai.

Although Khidr Beg is reputed to have introduced the versified chronogram into Ottoman literature, very few of his Turkish poems have survived (Sehl, 39) and his reputation rests on three poems in Arabic. The first, a didactic kasida in the basif metre the creed, is known in the Nunivys and has been the subect of several commentaries, most notably that by hle pupil Khayalf (Hadidil Khalifa, ii, 2348; Brockelmann, II, 229, II II, 321). Another karida, also a admiyya dealing with the creed, but in the mafis metre, is usually known as the 'Udiala layla aw laylatayn (Brockelmann is incorrect in saying that translated this into Persian). Finally, there is a mustaadd, in a Persian variety of the hasadi metre, which was greatly admired and attracted imitations for over a century ('Ali, Künk, v. 230-1; Ahmed Pasha, Diwds ed. Ali Nihat Tarlan, Istanbul 1966, 357). Bursall Mehmed Tahir mentions a translation into Persian of the Majáli' which he made at the request of Sultan Mehemmed II, the work in question probably being the Majáli' al-smedr, am logic, by Sirádi al-Din Mahmud al-Urmawi (Hadidi Khalifa, ii, 1725).

Bibliography: Tashköprüzado, al-Shakā'ik alnu'mdniyyo, Arabic text in margins of Ibn Khalilkān, Wafayda al-a'yan, Bulāk 1299, i. 151-5; Medidi's Turkish translation (Istanbul 1250, 111-4) omits many important details. Bursall Mehmed Tāhir, 'Othmānil mū'ellifteni, Istanbul 1333, i. 290; Rusaya Aywānsarāyi, thadikat al-djawāms', Istanbul 1282, i. 86; Ediraeli Sehl, Hesht bihisht, Istanbul 1325, 39; Mustafā 'All, Kūnh al-akhbār, Istanbul 1325, v. 229-32; Süheyi Ünver, Hisser Bey Çelebi, hayais ve eseri, Istanbul 1945. The biography given in the entry for Khidr Beg in von Hammer's Geschickle der osmanisahen Dichthunst, Pest 1836, i. 142, is netually that of his son, Sinān Pasha.

(J. R. WALSH)

AL-KHIDR HUSAYN [800 AL-KHADIR B. AL-

KHIOR-ILYAS (in Turkish, Hidrellez), is the name, in Turkish tradition, of a popular festival in the spring and celebrated on the 5-6 May, this date being considered as marking the beginning of the season of summer, extending from then till 7 November (Kassm). The two dates correspond respectively with the feastdays of St. George (23 April) and St. Demetrius (26 October).

Khidr (Tkish, Hizir) symbolises in Turkish tradition the renewal of vegetation in the spring. It is believed that, when this personage shows himself upon the face of the earth, the dry vegetation comes green again as he passes; that he leaves a green impression on the hands which he touches; and that he brings abundance, fertility and happiness. Another feature of his legendary personality is that he to the aid of beings in distress, and in particular, of those in danger of drowning in the see or lost in the desert. In regard to Ilyas, beliefs and traditions are somewhat rare. In the written literary texts and in oral tradition they are limited to allusions to his supernatural aid beings in distress on land or sea. a power which he shares with Hizir; according to certain beliefs, llyas is the master of the seas, and Hazar that of the land, but others hold the inverse of these attributions (see Holk bilgisi kaberleri = HBH, 1 (1930), 182; Gedis, No. 73 (1944); O. Bayatli, Bergama'da efsaneier, ddatler, Istanbul 1941, 54; Ewliyd Celebi, Seydhat-nama, iii, 90; Yazlqiloghlu, Musammediyye, lith. Istanbul 1312/1894-5, 77; Sadettin Nüshet, Turk soirleri, i, 57; in me poem the popular poet of the 17th century Karadiaoghlan calls him "guardian of the seas, mounted upon a grey horse"; in the Ornuz epic Dede Korkud he is likewise described as a horseman). Hyas is further mentioned in beliefs which explain the name Hidrettes, It is generally held that each year, on the right of 3 May. these two beings, both of them immortal after having drunk from the "Water | Life", come to meet togather on the earth. Their meeting place is often pictured as a spot by the sea shore. According to a local belief of Balikesir (HBH, i, 181), they are two brothers. A legend recorded at Halkalı near Istanbul telis how they were two lovers. Hidr wyouth and Elles a girl: for long they were unable to come together again, but at last met on the night of 5 May, and then both died

les, in Türk folklor araquemalars, No. 96 (1937)).

Hidreliez is a festival the greater part of whose ceremonies are reserved for women and girls. They

of joy from their reunion (Ali Imer, Halkali'da Hidrel-

comprise three main sequences: (1) On the night of 5 May, various practices we performed and rites observed in order to susure the fulfillment of divers yows, such as abundance, prosperity, hanginess in general, or more specifically, the acquisition of a house, the birth of a child, etc. (2) Early the next morning, there takes places the "drawing from the divinatory pitcher". The previous evening, there placed in the pitcher, to the accompaniment of appropriate rites, various small objects belonging to women and girls who wish to ask Fate about their future destiny; the pitcher is then placed under a rosebush during all the night. In the morning, a young girl draws out the objects in the pitcher one after the other, and woman recites the "divinatory quatrain", which is interpreted in regard to the future fate of the owner of the corresponding object. (3) On May, there is an online to go and cat, in groups of relatives, neighbours and friends, in the countryside, usually by some sanctuary. Games and amusements, including swings, the preferred pastime for this festival, are organised.

The festival and its attendant ceremonies are normally limited to two days only. Nevertheless, they form a sequence of seven weeks in the 'Alawi villages of a mountainous region in the province of Kirklards. During the month which precedes the day of Hidrelles, the ceremony of "drawing from the divinatory pitcher" takes place every Thursday evening. The seventh Thursday is called "the day of Nazari", when a communal meal in caten, prepared from the meat in sacrified animals. On this same day, the children, carrying flowers and willow branches, search out, and organise for themselves, communal meals by a sanctuary; they also carry out other rites which are, moreover, to be connected with those aimed at summonuing rain [see tstiskA]. On returning to the village. they throw their growns of flowers and leaves into the river (Etem Utik, Yukarı Kanara köyünde Nasari şenlikleri, in Türk folklor araştırmaları, No. 267 [1971]).

KHIDR KHAN, founder of the "Sayyid" dynasty which ruled at Dihli from 817/1414 to 855/1451. His designation as a sayyid is traced in the near-contemporary Ta'rikh-i Mubdrak Shahi firstly to a remark haglologically attributed to the Stift Dialal al-Din Bukhāri, and secondly to his excellent character, and has been accepted by later historians like Nizām al-Din Ahmad, Badā'tinī and Firishta; but this has been regarded an dubious by modern British and South Asian historians. The other contemporary source, Bihamad Khani's Ta'rikh-i Muhammadi (compiled or revised in 842/1438-9) silent on the point. While false genealogies - quite common in Indo-Muslim history, Khidr Khan's selection by Timur [q.v.] as his "deputy" in Dihli suggests that he may have been regarded as sayyid in his lifetime, since Timur's regard for sayyids is well documented.

Khān was the son of Malik Sulaymān, an adopted of Mardān Dawlat, the ibid'-dar of Multān under Sultan Firltz Tughluk [q.v.]. Sulaymān Malik succeeded to that ibid after the death of Malik Shaykh, Mardān's son, and Khidr Khān was assigned the ibid' in succession of his father. In 208/1396 he lost the ibid' during his strife with Sārang Khān,

When Timur invaded India in 801/1398-99, he took refuge in Mêwât, but later entered Timur's service, and appointed governor of Dihli and ikjā-dār of Multān and Deopālpūr. However, it was not until 817/1414 that he finally took possession of Dihli. He regarded himself a vassal of Timur, and later of the latter's son Shāb Rukh [q.s.], whose names were recited in the Multa and inscribed on the coinage. He obtained Shāh Rukh's permission in 820/1417 to affix his own name also in the coinage; he chose for himmot the title of sulfān, but that of rāyat-i slā, suggesting presumably that he is standard-bearer of the Ilmūrids.

His reign of seven years, until his death in 823/1222, was full of campaigns undertaken by himself and by his able and loyal wark Tādi al-Mulk which extended the frontiers of his authority and re-united Pandjāb with Dihll. Punitive expeditions were organised against rebellious nobles, especially the Tilrkbačas; there were also reveral expeditions agadust Hindu rādjās such as those of Katahr and Gwāliyār [g.ev.] in order oellect taxes and tribute. Nearcontemporary chronicles regard him on kind and benevolent ruler who brought to Dihli and the other areas which he governed relief from the economic sufferings and insecurity which had continued since the invasion of Timbr.

KHIL'A (pl. kipila'), "robe of honour," also called tashrif (pl. tashdrif and tashrifat). Throughout much of the Middles Ages, the term kinta did not designate a single item of clothing, but rather a variety of fine garments and ensembles (hulla or badla) which man presented by rulers to subjects whom they wished to reward or to single out for distinction (hence the alternate name tashrif "honouring"). These robes, the most common of which was the habd' (see LIBAS), were normally embellished with embroidered bands with inscriptions known mirrar [g.v.] and were produced in the royal factories (did al-juist).

(i) Origin of the custom.

The custom of bestowing garments of honour in the Near East is very ancient. The Patriarch Jacob singled out his fevourite son Joseph from amongst his brothers by giving him a heitnet passim (Gen. xxxvii, 3) which was a ceremonial or royal robe (see commentary of E. A. Speiser, Genesic, Anchor Bible, Garden City 1964, 290). Joseph was later similarly honoured by Pharaoh, who had him dressed in garments of linen (Gen. xli, 42). Herodotus reports that the Egyptian king Amasis sent to Crossus of Lydia aroyal gift a corselet of linen embroidered with gold thread and cotton with the figures of animals into the fabric (Hist., iil, 47).

This custom had most important precedent in Islam with Muhammad's gift of the burda [q.v.] which he was wearing to the poet Ka'b b. Zuhayr (Ibn al-Athir, Kāmil, Cairo 130x, ii, 133-4). The very word thir denotes the action of removing one's garment (A. hhala'a) in order to give it to someone (TA, v, 322). L. A. Mayer has suggested that this was "originally more a promise of personal security (amain) than a token of distinction" (Mamhak costume, 56), but this is an overstatement.

(ii) Davelopment of the custom in Islam.

The term his a does not appear until 'Abbāsid times, when the practice became institutionalised that the bestowal of garments of honour was an almost daily occurrence. Members of the caliphal entourage came to be known as sphàb al-hhir a "those who wear the his a". The presentation of a robe of honour was a standard mark of investiture. Such was the if for an heir apparent (see e.g. Mas udf, Muradi, vi, 365), a vizier (e.g. Hilâl al-Ṣābi', Ta'rihh al-Wurani', ed. Amedroz, Beirut 1904, 176), or a provincial governor (e.g. Tabari, ili, 2194). The bestowal of hida' and other gifts to favourites was an occasion for poetical compositions and was noted by historians (e.g. Ibn al-Fuwati, al-Hawādih al-didmi's, ed. M. Djawād, Baghdād 1351).

In the heyday of Fatimid rule in Egypt, the new haute bourgeoisic found itself with the means to emulate—after a fashion—many of the lawurlous practices of the aristocracy. Anomy these was the custom of bestowing khila upon friends and relations (Y. K. Stillman, The importance of the Cairo Genisa manuscripts for the history of medieval female attire,

in IJMES, vii (1976), 582).

The Mamlüks with their strong military psychology and a marked penchant for heraldic symbolism, standardised the hide in accordance with the class of the wearer and his rank within that class. The three major classes of hills wearers were the military (arbāb al-suyū/), the civil service (arbāb al-aklām), and the religious scholars (al-fulama"). Makrizi, drawing upon 📟 Masēlik al-absās of al-Umarī, describes in detail the great variety of khile" worn by these three important classes of Mamluk society (Khitat, ii, 227-8; tr. by Mayer, in Mamluh costume, 58-60). A special official, the Nasir al-Khais (Keeper of the Privy Purse) oversaw the khile! in the Great Treasury (al-khizana al-kubrā) which contained only robes of honour (ibid.). In addition to garments, the Mamlük military taskrif could consist of arms, such as goldornamented swords, and a horse from the sultan's own stable (min al-istabl), fully outfitted with saddle, bridle, and caparison (kanbûsk).

Money or other valuables were also given as part of the hhil'altashrif (e.g. Ahu 'l-Fid2', al-Mukhtasas min Ta'rikh al-bashar (Annales Moslomioi) v, ed. J. J. Reiske, Copenhagen 1794, 294). In the Ottoman Empire, a series in oney was sometimes given in place of the robe of honour. This monetary gift was called hhil's beht ("the price of a hhil's"). It specifically referred to money distributed to Janissary

officers upon the accession of a sultan (C. Barbier de Meynard, Dictionacire tier-français, Paris 1881, 1, 709), so that this term is to a large extent synonymous with that of divides affect "accession payment".

Robes of honour were given on all sorts of occasions and for a variety of reasons. Thus, there was the hhill at al-niyāba or hh. al-sistiķrās (robe of appointment), the hh. al-wisāra (robe of viziership), the hh. al-vidā (robe of pardon), and the hh. al-vidā (robe of dismissal—with honour of course). The hh. al-budum was given to a guest from atar, while the hh. al-safar was given upon his departure. A sultan might give a hh. al-afiya (robe of health) to a favourite who had recovered from an illness (Mayer, Mamish postume, Sr. 2, and the sources cited there).

The custom of bestowing robes of honour remained widespread throughout the Muslim world until recent times. In 19th century India a khillout (also khelat, khillut) might consist of anywhere from a minimum of five articles to as many as one hundred and one (Mrs. Meer Hassan All, Observations on the Mussulmauns of India, London 1917; repr. Karachi 1974, 148-50; also Yule and Burnell, Hobson-Jobson, glossary of Anglo-Indian colloquial words and phrases, London 1903, repr. London 1968, 183-4).

KHILAFA [See KHALIFA]

EHILAFA, KHILAFAT MOVEMENT, a politicoreligious movement in British India, manifesting itself in the years after the First World War.
On the one hand, it had its roots in Pan-Islamism,
which came to the fore about 1900. On the other
hand, is was stimulated by nationalism [see yawmiyya. In Muslim India and Pakistan]. Turkey's
defeat in the First World War speit serious danger to
the position of the Ottoman Sultan-Khalifa. Would
his power remain great enough to protect Islam?
Would the Holy Places of Islam remain under his
sovereignty (or at least suzerainty)? Arab nationalism
posed a threat, and Greece, France and Italy wanted
to rob him of extensive territories in Thrace and Asia
Minor.

In September 1919, when rumours about the coming treaty of Sevres were rife, the Khilafa movement was organised. Khilafa conferences met in several cities in Northern India, and a Central Khiläfa Committee constituted itself at Bonsbay, Seth Chotani, a wealthy merchant, became its president. Prominent leaders were Muhammad and Shawkat 'Ali (the " 'All brothers"), Abu 'l-Kalam Azad, Dr. Anşarl and Hasrat Mohani. An important part was played by the "warma", organising themselves in the Diam Syyat al-'Ulama'-i Hind. Their most influential leaders were 'Abd al-Bart (of Farangi Mahall) and Mahmud al-Hasan (of Dechand). In January 1920, Ekhilata deputation presented **address** the Viceroy. It stated that "the preservation of the Khilafa m a temporal no less than a spiritual institution" was "the very essence" of their faith, and that this meant full Muslim control over the Arabian peninsula, the Khallfa's wardenship over the Holy Places and the integrity of the Ottoman Empire—claims which, by the way, constituted a check on Arab nationalism and the ambitions of the Sharli Husayn of Mecca. Another deputation, headed by Muhammad 'Ali, went to Europe and had two (unsuccessful) interviews with members of the British Government in March 1920.

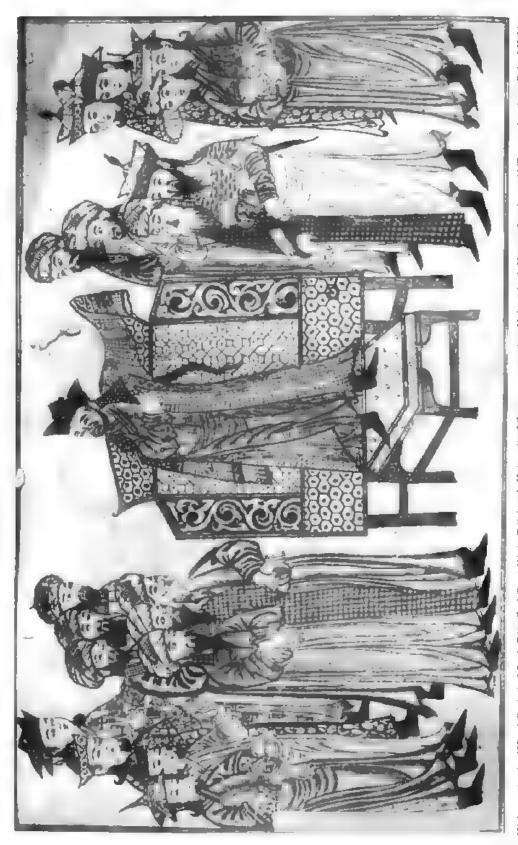

The Khilafa movement started = a communal movement and met with mass approval within the Indian Muslim community (only among upper-class Muslims was there a marked tendency to hold aloof from it). Large funds were collected, partly by petty contributions. But it also got the support of the Indian National Congress, Thereby the Khiláfatists became more and more involved in the nationalist movement, which entered upon its first non-cooperation campaign (1920-2). Gandhi became a member of the Central Khilafa Committee and issued . Khilafa Manifesto in March 1920. The Khilafatists, however, accepted Gandhi's creed of non-violence only conditionally: if it did not bring success, they would have to resort to dishad and hidira. The former seemed possible in connection with Afghan invasion: the latter was actually performed in the summer of 1920. Some 30,000 muhādjūrīn, most of them coming from Sind or the Pandiab, crossed the Aighan border, but about 75% of them came back, disillusioned by their reception in Afghanistan. These aspects of the Khilafa movement had an adverse effect upon Hindu-Muslim relations, which were vital to its nationalist character. Gandhi's suspension of non-cooperation in Fobruary 1922, constituted a severe blow in this respect; Indian Muslims felt betrayed by the Hindus after bearing the brunt of the nationalist battle.

No less deadly blows came from the Turks. The nationalist government at Ankara succeeded in restoring Turkey's position. The Khilafatists supposed that Kemāl Pasha was acting on behalf of the Sultan-(Chalifa, but this proved to be an error. In November 1922, the Sultanate in Turkey was abolished and the Khalifa lost all temporal power; he was "Vaticanised" (a condition which the Khiläfatists had declared to be incompatible with his office). Khilafa leaders tried to explain away the fact, but their followers left them. The movement wholly collapsed when in March 1924 the Ottoman Khilafa was abolished. Some leaders, like Abu'l Kalām Āzād and Dr. Ansārī, remained in the Congress; others found their way back to the Muslim League, which up to 1919 had been the political organisation of Indian Muslims. Other leaders again, like the 'All brothers, tried to save the Khilāla. organisation, but to direct it towards communalist goals, grew into an instrument to further Muslim interests as opposed to Hindu ones, but ____ in this form, the organisation had lost all significance by rgz8.

Bibliography: Among the contemporary accounts the most important is P. C. Bamford, Histories of the non-co-operation and Rhilafal movements, Delhi 1925 (confidential publication of the Govt. of India). Materials concerning the movement can be found in Atzal Iqbal, ed., Select writings and speeches of Maulana Mahomed Ali, Labore 1944 (containing among other things munitinished autobiography of the author). In many books, the movement is treated mepisode in the nationalist struggle, e.g. A. Aziz, Discovery of Pakistan, Labore 1964, and R. C. Majumdar, History of the President movement in India, iii, Calcutta 1963. The most recent monograph is A. C. Niemeijer, The Rhilafal movement in India, 1917-1924, The Hague 1972.

(A. C. Niemeijer)

KHIL'A PLATE I

Ministure in the MS, of Rashid al-Din's Dismit al-Tausidah in Edinburgh University Library representing Mahmad of Chazna donaing a Addra seat by the caliph at Kahir In A.D. 1000.

KHILĀŢ [see AKHILĀŢ]. KHILĀJĪ. [see KHALDJĪ].

KHINALUG (self designation: Kättitturdur; Russian, Khinalug (from the aud Khinalug)), a people of the eastern Caucasus. Khinalug is a numerically small ethnical group, which forms an independent branch of the Northeastern Ibero-Caucasian language group. According to the 1926 Soviet census, there were (athnically) 105 Khinalugs, and linguistically 1,540. The Khinalugs are Sunni Moslems of the Shalif rite.

The Khinalugs inhabit the awl Khinalug on the upper right arm of the Kudlal-chay, in the Mount Shakhdagh area of Konakhkend rayon (Azerbaidjan S.S.R.). The Khinalug traditional economy was based on sheep-raising (transhumance system) and horticulture.

The Khinalug language is purely a vernacular, and Azeri is used as the literary language; the Khinalug in fact being culturally and linguistically assimilated by the Azeris.

Bibliography: A. Bennigsen and H. C. d'Uncausse, Une république soviétique musulmane: le Daghestan, aperçu démographique, in REI, antii (1955), 7-56; Geiger, Halasi-Kun, Kuipers, Menges, Peoples and languages of the Caucasus, The Hague 1959; S. A. Tokarev, Etnografiya narodor SSSR, Moscow 1948.

EXERCIA (A., fem. <u>thinsies</u>, pl. <u>thindies</u>) or <u>thinsie barri</u> designates, amongst the pachyderms, all suides or pornines belonging to the palaearctic zone, without any distinction between the plg (<u>thinsie ahil</u>), domesticated since farthest antiquity, and the wild boar, Sus scrofa (<u>thinsie wabshi</u>), its feral relative, frequenter of wooded slopes and dense

scrub in the valley bottoms.

The word kkinsis (Hebrew khinis) is to be attached to the root Kk. Z. ■ with the idea of "having small eyes", as has no link with the root Kh.N.Z.R which implies the idea of bulk, mass; this at least is the general opinion amongst philologists, but a comingtogether of both ideas is not to be excluded. Without being everywhere in current usage, khinrir is known to all arabophone populations; however, the term halles (pl. hidles, hidles; cf. Berber ill, pl. ilsan) is preferred to it in the Maghrib, whilet the Touaregs keep for the animal its name apubara / tasubarat [pl. isubaraten / tisubaratin). Liven within the porcine species, whilst the sow and the wild sow have no special name except for the feminine derived normally from the masculine (hhinriva, hallafa), the boar is called hansewan and the wild boar, whether under three years old, a three-year old, a four-year old or an old boar, is called ratt (pl. ratūt) and 'ufr i 'ifr (pla. 'ifar, a'far). In the Maghrib, where the wild boar is common in the mountain massifs, it is differentiated from the pig which is freely raised by some Berber groups by the expressions khinstr diabatt "mountain pig" and hallif al-ghāba "forest pig"; an old boar III called, according to the places, shift / shift, theight, bu darms and M drives. The young of suidae, piglets m young wild boars, have retained almost everywhere in the Islamic world their classical name of khimness (pl. khanānis) in the form of dialectical deformations khonnus, khannush, khanshush 🔤 kkantish; in the Maghrib we have also | diminutive killef. From the anatomical point of view, the suidae are distinguished by a long mussis, a snout in the case of the pig and a shaggy head in the case of wild boar, and Arabic underlines these features by a series of evocative terms like hhurfilm, hammire, sanfars | sanfūre, khannāja | khannāja; in the wild

boar, its defensive tusks, the anout's powerful weapon, are called calsum | salsum and handjal (pi. hhand-djil), a probable deformation of handjar "dagger".

i.e. having a curved blade.

In Eur'anic law, suldae are included in the same divine anathema as monkeys (V, 65/60) [see RIRD], and since their flesh involves the major impurity (madjas al-cays), no Muslim was cat it (Kur'an, II, 168/173, V. 3/4, XVI, 115/116). This food prohibition inherited from the Old Testament (Lev. xi, 17; Deut., xiv. 8) was abolished by Christ for Christians (Matt. 1v. 17-20; Mark, vii. 15-21). In Islam, the prohibition of eating pig meat implies ipso facto the illegality of buying it m of raising the animal, whose presence near a person praying renders void the prayer; only the use of its bristles for making footwear is tolerated. These bristles are provided by Christian pig breeders who obtain them by scalding the beasts in boiling water after they have been slaughtered, whence the saying akrah min kirákat al-Ahmeir li 'I-ma' al-maghar "showing was aversion

than the pig for boiling water".

Al-Diable, although admitting the excellence of the pig's flesh, which had pride of place on the tables. of the Caesars and the Persian Emperors (Hayanda, i, 234, iv. 40), is careful to point out, in regard to the animal and its behaviour, its most unattractive habits, siming perhaps at justifying the strict terms of the Kur'anic prohibition. It is omnivorous, though not really coprophagous (dialiala), but it devours on occasion excrement. It consumes snakes, like the porcupine, certain raptors, the cat and the Purple Gallinule (shahmurk), Its zeal to prolong the act of copulation (Hayawan, ii, 52, iii, 186, 354, 400, 496, 525, iv, 50) suggested scornful sayings like of your min fuft "more flighty than a boar" and abook min khinsie "more vile than a pig". The sight of a pig squeiching in the mire or wild boar wallowing in mud (man-¿a'a), present in everyone's mind, did not lessen the obloguy heaped on the species, without even having to recall the legend current about its base origin. This legend (Hayawan, v. 347-8, vli, 204) stated that Nosh, distressed when in the Ark by the pestilence left by the evacuations of the pair of cats which Jehovah had created out of the lion's sneeze in order to end the great spreading of rats in the ship, appealed once again to the Almighty, who sent down to him, out of m act of defecation of the elephant, a pair of pigs (or wild boars), who soon set to work gorging on the fifth; from this hardly credible mode of generation arose the Arabic definition of the suidse, al-fil abu "l-khinnir "the elephant is parent to the pig". Like the monkey, 🛍 popular belief the bog was considered to be the metamorphosis of an impious person expiating the divine punishment; according to al-Damiri (Haydt, i, 304), there was a tradition current that Christ himself had changed a group of hostile Jews into swine. The comparison of the pig, as of the monkey, with a hated person or persons, has always been an of the sharpest insults, and one which the Spanish Muslims used for the Christians, who, as elsewhere in Islam, raised pigs for food consumption.

At the side of this generally unfavourable view of the suidae, ——— Arabic writers were able to note and observe the qualities peculiar to the species, by way of rehabilitation: the mother's attachment for its young, its endurance of bad weather, the ease of keeping and raising it, the speed by which it graw fat and its sociable temperament; al-Kalkashandi (5ub), ii, 48-9) goes so far as to say that, by way of comulation, horses put on flesh when one keeps them

in the neighbourhood of pigs. The fact was noted by E. Reclus (Nouvelle geographie universalle, Paris 1884, ix, 190) that in many stables in Fars there was the custom of keeping horses in the company of piglets and that a most close affection grew up between the two very different creatures. On the Christians' farms, the pig rivalled the cock III the role of waking people in IIII morning, since its cries for its food allowance could be heard from the earliest hours of the day (Hoyanda, ii, 294-5).

The ancient empirical forms of medicine attributed curative virtues warious organs of the pig. Thus its liver was antidote against the venom of reptiles and soothed cotics; its dried and powdered gall sprinkled on haemorrhoids made them go down; inserted in the nostrils, this last soothed coryza; a bone carried as a talisman secured against the quartan ague; and an ointment of its lard rubbed on the body gave protection against all evil and against maleficent spirits. Numerous other beneficial properties attributed to its blood, urine and dung, well to the wild boar's tusks (see al-Damirl, up. ett., i, 306, and in margins, al-Kazwini, 'Adid'io, ii, 224-6).

Arable cynegetic literature is poor in material relating to hunting the wild boar in particular and to the dangers involved in this. It was considered to be a dangerous beast because of its bad temper and its depredations, so that battues for its destruction were held by local rulers and officers; it was hunted with the lance, hunting spear, bow and sabre on these occasions. In Syria, the farmers preferred to let the lion roam in the fringer of their lands rather than try to exterminate it, since it was a sure protection against the possible nocturnal ravages of herds of pachyderms through their crops (Hayanda, iv. 49). Kushādiim [q.v.] simply recommends that a person on foot charged by wild boar should feign death, face downwards on the ground (Masayid, 215). In the 6th/12th century, the validant lord of Shayzar, Usama b. Munkigh, telis in a realistic fashion of his perlious encounters with the black beast which, in his time, abounded in the Orontes lowlands (K. al-140dr, Princeton 1930, 202, 223-4). Isa al-Asadi (7th/13th century), in his encyclopaedia of hunting al-Diamhara fi sulum al-bayzara (Escurial ms., Ar. 903, f. 162a), advises farmers that, in order to ward off the depredations of wild boars, they should cause boom out in the middle of the night a big cauldron, emptied and placed upside down, and with a drum akin stretched over its mouth; a banch of hairs should then be flicked between the fingers with an alternating movement of the two hands. He also gives directions for making a trap (hubits), roofing over the mouth of a conical hole dug in the normally-used pathway of the animals (op. cit., tt. 303b-304a). Finally, a century later, the Manifok Ibn Mangil, completing al-Asadi, brings to bear the fruit of his experience for anyone wishing to measure his strength against the savage beast, whether on foot mounted (Uns al-mala' bi-wahsh al-fala', B. N. Paris ma. Ar. 2832, if. 17b-x8b, and annotated tr. F. Vire, in the press). The arms which he recommends for fighting with it me the double-edged sabre (kilidjäri) and the with a flat-edged head (yāsiāj), which the attacker should plunge right into the animal's forehead m pierce with them its paws. If the hunter is thrown to the ground by the beast's charge (hamla), he should flatten himself on the ground and strike upwards with a slashing motion in order to cut the tendons of one of the beast's limbs. = should also ile in wait for the moment when **m** beast turns round in order to spit it with a backwards action and rip it open. Another secret of success is periect mastery of one's mount, which must not take the bit and bolt when it sees the attacking beast. With a lance a hunting spear, the best way is go out one of the beast's eyes, which cannot then survive this wound. Finally, Ibn Mangli records that, according to the ancients, the best talisman against the wild boar's victousness is to carry a crab's claw hung on the arm.

At the present time, in the mountainous regions of the Maghrib, where the wild boar is sometimes abundant, hunting it is used as a factical means of training for troops practising firing in the country-side, and the dead victims are left on the ground for wild carnivores.

The term thinkir plus other terms is also used to designate several other wild animals which have a long muzzle: the potamocherus (Potamochorus porcus) of Africa is therefore called khincir al-nahr ("wild boar of the river") or Music al-ma", wrongly identified by Kazimirski with the hippopotamus (see PARAS AL-MA' in Suppl.]; the two other African suidae, the phacocherus (Phacochocrus acthiopicus) and the hylocherus (Hylochoerus meinertzkageni) are lumped together under the name khinzir abd karnayn because of their highly-developed defensive tusks; with its long snout for grubbing up ant-hills, the orycterops (Orycleropus afer) is called khinste al-ard; whilst the dolphin and the porpoise are called khiszir al-bahr "sea pig". Finally, in pathology, the plural handsir denotes scrofulous growths on the neck.

(F. Vint)

AL-KHIRAK!, "UMAR B. AL-HUSAYN AL-BAGH-DAD! (d. 334/946), better known under the name of Abu "L-Kasim al-Khirak!, was one of the first and most celebrated of Hamball jurisconsults. He mus first guided into the madhhab of the Imam Ahmad by his father Abh "All al-Khirak! (d. 299/912), who was himsel! m pupi! M Abū Bakr al-Marwaihl! (d. 275/899). He also knew Ahmad's two sons, Şālib (d. 266/880) and the skayhh "Abd Allāh (d. 290/903).

On the eve of the arrival of the Shvi Büyids in Bughdad, al-Khiraki left the Traki capital as a muhadfir scoking refuge in Damascus, where a blanball school was already taking root. He died there soon after his arrival there, \$\int_{334/945}\$, although the exact date of his death is not known. He was buried in the cemetery of the \$\int_{341/945}\$, although the martyr's tombs (Kubbr al-shuhada'), and his tomb became a place of pilgrimage. In Batta vialted it when he passed through Damascus, and it still existed in Inn Kathir's time (Bidāya, xi, 214).

Shams al-Din al-Nabulusi (d. 797/1394-5), in his resume of the hidd Abu 'l-Husayn's Tabahat al-handbla, 333, tells us, on the basis of a report going back to Muwaffak al-Din Ibn Kudāma, that al-hipiraki had denounced publicly in Damascus a "reprehensible practice" (munkar), whose nature is not otherwise specified; because of this, he was condemned to be flogged and died as a result of his wounds. However, this version of his death does not seem to be given by his other hiographers.

Al-Khirakl's only work which has come down to us is his famous Mukhtaşar, the first precis of Hanball fikh, which was to enjoy mechaniderable success and to contribute to the education and formation of numerous generations of legal scholars.

It is said that he wrote numerous other works whose titles are not specified and which have all

been lost. He had left his personal library in Baghdad in the care of a friend in the Darb Sulayman, before leaving for Syria. A fire there destroyed it (Biddys, 21, 224).

Ibn Kathir remarks, loc. cit., that the Muchiapar was written when the Black Stone was in the hands of the Carmathians. In fact, al-Khiraki tells us in the Machiapar, ili. 383, when describing the Pilgrimage rites, that "The pilgrim must kies the Black Stone if it in in its proper place". It is well-known that this last was carried off in 317/930 and restored in 339/950; one may accordingly conclude that the Muchiapar was put together between 317/930 and 334/945, after the death of Abū Bakr al-Khallál (d. 311/923).

Abu Bakr 'Abd al-'Aziz b. Dia'(ar (d. 363/974), called Ghulam al-Khallal, gave out that he did not follow the views of the Mukhlasar = 60 questions (mas'sla). The hidd Abu 'l-Husayn, in his Tabahat, il, 76-118, returns to this problem and enumerates 98 points of divergence between the two scholars, whilst defending that doctrine which he deems the

A large number of commentaries we written the Mukhiasar, of which three became especially celebrated, sc. those of Ibn Hamld (d. 403/1011), of the kill Abū Ya'la (d. 458/1006) and of Muwaffak al-Din Ibn Kudāma (d. 620/1223). The first two have been lost, but the third, known under the title of al-Mughai, has been published in Cairo by Rashid Rida (12 vols., 1341-8/1922-30). But there were also many other commentaries, and no text of Hanbalism was so much commented upon. The shayah Badran, in bis Madhal, 214, states that 300 commentaries still existed in the time of Yūsuf b. 'Abd al-Hādī (d. 909/1503), a Hanbalī known as a historian of Damascus.

Various disciples are known to of al-Khiruki, including the following: (1) "Abd al-"Aziz b. al-Harith Abu "I-Rasan al-Tamimi (d. 371/981), prolific author and founder of a famous line of legal scholars (Ikhisār, 342); (2) Abu "I-Husayn Sam'ūn (d. 387/998), one of trost famous preachers of his generation and a Şūfi master (ibid., 350-3); (3) "Abd Aliāh b. Baṭṭa (d. 387/998), even though he does not mention al-Khiraki amongst the authorities upon whom be based his credo (ibid., 346); and (4) Abū Ḥaṭṣ al-Wkbarī (d. 387/998), considered of the best-informed scholars of Ḥanbalism.

KHIRBAT AL-BAYDA', an early Arab structure in the Syrian Desert. Khirbat al-Bayda' or Qasr al-Abyad is situated about 100 km. southeast of Damascus, looking out to the east over the Rubba, a fertile depression in the middle of the southeastern Syrian harrat. It is a structure set out as a square, 60 m. x 60 m. At every angle and in the centre of each side, except for the eastern one, there are carcular towers. The eastern side contains the gate, giving on to a courtyard of ca. 43 m. × 43 m. This courtyard is surrounded on the other sides by ranges of rooms, 7.6 m. deep and sa. 5.0 m. (type a), 6.5 m. (type b), 7.5 m. (type c), and 5.8 m. (type T) wide, forming the schema c-a-b-a-T-a-b-a-c. All these rooms living quarters. On the eastern side there were two small flanking the entrance and four long rooms, which must have served as store-rooms. On the southern and northern sides the rooms were artic-

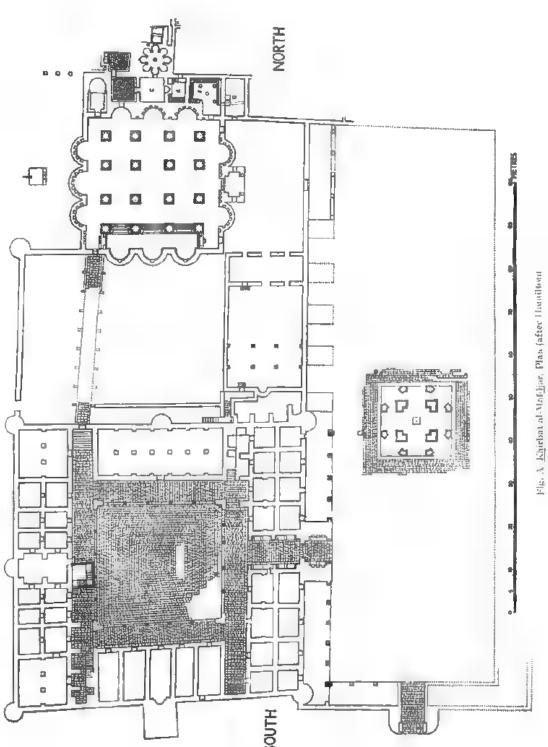

ufated into two groups with the schema s-a-b-a and a-b-a-c respectively. Entrance from the courtyard was given by doors in the b-rooms, whence doors led to the a-rooms and further doors led from there to the 6-rooms. On the western side were two groups of rooms following the schema a b-a which were also accessible through doors in the b-rooms. Thus we have on three sides of the courtyard two groups of rooms separated by isolated room of the T-type. The residential character of the building is attested by the organisation of the rooms, together with the abundant mural decoration especially on the lintels. First impression suggest that Khirbat al-Bayda' was another example of the sense of Umayyad nalaces. Closer investigation, however, reveals this identification to be impossible. It lacks plements shared by Umayyad palaces, principally the bayt-organisation of the rooms, the peristyle, brick and vaulted construction, and stucco decoration. Both the decoration and the technique of construction demonstrate an ambitious local Syrian craftsmanship. The decoration shows this craftsmanship to be working with occumenical patterns of the 5th and 6th centuries A.D. The relations of this local craftsmanship can be more closely determined. Masonry comparable with that of Khirbut al-Bayda' is found in northeastern Syria, not in the neighbouring Hawran, Equally, the decoration is not Hawranian in type, but resembles closely the ornament found in the region northeast of Hama. This suggests that Knirbat al-Bayda' is not on Umayyad structure but was built in the 5th and 6th century by one of the Arab rulers, clients in the Byzantine state.

KHIRBAT AL-MAPDJAR, popularly known as Kaşr Hisham, is the modern name for the rulus of unfinished Umayyad mansion in the Wadt 'I-Nuway'ma, north of Jericho. The ruins comprise three separate buildings: a palace proper, a mosque and a bath attached to a half. On the east side of this complex stood a colonnaded forecourt with mornamental pool its centre. Additional architectural remains lie north of these buildings, but have not yet been excavated. Foundations of a wall, found north of the site, suggest that the buildings originally surrounded by a walled estate, comprising cultivated land, agricultural settlements and perhaps a game preserve. A complex irrigation system, developed already in Roman times and based on three neighbouring springs-'Ayn al-Sultan, 'Ayn al-Nuway'ima and 'Ayn al-Duyük, provided the water for the residential buildings as well in for the cultivation of the land. The modern name of the site, meaning "a place where water springs from the earth", attests to the abundance of water in this area-

The site, which has not yet been identified with any place mentioned in written sources, was first visited and described by Captain Ch. Warren and Mr. F. J. Bliss — behalf of the Palestine Exploration Pund (Survey of Wastern Palestine, iii, 1883, 211-14;

PEFOS, 1894, 177-81). Our main knowledge, however, derives from the excavations conducted between 1935 and 1948 by the Department of Antiquities of Palestins, under the direction of . W. Hamilton with D. C. Baramki as field director. Their finds which appeared first as preliminary reports in the Quarterly of the Department of Antiquities of Palestins, were later published by Hamilton (Khirbat al-Maijar, an Arabian mansion in the Jordan valley, With a contribution by Dr. Oleg Grabar, Oxford 1959).

I. Architecture. - A glance at the plan of Khirbat al-Maidiar reveals some remarkable irregularities and somewhat awkward relation between the main units of the building complex (Fig. A). The walls of the square, two-storeyed palace, which was by far the largest part of the whole complex, - of uneven length (the south and west walls, 67.28 m. externally; the north wall, 67.21 m.; the east wall, 64.86 m.). Its facade is asymmetrical, and there printer oddities in its inner division. However, the plan of the palace conforms to those of other Umayyad castles. A three-quarter round buttress-tower stood at each of the four corners and semi-circular one in the middle of the west and north walls. In the middle of the southern wall only there was a square towerpresumably the base of a minaret-and another rectangular porch-tower faced the entrance in the east. The rooms of the palace were arranged around a central porticoed court. They were generally not connected, although along the west side of the palace

they were arranged in communicating pairs, one behind the other, with a group of five intercommunicating rooms in the centre. The central room in the couth was provided with a niche, probably w missio, flanked by two colonnettes. The northern wall had a single elongated with with the centre wall had a single elongated with with the piece down the centre. Six pairs of parallel wall piece suggest that with hall with divided by lateral arches into two times where hall well divided by lateral arches into two times where hall well piece suggest that with all with the centre of the western portico, but not aligned with the axis of the central room, three flights of stairs descended to wall forecourt preceding a sirdab, we small room supplied with cold water and intended for refreshment. A balustrade around the top of the staircase clearly blocked the direct access to the central room.

At a distance of about seven metres from the northeast corner of the palace and aligned with its eastern wall stood mosque (23.6 m. × 17.1 m.). It could be reached in two ways: either by a staircase which descended from the first floor of the palace and led to a door in the kibla wall, or by three doors in its northern wall. The door in the kibla wall, next to the mibrab, mm probably used by the owner of the palace and his close attendants exclusively, while the openings in the northern wall were presumably used by the public.

The mosque was preceded by a small courtyard or vestibule, which had three additional openings in its northern wall. The milvib was flanked by two cylindrical columns and was covered with white plas-

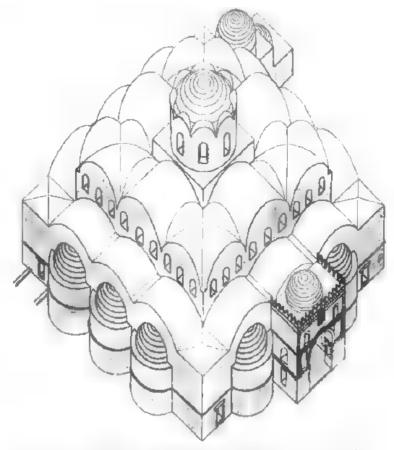

Fig. : "Bath Hall". Revised isometric reconstruction (after Hamilton).

ter which remained undecorated. In front of the wiles b the excavators found the fallen remains of two areades composed originally of three arches each. These arcades must have sheltered a strip of slightly more than 10 m, of the enclosure. The construction of the mosque was probably never finished, for the walls nowhere stood more than three courses high, and the excavators found in traces of a floor.

About 40 m, north of the palace are the ruins of a second large building complex which was separated from the palace by me open area. A wall and a buttress tower enclosed the area on the side aligned with the western palace wall, and the mosque bordered it on the east. A paved and originally covered passage crossed the open space, connecting the palace with the northern buildings. The dominant feature of this complex was a square hall (north wall, 30.28 m.; south wall, 30.33 m.; west wall, 30.42 m.; east wall, 29.79 m.). The north, south and west sides each had three horse-shoe shaped exedrae, while a stately entrance porch, flanked by similar exedrac, occupied the eastern wall. Two additional entrances were found at either end of this wall. Each of the eleven exedrae flanked by a pair of engaged columns, whose bases stood about a metre above the floor. Between and inside these exedrag were small rectangular niches which stood about 1.10 m. above floor-level and were covered by arched heads. Square pilasters with threequarter round shafts at their corners supported the roof and divided the hall into nine central bays and an ambulatory. The piers were interconnected by stone-built arches carrying intersecting walls which rose high enough to provide room for windows. According to Hamilton's reconstruction (Fig. B) (Mafjar, 67-9x, Pl. CV and Lavant, 63 and Fig. 1 for revised isometric restoration), the four corner bays square and bad cross-vaults, while the axial naves were rectangular and barrel-vaulted. The central bay was raised above the rest and carried a dome over a cylindrical drum which was also pierced with windows. Except for the four compartments at the corners, the bays of the ambulatory were barrel-vaulted. The spacing of the piers was such that the central nave, connecting the porch with the central abse in the west, like the main north-south axis, was wider than the other passages [5.50 m. to 5.60 m. as against 4.40 m. to 4.60 m. for the flanking aisles and 2.50 m. to 3.36 m. for the aisles closest to the walls).

Along the southern wall of the hall, and including its three exedrac, there was a pool. It was bordered by a barrier built between the four southern piers of the hall and continued at either end in a right angle towards the wall. This pool, the floor of which was at about the seem level on the rest of the hall, was apparently not included in the original plan of the hall and only added subsequently.

The main entrance into the hall was by way of a monumental porch (8.45 m. wide) in its eastern façade. This porch was entered by a arched opening with stepped and undercut croncliations at the top edge. It are covered by a done resting on pendentives carrying its high drum. Within the porch was a pair of arched recesses, and there was another part of niches in the jambs of the entrance arch. A doorway connected the porch with the main half,

Attached to the hall at the north-west comer was a small, originally domed, room with a semi-circular apsis, the Diwin, used apparently for private audiences. There were extensive latrines at the northeastern corner (F). In the centre of the northern wall there was the bath proper, composing two rectangular rooms (A, B) with benches along the walls (and two

tanks in B), and two additional rooms (C, D). Their floors, built over hypocausts, were heated by a furnace in the stoke-hole (E). The first (C) was nearly square with a single niche in the east, while the other, a circular originally doomed chamber, was surrounded with eight horse-shoe shaped niches, one containing the door to room (C). These two were the more temperate and the hotter caldoria respectively, while the first two chambers may have served as waiting rooms or vestiary (A) and frigidarium (B).

The rooms of the hammam are remarkably small and could be reached from the large hall through chamber (A) only. There was no direct connection between the bath and the dispreportionally large lattings.

z. Descration.-Apart from the mosque, which was never finished, and the ground floor of the palace. the buildings at Khirbat al-Maidiar were lavishly decorated. There were mosain floors at the sirdeb. the hall adjoining the bath, and the diwan. The facade, the porches and the walls of the hall and the diwin were covered with stone and stucco panels respectively. The wails of the upper floor of the eastern wing of the palace, and of the bath hall, showed remains of paintings; figural sculptures, many of them nearly life size, were placed in niches or arcades at different parts of the buildings. The mosaics were of natural stone in a rich colour scale of red, brown or vellow, bluish, grey and white grades. While those in the sirdab are technically of mediocre quality, the mosaics in the ball and slwan are extremely line. There are forty-two carpets altogether (thirty-eight is the hall and four in the diade). They are partly adapted in size and pattern to the architectural superstructure, and their placement appears to have been guided by the purpose and function of these buildings (Pl. Ib). The majority of these patterms show geometric or abstract designs and interlacings which are enriched by stylised floral devices. In the centre of the Hall a radiating rosette pattern accentuates the main axis and "reflects" the central dome above it (Panel 17 in Hamilton's chart, Maffar, 328. Fig. 258). Roundels containing concentric interlacings decorate the floors of the four corner bays which were apparently cross-vaulted. There is a continuous mosaic panel in each of the outer corridors (Nos. 1, 2, 3 in Hamilton's chart). The rectangular panel between the entrance porth and the central rosette, in its composition and ornament, leads towards the central axis of the Hall. Finally, the design in the central apse (No. V in Hamilton's chart) distinguished from the other apses by a large rosette in its interior and a semi-resette at its base (Pt. Ha). The pavement includes only two figural designs; one at the base of the central apse, representing a citrus fruit, a branch and a knife; and the other in the dals of the distant showing a truit-bearing tree flanked to the right by a pair of gazelles and to the left by a lion attacking a gazetle (Pl. 11b).

Togother with Kapr al-Hayr al-Gharbl [q.e.], Khirbat al-Maidiar provides the richest accumulation of early Islamic architectural decoration so far known. Apart from stone—and occasionally marble—the artists made abundant use of plaster for elaborating the interior and exterior of the mansion. This technique, not used in Syrian architecture until later Umayyad times, had the advantage of being comparatively cheap, and its flexibility allowed it to be used for life-size sculpture. Moreover, it could be painted, and since it lent itself. In modelling in a wide variety of forms, these stucco carvings must have contributed to the impression of richness and sump-

tuousness of the buildings.

Generally speaking, two groups of motifs predominate in the architectural surface decoration of Khirbut al-Maidiar. The first, and largest one consists of vegetal elements, such m acanthus leaves, and half palmettes, vine garlands, flowers and fruit. The other comprises geometric elements and various abstract designs. Pure geometric compositions, however, are comparatively rare. In general they appear together in interwoven with vegetal designs, such as interlaced roundels, or roundels alternating with rectangles filled with rosettes, or diamond-shaped units filled with resettes and palmette leaves respectively (Hamilton, Mafjar, Pl. XI.III, 2). In most of the plaster ornaments the geometric units me interrupted and combined in such a way that the resulting patterns completely conceal their original rigid construction (Balustrade panels from Palace, Hamilton, Mafjar, Pl. LlX, 13, 14 and pp. 245-61, Figs. 185are. The same principle was used in the mosaic pattern).

Wall paintings were found in two areas only: In the rooms of the east wing on the first floor of the Palace, and in the "Bath Hall". Painted on plaster, in both fresco and tempera, hardly any of these paintings 🗪 found is situ, and 🔳 that has remained are fragments. Since we know so little about Umayyad painting, this situation is all the more deplorable. Professor Oleg Grabar has studied these fragments and found that in subject matter, style and iconography the fragments in the Palace differed from those in the "Bath Hall". In the north part of astern wing of the Palace Sasanian textile motifs predominated. In addition to floral ornaments, such as heartshaped leaves, rosettes, lotus and palinette designs, a pattern of interfacing circles with a simurg painted within each of the roundels could be reconstructed. In the rooms III the south the excavators found architectural and figural remains as well as painted imitations of marble. The style is less homogeneous than in the north part; yet the Roman-Byzantine tradition is most conspicuous. The paintings in the "Bath Hall", which originally decorated the walls and piers above the level of the window-sills, were less spectacular and more limited in subject matter. Their main purpose was to emphasise the architectural setting of the construction; in particular, the groups of three niches in the elerestory richly painted (Hamilton, Mafjar, Pl. XIII and p. 73, Fig. 33, for restored sketch). At the floor level all the apses were plastered white. The only exception was apse V in the centre of the western wall, whose archivolt was decorated with meandering bands which enclosed panels with varima fruits (including pomegranates), vegetables in a bowl, etc. Another panel with painted fruit and resetcovered an arch which spanned a western alsie of the northern ambulatory, south of the Diman. The importance of this fragment lies in the affinities of its resettes to the type of resette which is repeatedly depicted in the mosaic floor of the Hall, particularly in front of the main apse, in the ambulatory and in the main panel between the entrance porch and the large central medallion (Pl. 1b).

Khirbat al-Mafdlar abounded in monumental sculpture of various human and animal forms. Although more of the statues were found in situ, they were evidently concentrated in three areas: the Palace porch and entrance, the porch leading to the "Bath Hail", and the Diseas. The human manufactured an almost life-size princely figure, generally interpreted as a caliph, which came from a niche surmounting the entrance to the "Bath Hail" (Fig. C and Pt. Va), male and female entertainers (Pl. Vb) and miscellaneous

figures connected with courtly pleasures. A quick glance at these statues reveals that they were sculptured in a remarkably homogeneous style: they are rendered frontally, in nearly identical conventionslised postures, and their rigidity and lack of movement gives them an impressive monumentality. The men and women are plump and heavily built, and the semi-nude female bodies show folds of abundant flesh on the thorax and above the girdle. The caliph is clad in a long coat trimmed with Iranian-type pearls, worn over wide trousers, and holds a short sword; the girls pleated skirts that close from right to left held on the hips by a twisted cond. With slight variations the hair of the figures is identically modelied; parted in the centre and rendered in parallel grooves (caliph and some of the busts), or rows of annil curls. The hair of the women is dressed in three heavy twists which are covered with a rosette in the centre, and me the forehead forms small ringlets which descend at either side and terminate in cork-screw curls (P). IIIb). The rendering of the faces is generally identical. The brow forms one plane with the forehead and the flattened bridge of the nose, and abuts at a sharp angle on the plane of the eye sockets. The pupil of the eye is pierced m drilled, and the mouth curves downward slightly and has a drilled hole in each corner. There is little, if any, modelling in the faces.

The eyes of the ligures from the Palace entrance, like those of the caliph, are modelled in a different style from those of the women from the bath porch of the Diudu. In the first group the eyes are encircled by a heavy unbroken band representing the cyclids, and the brows are marked by a grooved line; the cyclids of the other figures are more smoothly sculptured, and the brows are painted (Pl. IIIb).

There were various animal figures at the Palace entrance. Rams or mountain sheep decorated the front of the "Bath" porch and the bottom of its drum, and about m hundred partridges (Pl. IIIa) were found in the Dissis and the "Bath" porch. On the whole the animals were more delicately modelled than the human figures.

3. Interpretation of structures and decorations. - Our knowledge of the purpose for which Khirbat al-Mafdjar - built, and I the actual function of its different units, is based primarily on interpretations of its architectural features and decorations. The irregular plan of the whole complex meet to imply that it was not conceived m a single unit and was built in consecutive stages. The function of most of the rooms of the Palace, except the little mosque, or musalle, and the underground siedeb, is uncertain. The discovery of numerous wall paintings in the upper storey, in contrast to the lack of decoration observed in the ground floor rooms, is generally explained by the fact that the upper floor was reserved for the living quarters and private seem of the owner of the mansion. This seems to be confirmed by the only painting which could be fully reconstructed, the textile pattern with the simurg and the Interstitlal heartshaped four-petaled rosettes, which came from a room in the northern part of the east wing. This pattern would have been appropriate for a princely dwalling, as its Sasanian prototype ligures on the garb of Khusraw II at the bas reliefs of Tāķ-i Bustān and in similar royal Sasanian representations.

Scholarly opinions vary in to the purpose and function of the "Bath Hall". In relating it to the bathrooms proper and the Roman tradition in public baths in Palestine and other provinces of in Roman empire, Creswell and Hamilton interpreted the Hall 48

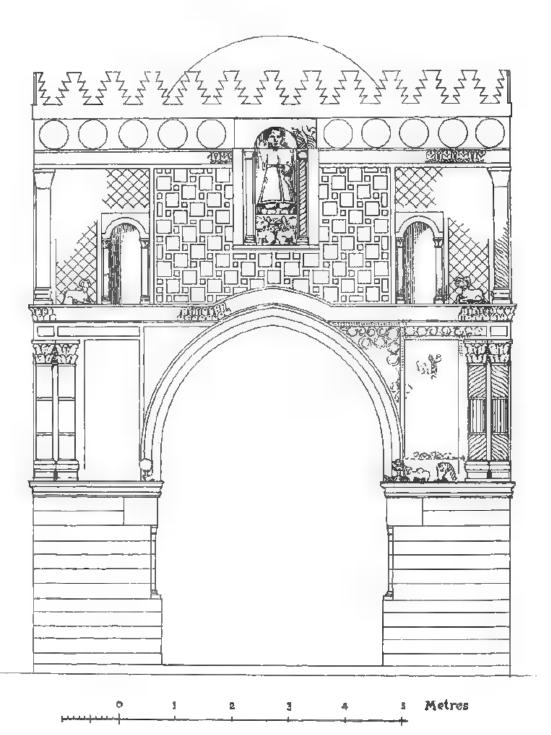

Fig. C "Bath Hall". Porch façade (after Hamilton).

a frielderium which, according to Hamilton, served also as a vestiary or appdilerium. He saw an indication of these functions in the niches along the walls. which interpreted as a repository for the bather's clothes. Hamilton was aware of the abnormal size of the Hall, which he believed to represent an "architectural response to some specialized regulrements" (Mariar, 47). A more specific function was suggested by Grabar, who suggested that the Hall should be related to the Roman triclinia and considered as a place for ceremonial entertainment, and for other customary Arab and Sasanian activities, such as dencine or hanqueting (Islamic art and Byzantium. in Dumbarion Oaks Papers, xviii (1964), 76-7). A fresh study of the architectural peculiarities, decorative features and iconography of the Hall and a re-evaluation of these is led Professor R. Ettinghausen to point out that in contrast to the more private character of the Palace, the "Bath" Hall was conceived as the representational part of the mansion. First, it could be entered from the outside by a distinctively ornamented monumental porch and two additional doors next to it. Aside from the caliphal statue, the front and inside of the porch carried figural sculptures of definite princely associations particularly appropriate for a princely abode, such = male and female entertainers, as well animals alluding to the royal bunt. Secondly, the official character of this building becomes further evident if one follows Ettinghausen's discussion of the central axis of the Hall. This aisle, which connects the porch with the western wall opposite, focuses on a central apse which in its artistic rendering differs from the remaining exeduae of the ambulatory. Originally attached to a cross-shaped voussoir, there was a stone chain ending in a cylindrical device hanging from the apex of its semi-dome. There were seven, and not five niches in the lower wall of the apse, and a pair. instead of a single niche, decorated the upper level of the exedrae. I arched heads of these niches had a horse-shoe and not a semi-circular profile, and were supported by colonnettes missing in the other re-Moreover, while all the exedrae in the ambutatory were plastered white, the archivolt of the central apse was painted with a meander pattern with nerspective frets and different vegetal designs.

The exceptional readering of the central apse, which have been viewed by every visitor entering from the main porch, is explained by Ettinghausen in relation to its function. According to his interpretation it served a throne recess or place of honour where the owner of the mansion sat at official occasions and in compliance with royal Sasanian practice, with his royal headgear suspended over his head.

Aside from the symbolic "hanging crown"—in Umayyad times transformed into a "hanging" talenture—the royal character of the throne is further brought out by the huge half rosette in the pavement at the base of the apse, a motif which in Sasanian iconography had royal connotations. According to Ettinghausen it was not selected in random but rather in conformity with the Sasanian iconographic tradition, in order to emphasise the princely sections of the mansion.

By applying the principle that a "given imagery is related to the situation or activity that took place in or near the particular spot" (From Byandium, 35-6), Ettinghausen further uses the mosale panel with the knife, citrus fruit and leafy branch in front of the main apre (Hamilton, Mafjar, 336-7) to explain one of the other functions of the "Bath" Hall. First,

since Khirbat al-Moshjar was an agricultural estate, this picture may be interpreted an an offering or present to the owner of the estate, or possibly a symbol for a tax paid in the form of a highly-esteemed fruit grown in the plantations. Second, the fact that the only ligural mosaic in this Hall depicts fruit which had to be peeled with a knife in order to be eaten, appears to indicate that of the purposes of this Hall are feasting and banqueting.

Assuming that the "Bath" Hall was built for public audiences, the Diseas or small spsidial room in its north-western corner (Fig. 1) was probably built == private audience chamber. The interpretation of its function has again been based on the iconography of its decoration—the figural mosaic pavement on the raised dais (Pl. 11b), and the stucce emanents of the dome in front of it (Pl. Ic). Accordingly, it has been pointed out that the lion preying upon a gazelle to the right of the fruit-bearing tree was probably meant to demonstrate the caliphal power, while the two eating gazelles to the left alluded to a peaceful caliphal reign—the Dar al-Islam versus the Dar al-Islam, the Abode of War (From Byzarsigm, 45-6).

The mosaics in the Dinan are based ancient oriental concepts and symbolism. The winged horses and the pendentives of the cupota (Pl. IIIc), on the other hand, represent Iranian, particularly Sasanian, motif. They are beasts which figure on seals, textiles and silver vessels as the royal mount of ascension and symbolise the semi-divinity of the Sasanian king. Their representation the cupota provides additional proof of the princely character of the chamber which, like in other parts of the mansion, is expressed in the iconographic language of Sasanian Iran.

4. Who built Khirbat al-Majdjar?-So far It has not been possible to connect the buildings at Khirbat al-Mafdjar with one single prototype. The combination of a villa, a private bath and a multifunctional hall is Roman. The buildings reflect primarily Byzantine tradition, while mosaics and most of the paintings in the palace are routed foremost in the local Syro-Palestinian tradition. The remaining decoration -particularly the stucco sculpture and ornament—is inspired in style and technique by Eastern, Iranian and probably Central Asian prototypes. The imagery in particular is applied in accordance with Sasanian concepts of princely dwellings. It represents an apparently conscious adaptation of royal Sasanian art which was combined with architectural elements of Roman and Byzantine derivation in order to meet best the demands and aspirations of the Umayyad owner of the mansion.

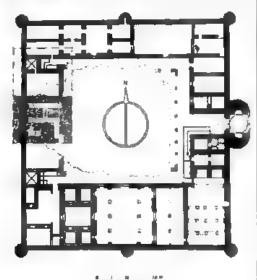

The identity of the owner and builder of Khirbat al-Mafdiar has not yet been established conclusively. On the basis of certain graffiti with the name of Hisham which were found in the debris of the palace, it has been assumed that Khirbat al-Mafdiar was built during the caliphate of Hisham, between the years 105-25/724-43. More recently, however. Hamilton tried to prove that although the mansion was built at the time of Hisham, it was owned and occupied by his nephew, al-Walld h. Yazid. Hamilton's arguments are rather intricate. Yet it is true that in its architectural concept the palace, and particularly the Throne and Banqueting Hall, would have suited the taste of a personality like al-Walld II,

EFIRBAT AL-MINYA, in mediaeval times known as Minya — 'Ayn Minyar Hisham, is the name for the ruins of — apparently unfinished Umayyad mansion about 230 m. west of the northern end of Lake Tiberias. The ruins were excavated in 1932 by A. E. Mader and between 1936-9 by A. M. Schneider and O. Putrich-Reignard. During July-August 1959 the western section of the palace was excavated by O. Grabar in collaboration with the larger Department of Antiquities.

The building consists of irregular rectangular enclosure (66.40 m. × 73 m. × 72.30 m.) facing the four cardinal points. Like other Umayyad castles it has round at the corners, a semi-circular

Khirbet al-Minys, Ground plan.

tower will be the control of three of the walls, and a gateselient about 3.70 m. north of the centre of the castern wall. The rooms which surrounded the originally portioned court differ in size and arrangement. They comprise a mosque in the south-east corner, a three-aisied basilical hall flanked by a unit of five rooms in the south, and residential quarters in the north.

As against the simple impretentious decoration of the mosque, the domed gate-way chamber and the southern rooms must have been richly decorated. Marble panels covered the dadees of the walts. Coloured and gilt glass mosaics decorated summit of the dome, southern mosaics combined with glass cubes and southern geometric carpet-like patterns on the floor of the five southern southern this section.

Another well-preserved floor mosaic was discovered in 1959 in the western part of the mansion.

A fragmentary inscription with the name of al-Walld manable slab which had been used as a sill when the gateway was rebuilt centuries later supports an attribution of Minya to al-Walld I (86g6/705-15). However, the palace was apparently used throughout the Umayyad period. Moreover, the stratlification established in the western part of the site, and the ceramics found in the excavation in 1959, have shown that the site was settled in the later Mamilik period when it served maniportant commercial post between Damascus and Ceiro. It was abandoned at managers and the served was resettled.

Oxford 1969, 381-9. (Eva Barn) KHIRKA, "rough cloak, scapular, coarse gown". The assumption of such a cloak - symbol of embarking on the mystical path is mentioned early = the grd/8th century (by Ibn Harb and al-Muhāsibl; see Massignon, Lexique). It is the equivaient of the handclasp (musafaka) by means of which the spiritual director (murshid) transmits to the initiate (murid) the blessing inherited from the Prophet. It can also be replaced, or accompanied, by other rites with the significance; the handingover of a resary (sibbs), of the text of a litany (wird [q.v.]) belonging to the mystical order (tartha [q.v.]) which is receiving the novice. Its value as "the garment of piety", external and internal (according to Kur'an, VII, 26), this latter implying humility and detachment from worldly standards, is further stressed when the khirks becomes, as with the Darkawa [q.v.], a cloak made up of pieces must together (marakhata),

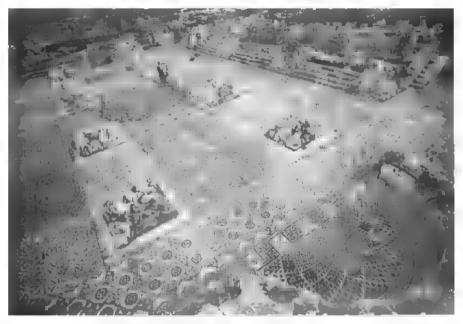

Staring from its original technical sense, the word Mirka has been broadened to designate the initiation as such, becoming a synonym for "transmission" (lanaghul), "embarkation on the way" (ahhdh aisariè) and "covenant" ('ahd, bay'a). Thus the Sulfsme to speak of the history allidriyya "investiture by al-Khidr" [see at-Khapia] to describe those cases, numerous in the history of mystleism, in which contemplatives are said to have received spiritual direction directly from the powerful and mysterious person who, in the Kur'an (XVIII, 64-8x), shows a wisdom superior in the prophetic law.

In fact, the two methods of spiritual transmission, so attachment to the chain (silsila) of spiritual masters and apontaneous illumination coming from the bestowal of a special grace, existed side-by-side at all stages of the history of Sūfism. Abu 'l-'Abbās al-Mursi, the disciple of the imām al-Shādhili (d. 656) 1258), we to derive a arguments for demonstrating the superiority of the jarika founded by his master, from the fact that all latter and not rest on the transmission of the history, but on "a spiritual direction (hiddya) in which God was able to attach certain of his disciples directly to Muhammad His prophet" (cited by P. Nwiya, in Ibn 'Afā' Allak et la naissance de la confetrie lādilite, Beirut 1972, 31).

may serve to define various extegories or degrees of initiation to the mystical path. Thus higher al-irada "the robe of free-will" means, according to al-Suhrawardl, "he whom one asks personally, of his must free-will, from the slayes, having full knowledge . . . of counting me passive obedience to whatever thing he will be condemned to by accepting", whilst the Mirket al-tabarruk "cloak of blessing", is that which is "given officially by the shayhh to those whom it seems to him useful to introduce to or guide along the mystical path, without their giving an exact accounting of the significance of the act of investiture" ("Awdrif, quoted by E. Blochet, in L'Esoférisms musulmen, Louvain 1910, 153). Other authors speak, in more general terms, of the "cloak of Safism", thirket al-tesaword, always insisting on the close connection created by this act of investiture between the disciple and his spiritual master, who penetrates the most latimate thoughts and needs of the initiate becomes "his real father" (Abmad Diya' al-Din al-Nakshabandi al-Mudjaddidi al-Khalidi, Mutimmat Djāmi' al-uşūl wa-karamāt al-awliyd', Cairo 1328. too). Finally, the act of investiture with the "cloak of nobility", khirket al-futumes, originally conferred by the 'Abbasid caliphs and then later by the Ayyubid sultans of Syria and Egypt, was one of the features marking out the chivalric orders of the Islamic world before they spread into Christendom.

KHIRKA-YI SHERIF, one of the manties attributed to the Prophet Muhammad, called KEIRKA-YI SHERIF OF KEIRKA-YI SA'ADET WAS preserved at the Topkapi Palace in Istanbul. It was brought to Istanbul by Muhammad Abii Numayy, som of the Sherif of Mecca, together with the key of Mecca and other Islamic relics, after the conquest of Egypt in 0.21/1517 by the Ottoman ruler Selim I.

This black mantle, 1.24 cm. long with wide sleeves and a cream-coloured woolen lining, was kept III a throne made IIII Murad IV by IIII father of Ewilya Celebi, Derwish Zilli Mehmed, the head jeweller of the palace. The throne, which resembled a canopied tent, lost its function in Mahmid II's time when lattice work doors were made. Today the Khirka-yi Sherif III protected by being wrapped in seven silk velvet cloths, embroidered with gold thread; these in turn are protected by a gold box with II double lid, which is given further protection by being placed in a gold casket that IIII made in the III of 'Abd al-'Aziz, This is then placed on a cilver table in the silver throne.

The Khirka-yi Sharif had a special function in Ottoman customs and ceremonies. In one of the late Ottoman chronicles ('Ata', Ta'rikh, i, 93 cf. Hirka-i Serff, in IA, by K. Kufrah) the author refers to the Khirka-yi Sherif and says that a room was built named the K_1 ass Oda [q.u.] to protect the sacred relies when Selim I brought them to the palace. It is not really possible to accept this statement as fact, because there is no other source of was same century or subsequent ones that mentions it until the roth century. In fact, this room is most probably the Khass Oda built by Mehemmed II. No information about the mantle is known before Ahmed I's time; his imam, Mustafā Şaff Efendi, refers in his Zübdet eltewarith (Topkapı Sarayı, R. 1304, f. 128a) to the mantle, and says that Ahmed I had a shell made above his throne in the Khāṣṣ Oda and had the mantle put on it. We also learn that Ahmod I started the ceremony of dipping mer part of the mantle into water, thus making mill latter holy; this custom was later changed into dipping the fastenings and then in Mahmūd II's reign, to placing scarfs on it. We also learn from the Zübdet al-iewārīḥḥ that the Khāṣṣ Oda did not contain all the relica in Ahmod I's time. This room, with its roth/16th century tiles, was repaired by Mahmūd II, when a new tireplace was built, the decorations of the dome and upper parts of the walls were redone, and the whole apartment assigned to the keeping of the relics.

There were forty Khāss Odalis -- the men in charge of the Privy Chamber-who did the work | guarding the Khirba-yi Sherif. The duties of the Khāss Odalis were to sweep the area, dust the Rur'ans and other books, burn incense on special nights, sprinkle rose water, clean and polish the gold and silver objects. eic. (I. H. Uzunçarşılı, Osmanlı sazayı teşkilatı, Ankara 1945, 325). The "silver" water carriers, thus named because they carried the water in silver containers, washed the floors of the building fidem. 455). In the corner of the wall, where there was a gate that opened into the third courtyard, there was pounding stone used to grind up incense; on the other side of the same wall was a well where the sweepings were disposed of. Four of the Khāsa Odells stayed - duty might and read the Kur'an (ibid., 32). The guarding of the Kkass Oda - the duty of Aghas, whose spell of duty lasted for a period of 24 hours before being relieved.

All the Ottoman Sultans believed firmly in the sanctity of the Khirks-yi Sherif and tried to remain near it; Abmed I took it with him wherever he went (ibid., 256). Findikilli Mehmed Agha, a Khass Odalf of the reigns of Mustafa II and Aboved III, speaks in length about in Khirks-yi Sherif. According to him, Mustafa II took the mantle with him in a private wagon to Cataldia where he went for Ramadan, had it kept in a special room and visited it ceremonially me the 15th of Ramadan. He also took it with him when he went to Edirne (Nusrel-name, ed. 1. Parmaksizoğlu, Istanbul 1966, ii, 45), and when the revolt that ended his reign took place, he tried to escape to Edirne with the mantle (ibid., ii 183). Ahmed III was also keen on keeping the mantle with him. When he want to the Tersane Bagncesi to spend the summer of 1127/1715, or to the Walide Sultan's seaside palace to spend the winter, and when he held a circumciaion festivity for one of his sons, the mentle always figured prominently in what had to be taken with him (idem, 213, 338-9, 397).

Ewliya Celebi writes about Murad IV's swordgirding ceremony, after which he went to the Khirha-yi Sherif at the Khass Oda, paid humble respect to the mantle and then prayed (Ewliya Celebi, Seyahat-name, i, 227). We also learn from FindBill! Mehmed Agha that, when Mustufa II learned that he was going to succeed to the throne, he went to the Takhi Odasi (Khdy; Oda), prayed in front of the Khirka-yi Short/, and then put suitable robes ill order to take the oath of allegiance (Nusret-name, i, 4). Subsequently, he visited the Khirka-yi Sherif every Friday (ibid., i, 32). Ahmed III's eldest son, Süleymän, after 🖿 finished reciting the Kurlan, held a ceremonial session in the Tersdus Baghlesi in front of the Khirka-yi Sherif, according to Findikilli (ibid., il, 388). It had an even greater importance in war-time. A good example of this is the Egri campaign of Mehemmed III, which was going very badly, but was finally turned into victory when Sa'd al-Din addressed his people and Mehemmed III put the mantle. The spirit of battle was kindled, and this turned III tide of the war (Orhan Salk Okyay, Kalip Gelebiden sepmeler, Istanbul 1968, 59). Mustafa II took the Khirba-yi Sherif on all of his campaigns in order to reinforce the courage of III army (Nusret-nāma, i, 143, 166, 167, 174, 183, 186, 190, 199; ii, 180, 300). We know from this same source that Ahmed III took the Khirba-yi Sherif and the Sandjab-i Sherif—the flag of the Prophet which was only unfurled for a holy war—with his army in order to raise the morale of the men (Nusret-name, ii, 200).

When the sultan took his oath of allegiance, the history is there was not forgotten. When a sultan tied, the Dar al-Sa'éde Aghasi carried the news to the crown prince and took him to the deceased. He was then joined by the Siláhdar Agha, who took him to the Kháss Oda (Diewdet Pasha, Ta'rihi, i, 236; Uzunçarşih, op. cii., 186). The oath of allegiance of the Sadr-i A'sam or Grand Vizier, the Sheyh al-Islâm, the Dar al-Sa'ddo Aghasi, and the high officials of the Enderün, was also taken there (Diewdet, iv, 237; Uzunçarşih, 287; Nasreināme, ii,

187-9).

During the third week of Ramadan, a visit to the Khirka-yi Sherlf also customary. Even after the sultans ceased to reside in the Topkapi Palace, the Khirba-yi Sherif remained on the Palace premises, either in its me room or at the Sola Koshkii. On such visits as these on the 15th of Ramadan, the sultan would open the sliver throne, the seven wrappings and the gold casket with a golden key, take the mantle out, dip its fastening into a bowl of water and then put drops of this water into vessels filled again with water, which in turn would be given away meresents. This custom was abolished by Mahmad II, who chose to touch the mantle with some specially-prepared scarves with poems inscribed **m** them, and these were then distributed m gifts for his guests. At the end of the visit, during which the Kur'an was recited continuously, the mantle was put away by the sultan himself. This custom had however been abolished by the end of the sultanate.

One other mantle of the Prophet was brought in 1027/1617-18 by Shükr Alläh Efendi. It was believed that this mantle was sent to Uways al-Karani by the Prophet. Presumably it was preserved by Shükr Alläh Efendi and his son at his house in the Eski 'All Pasha quarter of Istanbul. Their manslon was rebuilt by Mahmud 11, and a mosque was built opposite it in 1851 by 'Abd al-Medjid. In this mosque, named that of the Khirêa-yi Sherif, the mantle was displayed to the public every year by the Queen Mother on the 15th of Ramadán. Today, it is possible to visit it there between the 15th of Ramadán and the Laylat al-Kadr.

AL-KHIRRIT B. Riggid AL-Nami, partisea of 'All b. Abl Talib who fought in his ranks at Siffia [q.v.], but who rebelled against him when the first results of the arbitration were known after having accepted, it appears, the principle of arbitration. He chief of the Band 'Abd al-Bayt b. al-Harith b. Sama b. Lu'ayy (most usually called the B. Nādiiya, after the name of 'Abd al-Bayt's mother), who had only recently been converted to Islam, where they had not kept their original Christianity. He informed 'All of his intention to disregard the results of the arbitration, which implied the caliph's deposition; All advised him to reflect a while before taking action, but al-Khireit, oblivious to arguments raised, withdrew with his followers into the Sawad of Kufa; al-Mas'udi even accuses him, together with 300 of his fellow-tribesmen, of abjuring Islam. It is difficult to establish the chronology of events, but these events probably took place after the battle of al-Nahrawan [q.e.], in which the rebel took no part, contrary to what certain coincidences might lead one to expect; it is certainly tempting to compare and to assunitate al-Khirrit's action to that of the Kharidits when one takes into account, in particular, the tradition according to which his group killed in the Sawad a Persian convert to Islam but spared the life of a Jew, circumstances which manalogous to those of the isti'rad [q.v.] of the Azarlka [q.v.].

'All sent after him Ziyad b. Khasafa, who finally caught up with him at al-Mada'in, where, after valuly trying to reason with him, he gave battle. The rebals fled in the course of the following night and headed for al-Ahwaz, where their ranks were swollen by a certain number of malcontents from Kūfa and of local people, who doubtless discerned here a way of avoiding taxation. At this point, in order to bring them to reason, 'All sent Ma'kil b, Kays al-Riyāhl at the head of a mumerous force, and gave orders to 'Abd Allah b. 'Abbas, the then governor of Başra, to send as reinforcements a substantial contingent under the leadership of Khalid b. Ma'dan al-Ta'l, The rebels put to flight by the government troops, who pursued them to the Persian Gulf shores. In a decisive battle, al-Khirrit was killed fighting, and his companions made prisoner. These events probably took place in the early months of 38/658.

According to 🔤 accounts given, Ma%il 5. Kays freed the captive Muslims and also the apostates, who for a second time abjured the Christianity to which they had returned; only one refused, it is recorded, and had his head chopped off. The Banti Nādjiya who remained Christian, numbering 500, were on the other hand led into captivity. Maskala b. Hubayra, 'Alt's 'amil in the hore of Ardashir Khurra, whose centre was at SIraf, now intervened. Affected by the entreaties of the captive men, women and children, he purchased them for a min of 300,000 dirhams (ai-Mas adl) or 200,000 only (ai-Tabari), of which he sent only part to 'All. He freed the prisoners without having asked them to contribute to the purchase money, and then, when pressed by the caliph to hand over all the money, he though it more expedient to take refuge with Mu'awiya, who entrusted to him important official posts.

KHITA [900 KARÂ KHITÂY]

KEITAN (A.), circumcision. The term is used indifferently for males and females, but female excision is particularly called hhifad or hhafd [q.v.]. In the dual, al-hhifadani are "the two circumcised parts" (viz. that of the male and that of the female), and according to tradition "If the two circumcised parts have been in touch with one another, ghast is necessary" (Bukhāri, Ghast, bāb z8; Muslim, Hayd, trad. 38; Abū Dāwūd, Tahāra, bābs 81, 83).

Some words connected with the root hh-t-n denote the father-in-law, the son-in-law, the daughter-in-law (hhatan, hhatana), marrying (hhatana). Some of these words must have belonged to the primitive Semitic language, as they occur also in the same morgante forms in North-Semitic languages.

Circumcision must have been a common practice in early Arabia. It is mentioned, not in the Kur'an, but in old poetry and sadify, and the ancient language also has special words for "undircumcised", sc. aligna,

akiof, aghiof and aghrai (Hebrew 'arel).

In hadily it is said that Ibrahim was circumcised in his 80th year (Bukhāri, Anbiya'), bab 8; Muslim, Fadā'i, trad. 15t). This tradition is subset on the Biblical report. Ibn Sa'd has preserved a tradition according to which the patriarch already circumcised at the age of 13 (Tabahāi, ifr 24). This tradition is apparently reflex of the practice of circumcision in the first centuries of Islam. We may confront it with the statements concerning Ibn 'Abbās' circumcision in hadili. According to some traditions (Ahmad b. Hanbal, i, 273) he was 15 years when Muhammad died. In other traditions it is said that he was already circumcised at that time (Bukārī, Isis'Adān, bāb 11; Ahmad b. Hanbal, i, 264, 287; Tayālisi, Nos. 2639, 2040).

Circumcision is mentioned in kadith in the story of the Emperor Heraclius' horoscope (Bukhāri, Bad' al-mahy, bāb 6). Heraclius read in the stars the mage of "the king of the circumcised". Thereupon an envoy in the king of Ghassan arrived who reported the news of Muhammad's preaching of Islam. This envoy appeared to be circumcised himself and he informed the Emperor of the fact that circumcision was a custom prevalent among the Arabs.

It is further recognised in hadith that circumcision belongs to pre-Islamic institutions. In the traditions which enumerate the features of natural religion (al-fifm), circumcision is mentioned together with the clipping of nails, the use of the toothpick, the cutting of monstaches, the more profuse length in the beard etc. (Bukhāri, Libās, bāb 63; Muslim, Taksed, trad. 49, 50; Tirmidhl, Adab, bāb 14, etc.). In a tradition preserved by Ahmad b. Hanbal (v, 75) circumcision is called susses for males and honourable for females.

There are differences between the several maginals's concerning rules for circumcision. Instead of giving a survey of the different views it may be sufficient to translate the passage al-Nawawi in his commentary on Muslim, Tahára, trud. [8] (ed. Cairo x283, 1, 328) has devoted to the subject, also because it contains a description of the operation:

"Circumcision is obligatory (widjib) according to al-Shāfi? and many of the doctors, susua according to Mālik and the majority of them. It is further, according to al-Shāfi?, equally obligatory for males

and females. As regards males it is obligatory to cut off the whole skin which covers the glows, so that this latter is wholly denudated. As regards females, it is obligatory to cut off a small part of the skin in the highest part of the genitals. The sound [salth] view within the limits of our school, which is shared by the large majority 🔳 our friends, is that circumcision is allowed, but not obligatory in a youthful age, and one of the special views is that the meli is obliged to have the child circumcised before it reaches the adult age. Another special view is, that it is prohibited to circumcise a child before its tenth year. The sound view according to us, is that circumcision on the seventh day after birth is mustahabb (recommendable). Further, there are two views regarding the question whether in the 'seventh day' the birthday is included moth.

The treatment of circumcision has not a prominent place in the books of law (see e.g. al-Kayrawani, Risāla, 161, 305). More important, however, is the value attached to it in popular estimation. "To the uneducated mass of Muslims" says Snouck Hurgrouje "as well as to the great mass of non-Muslims, both of whom pay the greatest attention to formalities, abstention from pork, together with circumcision, have even become to a certain extent the criteria of Islam. The exaggerated estimation of the two precepts finds no support in the law, for here they are on the same level with numerous other precepts, to which the mass attaches less importance" (De Islam, 🖿 1912, 30; Verspe. Geschriften, i, 402; cf. iv/1, 377). In Java circumcision is generally considered as the ceremony of reception into Islam and therefore sometimes called nielamahiselam ("rendering Muslim"). Apart from this term many other words denoting circumcision are used on Java (op. cit., iv/z, 205-6). In Atcheh circumcision of infidels only is considered as the ceremony of reception into Islam (Snouck Hurgronje, The Acheknese, i, 398).

1005, 353).

At Mucca, where the rite is called taker, children are circumcised at an age of 3-7 years, girls without festivities, boys with great pomp. On the day precoding that on which the rite will be performed, the boy, who is clad in heavy, costly garments, is paraded through the streets m borseback, several footman walking on both sides in order to prevent him from falling and to refresh him by more of a perfumed handkerchief. He is preceded by men with drums and duffs who accompany the deides sung by others. Nearest to the boy goes an elderly black handmaid of his father's, bearing me her head a brazier burning with chargoal, resin and salt. The second part of the procession is formed by the boy's poorer comrades, equally on horseback. The procession passes through the main streets during the time of 'apr and back to its starting-point a little before sunset. The female members of the family pass the evening with their friends; the party is enlivened by female

Next morning, at sunrise, the barber performs the operation. The foreskin is pressed together by more of a thong, the boy lying on his back, while his mother tries to divert his attention by sweets. A plaster is applied to the wound which usually is healed in a week. The operation is followed by a breakfast for the nearest relatives. It is to be observed that

KHITAN 21

Hadram's who still cling to their native customs, circumcise their children on the 40th day after birth (Snouck Hurgronie, Mehks, ii, 141 ff.).

In Egypt, boys an circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and his attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The kerchlef is used to cover # part of his face in order to avert the evil eye. As in Mecca he is preceded by musicians. The foremost person of the procession is usually the servant of the barber (who performs the operation), who bears his haml, a see of wood of a semi-cylindrical form, with four short legs; its front is covered with pieces of looking-glass and brass, and its back with a curtain. It is to be noted that the Coots also circumcise their boys (Lane, Manners and sustoms of the modern Egyptians, ch. on Infancy and Education).

D'Ohsson in his Tableau de l'empire othoman, Paris 1787, i, 231 ff., describes cheumeisieu as practised in Turkey under the heading "Circoncision, sunneth", a designation which is also reflected in the word sunnetdii for the barber who performs the operation. It takes or took place in the presence of the imim of mosque who accompanies the ceremony with prayers for the preservation of the child, who is usually 7 years old when he is circumcised. Plate of d'Ohsson's work shows children dressed for the ceremony, and plate adomed victims which is slaughtered at this occasion. Parties for relatives, friends and poor people as well as the procession are also men-

tioned.

The circumcision of the imperial princes used give occasion to the displaying of great pomp. Long before the appointed day intimation sent to the high dignitaries of the empire, sometimes even to the other courts of Europe, D'Ohason gives a translation of Mürād's III letter of invitation to the dignitaries on the occasion of the circumcision of the crownprince.

In North Africa children are circumcised at ages varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Dan, as cited by Doutté, Marrdhech, 351, at Algiers a stone knife was used for the operation. It reminds us of Joshua v. aff. where it is said that the Israelites at their enterlag the Holy Land were circumcised by means of stone swords or knives; some populations of the Dutch Indies also use a stone knife for the operation (Wilken, 212). In North Africa as well in Egypt often several boys are circumcised together, the father of the richest bearing the expenses of the coromony. A. Janssen (Contumes des Arabes au pays de Moab, 363-4) has observed that the Bedouins organise collective discumcisions every two years, as an economy measure; hence the children's ages vary considerably (see also al-'Uzayzi, Kāmūs al-'ādāt, Amman 1973-4, ii, 232, s.v. [-h-r). It should be noted here that in most Arabic dialects, the term for circumcision and its accompanying rites is taken from the root f-h-r, implying the idea of purity; this practice is therefore popularly felt as a purificatory rite.

On Java, circumcision of boys is often combined with the <u>khatm-</u> or halaman-ceremony. On the different designations of circumcision used in this part of the Archipelago, cl. Snouck Hurgronje, Verspeide Gaschriften, iv/1, 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is higher (x4-75 years)

than in circles which me in closer touch with Muslim law (10 years or younger). Before the preparations begin, the boy is taken to the tomb of his father or ancestors, where flowers and incense are offered and prayer is performed. Then a portico (terup) is made before the house or pendopo, and a small room (kobongan) is prepared where the operation is to take place. In or before this room several objects and dishes are placed which have a symbolical or ritual meaning. These preparations are concluded by a religious meal at which several dishes are offered to several gories of awe-inspiring beings. Festivities such as wayang, tayuban, diagongan precede or follow the ceremony. The diagongan always takes place in the preceding night and follows upon kataman, the recitation of some chapters of the Kur'an by the boy. On the day preceding circumcision, m procession is held in which the boys are either conducted by their relatives, or placed in a kind of cars which have the forms of sagas or other animals. They wear the bridegoom's dress, and are bung with gold and diamond ornaments, the visible parts of the body being besmeared with bords. It occurs also that the boy wears the Majdil's dress. Just in North Africa, poor parents have their some circumcised together with those of well-to-do people, who bear the exneuses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then is placed on the lap in an elderly person, usually a santri who has many chiktren, a circumstance which is expected to exercise a wholesome influence on the boy's marriage. For further details see Snouck Hurgrouje, Verspreide Geschriften, iv/1, 205 ff.

In Atcheh, boys are usually circumcised by the mudem (probably = mu'adhdhin) at the age of 9 or to years, immediately after finishing their Kur'an study. The operation (for details see Snouck Hurgronje, The Acheinese, i, 399-400) consists in = complete circumcision; in some parts of Java it is rather = incision. The boy here also has to diet himself. In Atcheh the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with circumcision. The father of the boy vows, e.g., to arrange a Rapa'i-performance or = visit a sacred tomb. In this case = bridegroom, is conducted = the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Circumcision is a rite practised by many peoples, primitive peoples of the present time as well as those mentioned in accient literatures, the Egyptians, the Arabs, the Israelites, the Edomites, Moabites and

Ammonites (see Jeremiah, ix, 45).

In the Indonesian Archipelago it was already practised before the rise of Islam in that part of the world (cf. G. A. Wilken, De basnijdenis bij others van den indischen Archipel, in BTLV, Set. iv, vol. x, 166, 180-1 = Vertpreide Geschriften G. A. Wilken, iv, 206, 220). The facts mentioned above may be arranged in certain groups,

a. Among many peoples females well as males are circumcised. We must consequently start from the view that the rite was not originally applied to one of these classes to the exclusion of the other.

b. The rite is sometimes repeated (Wilken, op. cit., 207). In the Muslim world we have the in-

stance of Malayans who in their country mem not circumcised in the way prescribed by religious law and who submit to the operation a second time when arriving at Djidds for the pilgrimage (Snouck Hur-

gronje, Mahha, ii, 312).

c. . Children are circumcised at ages varying between the 2th day after birth and the 15th year. It is consequently a rite which may take place in any period of childhood and which is often indeed combined with other rites peculiar to childhood such as the first cutting of the hair ("akika, cf. Doutté. Mardhack, 353), the filing of teeth, the conclusion of the study of the Kur'an. As we have seen above, there are linguistic features pointing to a relation between circumcision and marriage. These features, valuable m matter-of-fact evidence, an supplemented by reports of travellors. In Central Arabia, it is said (e.g. Batanuni, Rihia, 213), there are tribes among which the operation is applied to adult young men, in a painful and dangerous way; the bride of the patient stands opposite him during the operation; if he utters a cry of pain the projected marriage is abandoned (Snouck Hurgrouje, Mekka, ii, 141). In spite of doubts about the authenticity of such information, the relation between circumcision and marriage appears also from the Javanese custom of placing the boy who is operated, me the lap of a sastri who has many children (see above and Wilken, op. cit., 225).

d. Another group of characteristics is evidence of relation between circumcision and the transition into a tribal or religious community, e.g.: the boy's being conducted to the tomb of his father or of one of his ancestors (see above); the circumcision of several boys at one time (cf. also Wilken, op. cit., 220); the value attached to circumcision as the ceremony of reception into the Muslim community; cf. the Old Testament designation of circumcision in the "token of the covenant" (Genesis

xvii; see also Wilken, op. cû., 227).

s. Many accessory rites express the intention to avert danger: the boy's being dressed as a girl, the use of the handkerchief, the burning of charcoal and salt; the drums and duffs; the recitation of dhibs and prayers; possibly the displaying of charity and the slaughtering of victims may also be viewed in this

light.

Ethnologists put forward various interpretations for the phenomenon of circumcision: as a surgical operation meant to prevent phimosy and to help fecundity; us a religious rite connected with fertility or reception into the community; and as a rite of passage. The viewpoint expressed by Van Gennep in his Rites de passage, Paris 1909, seems to account for many of the features of circumcision mentioned above. It accounts for the fact that children are submitted to the operation at ages varying between the seventh day after birth and the beginning of the manly age or the time of marriage; that females as well as males are circumcised; that the rite is sometimes repeated; that it shows a deeply-rooted connection with marriage; that it is considered as the act of reception into a religious community; that it is sometimes preceded by a bath; that processions take place, which show a striking similarity with bridal processions; and so on.

ography on the topic in C. M. Kleffer, A propos de la circoncision à Caboul et dans le Logar, in Festschrift für Wilhelm Eilers, Wiesbaden 1967, 191 ft.

(A. J. WENSINGE) KHITAT (A.), pl. of khills, the various quarters of the newly-founded early Islamic towns which the Arab-Islamic chiefs laid out (root M.J.) for the population groups which they attracted thither or for their respective leaders. Historical-administrative concerns led fairly quickly to the appearance of a literary genre which consisted of a description of the historical topography of these bhitot. This happened in regards to Baghdad, and one finds chapters of this nature in the "geographical" works of Ibn al-Fakih al-Hamadhāni, and also in the introduction ■ the biographical history of the city by al-Khatib al-Baghdadi. However, the genre developed most of all in Egypt, aided by its strong particularist feeling. It is already discernible for al-Fustat in two chapters of the Futuh Misr of Ibn 'Abd al-Hakam, and is expanded in the History of the Kadis of Egypt and in a separate opusculum, now lost, of al-Kindi and also, a generation later, in another lost opusculum by Ibn Zālāk. The foundation of Cairo caused = expansion of these studies, as is apparently already discernible with Ibn Zūlāk's work and with a treatise from the mid-Fatimid period, now lost, by al-Kuda's. An apparently much more important work was written two centuries later by Ibn 'Abd al-Zābir, the biographer of Baybars, Kalawun, and al-Ashraf. All this literature culminated in the monumental work, the only one of its kind preserved for us (apart from the citations from the earlier works included within it), of al-Makrizi, al-Mamā^riz wa "l-i^rtibār fī <u>kh</u>ifaf Mişr wa "-Kähira, In fact, the contents are arranged not according to quarters but by categories of buildings, at the me time comprising a description and history of everything connected with them. The title of Makrizi's book was utilised later, because of its fame, in the survey conducted in the same spirit but adapted to modern Egypt, by 'All Pasha Mubarak, and in a flexible form, in the geographical-historical description of the whole of Syria by Kurd 'AlL

(CL. CAHEN)

KHITÄY [see AL-\$!H].

EHITBA (a.], "demand in marriage", whence "betrothal", i.e. the mutual promise of marriage which in certain legal systems can form the first stage of marriage proper (cf. the sponsals of ancient Roman law). But is this promise considered as entailing a obligation in Islamic law? In other words, does betrothal give rise to legal consequences?

According to Muslim authorities, the higher does not involve a contract. It is true that it involves an offer and acceptance, but before the acceptance made, it is merely a demand in maxilage and does

not form a legal act.

The Malikis, apparently uniquely, give more importance to the betrothal than the Hanalis or even the Hanbalis, but the principle remains that the act of betrothal does not involve a legal obligation. However, betrothal and only take place when there are an unlifying factors present which would prevent a valid marriage; every impediment to marriage is an impediment to betrothal. The parties to a kailful are on the one hand, the man making the demand in marriage, and on the other, the woman, who may be represented by her walf [see Bikkit]. Yet if betrothal does not in principle involve any legal obli-

gation and is not a lagal act, certain effects never-

x. The right of seeing the woman. Certain authorities state that the fiance has this right, even if looking at her is accompanied by sexual desire. Ibn Rushd specifies that this right should be limited to seeing the face and hands only (Bidāya, ii, 3); others extend the right, but they never go if far as to admit the possibility of the couple being left alone (halves), which is the right to be alone with each other away from all indiscreet looks.

2. The right of priority. Betrethal gives the flance a right of priority, in that once woman is betrothed to man, that woman cannot be sought in marriage by another man; but this right is only

sanctioned by the Malikis.

Dissolving of a betrothal. Either of the two parties can end the state of betrothal unilaterally. The only problem is that of disposal of presents which have been exchanged, and which we subject to the rules of donation. However, in various Islamic countries, part of the dowry is paid over at the time of betrothal, and this must in all cases be given back, Finally, there remains one problem; can one award damages to the victim of unjustifiable breakingoff of betrothal? Although certain modern Islamic authorities are endeavouring to introduce an obligation to pay an indemnity for damages in the case of an ill-founded breaking-off, the action for damages is not an absolute right. Even so, many Islamic countries have been compelled to adopt the solutions of western law, since on the plane of practical law, betrothal is of me legal concern except in case of its being dissolved.

KHITTA ("piece of land marked out for building upon"), a term used of the lands allotted to tribal groups and ladividuals in the garrison cities founded by the Arabs at the time of the conquests. The lay-out of these cities everywhere followed the kinship organisation of the conquerors, who were distributed in tribal quarters around a centre housing the Friday mosque and the ddr al-imdra. The smallest unit of the bhites was the dar, in the case of prominent individuals often a sizable estate (usually known as kat('a), otherwise ■ modest plot of land occupied by one or several families. Next came the quarter based the smallest political unit of the tribe (what is often known as the 'ashirs in Arabic sources, "clan" "subtribe" in modern literature); these quarters usually had their own mosque, and how small the unit in question tended to be is indicated by the fact that the tribe Kinda, which was strongly represented in Fustat, Damuscus and Hims in addition to Kufa. had at least twelve such mosques in the latter city. Finally, there was a larger quarter reflecting the tribe proper, often endowed with its own djabbana, a piece of unbuilt land serving, inter alia, as a meeting place and a cemetery. In Syria, where the Arabs settled in existing cities, the tribal quarters were less selfcontained and possessed neither mosques me disbbilings of their own.

The histat served as military and administrative units from the start, but their small size was impractical and amalgamation of the tribal groups began already with the foundation of Kūfa, which was divided into sevenths, to be continued under Mu'awiya when Bayra and divided into fifths, and other settlements into quarters. Every such new division

was placed under an officially appointed leader, the ra's al-rub' or ra's al-khums, who mee selected from among the chiefs of the larger tribal groups represented in the division, and who was responsible for fue command of the division in war and the maintenance of law and order within it in peacetime. The lesser groups continued to serve as military and administrative subdivisions under their own leaders. The entire range of tribal chiefs (the asheaf of the Umayyad period) served as the link between government and subjects in the Sulyanid system of Indirect rule, ashraf and governor coming togother in the latter's madilis where information, orders and requests were exchanged, accompanied by a traditional display of generosity. The ra's al-rub' | ra's al-thums in turn passed on information, orders and gifts in his own madilis, and the process was repeated in the madiális of the lesser chiefs until we reach the smallest political unit reflected in the histar.

The erosion of the tribal ties in the Marwanid period rendered the system obsolete; the agiral disappeared from the political scene, while the highest survived only as place-names. The larger quarters and fifths, on the other hand, persisted until the end of the Umusyad period, physically as military divisions, now housing regiments rather than tribal groups, and morally as categories for the definition of factional loyalties. When the 'Abbäsids came to power these too disappeared, and the allotments in Baghdad (known = kata's' rather than kistal) were made on the basis of geographical provenance, not

tribal affiliation.

EXTWA. on the western bank of the Amu Darya, site of the last capital of the khanate of Khwarazm, subsequently called the khanate of Khlwa. Its origins are bound up in the history of Khwarazm [q.v.].

Khiwa was the third capital, after Gurgandi (385-515/995-1221) and Kāih [q.vv.]; the latter was the capital during the 8th/14th century, in which period, with Khiwa, it was governed by the Cagharay, and Gurgandi (subsequently called Urgend) by the Goiden Florde. After the restoration of unity (under the rule of the Shaybanids) in the 9th/15th century, the capital was again established at Urgend, but noither this dynasty, nor the Djudi branch of the Ozbeg dynasty that succeeded it, was in m position to restore stability in the region; brigandage increased, and the closure of the commercial routes which crossed the land hastened, at the same time, its economic decline and its relative isolation.

During the second half of the reign of 'Arah Muhammad (1013-38/2603-23), which perhaps coincided with the drying up of the left branch of the Amū Daryā, the capital was transferred to Khiwa, and it was then that the khāmate of Kh-waram began to be called the khāmate of Khiwa. Little is known of the early history of this town; archaeological remains enable us to date its foundation between the 6th and 8th centuries of the Christian era; it is mentioned by the Arab geographer al-latakhri in the 4th/10th century. The inhabitants of Khiwa were distinguished from the other Kh-waramians by the fact that they were Shāfi'is rather than Hanafis.

The khanate composed of various feudal districts (begliss) somewhat loosely linked together, and their chiefs (bdsim) recognized the sovereignty of the blow of Khiwa. The degree of unity of the khanate depended on the personal power of the khan; it is relevant, in this regard, to make special mention of Abd al-Ghan Bahadur Khan (1054-73/1643-63) whose History of Khiwa has survived and is available to us. After the conquest of Mashhad by Anusha, we the end of the 11th/17th century, the sovereigns of

Khiwa took the title of that.

The dynasty of the Özbegs was followed by that of the Cingizids, which occupied the throne of Khiwa until 1804, but real power was concentrated in the hands of the Inak (tribal chief) of the tribe of the Kungrat [q.v.]. The 18th century saw me acceleration in the process of disintegration, when to the effects of internal strife there were added the fruitless attempts at conquest made by Peter the Great in 1717, and by Nadir Shah in 1153/1740, while invasions by nomads and attacks from the Turcoman Yomuts were particularly violent between 1153 and 1184/1740-70; however, in 1184/1770, the Inal Muhammad Amin defeated the Turcomans, restored relative prosperity to the region and undertook the construction of a new city on the foundations of the old. In the course of this reconstruction, which lasted seventy years, a number of remarkable architectural monuments erected, including the palace of Tashkaul (1832), the mausoleum of Pakhmavan Shakhtuda (1835) and the madrasa of Allah Kull Khan (1835), which are still standing today

Under the Isak littizer, who became the first Kungrat & A is a 1804, the khānate attained its greatest territorial extent of the modern period, stretching from the mouth of the Sir Darya on the Aral Sea m far m Katai Mawr on the Kushk; this sovereign irustrated an attempt by Bukhārd at annexing the casis of Merv, and he improved his relations with the Turcomans who became the first line of defence of the khānate. His successor, Muhammad Raḥim Khān, who mm the most powerful khār of the 19th century, made a number of successful forays into the territory of the Kazaks, subdued the

Kara Kalpaks and ravaged Khurāsan.

Although it had repelled an attack by the Russians in 1839-40, Khiwa was forced to accept their economic and diplomatic demands, which had the result of reinforcing the Russian presence which was already showing itself in Central Asia. The conflict which broke we with Bukhārā and the Turcomans further enfeebled the already divided State, and in 1873 the Russians were able to take possession of the entire territory without striking a single blow. The posses treaty gave them the right bank of the Amil Danyā and made the history of Khiwa a vassal of the Tsar.

The Turcomans continued their struggle against the <u>Khānate</u> and in 1918, the <u>khān</u> Islandiyār (1910-18) was assassinated at the instigation of <u>Dimayd</u> Khān, the Turcoman chieftain, who reduced sovereign, Sa'id 'Abd Aliāh (19x8-20) to the status of puppet. After in initial failure in 1918, in Soviets waited until 1920 before putting an end to the khānate of Khīwa and on the 26 Aprīl 1920, the People's Republic of Khwāraxm was proclaimed, with government of young Khīwans. On 5 September 1921, this was replaced by the Soviet Socialist Republic of Khwāraxm, controlled by the Bolshoviks, and in November 1924, it became the oblass' of Khwāraxm in the Soviet Socialist Republic of Uzbekistan, with Khīwa as provincial capital (194900); between 1918 and 1924, there is considerable movement of resistance to the Soviets, led by Djunayd and supported by the deposed ½hān.

The Soviets did nothing to assist the development of the town. Although it is meentre for cotton-growing and has brickworks, dairies and mearpet-weaving industry, modern Khiwa no longer plays a vital role in the economic or political life of the Uzbek S.S.R.

(W. Barthold - [M. L. Brill.])

KHIYABANÎ, SHAYKH MUHAMMAD (1879-1920), Persian religious scholar and political leader. Born in Khāmna, Ādharbāydiān, the son of a merchant, Khiyabani received his early education there and then moved to Daghistan in the Caucasus, where his father lived. After returning Tabriz, he studied fikk, usel, and Ptolemaic astronomy, and became a muditabid leading public prayers in two central mosques. Responding to the Iranian constitutionalists, Khiyabani joined the Social Democratic Party and also became a leading member of the Adharbaydjan Provincial Council which played a decisive role in the deposition of the anti-constitutionsäst Shah Muhammad 'All (2007g). Khiyabani was then elected to the second Parliament, where he rejected the rgrr Russian ultimetum and condemned the Persian government which, the British recommendation, was willing to compromise. The Parliament rejected the ultimatum but the Regent, Nasir al-Mulk, dissolved Parliament and accepted the ultimatum, leading Khiyabani to denonnce this action in a long speech before the people of Tehran. He then fled to Russia, and later on returned to Tabriz secretly. After the two Anglo-Russian treaties (1907 and 1915) there remained little for the existence of Khiyabani and his party. Suddenly, however, the 1917 Russian Revolution broke out and the Soviets withdrew the claims the Tsars had made against Iran. At I point, Khiyabint and his friends re-established the Democratic Party and founded Tadiadded, a newspaper which published Khlyabani's speeches and articles. Among KhiyabanFs targets of attack were the British South Persia Rifles and the existing Persian régime es being submissive to foreigners. Before the end of the War, Ottoman troops invaded Tabriz, arrested Khiyabani, and imprisoned him in Rida lyya, but after the War he returned to Tabric. In 1919 the British signed an agreement with the Wuthuk al-Dawla which gave them control of the Iranian army, finances, and customs. Under the influence of Khlyabani and others, the treaty was not passed in Parliament. The Wuthak al-Dawla then suppressed Khiyabani's party and resigned. Khiyābāni rose against the government (now in the hands of Mushir al-Dawla) and in April 1920 he declared his province Azadistan ("home of freedom"). Mushir al-Dawla appointed Mukhbir al-Saltana (Mahdi Kuli Hidayat) governor of Adharbaydian, and the latter put an end both to the six-month old movement and to Khiyabani's life.

Khiyābānī has been described as a rebel, and his movement as a separatist one. Khiyābānī's attachment to the Soviets has also been a matter of controversy. However, he has been widely recognised mustional bero, whose murder was lamented by poets

such as Bahār, 'Āril, Şafwat, and Āgāb,

(ABDUL-HADI HAIRI)

EHIYALA [see EMAYL].

EHIYAR (A.), a legal term meaning the option or right of withdrawai, i.e. the right for the parties involved to terminate the legal act unilaterally. This option is always included in the legal act, and in this case, the act does not irrevocably bind authors. The word third implies a choice on the part of the holder of the right of option, who may either confirm the act or render it void; the legal act containing an option is not void in origin, but its validity is nevertheless precarious and subject to confirmation. The act giving rise to an option corresponds in western law to an act liable to a suspensory or resolutory condition, according to the nature of the option.

Options (Miydrát) may be either conventionary or legal in nature.

I. Conventionary options. Included amongst these, there is first of all the conditional option, thirds at the clause by means of which, in certain legal acts (in particular, contracts), one of the parties, or both of them, reserves the right to annul or to confirm, within a specified time, the legal act which they have just drawn up. This clause is undertainly equivalent to more purely potestative suspensory condition. The

decision of the one confirming or rejecting the act does not have to be justified. The lawyers of the four schools adopted this institution without difficulty. The other conventionary option is the one called by the jurists that of designation (higher alta'yin). It can only be inserted into alternative obligations, and allows the one making the stipulation to make his final choice between the different objects of one and the same obligation. Thus there are only two conventionary options, one common to all four schools and the other peculiar to the Hanails and Mallids.

2. Legal options. On the other hand, legal options, in which the law automatically grants the options without the parties having to stipulate them, very numerous. Some Muslim authors number them at saventeen. Frand, injury, hidden defects, eviction, and many other deeds, are only to be senctioned in Islamic law by properties. In the fish treatises, only a brief allusion is made to legal options, apart from the option in the case of a latent defect making the agreement void (khiyār al-'ayb or hhiyār al-nahisa). The option of sight (khipdr al-ru'ya) prosents a problem. It a rejected by the Shali'is, and there exists concerning it as many different doctrines as schools of legal opinion; see Ibn Rushd, Bidaya, Cairo 1952, il, 154. Some countries have introduced the principle of the option of sight into their new civil codes: Egypt (art. 429), Iras (arts. 517-23), Syria (art. 389) and Libya (art. 408). Khiyav is also to be found in Imami law (Persian civil code arts. 396-457). In the fish treatises, there is no systematic exposition of the idea of option, although certain modern jurisconsults have tried m remedy this.

It should finally be noted that the system of options is not peculiar to patrimonial law. There exist also options in family law, e.g. in the case of incompatible marriages, m when a minor still below the age of puberty has been married by a mail other than her own father or grandfather; when the minor reaches his majority, he can choose between maintaining the marriage in being or dissolving it.

KETYAR (In theology) [see PERTIVAR].

KHIZĀNA [600 MAKTABA]

KHIZANE-I 'AMIRE [000 EHAZÍNE].

KHLOT [see KHULT].

KHODJA in the strict is the name of an Indian caste consisting mostly of Niziri Isma'llis and some Sunnis and Twelver Shi'lls split off the Isma'ill community. In a looser sense the name is commonly used to refer to the Indian Nizaris in general including some minor communities like the Shamsts in the area of Multan and some Momnas in northern Gudiarat. The history of Nizari Isma'llism on the Indian subcontinent, especially in the early centuries, is largely obscure because of a lack of reliable sources. The Khôdla religious literature [see SATPANTH] contains me highly legendary accounts of the activity of Nizari da's, mostly unreliable chronological data, and bare lists and genealogies of the pirs and their descendants. On **mil** basis of this material a few comprehensive historical accounts have been written since the 19th century by khôdias and members of the related Imam-Shahi community.

It is unknown if any of the Isma'll communities existing in India before the split into the Nizari and Musta'lawi branches in 487/1094 subsequently joined the Nizaria. Khôdia tradition makes was Satgur Nür. also called Nor al-Din, the first day who, coming from Daylaman, was active in Pafan, Gudjarat, Dates ascribed to his activity vary widely. According to one version he sum sent by the saides al-Mustansir (427-87/1036-94) in order to preach for his we Nizar; according to another, by the imam al-Hasan 'alla dhikrihi 'l-salam (557-61/1162-6). He is alleged to have converted the Hindu king Siddharādja Djaysimha (d. ca. 1143). Yet his place in the lists of pirk would seem to put him in the first two centuries of Islam, and he is even identified with the imam Muhammad b. Isma'll. His shrine at Nawpari appears to date from about the end of the 18th century. His historicity has been doubted. Evidence for the prosence of Nizaris in Cudiarat in the first half of the 7th/13th century is too vague to be trusted. Most early Nizārl activity rather appears to have been centred on Sind.

The beginnings of the Nisari 44 wa in Sind are connected by tradition with the pir Shams al-Din, though the provious pir, Salah al-Din, who is also called the father of Shams al-Din, is mentioned to have already been sent from Alamüt to India. Legend, on the other hand, identifies Sharus al-Din variously with Shame i Tabrizi, the spiritual guide of Dialal d-Din Rami, or with the first post-Alamat imam Shams al-Din Muhammad who, it is alleged, turned the imamate over to his son Käsim-Shah in order to come to India. While most of the religious poetry ascribed to him names Käsim-Shah as the contemporary imam and thus would place him around the turn of the 7th/13th century, several dates mentioned in the poetry for his activity are in the first half of the 6th/12th century. A legendary account of his meeting with the Safi saint Baba' al-Din Zakariyya' of Multan (d. 665/1266) appears to be without historical foundation. His lifetime thus cannot be dated with any degree of certainty. He is described as having been active in Multan and Učch in Sind and his shrine is located in Multan. The community of the Shamsis claims to have been converted by him to Nizāri Ismā'ilism. They live in Multān, Rāwaipindi and elsewhere in Pandiab and are mostly goldsmiths.

The was two pers on the traditional fists, Nastr al-Din and Shihab (also Sahih) al-Din, are said to be the and grandson of Shams al-Din. It is likely, however, that man minor figures man omitted. There is no information in their activity except that they worked clandestinely. Shihab al-Din was succeeded by his Sadr al-Din who is credited with the conversion of the Khôdias from the Lohanas, a Hindu caste. He is also said to have given them the name Khōdia, derived from the Persian hhwadja, master, which corresponds to the Hindu term thakur 🖿 in addressing Lobanas and <u>Khōdi</u>as, as the Lobanas are considered Kshatriyas. Death dates given for him range from 770/1369 to 819/1416. The latter date reasonable. Sadr al-Din, according to tradition, also laid the foundation for the communal organisation of the Khodias by building the first three djama at-kanas (assembly and prayer halls) and appointing their makhis (leaders). The centre of his activity We Učch and his shrine is not far from it near Dictur.

Sadr al-Din was succeeded as pir by his son Hasan Robir al-Din of whom a short vita was included by 'Abd al-Hakk Dihlawl (d. 1052/1642) in his hagiographical work Akhbār al-akhyār. His appearance in a list of shaykhs of the Suhrawardi order reflects the close links of Nizari Ismā'ilism with organised Sūfism throughout this period. According to the Akhbār

al-akhyār he traveled widely before settling down in Ucch and converted many Hindus. The death dates mentioned for him range from 853/1449 to 895/2490. Most accurate are probably those giving 875/1470 or 876/1471. His shrine is outside Učch. As Kabit al-Din's successor, his brother Tadi al-Din was appointed by the imam. He was opposed by some of the numerous sons of Kabir al-Din who were also quarreling among themselves. After Tadi al-Din's return from a visit to the imam, they accused him of embezzling the tithes for imam and he is said either to have died of the shock or to live committed sulcide, probably not very long after his brother's death. His grave is in Jhun in Sind. After his death Imim Shāh [q.v.], son of Kabir al-Din, vainly tried m gain the allegiance of the Khodies in Sind. After a visit to the imam in Persia he settled in Gudjarat, where he succeeded in converting numerous Hindus, mostly of peasant communities. Legend maintains that he converted Maḥmūd Begfā, sultan of Gudjarāt, who gave his daughter in marriage to Imam Shah's son Nar Muhammad. Imam Shah died in 919/1513 in Prana, a town founded by him, where his shrine is located. Although he is not recognised as a pir by Khodja tradition and according to some accounts seceded from the Isma'lli community, it appears will likely that the schism occured only under his son and successor Nar (Nür) Muhammad Shah. The latter at an unknown date demanded that the smam's tithe should no longer be sent to Persia but be turned over to himself, claiming that his father Imam Shah had been the imam and that he was his successor. The majority of his followers accepted his orders and came to form the separate Imām-Shāhī community while a minority remained faithful to the Isma'll imdms.

The Khodia lists of pira name after the pir Tadi al-Din the Pandiyat-i jawanmardi, a book of religious admonitions attributed to indea al-Mustansir II, in place of a person. According to tradition, the indm decided in view of the dissension in mil pis's family after Tādi al-Dīn's death not to appoint any pir, but instead to send the book as guidance for the faithful. There is, however, reason to assume that the book reached India only around the middle of the roth/ 16th century, probably after the Imam-Shahl secession. It may have been sent at that time with a view to easing the leadership crisis resulting from the schism. Only one pir mentioned in meet of the lists after the book was active in India, sc. pir Dadu. is said to have been sent by the imam from Persia to Sind with the mission of stopping the conversion of Ismacilis to Sunnism. He was forced to leave and settled first with mee followers from Sind in Navanagar (Djamnagar) in Gudjarat. III 1584 he moved to Bhudi where he died in 1593. An important role in reorganising the community and the prayer is ascribed to him.

After the end of the line of pirs the imams came to be represented at the local level in India by makis and bămās. This development evidently reflects an attempt of the imāms to gain more direct control over the Indian communities. However, some local families of sayyids, i.e. descendants of the pir Kabir al-Dīn, retained much influence. Host important among these were the Kadiwala sayyids of Sind. Their ancestor, Sayyid Fāḍil Shāh, was active in Kadi around the middle of the 17th century. In Sind the family resided in Rali and after 1780 in Tando Muhammad Khān. Shrines of early members of the family members are known as authors of extant gnans. Two soms of Fāḍil Shāh, pir Maghāyikļ and Ḥasan pir, played a

major role among the Mönnas in northern Gudjarāt. Mashāyikh (d. 1108/1697 in Ahmadābād) actively endeavoured in suppress Hindu practices in the community and cut his allegiance to the Ismā'lli imims. His extant works espouse strictly Islamic practices and reflect Sunni and Ithnā 'Asharī tendencks. He is said to have cooperated with Awrangzih in his wars against the Shi'ī rulers of Bidjāpūr. His followers later quarreled whether he are a Sunni or a Shi'ī. His brother Hasan remained loyal to Ismā'llism and became the saint of the min Mönnas. In addition to his mausoleum in Thanapipil near Diūnāgafh, Khōdjas and Nizāri Mōmas in 1717 built a shrine in his honour in Ganod in Gudjarāt.

The Khodjas were active in the commerce between India and East Africa at least since the 17th century, and in the 19th century, especially after the 'Umani sultan Sayyid Sand transferred his capital to Zenzibar in 1840, they came to settle in large numbers on the island and later in mainland East Africa. The coming of the Agha Khan [q.v.] Hasan Alt Shah to India in 1840 led to maggravation of earlier conflicts in the Khodia community about the rights of the imam. In 1866 the judgment of Sir Joseph Arnould in a law suit brought against the Agha Khan by excommunicated members of the Barbhai party fully upheld his rights and authority, and the dissidents definitely separated from the community as Sunnt Khodjas. Later dissidents seceding in 1877 and 1901, formed Ithna 'Ashari Khōdia communities in Bombay and East Africa.

For Khödja religious doctrine, sea isml*iliyva and satpants.

(W. Madelung)

KHÖDJA BFENDI, Sa'd at-Din B. Hasan

Din B. Hiri; Muhamnad Ispanini (1536-99), z
famous Ottoman shaykh@!-Islam, statesman,
and historian.

Life. He was born in 943/1536-7 in Istanbul, and died there on 12 Rabis 1 1008/2 October 1599. His grandfather, one of the notables who had joined Sultan Selim I after the battle of Caldiran, had served Sellm I as hāfip, and his father Hasan Dian had been an intimate courtier to the same sultan. Said al-Din studied ander prominent scholars, entered the fulama? career and became assistant (müldrim) to the multi-Ebu 'I-Su'ud [see Anu 'L-Su'On] at the early age of twenty (963/2555-6). Soon after, he was appointed, with a salary of 30 aspers, to the Murid Pasha madrate in Istanbul. In Shawwal 971/May-June 1564 he was appointed, "with forty", to the madrate of Yildirim Khān in Bursa, and we year later was promoted to the kharigi rank. After another promotion in Dhu'l-Hididia 977/May 1570 he rose, in Ramadan 979/January-Pebruary 1572, to the rank of professor

at me of the eight courtyards (sain) attached to the Fatih Mosque in Istanbul. When the preceptor (khōdia) of Prince Murad dled, Sa'd al-Din was appointed in his place (Muharram 981/May 1573) and sent to Mantsa. This was the beginning of a long period of prosperity and influence for Sa'd al-Din. who was henceforth known as Khôdia or Khôdia Efendi. When his pupil became sultan 🖿 Murad III, 🜃 followed him to Istanbul 🖿 khōdja-i sulfānī (8 Ramadan 982/22 December 1574). As the sultan's trusted adviser, he soon became influential in politics, even in foreign affairs such as the establishment of relations with England. When Mehemmed III succeeded to the throne in 1595, it was to Sa'd al-Din that he was expressly referred to for advice, the decree saying that "consultation (meshwere) should be with Khôdia Sa'd al-Din in all matters of appointing viziers and religious officials". Although Sa'd al-Din, in Murad III's special medilis-i meshweren, had strongly advised against the "Long War" with Austria begun in 1393, it was he who backed up the wavering sultan Mebernmed III, especially in the Egri (Erlau) campaign. In the great meshword on 20 October 1596 it was Sa'd al-Din who with his courage carried all with him, prevailing on the timid sultan to stand fast and eventually win the battle of Hat Ovasi (Mező Keresztes), After this triumph, Sa'd al-Din 📰 into disgrace over 📰 appointment of the aext Grand Vizler; on o <u>Diumādā II 1005/28 January</u> 1597 his opponents at court brought about his dismissai from the office of preceptor. Expressly ordered to refrain from intervention in state affairs, Sa'd al-Din remained in disgrace for 14 months, As soon as he could, in Merch 1598, the sultan fully rehabilitated Sa'd al-Din and raised him, against some resistance, to the office of shaykh ill-Islam, together with that of sultan's preceptor. This carned him the title Diami* al-Rivisataya. At this time Said al-Din took the inefficacy of Saturdil Mehmed Pasha as scedar on the Hungarian front men opportunity to state his views: he drew up a memorandum, outwardly directed to the Commander, but obviously meant for his opponents at court and later circulated m a piece of insha? (it was published by Nafuna in his official history). It voices the sense of impending misfortunes that threatened the Ottomans, and justifies, in the matter of meshweret, what Sa'd al-Din had done and considering his duty; not to "meddle" with of state, but to render services to it. In 1500 this meant persuading both the sultan and his mother to pay out of their treasuries the funds needed for the next campaign. After a successful term of office as mufti, he died during prayer in the Aya Sofya Mosque.

As an eminent 'dim, Sa'd al-Din distinguished himself, even more than for his learning, for his peactical ability and political far-sightedness. Between 1579 and 1399 the preceptor of two sultans, the hero of Mac Ovasl "was the main voice directing the state's domestic and foreign policies" (H. Inalcik, The Ottomen empire, London 1973, 97). When the new Head Astronomer, Taki al-Din, had convinced him of the necessity of revising Ulugh Beg's Tabler, Sa'd al-Din at once persuaded the sultan to issue the formans necessary to establish m observatory in Galata (1577) This project was short-lived; the shaykh til-Islam Kädtzäde Ahmed Shams al-Din, an enemy of Safd al-Din, managed to have it destroyed already in 1580 (A. Adnan-Adivar, Osmanlı Kirklerinde ilim, Ankara 1943, 84-6; A. Suheyl Univer, Islanbul rasalhanesi, Ankara 1969, 35, 51-4, 61-2). But Taki al-Din's attachment to Sa'd al-Din is apparent in the grateful dedications to him of several of his astronomical works. The Khôdia attracted writers and younger scholars of growing fame, some of whom worked as his assistants (Nishāndjirāde, Nādhī) or were his protēgės (Loķmān); even Muntafā 'Ālī, his severest critic, dedicated a book to him. The charge of nepotism and favouritism which membrought against him, especially by 'Ālī, does perhaps deserve closer inspection within the framework of the times. Of his five was one died before him; who became shayhā illustam and two were hādī 'askers; three of his grandsoms were shayhā ill-Islam (\$. Turan, art. Sa'd-id-Dim in IA; I. H. Danismend, Osmanti decite erkāni, 179).

Works. Although he did write poetry, he was essentially a prose writer. He translated Arabic and Peralan works into Turkish (see Turan's article in (A). His fame as a writer rests on his Tegi al-taurdright begun under Selim II and dedicated to Murad III in 982/1575. As a carefully-written history, based on critical examination of a number of named sources, the work rightfully superseded the older chronicles. It deals with the history of the Ottomans from their beginnings to the death of Sellm I. In It Khodja Sa'd al-Din displayed his celebrated powers of eloquence, but he was not showy in pompous, as has sometimes been alleged, indeed, the clarity of his exposition not lost on contemporaries and later writers. While it is true that his Tidi abounds in Arabisms and Persianisms, he could often be simplicity itself: indeed, the contrasts are great and have only been disregarded to some extent because 5a'd al-Din is habitually classed among the writers of "ornamented prose". On the many MSS, of the Tādi, . F. Babinger, Die Geschichtschreiber der Osmanen und ihre Works, Leipzig 1927, 125-6; M. Aktepe, Haca Sa'daddin Efendi'nin Tdcü't-taudrih'i ve bunun zeyli hakkenda, in TM zili, 206-20; Turan, art. in IA; 🖿 Flemming, Türkische Handschriften, i. Wiesbaden 1968, 105-6. The work was printed in two volumes at Istanbul in 1279/1861. Based - this edition, a modernised version in Latin script by I. Parmaksisogiu has begun to appear in 1974. The book found early recognition in the West, and parts of it have been translated; see Babinger, GOW, 126. A continuation of the Tadi al-terarità is Mustain Sail's (d. 2025) 1616) Zubdai al tamoribh. An abridgement is the first part of Hasan Bey-Zade's (q.v.) History. Solakzade (d. 1067/1657) and Dizyedartade (d. 1208/1794) made extensive use of the Tadi.

Sa'd al-Din's Selim-name, a collection of anecdotes based on the recollections of his father Hasan Dian, was printed together with the Tādi al-tauārikh (ii, 221-401).

Bibliography: 'Ata'i, Dhayl al-shaha'it, Istanbul 1268/1851-2, 429-31; F. Bahinger, El', s.v.; of the works cited above, Turan's article has the fullest bibliography. (B. Plemanne)

KHODJA ELI (see kodia kui)

EHODIAEV (FAITULIAN Knopla) (1896-1938), Bukhāran revolutionary and nationalist, was born in Bukhārā the son of mealthy merchant. In 1907 he went with his father to Moscow, where he received a Russian education. In 1913 he joined the so-called Djadid Muslim reformist movement [see Maddo], which was opposed to the feudal regime of the Amir. In 1917 he became moember of the newly formed Young Bukhāran Party and in December left for Tashkent with the avowed object of working for the overthrow of the Amir. By 1920 he had become leader of the Young Bukhārans. He declared himself in favour of the Shari'a remaining the basis of the new republic of Bukhārā, at the foundation of which he almed, but this was, and still is, pronounced mistake

by the Communist Party of Russia. On the final overthrow of the Amir's regime in September 1920, Khodiaev became a member of the Communist Party and constituted head III the newly created Peoples' Soviet Republic of Bukhārā. He vigorously opposed the counter-revolutionary Basmači movement ied by Enwer Pasha, the Turkish ex-Minister for War. For this and other services to 📖 Bukhāran people, he was awarded in 1922 the Order of the Red Banner. Visiting Berlin in 1922, Khodiaev became active in trying to establish economic relations with European countries. This policy seen maiming at the economic independence of Bukhārā and in 1923 incurred the serious disapproval of the Central Asian Bureau of the Communist Party, to the setting up of which Khodiaev had always been opposed. In the same year, however, he took part in the 12th Party Congress in Moscow as delegate of the Bukhāran Communist Party. On the delimitation of the Central Asian Republics in 1924, the greater part of the former khanate of Bukhara was embodied in the Uzbek SSR, of which Khodieev was in 1925 appointed President of the Council of Peoples' Commissars, a post which he retained until his downfall in 1937, when he was dismissed from office and arrested. He num later indicted on a number of charges which included those of plotting against the Soviet state for the independence of Turkestan, of secretly aiding the Besmačis, and of being a British agent. While much of the indictment was probably based on fabricated evidence, there is little doubt that, as he himself admitted during the trial, Khodisev was siming at the national independence 🛍 Turkestan. He insisted, however, that he me not actuated by anti-Russian or anti-Bolshevik feelings. He was executed in 1938. Excluded from the list of other Central Asian personalities posthumously rehabilitated between 1955 and 1957, Khodiaev mes not rahabilitated until 1966 on the service of the 70th anniversary of his birth. Although he was then said to have made "errors of a nationalist character", he was described as "a prosuineut revolutionary". The long biographical introduction to the edition of his selected works published in 1970 is wholly laudatory, refers only briefly to his differences with the Party authorities and makes no mention of his downfall, trial and execution.

(G. E. Water, Ra)

KHODJAND (SOE KHUDIAND).

KHOI, Krov, Iranian town (population in 1952; 49,000), situated in long. 45° 02' E., lat. 38° 32' N., in the shahruida of the same name in the suita of West Adharbaydian; the Kurdish district of Qutur is in-

cluded in the shahristan of Khol.

The town lies at an elevation of 1040 m./3,444 ft., in a plain known locally as Khôi čukūri ("the Khōi depression"), because all the surrounding areas at a higher elevation. The mountains surrounding the Khōi plain protect the city from the cold winter winds (the Harāwil range along the Turkish inoutier to the north-west averages over 11,000 feet), and consequently Khōi as a warmer climate than either Tabriz or Ridā'iyya. Minimum winter temperature is —14° C/6.5 F; summers are very hot with hot southerly winds. The economy of the region is partly pastoral, partly agricultural; crops include grain, pulses, to-bacco, apricots in cotton. The region has minimum population in Sunnis sum Shi's whose first language is either Turkish or Kurdish (the name Khōt is said

to mean "salt" in Kurdish, and cartainly salt-mines are still worked in the area). In the bakksh of Shahpur

there are several Christian villages.

In ancient times, Khôi acquired commercial importance by virtue of its location on the silk-route.

Safawid times, the proximity of Khoi to the Ottoman frontier made it with town of great strategic importance; in 920/1514 Shâh Ismā'il I suifered a decisive defeat at the hands of the Ottoman sultan Selim I on the plain of Caldiran [q.v.], some yo miles north-west of Khōi. In Kādjār times the strategic value of the town continued because of its proximity to the Russian frontier; the ruins of the walls built by General Gardane early in the 13th/19th century at the request of Fath 'Ali Shâh are still visible. More recently, Khōi saw fierce fighting between nationalist and royalist forces prior to World War I.

KHOKAND, Arabic orthography, Khwakand, later written Khukand (which is given a popular etymology, khūš + kand = town of the boar), a town in Farghina [q.v.], where me also for the other spellings and the foundation of an independent Orbeg kingdom with Khokand as capital in the 12th/18th century. The accession of the first ruler of this Min dynasty, Shahrukh, was followed by the building of a citadel; another citadel later called Eski Urda was built by his son, 'Abd al-Karlm (d. 1746). 'Abd al-Karlin and his nephew and successor Irdana Bl are several times mentioned in the history of the Atalik Muhammad Rahim, afterwards Khan of Bukhara (d. 1759, see BUKHĀRĀ); Muḥammad Wafā Karminagi, Tubfat at-Khani, Asiatic Museum Ms. c. 581b, especially fols. 33b, 145b). When the Kalmuck empire was destroyed and the frontiers of the Chinese empire advanced up to Farghana (1758), Irdana also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter we cited by J. Klaproth, Magasin Asiatique, 1 (1825), 81 fi. from the Tai teling ye Pung Si. Irdana later was a member of a coalition of Muslim rulers of Central Asia, which applied to Ahmad Shah Durrani [q.v.], the ruler of Afghanistan, for help against China. The alliance had no further results, although Ahmed Shah in 1763 appeared in Turkestan at the head of an army and occupied the territory between Rhokand and Tashkend (at the time an invasion of the land of the Kara-Kirgiz was made from Khokand, Klaproth, op. cit., 83), but he had soon to retire again on account of the claims. of his enterprises in other directions. 'Abd al-Karim's grandson, När Büta Beg (probably reigned 1188-1213/ 1774-98, cf. L. Zimin in Protokoll Turk krudka lyub. arkheologii, xviii, 102, and Walidow, ibid., xx, 112 L), was also nominally under Chinese suzerainty. To the early years of this reign belongs the journey of the Russian sergeant, Filipp Yelremov, who was taken prisoner by the Kirgiz in 1774 and mill in Bukhara and 1782 returned to Russia via India and England. According to his Travels [F. Yefremov, Stranstravaniye v Bu<u>kh</u>arii, <u>Kh</u>ivye, Persii w Indii^a, St. Petersburg 1794, 59 f.), Närbûta was already entitled Khās "by the Chinese", was allied with China and at easity with Bukharl. No mention is made of prominent buildings in the capital (the Medrese Mir was built in the reign of Narbūta); on the other hand, a high pillar (apparently a minaret), said 📰 📰 🚃 also feet high in the market-place in Marghinan, is described. According to Filipp Nazarov (see below), this "tower" was visible for a distance of 50 versts (over 30 miles).

Nārbūta's two sons, 'Alim and 'Umar, me the real founders of the state and city of Khokand as we later know it. The chronology of these reigns (1212-1237) 1798-1822) is not sufficiently established; even the year in which 'Alim was assassinated and 'Umar raised to the throne is variously given in the sources. According to the Ta'rikh-i Shahrukhi (ed. Pantusov, 106) 'Umar died in the year 1237/1821-2 (in the cyclic reckoning the year of the horse = 1822 is given); according to Naflykin (Russ, original, ror; French tr., 124), which here follows another source (the Muntahhab al-Tawarikh of Hakim Khan), 'Alim was not murdered till the spring of 1232 li.e. 1877, not 1816, as in Nalivkin); on the other hand Nalivkin himself in another passage (Russ, orig, 185; French tr. 228) puts the building of the chief mosque of Khokand by 'Umar Khan in 1931/1816. The Russian interpreter Filipp Nazarov, who was in Khokand in the winter of 1813-14, calls the ruler of Khokand Amir Walliami (Zapiski a nyckorotikh narodakh Sredmysy Asie, St. Petersburg 1821, 50 ff. This is probably for Wali al-Nilami, not Wali Miyani, as in Klaproth, op. oil., 43. The culer at this time was only as years of age; this statement can only refer to Umar, not to the much older 'Allm; according to 'Abd al-Karim al-Bukheri also (ed. Schofer, 102), this embassy and the cause of it (the murder of the Khokand envoy by a Russian soldier in Petropavlovsk) both took place in the reign of 'Umar Khan, According . 'Abd al-Karim, 99, 'Alim had already been killed in 1224/1809, which cannot be right, as we have a document of his dated Djumada I, 1225/June 1810 (Protoholf Turk hrutha, lyub. arkh., ili, 165 f.). The change of ruler must therefore have taken place between 1810 and 1813.

In the oldest known document of his reign, dated 1213/1798-9, 'Allm still regards himself in the representative of in innamed Khān; later he appears as an independent riller with the title Khān or Amīr; after the conquest of Tāshkend, his power was as great as thet of the Amīr of Bukhārā. In 'Umar's reign in 1814 (so Nazarov; not so late as 1829, as in Nalivkin, Rusa, orig. 110 f.; French tr. 134 f.), the town of Turkistān with the parts of the Kingis steppes belonging to it was incorporated in the kingdom of Khokand. 'Umar thereupon took the title of Amīr al-Muslimin. There were several with Bukhārā, regarding the possession of Ura Tübe in the reigns of both 'Alim and 'Umar, and the town indeed remained a bone of contention between the two states

right down to the Russian conquest.

"Umar's domestic policy was quite different from that of his predecessor. Like many other Central Asian rulers, 'Aim had made up his mind to break the power of the Özbeg families and therefore surrounded himself with mercenary troops from the highlanders of Karatigin, Darwaz and other lands (Ta'rikh-i Shahrukhi, 42 l.). The war against the nobles was, as frequently elsewhere, combined with a war on the religious classes, especially the dervish orders. The historians on this account describe 'Alian as a godless tyrant (pâlim); m the other hand they praise the piety and justness of 'Umar, who was put on the throne by 'Alim's murderers, 'Umar built the present chief mosque of Khokand, which was also used as madeasa and therefore is known in the Madrasa-yi Diami's 'Umar was also fond of poetry and wrote poems himself under the pseudonym (takhisi-(as) of Amir; verses by the Khan himself, his officials KHOKAND

and favourites were collected in a special anthology (afterwards printed) entitled Madimū'at ai-shu'ara' by M. Hartmann in MSOS, vii, Westas. Stud., 87 ff. It == probably 'Umar who founded the town of Shahr-I Khān (west of Andīdjān); the great canal, led to it from the Karā Daryā, Shahr-i Khān Sāy, completely aftered the Irrigation of Parghāna.

'Umar's son and successor, Madali (properly Muhammad 'All), was 12 at his accession (according to others 14). During the first half of his reign, the khānate of Khokand reached its greatest power and extent. In the south the districts of Karātigla, Darwāz, and Kulāb, which now belonged to Bukhārā, were all conquered; in the north-east taxes were levied the Kara Kirgiz, on the Great and on a part of the Central Horde of Kazak Kirgiz; IIII Khān's representatives even appeared among the tribes of the Great Horde which led a nomadic life on the other side of the lii [q.v.]. The rebellion of Khodia Djahangir in Käshgharia (1826), which received support from Khokand, met with no success; nevertheless, the officers of the Khan were allowed by the Chinese government to collect taxes in the "six towns" (alli shakr): Ahsū, Ush Turiān, Ķāshghar, Yangishahr, Yarkand and Khotan, Like Khokand, where one of the largest madrasas bears the name of Madali Khan, Tashkend attained considerable prosperity; from 1835 the Begleebegi of Tashkend was given the administration of all the northern provinces of the kingdom, and a memorial of this period is the great Beglerbegi Madrasa. The excavation of the great Khan Harik canal in the region of Tashkend also belongs to this period (Protokoll Turk krutka, lyub. arkh., iil, 175).

In spite of the great extent of his kingdom, the authority of the Khān was not firmly established; his vicious life and cruel rule had aroused general discontent. Nașr Allah, amir ol Bukhara, is said to have been asked by people in Khokand itself to put an end to his rule. The Khokand army was completely defeated; the capital Itself me taken by the enemy (for the first time since the foundation iii the kingdom); Madall was killed while trying to escape (1258/ 1842). The conquerors were driven out again in the we year and Shir 'All, a cousin of 'Alim and 'Umar, was placed on the throne; but down to the Russian conquest, domestic peace was never restored for any length of time. The reigns of Shir 'All [1842-45] and his sons Khudayar (1845-58 and 1865-75) and Malia (1858-62) and several short-lived rulers were a period of continual confusion and bloody fighting, notably between the Ozbegs of the Elptak tribe and the "Sarts", i.e. the native population. Khudayar, who still a minor, was raised to the throne by Musulman Kul, the chief | the Kločak; the Kločak drove the Sarts out of their houses in the capital and took possession of the canals in the country; the Sarts only allowed the water necessary for their fields payment of mixed sum. In 1269/1852 Musulman Kul was overthrown by Khudāyār and put to death; the land again passed to the Sarts. Malla then relied on the support of the Kipčak and restored to them the lands taken by the Sarts. All this warfare, internal and external was waged with great ferocity; after Khudāyār's capture of Ura Tübe in 1264/1848, m tower of skulis (Kelle minar) was built from the heads of the stain enemy. Banished pretenders usually took refuge in Bukhārā, and taking advantage of these dissensions, the Mangit Khan of Bukhara Nasr Allah able to advance as far | Khudiand [q.v.] in 1275/1858.

In spite of all this, in hard metalood its former extent down to the Russian conquest of the later 19th

century. Russian forces had been in contact with troops from Khokand since 1830 on the upper Syr Darya, see in the north-east of the khanate between the Cu and Ili rivers since 1860. All these regions were under the Beglerhegi or governor appointed by the Khan for Tashkend (see above), who was also responsible for the maintenance of agriculture; the governor Mirza Ahmad (1853-8) is said to have organised irrigation works from the town of Turkestan or Azret to the Cu valley. In 1864 Tashkend fought off a Russian attack, and immediately afterwards, a Khokandi force attacked the town of Turkistan, by theu Russian-held. Subsequent Russian intervention was facilitated by the conflicting interests of the Iranian townspeople or Sarts and the nomadic Klpčak elements of the rural areas, mentioned above, and also by the discords between the Central Asian khanates. The ruler of Bu<u>kh</u>ārā Muzaffar al-Dīn b. Nașr Allah was invited to secure Tashkend for himself. when that town seemed likely to fall to the Russians; but in 1865 the Russians captured Tashkend, whereupon the Khan of Bukhara marched on Khokand, occupying Khudiand and Khokand and forcing Khudayar of Khokand to acknowledge the suzerainty of Bukhārā. In 1866, as part of the operations against both Khokand and Bukhārā, General Romanovski advanced up the Syr Darya, thereby driving a wedge between the two khanates. After the fall by Khudiand. Khudayar came to terms and agreed to become a Russian vassal and to pay an indemnity.

Thus began the last phase of the khanate's nominally independent existence. Despite all the internal dissensions and latrigues, the economic condition of the khanate to have been prosperous enough, with flourishing local textile, carpet-weaving and other crafts; according to a Russian observer in 1867, the town had a population of 80,000, with 15 madrasas and several hundred mesques. Treditional Muslim learning was, indeed, far from moribund in all three of the Central Asian khanates in this the last phase of their existence. During this period, several buildings were erected in the town of Khokand, including the pelace or urds of the Khan, and the madrasas of Hākim Āyin and Sultān Murād Beg, built by the

Khān's mother and brother.

Until 1875, it seems to have been the Imperial Russian government's intention to retain the khanate in a similar status to those of Bukhlel and Khiwa. But disturbances within the khanate, and attacks 🚃 Russian-held territory, continued, in 1875 there waa a popular rising against Khudayar Khan 🖿 by his kinsman Polad Khan, and the former regions of the khanate then annexed by Russia, such as Khudiand and Kuraminsk, joined the revolt. A Russian invasion inevitably is to the capture of Khokand by General Von Kaufman. The Treaty of Marghilan was made with the new Khan, Nasr al-Din b. Khudayar, by which all the territory of Khokand on the right bank of the Syr Darya was ceded to Russia. But fighting nevertheless continued in the eastern part of the khanate, until Russia finally occupied the whole of the khanate, deposed the line of the Min Khans and annexed III their lands to Russia. The imposition of direct rule over the khanate - especially important to Russia at this time, because Khokand's eastern frontier marched with Käshgharia or Chinese Turkestan, then controlled by the rebel Ya'kub Beg [q.n.], himself \blacksquare Khokandl who had fought against the Russians in the capture of Ak-Masdid (Kyzyl-Orda) on the middle Syr Daryā in 1853, and was not surprisingly hostile to Russia. As part of the Governor-Generalship of Russian Turkestan, Khokand now became an oblast under the ancient name of Farghana. In 11 12 1898 administrative re-organisation, Khokand became 11 west of the oblast of Farghana. The town of Khokand itself continued to be the chief town of the region, with 11,636 inhabitants in 1911, but with newly-founded town of New Marghilan, later

Skoholey, as the governor's seat.

The Muslim peoples of the former khanate played a major rôle in the anti-Russian rebellions of 1016. when the Imperial government attempted to call up non-Russians for labour service in the war. In the following year, it was the focus of the Muslim movefor the autonomy of Turkestan in the Tsarist régime broke up, and in December 1917, the Fourth Extraordinary Regional Muslim Congress met in the town of Khokand and declared the autonomy of Turkestan. Early in 1918, however, the Tashkend Soviet declared the government set up in Khokand under Mustafå Cakayev to be counter-revolutionary, and in February 1018 Red Army forces attacked the town of Khokand, which was defended only by a hastilyraised Muslim militia, captured it, and conducted a savage massacre in which several thousands of the inhabitants were killed. After this, Muslim desires for self-determination in the region were expressed by the guerilla activities of the Basmacis (q.v.).

Under the Soviets, Khokand forms a reyon or district of the Fargana oblast of the Uzbek SSR. It is now an important centre for light industry, in which silk and linen manufactures are prominent. The palace of Khudayar is now the town's museum.

The population in 1970 was 133,000.

(W. Barthold - [C. E. Bosworth])

EHOKARS, a powerful hill-tribe inhabiting
the Jehlum area in the north-west of the undivided Panjab. The Khokars were a dominant race
of the province at the time of the first Iluslim invasion of the Indian sub-continent; their origins are
as shrouded in mystery as those of any other Panjab
tribe, but that they were originally Hindus seems
hardly open to question.

The estilest mention of the Khokars in Hasan Nizāmi's Tādi al-ma'āthir which refers to an insurrection of the tribe under their chiefs named Bakan and Sarki. The next contemporary chronicle to contain a reference to the Khokars is Minhādi-i Sirādi's Tabaḥāt-i Nāṣiri, which says that they were encouraged by Malik Khusraw, the last Ghaznawid ruler of Lāhawr, to rise against their Djammū overlords. History also records a military contact near Lāhawr between the Khokars and a force of the fugitive Djalai al-Dīn Khwārazmī in 620/1223.

Extending their sway beyond their traditional stronghold in the country between the Jehlum and the Chenab, the Khokars held a considerable area east of the Beas. In 647/1250 they masters of most of the upper part of the Panjah, but they are no more heard of until the reign of Sultan Muhammad Tughluk when they again created disturbance. Yahya Sirhindi's Ta'rikh-1 Muhamkhihi describes the seizure of Lahawr in 797/1394 by the Khokar chief Shaykhā and his long-standing feut with Sārang Khān, governor of Dipālpur, resulting in the former's defeat.

The Khokars played a significant role in offering resistance to the invading hordes of Ilmur in India, After Shaykha's arrest by Timer in 801/1398, the Khokars disappear from history, but his son Diasrat, who escaped from Samarkand, whither Timur had taken him as m prisoner, emerges later in 823/1420 a force to reckon with. For more than twenty years, this indefatigable Khokar warrier proved to be the cause of constant worry to the Sultans of Dihli, In 845/1441, Sultan Mahmud Shah conferred Dipalpur and Lahawr on Bahlul Lodi and charged him to chastise Djasrat, but the wily Khokar to terms with Bahlol and urged him to oust the Sayyids and occupy Dihli. However, Diasrat was murdered in 846/1442 by his queen, a daughter of Bhim Deo. Radia of Diammu, because her father had been put to death by him. After Diasrat, the Khokars were left leaderless, and coupled with the rise of the Lodi power in the Panjab, the Khokar ambitions finally came to nought.

Scholars and historians have often confused the Khokars with the Gakkhars, a totally distinct tribe, settled in the same province. Firishta in all probability means Khokars when he describes the Cakkhars as a race of wild barbarians, devoid of religion or morality, practising polyandry and female infanticide. Similarly, in his article, A history of the Gak-Mars, in JASB, xl/1 (1871), I. G. Delmerick has attributed the achievements of the Khokars to the Gakkhars. As matter of fact, the Khokars were spread all over the central districts of the Panjab centuries before the Gakkhars acquired a footbold in the Salt Range, to which they remained traditionally confined (cf. H. A. Rose, The Khokars and the Galkhars in the Punjab history, in The Indian Antiquary, XXXVI (1907), 1-9),

KHOMAYR [SOC POSUMAYR].

KHOSRAW [See KHOSREW, KHOSRAW, KISRĀ].

KHOSREW BEG, SARĀJAĶ beg of Bosnia, was
born in Serez (Macedonia) ca. 885/1480. His mother,
the princess Seidiok, was a daughter of Sultan Bāyazīd II [q.v.], his father Ferhād being a South Slav from Herzegovina (C. Trubelka has that "Radivoj, the brother of the Sultan's son-in-law", to whom the people of Ragusa (q.v.) sent gifts, was Ferhäd's brother). Taking part in Sultan Sileyman's campaign against Belgrade (927/1521). Khosrew Beg was appointed sandjak beg of Bosnin on 13 Shawwäl/15 September of the same year, a fortnight after the conquest of the oity. Having stayed four years in Sarajevo, he was removed from office because he falled at the siege of Yayle. Some six months later he returned to his post, which he kept until he died, over sixty years old, in 948/1541, except for an interruption of a few years (1533-6), during which he may at Belgrade sandjak beg of Semendria.

Distinguishing himself by his successful campaign, Mosrew Beg was nick-named Ghāst; even today he is well-known among the Bosnian Muslims by the Most fluster-beg. Due to his military activities, Turkish power spread widely in Bosnia, Dalmatia and Slavonia (Obrovač, Yaytel, Bangaluka,

Požega, Klis, Gorlan).

His campaign brought Khosrew Beg great riches which he spent on enlarging Sarajevo. During his governorship, the city grew into an important centre. Three charters of foundation (wasfives) attest his activities: two (938/1531 and 944/1537) for the Khosrew Beg mosque (Begova diamijs) next to which was erected the mansoleum (turbs) in which he was buried, and one (943/2537) for the Kurlumlija medresa. The Become diamins is one of the most outstanding specimens of Islamic architecture in Yugoslavia, and an imposing monument of the Turkish period in Saraevo. The welf founded by Khosrew Beg has been of great importance for the city of Sarajevo and for the cultural life of the Muslims in Bosnia and Hesergovina in general. Up to the 20th century, many public buildings were creeted with its revenues. It still exists, but much property was lost in the 11th/17th century, especially at the great fire in 2507 when Prince Eugene of Savoy made his breakthrough at Sarajevo. In more of time, many estates belonging to the wall were lost, including recently at the land-reform in Yugoslavia after 1918.

In the charter of foundation of the medicase, Khosrew Beg ordered a library to be attached to the school. During the governership of Topai Othman Pasha in Bosnia (1861-9), the library was separated from the school, and the books were transferred in 1864. After 1867 books and documents from other libraries and institutions were brought to this library, known as Gari Husrev-begow biblioteka. In 1963 it beld 6,456 Arabic, Persian and Turkish manuscripts, and many have been added since. There are also ca. 3,500 documents of the Turkish period, 400 charters of foundation and 84 registers (sidjill) of the kighs of Sarajavo.

Other monuments in the town for which Knostew Beg was responsible include a khānakāk, a kammām, a bedesten of 90 stalis and the Tashii Khān, a cara-

vansarai provided with 60 lodgings.

Beg at Saraybosna'daki camiine bis minase daha ildus edilmesine dair bis vesika, in Necati Lugal armagani, Ankara 1968, 463-99; K. Dobrača, Gasi Hussev-begova biblioteka u Sarajeva—Katalog arapskih, tusskih i persijskih rukopisa, Sverak prvi, Sarajevo 1963. There are numerous references to Ghazl Khosrew's military activities in the Diarii of Marino Sanuto, where he appears under the name of "Usref Beg".

(B. DIURDIEV and L.-L. BACQUE-GRAMMONT) KHOSREW, Motta, a famous Ottoman iurist, whose real ____ Mehmed b. Faramurz b. Ait. According to one statement he was of Turkoman (tribe of Warsale) descent and born in the village of Karehin (balf way between Stwas and Tokat); according to others, bowever, he was of "Frankish" descent and the son of "French" nobleman who had adopted Islam. According to Sa'd al-Din his father was of Romaic (Rilm) descent. Khosrew became a pupil of the famous disciple of Taftazani. Burhan al-Din Haydar of Herat (cf. Ist., xi. 61 and Sa'd al-Din, Tadi al-tawarika, il. 430), and received a teaching post in the Shah Malik medrese in Adrianople: in 848/1444 he became \$460 of Adrianople and later kadi asker of Rumelia. On the death of Khidr Beg [q.v.], the first \$667 of Constantinople, he succeeded him and was at the same time miderris at the Aya Solya. Feeling hurt at Molfa Kurani [q.v.] being promoted over him, he went to Bursa in 867/ 1462 and built medress there. In 874/1469 he returned to Istanbul by command of the Sultan, became Shayah al-Islamand died there in 883/1480. His body was taken to Bursa and buried in the court of the mosque founded by him. He also founded w mosque in Istanbul, which bears his name (cf. Hafiz Husayn, Hadikat al-djawamit, i, 201; J. von Hammer. GOR, ix, 87, No. 428).

Molla Khoarew was meelebrated jurist, many of whose pupils became famous in after life. He also attained a wide reputation as me author. His two most important works are the often annotated Durar al-bubkām fī zharb Churar al-ahkām on the principles of legal practice, written in 877-83/1473-7 (printed at Cairo 1294 and 1303), also a dogmatic work Mirāds al-wuşul fi "Um al-wuşul (printed at Cairo 1262 and Istanbul 1304). On other works by him, cl. von Hammer, GOR, ii, 589 if. and Brockelmann, 11, 226-7.

EHOSREW PASHA, Bosniak (?-1041/1632), Ottoman Grand Vizier. Bosnian in origin, Khosrew was taken into the palace service and rose to the office of sildhdär. When, in Muharram 1033/October-November 1623, the dissident (2016) ods bash's of the Janissaries demanded the replacement. Their agha by someone not of the corps, Khosrew passed out of the andersin-i humbyin become Yesii-lori aghash.

The state was at this time going through a critical period: the dominance of the Janissaries in internal affairs had reached new heights with the execution of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control

med) Pasha [q.v.] was ■ revolt in Erzurum; and the Şalawid Shah 'Abbas I was soon to take Baghdad (Rahff I 1033/January 1624). In Shaban 1033/May 1624 Khosrew Agha, as agha of the Janissaries, left Istanbul with the hapibulu soldiery in the train of the Grand Vizier Cerkes Mehmed Pasha [see wuran-MAD PASHA CERKES], who had been given the command against Äbäza Pasha. Khosrew is mentioned 🖚 having fought courageously in the victory over Abaza's forces near Kayseri in Dhu 'l-Ka'da 1033/ September 1624. When Cerkes Mehmed died in winter quarters in Tokat (Rabi^c II 1034/January 1625), Khosrew 100 the bachdefterdde, Baki Pasha, wrote to the capital urging the appointment of the beglerbegi of Diyarbekir, Hafiz Ahmed Pasha [q.v.] as his successor, an action Khosrew came to regret - learning that he himself might have been considered for the office. Though he was soon after given the rank of vizier, he is said by Pečewi, then with the army, not to have been able to overcome his disappointment and to have hoped that Hafiz Ahmed might fail in the subsequent campaign against Baghdad (Pečewi, Ta³ri<u>kh</u>, ii, 403, 405).

In Ramadān 1034/June 1625 Khosrew and the forces which had wintered in Tokat joined the army under Hālis Ahmed to march against Baghdād. The entuing siege of that city, which lasted for nearly eight months (Safar-Shawwāl 1035/November 1625-July 1626), in unsuccessful, but Khosrew again distinguished himself by his bravery, especially when the Ottomans were near to rout in the third of the battles (Ramadān 1035/June 1626) with a relieving force in 30,000 soldiers under Shāh 'Ahhās himself. (For an undated imperial decree sent to Khosrew during this siege, see Feridun Beg. Munsha'āt

al-said/fm, Istanbul 1264-5, ii, 89-90).

Following the faiture at Baghdad, both Hafiz Ahmed Pasha and Khosrew Agha were dismissed (Rable I 1035/December 1626), though neither was disgraced. Summoned to the capital by the sultan, Murad IV, Kaosrew arrived in Radjab 1036/March-April 1627 and made a subbe vizier (and thus Pasha). The inability of the new Grand Vizier, Khalil Pasha, a counter the renewed threat from Abaza Pasha in 1627 led to the former's dismissat. The sultan is said to have placed great trust in Khosrew Pasha's courage and in his ability to control the army (Pecewi, ii, (og); and in the consultation over the choice of a new Grand Vizier the argaments of the Shaykk al-Islam Yahya Elendi that it was time to try a mini face and that Khosrew's unparalleled reputation for valour made **the** the test **man** for the post silenced the other ministers. Because there were viziers senior to him, notably the havin makan Radjab Pasha [q.v.], he was not made Grand Vizier immediately but was liest appointed governor of Diyarbekir and sent to lamit, where the imperial seal **and** delivered to him un 1 Sha'bān 1037/6 April 1628. In his letter of appointment he was charged first with subduing Abaza Pasha, then with marching against the Safawids; and he was also given wide discretion in the making of appointments and the administration of alfairs generally (see Feridua Beg, ii, 90-5, for the berat).

Having made careful preparations for the campaign against Abāza, Khossew moved towards Tokat. Through harsh measures against wrongdoers and those whom he regarded in having failed in their duty, he succeeded in establishing strict discipline in the army. He reached Tokat on 28 Ramadān ro37/2 June x628, where he remained for some seven weeks before in report that Abāza, concerned by desertions from his forces, was seeking aid from Shâh 'Abbās

spurred him to move quickly against Erzurum. His considerable reputation for bravery persuaded increasing numbers of Abaza's followers to desert to him, a tendency which he further encouraged by treating the deserters well. Abaza had laid siege to Hasankale but returned to Erzurum on hearing of Khosrew's advance. At the suggestion of the governor of Hasankale, Khosrew advanced on Erzurum at great speed with a picked force, arriving before Abaza could complete his preparations (29 Dhu 'l-Hijja 1037/30 August 1628). During the siege which followed, Khosrew again encouraged desertions by promises of pardon and employment in the army. Recognising the impossibility of resistance, Abaza surrendered on terms on 23 Muharram 1038/22 September 1628, and Khosrew thus brought to an end ■ problem which had bedevilled the state for some six years. A Şafawid force coming to Abaza's aid surprised and defeated by the governor of Kars, its commander, Shamsi Khān, being captured and to Khosrew. Having decided not to winter in the field, Khosrew returned to Istanbul with both Abara and Shamsi Khān in his train and made ■ triumphal entry into the city on 12 Rabi' II/o December. Abaza, pardoned in accordance with the terms of the surrender, was appointed governor of Bosnia.

Though Khosrew fail iil in the spring of 1629, he recovered and was appointed commander for the campaign to retake Baghdad. He left Üsküdar 📖 18 Dhu 'l-Ka'da 1038/9 July 1629 and arrived in Mosul on 1 Djumādā I 1039/17 December 1629. An unusually bard winter, with continuous heavy rains and even snow, caused severe flooding a large area and created great difficulties for the army. On I Diamada 11/28 January 1530 the army left Mosul for Baghdad. Having suffered considerable losses of men and materiel in the crossing of the flooded river Zab, Khosrew convened a dissin in which it we decided that to besiege Baghdad in the present conditions was impossible and that the time would be better spent in a pre-emptive attack 🚥 the ruler of Ardalán (q.e.), Khan Ahmad, who might otherwise threaten their rear. As the army advanced, many of the Kurdish begs submitted to Khosrew. Reaching IIII district of Shahrimir, Khosrew was persuaded to rebuild the fortress 🔳 Gul'anbar, built by Sulaymán I and subsequently destroyed by Shah 'Abbas. The work begun on t Shaban 1039/16 March 1630 and took some fifty days to complete. During the stay at Gulanbar, Khosrew sent a force to take the fortress of Mihriban, on the road III Hamadhan. The garrison surrendered, but the Ottoman force was then attacked by a Şafawid army under the thin-i thanks, Zaynal Khan. In the ensuing battle the Ottomana, with some difficulty, won the day (22 Ramedanis May). Moving further east, the Ottomans sacked the palace of Khān Ahmad 🖿 Liasanabād and, 🖿 27 Shawwallo June, reached Hamadhan, which had been evacuated by the Safawids. They laid waste the city, and, with the intention of marching on Kazwin, advanced to Darguzin, which they also sacked. It there decided that an attack on Kazwin would prove both difficult and ultimately pointless and that It was past time to return to the main aim of the campaign, the recovery of Baghdad which was now some sixty stages distant. The army departed from Darguzin == 10 Dhu 'l-Ka'da 2039/22 June 2630 and ==== ched towards Baghdad, meeting serious resistance only from the ruler of Luristan, sent against them by Shah Saft, whom they overcame on the plain of Camkhāl, near Nihāwand, on 3 Dhu 'l-Hijja/14 July. Reaching the environs of Baghdad in early September, Khosrew began on 28 Şafar 1040/6 October 1630 what proved to be a fruitless siege of the city. Five days after 111 unsuccessful full-scale assault 111 Rabi's 111/9 November it was decided to withdraw. During the course of the siege Khosrew had been persuaded by the local Arabs to garrison the fortress 111/112; and leaving a sizeable force there, he departed with the army for Mosul, where he arrived on 2 Djumādā/1/12 December. While the army dispersed for the winter, Khosrew, in ill-health, prepared to winter in Mosul.

When the news that the Ottomans had abandoned the siege of Baghdad reached Kurdistan and the Shah, an army under Khan Ahmad attacked the Ottoman gerrison at Dertensk. The defenders fled to the newly-built fortress at Shahrizur (Gul'anhar) which was subsequently attacked by a large army under Khan Ahmad and the Safawid Man i Manan; news of their advance caused the Kurdish bees to switch their allegiance to the Safawids. The garrison at Shahrizhr evacuated the fortress, but subsequently engaged the Kurdish Şafawid army in battle, only to be beavily defeated; three of the Ottoman commanders reached Mosul on 18 Djumādā I/23 December and were put to death by Khosrew. The victors meanwhile destroyed Gul'anbar. A Şafawid army under Shah Şafi then laid siege to Hills, which they succeeded in taking despite atout resistance. The loss of Shahrizur and the siege of Killa persuaded Khosrew to retire to the relative salety of Mardin. Having made arrangements for the repair of the fortifications at Mosul, he left on 18 Djumādā II/22 January 1631 and arrived in Mardin on the 29th/2 February. (For further details of the Hamadhan/Baghdad campaign from the Şafawid side, see Iskandar Beg Munshi, Dhayl-: Te'rikh-i 'diam-are-yi 'Abbasi, ed. Subayti Kh ** ansårf, Tehran 1938, 39 ff.)

From Maddh m request was sent to the capital for men (in particular a large force of Tatars), money and supplies for another campaign against Baghdad in 1631. In Dhu 'l-Ka'da 1040/June 1631 Khosrew moved to Kochisār, a short distance to the southwest of Mārdin, where he spent the summer months awaiting the arrival of the Tatars, several thousand of whom had set out in the spring, and trying to decide on his course of action. When he finally determined to move towards Mosul (Safar 104x/September 1631), heat, fatigue and disease had so affected the army that it was urged that the campaign be abandoned until the following year. Khosrew had little choice but to agree and retired toward Dlyārbekir where he entered winter quarters = 3 Rabl' II/29 October.

By this time, however, he had already been replaced as Grand Vizier by Hafix Ahmed Pasha, the decision to do so having been taken in Istanbul on 29 Rabis I 1041/25 October 1631. Nasimā (Tabriah, iii, 76-9) lists a number of underlying reasons for his dismissal, chief among them his excessive dependence upon, and consequent currying of favour with, the troublesome elements in the army (sorbas), this in turn leading to instances of oppression and malfeasance (see also ii, 441-3, where Nafimā gives details of Khosrew's securing the dismissal of a Yellideri katibi who had been appointed with specific instructions from the sultan to end the abuses in the enrolment of Janissaries and to prevent improper entries in the registers of the corps). The decisive factor, however, appears to have been his failure to retake Baghdad despite a substantial investment of men and resources. When the news of his dismissel reached Diyarbekir (21 Rab! II/ré November), the army immediately protested, threatening to kill the messenger who had brought the mess and urging Khosrew to remain until they could make representations to the capital on his behalf. Khosrew calmed them, however, accepted his dismissal and him Diyarbekir (26 Rabi' 11/21 November), surrendering the imperial seal in the vicinity of Malatya. A recurrence of gout forced him to halt in Tokat, where he was to remain until his death.

Khosrew Pasha's dismissal became the focus of a rebellion in the capital, incited, it is said, by the visier Radiab Pasha, who coveted the Grand Visierate. Those involved were the habitative who had been recalled from Divarbekir for the winter and a number of individual sorbes who, having built up their own followings and made themselves virtually independent in various parts of Anadolu and Rümeli, had agreed to attempt to restore Khosrow to the Grand Visierate and had converged _ the capital. Demandding the deaths of seventeen leading men identified m those who had brought about Khosrew's dismissal, the rebels succeeded in assassinating Hafig Ahmed Pasha, who was replaced by Radiab Pasha (19 Radjab 1041/10 February 1692: Pečewi, li, 420, wrongly cites the execution, not the dismissal, of Khoseew as the cause of this rebellion), Deeply angered by these events, Murad IV held Khosrew to be the cause and determined on his execution, Appointing Murtada Pasha to the governorship of Diyarbekir, he charged him secretly with putting Khosrew to death. Despite opposition from the people of Tokat well well khosrew's followers, this end was accomplished when Khosrew ordered an end to resistance and accepted his fate. The news of his death, which became public knowledge in the capital on 19 Sha'ban 1041/11 March 1632, provoked yet another serious rebellion, forming part of the general disorder which obtained until Murad IV was able declsively to assert his authority in June of the same year.

Though Khosrew Pasha is credited in the sources with considerable personal bravery and with taking great pains in the preparation of his campaigns, these qualities are overshadowed by what is regarded as his excessive severity, even bloodthirstiness, to demonstrate which numerous examples we given. On this aspect of his character Na una remarks: "He had besitation in putting to death whose execution neither the shar' nor reason required, who perhaps did not deserve so much as a rebuke" (iii, 77). His success over Ābāza Pasha, ■ considerable achievement, is as having made him arrogant and headstrong, qualities which fitted ill with his relative inexperience. In the accounts of the Hamadhani Baghdad campaign he is faulted from the military point of view for having allowed himself to be persuaded by the Kurds to rebuild Gul'anbar and by the Arabs to garrison Hills, since neither was deiensible unless Baghdad were taken, and both projects, though each in a different way, were distractions from that basic aim. In contrast to the generally unfavourable impression of him, and especially of his character, which emerges from the sources, however, one might note the apparently spontaneous protest by the army at his dismissal; the attempt by people of Tokat to defend him; and, while allowing for the selfish ends of some of those involved, the strong reactions aroused in Istanbul first by his dismissal and then by his execution. These events suggest that he was, perhaps, more widely admired, even at the end, than the sources, and particularly Nacima, would lead one to believe.

Husseu Paşa (H. Înalcik). (H. Înalcik - R. C. Repr)

KHOSREW PASHA, DIVANE or DELI, Ottoman governor and vizier, and elder brother of Lala Mustafa Fasha [q.v.], He was a Janissary of Bosnian origin, but became a deserter at the outset of his career, and for several years lived an adventurous life, as evoked by "All in his Kunh al-akhhar. He returned to grace at an unknown date, and then became food-taster (dashnigir) III the Palace, intendant of the corps of guards (supudit) and then equerry to the sultan. His conduct during the Caldiran campaign gained him the governorship (beglerbeglik) of Karaman on 25 August 1514. He took part in the conquest of Diyarbake in 1515, in the Egyptian campaign of 1516-17, and in the suppression of the Kizilbash revolt of Shah Well in 1520 and that of Dianbirdl Ghazall [q.v.] in the following year.

At the beginning of 1521 he became begieving of Anatolia, and then of Divarbake at the death at the end of that same year of Blylkil Mehmed Pasha [q.v.]; he was to remain for ten years in this post at Amid, with responsibility for watching over the security of the troutiers with Safawid Persin and for consolidating Ottoman authority in the Kurdish principalities which had recently rullied to the Porte. During the winter of 1531-2, his disputes with Ulama Pasha, a Safawid refugee who had been made commanderin-chief of the troops in eastern Anatolia and was at that time in favour with the Grand Vizier Ibrahlm Pasha, led to his dismissal. In 1532 he became governor of Anatolia for a second time, and took part in the "German" cumpaign of that were year. Trace is then lost of him until he turns up = sandjuk begi of Aleppo and then beglerbeg of Damasous in 1534, and charged with various military duties during the "campaign of the two 'Iraks''. Whilst the Ottoman army wintering at Baghdad in 1534-5, the sultan nominated him as beglerbeg of Egypt in place of Khadim Süleymin Pasha [q.v.].

Khosrew Pasha's brief tenure of office in Cairo (February 2535-December 1536) was marked by such an enormous increase in the revenue from Egypt (itselfiyya [q.v.]) that the Porte had suspicious about the legality of the means used to collect it. A commission of enquiry was unable to prove his guilt, but he was nevertheless dismissed from his office. In fact, the evidence on his administration in Diylirbakr and in Egypt reveals a brutal, largely unscrupnious and highly mendacious official, but also a remarkably efficient one. The Ottoman chroniclers of Egypt (Yüsuf, Mehmed b, Yüsuf of Khallâk and Abd al-Rahmûn) stress moreover the unusual prosperity and security which the land enjoyed under his rule.

He was replaced at Cairo by the powerful vizier Khādim Süleymān Pasha, whose previous ten years' tenure of the governorship he had endeavoured to denigrate in the eyes of the Porte, evoking in Khādim Süleymān Pasha a tenacious hatred against him. For the third time, Khosrew Pasha became beglerbeg of Anatolia at the beginning of 1537, and then of Rumella in June 1538. His services during his benure

of these offices (the Moklavian campaign of 1538 and the capture of Castelnuovo in 1530) led the sultan toappoint him as fourth vizier in 1541, Khādim Süleyman Pasha being Grand Vizier and Rüstem Pasha [q.v.] second vizier. It were very probable that the latter's ambitions were the **seem** of the ruin of the other two. As the sultan's son-in-law and enjoying the support of his influential mother-in-law Khür-Suitān, Rüstem was able to rouse against each other very skilfully the old enemies Khadim Stileyman and Khosrew in such a way that they came to blows in the sultan's presence in 1544 and were both deprived of office for this affair. Rüstem Pasha then became Grand Vizier. In despair at having lost his offices and powers, Khosrew Pasha allowed himself to starve to death in this year, one of the very rare were of suicide amongst Ottoman officials of this period.

(J.-L. BACQUÉ-GRAMMONT)

EHOSREW PASHA, MERMED (7-1271/1855),
Ottoman Grand Vizier, educated in the Palace
and raised to the post of head ćukhadár on the accession of Selim III (q.v.) in 1203/1789. He entered
the service of Ktičtik Hüseyn Pasha, a protagonist of
military and naval reform, who became Admiral
(Kapudan-i daryā) in 1205/1792. In 1215/1801 Khosnew sailed with the fleet to Egypt, where he commanded a force of 6,000 and co-operated with the
British in the recapture of Rashid and the defeat of
French forces. In recognition of his services he was
soon afterwards appointed wālī of Egypt.

In Egypt he attempted to establish the nighted gield [q.v.] army will disband the irregular backf boshk troops imported from Rumelia for the war against the French. When he attempted to stop their pay, the backf boshk forces rose in revolt and defeated Khosraw's own troops. Then Tähir Pagha attacked Khosraw, forcing him to withdraw to Damietta and declared himself walf of Egypt. Shortly afterwards, Tähir was murdered, leaving Muhammad "All [q.v.] and the Mamfüks real masters of Egypt. In Rabl' al-Awwal 1218/July 1803, the Mamfüks defeated Khosraw will Damietta and threw him into prison. On his release by Muhammad "All 8 months later, hewas removed from the governorship of Egypt.

His next appointment was as well of Divarbekir (1218-19/1803-4), followed by various governorships in Rumelia. He was active in the Russo-Turkish war which broke out in 1221/1806 m wdl/ of Silistra and military commander on the Danube front. In recognition of his services, he was appointed Kapudan-i doryā in Dhu 'l-Hididia 1223/January 1811 and commanded the Ottoman fleet in the Black Sea until the conclusion of a peace in Ramadan 1227/September 1812. He was dismissed in 1233/1818, and afterwards served in a number of provincial governorships. As still of Erzurum he was appointed military commander (ser'asker) in the east, with instructions to pacify rebellious Kurdish tribes whose activities had led to a clash with Persia. However, his mishandling of the affair led to a rebellion by the former mutasarrif of Bayezid, while the Persians, taking advantage of the situation, captured Bäyezid, Erdiish and Bitils. The Porte transferred him to the governorship of Trabzon, and in Salar 1237/September 1821 appointed in his place the former Grand Vizier Mehmed Emin Ra'01 Pasha.

With the cutbreak of rebettion in the Morea, Khostew Pasha again appointed Kapudan-i deryd (Rabi' al-Akhir 1238/December 1822) and to

pursue the rebels in the Aegean. For this purpose, he constructed a fleet of shallow-draught vessels, suitable for pursuit in shallow waters, and attempted to cut off sea communications between Morea and the islands, at the same time victualling Ottoman troops on the Greek mainland. However, during the stege of Missoloughi (1240-1/1825-6), rivalry often broke out between Khosrew and Muhammad AR's son Ibrâhîm Pasha [q.v.], who was commanding an Egyptian force on the Sultan's behalf. Ibrahim and Muhammad 'All sought Khosrew's dismissal from the admiralty and were eventually successful. He was instead appointed will of Anadolu (Anatolia).

Khosrew, however, retained the confidence of Mahmud II, who recognised him = protagonist of military reforms and as being instrumental in introducing European factics to the fleet. In 1242/1827 the Sultan therefore appointed him ser'asker of the newly formed army, the 'asakir-i mansure-yi muhammadiyye, where he also began to introduce European tactics and training techniques. His influence in the capital increased after the outbreak of war with Russia in 1243/ 1828, when he engineered the dismissal of the Grand Vizier Selim Mehmed Pasha and the appointment of his former slave and nominee, Rashid Mehmed Pasha. He also secured a commandership on the front for his former slave Khaltl Riffat Pasha, and the dismissal of the ser asker on the Russian front, Agha Hüseyn Pasha, Meanwhile, the Russians crossed the Balkans and advanced Edirne. Khotrew advised the Sultan to seek a peace, at the same time taking extraordinary measures to prevent panic in Istanbul, to the extent even of executing certain advocates of surrender. This, and the unpopularity of his westernising measures in the army, almost provoked a popular revolt. He was present at the peace negotiations in the presence of the French, English and Prussian bassadors. His influence was now at a height, and he used it to remove his rivals from positions in the government, replacing them with his was slaves, and to have the former Grand Vizier, Selim Mehmed Pasha, dismissed from the governorship of Rumelia.

During the Russo-Turkish war, Muhammad 'All had made excessive demands to the Sultan and was now threatening 'Akkā. At this point, Mahmūd placed the matter in the hands of Khosrew who, in Dhu 'l-Ka'da 1247/April 1832 appointed Agha Hillseyn commander of the army in Anatolia. After Muhammad 'Ali's victory and advance on Istanbul, Khosrew invited military instructors from Europe, among them the famous Von Moltke. During this period ill had the complete confidence of the Sultan, and his responsibility for the security of the capital and the fact that he advanced many of his numerous personal slaves to positions in the government, further increased his influence. By marrying his own men to the Sultan's daughters, he insinuated his way into Palace circles.

However, in Shawwal 1252/January 1837, two of his own protégés, Khalil and Sa'id Pa<u>sh</u>as, secured 🖿 dismissal as ser asker, while in Rabit al-Awwel 1253/ June 1837, his great rival Mușțafă Rezhid Pasha be-Foreign Minister. Khoscew was retired on a pension. His absence from public affairs did not last long. In Dhu 'l-Hididia 1254/March 1838, he received the chairmanship of the Reform Committee (medilis-i exid) and presided over the councils which met in his villa to discuss the Egyptian question.

A further deterioration of alfairs in Egypt and the death of Mahmūd ■ in 1255/1839 caused ■ grave erisis in the empire. Khosrew literally seized power, by grabbing the Imperial Seal from the Grand Vizier, Ra'tif Pasha, during the funeral of Mahmud II, and declaring him-Grand Vizier. This led to the defection of his rival, the Kapuden-i days, Ahmed Fevzi Pasha, who sailed with the fleet to Muhammad 'All in Egypt, with the intention of returning with Egyptian troops and deposing Khosrew. Muhammad 'Ali for his part, domanded Egypt and Syria for himself and the dismissal of Khosrew. Neither plan succeeded. Khosrew remained in his post, but the Foreign Minister, Mustafa Reshid Pasha, seized the initiative and, partly and doubt to win the sympathies of the European powers the Egyptian question, had the famous Khatt-i Sheelf of Gülkhane proclaimed, marking beginning of the Tongimat [q.v.] era. Khosrew was still Grand Vizier, but Mustala Reshid Pasha now had the sympathies of the Palace and was able to press for his dismissal and the reinstatement of Ra'ti! Pasha. He then had Khosrew tried and convicted for bribery by the Supreme Council of Judicial Ordinances (mediis-i māld-yi ahhām-i 'adliyye) and exiled Djumādā 'l-Ulā 1256/July 1840 to Tekirdaği,

In the following year, the Sultan Abd al-Medild permitted his return to Istanbul, where a change in government permitted his return to power. In Safar 1262/January 1846, he was appointed seriasker, in which position he removed his predecessor Rida' Pasha's nominees and replaced them with his own men. During this period of office, he opened the Military School at Kučuk Taksim. However, later in the same year, he was removed from office, and the new Grand Vizier, Mustafa Reshid Pasha, took care to prevent his further rise to power. He died, at the age of more than ninety, on 13 Djumada

'l-Akhira 1271/3 March 1855.

Bibliography: marticle Huster Paga by Halil Insicik in IA, of which the foregoing is a summary. (Ep.)

KHOST, Arabic spellings Kh.w.st or Kh.wast, the name of various places in Afghanistan. The likely etymology for the name is given by G. Morgenstlerne in his An etymological vocabulary of Pashlo, Oslo 1928, 98: that it is an Itanised form *kwärtu, cf. Skr. suuärtu- "good site" (which became place-name Swat [q.v.] in the North-West frontier region of Pakistan).

The mediaeval Arabic and Persian geographers mention what appear to | two places of this | in northern Afghanistan. Those of the 4th/roth century mention Khasht as a town on the apper Herl Rud = the borders = Ghur and Ghardistan (ct. Ibn Hawkall, 457, tr. 441, and Mukaddasī, 349), and this is apparently the Khöst mentioned three centuries m so later by Kazwini, Athar al-bilad, ed. Wüstenfeld, 244, as a town of Ghur; see Le Strange, Lands of the eastern Caliphate, 410, 417.

Distinct from this seems to be the Khost further north near Andarab and on the borders of Badakhshan, the district which the Hudud al-Glass (end of the 4th/roth century) refers to mm (?) Yûn, cf. tr. Minorsky, 109, 340-1, perhaps the Khuwāsht of Yakut, Bulden, ad. Beirut, il, 398, and the K'wat-sit-to of Hattan-Tsang, see Marquart, Erdniche, 242. It is frequently referred to in Timurid and early Mughal times. In 684/1479 we hear of mm Mir 'Abd al-Kuddüs being given the governorship of Khost, "one of the most important districts in Badakhshan and Kunduz" (Ta'rikk-i Rashidi, ed. and tr. Elias and Ross, tr. 103). One of Bâbur's wives, Mâbam, apparently comfrom here; his daughter Gul-rang was born here, and he visited it on various occasions, see the Babur-nama, tr. Beveridge, index.

In modern times, the most important region bearing the name Khost is that comprised within modern Afghan province of Pakhtie, lying = the south of the Selld-Küh range in the basin of the Kaitu, an affluent of the Kurram river which drains eastwards to the Indus; hence the ethnic and tribal connections of Khost with the regions of Kurram, Kohat and northern Waziristan on the modern Pakistani side of the Detrand Line have always been close. Khöst now forms an important forestry region of Aighanistan, and in the southern, sub-tropical zone, dates, citrus fruits, etc. are grown; recent Afghan governments have made considerable agricultural investment here (see J. Humlum et alii, La geographie de l'Afghanitian, étude d'un pays uride, Copenhagen 1959, 101, 105, and J. C. Griffiths, Afghanistan, London 1967, 119-20). In the 1920s, Khôst was me epicentre of a conservative, traditionalist Pathan rebellion against the tentative reforms King Aman Allah, which seriously weakened the ruler's position and damaged the economic health of the country (March 1924-January 1925) (see W. K. Preser-Tytler, Afghanisian, London 1967, 204-6; V. Gregorian, The emergence of modern Afghanistan, politics of reform and modernization, 1880-1946, Stanford 1969, 282-4; L. Dupree, Afghanistan, Princeton 1973, 449, 459, 479}.

Finally, the Imperial gasetteer of India, iii, 138, vi, 306, mentions | Khôst in Balüčistān, the site of |

small coalfield, 35 miles east of Quetta.

(C. E. Bosworth) KHOTAN, a town of the People's Republic of China, in the autonomous region of the Uyghurs. The town, and the territory which depends on its resources as me casis, lie between the desert of Taklamakhan and the massif of Kuen-luen on the one hand, and the Kara-Kásh and Yörüng-Kash rivers the other. The kingdom of Khotan became known to the Chinese world in about 125 B.C., following the mission of Khang K'ien, under the name Yu-t'ien. The represented by this transcription seems to have had no connection with the town of Yotkan, Although numerous archaeological relics have been found at that site, Yotkan cannot correspond to Yuthien. In fact, according to Pelliot (Notes on Marco Polo, 412, s.v. "Cotan"), Yu-t'len corresponds to **Odan, with wariant **Odon arising from the transcription Yu-tuen given by Hiuan-tsang (ibid., 409); the name encountered in the Khotanese texts is just a transcription of the Chinese Yu-then under the form Yittina, while documents of the 4th century in Kharoshti script give the form Khotana (L. G. Gercenberg, Kholanosakskiy yarik, 10). Yotkan is a ruined pre-Islamic cemetery, approximately | km. west of the town itself.

In fact, the kingdom of Khotan was not really known to the Chinese until after the conquest of the Tarim basin, carried out by Haa Wu-ti (140-87 B.C.), in the years following 210 B.C. and through 📰 🚌 conquest by the later Han between 73 B.C. and 170 A.D. Little is known of the history of the ruling dynasty and the name of the town is always transcribed Yu-t'ien in . Chinese sources. From the latter we learn that the population of the kingdom reached a total of 50,000. All that 🚥 can say is that this population spoke a language of Iranian type, which has become known as a result of discoveries made at the beginning of the 20th century and which has been deciphered principally by Lüders, Sten Konow H. W. Bailey, It now that the Khotanese spoke a dialect of the Saka language.

It in the course of the first centuries A.D.

that the kingdom of Khotan received Buddhism. According to the Tibetan tradition, which agrees in points with the account given by Hiuan-tsang, Buddhism was introduced to Khotan by a Kashmiri monk called Vairocana, during the reign, almost certainly legendary, of king Vljayasambhava (E. Zürcher, The Buddhist conquest of China, in Sinica Leidensia, xi, Leiden 1972, 340-x). This assessment is confirmed by the fact that one of the oldest dated Buddhist monuments is from 269 A.D. (A. Stein, Sand-buried ruins of Khotan, 1902, 405).

In the 7th century, Hiuan-tsang writes in his Memoirs (Watters, On Yuan Chwang's Travels, ii, 299): "We arrive in the kingdom of K'iu-sa-tan-na-(Note:) In Chinese, this signifies "Breast of the Earth"; it is the formal name used in the region. The local language uses the expression "Kingdom of Huan-na". The Hlong-nou call it Yu-touen; the Hou (Iranians), Ho-tan; the Indians, K'iu-tan. Formerly they (the Chinese) crilled it Yu-Pien; it is m incorrect form". (On this passage, cf. Pelliot, Notes on

Marco Polo, 409-17).

Thus, in the T'ong period, the polite and literary form is "Gostana" or "Caustana", difficult to interpret according to Pelliot; the local language used the expression Xuán-na (Huana?), this name faithfully rendering the name which appears in the Khotanese texts under ere form Hvatana, Hvamna, and Hyam; the nomads of the north would have pronounced it "'Odan or "'Odon, a name which is found much later in Syriac, translated from Persian, in the story "The History of the Patriarch Mar Yaballaka and the monk Rabban Saumd, published by Chabot (Paris 1895, 22), where the latter identifies the town of "Lôtôn" with Khotan. In fact "Lôtôn" is an erroneous form from the Persian original, where will idm has appeared as a result of confusion with the initial alif, whence we deduce the correct form "Odon" proposed by Pelliot fifty years ago, while Budge (The monks of Kübidi Khān, London 1928, 138) and Montgomery (The history of Yaballaha III, New York 1927) have retained the form "Lôtôn". This form appears in the works of Käshghari (Brockeimann, 251), with "Odon" and "Motan". Finally, the Iranians would have pronounced it Ho-tan (Xuât-tan) which assumes an original "Hwatan, precursor of the Khotan of the Muslims, while the Indians would have pronounced it K'iu-tan (*K'iut-tan) which presuppose a form Khutan or Khotan. The land was known to the Tibetans under the name of Li-yul, "land of Li", although they knew the town under the of Hu-ten, which is just a transcription.

In the Tang period, the kingdom of Khotan was bounded to the south by the Kuen-luen, while in the east its territory touched that of Kroraina (Niya, Cercen and the Lob-Nor region), and in the west that of Kāṣḥghar (Kḥyesa) which stretched from the Pamirs and Telen-shan to Maralbaṣḥi and beyord. The language used throughout the Khotan region was Saka-Khotanese, which was related to the Tadjik vernacular of the Pamirs, of which no ancient evidence has yet been recovered, to the language of Kāṣḥgḥar in the west and north, of which some traces have been recovered at Tumṣḥuk (the Turkish name of a site whose ancient name has disappeared), and in the east to the language spoken in Kroraina, of which apparently no relics romain.

The kingdom of Khotan at that time had w large population which had, no doubt under the influence of Buddhism, lost all interest in expansion and showed an extreme aversion to matters of war; Riuantsang noted that the Khotanese remarkable

craftamen with a considerable taste for literary pursuits, also for music and dence. The region ment the centre of a considerable commercial activity, being placed on the southern branch of the Silk Route, which was in use throughout antiquity and the Middle Ages; through the Khetanese texts we possess accounts of the travels of officials to Kashmir and Kansu, which permit us to gain an acquaintance with the geography of Contral Asia, in particular the names of towns; thus we find that Kāshghar is Kyesa, Niya is Niba, Čerčen ii Ysabadā parrūm, Urumči is Yārūmcinā, Turfan is Tturpanā, Leou-lan is Raurata, Yumble kouan is Kviyikye, etc.

The dynasty of the kings of Khotan in the T'ang period (7th-10th centuries), the family name of which apparently Vija (preferable from Vita) in existence before that time, for the history of the Suel (83, 5b) mentions, according = Pelliot (op. laud., 419) king called Vijayavikrama; under the Tang, the dynasty is known to us from a list which can be reconstructed from the texts of the History of the Tang and which can be partially cross-checked by reference to the names preserved in the Khotanese texts; a certain number contained in the latter cannot be placed with certainty in this list; these are: Visanskhan, Vitakirti, Vitavikram and Vitasagrama. On the other hand, there was some that can was dated, in perticular the last kings of the dynasty: Visasambkhava (9x2-966), Višašura (967-977) and Višadarma (978-982) (Gercenberg, op. cit., x2). It was shortly afterwards that the kingdom of Khotan was conquered by recently-converted Muslim Turks; the kingdom of Khoian was henceforward to be one of the collection of Turkish states in the region which constituted Turkestan.

The town of Khotan, unlike Kashghar and the northern part of the Tarim basin, is not mentioned by the Hudûd al-'alam in the description of the Turkish tribes (§ 13, p. 96) in the section of the Yaghmā of eastern Turkestan, but in that of China (§ 9, p. 85). As the Hudûd al-'alam dates from 11 year 372/982-3, it may be supposed that in about the year 980, when king Vijadarma, 11 alive, Khotan and its territory formed a sort of enclave between the region 11 Kāshghar which was occupied by the descendants of Satuk Bughra Khān (died 344/955-6) and the territories belonging to China and Tibet; the king of Khotan, according to this 11 (p. 85), styled himself "Rular of the Turks and the Tibotans" ('apim al-Turk wa 'l-Tubba').

A little later, Gardist, who was writing after 431/ 1040, reports (according to Barthold, Ottol a poissakis v Srednyaya Aliya, 94) that even the town of Kai (?), situated at fifteen days' march from Khotan in the direction of China, was under the domination of Toghunghuz Turks (cf. Hudad al-alam, 255). According Gardizi, the inhabitants of Khotan were Buddhists, but he mentious a Muslim cometery to the north of the town (sbid., 255, n. 3), and in the town itself two Christian churches, although no documentary evidence of this has been found. As regards the Muslim world, Gardin shows us that in the first half of the 5th/11th century, Muslim proselytism was already actively exercised in Buddhist circles, and it is possible that the implanting of this group was a contributory cause of subsequent events.

At the beginning of the 5th/11th century, the Turkish rulers of Kashghār had become very powerful (Barthold, 12 Verksungen, Berlin 1935, 79 ff., particularly 88-90), and had founded the dynasty of the Karākhānids (see ILEK-KMĀNS). The son of Bughrā Khān Hārūn, himself the grandson of Satuk Bughrā

Khūn, who called himself Kaille Khūn Yūsuf and reigned in Kāshghar from about 401/1010, decided, for many unknown to us, to conquer the territory of Khotan. Seeing that he died in 423/1032 (Ibn al-hhie s.a.), it is likely that the conquest of Khotan was accomplished sometime between the years 1013 and 1032, for we possess money struck in his name at Kāshghar and at Yarkand from 404/1013-14 onwards (A. Markov, Inventarniy halaleg, etc., 102 ff.). On the onquests of Khotan, cf. Barthold, Turkestan³, 281, 2.

Later, Khotan, like Kåslighar, passed under the authority of the Ilek-Khans [q.v.], and subsequently under that of the Kara-Khitay (q.v.). After these events, the crisis arlsing in Central Asia as a result of the expansion of the Mongol empire led the Kharāzm-Shāh to make an agreement with Küclüg, who had deposed and expelled his father-in-law, the Gur-Khan of the Kara-Khitay, and a partition of the western sector of the Kara-Khitay empire took place. between the two rulers, giving to the Khwarazm-Shah the territory to the east of the Syr-Darya as far ... the heights of Küshghar and of Khotan (Barthold, Turkestan*, 356-7); after his succession to the throng, Küclüg, who had married the daughter of the Gür-Khan, a Buddhist fanatic, undertook a fierce persecution of Islam in the regions under his authority. particularly in Khotan, after his agreement with the Khwarazm-Shahs [q.v.]. According to Diuwaynl (tr. Boyle, 65.6, 70-3), Küclüg persecuted the Muslims cruelly and crucified the Imam 'Ala' al-Din Khotani at the door of his madrasa in Khotan. In the time of Haydar Mirzi (q.v.), nothing more was known of this martyr; even his tomb was unknown (Ta'rikh-i Rashidi, tr. E. D. Ross, 218, and ch. xlii). Thus there was no indigenous bistorical tradition at Khotan. if there was, the texts have been lost. Arabic and Persian geographical literature provides with only the most meagre of information; the real situation is misrepresented by al-Samfani (f. 189b) and by Yakût. who followed al-Samfani in his own writing (if, 403).

Under the reign of Ögedey, Diuwayni (tr. Boyle, 517) reports that "the lands between the banks of the Amu-Darya and the frontiers of Khitay were placed under the orders of the Chief Minister Mahm@d Yalavač and of his son Mas'nd Beg; those included Transoxania, Turkestan, Otrar, the land of the Uyghurs, Khotan, Kashgijar, Djand, Khwarazm and Farghana". Rashid al-Din (Djamit al-tawarith, tr. J. A. Boyle, The successors of Genghis Khan, New York-London 1971, 94), also writes = follows: "The Kalan (Ogedey) placed all the lands of Khitay under (the orders of) Mahmud Valavac, and (the region of) Besh-Ballk and Kara Khodjo, with the territory of Uyghuristān, Khotan, Kāshghar, Almalik, Quyalik, Samarkand and Bukhārā as far as the banks of the Ogus under (the orders of) Masfûd Beg, the son of Yalavač". In the remainder of his work, he makes further mention of Khotan; nevertheless, under the year 1253, Barthold (12 Vorlesungen, 184) writes as follows: "After the re-establishment of order, the frontiers of his government (sc. of Mas'ad Beg) were extended further: to him were subjected Transoxania, Turkestan, Otrar, the land of the Uyghurs, Khotan, Kashghar, Djand, Khwarazm and Farghana". After the death of Mengii (Möngke) in 1259, a conflict arose between Kubilay [q.v.] and his younger brother Arikboge in the course of which a cousin of Arik-boge, the Caghatayid Alugu, took to himself the entire area. entrusted to the authority of Maseud Beg; the latter appealed to Arik-böge who gave him authority to dispossess Alugu, but in the course of his mission be went over to the side of Alugn who died ca. 1266. As Arik-böge had been eliminated during this period, Kubilay appointed in his place another Caghatayid, Barak, who took possession of part of the former possessions of his grandfather Caghatay, but Barak was compelled in his turn to submit to Kaydu, grandson of Ögedey, who sought to reconstitute the territory given to him by Cingiz Khān. (Barthold, 12 Variesungen, 184-6). Finally, a more in less stable equilibrium was established between Kubilay and Kaydu, in much so that according to a passage of Marco Polo (ed. Yule-Cordier, I, 188; ed. Hambis, Paris 1955, 62-3), It ill reported that in the 1270s Khotan was under the authority of the Emperor of China, while Yarkand depended in Kaydu.

While Central Asia was the object of partition between great powers, it is nevertheless certain (Barthold, za Verlemman, 188-9) that a number of indigenous dynasties survived as vassals, especially at Kliotan. In reference to these last, Barthold mentions Persian verses of which the date is unknown, which composed in honour of the sultan of Khotan, Munmish-Tegin, the last words being quoted in Turkish (canddn bisi ey shah kigüyad Turk "yavlak karl bolmish Memmish Tägin". Barthold (op. cit., 195) also mentions the fact that Diamil Karshi, in the appendices (Mulhakāt) to his translation of an Arabic dictionary of the 4th/soth century, devotes considerable space to the town of Khotan, giving a brief description and a list of some persons native to the place. Again according to Barthold (op. cit., 195), Muhammad Haydar (op. oil., tr. Ross, 301) writing in Kashgharia, distinguished according to his own terms, four classes at Kashghar and at Khotan; first-itimen, the peasantry; second-kaucin, the army; third-oymak, the nomads (who were entitled to a certain quantity of grain, textile goods, etc.); and fourth-the class of the officials and the 'mand'.

Much later, it seems that Khoten shared the fate of other towns in the Tarim basin, in particular of Käshghar and other towns in the same region; in the 18th century It was a part of the state established by the Khodjas, who defeated the descendants of Caghatay, and were compelled to submit to the domination of the Djungar, and later, in ca. 1760, to that of the Manchus who eliminated the Diungar. Later still, in the seventh decade of the 19th century, Khotan was obliged to accept temporary domination by Ya'kub Beg and after the death of the latter in 1877 to submit once again to the Manchus. With regard to a bistorical work completed on 11 Sha bin 1311/24 February 1894 in Khotan and dealing with events subsequent to 1280/1865, cf. Bull de l'Acad. (1921), 209; cf. also the chapter m the Khodjas of Khotan in Ta'rikh-i ememiyye, ed. Pantusov, 161 ff. The principal source for the history of this region is provided by reference in the Chinese dynastic histories and in other works concerning the autonomous region of the Uyghurs itself, which have appeared in Chinese from the 18th century in the present day. It is there that the documentation concerning the town of Khotan Is found.

The town itself, like all those in the Tarim basin, has known a variety of activities, but the silk industry which has continued from the Han period to the present day is the principal activity. At the time of writing, the industrialisation of the region is being developed by the People's Republic of China, although it is not possible to assess what progress in being made; it seems that the Chinese government is concentrating there is the search for raw materials. There is no certainty about the population figures; according to Kornilov, Kaelgariya, Tashkent 2003,

27.3, the population amounted to only 15,000; according to E. and P. Sykes, Through deserts and oases of Central Asia, London 1920, 216, the population was 50,000.

Hartmann, Chinesisch-Turhestan, Halle 2908, 93 ff.; on the state of the Khodjas and their connections with Khotan, cf. idem, Der islamische Orient, i. Berlin 1905, 195 ff. and the index. These sources may be completed by numerous works in Chinese.

(L. Hambel)

KHOTIN (in Ottoman Turkish usage Khōtin; in modern Turkish and in Romanlan, Hotin; Pollsh Choczim and variants; German Hwthyn (15th/century), Chotim, Chotin, Chotezyn, etc.; Italian (18th/century) Cucino; and other forms): a fortress and town on the right (formerly Moldavian) bank of the Duestr (Turla), 20 km. south of Kamenets Podolsk (Kamaniče [see Kamāniča]). Khotin is now (since the end of World War II) in the Ukrainian S.S.R., and forms the administrative centre of the rayon of the same name in the oblast of Cernovits (Cernauti, Czernowitz).

Khotin, which occupied an easily-defensible site at the point where the important mediaeval trade route from the Baltic to Constantinople crossed the Dnestr, was from the mid-14th to the late 18th century a military stronghold and commercial entrepôt of some Importance. The region of Khotin, which was, in the 16th and 17th centuries, disputed between Poland and Moidavia, had attracted Ottoman ettention as early as the reign of Mehemmed II, and in the 15th century Mitslim merchants frequented the route via Khotin to Poland. Khotin was besieged unsuccessfully by 'Othman II in 1030/1621; thereafter it was restored to Moldavian control, and is me described by Ewliya Celebi, who visited it in the retinue of Melek Ahmed Pasha in 1658 (Soyakat-name, v. 124-5). In 1084/1673 Khotin was occupied by the Poles, but it was regained by the Ottomans in the following campaign season (Silahdür, Ta'rīkā, Istanbul 1928, i, 628 (f.). The Ottoman occupation of Podelia in 1083/1672 carried the frontiers of the Empire beyond the Daestr, but with the retrocession to Poland of Podolia, and the evacuation of Kamaniča in 1220/ 1699, Khotin became the most important Ottoman fortress in the region of the upper Duestr; this importance was to increase in the course of the 18th century, in the conflict with Russia became ever more acute.

Khotin was occupied by the Russians in 1713; on its return to the Ottomana in 1125/1714, the old fortifications were rebuilt and increased in height by more than a balf, as part of a general strengthening and rebuilding programme, which was supervised by a special commission sent from Istanbul. The contemporary Moldavian historian Cantemir described the Khotin of this period as the most elegant and wellfortified town of Moldavia, praise which is echoed in an Ottoman description of the town written at the same time. Also in 1125/1714, Motin and its surrounding districts were removed from the iurisdiction of Moldavia and reorganised as we spalet, as part of the strengthened Ottoman frontier defences along the right bank of the Duestr, becoming, in the words of a German observer, "die einzige Vormaner der Moldau".

The rath century stronghold of <u>Kh</u>otin consisted of the medieval it has and the more extensive new outer works encircling the old fortress on three sides.

In the outer walls me four gates: their names variously given as the Istanbul (or Jassy) gate, the Temeshvar gate, the Water Gate and the Ukraine or Bender gate. Within the outer fortress were two baths, two principal mosques and, near the Istanbul gate, a betesten. Inside the Istanbul gate, on the right, lay the barracks of the artillery and the supply-train, the residences of their again, and the headquarters of the defterder. On the left was a large and wellconstructed reserve granary. Further towards the \$\tilde{c}\$ kai's were situated another bath, the office of the petiteri aghasi, and the barracks of the Janissaries of the fortress. Higher up, towards the old fortress, was situated the seray of the pasha of Khotin, and the mosque of the walide sulfan. Khotin was, however, yet again occupied several times by Russian forces in the course of the 18th century: in 1152/1739 (by Münnich) and again in 1183/1769 (by Galitsin). In 1788 Khotin was occupied by an Austrian force; later, after the conclusion of the Peace of Jassy, Khotin was restored for the last time to Ottoman rule. After 2806 it remained Russian hands, except for the period 1918-47 when the territories south of the Doestr formed part of Romania.

J. HEYWOOD) the fortress).

At-KHUBAR, a town on Saudi Arabla's Persian Gulf coast (26° 17' N, 50° 12'45" E). The name is most likely a collequial plural derived from the word hebera?, meaning "a small pond formed

by rain",

The first permanent settlers in the spot were members of the tribe of al-Dawlair who landed in 1341/1923 after fleeing the island of al-Bahrayn in fear of British reprisal following clashes with Shift elements. Is a bahmad al-Dawsari is generally regarded as the first settler of al-Khubar. Other tribesmen who landed at nearby al-Dammām in few weeks earlier subsequently moved to al-Khubar. Prominent among the early inhabitants were Muhammad b. Rashid and his brother Isā, Husayn Bū Surayh, Khāild b. Mihar and his brother Nāṣir, Sa'd b. Muḥammad and Ṣāliḥ b. Dium'a (author's father). The settlers built huts of palm fronds along the sea shore. For two decades the village depended on small-scale pearling and

fishing for its survival. No more than 20 boats left the village each pearling season; the crews came partly from the village, but mostly from nearby cases. In the early 1930s 'Isa b. Ahmad returned to al-Bahrayn with a group of the villagers, mostly crew

members of his pearling fleet.

Al-Khubar remained a small fishing and pearling village covering an area of less than 0.5 km." until 1935. In that year the California Arabian Standard Oll Company (later the Arabian American Oil Company) built a pier at al-Khubar to support the early oll well-drilling at nearby al-Zabrán. In 1357/1938 a storage and shipping terminal was built = al-Khubar, and barges started carrying Saudi Arabian oil to the rafinery of the Bahrain Petroleum Company (Bapco); this marked the beginning of the export of Saudi Arabian oil. The importance of al-Khubar port has diminished since 1369/1950, when a deep-water pier began operating in al-Dammam; the al-Khubar herbour facilities now accommodate only fishing fleets and coastal ships. The city itself, however, now covering an area of 8 km², thrives as one of the most active business centres on the Kingdom's Gulf coast, second only to al-Dammam. Commercial enterprises that were given their original impetus by the oil industry flourish independently, supported by both the public and private sectors of the economy. With modern office buildings and living quarters, with stores displaying merchandise from all over the world, and with substantial job opportunity, al-Khubar attracts foreign communities of various nationalities. ('ABDALLAH S. JUM'AH)

KRUBAYB a. 'Ani al-Angari, one of the first martyrs of Islâm. The main features of his story common to all versions are as follows: After the battle of Uhud [q.v.] (on the chronology ill which, see below) small body of ten of the Prophet's followers discovered and surrounded between Mecca and Usfan by 100 (or 200) Lihyanis who belonged to the Hudhayl. The leader of the hard-pressed little band, 'Asim b. Thabit al-Ansarl (according to others, the leader was al-Marthad), proudly refused to yield. He and six others were killed whereupon Khubayb, Zald b. al-Dathina and a third surrendered; the latter feli a victim to his stubbornness and the two former were taken to Mecca and sold. Khubayb fell into the hands of the Banu 'l-Harith b. 'Amir b. Nawfal b. 'Abd Manaf, who on the expiry of the sacred period, took him out of the Haram to al-Tan'im, bound him to a stake and killed him with lances (subran) in revenge for al-Hārith, whom Khubayb had killed III the battle of Badr. Before he was to the stake, Khubayb asked for time to perform two raka'as, which became month for martyrs, comparable to the last prayer of Christian mertyrs. Khubayh is said to have recited two verses at the stake to the effect that he as a Muslim martyr cared nothing about the treatment of his body as Allah was able to bestow his blessing even upon his severed members. Kunit formulae uttered by him besides these verses have also been handed down in which he appealed to Allah for vengeance on his enemies. Those present we said to have shown great trepidation at this curse of the dying man; it is related that Abū Sufyān hurriedly pressed the little Mufawiya to IIII ground to protect him from the consequences of the ill-omened words; and Sa9d b. 'Amir used to fall into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death "Aşim prayed to Allih asking him to communicate news of the event to his Prophet in Medina, which actually happened. His copper me protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain. According to al-Wakidi. 155, however, Muhammad received with III the event at the same time as that of Bir Ma'dua; and according to Ihn Hisham, 641, it was not sasim, but Khubayb, who prayed to Allah asking him = cause Mubammad to be informed. According to al-Zuhrl and 'Urwa (see the latter's brief account | al-Wakidi, 156) the ten men were sent out as a sariyya to spy upon the Meccans: according to I'm Hisham, 638, al-Walddl, 157 and Ibn Sa'd, ills, 30-40, illf2, 33-4, ten teachers of religion, who were on their way III a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides. This story is too much like that which has been woven round drama of Bi'r Ma'una, which happened at the same time. Al-Wakidi, 227, tells us under the year 628 that Khubayb was not yet at that time a priamong the Meccans. The only certain chronological statement that can be made is that the event took place after the battle of Uhud, as 'Asim fought there. In the official Sira, the incident is recorded under the name Yawm al-Radii and put by Ion Hisham in the year and by al-Wakidi in the year 4.

The figure of the protomertyr Khubayb lent itself readily to embellishment. The daughter of al-Härith (according to others Mawyis, a client of Hudjayr b. Abi Ihab), in whose house he was kept a prisoner, him one day eating grapes, although these could not possibly be obtained in Mecca. When his martyrdom approached, he asked for a knife with which to the hair in his privy parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought in his possible revenge; when Khubayb noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. The verses above mentioned. which he is said to have uttered at the stake, have grown in Ibn Higham to a whole poem. The same author (644 ff.) gives the elagies uttaced over him. For how his corpse was taken from the Kuraysh and swallowed up by the earth, see Tabari, i, 1436-7 = Isāba, i, 862.

Bibliography: al-Zuhri's or Abu Hurayra's tradition in Ahmad b. Hanbal, Musnad, ii, 294 ff., 310-xx, and in al-Bukhārī, Djihld, 100 170; Ibn Ishāk's version, 638 ff., goes back to 'Aṣim b. Umar b. Katāda: al-Wakidi, tr. Wellhausen, x56ff. (cf. 226-7) compiled the whole story from various sources; Ibn Sa'd, iii/2, 33-4; al-Diyārbekrī, Ta'-riāh al-Khamīs, Cairo 1203, i, 454 ff.; Ibn Hadiar, Iṣāba, i, 860 ff.; Ibn al-Athre, Usd al-ghāba, ii, rx ff.; Caetani, Asnali deil' Islām, Anno 4, \$7,8; anno 6, \$2; Tabarī, i, 1431 ff., who gives the two main versions; Ibn al-Kabl-Caskel, tab. 77, on his genealogy.

[A. J. Wensunck]

RHUBMESINIS, the members of mobscure heretical movement is rith/17th century Istanbul that preached the superiority of Jesus to the Prophet Muhammad. The term derives from Persian that "good, virtuous", and mesth — Messiah". Some description of their tenets is to be found in Paul Rycaut's The present state of the Olloman Empire, London 1658, 129. Rycaut attributes to the Khübmesihs a belief in Jesus as "God and Redeemer of the World", and says that it is "principally maintained amongst the gallants of the Seraglio". Although adherence to the doctrine was liable to bring death, and its followers commonly practised secrecy, they might be recognised by the white turbans they were

According to Rycaut, in addition to designating member of the movement, the term Mühmesibl entitle general usage as a description for anyone of mild and affable disposition. The accuracy of this information in all its points is not to be assumed; many of the statements of Rycaut on religious matters are demonstrably erroneous. The Khühmesibl movement presumably found its inspiration in the teaching of Kabid, executed in Istanbul in 934/1527, after some delay, for alleging that the spiritual rank of Jesus was superior to that of the Prophet. Rycaut makes no mention of Kabid, however, nor do any of the sources on Kabid (e.g. Ibrāhīm Pečewi, Ta²rīḥ, Istanbul 1283/1866, i, 124-6) attribute to him the foundation of the Khühmesibi movement.

Bibliography: Given in the text.

(HAMID ALGAR)

KHUBZ (A.) generic term (nomen unitatis: Musbra) meaning bread, whatever the cereal employed, e.g. corn [see KAMR], barley [see SHAMR], rice [see RUZZ] etc., and whatever the quality, the shape and the method of preparation. There exists nevertheless, in literary Arabic and, to a greater degree in the various dialects, a certain number of metaphors and of specific terms which cannot all be mentioned in this brief article, and the ellipsis of the word khubt, in expressions denoting a porticular type, causes the semantic range of the fundamental notion to be appreciably enlarged: thus hhamir for hhabes hhamirus "leavened bread", fafir for hhubses fafires "unleavened bread" etc. The baker is called akabbaz (but in Morocco this is known only in its feminine form kkabbäza; m below), or farrän "oven-worker" (which however in Morocco means | communal oven), and a bakery is called makhbas or simply furn "communal oven" (in technical usage corresponding to hispa "lime-kiln" etc.). All these terms apply to precise cases which will be summarised later.

The economy of ancient Arabia was such that the Arabs could not make bread the basis of their diet [see CHIPHA', i], so that the expression akil al-hauba "bread-eater" was a lambian epithet implying considerable affluence (al-Djahiz, Buhhala', ed. Hadjiri, 211). Nevertheless, the nomads occasionally ate a fulma ("flat bread", for khube" fulmatia), that is a kind of pancake cooked on a heated stone, or a malla "hot ash", for khubz mallati") also called malli, a thicker loaf cooked under ash according to m process similar to that described by A. Jaussen (Cordumes des Arabes au pays de Moab*, Paris 1948, 63) in talking of kors: on arrival at the halting place, the Bedouin kneeds flour with water and salt (if he has got lt), but without adding yeast, and makes a sort of pie which be cooks in ash, turning it frequently to prevent burning. E. Lacust (Mols at choses berberes, Paris 2920, 89-90) has collected in Berber (where bread is called agarum) a text which refers to very similar practices.

For their part, the sedentary people, who were familiar with the whitest flour (hawrārā) and bread of the finest quality which they cooked in an oven (famīdr), did not eat it regularly. They used to crumble it, however, to make a broth (farīd) which the Prophet placed above all other foods (al-Bukhārī, litāb al-af-ima, bab 27) and it is known that, according to the tradition, Hāshim [q.v.] owes his name to the fact that he crumbled (hashama) bread to make broth; this economical dish was highly thought of for a long parlod after Islam.

The conquest of several nations which produced corn in abundance increased in the various classes of society, and in varying degrees, the consumption of KHUBZ

bread, which was from that time considered, with anances, "the subsistence of the land-dwellers, the basis of nourishment and the prince of foods" (al-Diāhiz, Buhhalā', 114) and city-dwellers who did not offer it to their guest unstintingly are taken to task (ibid., 182). The Kitāb al-Buhhald' (see index, s.v. KEUBZ) provides interesting details regarding wheat-bread and its use, but in general it gives a picture of an affluent class, whose members were in a position to own a slave charged with the functions of a waiter or of a majordomo rather than metaker, but called habbāz because of the importance attached to bread (ibid., 48).

42

The work (108), while giving valuable information on the refined standard of cuising then practised, shows that bread was never eaten alone, and mat it was incorrect to offer it day, (hhubana ka-[dres]. In the more affluent circles, it did not constitute the most substantial part of the diet and was rather used for dipping or was eaten from side-plates, while in poorer families and from a very encient period, it was always accompanied by some condiment (udm) designed to make it palatable; in the present day, a term taken from the root 'd w: 'add, or di es s "to fan" : djuris, juris, dwas, clearly expresses this idea; however, the interested parties probably do not take into account the Imbalance which they create in thus adding lipids to the proteins and glucoses contained in bread. It should be stressed however that not everyone was in a position to eat it regularly, and even today, it still constitutes = rare luxury for certain particularly impoverished populations; for the more affluent, the basis of the diet is often, in many regions, boiled rice, ground corn (burghul) or kuskus (see kuskus0).

Since the classical period and, to a large extent, to the present day, there have existed various categories of bread which can be reduced to the following, while it may be noted that the dialectical vocabulary, extremely variable and rich, deserves to be the object of a linguistic-geographical study, whose ethnosociological results could yield useful information:

- in Iraq, rice cultivated in the region of Başra was used probably by a limited number of bakers (among whom a popular poet, al. Khubz'aruazi [q.v.] was to become famous) to make a bread which was quite cheap and accessible to the poorer classes, as well as to those who lived an ascetic life-style (cf. Ibn Baṭṭūṭa, ii, 5); in the other regions where it was cultivated, notably in Palestine and Egypt, rice was more often consumed in other forms (see M. Canard, La ris dans le Prochs-Orient, in Arabica, vija (1959), 122 ff.);
- white bread, made with pure wheat-flour (hererears) was in general confined to the more affluent families, but it seems to have been in widespread use in a number of countries, such — Palestine and Egypt; physicians actively recommended it, although it was less nutritious than
- bread of coarse-ground flour (htm://dr and vars.) which was consumed by people of less means;
- bread made from common wheat, perhaps inixed with a little barley-flour;

- semolina bread (samīdh/samīd);

barley bread, more coarse, mention of which oppears frequently in the hadith; ascetics judged it to be sufficient, but many poor families even today, must be content with it; in North Africa, hear, and in the Near-East, kurs, are often nothing more than paneake of burley-flour, pure mixed with a little wheat-flour;

- to this list it is appropriate to add the bread

manufactured. In times of hardship, with flour of maite, millet or sorghum (distra) or man of some wild plant, such in samek in Jordan.

Apart from various pastries based wheat-flour, bread was presented, with variations on which we cannot dwell here, in two principal forms;

rubāk, vary thin, was cooked on a slab of iron (or later, of stone) heated on a bearth or a brazier. This slab, called tābakļīābi in the Middle Ages, is still in a in the Near East where it is convex and bears the name sādi; in the Maghrib, similar baking is not unknown, but a type of earthenware case-role is more often used, and bread thus prepared is called markūk a mahū' (cf. E. Laoust, op. land., 89-

for the Berber world);

raghif, or (from Persian) diardah/diardhah is a round bread (muchawwar) quite thick and cooked in an oven. But there is a distinction there between the domestic and the communal oven. The former (tammer; entrently tābān/tābāna) has the form of an upturned jar without a base or of the frustrum of a cone open in the upper part; it is heated by means of embers placed inside and the raw dough is spread on the sides, on the outside (see Beaussier and Dozy, Suppl., s.v. (ábila). In certain regions there is also still to be found a tannar dug into the earth, while itt Jordan (Jaussen, Moab, 63) tübün refers to a small construction in which is placed a sort of cooking-pot, surrounded by embers to cook the dough in the interior. In encampments the oven is replaced-by a pottery plate (glannay or hammas in Tunisia) is beated on a brazier (kānān) or even, on occasion, by heated stones.

As for the communal oven (furn, haska) it is found in various parts of the towns as well as in the villages, and it is there that individuals normally cook their bread for consumption at home. Until recently, in the Maghrib at least, it was considered dishonourable to buy one's bread outside, and the kneading of the dough, messentially feminine occupation, was the duty of the mistress of the house or of mervant. On a large wooden tray (has a/gas a), the housewife put, sometimes with a little bran, flour of some or of barley or of both, or even of semolina, in quantities sufficient to provide food for several days, added yeast and salt, then poured in hot water and kneaded the dough which she then cut into pieces and left to rise on a tray m warm place. A journeyman baker (jarral) im Morocco) went round the houses, took the trays, imprinted on each piece a distinctive mark and took it all to the bakehouse.

The baking done, the baker came and handed over to each family the tray and the bread belonging in it. The wages of the baker consisted of a piece of bread which be baked and sold to his profit; in al-Andalus, this bread was called pope (and vers.) and this term has survived under the form piwaiphyai baya, in regions of Morocco and of Algeria to designate the salary of the baker, even after it became the practice to pay him in cash (see W. Margais, Testes stabes de Tanger, Paris 1911, 242-3; this work contains, pp. 2-39, 127-51, extremely vivid text relating to the journeymen and the bakers, notes and a bibliography.)

Thus there were no real bakeries, and there was no see reserved for the making and the sale of bread. However, foreigners, individuals and bachelors were able to obtain it, either from certain women who kneaded extra pastry in order to sell the surplus bread in the streets, at a price fixed by the makeries or from bakers or retailers; in fact the farries sold not only the small amounts of bread that they had

received in wages (for they were in principle forbidden to mix the pieces of dough to make large baves; cf. E. Lévi-Provençal, Séville musulmane, \$\$ 115, 148), but also the bread which they made on their own account. The authors of works of hisbs [q.v.] especially al-Sakati (G. S. Colin and E. Lévi-Provençal, Un manuel hispanique de hisba, Paris 1931, 26-32 and passim; Spanish tr. P. Chalmeta, in al-And. (1968 (f.), §§ 53-67 and passim), enumerated in detail the frauds committed by these bakers, in such matters in the mixing of flours of different qualities (and even the addition of white earth), as well malpractices in the baking and in the weighing of the bread, and also the rules of hygiene which were to be observed by the bakers and the traders who, in particular, not allowed to work at professions such as those of the butcher or the fishmonger. (cf. Ibn 'Abd al-Ra'01, ed E. Lévi-Provençal, Trois trailés hispaniques de hisba, Cairo 1955, 89-90; French tr. R. Ario, in Hesperis-Tamuda, I/2 (1960), 201-2). In spite of these precautions, the quality was not always high, and bread sometimes contained gravel and other impurities (cf. M. Talbi, in Arabica, i/3 (1954), 299).

The price of bread, sold by weight and not by the loaf, was fixed by the muhitasib, but it varied enormously, and it is the price of corn which provides the most convenient basis for estimating the cost of living; we conline ourselves to referring in E. Ashtor's fundamental work, Histoire des prix et des salaires dans l'Orient médiénal, Paris 1959, and to the article Thues for all matters relating to the different types of flour.

As in other civilisations, bread is treated with great respect. It is always broken and it should never be cut with a knife. Ill crumb which falls to the ground is picked up, raised to the lips and swallowed; a piece of bread found on the road III put, for the benefit of some destitute person, in a place where it will not be tredden on and solled. And man though it does not constitute, strictly speaking, the basis of the diet, it is given in the Arabic dielects names which rafer to life and to subsistence; 'ayahi'lah, ma'isha, hai, etc. And it is not absolutely certain that the magical purposes that it served have totally disappeared.

However, the situation described above has now been perceptively modified in the **man** that, in the towns at least, it is from the bakerles that the population buys the bread that it needs; but if the making of bread has borrowed from the West certain modern processes, anyone can still easily obtain the bread and presented **m** in antient times. Also, in the countryside the tradition **m** still alive.

(CH. PELLAT)
AL-KHUBZA'ARUZZĪ (many possible vocalisations), ABU 'L-ĶĀsīm Nagr m Aņmad B. AL-Ma'mūn,

popular poet of Basra, who probably died in 327/936. He made rice bread (hhubs aruss) in a shop at the Mirbad (q.v.), where his biographers show him as surrounded by a circle of admirers who were especially attracted by his ghazai verses on boys, these being his speciality. It does not seem that he should be included in the list of those poets whose belligerence involved them in contests and controversies, nor does he seem to have been inclined, like so many of his compatriots, to attack the honour of others; because of this last fact, al-Massudi's information that he had to flee into Arabia in order to avoid the vengeance of one of the Baridis [0.0.] is dubious. This same author states that his verses, set to music, were sung everywhere, but except in error, the Aghani cites none of them. At all events, his Diwdn, put together by his friend Ibn Lankak [q.v.], must have spread considerably beyond the confines of his native town and meet of Baghdad, where he lived for some time. This is confirmed by the fact that this illiterate (amoi) poet was highly appreciated by a person who held fast III the classical tradition like Ibn Sharaf [q.v.], who attributes to him "ingenious shafts of wit and subtle inventions, in a closely-knit form and a chaste style, with no superfluities". The judgments of the biographers and anthologists confirm this appreciation, which the extant fragments of his work do not however seem entirely to justify; but the complete Dimin must have much richer and must have had enough originality to have stimulated the jealousy of a certain "great poet", thus referred m briefly by Ibn Sharaf.

KHUDA BAKHSH, a notable bibliophile of Muslim India, the founder of the celebrated Oriental Public Library, at Patna, Bihar, India. He was born in 1824 at Chapra, and received his education in the University of Calcutta. After obtaining his degree in law, he began to practise in a lawyer at Patna at the age of twenty-six. He man achieved considerable success in his profession, and was appointed a public prosecutor, which post he held for many years. In 1854, he was invited to serve as the Chief Justice of the High Court at Hyderabad, Deccan. On his retirement in 1898, he lived a quiet life at Patna, where he died in 1908 and was buried in IIII precints of the library he had founded. In recognition of his public services, the order of C.I.E. was conferred on him in 1903 by the British Government of India,

Mudh Bakhsh had inherited his passion for collecting rare Arabic and Perslan manuscripts from his father. When his father died in 1876, he left him a collection of 1,400 manuscripts, with the behest to make it into a walf mean circumstances should permit him to do so. He continued to make substantial additions it, till the number of manuscripts had reached 4,000 in 1891, when the collection, along with the building which accommodated it, was made into a public trust. The walf-dead was duly executed on 29 October 1891, and the library was formally opened by the Lieutenant-Governor of Bengal and Bihar. It was given the name of the "Oriental Public Library", though the people have

often persisted in calling it the "Khuda Bakhah Library" after the name of the generous donor.

A new era in the history of the Library opened in 1903, when it was visited by Lord Curzon, man Governor-General and Viceroy of India. He was deeply impressed by its literary treasures, and ordered that a suitable man building be erected to accommodate them. He also discussed plans for the proper preservation and safe-keeping of the manuscripts; and at the same time he directed Dr. E. Denison Ross, then Principal of the Calcutta Madrasa. In make suitable arrangements for the proper cataloguing of the manuscripts.

Twenty-eight volumes of the catalogue have so far (1970) been published, in addition to two Supplements and an Index. The work of cataloguing is still in progress. The library at present contains 4,232 Arabic and 4,238 Persian manuscripts, in addition to a number of printed books in Arabic, Persian, Urdu, Hindi, English, French, German, Latin and

other languages.

Khudā Bakhsh survived by son Şalāh al-Din Khudā Bakhsh, Barrister-at-Law. Like his father, he too was a legal practitioner, but tound time to write a number of essays and papers on Islamic history and civilisation, which have been collected in book form. He also translated into English some of the works of Alfred von Kremer and Joseph Heil, and was accordingly characterised by D. S. Margoliouth as an "interpreter of Indian Islam to Europe and of European Orientalism to India". He was a liberal and a modernist in his social and religious views.

Bibliography: V. C. Scott O'Connor, Am eastern library, Glasgow 1920; Salah-ud-Din Khuda Bakhsh, My father, his life and reminiscences, Calcutts information supplied by the present Librarian. (SR. INAVATULLAM)

KHUDABENDE (see ULEIAYTU)

KHUDÁWAND (r), God, lord, master. There is no established etymology for this word and Middle or Old Persian antecedent. It is used in Ghaznawid times in the sense of lord or master (cf. Abu 'l-Fadi Muhammad b. Husaya Bayhaki, Tarikh-i Baykahi, ed. 'Alt Akbar Fayyad, Mashhad 1971, 23, 435, and passim). In documents and letters belonging to the Saldjuks and Khvárazmsháhs it was as a term III address to the sultan, usually with some qualifying word or phrase such as hhuddwand-i 'dlam "lord of the world" (cf. Muntadiab al Din al-Diuwayni, 'Atabat al-halaba, ed. Muhammad Kazwini and 'Abbās Ikbāl, Tehran 1950, 4; Bahā' al-Dīn Muhammad b. Mu'ayyad Baghdadi, al-Tawassul ila 'l-tarassul, ed. Ahmad Bahmanyar, Tebran 1937, 139, 341). Khudāyagān-i 'ālam and other similar combinations are also found in the same sense. Khudawand, with or without a qualifying phrase such multimi'am, is also used m a form of address to government officials (civil and military) and to patrons in general. Muhammad b. 'Abd al-Khālik al-Mayhanl in his manual me the art of the secretary, Dastar-i Dubiri, written in 575/1180, mentions khudarand-i 'ālam, khudāpand-i djahān, khudāyagān-i djahān and khudawand-i mali-ni'am among the forms of address accorded to the sultan (ed. Adnan Erzi, Ankara 1962, 13, 15). He also includes handaward among the titles of the masir (ibid., 16).

The terms hindawand-i at n.m. hindayagan-i 'dism and similar combinations are common in Dislayirid, Ak Koyuniù and Kara Koyuniù documenta. The derivative term hindawandagar is common m an honoritic for tearies and commanders under the Salginks of Rum (A. Z. V. Togan, Umumi türk tarihine giriş,

Istanbul 1946, 329) and in Ottoman usage (I. Beldiceanu-Steinberr, Richerches sur les actes des rignes musicose Osmon, Orthan m Murad I, Munich 1967; H. Inalcik, IA, art. Pddisth). See also E. Quatrèmere, Histoire des sultans Mamiouks de l'Égypte, Paris 1837-45, i, 64 fi., and F. Taeschuer, Die Worke des Familie Dui Qurafa Beg in Brussa, in Isl. xx (1932), 175).

(A. K. S. Lamerou)

KHUDAWENDIGÄR (p.) "lord, owner, master";
in Ottoman usage, it was used as (1) the title of
blurad I, and (2) the name of the sangles and
province of Bursa.

1. The title Khuddwendigdr was used for women ders and viziers during the Saldjük period (Hasan b. 'Abd al-Mu'min al-Khoyl, Ghunyat al-katib wamunyal al-falib fi rusum al-rasa'il wa-madimu' alfadă'il, ed. N. Lugal-Adnan S. Erzi, Ankara 1963, 4-5; M. C. Şahabettin Tekindağ, lazet Koyunluoğlu Kütüphanesinde bulunan Türkçe yazmalar, in TM, xvi 1971, 134-5). As an attribute, the term was used for mystics like <u>Di</u>alāl al-Din Rumī and Ḥādidi Bektāsh (Bíláki, Manábib el-Sarifin, ed. Tabsin Yazıcı, Ankara 1959, i-ii, index). The word became widely used, especially after its usage as a title for the Ottoman sultan Murad 1 (761-91/1360-89) (Feridün, Münghe'dt al-seláfix, Istanbul 1274, i, 100, 103-4, 105-9, 112, 163, 166; M. Tayyib Gökhilgin, XV-XVI asırlarda Edirne se Paşaeli livarı, İstanbul 1952, 172), but the early Ottomans historians (e.g. 'Ashikpasha-zāde, Noshri, Orūč, Bihishti) 📰 not mention this title. In 9th/15th century documents, when referring to the raign of Murid I, the phrase Khudowendigas samaniada is med without mentioning the Sultan's name (H. Inalcik, Hieri 835 tarihli Süret-i defter-i sancak-i Arvanid, Ankara 1954, 154; Kanun-name-i Sulfani ber milceb-i Sof-i Otherdei, ed. H. Inalcik and R. Anhegger, Ankara 1956, 77, 81; Çağatay Uluçay, Saruhanoğullars ve eserierine doir verikaiae, Istanbul 1946, ii, 44, 48). The roth/r6th century historians accord Murad I the title of Khudawendigar. Also, Murad I was sometimes addressed as Ghārī Khimkār (Gökbligin, op. cit, 175) and it has been argued that the word khilehar is a variant form of Khuddwendigar (for the form Abundade used in a document of 848/1444, see Halil Inalcik, Arvanid livers, 9). On the evidence of the documents, the term thildswendiges we used for the successors of Murid I from Bayezid I to Selim I (Feridûn, op. oil., i, 118, 124, 149, 151-2, 154, 165, 187, 290, 304, 373, 377; A. Nimet Kurat, Tophage Saraya Müzesinde bulunan Altmordu, Kurım ve Türkistan hanlarına ail yarlık ve bitikler, İstanbul 1940, 49-50). As applied III these Sultans, it had the meaning as the terms padigiak and hindswend (Kanan-name, Veliyuddin Efendi Library, no. 1970, if, 15b, 16a; Tekindeg, op. cif., 135, n. g); but in the 11th/17th century, it was applied to Murid I exchisively (Ewilyh Celebi, Seyahat-name, Istanbul 1314, 14).

2. The use of Khudawendigir as a name for the province of Bursa started after its conquest when Orkhan gave the town, together with its surrounding lands, to his son Murad as a sandiak (Neghri, Diihānnamā, ed. F. Taeschner, Leipzig 1951, 56; Ashippasha-zāde, Ta'rīkā, Istambul 1915, 43). However, there is me record in the contemporary sources that this name was used during the reign of Murad I (cf. Kātib Čelebi, Diihān-namā, Istanbul 1145/1732, 556). At this early period, Bursa was the capital of the Ottoman leader, himself called the emir-i kebir, and the province was therefore called after him beg sandiaghi (see H. Inalcak, Bursa periye sicillerinde Patih Sultan Mahmed'in formanders, in Balleton, liv,

698, 702; M. Akdağ, Türkiye'nin ikiisedi ve içlimci tarihi (1558-1589), Ankara 1971, il, 284, 309). The oldest document relating to the region and calling k Khudawendigar is the Khuddwendigar lings lubrir defteri dated 892/1487 (Başbakanlık Arşiv Genel Müduringa Tapu Defteri no. 23). From this date onwards, the term Khuddicendigdr sandjaghi was sometimes used instead of "the sandiak of Bursa" (M. Akdağ, op. cil., ii, 310; H. T. Dağlioğlu, xvi asırda Bursa (1558-1589), Bursa 1940, 31, 41 and passim). The Rhuddwendigar sandjaght in the sydlet of Anatolia was organised as a separate province in the 19th century. This province consisted of the sandjahs of Karahisar-ı Sahib, Kütahya, Bilecek, Erdek, and Biga in 1846-7; it me reduced to a mere mulasarrifile in 1860, but restored to the status of a province again in 1861-2. Khudāwendigār, according to the provincial organisation regulation of 1864, consisted of Kütahya, Koceeli, Karesi, Karahisar-i Sahib and the central sandjab of Khudawendigar itself (Vecihi Töntik, Türkiye'de iddri tegkildi, Ankara 1945, 220. 128, 130, 264).

KHUDNAND(A), a town and district in Contral Asia, now the town and oblast of Leninabad in the Tadzhik SSR, the town lying in 40° 17' lat. N. and 69° 37' long. E. The mediaeval was strung out along the left bank of the middle Sir Darya at the southernmost bend of its course and at the entrance to the Farghana valley. It lay in the ill-defined borderlands between the Transoxenian districts of Ilāķ [g.v. in Suppl.] and Ushrūsana [g.v.], and was generally reckoned as being connected administratively with one or other of these two in the early middle ages. Its destinies were, however, frequently linked with those of the region of Farghana [g.v.] to the east, the frontier between the two districts being marked, according to the Hudud al-'alam (372/982), tr. 115-16, by the town of Wathkath or Wan Kath.

At the time of the Arab invasions of Transoxania, there was a local ruler or malik of Khudiand, apparently dependent on the ruler of Farghana. The town was captured by the Arabs in 103-4/722, when anti-Arab elements of the Soghdians who had retreated thither were dislodged by Salid b. 'Amr al-Harashl's troops, with a savage massacre of the besieged (Tabari, ii, 1439 ff.; Barthold, Turkerian down to the Mongol invasion, 189; H. A. R. Gibb, The Arab conquests in Central Asia, London 1923, 62-3). It must nevertheless have been speedily lost to the Arabs shortly afterwards when the local rulers of Soghdia were joined by the Kaghan of the Western Turks or Türgesh, Su-lu, and the Arabs temporarily expelled from most of Transoxania. Not surprisingly, the people of Khudjand joined those of Farghana, Ushrusans, Caghiniyan, etc. in supporting the rebellion of Rafic b. al-Layin during the years 190-4/806-9. according W Ya'k 6bl.

The geographers of the 3rd-4th/5th-roth centuries now describe Khudjand and its district as a fertile

and prosperous one, with many orchards and vineyards, although the town bad | import grain from Farghana and elsewhere. Ibn Hawkal states that Khudjand had a sukandis or citadel with a prison; a mading or inner city; and a rabad or outer city, where the local ruler's palace, the dar of imara, lay. As befitted a frontier region, the inhabitants were warlike and generous. Furthermore, the town was an important centre for river navigation along the Sir Darya. This me author describes the district of Khudjand = extending southwards towards Washgird and Caghaniyan, so to the Buttaman Mts. separating the basins of the upper Sir Darya and the upper Oxus. The only other town of the Khudiand district was Kand or Kand-i Badham "Kand of the almonds", so called for a local product, almonds; this was presumably on the site of the modern village of Kan i Badam, ____ 40 mlies from Khudiand-Leninebad, visited by the American traveller E. Schuyler in the mid-1870s en route for Khokand (see Iba Hawkal, tr. Kramers-Wiet, ii, 457, 489; Le Strange, The lands of the Eastern Caliphate, 479; Barthold, Turkestant, 157-8, 164-5; Schuyler, Turkistan, Notes of a journey in Russian Turkistan, Khokand, Bukkara, and Kuldja, London 1876, ii, 3-4). A considerable number of 'ulama' bearing the nishe of "ni-Khudjandt" mentioned by e.g. Sam'ani, Ansáb, ed. Hyderabad, v, 53-6, 📟 Yākūt, *Buldān*, ed. Beirut, ii, 348; most notable of these is the mathematician and astronomer Abû Mahmûd Hāmid ai-<u>Khudiandl, d. 390/1000 [q.v.].</u>

Khudiand = a place of importance under the Kara-Khanids or Hek Khans [q.v.], and in the early years of the 5th/11th century, from 406/1015-6 onwards, Amlan Khan Muhammad b. 'All, originally ruler in Talas, minted coins there (see R. Vasmer, Zur Münshunde der Qarahaniden, in MSOS, Westas. Studien, xxxiii (1939), 90-1, and R. von Zambaur, Die Münspragungen des Islams, zeitlich und örtlich geordest, i. Wiesbaden 1968, 120). In the mid-5th/22th century it was the frontier town between the eastern khānate of Kāshghar and Balāsāghūn under the sons of Kadir Khan Yusuf and the western one of Transoxania under Shams al-Mulk Nasr b. Tamghač Khān Ibrahlm. It was also at Khudjand that in 531/1137 the Kara Khitay invaders won a victory over the Kara-Khanid Mohmud b. Muhammad.

During the period of the Mongol invasions, Khudiand was in 617/1220 stubbornly defended after the fall of Samarkand by the governor Temile Malik against a besieging force of 20,000 Mongol troops and 50,000 pressed levies, and after abandoning the citadel, he sailed away down the river and eventually reached Khafraum (E. Bretschneider, Medianus) researches from eastern Asiatic sources, London 1910, i, 277-8; Djuwayni-Boyle, ii, 92-4). In the next century, under the Caghatayids, the soles of the important Dialayir tribe in the Khans' following was the district around Khudiand, until in 778/1375, after the revolt of the Dialayirs, they were disbanded by Thair and dispersed from the region (Barthold, Four studies on the history of Central Asia, ii. Ulugh Beg, 9, 26). Babur, in the period of his struggles in Farghana against the kinsmen who were his rivals for power, used Khudiand as a centre for operations in 903/1497-8; he has given an enthusiastic description of the walled town or hurghes of Khudjand and its many amenities (Babur-nama, tr. Beveridge, 7-8, 89-92).

It was the connections of the Mongols and their epigoni la Central Asia with their kinsmen in northern China which stimulated mentions of Khudiand in the Chinese annals of the 14th century, e.g. as Hu-ch'an in the Ystan-shi, and an early 14th century Chinese map shows it as Hu-lan; mediaaval Chinese travellers call the Sir Darya the Ho-ch'an or Hu-k'ien "river of Khudjand", following Arabic usage of such terms as Nahr Khudjand or Nahr al-Sharl for that river (cf. Bretschneider, op. cit., il, 54-5).

After being under Ozbeg rule, Khudiand became part of the Khanate of Khokand at the beginning of the 19th century, but in 1842 was captured by 📰 Mangit Khān of Bukhārā, Nașt Allāh b. Ḥaydar (see F. H. Skrine and E. D. Ross, The heart of Asia, a history of Russian Turkettan and the Central Asian khanates, London 1899, 215-16). In May 1866 Khudiand fell to the Russian armies of General Romanovski after m bloody siege of eight days, in which 2,500 of the defending Khokandi force were killed, and the town was then used as a base for the final reduction of the Khanate of Khokand (see ibid., 251-2; Schuyler, op. cit., i, 312 ff., 339, 354; R. A. Pierce, Russian Central Asia 1867-1927, a study in colonial rule, Berkeley and Los Angeles 1960, 23-5, 34-5). In 1875 the Russian garrison in Khudjand was for a while besieged there by a rebellious faction in the Khanate of Khokand, and it was this revolt in Khokand which led to the final annexation of the Khanate by Russia [see KHOKAND]. Under Tsarist rule, Khudiand eventually became part of the Samarkand oblast of the Governor-Generalship of Turkestan.

Under the Soviets, Khudjand was in 1936 re-named Leninabad, and this name was also given to the northern oblast of the Tadzhik SSR. It is now the second most important industrial and cultural centre of the Republic after Dushambe (the Stalinabad of 1929-61), with manufactures of cotton, silk and footware, food processing, and with orchards and vineyards outside the town. The population in 1970 was

103,000 (see BSE*, Exiv. 513-5).

(C. E. Bosworth)

AL-KHUDJANDI, ABO MARMOD HAMID B. AL-Kaipa, astronomer and mathematician, originally from Khudjand in Transoxania. He lived under the protection of the Buwayhid Fakhr al-Dawla (366-

87/976-97) and died in 190/1000.

From amongst his mathematical works, there has stuvived in Cairo the manuscript of a treatise on geometry. We know that he was concerned with the resolution of equations of the third degree by geometrical methods and that he demonstrated, in an imperfect manner, that the sum of two cubed numbers cannot be another cube. Nasir al-Din al-Tusi (K. Skaki al-haifat, Istanbul 1891, 108-20) aifirms that Abu 'l-Wafa' al-Buzadjani [q.v.], Abu Naşr Mansor b. 'All b. 'Irak [q.v.] and al-Khudlandi are the three authors to whom attributed the discovery of the sine law called by the latter the "astronomical law" (\$dniin al-hay'a), because of its frequent use in astronomy, and he gives the proof which he offered of this law icf. C. Schoy, Behandlung einiger geometrischen Fragepunkte durch muslimische Mathematiker, in Isis, viii (1926), 260-3). However, P. Luckey, in his Zur Enistehung der Kugeldreischtsrechnung, in Deutsche Mathematik, v (1940-1), 416, 418-9, rejects al-Khudjandl's part in this in principle, because we are concerned here with a person whose outstanding work in the field of practical astronomy.

Al-Birunt, in his Tahdid nihāyat al-amākin, in RIMA, viii (1962), 107, states that al-Khudjandi 🚃 "unique in his age" [awhad tamdniki] for the construction of astrolabes and other astronomical instruments. Some manuscripts have been preserved of his treatise Fi 'amal al-âla al-'âmma, în which is des-

cribed a universal instrument (al-āla al-ʿāmma = alaldemila) to be used in place of the astrolabe or quadrant. He constructed an armillary sphere and other instruments, and must have worked on theoretical questions concerning the laying out of the plan of an astrolabe, since Abū Naşr Manşûr gives two methods of al-Khudiandi's for determining the position of the circles of the azimuth me the astrolabe by the intersection of the squator and the mukantarat (Risale fi madjanat dawd'ir al-sumut fi 'l-asturlab, in Rasa'il ile 'i-Biruni, Hyderebad 1948, 3-9). His most important work in the sphere of astronomical instruments was the sextant called al-suds al-fahhri (sc. dedicated to Fakhr al-Dawls) which he made in order to determine the obliquity of the ecliptic. He described this instrument and the observations which he was to make with it in his Risala ft 'I-mayl wa-'ard albalad (ed. L. Cheikho, in Machrig, zi (2908), 60-8). Al-Biruni gave a detailed analysis of this in his Takdid, 101-8, which is said to be based mu the Maddia ft toskib al-mayi of al-Khudiandi (probably to be identified with the R. /l 'I-mayl cited above). This sextant had a diameter of 40 dhird's - cubits (al-Birûni: 80 cubits) constructed at Tabrûk near Rayy and set down on the plan of the meridian; it was surrounded by walls and covered over by a roof, part which was vaulted (FER) and with an aperture 3 spans (skibr) in diameter (al-Birûni: one span) coinciding with the centre of the sextant. With this instrument it was possible to take the height of the Sun; the sun's light threw a circle on to the sextant and, in order to determine the centre, al-KhudjandI used a circle of the same radius which had two perpendicular diameters which he placed on the circle thereby in up. Al-Khudjandi asserted that the sextant was his own invention, and he boasted that, by using it, he could make calculations down to the very second. Similar instruments seem to have been employed in the observatories of Maragha (founded before 660/1261-2) and at Samarkand (built in 823/1420).

With this suds al-fakleri, al-Khudiandi observed the meridian height of the sun at the summer and winter solstices of the year 384/994; the procedure involved consisted in making observations on two consecutive days at the time of the solstice and in determining, by interpolation, the exact moment of the passing of the sun into the solstice. He was able to do this in the month of June, but clouds prevented him from repeating the procedure in December, so that the exactness of the whole operation was somewhat affected. His observations were made in the presence of a group of leading scholars who drew up a report. The result was: $\varepsilon = 23^{\circ} 32' 19'' (21'' accord$ ing to al-Birûni in al-Kanan al-Mas'adi, Hyderabad 1954, i. 364), a value which, compared to those worked out by the Indian astronomers (24") and Ptolemy (23° 51') justified al-Khudjandi's belief in a progressive reduction in the obliquity of the ecliptic. Al-Birûni, who believed that a was a constant (Tahdid, 107-8, 116; Kd#4#, i, 364) emphasises that al-Khudiandi told him verbally that the aperture of the voult by which the sun's rays in had been displaced downwards by a span before the observations regarding the winter solstice were made, - that it did not coincide exactly with the sextant's centre. This fact may explain the decrease in the value of a in relation to other determinations made roughly around the men time.

Al-Khudjandl made other observations; he fixed latitude of Rayy at 35" 34' 39" (al-Birant, Tahdid. 86-7, 238; Kānān, il, 612), and he asserted that he had observed the planets for Faithr al-Dawla by

of armillary spheres and other instruments (R. fi 'l-mayl, 62). The final result of this work the compiling of al-Zidi al-Jakkri. An incomplete copy in Persian of a sidi, preserved in the Majlis Library in Tehran (ms. 151) may be based on al-Khudjandi's observations; the period of the tables of average movements is 600 of the Yazdagirdi era, sc. about two centuries after al-Khudjandi's death (see E. S. Kennedy. I survey of Islamic astronomical tables, in Trans. Amer. Philos. Soc., N.S., xlvl (1956), 133, No. 60),

(J. SAMSÓ)

KHUDJISTĀN, a small town or village of mediaeval Islamic Badhehis [g.v.], lying to the northeast of Harāt in modern Alghānistān, and described by the mediaeval geographers as being mountainous, possessing agricultural lands and having warlike inhabitants (Istakhri, 268-9; Ibn Hawkali, 441, tr. Wiet. 426; Hudüd al-falam, 104, 327; Yāķūt, ii, 404; Barbier de Meynard, Dict. glogr., hist. et litt. de Perse, 297). Although within a Sunni region, Khudjistan itself was one of the last centres for the Khawāridi in eastern Iran, and the population are described Khāridib and extremists (shurāt wa-ghulāt).

Its main claim to fame is that it gave birth in the pro/9th century to Ahmad b. 'Abd Allah al-Khudjistant. He was a commander in Muhammad b. Tahir's army, but after the fall of the Tahirid capital Nishapur to Ya kub b. Layth in 239/853, he made a bid for independent power in Khurāsān, with a base of power in Harat and Tukharistan, against the Saffarids, until he was killed by one of his own ghuldens in 268/882. Worthy of note is the detail that Khudiistan! was allegedly launched on his career as a condottleri through heating the martial poetry of a local author, Hanzala of Badhahis, who must have been one of the very earliest writers of verse in New Persian (Nizām) 'Arûdî, Cahar mahdla, ed. Browne, 26-7, revised tr. 27-9, cl. G. Lazard, Les premiers polles persunes (IX-Xº siècles), Tehran-Paris 1964, i, 17-8, 53).

KHULDÄBÄD, a town in the northwestern part of the former Haydarábád state, 🚃 in Maharashtra state of the Indian Union, and situated in lat, 20° 1' N. and long, 75° 12" E; it is also known as Ratma (sc. Rawda). It is 14 miles from Awrangabad and 8 from Dawletabad (q.vv.), and m particularly holy spot for Deccani Muslims, since it contains the tombs of several Muslim saints and great men, including the Nigam-Shāhī minister Malik 'Anbar (q.v.); Nigām al-Mulk Aşaf Djah, founder of Haydarabad state [q.n.]; and above all, of the Mughal Emperor Awrangath [q.v.], who died at Ahmadnagar in Dhu 'l-Ka'da 1118/ March 1707 and was buried at the rauda or shrine of Shaykh Zayn al-Hakk, and of his son A'zam Shah. After Awrangelb's burial, the place was called Khuldābād, the monarch's posthumous being Khuldmakam "He whose abode is eternity" (see Cambridge hist. of India, iv., 302).

(C. E. BOSWOUTH)

KHUL' [see TALAK]. KHUŁK [see akhlák].

KHULM, a town of northern Afghanistan lying in the lowland region to the south of the upper Oxus at an altitude of 2,400 ft./450 m. and in lat, 36" 42" N. and long. 67'41" E.; it is situated ______ 30 miles/50 km, to the east of modern Mazar I Sharif and, according to the mediaeval Islamic geographers. two marhalus or to farsakhs to the east of Balkh [q.v.]. It further lies on the Khulm River which flows down a narrow valley from the Hindu Kush past the town of Haybak and then Khulm itself until it peters out short of the Oxus. It is possible that this river is the Artamis of the Greek geographers.

The mediaeval geographers describe Khulm as the centre of a flourishing agricultural district, with luscious fruits, and as enjoying a healthy climate; the tharidi = land-tax = levied on the extent of freigated land. The grapes and other fruits of Khulm. still the subject of much praise by the Scottish traveller Alexander Burnes in the early 19th century. The road from Balkh eastwards into Badakhshān and Andaraba and the silver mines of Pandibir also passed through Khulm (see La Strange, The lands of the Eastern Caliphate, 427, 432; Hudud al-alam, 108).

Regarding the pre-Islamic history of Khulm, it has been conjectured that Khulm is the Aornos mantioned by Arrian - conquered by Alexander - Great in the winter of 330-320 BC (cf. Pauly-Wissown, i/2, 2659). The Buddhist Chinese traveller of the early 7th century, Hinen-Tsang, seems, however, to mention it m the kingdom of Hu-lin, whose chief town had over 10 Buddhist monasteries with more than 500 monks (see T. Watters, On Yilan Chwang's travels in ludia, London 1904, j. 106, 109). In the period of the Islamic conquests in Central Asia, it is mentioned at various times in the course of warfare, e.g. in 90/ 708-9 when Kutayba b. Muslim [q.v.] made his final attack on the Hephthalite leader Tarkhan Mizak (Tabari, li, 1205-6, 1219, with mention of the shift Khulm "defile or valley of Khulm"), and in 119/737 when Asad b. 'Abd Allah al-Kasri was endeavouring to expel from Tukhāristān the united forces in the Turkish Khākān Su-lu of the Western Türgesh, the rebel al-Hārith b. Suraydi and the local princes of the Oxus valley principalities and of Soghdia, and the Khākān endeavoured in vain to take the town (Tabari, li, 1603, 1615). Once pacified, the district was settled by Arabs of Tamim, Kays, Azd and Bakr (Samfini, Kitāb al-Ansāb, ed. Hyderabad 1382-6/1962-6, v, 180). Khulm also figures **II** the tax-assessment for Tukhāristan in the time of 'Abd Allah b. Tahir's governorship (years 211-12/826-8) under the sum of 12,300 dirhems per annum (Ihm Khurradādhbib, 36, cf. Marquart, Erānādas, 218); and in the fighting around Khulm in the later 3rd/9th century between the Saffārids and other contenders for power in Khurādān, the condottieri Ahmad b. We hear little of Khulm under the rule of the successive Turkish and other dynasties of eastern Iran like the Saldjüks and Timürids, but it was clearly within these centuries that the Turkicisation of these lands south of the Oxus took place, so that in modern Afghinistan, the population of the region is largely Uzbek.

In the period after Nedir Shah, so. in the later 12th/18th century, the region under the control of a local ruler of Uzbek stock, Killdi 'Ali Beg of Khulm. He held, according III Elphinstone, the title of Atalik from the Durrant kings of Kabul and paid deference to them, but was left virtually independent in return for protecting the northern borders of Afghānistān against Uzbek incursions from beyond the Oxus. It was because of these depredations that the seat of government for the Khulm region was in the early 19th century transferred from Khulm to Tash Kurghan 4 miles/6 km. to the south, and this has become the site of the modern town of Khulm. Various British travellers visited it at **m** time. W. Moorcroft (1824) mentions that the tyrannical Muhammad Murad Beg, ruler of Kundus and much of the region north of the Hindu Kush, had compelled the inhabitants of Khulm proper to transfer to his own capital of Kunduz, Old Khulm certainly now fell into decay, whilst New Khulm or Tash Kurshan flourished. Concerning population, Elphinstone (1809) estimated that Old Khulm contained about 8,000 houses, and Burnes (1832) that New Khulm had some ro,000 inhabitants. Subsequently, the some of Killidi All Beg reigned from Khulm over an area comprising Khulm, Haybak, Talakān, Andarāb and Mazār-! Sharif as vassals of Muhammad Murad Beg, but in the early 1850s Döst Muhammad of Kābul (q.v.) succeeded in bringing Badakhshan and the Uzbek principality of the Khuim district under his own control, and henceforth it formed part of the dominions of the kings of Kābul.

Present-day New Khuim-Tash Kurshan forms part of the Aighân province of Samangān, within which it and Haybak are the main towns, Khuim, however, being the populous of the two (population estimated by Humlum at 30,000 in ca. 1950); both towns benefit by being the main road from Kābul to Mazār-I Sharif and the Russian frontier.

RHULT, the classical form of the name of a tribe of northwestern Morocco pronounced Khlot (but ethnic, Khulți). The Khlot came into North Africa with the invesions of the Bank Hildl in the 5th/zzth century, and formed part of the "mixed" Arab people known as Diusham; according to Ibn Khaldan and other historians, the Khlot allegedly belonged to the Banu 'l-Muntafik. The Diusham spread throughout the central Maghrib, settled there and took part in all the wars which desolated Barbary. After the Almohad conquest, they vainly tried to rebel, and not long afterwards, the Banti Ghaniya [see law QHANIYA) had little trouble in engaging them = their auxiliaries after the capture of Bougie (see BIDIAYA). The Almohad caliph al-Mansur, once victorious over his enemies, punished their allies and accordingly transported to the oceanic shores of Morocco the Diusham and Riyah Arabs. The latter men established in the Hibt and the Gharb, and the first group in the Tâmesnă (Shāwiya), depopulated since the extermination of the Berghawata [q.o.] by the Almoravids.

Under al-Mansur's successors, the intrigues of the Almohad shaykhs found excellent support in the two component groups of the Diusham, the Khlot and the Sufyan, whose jealousies yet further aggravated the internecine conflicts. In 621/1224 the Khlot espoused the cause of the pretender al-Ma'mun against the caliph al-'Adil, who was supported by the Sufyan. In 625/1228, al-Na'mon was proclaimed caliph; in 630/1233 his son al-Rashid succeeded him, but because of their misdeeds and violence, he was obliged to take strong measures against **Kh**lot chiefs, who then man and took the side of the pretender Yahyā b. al-Nāşir. The Sufyān, now clied with al-Rashid, attacked the Khlot on the banks of the Umm al-Rabit and a frightful carnage ensued. The Khiot sought vengeance by proclaiming a caliph the Andalusian pretender Ibn Hod, but al-Rashid pursued them, drove them back, and captured and then executed their chiefs (635/1237-8). Much weakened and browbesten into obedience, they took part in the caliphs' expeditions, but their rivalry with the Sulyan was in no way extinguished and proved fatal to the Almohads. In 646/1248, at the siege of Tamzesdekt against the Zayānid pretender Yaghmorasen, this rivalry brought about the caliph al-Sa'id's death and the Almobads' defeat.

The Marinid sultan Aba Thabit treated the Khlot barshly for their violence (707/1308), but he took advantage of their assistance in order to destroy the power of the Riyah. They were then settled on the former's lands, in the Azghar and the Hibt, and formed part of the makkurn [q.v.] of the Moroccan sultans, made marriage alliances with these rulers and provided for them provincial governors, ambassadors and advisers. They subsequently passed into the service of the Banti Wattas and gave no support to the Sa'dids, who at first held them at arm's length despite the importance of the tribe which, according to Leo Africanus, could put xx,000 cavalry and 50,000 infantry into the field. However, the Khlot's important part in the Moroccan victory of Wadl 'l-Makhazin against the Portuguese gave them entry in part at least to the makhaan of the Sacdida. At the time of the latters' decadence, the marabout pretender al-'Ayyāṣḥī [q.v.], who sought to compel them to merch against the Christians of Larache, was unable to bring them to obedience and was assessinated by them (1048/1638-9). Under the 'Alawids, the Khlot took is side of the petty princelings of northern Morocco who had made themselves independent under the cover of waging holy Mawläy Ismä'il and his successors, after first reducing them to submission, deprived the Khlot of their status as makkan tribe and favoured the establishment in their region of heterogeneous elements, the Tlik and Badāwa groups, who inevitably afflicted and reduced the power of the former occupants of the land.

Bibliography: Michaux-Bellaire and Salmon have provided the most complete information about the habitat, ethnography, administrative organisation, political position and the splits among the Khlot in their article Tribus are has de la valide du Lekkous, in AM, iv-vi (1903-7). (A. Coun)

KHUMĀRAWAYH B. AHMAD E TOLOR, Second Tülünid ruler of Egypt and Syria. He was born in Sămarră în 250/864 and, alter the abortive rebellion of his brother 'Abbās [q.r. in Suppl.] against Abmad b. Ţālūn [q.r.], was designated helr-apparent as early as 260/882. In an unprecedented act in the history of Muslim Egypt, the popular Khumārawayh to power upon the death of his lather on 10 Dhu 'I-Ka'da 270/10 May 884 without the caliph's sanction, but rather with the general approval of the military and civil authorities of the Tüllünid régime. His brother 'Abbās was forced to pay bornage to his rule, and was assassinated under obscure circumstances only a few days after Khumārawayh's accession. Khumārawayh reigned for twelve years; = 28 Dhu 'I-Ka'da 282/18 January 896 he was killed,

a victim to a palace cabal, by one of his own staves. Khumārawayh inherited both a stable and wealthy polity from his father—the treasury is said to have contained ten million dinárs, thanks to Ibn Tülün's far-sighted internal and external economic policyand also an unresolved struggle with the court of Baghdad. Since he had come to power only through iather or rather through his father's generals, the caliph regarded him as an usurper. Immediately upon receiving the news of Ibn Tillin's death, al-Mitwaffak, the ruler of the eastern half of the 'Abbasid empire and strong man in the Baghdad court, broke off the negotiations which had led to the de facto recognition Iba Tülün as governor of Egypt and Syria. One of Ibn Tülün's foremost generals, Ahmad b. Muhammad al-Wāsiţi, then changed sides and urged al-Muwaffak to attack Khumarawayh and reconquer Egypt, exploiting Khumārawayh's lack of political and military experience (al-Kindi, 234, ii, 4-5). Two generals of the caliph with al-Muwaffak's sanction now invaded Tālānid Syria: Ishāk b. Kundādi, the governor of Mosul whom al-Muwaffak had appointed "legal" governor of Egypt and Syria in 269/882-3, and Muhammad b. Diwdad Abi 'l-Sadi of Anbar, The defection of the Tülünid governor of Damascus and finally the appearance of Ahmad b. al-Muwaffalt (the future caliph al-Mu'tadid) leading an 'Iraki army challenged Khumarawayh's control over Syria even further. In Shawwal 271/Pebruary-March 585 (Grabar, 68) Ahmad's troops met the Egyptians under Khumarawayh's command in the tragl-comic Battle of the Mills (al-Tawahin) in southern Palestine. Ahmad and Khumarawayh ignominiously fled from the battlefield; the military decision 🔳 Khumarawayh's favour secured by the capable and courageous Tülünid general Sa'd al-Aysar. After his victory he went to Damesous and rebelled, though fully, against the humiliated Khumarawayh. Khumārawayh's long-term strategy of achieving a rapprochement with the 'Abbasid court is reflected in the exceptional elemency with which he treated his Trakt prisoners of war. In the following years his realm was considerably extended. III heat decisively, though with inferior forces, Ibn Kundádi, who submitted to him and brought areas as far east as Harrán (Grabar, 75) under Khunárawayh's control. The Djazira became part of the Tülünid lands when its governor Ibn Abi "I-Sădi sought Khumărawayh's protection. On Khumărawayh's own initiative, Yazmân of Tarsûs finally accepted Tülünid sovereignty over Cilicia.

In Radiab 273/December 886 al-Muwaifak and Khumārawayh eventually came to terms. Khumārawayh discontinued the public slandering of al-Muwaftak in the sermons of Egypt and formally acknowledged 'Abbāsid sovereignty. In return he was granted the de jure governorship of both Egypt and the lands of Syrie (al-Sha'mat) for thirty years for himself and his progeny (wwiduhu). Thus not only his own succession, but also the dignity of his family, were recognised by the caliph. The time limit imposed, however, clearly shows that the caliph regarded the Tülünid rule over Egypt and Syria to be temporary and revocable, unlike the privileges granted to the Aghlahids [q.v.] of Ifrikiya. Unfortunately, the financial provisions of this first treaty between Khumarawayh and al-Muwaffak are not recorded in the sources. Syria now became an integral part of the Tolanid domains; in the provincial capitals of the Shahnat, Ramla/Filastin, Hims, Halab and Antakiya, new mints were set up.

In Radiab 279/October 892 al-Mustadid, the son of al-Muwailak, succeeded al-Mutamid as caliph. In a new treaty he readily confirmed these arrangements with Khumarawayh. The annual tribute to be paid by Khumārawayh as vassal 🖿 al-Mu^ctadid was fixed at a rate of presumably 300,000 dinars, supplemented by 200,000 dinars is be paid for each preceding year of his rule. The sources are vague and inconsistent these crucial figures. Khumārawayh lost the territories east of the Euphrates, Mawsil, Diyar Rabi'a and Diyar Mudar around al-Rāfika, where coins and been struck on his behalf before 279/892. The important and prestigious firds-manufactures of Fustat and Alexandria remained under the control of the caliph. Tülünid coins bore his along with Khumarawavh's name.

Khumārawayh's limited autonomy made him susceptible to honours bestowed upon him by the caliph, the most exalted and highest sovereign of the Muslim community. In 279/892, through the mediation of his closest adviser, al-Husayn Ibn al-Diassas al-Diawharl, he arranged for one of the great political marriages of mediacval Islamic history. He offered his daughter Kair al-Nadā to the caliph al-Mu'tadid's son 'All, but the caliph took her as a bride for himself. It marriage, which entailed an exorbitant dowry of one million dinars, was a calculated device on the part of the caliph to wreck the finances of his dangerously wealthy and powerful vassal. The splendid nuptials of Katz al-Nada lived on in the memory of the Egyptians well into the Ottoman period, m is recorded in the chronicles and the folk-literature.

Khumārawayh's frivolity and generosity are well attested in the sources. He had sumptuous palaces and gardens built for himself and his favourites. To his contemporaries, his awesome blue-eyed palace fion epitomised his prodigality. He was said to ride no horse more than once. Becker (Beiträge, ii, 191) connects his addiction to luxury and debauchery with his status as heir to the capable and successful founder of a dynasty. "Rule was something self-evident to him, something given. He service it, but shied from the burdens which were indispensable for

it". When Khumārawayh was murdered in a8z/895, the treasury sum empty. All the wealth Ibn Tülün had amassed will been squandered within a few years. In Khumārawayh's rule the dinār's worth sank to one third of the former will (Hassan, 245). Under Khumārawayh's sons Diayah and Hārūn who succeeded him in rapid sequence, the political and financial damise of the Tülünid state was still further accelerated. In 29z/905 'Abbāsid troops sacked Ibn Tūlūn's new city of al-Kaṭā'i' and brought back for thirty years direct 'Abbāsid rule to Egypt.

Khumarawayh's military provess was notable. After the disaster of al-Tawahia he showed strategic skills and astounding personal bravery; he is said to have killed the rebellious Sa'd al-Aysar with his own hands. He could rely on the multi-racial army of his father, composed mainly of Turkish, Greek and Sudaness military slaves and some, mainly Greek, mercenaries; he strengthened its force with numerous fresh soldiers from Turkestan. Yet in contrast to his father, he lacked undisputed authority over the military. He tried to compensate for this with overlygenerous special distributions that further undergined the precarious finances of the state.

Possibly under 'Abbāsid influence (al-Mu'tadld had his own ditte body of military slaves, al-mukhtarām), Khumārawayh established a corps d'elite, al-mukhtārā, composed of unruly Egyptian Bedouins of the Eastern delte, on whom he bestowed various privileges. By converting these tribesmen into m loyal and efficient bodyguard he reasserted control and brought back peace to this strategic region between the centres of Egypt and Syria. Significantly enough, there to have been no Turks among Khumārawayh's mukhtāra soldiers; he seems rather to have used them to offset the predominant influence of his man Turkish entourage. One thousand Negroes formed a less highly privileged special contingent within the mukhtāra.

Already under Khumarawayh, the civil administration of Egypt passed gradually into the hands of the Madhara'i family who later, during the 'Abbāsid intermezzo and under the Ikhahldids, directed the linances of the country. 'All b. Ahmad al-Madhara'i began his illustrious career by bringing under his control the basid, the intelligence and communications service. Khumarawayh's relations with the religious establishmol of Egypt were strained; his libertinism and irluvolity made him in target of harsh attacks both contemporary and later historiography.

Khumārawayh's prodigal rule encouraged m rich life. Few traces of his splendid architectural and cultural monuments and the minor arts are preserved. His patronage of scholarship and poetry is well known; the grammarian Muhammad b. 'Abd Aliah b. Muhammad b. Muslim (d. 329/944) was his protégé and the teacher of his som. Al-Kāsim b. Yahyā al-Maryami (d. 317/929) wrote encomia to celebrate Khumārawayh's triumphs on the battlefield.

Bibliography: See El' s.v. (Sobarnheim). Among the Arabic sources an contemporary historian Ihn al-Dâya [q.b.] will be ranked first; fragments of his chronicle of the Tullimids preserved in Iba Sa'ld's al-Mughrib fi huld 'l-Maghrib; as far Khumārawayh is concerned, this important text unfortunately only contains fow remarks on his appointment as heir-apparent, see Ibn Sa'ld, Fragments aus dem Mughrib, ed. RHUMAYR (pronounced locally Knmtr, in French Kroumir), an element of the population which has given its name to a mountainous massif extending along the north-west littoral of Tunisia. The Djebel Khmir, or Kroumiris, forms part of the administrative district of Djenouba, which covers an area of 3,000 square km. and has a population of 255,000, of whom 225,000 are peasants (census of May 1966).

The massif of the Khumayr, a Tunisian extension of the Atlas range, consists of a series of contrasting sandstone flexures running along a south-west - northeast axis. The two extremitles of the massif, separated by the cultivated limestone depression of Ghazwan. present palpable differences in spite of the overall unity. The western Kroumirie has its highest point at Djebel Ghorra in an altitude of 1,202 m., and the eastern Kroumirie, very difficult of access in spite of its modest sittiudes, reaches a height in 1,014 m. at Djebel Bir which dominates Ain Draham. Everywhere the contrasting forms of rockstrata, deeply furrowed anticlinals will sheer synclinals, give a wild aspect to a landscape covered by a forest 47,000 bectares in week Of the trees 70% are cork-pak, 20% eak, and to% other species, including the wild olive. Often the undergrowth consists of fern. Other species have recently been introduced, notably the parasol pine (bundué). The level of rainfall in Kroumirie is the highest in Tunisia, with an average of 1 m. per year and a maximum of 1,575 m. at Ain Draham. In spite of the abundant rain and relatively plentiful falls of snow, the massif suffers from shortage of water. Springs - certainly numerous, but they are dispersed over a wide were their output is feeble. Some springs even dry up in summer.

In ancient times, the massif of the Khumayr did not escape penetration by the Romans. Three routes crossed it: in the longitudinal axis, the road from Carthage to Hippo Regius (Bône, now called Annaba) via Hippo Diarrhytus (Bizerta), in the transverse axis the road from Simittu (Chemiou) to Thabraca (Tabarka), of which numerous traces have will discovered, and the road from Vaga (Béja) leading to the same destination via Trisipa. Thabraca, originally a Carthaginian market-town, and from the 4th century one of the richest dioceses III Africa, was the centre for the export to Rome of we products of the massif, timber for building and wild animals, as well as oil, wheat and minerals. "A city of luxury, where art has its place alongside commerce" (P. Gaukler, Mosaigues, 155), Thabraca has given us some very fine mosaics.

It is curious that throughout the mediaval period, the massif of the Khumayr has gone unnoticed by the historian. The silence of our second is complete. It is only in modern times, and in contemporary in particular, that it has begun to play a historical role, appearing at the same time as a place of refuge and in resistance, escaping almost completely the power of the Tunisian authorities.

The Khumayr had cordial and profitable relations with the colony of Genoese fisherman established since 947/1340 on a rocky island of 40 hectares in area separated from Tabarka by a channel 500 metres wide. They were acutely affected when this islands min unexpectedly attacked and forefoly recovered by

KHUMAYR

"All Pasha in 2253/2740 (Ibn Abl 'I-Diyaf, Ithaf, ii, 124). In 1183/1769 70, the Khumayr gave asylum to the pretender 'Uthman al-Haddad, who was ultimately captured and executed (ibid., il, 265). In 1260/ 1844 they gave their support to another pretender, who claimed to be a descendant of 'Uthman Bey. The latter also was captured through a trick and beheaded (ibid., iv., 78-9; ed. A. Abdesselem, 116-7). In 1282/1865, 'All Bey, at the head of the military mission (makalla) responsible for the levying of taxes, bled the region of Béja white, but did not dare venture into the massif, which was subject to tax only within agreed limits (Ibn Abl al-Diyat, op. cit., vi, 55, 65). However, the mountain-people were not involved in the insurrection of 1864-they did not feel that it concerned them-nor in the troubles of 1867-8.

It was in 1881 that they came abruptly to the tore. The Khumayr were in the habit of pillaging their neighbours, including those in Algeria, Seeing that the Cald of Tabarka, to whom they were theoretically answerable, had no control over them, the French authorities, in the context of a complex policy which had the effect of setting various powers in competition with an another, decided to act. They set in motion the process which culminated in the establishment of the protectorate over Tunisia. On 24 April 1881, the French Army of Algeria marched into Tunisia: two days later they occupied Kel without a battle; on 13 May it was the turn of Afn-Draham, and the following day the French routed the Khumayr at Ben Mtir after a number of flerce skirmishes

Regarding the origins of the inhabitants of the massif, we have precise and reliable information. The name Khumayr does not appear in any mediaeval text. In the period when Ibn Khaldūn was writing, that is to say, the 8th/14th century, the region between Béja and the was inhabited by Hawwara Berbers, by that time completely arabised, with whom there had been blended various elements of Arab descent, notably the Humayl ('Ibar, vi, 288-9; tr. de Slane, Berbères, i, 279).

The Khumayr pose an insoluble puzzle to the historian. They only make their appearance in the righ century, if for this period there are only scraps of information in the archives, when they pillage their neighbours, or when the majallas try in vain to force them to pay taxes. Who are they? They themselves say that they are Arabs, and it is true that there is me oasis in the Yemen called Chumayr (Yākūt, ii, 390, iii, 406) and there is ■ Kahṭānid tribe which bears the name Band Khamr (Kalkashandi, Nikāya, 247), of which Khumayr could be a diminutive. Legend would also have us believe that they are the descendants of a certain Khumayr b. Umar, an eminent companion of the conqueror of the Maghrib, 'Ukba b. Nāfi'. A descendant of Khumayr, Sidl 'Abd Allah Abu 'I-Dimal, is supposed to have died, worn out by dishdd, in the heart of the massif, on a small plateau about 5 km. south-west 🖩 Ain Draham. The maysoleum raised to him in this place perpetuates the legend and unites the Khumayr in me almost total veneration for their patron saint and presumed ancestor. According to another tradition, the Khumayr originally lived in the south of Tunisla and were ruled by the Shabbiyya of al-Kayrawan. In the 18th century they were forced to emigrate towards the north, occupying the massif to which they gave their name.

The Khumayr are divided into a number of segments. The most important in the eastern Kroumirie are the Awlad 'Umar, the Hwamdiyya, the Awlad

Ibn Safid, the Safadiyya, the Urahniyya, and Twadiniyya III the region of Tabarka; the Salit, the Hudhayl, the Awitd Mussilim, the Khraysiyye, the Didaydiyya, the Diwabliyya, the Mlaykiyya, the Awlad Mosa, the Awlad Hilal, the Humran, the Dabābisa, and M particular the 'Atatifa in the region of Ala Draham; the Gwadiyya, the Tbaniyya, and the Shibiyya in the region of Fernana. In the western Kroumirie, there are found the Banû Mazin, the Awlad Ali, Ill Maire, the Mrasin, and the Washtâta. It would be futile to attempt to distinguish between Berbers and Arabs these tribes. The population of the massif is in fact the result of immense and long-term ethnic jusion, duting back to the mediaeval period if not further, a fusion which was doubtless accelerated by the infiltration of the Bank Hilal in the mid 5th/12th century, and of the Sulaym at the start of the 7th/13th century. Let it be stated explicitly that the local Arabic dialect contains no traces of Berber, and that sometimes the nomadic tent is found incongruously pitched in the mountain itself.

The geographers of the Middle Ages show little interest in the massif of Kroumirle in its own right. Their main concern is to describe the itineraries. The first, Ibn Hawkal, who visited the Maghrib in the mid-4th/roth century, Iells — that the main highway (al-diddda) from Tunis to Tabarka passed through Béja (Salvat al-ard, 76). Al-Bakri, who was writing in the mid 5th/11th century, tells us that from Béja one would reach Tabarka in three stages, passing through Básil and Darna (Massilia, 56-7/120-1). Al-Idrisi (mid-6th/12th century) mentions two routes from Tunis to Tabarka, the one passing through Bizerta, and the other branching off after Béja. (Nusha, 84-5). It is clear that this road system follows the routes inherited from ancient times.

We have no precise information regarding urban settlement in the massif during the Middle Ages, It is only just possible to follow the evolution of Tabarka. We have seen that it was a very prosperous place in ancient times. In the 4th/10th century, according to Ibn Hawkal it was nothing more than "an unhealthy village" (harya wabPa), infested by scorpious, its only claims to importance being the movement of ships between it and Muslim Spain and its status = a customs station (op. cit., 76). In the 5th/12th century al-Bakri noted that impressive rains of anclent monuments were still to be seen at Tabarka. and that the place enjoyed a certain prosperity account of the activity of its port. In the 6th/12th century, according to al-Idrist, it was nothing than a fortress (hisn), thinly populated and surrounded by gangs of Arab bandits, men with respect for neither law nor religion. Finally, at the start of the 16th century (Leo Airicanus, Description de l'Afrique, 549) it me nothing more than ''m abandoned port'

Today, Tabarka (population 4,000), is a port of modest size whose primary function is separated cock from the massif of Kroumirie, 3-4,000 tons per year. There is also fishing and the limited exploitation of coral, and the town has profited, albeit on B relatively minor scale by comparison with other regions, from the growth of tourism in Tunisia. The most important settlement on the massif is Am Draham, at an altitude of 800 m., I summer resort and a centre for boar-hunting; Fernana, at 275 m., is principally a market-centre; Babouche is little more than a frontier-station controlling the border-crossing into Algeria; at Oued El-Lil, near the hamlet of Ben Mir, there was constructed in 1955 m dam with a capacity

of 73 million cubic m. to produce Hydro-electric power and to provide Tunis with water. Another dam, at Oued El-Kebir, is in the process of construction. In spite of efforts in re-organisation, settlements continue in the main to be scattered, according to the location of wells and agricultural small-holdings. Huts and shacks built of branches have not yet disappeared

in fact, the massif of the Kroumisie, dependant on a silve-pasteral economy, is impoverished. The standard of living of the inhabitants is the lowest in Tunisia. The most important meet of income in provided by the extraction of cork. The cultivation of tobacco is also moderately profitable. The breeding of cattle, sheep and goats, in which the methods used have not evolved at all in the course of time, provides only a mediocre income. Attempts at improving the cultivation of trees, by introducing apple, pear, and cherry-trees to the area, have yielded only very limited results. Products of local craftsmanship-Kroumirie carpets in white, black and beige; wooden kitchen-utensils; embroidery-are not much in demand outside the region and provide employment for a very small number. Finally, let it be added that the hot and sulphurous springs of Bordi al-Hamman, much appreciated from the earliest times for their medicinal properties, have led to the establishment in 1966 of a modern spa resort, built presumably alongside the ruins of the ancient baths and given the name Hammam Bourguiba. Enlarged in 1973, this is attracting an ever-growing Tunisian clientèle.

KHUMBARADJI, bombardier, gregadier (Persian Ahumbara "explosive projectile, grenade, mortar bomb", etc.), a term used in the Ottoman military organisation. The bombardiers in the Janissary corps and the Khumbaradil unit in the Diebedii corps are thought to have been first introduced in the 9th/15th century. The Khumbaradils were of two types, the ultifeli ones, who were paid, and the ilindrholders, who formed the majority of them and who served in the fortresses. The Khumbaradils were neglected until the beginning of the zzth/z8th century, Khumbaradil Ahmed Pasha (see ARMED PASHA BON-NEVAL) was appointed by Mahmud I in 1144/1731 to reorganise the Khumbaradils; under his reorganication, 301 soldiers from Bosnia mem registered as paid ulufelis, and thus a separate corps of bombardiers formed. Each roo soldiers became an ode, and each oda was to have a captain (yilabashi), a ellibashis, and to corporals (onbashis) (Taribh-i Sāmi-Shāhir Subbi, Istanbul 1198, 58 a-b). In the Ayazma palace at Uskildar, there were constructed a barracks and a factory for the Khumbaradil corps, and later, their numbers increased to for, haif of whom will ultifelis and the other half umar-holders (for the activities of Khumbaradil Ahmad Pasha, see also Basbakanlık Arşiv Genel Müdürlüğü, Cevdet tasnifi, Askeri kışım, no. 45137; for **m** number of Khumbaradiis on the strength 🖿 8 Ramadan 1152/December 1739, 🚃 Cevdot tasnifi-Askeri kısım, no. 37485). The Khumberadit corps, which expanded until 1160/1747, was neglected thereafter, but in 1197/1783, during the reign of 'Abd al-Hamld I, there were attempts improve it again (Djewdet, Ta'rikk, Istanbul 1309. iii, 85; I. H. Üzunçarşılı, Kapıkulu ocaklası, istanbul 2944, ii, 125-6). During the reign of Sellin III, when the army me organised on western lines, the Khumbaradil corps was also included in the plan of reform. According to the decree of 1206/1792, the Khumbaradil corps, whather paid or finear-holders, were to be concentrated on Istanbul and the names of those absent were struck with the pay rolls. Also, there were to be to Khumbaradil soldiers and live assistants (millarim) for each Khumbasa, so that the whole corps would comprise 500 Khumbaradil soldiers and 230 assistants. Out of every to soldiers, one was to considered as the khalife, and so other me his aides (yamaks); out of every | Khumbaradi's one was to be an officer with the title of ser-khalife, and the most notable among the officers was to be odjak kethindast, another comuse, and another salemder or standardbearer; beside the chief hombardier (Khumbaraditbash!), who was responsible for the soldlers' discipline, there was to be appointed a superintendent (wasir) from among the sees officials (Enver Ziya Karal, Selim IIPān katt-i kumdyunlars Niedm-i cedit (1789-1809), Ankara 1946, 45-6; for the text of the regulation relating the bombardiers' corps, Djewdet, Tableh, vi. 356-8). The barracks for their training were built at Hasköy on the Golden Horn shores in istanbul. A more detailed ordinance for the Khumbaradjis was prepared and put into effect in 1211/1707 (Cevdet tasniff, Askeri kisim, im 40887). In the movement to dethrone Sellm 111, the Khumbaradils sided with the rebels, but when the Janissary corps was abolished in 1241/1826 during the reign of Mahmod II, they supported the government action (Diewdet, op. ch., xii. 157; Es'ad, Uss-i cofer, Islanbul 1203. passim). When a new army was established under the title of the 'Asakir-1 Mansura, the Khumbaradil corps was reorganised and retained within it (Lutfi. Taleigh, Islambul 1290, i, 159), but was included in the artiflery division and was to me headed by the Tobdiu-baski flater by the Tophhane-i 'amire müskirlies). There was we Khumbara regiment (alay), with two battalions (laburs) in existence in 1248/1832 (Basbakanlık Arşiv Genel Müdürlüğü, Kâmil Kepeci tasnifi, no. 6744), and four years later, 100 cavalrymen and 220 foot soldiers, a total of 338 soldiers (Kāmil Kepeci tasnifi, no. 6750).

KHUMM [see CHADIR AL-KHUMM]

KHUNASIRA, an ancient fortified settlement situated some 60 km, to the south-east of Aleppo and we km. to the north-east of Hamit, on a route through the desert-on the fringes of which it lies-connecting Aleygo with Baghdad. The foundation of the place is attributed to Khunasir(a) b. Amr. of the Kinana (Ibn al-Kalbi-Caskel, Tab. 200 and ii, 349), but it is probably older than this. Yākūt (s.v.), who cites also al-Khunaşir b. Amr, the representative of Abraha af Ashram, may be echoing a later legend. In the Umayyad period, this chef-lieu of the hara of al-Ahass owed its fame to the fact that "Umar b. "Abd al-"Azīz had a stronghold constructed there in which he frequently resided (al-Mas'udi, Muridi, v. 343 = | 2188; Ibn Shaddad, al-A'lak althatire, ed. D. Sourdel, Damascus 1953, ifr. 28; Ibn al-'Adim, Zubdat al-halat, ed. S. Dahhan, Damascus 1951, i, 42, 45). Ibn Hawkal (K. Sarat al-ard", 179, tr. Kramers-Wiet, Beirut-Paris 1964, 176), describes the role played by al-Khunāşira at a time when the state's power had become relaxed and the routes in the interior of Syria were uncertain, me that travellers from Aleppo to Baghdad preferred to journey through the desert where they could enjoy, for # price, the protection of the Bedouins. In \$15/1121 it was captured and designed by Baldwin II, who carried off to Antioch the gates of the citadel (Ibn al-'Adlm, ii, 201), after which the place was abandoned (N. Elisséeff, Nur al-din, Damascus 1967, i. 179). Nevertheless, there still exists a place there called today Khanāsir.

KHUNATHA BINT BAKKAR R. 'ALI B. 'ABD ALLAH AL-MAGEAFIRE, wife of Mawlay Isma'll. sultan of Morocco (1082-1130/1672-1727). She was highly versed | literature and the religious sciences and acted as a adviser to her royal spouse. In 1143/ 1731, during the reign of her sons Mawlay 'Abd Allah. she performed the Piterimage; and at Mecca, she bought buildings and established them = awkaf, in particular, a house in the Bab al-Umra, one of the gates of the Holy House, which she placed at the disposal of students. The memory of her sumptuous pilgrimage was commemorated by the shaykk Abu Abd Allah Muhammad b. 'All al-Husayni al-Shafi'l al-Tabari, imam of the Makam Ibrahim, in a splendid poem. She died at Fas in Djumada I 1159/May-June 1246 and was buried in the mauscleum of the Shorfa in Fäs al-Diadid.

Her writings include a letter addressed in the people to calm their fears over the neighbouring Turks, and a commentary on the Isabs of Ibn Hadiar al-^eAskalānī.

KHUNDJI, FADL ALLAR B. ROZBIHAN (860-027/ 1455-1521). Persian religious scholar and political writer, who as a staunch Sunni fiercely opposed Shah Isma'll, left Iran and fled to Uzbek

Transaxania

Khundil's background, both on the side of his father (of the famous Rūzbihān family, cf. Rūzbihān al-Bakli) and of his mother (of the Sacidi family), made him a member of the wealthy and influential "ulama" of Fars who were important as soyurghaldars and who enjoyed the high esteem and the protection of the Ak-Royunlu rulers. Khundji received = exceptional scholarly training; in his native Shiraz he studied under the great Shafi'l Diatal al-Din Dawani [q.v.], the author of the Akhlak-i Djalali. Dawani's preoccupation with political thought is likely to have influenced [Chundlf's own interest in mpractical application of the norms of the sharf's in a post-Mongol, Sunni state, m his sophisticated manual of government, Sulak al-mulak-which 🔤 wrote shortly before his death on the suggestion of the Uzbek ruler 'Ubayd Alfah Khan in Bukhara-attests. He was introduced to Sutism by Djamal al-Din al-Ardistani, a follower of the Suhrawardiyya farika. With him he travelled to Egypt and Palestine and he devoted a manakib biography to him which has not, however, come down to us. Khuadil himself joined the Djahriyya order, an offshoot of the Nakshbandiyya, possibly only after he had left Adharbaydian and Iran and had settled at the Uzbek court. Khundil represents the typical intellectual Sufl of his time, for whom taxawauf is an indispensable item in the academic curriculum. He wrote a commentary on the Wasiyyat-nama of 'Abd al-Khalik al-Ghudjuwanl [q.v.], one of the great precursors of the Central Asian Nakshbandiyya. Khundit eulogised Khwadia Baha' al-Din Nakshband and extensively quoted his doctrines; he sought and cherished the friendship of the disciples of the famous Nakshbandi popular leader

Khwadia 'Ubayd Allah Ahrar [q.v.], who had dominated religious and political life in Transoxania in the second half of the oth/15th century. At the same time. Khundii fiercely opposed any and abuse in mysticism, particularly the doctrine that man can acquire divine attributes through fand?. For him. such exaggerated myeticism as much istidad, apoetasy, as the pernicious ghulumm of Shah Isma'll I. Khundil's paramount concern in all his writings is the protection of the revealed sharife from any infringements. In his sharp differentiation between types of mysticism, one is reminded of Ibn Khaldûn's Shifa' ai-sa'il ila tahahib al-masa'il; an influence from Ibn Khaldun on Khundii cannot be ruled out. Khundil also severly attacked the semi-pagan religious practices of the nomadic Uzbeks, such as the institutionalised pilgrimage to the tombs of local saints; however, he does not seem to have been very succesful with these admonitions.

It was from the well-known Mamlük historiograoher and polyhistorian al-Sakhāwī [a.v.] that Khundiī. owed his initiation into the sciences of hadith, i.e. the discipline for which he acquired particular fame in his century. In Uzbek Central Asia, he became known as the "paragon of the traditionalists" (sanad al-muhaddithin). He studied law, theology, the Arabic sciences and hadish with al-Sakhawi in Medina; his proficiency is attested by the very complimentary tardiama which al-Sakhāwī, who me normally very critical of his students and compeers, included in his biographical dictionary of 9th/15th century celebrities. Among Khundil's writings on tradition, one might mention an Arabic risals on the big fire in Medina in 886/1481, Hidāyat al-tasdik ilā bikāyat alkarik (ed. Muhammad Dānishpazhūh, in Yadnama-yi irāni-yi Minorsky, Tehran 1969, 77-223), which is a methodically exemplary study based on hadith.

Khundil began his public career at the court of the Ak Koyuniu Ya'kub b. Uzun Hasan, whose attention he had attracted in 892/1487 with a copy of his lostpossibly panegyrical-work Badic al-tamán / hissat Hayy b. Yekzin. He served as a katib in Ya'kub's dimin, and dedicated to him and his unfortunate son Baysonkor his chronicle of the Ak Koyunlu house, the carefully-composed Ta2rthh-i 'dlam-drd-yi amini (partial translation by V. Minorsky, Persia in A.D. 1478-1490-An abridged translation of Fadiulian b. Rūzbihān Khunji's Tārīkķ-i 'Alamdrā-yi Amini, London 1937: full edition under preparation by John Woods, Chicago). In this work, which is the most important single narrative meet on the history of the later Ak Koyuniu rulers, Khundil presents himself as an active courtier, who probably participated in the cabal to overthrow Ya'küb's first minister 'Isa of Sava who had tried to re-islamise the fiscal system of the state, thus endangering the soyerghdis of Khundil's affluent 'uland' relatives. The most significant passages of this chronicle are his diatribes against Isma'91's grandfather and father, Shaykh Diunayd and Haydar [qq.v.], whose self-styled religious authority he reviled in vitriolic language.

After Isma'll's accession to power in 907/1501, he fled in 909/2503 to Kashan, where he wrote his refutation of Ibn al-Mutahbar al-Hill's treatise Kashf al-habb wa-nahdi al-sidb wa 'l-sawdb, entlifed Ibfal nakáj al-bájil wa-ihmál kashí al-'ájil (partial edn. and German tr. by I. Goldziber, Ecitrage nor Literaturgeschichte der St'a und der sunnitischen Polemik, in SBWAW, lxxviii (1874), 475-86). There 🔳 questions the originality and consistency of Imami figh 🚃 ușul al-fihh, and disqualifies ShIA dogmatica as a bad reproduction of Mustazill (that is, in itself reprehensible) halam. A hundred years later, the Shi'l Kadi Nur Aliah Shushtari (d. 1010/1610), wictim of Diahängir's anti-ShIS religious policy, again wrote a refutation of Khundil's treatise. Khundil's book has had a lasting influence on Shift-Sunni polemics in the Arab lands, even in the 20th century. Khundil, who himself held the ahl al-bayl in high esteem and wrote poems in praise of the twelve smanes (see the text in Muhammad Amin Khundil, Fadl Allah b. Resbihan Khundit, in Farkang-i Iran-samin, iv (1135/1936). 178-9) and, me the occasion of a pilgrimage to Mash. had in the company of Shaybani Khan ig.v.), of the eighth Imam 'All Rida (see Khundis, Mihman-namavi Bukhara, ed. Manüčíhr Sutuda, Tehran 2341/1962, 336-8), accused the Ithna-'Ashari theologians of placing emphasis on the slander and cursing of the Prophet's Companions, and the skaykhays Abb Bakr and 'Umar in particular, than me the due vener-

ation of the immaculate family.

On his flight to the east, which also took him to Timurid and later Uzbek Herat, Khundii passed through Tds, where he was inspired, as he describes in a touchingly impressionistic and intimate account, by the decaying ruins of al-Ghazall's tomb in the solitude of the steppe (Mihman-nama 352). Al-Ghazālī Khundil's revered model whom he quotes extensively. On this occasion Khundil pledged that he would make an effort to emulate the great master and being to the land of Khurasan, in this of great calamity, a revival of selection orthodox religious sciences. He came to Bukhārā, to the court of Shaybant Khan, the successful Uzbek ruler, who had ended Timurid rule in Transoxania and Herat and had conquered most of western Khurasan. He gained access to and was to dominate the scholarly madialis in which the Khān, himself a cultured man, had scholars discussing questions - religion, particularly - the compatibility of certain policies with the sharifu, e.g. the Issue whether it permissible for the Muslim Uzbeks to eat the meat of animals slaughtered by their semi-pagan Kazak enemies. Khundji compiled at the court before qr6/1510, perhaps at the suggestion of the ruler himself, the unique "guest-book of Bukhārā" (Mihmān-nāma-yi Bukhārā, see above; partial German tr. by Ursula Ott, Transoxenien and Tuehestan zu Beginn des 16. Jahrhunderts-Das Mihman-nama-yi Buhara des Fadialiah b. Rasbihan Hungi-Ubersetzung und Kommentar, Freiburg 1973) a token of gratitude to his host and friend Shaybant Khan. This work delies any formal classification. Its beautiful language and style evidences his literary talent. We find here, in a loose, more or less chronological sequel, passages on tradition, refreshingly natural descriptions of the scenery of Turkestan in spring and winter, surprisingly personal and autobiographical sketches (Khundil tells us, unusually, much about himself, e.g. his fits | hypochondris), and straightforward narrative passages. In the latter he e.g. gives an account of the manners of the Kazaks, the cousins and at the same time the most dangerous enemies of the Uzbeks to their north. He devotes special attention to Shaybani Khan and to his nephew Ubayd Allah Khan, who much later was to lead the Uzbek federation back to political power.

The Impelling idea of the Mihman-name was the effort to drive Shaybani Khan into attacking and exterminating the Shift heresy from Iran and reviving the legal order of the mount in Iranian homeland. He unsuccessfully opposed the scheme of defeating the Kazaks in the rear of the Uzbeks first, before marching against the Şafavids, whose deeds Khundil denounced—in a familiar topor—as some more aborninable than the unbelief of the Franks, who were kuffår ab origine. He expatiates on the apocryphal hadith of Harith, both in the Mihman-nama (04-102) and in a separate risala: Harith, the prototype of Shaybani Khan, saved the true doctrine M Islam from a heretic tribe which standered and vilified companions of the prophet and the four erthodox caliphs, an unconcealed allusion to Shah Isma'il. foe, and his damnable creatures, the Kizilbash [a.c.]. Khundil's concept of history is remarkable. He regards the Uzbeks as another manifestation of the nomadic migrations from Inner Asia to the Muslim East, destined to overwhelm Iran and Irak and bring back justice to these lands, just = the Saldjüks had done. He praises the legendary past of the Uzbeks and predicts a glorious future for them. He elevates Shaybani Khan, beyond the bounds of conventional encomium, to appear as a mudiaddid of his age.

The catastrophe of Marw in 916/1510, when Shay-banl Khan was slain in battle by the Snfawid army, shattered Khundji's dreams. His advice had proved fatal for protector and sovereign. Taking into account the vulnerable personality of the author, which shines through so often in the autobiographical passages of the Mihmān-nāma, this turn of events must have had drastic effects on Khundji. He passed the following two years in hiding in Samarkand which had returned to the rule of the Timurki Babur, Ismā-Tr's half-hearted ally. In 918/1512 Khundji suddenly re-appears delivering eloquent sermon in Samarkand (cf. Zaya al-Din Mahmūd Washit, Badā'i's al-waḥā'i, ed. A. N. Boldyrev, Moscow 1961, i, 45 l.), which had been recaptured by the Uzbeks under

Ubayd Allah Khan, Fulfilling a yow made at the tomb of Shaykh Ahmad Yasawl in the hour of greatest affliction. 'Ubayd Allah commissioned Khundil to compile, as a guide for a righteous Sunnt ruler, the Salak al-mulak (ed. Muhammad Nizāmuddīn, Hyderabad/Dn. 1386/ 1966). In form this didactic work displays features of the Mirror for Princes books; in its topics and in arrangement however, it belongs to the tradition of the manuals of government, such as al-Mawardl's al-Ahhhm al-sulfaniyya. It represents a highly intelligent attempt to barmonise the norms of the thanks, we developed in the first centuries of Islam. with the realities of a tribal confederation, the bodypolitic of which is nomadic and Turkish, and not Islamic. Khundil gives the prescriptions and legal interpretations both according to the Hanaff madhhab of the Turkish Uzbeks and his own, Persian, Shaff's mudhad. He carefully juxtaposes lengthy passages on the legal norms, with numerous quotations from the hadith and the canonical textbooks, with highly realistic and sober opinions on the present state of affairs. This can be observed in his treatment of taxation; he appears to equate certain aspects of the canonical sakes-duties with the prevailing Mongol samehd-imposts. Even more significant is his chapter on the diskad. He took his lesson from the catastrophe of Marw. No longer does he call for dishad against the Safawids at all costs, lest the blood of innocent subjects of Isma'll be shed. He even concedes (and thereby joins the mainstream of traditional Sunni polemics) that the Twelver ShII doctrine does allow for the observance of the precepts of the shart's, such as legal marriage contracts, the call to prayer elc. We do not know to what degree Khundit's enlightened doctrines were taken up by 'Ubayd Allah, an energetic and pions ruler, who despite the bitter polemics on both sides, kept religious issues targely the possession of Khurasan. His fame lived on at least in Central Asia; the increasing isolation of Transoxania from the Sunni central lands probably accounts for the little influence which his writings—particularly III Sulik al-mulik, which was explicitly directed to a broad audience of Sunni rulers—exercised outside the Uzbek domains. An effect on political thought in Mughal India III more likely, yet remains to III investigated.

KHUNZAL (self designation, Khunzani; Russian designation), Khunzall, Gun(d)zall, Gunzebi, Gunzebi, Enzebi, Nakhad; other designations, Khunzeb, Gunzeb), a numerically small people of the eastern Caucasus. Khunzal forms with Bezheta, Dido, Ginnkli and Khvarshi [eq.v.], the Dido division of the Avar-Andi-Dido group, of the north-eastern Ibero-Caucasian languages.

According to the Soviet census, in 1926 there were, ethnically, 106 Khanzals, and 129 claiming Khanzal as their mother tongue; in 1933 (estimation by Grande) there were 616 Khanzals. The Khanzals inhabit four auls on the upper course of the Avar Roysu in the Tharata district of the Daghistan A.S.S.R. They tive in the highest and most inaccessible part of mountainous Daghistan. This isolated position has protected the Khanzals from exterior influences, and they have maintained to a great degree many of the patriarchal customs. The Khanzals are Sunut Muslims of the Shāfif rite. The economy has remained traditional: ralsing sheep with a transhumance system, agriculture on terraces, and handicrafts (especially leather work).

Khunzal is a purely vernacular language, and the Khunzals Avar their first literary and second spoken (sometimes first) language, having Avar the language in primary education. Russian is the second literary language. They are in fact being culturally and linguistically assimilated by the Avars.

KHURASAN, today the north-easternmost usion or province of Persia, with its administrative capital at Mashhad [q.v.]. But in pre-Islamic and carly Islamic times, the term "Khurāsān" frequently had a much wider denotation, covering also perts of what

are now Soviet Central Asia and Afgjänlstän; early Islamic usage often regarded everywhere east of western Persia, sc. Djibāl or what was subsequently termed 'Irāk 'Adjami, as being included in a vast and ill-defined region of Khurāsān, which might even extend to the Indus Valley and Sind. Thus the Armenian geography traditionally attributed to Moses of Khoren depicts Khurāsān as stretching from Gurgān and Kūmis in the southeastern Caspian region to Badakhṣḥān and Tukhāristān in the upper Oxus and Bāmiyān in the Hindū Kuṣḥ (see J. Marquart, Ērāmishr, 47 ff.).

Topographically, Khurāsān in the modern, restricted is dominated by a zone of mountain ranges running roughly NW-SE, a continuation of the Alburz chain, and connecting that chain with the Paropamisus and Hindu Kush ranges of northern Afghānistān: in a district such at that of the Küh-i Binaind the north of Nishapur, these mountains rise to 11,200 feet. To the north, open steppes and deserts run down through the Soviet Turkmenistan SSR to the Caspian Sea and the Amu-Darya basin. To the south, there lies an extensive region of landlocked deserts and salt flats, such as the Dasht-i Kawir, the Dasht-i Lut and the Hilmand basin of Sistan, but within this region is situated an important upland zone, that of Kā'in and Birdiand, the early Islamic province of Kuhistan [q.v.], massif of which, the Küh-i Mürninābād, rises to 9,200 feet. There is thus considerable topographical diversity, but only in the more northerly mountain and do adequate rainfall, perennial streams and accessible wells permit a relatively flourishing agricultural and pestoral economy; here, the population is quite dense for Persia. Elsewhere, and especially in the more southerly parts, there is usually an oasis pattern of life, with much dependence on wells and on Adrius = kanāts. Also, until the time of Ridā Shāh Pahlawi at least, there was a substantial minority of nomads in Khurāsān, composed mainly of Göklen and Yomut Turkmens, and some Hazāras, Taymūris and Balūč-(See for the geographical, topographical and demo. graphic background, Admiralty bandbook, Persia, London 1945, and Cambridge history of fran, i, ed. W. B. Fisher, Cambridge 1968, chs. 1, 2, 5, 18, 19; and for the historical geography of the older period, Marquart, op. cit., Le Strange, 381-432, and Hudid el-falam, tr. Minorsky, | 23).

The present population of Khurasan is very mixed. There is of course the still-important Iranian substratum, but there are extensive other groups, such Turkmens, Kuids, Balüč, Arabs, and Taymūris and Hazaras from Aighanistan. The presence of these veried races is a concomitant of Khurāsān's strategic position as a bastion facing Inner Asia and as a corridor between the steppes and the civilised, settled lands of the Middle East. Pressure on Khurasan by the Inner Asian nomads has been intermittent from the earliest known times till the later 19th century, when permanent political frontiers were established and the free movement of peoples thus impeded, Khurāsān was therefore the gateway through which Alexander the Great passed to Bactria and India, and conversely, that by which Turkish peoples from the Saldjüks onwards and then the Mongols entered Persia. The result has been methnic comminging in Khurāsān, especially as the relers of Persia, whether Persian, Arab or Turkish, have, in purof their historic task of defending their northeastern frontiers, at various times planted colonies of auxiliaries and guards; for political reasons, colonies of peoples like Lurs were settled there as late as the reign of Rida Shah Pahlawi. Nevertheless, whilst the basically franian ethnic and linguistic nature of northern Khurasan at least has been overlaid, this process has not gone so far as in Turkicised province like Adharbāydjān; the Kā'in and Birdjand region, in particular, is still predominantly Persian.

In Sasanid times. Khurasan was one of the four great provincial entropies, and was governed from Marw by an Ispahbadh (MP form Spakbat; [see ISPANBALMI). Yackubi, Taribb, i, 201, enumerates as comprising Khurasan under the Sasanids the following districts: Nishāpūr, Harāt, Marw, Marw al-Rūdh, Fāryāb, Talagān, Balkh, Bukhārā, Bādahis, Abiward, Ghardistan, Tüs, Sarakhs and Gurgan. In times of military expansion. Säsänid arms pushed beyond Marw: thus Tabarl, i. 810, says that Ardashir Babakan extended his power over Khwaraam and Tukhāristān. In fact, many local princes must have remained as Sasanid feudatories, holding offices like those of marshins or frontier wardens; many of these achieved temporary independence when the Sasanid monarchy collapsed under the Arab onslaught. To the immediate east of Sasanid Khurasan lay the lands of their enemies, the powerful northern branch of the Hephthalite confederation, with its centres in Badghis and Jugharistan; Baladhuri, Fullik, 405, mentions that there was ruling over Harāt, Bādghis and Pūshang a local potentate, called by him the 'axim or "mighty one", who must have been a Hephthalite chief. The ancient pattern of hostilities between the rulers of Persia and the Hephthalites was to be taken up by the Arab governors of Khurasan in the Umayyad period (see further, HAYATELA).

It at Marw that the last Sasanid Emperor, Yazdagird III, made his stand before his betrayal by the local marsban Mähüya and his murder in 31/651. Meanwhile, the Arabs had already appeared in Khurāsān. During 'Umar's caliphate, forces from Başra penetrated = far as Tabasayn in the Great Desert, and a determined attack - the province - made in the following reign of 'Uthman when 'Abd Allah b. 'Amir b. Kuraya [q.v.] was governor of Başra (sc. from 29/649 till 35/655). An expedition eastwards was mounted by the see of Kufa under Sa'ld b. al-'Asl, travelling along the northern route between the Alburz and the central deserts, and another one by the Basran army under 'Abd Allah b. 'Amir and his lieutenant al-Ahnaf b. Kays, approaching via Kirman and Tabasayn, a route which was for long preferred as an easier and safer route than that of the modern highway and railway connecting Tehran and Mashhad. It was the Basran army which made most progrest, and in 31/651-2 reduced Nishapor to obedience, receiving the submission of local rulers and former Sāsānid governors in most of mill other towns of Khurāsān. In the following year, the last great stronghold of the Sasanids, Marw al-Rugh, fell to al-Ahnaf after flerce fighting, but the local marshan, Badham, was confirmed in his office and possessions there in exchange for a relatively light tribute. The permanent pacification of Khurasan was, however, a protracted process. Local potentates frequently rebelled against Arab control and appealed to outside powers like the Hephthalites, the Western Turks or Türgesh, the Soghdians, and even the Chinese Emperors (who claimed a vague sovereignty over Central Asia, and with whom certain Săsânid pretenders took refuge). In particular, the civil war between 'All and Mu-Cawiya meant a relaxation in Khurāsān of Arab control, which had subsequently to be re-imposed by 'Abd Allah b. 'Amir (re-appointed governor of Hasta and the sest by Mu'awiya from 41/661 to 44/664)

KHURĀSĀN

and his generals. Thus an important expedition sent against Sistân and Zābulistān under 'Abd al-Raḥmān b. Samura, in the course of which was reached, and according to Balahnst, Futus, 409, Balah was restored to obedience to great Buddhist shrine of Nawbahār despoiled.

A period of stronger Arab rule came with the appointment in 45/665 of Ziyad b. Abihl as governor of Başra and the east. During the Umayyad age, authority over the extensive provinces III Khurasan and Sistan (within which were included in times, in noted above, such distant regions as Transoxania, Farghana, eastern Afghanistan, Makran and Sind) was exercised in the first place by the governors of Başra, for Başran troops, and especially the men of the North Arab or Kaysl tribes of Tamim and Bakr, were prominent in the overrunning of the eastern Persian lands, though in the governorship of al-Muhallab b. Abi Sutra (78-82/697-702), considerable numbers of that governor's fellow-tribesmen of the Yamanî Azd were settled in Khurasan, Since the turbulent province of Trak always demanded the personal presence and attention of the governors of Kafa and Başra, the latter appointed deputies in Khurāsān and often in Sistan also; and all these appointments tended to reflect policy trends and personal ascendancles at the heart of the caliphate in Syria, In Ziyad's time, attempts were made, against strong resistance from the local peoples and from the Hephthalites, to reduce Tukhārlstān to obedience. This are achieved by al-Rabt' b. Ziyad and his son 'Abd Allah, in the case of Balkh and the lands up to the Amu-Darya, in the years after 51/671, but the Hephthalite threat was not finally removed till the governor Kutayba b. Muslim captured and killed their leader Tarkhan Nirak 📕 91/710 and took 🖿 a hostage the Turkish Yabghu (in the Arabic texts, Djabbuya) of Tukhāristân. But man after this, Arab rule was far from secure. The Arabs made Marw their military centre. and by the end of the 1st century A.H. were beginning to settle down permanently in the Marw casis and probably intermarry with the indigenous Persian population. But their solidarity in the face of external threats from enemies like the Türgesh and Soghdians adversely affected by the tribal divisions and feuds between the Kays faction, numerically superior and generally dominant, and the Yamanis, and also by the fact that control by the caliphs was difficult to exercise from distant Damascus, See for events in Khurasan during the Umayyad period, Marquart, Eransahr, 47-70; Wellhausen, Das arabische Reich und sein Sturz, Eng. tr. The Arab kingdom and its fall, esp. ch. 8; Gibb, The Arab conquests in Central Asia; Spuler, Iran, 5 ff.; M. A. Shaban, Islamic history A.D. 600-750 (A.H. 132), Cambridge 1971; idem, The 'Abbasid revolution, Cambridge 1970; and idem, Khurasan at the time of the Arab conquest. in Iran and Islam, in memory of the late Viadimir Minorsky, ed. Bosworth, Edinburgh 1971, 479-90.

The last decades of Umayyad rule were characterised by tribal warfare amongst the Arabs, which, amongst other things, delayed the consolidation of Arab control scross the Arab Darya in Transoxania; noteworthy in this connection is the prolonged reveit in Tukhāristān from 116/734 onwards of al-Hārith b. Suraydi [q.v.]. Large numbers of Arab troops continued to reach Khurāsān, m that according to the historian Ibn A filam al-Kūfi, there were 40,000 Muslims in Khurāsān by 112/731. The last Umayyad governor there, Nasc b. Sayyār al-Kināni (120-30/738-46) [q.v.], was faced latterly by the spread of the fabbāsid dafms or revolutionary movement from its

centre at Marw under a political adventurer of consummate skill, Abū Muslim [q.v.]. This movement had been organised, from the caliphate of Hisham onwards, under local makibs in representatives of the 'Abbāsid family in Marw, until Abū Muslim took over the leadership there in 128/746, apparently drawing his prime support from the older-established Arab settlers in the district, those whom Tabari and the anonymous author of the Ta'righ al-Ahulafa' edited by Gryaznevich call the ahl al-lahadum (see Shaban, Tha 'Abbāsid revolution, 155-8). By 130/748 Abū Muslim was undisputed master in Marw and Nasr b. Savyār had been forced to flee towards the west.

Since Khūrāsānī support was m decisive in m rise of the 'Abbasids, the province enjoyed considerable favour from the early 'Abbasid Caliphs; cf. the encomium of the Khurasanis as "our party, our helpers and the people of our da'un" in a khulba or oration pronounced at Hāshimiyya by al-Manşūr and reported by Mastadi, Muradi, vi, 203 ff., and the similar sentiments quoted from 1bn Kutayba in Mukaddasī, 293-4. Khurāsānian guards and officials, the Abna' al-Dewla, continued to be the mainstay of the regime till towards the middle of the 3rd/9th century, when there began the wholesale adoption of slave troops as the nucleus of the Caliphal army and household [see <u>GRULAM</u>]. Many Khurāsānīs migrated westwards into 'Abbasid service, such as the Barmaki family from Balkh [see BARARIKA]; this process was accentuated when al-Ma'mun, the former governor in Marw, achieved the caliphate in 198/813 with the support of the Persian east against his brother al-Amin.

The Tähirids [q.v.] governed Khurasan for the Abbasids, as faithful servants of the caliphs rather than as autonomous rulers, for some fifty years (205-59/822-73). They were of arabised, Persian manda stock, me member of whom had been secretary to an 'Abbasid da's or propagandist in Khurasan, Sulayman b. Kathir al-Khuzaq. Tahir 13hu 1-Yaminayn was one of al-Ma2mun's generals, and was in 205/821 appointed governor of Khurāsān and the east. The Tahirids were stranuous supporters of Sunni orthodoxy and the established Perso-Islamic social hierarchy against ShII and older Iranian religious movements in the Caspian provinces and Transonsnia, and also against heterodox currents of Persian socio-religious protest which were racking the Persian countryside at this time (see G. H. Sadighi, Les mouvements religieux frantens 🖚 III et 🖿 IIIº siècle do l'hégico, Paris 1938). Under the Tähirids, Khurasan blossomed economically and culturally. We find 'Abd Allah b. Tahir (213-30/328-45) showing his concorn for his province's welfare by his commissioning a book on water rights and the regulation of kandis, the characteristic means of irrigation throughout much of Khurāsān; this Kitāb al-Kuni was, according to the Ghaznawid historian Gardizi, still in use two conturies later. Whereas in the early Islamic period Khurāsān had been economically and culturally backward compared with western Persia (cf. E. Herzfeld, Khorasan: Denhmalegeographische Studien zur Kullurgeschichte des Islams in Iran, in Isl., 34 (1921), 207-74), its agricultural prosperity now increased; according to Yackubl, Bulden, 308, tr. 138, the hharadi or land tax of Khurasan under the Tabirids amounted to so million dirhams a year. It benefited from commercial traffic connecting Trak and Baghdad with Contral Asia and the fringes of the Indian world, and a luxury product like the edible earth of Nishapht was, according to Thaialibi, Lafa'if al-ma-'arif, 192, tr. Bosworth, 132, exported all over the

Islamic world, including to Egypt and the Maghrib. Above all, Khurasan derived much advantage from the transit trade in Turkish slaves, which make a regular component of the annual tribute forwarded to the caliphs by the early 'Abbasid governors, the Tahirids, and later, the Sāmānids, and which often fetched high prices; Ibn Hawkal', ii, 452, tr. ii, 437, says that he saw make than once in Khurasan slaves sold for 3,000 dinārs. (Further on the Tāhirids, m. Bosworth, ch. 3, The Tāhirids and Saffārids, in Cambridge history of Iran, iv, Cambridge 1975, 90-105).

The Şalfarid adventurer from Sistan, Ya'kub b. Layth, overthrew Tahirid rule in Khurasan, entering their capital Nishapur in 259/873, and in the ensuing years, Khurasan was fought over by various contending generals, until the Samanid amir Isma'll b. Ahmad [q.v.] defeated 'Amr b. Layth in 287/900 and incorporated Khurasan into the Samanid dominions. Under what is described in the sources as the beneficent rule of the Samanids, Khurasan continued to be within the mainstream of Sunni religious orthodoxy and culture. It had become already under the Täbirids a vigorous centre of Arabic literature and of Sunni legal and religious scholarship. There is a large representation of Khurāsānī scholars in such literary biographical works as Tha 'alibi's Yatimat al-dahr and the continuations of Bakharzi and Islahani. Khurásanl theologians and traditionists were prominent in Sunni, especially Shafi's and Agh'art, learning, and in such theological and philosophical movements those of the Mutazila and Karrāmiyya [qq.v.] The extremist Shift Isma'lli sect had pockets of support in **in east**, and Khurāsānī ascetics and mystics played important rôles in the development of Sufism. It is, of course, well-known that Khurasan and the eastern Iranian world in general had a crucial part in the renaissance of the New Persian language and its literature from the grd/oth century onwards; see Browne, LHP, i, 445 ff., and Rypka et alti, History of Iranian literature, 133 ff.

As the Samanid amirate disintegrated in the later 4th/roth century under external attack from the north and internal revolt by unruly Turkish generals, Khurasan passed under the rule of the Turkish Ghaznawid dynasty [q.v.]. In 384/994 the founder of the line, Sebüktigin, had been given the governorship of and the eastern parts of Khurasan, and in 388/998 his son Mahmud consolidated his power in the whole of the province, which was to remain under Ghaznawid control for forty years. The riches of Khurāsān did much to finance the successful Ghaznawid was machine, but the financial exactions of Chaznawid officials and a series of disastrous famines made the Sultans' rule there unpopular. Hence Nishapur and the other towns much not make during the period 428-31/2037-50 from surrendering to the incoming Oghuz nomads led by the Saldjük family; and the Saldjük victory at Dandankan [q.v. in Suppl.] in 431/ 1040 scaled the fate of Ghaznawid rule over those parts of greater Khurësan to the west of Badakhshan and the central Afghān mountain massif.

Under the Saldjük Sultäns, Khurtsän was an important province of their empire, even though the founder Toghril Beg soon moved his capital westwards from Midiāpūr to Ray and Istahān. Khurtsān and the east were initially ruled by Toghril's brother Čaghril Beg Dāwūd, whose son and grandson Alp Arslan and Malik Shāh were to raise the Saldjūk empire to its apogec. In general, firm rule brought peace to the towns of Khurtsän. This was temporarily ended in the uncertain years after Malik Shāh's death in 483/2092---the local historian of Bayhak or Sabza-

war, Ibn Funduk, comments on the recrudescence of sectarian strife and the activities of the para-military 'ayyar groups in the town-but stability returned under the long reign of Sandiar, who me firstly governor in the east and then Sultan for a total of over sixty years. The intellectual and cultural vitality of Khurasan remained unimpaired, and four of the original nine madratas or colleges founded by the great Vizier Nizām al-Mulk were, according to his biographer Subki, In towns of that province, so, in Mishapar, Balkh, Harat and Marw. One effect of the Oghuz migrations into Persia the arrival of Turkgroups in northern Khurāsan, where suitable pasture was to be found for their flocks. These noauads remained an unassimilable element of Saldjük Khurasan, until neglect of their interests by the contrai government drove them into revolt towards the and of Sandiar's raign, leading to the Sultan's own capture by the Oghuz and effective deposition in 548/

In the decades preceding the Mongol invasions, post-Saldjük Khurāsān was held by various Oghuz tribal leaders and by former Saldjük generals, and was then fought over by the Churids and Khwārarm-Shāhs [qq.v.], until the Shāh 'Alā' al-Din Muhammad finally overthrew his Churid rivals in the opening years of the 7th/13th century. (See, for the history of Khurāsān in the Charnawid and Saldjük periods, Bosworth, The Charnavids, their empire in Afghanistan and castern Iran, part II and III, and idem, in Cambridge kintory of Iran, iv, th. 5, v, th. 1).

The Mongol bordes . Cingia Khan, driving the Khwarazm-Shah Djalal al-Din before them, appeared in Khurāsān in 617/1220, and seized control of its towns. Whilst not all of the notorious massacres of the Mongols may have been perpetrated at the original surrender of some towns, but at the time of subsequent revolts, Marw and Mishapar, which resisted fiercely in 618/1221, suffered appallingly. Ibn al-Athir, xil, 256, places the number of in Marw at 700,000, and Dinwayni, tr. Boyle, i, 163-4, has the figure of 1,300,000 for the Marw oasis m a whole. Even allowing for statistical exaggeration, the Mongol invasions undoubtedly devastated Khurāsān to a far greater degree than the Oghuz incursions of the 5th/ irth century had done, as is amply demonstrated in the accounts of European and Muslim travellers and geographers of the following period of the Il-Khanids, e.g. those of Marco Polo, Ibn Battata, Hamd Allah Mustawil, etc. As well as the population losser and destruction of settlements, the increased proportion of Turkish and Mongol nomeds in **ma** province accentuated the existing trend from Saldiuk times towards pastoralisation and the decline of agriculture; moreover, the arbitrary Mongol system of taxation bore especially heavily on cultivators and landholders, according to I. P. Petrushevsky, in Camb. hist. of Iran, v, ch. 6. Certainly, Churasan never recovered its cultural and intellectual position within Persia whole; the II-Khanids made their centre in western Persia, and Dibal, Adharbaydian and 'Irak became the feel of political activity and artistic and literary life. The towns | Khurlsan continued to suifer from the wariars between the Il-Khanids and the Caghatayids, and a place like Harat only became a major centre with the florescence of the Timurids In the 9th/15th century.

After the death of III II-Khānid Abū Sa⁵Id III 736/ 1335, various local dynasties arose in Perala, including III Khurāsān the Karts or Kurts and the Sarbadārids [qq.v.]. The Karts arose in Harāt during the 7th/x3th century, and successive rulers with the title of malik or king retained power there till the deposition by Timur of the last ruler, Ghiyath al-Din Pir 'All, in 701/1389. The Sarbadars stemmed from Bayhak, and in the middle years of the 8th/ 14th century they will this region western Khurasan, extending to Damghan and even holding Nishapur temporarily, till they too were extinguished by Timur in 783/1381. Timur made his were capital at Samerkand in Transoxenia, but his 🗪 Shāh Rukh became governor of Khurāsan for his lather in 799/ 1397 and ruled there for fifty years until his death in \$50/1446-7. Towns like Harat and Marw were rebuilt, and a considerable degree of prosperity restored; and under the Timurid prince Husayn b. Manşûr b. Baykara (875-911/1470-1306) (q.v.), Harāt and Khurāsān enjoyed a period of political stability and of brilliant cultural and artistic life.

In the early zoth/zôth century, Khurāsān was overrun by the Örbeg chief Muhammad Shaybani Khau and his hordes, but three years later, in g15/1510, the Safawid Shah Isma'll I killed the Khan and incorporated Khurāsān into the Şafawid dominions, The Safawids were, however, unable to hold Balkh, and lost it permanently in 922/1516. Warfare with the Özbegs remained endemic in northern Khurasan, with the possession of frontier towns like Marw osciliating between the two powers. Noteworthy in the Safawid period-one in which Persia became in majority a Shiff land-was the rise in importance of the great shrine of the Imam 'All al-Rida [q.v.] at Mashhad, originally the village of Sanabad, where both the eighth Imam of the ShI's and the Caliph Haran al-Rashid were buried. The shrine was already splendidly ornamented in Il-Khanid times, as Ibn Battūta noted (Rikla, iii, 77-9, tr. Gibb, lit. 582-3). and was increasingly enriched by the Timurids and Safawids. Shah 'Abbas I endeavoured to encourage the Shift pilgrimage M Mashhad, since the holy places of 'Irak, such - Nadjaf and Karbala', were often in Sunol, Ottoman hands. In the comparatively peaceful period of Kādjār rule, Mashhad gradually attained its modern position as the principal city of Khurasan.

With resurgence of tribalism and the political upheavals of the rath/18th century, Mashhad became Nadir Shah's capital, and he made his military redoubt in massif of Kal'at-i Nādirt in northern Khurāsān, but after Nādir's death in 1160/1747, the eastern parts of Khurāsān passed for while into the control of the Durrâni Afghan chief Ahmad Shāh [q.v.], and by 1163/1750, Balkh, Harāt, Mashhad and Mishāpūr were all in his possession. But the blind, half-Safawid grandson of Nādir, Shāh Rukh, had remained there as nominal ruler at least till his death in 1210/1796.

Once Aghā Muhammad Kādjār had made firm his power over the whole land of Persia, control over Khurisan was fully restored to the central government, now installed in Tehran. But the depredations of the Ozbegs and other Turkmens continued to make life in northern Khurāsān chronically insecure; the progress of commerce and agriculture was inhibited, and many Persians were carried off and enslaved by raiders from the Central Asian amirates. These in friction were only ended by the Russians' virtual annexation of Khiwa in 1873 and the crushing of the Tekks Turkmens at Gök Tepe in 1881, After this last victory, the Persian government was not strong enough to withstand Russlan pressure, and the Russians annexed the Marw ousis in 1884. Relations with the amirs of Afghanistan had meanwhile continued to be bad, with contention over possession

of Härat. The town was besieged in vain by the Persians in 1838, and Näşir al-Din Shāh fought a brief war with Britain in 1856-7 over a temporary Persian seizure of Harāt. After this, overt Persian attempts on districts of Afghānistān ceased, though disputes over the demarcation of the boundary between Khurāsān and Afghānistān were not finally settled till the definitive demarcation of the whole boundary as far south as Sīstān in 1934-5. Ichurāsān and the provincial capital Machhad are now fully connected with Tehran by a metalled road, a railway and air services. The present population of the province (1966 census) is al millions, with Machhad now the third largest city of Persia with 409,000 inhabitants.

Bibliography: This is largely given in the article, but note for the earlier period the flourishing genre of local histories, e.g. of Baybak, Nishapar, Balkh and Harat (see Storey, i, 353 (f.). The political and social history of the province must be largely extracted from such general works in the books of Spuler, Iran and Die Mongolen in Iran, Sykes' History of Persia, the relevant chapters of the Cambridge history of Islam, i, and above all, the published and forthcoming volumes iv-vii) of the Camb. hist. of Iran. For the 19th and early 20th centuries, the works of European, mainly British, travellers, officials, consuls, etc. are a prime source, e.g. those of J. B. Fraser, C. Metcalfe MacGregor, the Hon. G. C. Napier, the Hon. G. N. Curzon, C. E. Yate, P. M. Sykes, W. Ivanow, etc. (C. E. BOSWORTH)

BANG KHURASAN, the dynasty which, taking advantage of the anarchy initiated in Zirid Ifrikiya by the Hilall invasion, governed Tunis 454-522/ 1002-1128 and 543-554/1148-59. When leaving Kayrawan to take refuge in al-Mahdiyya (449/1057), the Zirid al-Mu'lzz b. Badis had left Kayrawan and Tunk in the protection of a Sanhadi chieftain Karld b. Maymun. The latter to have exercised no authority at Tunis, which was probably evacuated by the Sanhadia, regrouping at al-Mahdiyya or in Hammadid territory, and independent. Ibn Khaldün states that it fell prey to # Hilali amer, a son-in-law of al-Mufizz b. Badls, 'Abid b. Abi 'l-Chayth who reduced the inhabitants to slavery; this episode, undated, seems to have been no more than an isolated raid of which the effects were short-lived. According to the same author, a mercenary leader, Kahrun b. Ghannúsh, who became governor of Tunis, was banished from there because of his had administration; subsequently he made a stronghold for himself in the arches of the aqueduct at Manzil Dahmun, a refuge of brignads which the Tunislans succeeded in destroying with the aid of the Riyahid amir Muhriz b. Ziyad. One imagines the Tunislans paying ransoms and tribute to the nomads, the rulers of the plains, but wishing to be protected against these marauders.

In the West, the Hammadid principality, still intact, and indeed reinforced by the downfall of the Zirid state, passed into the hands of an energetic, far-sighted sovereign, al-Nāṣir [454/1062]. His power was quickly consolidated by the rallying to his side of Sfax and Kastlliya. It was only to be expected that Tunis should have considered doing the same thing, and accordingly a delegation of Tunisian shaphs went to the Kalfa to ask in Hammadid prince to choose them a governor. According to Ibn lighar, al-Nāṣir, prudently no doubt, contented himself with advising them to choose for themselves in shaphs who would govern them whilst he confined himself to observing them, taking his time to study

the situation (yapamu bi-amrikim khalāla mā yanguru ilaykim); they chose of the leaders of their community but he refused, and it was then that 'Abd al-Hakk II. 'Abd al-'Azīz h. Khurāsān took power in the of al-Nāṣir. According to Ibn Khaldūn, 'Abd al-Hakk was appointed by the Hammādid immediately following the reception of the embassy of the Tunisian shaykhs. This historian, who makes no mention of the election of a Tunisian shaykh, proposed initially by al-Nāṣir, seems to have condensed his account of events; possibly there was a second deputation which returned with the designation of the Khurāsānid, or with the governor in person.

Abū Muhammad 'Abd al-Hakk b. 'Abd al-'Aziz b. Khurāsān, a native of Tunis, was quite probably, says ibn Khaldūn, of Şanhādit origin; without this affirmation one would have to postulate for him a Khurāsāni descent; in Tunisian dialect, Khurāsān became Khītsān (the cupois of Sidl Bū Khrīsān).

He bore only the title of shayes, and ruled the city assisted by a council of shayes, a kind of senate partaking, — doubt, of the nature of the Berber ffama's. Nothing more is known of the institutions, certainly of a rudimentary nature, of this oligarchic republic. 'Abd al-Hakk showed himself a good administrator, knowing how to assert himself and gain the sympathy of the population. To put an end to the brigandage of the Hildii Arabs, he had the wisdom to agree to pay them an annual tribute (idea malima); this modes vivendi probably made conditions favourable for the exploitation of neighbouring lands, for the provision of food supplies, for industry, and commerce.

The Hammadid suzerainty seems to have been more then nominal; besides, al-Nāşir was occupied warding off the Hilall peril and in 457/1064-5, at Sabība, he suffered a defeat as great as that of the Zirid at Haydaran in 443/1052. Tamim b. al-Musiza b. Bādīs took advantage of his cousin's defeat to attack Tunia (458/1065-6); after a siege fasting fourteen months. Abd al-Hakk submitted to him and recognised his suzerainty, but the authority of the Zirid of al-Mahdiyya seems to have been exercised in Tunis no more than had been that of the Hammadid of Kal'a. 'Abd al-Hakk governed for a further thirty years until his death (488/2095). His son Abd al-'Aziz succeeded him. One may suppose, on the basis of an inscription on the foundation of a mosque dated Ramadan 485/5 Oct. - 3 Nov. 1092 where he is called al-shayah al-adjali (the most venerable shayah) that before his father's death he bore at least some of authority. In addition, the frieze on the cupola of Sidi Bu Khrisan says that this meusoleum was built | Djumādž II 486/29 June - 27 July 1093 by "the victorious power" (al-sulpan al-mansar) Abû Muhammad 'Abd al-'Aziz and Abu 'l-Tahir 'Isma'll, both of them sons of shayah 'Abd al-Hakk b. 'Abd al-'Azīz b. Khurāsān; from this we may suppose that at this date, 'Abd al-Hakk, doubtless aged and sick, had handed over the min of government to his two sons. It seems that 'Abd al-'Aziz, whom Ibn Khaldun accuses of "a feeble spirit", at least to m certain extent shared power with his brother Isma'll.

Tunis must have broken with the Zirld of al-Mahdiyya, since the sources state that Tamim attacked and took it again in 491/2097-8.

The epitaph has survived of shayki Abb bluhammad 'Abd al-'Ariz b. 'Abd al-Rakk b. Khurasan who died in 5th Muharram 499/17th Sept. 1105, also that of the amir Abu 'l-Tahir Isma'il b. 'Abd al-Hakk b. Khurasan, who died on 12th Radiab 500/8th March 2107; so the latter must have reigned from 5th Muharram 199 to rath Radiah 300 with the title of amir. Had he seized power? Had he aimed a blow at the power of the council of elders? Whatever the explanation, 1991 nephew Ahmad b. 'Abd al-'Aziz put him to death and his son Abh Bakr b. Isma'll fied to Bizerta.

Abmad b. 'Abd al-'Aziz b. 'Abd al-Hakk b. Khurasan showed himself a dictator, abolishing the authority of the haykis, many of whom were exiled to al-Mahdiyya and elsewhere, and he sought the favour of the jurists with whom he liked to surround himself. He built the Kasr (palace) of the Banu Khurasan, surrounded Tunis with ramparts and obtained from the Hilall Arabs a guarantee to watch over the safety of travellers. In Hamdis wrute a panegyric of this prince, considered by Iba Khaldun the most remarkable of his family.

In 510/1116-17, he was obliged to submit to 'All the Zirid of al-Mahdiyya who sent an army to besiege Tunis, but in 514/1120-1 it was al-'Aziz the Hammadid of Bougle who laid siege to Tunis and imposed this suzerainty upon it. Finally, in 522/1128, a general of the Hammadid Yahyā b. al-'Aziz attacked Tunis. Ahmad b. 'Abd al-'Aziz went out of the city, surrendered and was banished, with all his family, to Bougle where he died. Tunis was entrusted to Hammadid governors who continued to rule there until 543/1148-9.

There followed for the Tunisians a period of anarchy; they were threatened simultaneously by the Normans-already masters of Djerba (530/1135), of Tripoli (541/1146), of Gabes (whose chieftain, a usurper, recognized then; in about 54r/1146-7), of al-Mahdiyya, of Sousse and of Sfax (these three taken in the many year, 543/1148)—and by the Hammadids of Bougie who were making preparations to subjugate them unconditionally; in addition, they were harassed by Mubriz b. Ziyad, the Riyabid amir of La Malga (al-Mu'alla)ta, between Tunis and Carthage). They took as their chief the \$ādl Ahū Mubammad 'Abd al-Mu'min, son of the imam Abu 'l-Hasan. With his approval, they made an astonishing rolls-face, deciding to appoint Muhriz b. Ziyad m their king. In reply to their invitation, the Riyahid approached Tunis; the kddl and the shaykks came in procession to meet him; but a cry taken up by the crowd, "No obedience to an Arab or # Ghuzz (sc. a Turcoman)", caused the enterprise to fail. It seems that the ruling class, having acted out of realism or for the defence of their own interests, were folled by public opinion. Muhrlz b. Ziyād made his way back to La Malga where he was joined by the hadf who had been chased out of Tunis.

In order to put an end to the civil war, the Tunisians decided on a restoration of the Banû Khurāsān. A deputation went to Bizerta to fetch Aba Bakr b. Isma'll b. 'Abd al-Hakk who was hauled up at night over the city walls of Tunis in a wicker basket. This secret entry, which is not adequately explained by the closure at night of the city gates, suggests that the population was not unanimous in the decision to adopt him - amir. Seven months later he was betrayed by his brother's son, 'Abd Allah b. 'Abd al-'Aziz who seems to have had him drowned. 'Abd Aliāh b. 'Abd al-'Azīz b. Ismā'll b. 'Abd al-Ḥakk remained in power for about ten years. He killed the Add Abu 'l-Fadi Dia'far b. Halwan, his son and the son of his sister Ibn al-Bannad, fearing lest they conspire against him with the Arabs, doubtless with Mubriz b. Ziyad.

Nevertheless, it was thanks to a unit commanded by Muhriz b. Zlyad, which had penstrated into Tunis, that the inhabitants, under siege by Abū Muhammad Abd Allah, son of the Almohad caliph 'Abd al-Mu'min, made a successful sortie and forced the enemy to retire. On the last day of Djumada | 552/ 10th July 1157, 'Abd Allah b. 'Abd al-'Aziz reported to the archbishop of Pisa the victory which he had just won over the Masmuda, in a letter preserved in the archives of Pisa confirming the verbal terms of a commercial treaty between Pisa and Tunis.

He succeeded by his nephew 'All b. Ahmad b. 'Abd al-Aziz b. 'Abd al-Hakk b. Khurasan (in about mid-February 1159). But five months later (about mid-July 2759). Tunis was laid under siege by a formidable army and fleet under the callph 'Abd al-Mu'min, and surrendered. A deputation of twelve (or seventeen) shaykhs went to 'Abd al-Mu'min to ask for peace. After an initial refusal, and long equivocation, he accepted. In the list of these shaveles. unfortugately incomplete, motice aine names: three brothers, the Banu 'Abd al-Savvid, Hashimi sharifs (the epitaph of another member of this line. dating from 528/1113, is qualified by fakth and imam], and two sons of Mansur Isma'll and their paternal cousin; we are dealing here with an oligarchy, and, more, it is making terms with the enemy. In fact, "Abd al-Mu"min promised to respect the lives, families and goods of the shaykhs who had come to negotiate, in return for their readiness to surrender, but he made the same guarantees to the other inhabitants of the city and environs only after they had handed over to him ball of their goods.

The last of the Khurāsānids, 'All b. Ahmad, had not only to surrender half of his goods, but also to accept exile in Bougie; once these conditions were accepted, he left Tunis that same day, but died on the road.

Tunis has kept some relics of the Banů Khurasan. sc, the mosque of the Diami' al-Kast (ca. 400)1106). which probably adjoined their palace (no longer in existence), and not far from Sidi Bû Khrisan street. a Kubba, their funeral mausoleum in the centre of a necropolis excavated by S. M. Zbiss, to whom we owe the establishment of mepigraphic musuem and the publication of a number of tomb-inscriptions of the men and women of this family.

<u>KHURASANI, Am</u>ond Mulla Muhanmad Karm (1839-1911), a distinguised Shift muditabid I Iran; born in Tas, he received his early education in Mashbad, pursued traditional studies including natural philosophy in Tehran in 1860, and moved Nadjaf in 1861 for further studies. He studied under Mirza Husan Shirazi, the then sole mardia'-i takild of the Shift world. After the latter's death (1894), Khurāsānī was recognised as the legitimate successor to Shirazi. He proved to be a resourceful teacher, lecturing daily before more than 1,000 students of usul al-fifth and producing as graduates of his courses some 120 muditahids (Mahdi al-Müsawi, Aksan al-wadi'a, i, Nadia(1968, 147-8). He established three religious (soid., 148) and some modern schools in 'Irak ('Abd Allah al-Fayyad, al-Thampa al-Irakiyya al-kubra sana 1920, Bughdid 1967, 82 ff.). Since 1906 Khurāsāni's name has been associated with the Persian Constitutional Revolution as one of its most influential supporters. He and two other muditahids, Tibrani and Mazandarani, issued numerous fateds and manifestos, sent many telegrams, wrote many fetters to responsible authorities in Persia and Turkey, and organised two uprisings. Led by Khurasani, the Persian (wlama) of Crak intensified their campaign after Muhammad 'Ali Shah's abrogation of the constitution in 1908, and in a fated they declared that obedience to the Shah and the payment of taxes to his government were un-lalamic Ahmad Kasravi, Taribh-i Mashrata-vi Iran, Tehran 1951, 730) and strongly condenined their clerical opponent Shavkh Fad) Allah Nuri (ibid., 128), Khurasant's activities were not favoured by Abd 51-Hamid Il of Turkey, Thanks to the Young Turks' Revolution of 2008, however, there appeared a degree of mutual co-operation between the 'ulama' and the Turks, and Khurāsānī openly supported the Turkish Revolution. He even threatened to dethrone 'Abd al-Hamid upon the latter's counter-revolution in 1000 (Savyid Muhammad Hasan Nadjafi Kückni, Siväkät-i

shard, Mashbad 1972, 474-6).

Living in an Ottoman province, Irak, Khurasani and other Persian constitutionalists seem to have been led to an agreement of expedience with the Young Turks. We see Khurāsāni, for instance, sanctioning the Pan-Islamic policy of the Young Turks (RMM, xiii (1922), 385-6) and at times, despite his being a Shi'l maditabid, calling the Ottoman sultan "caliph" (al-"Irfan, i (1909), 240-1; Nigam al-Dia-Zada, Hudrum-i Rus bi-fran, Baghdad 1913, 45). In support of the sultan, he also declared a holy war against the Italian invasion of Libya in 1911 (al-'Ilm, ii (1911), 246-7, 290-7, 338-42). In return, Khurāsānī appealed to the sultan to interfere in favour of the Persian constitutionalists; once in 1909 when he was successfully working towards the dethronoment of the foreign-backed Shah (al-Vefan, I (1909), 240-1), and another time when, upon the Anglo-Russian invasions of Iran in 1911, the deposed Shah vainly attempted to regain his throne (Hudiam-i Rus, 45-6). In both cases Khurāsāni, leading many of his supporters, set out for Perala to mobilise the masses; the first uprising was stooped because of the Shab's downfall (al-4/2/dn, i (1909), and iv (1912), 36-40), and the second one was postponed because of Khurasant's sudden death (Hudjam-i Rus, 58-67).

Despite the allegation concerning Khurasani's ties to the Oudh Bequest (Mahmud Mahmud, Tariga-s rawābil-i siyāsi-vi Īrān va Ingilis, Tehran 1953. vi. 1741-5), he does not seem to have lavoured the British, Since the Russian troops were suppressing the Persian Revolution and the British were thought to have supported it. Khurasani sent delegates to the British Consulate in Baghdad seeking co-operation. (Abdul-Hadl Hairl, Shi'lam and constitutionalism in fran: a study of the role played by the Persian residents of Iraq in Iranian politics, Leiden 1977), though this proved useless because of the British commitment to the 1907 Convention. From then on, we see Khurasant in an equal opposition to the two powers. He expressed his deep mistrust in the Shah, and paid no attention to the intercession of the two powers under whose pressures the Shah had to promise the re-establishment of the Persian constitution; Khurasani only insisted upon the deposition of the Shah and the declaration of a genuine constitutional regime (Hairi, Why did the 'Ulama' participate in the Persian Constitutional Revolution of 1905-1909?, in 191, avil

AL-KHURAYMI [600 ABU YA'KÜB AL-RHURÄYMÎ] AL-KHURI, FARIS (1875?-1962) a Syrian politiofan. Christian, who played a very important role over a period of almost half a century. Born in a Lebanese village on the slopes of Mount Hermon, he studied at Sayda then at the school in Beirot which was later to become the American University. while also working = a teacher. When family affairs took him to Damascus in 1899, he took up residence in the Syrian capital, learned Turkish and French and me employed as an interpreter in the British consulate. His political career began in roos when he joined the Committee | Union and Progress. As legal adviser to the municipality of Damascus (1910-38) he was elected a member of the municipal council of the town in 1914, took part in 2928 in the Council of State which met in Istanbul, participated in the creation of the Arab Academy, and then occupied a number of important political offices: Minister of Finance in 1920, of National Education in 1926. President of the Chamber of Deputies in 1943 and then from 1946 to 1949, and President of the Council of Ministers in 1944-5 and in 1954-5. At the same time, he was President of the Bar of Damascus (1920-36), for a short time Professor of Law (1922), a founder member of the People's Party (1925), then of the Nationalist Bloc (al-Kutla al-Watentyva, 1028). and me member of the delegation which negotiated with France the Treaty of 1936. After the men he was appointed Syrian delegate to the United Nations, and presided over the Security Council in 1947 and 1948. He retired from active life in 1955 and died on a lanuary 1062.

Fär is al-Khuri was a calm, level-headed man whose essential min was to achieve the supremacy of justice. He was of great culture and crudition, and his powers of oratory were widely recognised. After the beginning of this century he took an interest in events outside the Arab world and derived from them the inspiration for his literary, more precisely his poetic, production, for this man of politics and also a poet. His classical background gave him the idea in 1898 of preparing anthology entitled Shudhur al-drahab /I late if al-'Arab which has remained unedited, but he continued subsequently to compose verses, of which the total number is close to 2,000. His poetry is neo-classical in style and comprises a number of hastdas on various events, notably on the Russo-Inpanese War, panegyries and obituary tributes dedicated to his friends or to distinguished personalities, a single hidia? (of sultan 'Abd al-Hamid [I, which he later regretted), and we love poems, including three munayhshahat; another product of his classical education is a takhmis of the muniyya of [bn Zaydun [q.v.]. He also found the time, in spite of his many commitments, to write two legal works: a Mūdjaz fī 'ilm al-māliyya (1924, 1937) and the Uşül aj-mahikamat al-hukukiyya (2nd ed. 1936).

Bibliography: In addition to the archival information held by the family, whose material is unedited, there have been two monographs on Faris al-Khūrī: Hanna al-Khābbās and Dlurgl Hachād, Fāris al-Khūrī, Beirut 1952, and Muhamnad al-Farhānī, Fāris al-Khūrī wa-ayyām la iunsā, Beirut 1964. See also Cahiers de l'Orient Contemporain, Paris, i-xxxii (1945-55), index; Nashn Sh. al-Khūrī has presented at the Lebanese University in 1973 a Dieciu Fāris al-Khūrī containing of his poetic work which is accessible, together with n

detailed bibliography; this work should be publish-

AI-EHURMA, an ousis in western Saudi Arabia situated atlat. 22° 54' N and long. 42° 2' E, which became prominent in Arabian politics during the first quarter of this contury. The easis lies iii the middle reaches of Wadi Taraba or Turaba (also shown on maps as Wadi Subay'). The companion easis of Taraba [q.v.], capital of the tribe of the Bukum, is farther up the valley about 75 km. to the south-west. Another 75 km, downstream from al-Khurma the valley passes by the wells of al-Kunsuliyya and there ends at 'Irk Subay', whose sands keep the floodwaters from joining the main drainage system emptylog into Wadi 'I-Dawesie [see (DIAZIRAT) AL-CARAH]. The oasis is close to the northern tip of Harrat Navasif, the southern part of which is called Harrat al-Bukum. The road from al-Khuma to al-Ta'if runs south of west over the range of Hadn, often taken as marking the castern geographical limit of al-Hidiaz [q.v.]. About 80 km, north of al-Khurma is the ancient gold mine of Zalim, attempts to rework which in recent times proved a failure. Beyond Zalim to the north is the present main highway from Djudda and Mocca to al-Rivad (Darb al-Hidjaz); earlier, many pilgrims and a considerable amount of trade went along the track through al-Kunsuliyya and al-Khurma.

The relatively small population of al-Khurma is made up of tribesmen from the western section of Subay' [g.v.], who regard the easis as their capital, Sharifs, and black freemen. The chief place in the easis is Kass Khālid, named after a former Amir (see below), and the other principal settlements are al-

Sük and al-Sulaymiyya.

Unlike Taraba, al-Khurma is not mentioned by Hamdani, though it may have been inhabited even before his time. Its first appearance in history seems to have been in 1212/1798, when the Sharif Ghalib b. Musafad, m determined foe of the Wahhabiyya [q.o.], pitched his camp there with a host of "Bedouins, townsmen, Egyptians (masariyya), and Maghrible" (Ibn Bishr, i, 112) while making a sweep through the southwestern cases in an effort to balt the spread of the reform movement. Surprised by Wahhabi warriors under the leadership of Hadi b. Karmala of Kahtan and Rubayyis b. Zayd of the Dawasir, Ghalib and his host fled pell-mell, losing many hun-pelled Ghalib to rescind in zazajz799 the ban that for some years prevented the Wahhabis of Nadid from making the pilgrimage.

With the resurgence of the Wahhabiyya in this century under 'Abd al-'Asis Al Su'ad, possession of al-Khuma became a crucial issue. Many Khurmans had remained attached to we reform movement since the preceding contury. As Wahhabi proselytising also won new adherents in the west, the Sharif al-Husayn b. 'All of Mecca tried to assert sovereignty over al-Khurma, which would have carried his authority well towards the east. In the words of Philby, "Khurma itself was a locality of little importance, economically or politically, though it occupied a strategic position the back-door to Najd. Its real significance as a symbol of the struggle for Arabian begemony, which had now been transferred from the old cockpit of the Qasim [see AL-KASIM] to the frontiers of the Hijaz" (Arabian jubilet, 60). The British government held that al-Khurma, which it thought me not very far away from al-Ţā'if (the actual distance is 190 km.), fell within al-Husayn's sphere. 'Abd al-'Aziz, me the other hand, avowed that he had inherited all the territory that had belonged to his forefathers, including al-Khwana.

The Sharif Khalid b. Mansur Ibn Lu'ayy, said to have been named amir of al-Khurma by al-Husayn, became a convert to the Wahhābiyya, as a result of which al-Husayn detained him in Mecca for a time; al-Husayn also rebuked the Hanball hads of al-Khurma for preaching in the Wahhabi vein. The Khurman Wahhābis devout enough to be reckoned as belonging in the ranks of the [khwān [q.v.]. Late in 1335/1917 al-Husayn's son 'Abd Alläh delivered ultimata Mhalid demanding that he return to his original loyalty. Khalid rejected the ultimata, and the Khurmans called on 'Abd al-'Asiz for help. Sympathetic though he was to their cause, he was occupied elsewhere and could do little for them. During 1336/ 1918, expeditions sent by al-Husayn to subdue al-Khurma were repulsed after another by Khalid and the Ikhwan.

Infuriated by the tenacious and successful resistance of the little casis, al-Husayn in Shaban 1337/ May 1929 deputed his sen 'Abd Allah with a martial array, well armed by Arabian standards, to settle accounts there once and for all. On the way, 'Abd Allah paused at Taraba, where Khālid and the lithwan, striking suddenly at night, " signal victory reminiscent of the one achieved by their Wahhabl predecessors over the Sharif Ghāllb. No serious military obstacle then barred the way to al-Tā'il and Mecca, but 'Abd al-'Asis chose to bide his time, When the move in that direction leading to the capture of Mecca set finally made in 1341/1924, al-Khurma and Taraba provided the springboard for Khālid and the Ikhwān.

The hidira of the Ikhwan beside Khalid's eastle in al-Khurma is said to have been founded after the battle of Taraba. The British explore: Philipy visited the oasis in 1336/1917 and again in 1351/1932, as well as a year or two before that while hunting with "Abd al-YAZE.

Bibliography: In addition to the works clied under AL-INGWAN, see "Bihman b. Bishr, "Unudn al-magid, Mecca 1349; H. Philby, Arabian high-lands, Ithaca, N. Y. 1952; G. Troeller, The birth of Saudi Arabia, London 1976. (G. RENTZ)

efurramana, chief town of the shahrisides of the in the Iranian province of Luristan (untan 6), situated in long. 48° 21' E., lat. 33° 29' N.; population of the shahristan (1956); 259,000, elevation above sea-level; 4,700 feet.

The town is first mentioned under its present name in the 8th/14th century by Hamd Allah Mustawfl, who states: "this was fine town, but it is me in ruins" (Nushai al-hulib, 74). To the south-east of the town, along the banks of the Khurramābād river, and also to the south-west, are remains dating from the time when the site, then known as Diz-i Siyāh, was the capital of the Saldjūk atābegs of Lur-i Kučik [q.u.], who governed the area from 380/1184 and whose last representative me killed by Shāh "Abbās I in 1006/1397. At a still earlier date, the Sāsānid town of Shāpērhh "āst me to have occupied the site (thus Minorsky, in EP, Luristān, who supports Rawlinson contra La Strange, Lands, 201-2).

This mountainous region, inhabited by Lurt-speaking tribes, remained remote until almost the end of the 13th/19th century, when it was finally opened up by the construction of the Tehran-Ahwar highway; this reduced to 12 days the 40-50 days previously required for the journey from the Persian Gulf to Tehran via Shiraz.

(R. M. SAYORY) KHURRAMIYYA or Khurrambiniyya refers in the Islamic sources to the religious movement founded by Mazdak [q.v.] in the late 5th century A.D. and to various Iranian, auti-Arab sects which developed out of it under the impact of certain extremist Shiff doctrines. Although the Khurramlyya are sometimes mentioned separately besides the Mazdakiyya, Ibn al-Nadīm, following Abu 'l-Kāsim al-Balkhī, is no doubt right in stating that the name Khurramiyya, as also Muhammira [q.v.], originally meant the movement of Mazdak in general, and not merely a branch of it. Al-Mas'odi's assertion that the Khurramiyya and distinct from Mazdakiyya evidently relates to the later development, since he the same time identifies the former with the followers of Abu Muslim. The Persian name Khurram-din ("joyous or agreeable religion") may, as has been suggested, have been chosen by the ecctariant in analogy to the weem Vehden which the Zoroastrians applied to their own religion, though it seems also possible that it was coined by their Zoroastrian opponents. In the Islamic sources, it is usually explained referring to their libertinist and hedonistic view that everything agreeable to the senses ill permitted. Other explanations of the name, that it is derived either from Khurram, a district of Ardabil, or from Khurrama, the wife of Mazdak, are probably unfounded.

Although the sources do not mention the Mazdakite movement in early Islamic times, it is evident that Mazdakite communities were dispersed in the countryside of many regions of Iran with the heaviest concentration in the province of al-Djibal. The coalescence of the Khurramiyya with various extremist factions of the Kaysaniyya [q.v.] began during the upheavals of the late Umayyad age. Al-Tabari, ii. 1588, reports that the 'Abbasid dd' Khidash [q.v.], who was active before 118/736 = the area of Naysabur and blarw, taught the religion of the Khurramiyya and permitted promisenity. Al-Nashl' identifies the <u>Kh</u>urramiyya of <u>Kh</u>urāsān with the <u>Kh</u>idāshiyya, who held that the imamate had passed from the 'Abbasid Muhammad b. 'All by forfeiture to Khidash, and who furthermore denied the death of the latter. According to Abu Hatim al-Razi, the Hazithiyya, the extremist supporters of 'Abd Allah b. Mu'awiya [q.v.] who after his death in 131/748-9 chose various chiefs of their own, were called Khurramiyya. It is likely that these two sects partially recruited from the local Mazdakites in Khurasan and western Iran, which was controlled by 'Abd Allah b. Mu'awiya for meet time. The strongest impact on the Mazdakite Khurramiyya was made, however, by the figure of Abû Muslim (q.v.), who = the leader of the revolutionary movement which overthrew the Umayyad callphate and m the victim of 'Abbasid perfidy to symbolise Persian self-assertion against Arab dominance. Many heresingraphers fully identify Khurramiyya with the Muslimiyya, who considered Abu Musien I their imem, prophet or an incarnation of the divine spirit. Abū Hatim's statement that the Rizāmiyya belonged to the Khurramiyya is to be understood in the same sense, for he and some other sources explain this name as meaning the radical, anti-Abbasid followers of Aba Muslim.

The dation of Abû Muslim evidently gained numer-

ous Mazdakite adherents during his lifetime. After his nurder in 137/755, the Khurramiyya in Khurasan, according to al-Mas adl, min in revolt. Some of them denied his death and expected his early return to establish justice in the world. Others affirmed his death and held that the imamate had passed to his daughter Fățima. They were known as the Fățimiyya. The Zoroastrian Sunbadh [see sindado], a former associate of Abū Muslim, led an army of rebels from Naysābūr to al-Rayy where his following swelled rapidly. According to the Siydsat-name, it was composed of Mazdakites, Shifts and Zoroastrians. Sunbadh predicted the end of the Arab empire and promised to destroy the Kacba. Abu Muslim, he asserted, had not died and would shortly reappear, together with Mazdak and the Mahdi. By the latter, who is not identified, Muhammad b. al-Hanaflyya may have been meant. The revolt was suppressed after 70 days and the leader was killed. Another former associate dd's of Abu Muslim, known as Ishak al-Turk, after the former's murder fomented an insurrection in Transoxania, affirming that Abû Muslim was alive in the mountains of al-Rayy and would return. He is also reported to have previously taught that Abū Muslim a prophet sent by Zoroaster, who himself was alive and would reappear to restore his religion. Nothing is known about the exact date of the activity of Ishak and the late of his movement. It has been suggested, on the basis of the account of Gardizi, that the governor of Khurasan, Abu Dawud Khalid (d. 140/757) was killed by followers of Ishāk and that the rebei leader Barāzbanda, whom Abū Dāwūd's successor 'Abd al-Djabbar joined when he revolted against the caliph al-Mansur, also belonged to Ishak's movement. The first suggestion is highly conjectural and the second quite unlikely; the white-clad (sapiddidmagan) murderers of Aba Dawad were, according to Gardial, the followers of one Sa'id the (d)@ldh), Barāzbanda claimed to be Ibrāhim b. 'Abd (read : Muhammad ?) al-Hashimi (Gardizi, Zayu al-a<u>kk</u>hār, ed. 'Abd al-Ḥayy Ḥabibi, Tehran 1347, 123 f.). About two decades after 🔤 death 🔳 Abū Muslim, al-Mukanna' [q.v.], also a former member of his dafen and 📰 the Rizāmiyya, appeared in Transoxania to lead another revolutionary movement. His following was composed of white-clad (Ar. Mubayyida [q.v.], Pers. Sapid-djāmagān) Soghdian peasants and by Turkish tribesmen. He claimed to be the final divine incarnation after Adam, Nüb, Ibrāhlm, Mūsā, Tså, Muhammad and Abû Muslim (a different report adds Shayth and substitutes 'All and Muhammad b. al-Hanafiyya for Abû Muslim) and taught the transmigration of souls and sexual license. The sect of the Mubayyida is still mentioned as surviving in the 6th/ 12th century.

The latter two movements usually are not called Khurramiyya in the sources, though as branches of the Muslimiyya they were covered by the name in its wider sense. There is make specific information method doctrine about Mazdak and the role of Mazdakites in them. Al-Birdini, however, states in general terms that al-Mukanna' prescribed for his followers "everything Mazdak had brought" and al-Shahrastanl counts the Mubayyida as one of the neo-Mazdakite sects and as a variety of the Khurramiyya. They may have been crypto-Mazdakites before the coming of al-Mukanna' (see A. Yu. Yakubovskiy, Vosstanie Mukanni-Dviženie lyndey v beiligh odetdah), in SO, v [1948], 35-54).

The use of the name Khurramiyya is more prevalent for the neo-Mazdakites in western Iran. In 162/779 the Muhammira, i.e. the Mazdakites, of

Djurdjan rose and made common cause with the Khurramdiniyya, i.e. the Muslimiyya, claiming that Aba Muslim was alive and promising to restore his reign. They put Abu '1-Ghazā', the young grandson of Aba Muslim, at their head and reached al-Rayy before they were defeated by 'Umar b. al-'Alā'. At the same time, the Khurramiyya of Islahān revolted. Again in 180-1/796-8 the Muhammira of Djurdjan rose and for a brief time held sway over the province. In 194/608 the Khurramiyya revolted in Adharbay-djān and the regions of al-Rayy, Hamadhān and Islahān. The insurrection was quickly suppressed by 'Abd Alāh b. Mālik and Abū Dulai al-'Idjii.

The anti-Arab and anti-Muslim activity of the Khurramiyya reached its climax in the great rebeltion of [[q.v.] al-Khurrami in Adharbaydian (201-23/816-38). Babak had become the chief of the Khurramiyya = the region of al-Badhdh in Adharbaydian in succession to Djawidhan b. Shahrak, whose prophetic spirit, he claimed, had settled upon him. Djawidhan was alleged to have predicted the victory of Mazdakism under his successor. The sources offer little information on the religious doctrine of Babak and his followers. Their connection with the Muslimiyya is indicated by the fact that some people, according to al-Dinawari, held Babak to be a son of Mujahhar, son of Fajima, daughter of Abu Muslim. The revolt later spread outside Adharbaydjan, In 212/827-8 the Khurramiyya rose in the area of Isfahan and al-Karadi and some of them joined Babak in Adharbaydian. In 218/833 they revolted around Islahan under their chief 'Alt b. Masdak and in Fars. As 'All b. Mazdak took al-Karadi, the sectarians joined him in large numbers. After a bloody defeat by Ishak b. Ibrahim near Hamadhan, some of them retreated and pillaged in Işfahān, while others under their leader Bärsis fied to Byzantine territory. They were enrolled in the Byzantine army and are mentioned in 223/838 fighting under the emperor Theophilus against the Muslims.

"Abd al-Kāhir ai-Baghdādī treats acalled Mānyāriyya, followers of the Kārinid ruler of Tabaristān, Mānyār [see Kārintos] [d. 225/840], as the second major branch of the Khurramiyya besides the Bābakiyya. Mānyār, whose revolt against the caliphate developed out of his quarrel with the big landout of the lowlands of Tabaristān and his rivalry with "Abd Allāh b. Tāhir, was certainly not a Mazdakite, although he was accused of having aided Bābak. In his political struggle he came to rely on the non-Mustim elements of the highlands, particularly Zorostrians, but evidently also Mazdakites. The Khurramiyya of Tabaristān and Djurdjān may have tinued to honour his memory at the account of al-Baghdādī suggests.

According to the Siyasal-nāma, the rebellions of the Khurramiyya in of 1sfahān continued after the execution of Bābak until the year 300/912-3. First they rose during the reign of al-Wāhik (227-32/842-7), and again sacked al-Karadi. Later, ali an especified date, one Bāryazdshāh succeeded in fortifying himself in the mountains of Isfahān. The Khurramiyya joined him and raided caravans and villages. Only after some 30 years was he seized and executed. Still in 320-1/932-3, 'All b. Bûya conquered several fortresses previously held by the Khurramiyya in the region of al-Karadi and captured great treasures.

Khurrami communities are mentioned in the 4th/ zoth century in the regions of Fars, al-Ahwāz, Islahān, al-Burdi, al-Karadi, Māsabadhān, Mihridiānķadhak, al-Saymara, Dinawar, Nihāwand, Hamadhān, Kāshān, Kumm, al-Rayy, in the mountains of Tabaristān, al-Daylam, Ārīharbaydjān, Armenia, Shehrazur, Djurdjan, Balkh and Khurasan. It has been accepted on the basis of a report of Miskawayh (ed. Amedroz, Eclipse, ii, 299; tr., v. 321) that Khurramiyya living along the coast of Makran and Kirman were subjugated in 360/972 by a general of 'Adud al-Dawla. The name al-Khurramiyya is, however, a corruption in the manuscript and should be read al-Djurumiyya. This is evident from the text of Ibn al-Athir (viii, 451) which is based - Miskawayh as well as from Miskawayh's mention of the same people called al-Diurumiyya later under the year 364/974-5 (ii, 359 f.; Ibn al-A<u>th</u>ir, viii, 482; Hilâl in *Eclipse*, iii, 377: al-Diurûm; this point is also made by C. E. Bosworth, The Band Hyds of Kirman (320-57/932-68), in Iean and Islam, in memory of the late Vladimir Minorsky, ed. Bosworth, Edinburgh 1971, 123 n. 34). The latest mention of surviving Khurramiyya communities is for the first half of the 6th/12th century in the region of Ansābādh and Darkazin, north-west of Hamedhan (al-Bundari, Mukhtaşar zubdat al-nuşra, ed. M. Th. Houtsma, Leiden 1889, 124), and in Adharbaydjan.

According to al-Mas Odl (d. 345/956), the Khurramiyya in his time mostly belonged to two divisions, the Kūdakiyya and the Lūdshāhiyya). (variants Kūdshāhiyya, Kurdshāhiyya). The former were probably named thus because of their veneration of Mahdi b. Fayruz, the son (or grandson?) of Fățima, daughter of Abû Muslim, whom they called kūdak-i dānā, the omniscient boy. They are also mentioned in other sources and apparently constituted the great majority of the Khurramiyya in western Iran. Abû Hatim al-Râzî (d. 322/924) states that the extremist factions which originally developed out of the 'Abbasid revolutionary movement were known under different names in different regions; in the country of Islahan as Kūdakiyya and Khurramiyya, in al-Rayy and elsewhere in al-lijibal as Mazdakiyya and Sunbādiyya, in Dinawar and Nihāwand as Muhammira and in Adharbaydian as <u>Uha-</u> küliyya (or Dafüliyya). It is not clear if the latter name implies a distinction in religious doctrine between the Khurramiyya 🖿 Āḍḥarbaydjān and elsewhere in western Iran, though any such differences were most likely not substantial. Abû Dulaf b. Muhalhil, who visited al-Badhdh about the middle of the 4th/10th century, mentions = place there were the Muhammira known as the Khurramiyya consecrated their flags and where they expected the coming of the Mahdi. Probably the kūdak-i dānā or, in any case, a descendant of Abū Muslim's daughter Fāţima, is

The reports of the Muslim sources about the doctrine and practices of the Khurramiyya are mostly summary and biased. An exception is account of Mutahhar b. Tähir al-Makdisī, which is based on his personal acquaintance with members of the sect and his reading of some of their books. The Khurramiyya were dualists holding that the principle of the world was the light, some of which had become effaced and turned into darkness. They all believed in the transmigration of souls in human, animal, and angel bodies. Prophetic revelation in their view never ceased and the same divine spirit inhered in all prophets. They had == religious law but, according to Mutahhar, had recourse to their imams in legal matters. Messengers whom they called angels (firishlagan) made the rounds among them. They were much concerned with cleanliness and purity, tried to win people's favour through acts of kindness and strictly avoided bloodshed excapt when they decided on rebellion. They expected the appearance of a descendant of Fatima, daughter of Abû Muslim, as the Mahdi who would make their cause prevail in the world. Wine was considered particularly blessed by them. According to Mutahhar, held promiscuity licit with the consent of the women and, in general, any fulfillment of natural desires long as was harmed. The extravagant clichés of some sources concerning their sexual libertinism deserve no credence. There is no sound evidence for community of goods among them.

The Mazdakite and Manichaean basis of these beliefs is manifest. The attempts of some sources to establish a close link between the Khurramiyya and the Karmatis and Ismā'iliyya must be viewed with reserve. There is no evidence for any influence of Khurrami doctrine on Ismā'ili doctrine or of any large-scale conversion of Khurramis to early Ismātism.

Amoretti, in The Cambridge history of Iran, iv, Cambridge (W. MADELUNG) 1975, 494-510. KHURRAMSHAHR, chief town (population in

1966: 88,536) of the shakristān of the same name (population in 1966: 156,281) in the Iranian province of Khuzistan (asten 6), and situated in long. 48° og' E., lat. 30° 25' N. Its elevation above sealevel is I m./26 ft., and the climate in hot and humid, with summer temperatures rising to 58° C./136° F.,

and ■ winter minimum of 8° C./46° F.

The present town is the successor of a number of settlements which, since ancient times, have been located in the general area where the Kārūn (Dudjay)) river and the combined Tigris and Euphrates rivers flow into the Persian Gulf ■ few miles apart. Elamite and Achaemenid settlements succeeded, in Islamic times, by Bayan and Muhriza, which were included by the Islamic geographers in the province of 'Irak-i 'Adjam. The earlier settlements were situated on the Karim river itself, the later ones on a channel cut to link the Kārun and the Tigris-Euphrates estuary (now called by the Araba Shatt al-'Arab, and by the Persians Arwand-rad). The construction of this channel (known at different times as Juy-i Bavan: Juy-i 'Adudi (after it had been widened by the Buwayhid ruler 'Adud al-Dawla [q.v.]; and the Halfar channel) created the island of Abadan [see *ABBADAN],

the site of the National Iranian Oil Company's re-

After being mentioned by al-Mukaddasi (4th/10th gentury), the site is not heard of again until beginning of the 13th/10th century, when a fort called Kut al-Muhammara ("Red Fort") developed into the town of Muhammara governed by Arah shaykhs of the Ka'b tribe. The new town was situated on the Haffar channel, one mile from its confluence with the Kārūn. The rise of a rival port at the end of the Persian Gulf was regarded by the Ottomans as a threat to the prosperity of Basra, and in 1254/1838-0 they sacked the town, which was, however, subsequently ceded to Persia by the Treaty of Erzerum in 1847. This treaty was violated by the Ottomans in 1886 by the construction of a fort at Pao, at the mouth of the estuary, which enabled them to harass shipping bound for Muhammara.

In 1925, Rida Shah Pahlawi brought the virtually autonomous shaykhdom of Muhammara firmly under Iranian control, and in 1937 the name of the town, by a decision of the Iranian cabinet, was changed to Khurramshahr. During World War II, the port facilities at Khurramshahr were greatly expanded, and 75-mile branch line was constructed to link the city with the Trans-Iranian railway at Ahwaz. After further development under the Second Seven-Year Plan (1955-62), Khurramshahr is now one of Iran's principal ports-of-entry on the Persian Gulf; its exports include dates, milk-products, skins and wood.

The 1912-14 Boundary Commission took as the international boundary with 'Irâh the low-water line on the Iranian side of the Shatt al-'Arab. This left the navigation channel to Khurramshahr under 'Irâh' jurisdiction, and resulted in constant friction between the two countries. This dispute appears finally to have been settled by the agreement signed on 6 March 1975, whereby Iran and 'Irâh agree that the international boundary shall be the talway, or line of deepest water.

(R. M. SAVORY) KHURREM (P. "cheerful, smiling") is a name of both men and women. The most famous bearer of it is the Khāssekl [q.v.] and beloved wife of Sulayman I [q.v.], who was born in the early years of the 16th century and died = 26 Diumādā II 965/15 April 1558. Because of the accessary seclusion of her life, few facts about her are known. It is, however, certain that Sulayman remained passignately devoted to her from their meeting, probably in Istanbul after his accession on 17 Shawwal 926/ 30 September 7520, until her death; hence her power, by which she altered the more of the Ottoman Empire. This power, for which she is hated, brought upon her charges of witchraft (Bassano, Costumi, Roma 1545, 189.) and screery (Busbecq, Omnia . . . , Basel 1740, 72-3), but Navagero's 🖼 (Albèri, Relations iii/1, 74), "she knows the Sultan's nature very well", seems nearer the truth. According to the tradition established by Hammer-Purgstall (GOR, ill. 673), she was Polish, teom Rogatin (Polish: Rohatyn) on the Gullaya Lipa river, now in the Ukrainian SSR, then in the Little Russia of Poland, the daughter of

a Greek Catholic paper; possibly her name Aleksandra Lisowska (see Belleten, zziii, 230). The area, an old Ruthenian settlement, was subjected to frequent Tatur raids; she may have been carried off on one of these and sold as a slave in Istanbul. It may not be a coincidence that she had a mosque built later in the 'Avret Parari quarter, near the female slavemarket. Other traditions, of little reliability, make her Siav, Circassian, Sienese, even French. She may have been presented to Sulayman by his mother Haişa Sultan or by Ibrahim Pasha (q.v.) (Bassano, loc. cft., 18v)., whom she was to share Sulayman's affection. She was called Khurrem (variants: Churram, Currem, Hilrrem) but is known in Turkish histories generally as Khässeld Sultan and in Western accounts as Roxelana (variants: Roxolana, Roxelane, Rossolana, Rossane, la Rossa, la Rosa), probably all referring to her origin as a Russian meven a Ruthenian (Belleten, Exifi, 229), but not meaning "Redhead", nor Baudier's ingenous "Rox-"Rose" ana" to Sulayman's Alexander the Great (I municipal) Parls 1620, 344). Bragadin in 1526 (Albèri, iii/3, 102) describes her as "young not beautiful, but graceful and small".

As heir-apparent in Manisa, Sulayman seems to have favoured two ladies, Gulbahar and Gulfern, said to be variously of Circassian, Albanian, Montenegrin, and Crimean origin. Gulfern bore him Murad in 010/ 1913 and Mahmud in 921/1515, but both these sons died in 927/1521. Gulbahār bore Mustafā [q.z.] in 921/ 1515; thus, by 1521, as mother of the Sultan's eldest. surviving son, she was Khāşşeki Sultān and, after Sulayman's mother, foremost in the Imperial Harem. then housed in the Old Palace. However, Khurrem had captivated Sulayman, borne him a - Mehemmed [q.v.] in 927/1521 and, after a squabble reported by Navagero (Alberi, iii/1, 75), during which Gulbahar had called her "sold meat", had ousted her. Gulbahar devoted herself to her son Mustafa and. when she died in 988/1580, was buried beside him in Djem Sultān's mausoleum in Bursa (Refik, 201. asuda Istanbul hayatı, İstanbul 1935, 8). Gulfem, no rival, accepted by Khurrem and lived with her ladies; after her death, in 969/1561-2, a mosque was constructed in her memory in Uskitdar.

There is upanimous agreement that Sulayman made Khurrem his legal wife by giving her the kilbin (dowry), said to be 5,000 ducats annually, but no hint as to when this took place. It may have been after the birth of Mehemmed. As undated letter in the Archives of the Bank of St. George, Genoa, describes the wedding festivities in some detail (see Davey, The Sulfan and his subjects, London 1907, 18-19). In 928/ 1522 their daughter Mihr-i Mah Sultan [q.v.] was born, the next year a son 'Abd Allah (died 932/1526) and, on 24 Radiab 930/28 May 1524, the future Sultan Sellm II [q.v.]. Kharrem bore two more sons, Bâyezkt in 932/1526 and, in 937/1530 Dishangir, a hunchback much loved by his father. The circumcisions of Mustala, Mehemmed and Selim were colebrated together with great pomp in Dhu 'l-Ka'da 936/July 1530, after which Mustafa, as xandjah-beg of Şarukhan, departed with his mother to Manisa. On 4 Ramadan 940/19 March 1534 the walide Haisa Sultan died. During the night of 21-2 Ramadán 942/14-5 March 1536, ibráhini Pasha was assassinated I the Sultan's bedchamber in Topkapı Sarayı. Khurrem's influence is suspected in this murder, out of jealousy and fear for her children's lives after Ibrahim had declared in favour of Mostafa m heir, but there is no proof of this. With Ibrahim's death, however, all her rivals had been removed.

In 945/1539 Khurrem began a long series of pious bequests with the construction of Haseki mosque in Istanbul, the first commission of the new Chief Architect Sinān [q.v.]. It is in the former 'Avet Pazari, Haseki district, and comprises two mediceses, a medich, it sabil and it hospital (finished 957/1550) which, as the Haseki Kadiniar Hastanesi, is still in use for women. Sinān also built another mosque on her behalf at Edirne, 'smārets near the Ka'ba at Mecca, at Medina and at Edirne, and baths in the Aya Sofya and Yehudiler districts of Istanbul. Her other charitable works include a caravanserai and fountains at Edirne and a richly endowed 'imdeat at Jerusalem.

On the night of 27 Ramadan 947/25 January 1541 a fire swept through the Old Palace (Lutil, Tevárikh, Istanbul 1341, 384). Khurrem to have moved at once with her ladies to Topkapt Sarayi, where she remained. With a woman lodged for the first time at the political centre, there begins at this date the Kadinlar salfanati, the rule of women, during which the policies of the Ottoman Empire were directed by a succession of foreign favourites, until the death of Murad IV's mother in 1061/1651. In the Genoese Archives there is a description of Khurrem's apartments, probably written in 1542 (see Davey, Sulian, 21-3), and also in Bassano (loc. cit., 17v.). On 21 Şafar 948/16 June 1541 Khurrem had Mustefa dismissed to Amasya and on 3 Sharban 949/12 November 1542 her own son Mehemmed was appointed sandjak-bey of Şarukhān, the heir-apparent's post (Kanuni armagans, 249). One year later, on 8 Sha ban 950/6 November 1543, Mehemmed died in Manisa. Sulayman was inconsolable; in a deed of gift to Khurrem made some eight years later (Feridun, Munska all, i, 608-10), with all his other sons still alive, he calls her "the mother of my late son Mehemmed". On 13 Ramadan 951/18 November 1544 Rüstera Pasha [q.v.], husband of Mihr-i Mah since 945/1539, was appointed Grand Vizier. He was devoted to the policies of his motherin-law and wife, foremost of which we the destruction of Mustafa so that one of Khurrem's sons might succeed. The law decreeing that a Sultan at his accession must have all his brothers executed created such a desperate struggle for life within the Sultan's family, of which the pathetic aspect is well illustrated by Navagero (Albèri, iii/1, 77). Their scheming was crowned with success on 27 Shawwal 960/6 October 1553, when Sulayman witnessed the execution of his brilliant and popular eldest son in camp at Eregli near Konya. To pacify the infuriated army Rüstem Pasha was dismissed at once and Kara Ahmad Pasha [q.w.] appointed Grand Vizier .Diihängir, proceeding with his father on the Persian campaign, died of pleurisy at Aleppo on 22 Dhu 'l-Hididia 960/29 November 1553. A few weeks later Mustafa's son Mehemmed, born at Amasya in 953/1546, was executed at Bursa. His death also is attributed m Khurrem's plots, is the execution in office of Kara Ahmad Pasha on 13 Dhu 'I-Ka'da 962/29 September 1555 and the immediate reinstatement of Rüstem Pasha. I and Khurrem plotted for the succession to pass to Bayezid, the younger but abler of Sulayman's surviving sons, but petther of them lived to me the end of the struggle between the two brothers which resulted in Bayezid's execution in Persia at Selim's Instigation on 25 Dhu 'l-Ka'da 969/23 July 1562, Barbarigo tells us (Albèri, iii/3, 148) that in her last years Khurrem would not allow Sulayman out of ber sight; both infirm, they spent the winter of 965/1557-8 in Edirne together, and she returned to die in Istanbul in April. She is hurted in her mansoleum, built by

Sinžn beside Sulaymān's **men** the Silleymāniyye mosque. Due largely to her intrigues Selim, Sulaymān's least worthy son, remained alone to succeed his father.

A number of Khurrem's letters exist. Seven letters to Sulayman, writter between 1526-53, published in modern Turkish transcription in Uluçay, Osmanlı sultaniarına aşk mektuplari, İstanbul 1950, 🚃 preserved in the Archives of the Topkapi Sarayi Museum as TKS Argivi nos. E. 5038, 5662, 5850, 5026, 6036, 6056, 11480, In 1548 IIII 1549 she and Mihr-i Māh wrote to Sigismund Augustus of Poland; the originals are in Warsaw, AGAD, Arch. Kor., Dz. turecki, teczka 110, nos. 218, 219, 221, 222: French translations by Ackenazy, Listy Rosolany, in Kwastalnik Historyczny, x (1896), 113-7. A correspondence with Persia ensued over the building of the Süleymaniyye mosque, with Khurrom answering Shah Tahmasp's wife's letter of good wishes to her in 962/1535 (reterence to copies in Hammer Purgstall's Ms. in GOR, ix, 375: items 499, 500) and the Shah's sister's letter of congratulations after the completion in 964/1537; published in Feridiin, Muncha'af, ii, 63-6. There are many deeds of gift made by Sulayman to Khurrem; see, for example, Heyd, Ottoman documents, Oxford 1960, 143, and Kanuni Sultan Silleyman sergisi, Istanbul 1958, nos. 21, 90, 100, 125. Some examples of embroidery said to be Khurrem's work are preserved in the Topkapi Sarayi Museum and the Türk İslam Eserleri Müzesi in Istanbul.

Khurrem's fame spread through Europe in her lifetime. It is unlikely that she ever sat for m portrait, but several portraits of her exist. In Topkapa Sarays there is an oil painting (see cover of Uluçay, Ask mekluplers), made from the engraving in Boissard, Vitae et icones suitanorum, Frankfurt 1596, and two other portraits (see Uluçay, 7, 20). Sokolnicki, La Sultane Ruthone, in Belleten, xxiii, 1959, 229-39, lists further portraits in Florence, Venice and Vicana, the latter bearing the man inscription as Uluçay, 20, and probably identical to it. There is a fine engraving of her by Melchior Lorich in Twekische Figuren (see Rouillard, The Turk, Paris 1938, plate 23). Khurrem's story inspired drama and literature in Europe in the 16th and 17th centuries, including two French plays, La Suitane, Paris 1562, and Rozelane, Paris 1643; see Rouillard, The Turk, 421-66, and Chew, The Crescent, New York 1937, 497-503.

AMONSABAD, a vallage situated 36° 40° N. and 43° 10′ E. in the plain 17 km. to the north-east of Mosul, in the mubalance of al-Maweil. It is the site of the ancient Assyrian royal city Dur Shar-

rukin, "The Fortress of Sargon", The earliest excavetions there were undertaken by Paul Emile Botta in 1843 when he was the French Consul at Mosul, and he has been described by Parrot as "the first systematio excavator of a Near Eastern site". He himself described his work in a series of letters which he wrote after each important find and he carefully copied all the inscriptions he discovered, although at that time Akkadian was still an undeciphered language. Victor Place continued the excavation of the site from 1852-5, but then it me abandoned until G. Loud worked there on behalf of the Oriental Institute of Chicago for eight seasons from rozz-15. Since then mamber of stone reliefs from the palace, including two famous colossal bulls, have been removed to the Iraq National Musuem in Baghdad (1938, 1943) and the Directorate-General of Antiquities of Iraq resumed excavations for a short period in

Sergon 11 (722-705 B.C.) built the city between 717 and 707 when he moved the centre of his administration from Kalkhu (modern Birs Nimrūd), and the city is model of Assyrian town-planning. It has seven fortified gates and the early excavations revealed the rooms of the palace and the houses of the palace officials. There are a number of shrines various deities (called by Botts the Harem) and a ziggurat (which Botta described as an observatory). The later American excuvation discovered the temple of Nabu who, with his consort Tashmetum, was a god of veretation and recently it was been suggested by Postgate that the fertility ritual of the sacred riage was performed in this building. The entrance to the palace was flanked by a pair of massive, winged, human beaded bulls (as in other Assyrian cities) and the walls were decorated with detailed reliefs of battle scenes and festival processions. A number of glazed brick panels have also been recovered from the site and chemical analysis of the blue glazes derived from copper suggests that lead me being used as a flux, a technique that was forgotten but later re-developed.

Cuneiform Inscriptions show that the city was completed just before Sargon died. It was during his eighth military campaign, on which he plundered towns and villages in borth-western Iran, that he was ambushed and killed (705 B.C.) and his corpse was left unburied as "food for the birds of prey". The priests seem to have interpreted this final humillation as a sign of divine punishment, and his son Sennacherib abandoned the city and turned his attention to the rebuilding of Nineveh, which remained the capital of Assyria until the empire was overthrown in 672 B.C. The most important document for historical research which has been discovered at the site is list of the names of the kings of Assyria together with the length of their reigns - far back as Irishum I (1852-1813). Although there are inconsistencies of detail between this list and the King list from Asshur (see ATHUR) in Suppl. and the records of astronomical observations, it does provide the basic framework for the study of Assyrian history.

The palace is built on a raised platform and planned around an open courtyard which was accessible to the public. This gave access to an inner courtyard which seems to have been reserved for those in special positions of authority. The throns room was approached from the inner courtyard through a triple doorway flanked by monumental sculptures. A staincase led from the throne room to the private living rooms. Because of the absence of any relief carving in the throne room it has been suggested that this was originally decorated with mural palatings but no traces have survived.

Sargen had the construction of the city described in detail on the pavement stones in the palace gates with these words: "[the king] built the city at the foot of Mount Musri above Nineveh and named it Dur Sharrukin. He erected palaces of ivory, maple, boxwood, mulberry, cedar, cypress, juniper, pine and terebinth as his royal dwelling place. In front of the gates he built a portice, as in # Hittite palace, which in the Amorite language is called a bit hildsi." It is particularly interesting to note that he received inspiration for at feast one architectural detail from his western expedition.

When the site was first discovered, Botta thought he had found the much more famous city of Nineveh, for he was so astounded by the size and obvious spieudour of the ancient city. Layard raised objections to this identification because he thought it was too far away from the Tigds. Neither of them appeared to know the traditional identification in Arabic historical sources; Yākūt describes the village as the site of an ancient city called Sar'ūn, which probably

reflects an earlier corruption of Sarghan.

When excavations began, E. Flandin was sent by the French government to copy the sculptures which had been found. It was identified with Dur Sharrukin after the inscriptions of its founding king had been translated. He had had it built as a strategic defence against the troublesome Clmmerian attacks from the north and had cobbled the main exit roads - that his troops could be transported efficiently with their supplies. The ancient walls surround an area of 320 hectures with the citadel occupying so hectures. Yakut mentions that the village of his day (which he refers m as Khurustábád) had good irrigation. The modern village supports a small population (the average density of the area is 29.5 persons per km.") situated on the eastern bank of the river Khawsar at the northern end of the Djabal Makinb

LHURSHID, ispakbadh [q.v.] of the Dabüyid
line in Tabaristan. It was long believed that there
were two Khurshids, because of errors in interpreting
coin legends; Mordimann, in SB Bayr. Ak. (1872),
30, 36, dated three coins of this prince to the years
70, 60 and 64 of the Tabaristan era, and this led
people to posit the existence of a Khurshid I who
reigned 30-60 T. and a Khurshid II who reigned 88116 T. (idem, in ZDMG, xxxiii, xxo, cited by Unvala,
p. 6, § 5, p. 30, § 11). He was followed by Marquart,
Eransahr, 132, who also read 64 T. on m coin which

he attributed to Khurahld I, who must in his opinion have reigned 60-4 T. Vasmer, in E / art. MAZAHDARAN the first to perceive this false reading, which he explained by the resemblance between shast - 60 and daksat - in the Pahiavi script. Accordingly, Vasmer dated the coins ■ 110 and 114 T., instead of 60 and 64 T., and he therefore denied the existence of two Khurshids, especially as the local make no mention of a Khurshid I. Unvala, p. 7, § 4, p. 8, § 5, p. 30, § 11, confirmed Vasmer's conclusions, and remarked that the coins i the alleged Khurshid I are absolutely identical with those which Mordtmann attributed to Khurshid II. As for the bronze coin dated by Mordtmann (ZDMG, xix, 474, No. 170) to the year 70 T. and attributed to Khurshid I. Vasnier corrects this false reading to 107 T. (EP, loc. cit.). Unvala (p. 9, § 16, coin No. 800 in his catalogue) confirms Vasmer's dating, and observes that to date the coins to 64 and 70 T, and attribute them to Khurshid I would interrupt in an inexplicable fashion the series of coins issued by Farrukhan the Great (60-79 T.). One must thus cease speaking of two Khurshids, as does Spuler in EI art. Distry.

The ispahbadh Khurshid is therefore the last Dabūyid prince, who reigned in Tabaristān 89-110 T./ 123-44 A.H./740-61 A.D. according to his coins, which corresponds closely with the information of local chroniclers. In fact, Zahir al-Din, 40, gives him a reign of 13 years, to which should be added I years of the regency of his paternal uncle Sărûya (Ibn Islandiyar, 113). But elsewhere (319), he gives him a reign of 51 years, which cannot even be given credence as an indication of his age. Al-Tabart, iii, 140, states that Khurshid was still young when his father Dadhburamir died. According to Ibn Islandivar, loc. sil., Dādhburzmir's brother Sārūya acted as regent for I years, but his sons wanted to keep the throne in their own line, beace plotted against their cousin Khurshid, who had reached his majority. The latter managed to defeat them and recovered his throne (ibid., 113-14). He was a real petty king, with a personal guard, an army and representatives in the various districts of Tabaristan (ibid., 114-16). He even sent an embassy to the Chinese court of the T'ang, in ca. 746 (Abel-Rémusat, i, 254, ii, 166-49): "In the fifth year Tian-pao, the king Hu-lu-ban sent an embassy to the Imperial Court and received in exchange the title of King of Kuci-Sin" (submission to vassatage). These royal pretensions explain his reballion under the last Umayyad caliph Marwan II (127-12/ 744-50; cf. Balauhuri, 338), but he had to submit to Abū Muslim al-Khurāsāni in 131/749 (Tabari, ii, 2016). After al-Manşûr's execution of Abû Muslim in 137/755, Sunbadh revolted and entrusted to Khurshid part of the treasures of Abu Muslim (Tabari, iii. 86, 119; Nizām al-Mulk, tr. Schefer, 267-8, tr. Darke, 212). After his defeat, Sunbädh sought refuge in Tabaristan, but Khurshid had him killed by his cousin, in order to get his hands on the rest of Abū Muslim's treasures (Ibn Islandiyar, 117-18). The caliph al-Mansur had to send his son al-Mahdl to Rayy to recover Abu Muslim's property (I'bn al-Athle, v. 369; Ibn al-Fakih, 312, 314). Khurshid refused to send his son as a hostage, but had to pay a heavier tribute, at the level paid to the Sasanids (Ibn lsfandiyar, 118).

This submission did not last long, since he took advantage of the rebellion of 'Abd al-Djabbar b. 'Abd al-Rahman, governor of Khurasaa, to cut off tribute in 141/758 (Ibn al-Fakih, 309-10; Bal'ami, iv, 380). This time, the caliph decided to finish once and for all his vassal's insubordination and to

his principality. His army invaded Tabaristan and they made contact with each other without fighting, forcing Khurshid = take to the mountains, where he shut himself up in the fortress of al-Tak (Ibn al-Fakih, 310). A long slege followed, but the place was finally captured in 142/759-60. Khurshid managed to flee for refuge in Daylam (Iba al-Athir, v, 387; Iba Isfandiyar, rat), but his family fell into the hands of the Muslims and were sent to the 'Abbasid court (Baladhuri, 339; Tabari, iii, 136-7, 139-49). There is great confusion over the names of these captive princesses, and certain chroniclers identify them with the daughters of the masmughan of Dunbawand and not with Khurshid's family (Vasmer, 91, 100-1). However, various of this prince's daughters became concubines of al-Manaur, his brother al-Abbas, and al-Mahdl, who had a son of al-Bakhtariyya (or a)-Buhturiyya, according to Ibn Kutayba, 3/4'ari/, 193) called al-Mansur. It was al-Mansur b. al-Mahdi who refused the caliphate, as offered to him by the people of Baghdad in 20x/817, after the choice of the 'Alid 'All al-Rida as al-Ma'miln's heirpremiaptive. He merely agreed to become governor of Trak for al-Ma'mun (Tabari, iii, 2002, 2005-6). Another of Khurshid's daughters, usually named as Shakla, also became the concubine of al-Mahdi (Tabarl, iii, 140; Ihn al-Fahih, 314). She gave him # son, Ibrahlm b. al-Mahdi [q.v.], sc. the anti-callph of 201-4/ 817-19, who accepted his acclamation by the Baghdad populace after his half-brother ai-Mansûr's refusal. All this shows that one cannot set up against each other, in a simplistic fashion, the see of the "Persian concubine" (al-Ma'mun) and the mo of the "Arab princess" (al-Amin), since the Trakis did not hesitate in 201/817 to set up the son of a Persian concubine (a)-Mausur and then Ibrahim) against the son of another Persian concubine (al-Ma'mun), who was moreover the very nephew of Ibrahim b. al-Mahdi.

Khurshid gathered army in Daylam and Gillan and in 143/760 tried to regain his principality (Tabart, iii, 141-2), but meeting no success, killed himself the following year (Bal'amt, iv, 381; Ibn al-Fakth, 314). His son, who was on an embassy to China, learnt of the annexation of Tabaristan, as recorded in the Chinese annals: "He was honoured by the title of superguinerary officer-general, and awarded a purple cloak and a golden fish. Whilst he was staying in the capital, the black-robed Arabs conquered his lands" (Abel-Rémasat, i, 254). The other local dynasties of Tabaristan (the Bawandids [q.o.] of Mount Sharwin, the Karmids [q.r.] of Mount Karin and the Zarmihrids of Miyandurud) were kept m tributaries under the oversight of 'Abbasid governors resident at Amul. These last continued to mint coins with Khurshid's name till 114 T. (he having killed himself in 110 T.), which has led many historians to think that Khurshid reigned till 115 T. The first extant coin minted in the name of an 'Abbasid governor in that of Rawh b. Hatim in 147/764 (cited by H. Gaube, Arabosasanidische Numismatik, Brunswick 1973, 124; it will be published shortly by R. Curlel, of the Cabinet des Médailles of the Bibl. Nat. in Paris).

AL-KHURTOM (KHARTUH, KHARTOUH), a city at the confluence of the Blue and White Niles, now the capital of the Democratic Republic of the Sudan. The name is said to be derived from the resemblance of the site to an elephant's trunk. At the time of the Turco-Egyptian invasion (1821), Khartum a small village, the residence of a boly It was chosen as the military and administrative headquarters of the conquered territories by the governor, Uthman Bey Djarkas, in 1824. With the extension of Turco-Egyptian rule, the pacification of the Sudan, and the opening-up of the Equatorial Nile and Bahr al-Ghazal [q.v.], Khartum developed into a flourishing town with a beterogeneous population, which included European traders, consular officlais and Catholic missionaries. After the outbreak of the Mahdist revolt, the defence of Khartum assumed by the governor-general, C. G. Gordon Pasha (General Gordon), a British subject in the khedivial service. The town, which had been under close siege from October 1884, fell to the Mahdi a6 January 1885, Gordon being among the slain. During the Mahdist period, the capital men transferred to Omdurman (Umm Durman), = the left bank of the Nile below the confluence, and Khartum abandoned, apart from the dockyard (al-tarsana), where steamers of the Mahdist state were maintained, and the gardens, which became a source of revenue. After the defeat of the Khalifa 'Abd Allah b. Muhammad (q.v.) | Karari in September 1898 by Anglo-Egyptian forces, the restoration of Khartum was begun by Kitchener, the serdde and governorgeneral. Although again the administrative centre the principal place of residence for Europeans. Khartum did not equal Omdurman in extent or population during Condominium (1899-1955). Together with Omdurman and Khartum North it forms a conurbation known as "the Three Towns" (al-Mudus al-Thaidth).

EMORYAN-MORYAN, a group of islands in the bay of the second on the south coast of Arabia, lying along latitude 17' 30' N between longitudes 55° 30' and 56° 30' E. The islands, principally of granite and limestone formation, are the peaks of a submarine ridge. From west to east they see Häskiyya, Sawdä, Hallaniyya, Karzawt and Djubayla. Hallaniyya is both the largest (about I miles long and 23 in circumference) in the only inhabited island of the group. At its centra it rises

to a peak some 1,500 feet above sea-level. Its vegetation is snanty: only a few marine shrubs, some scattered tamarisks and occasional mimosas relieve the monotony of the landscape. The water is brackish, the best being obtained from a couple of wells sunk by a RAF survey party in 1963. Sawda, the second largest island (3 miles long), is equally barren, though it was once inhabited. So also, apparently, was Djubayla, to judge from a few tombs on the Island. Djubayla and Hāsikiyya, the westernmost island, lying only 20 miles from the mainland, are the haunts of thousands of seabirds, including peikans and goosanders.

The Khūryān-Mūryān Islands were early identified with the so-called seven successive Islands of Zenoblos, and as such they marked the broutler between the kingdom of the Parthians and the kingdom 🔳 Hadramawi. From this it would appear that the Parthian frontier should be located in the innermost comer of Khūryān-Mūryān Bay, Over the centuries the inhospitality of the islands has forced their inhabitants to seek their livelihood from the sea. In the 6th/12th century, al-Idrīsī [q.v.] records that the islanders, who then politically under al-Shihr, yery poor in winter and only managed to make a moderate living in the sailing - They used to sail to 'Uman, Aden and the Yemen. Their main source of revenue was tortoise shell, which they traded to the Yemenis, and occasionally very beautiful amber, for which they sometimes got very high prices. Ai-Idrist calls the bay containing the islands Diawn al-Hashish (Bay of Herbs). The Khuryan-Müryan Islands in their turn - frequented by Arabs from Shihr and Mukalla in the Hadsamawi [q.v. M Suppl.], and from Hudayda in the Yemen, to dig guano from Hāsiklyya and Diubayla Islands, where the seabirds down the centuries had left rich deposits. The guano was used as agricultural fertiliser, especially in the cultivation of tobacco.

The Portuguese were the first Europeans in modern times to record the existence of the Khuryan-Mūryān Islands. Affonso d'Albuquerque discovered them in 1303, and they appear thereafter in Portuguese sources as the Curia-Muria Islands, with Hasikiyya as Asquié, Sawdž as Sodié and Karzawt as Rodondo. Kawasim [q.v.] from Ra's al-Khayma descended upon the islands in 1818, possibly with the intention of using them as a base for attacks upon shipping. The local inhabitants were driven or carried off and the islands remained unpopulated for several years afterwards. Sometime before or, more probably, after this incursion (the manner anciesr) 🔤 is lands came into the possession of a sub-section of the Mahra tribe, the Ibn Khalfan, residing in the vicinity of Mirbat on the word of Dhufar (Zufar [q.v.]). It is from this clan that the islands have derived the name by which they are known to the Arabs of southern Arabia—Djazā'ir bin Khalfan. By the middle III the 13th/19th century—and possibly a decade or so earlier-the islands had become a dependency of the sultanate of Maskat. French planters from Réunion Islands occasionally resorted to the islands to load guano for use as fertiliser, and it was the existence of these valuable deposits that led the British government in 1854 to ask the Sultan of Maskat, Sayyid Sa'ld b. Sultan, to cede the islands to Great Britain. The deed of cession was signed 14 July 1854 and the guano deposits were worked from 1857 to 1859. A cable station was set up on Halianiyya Island in 1861, only to be abandoned a year later when the Red Sea-Karachi cable proved unwockable.

From 1854 enwards, the Khuryan-Muryan Islands were formally designated a dependency of the British colony of Aden, although administrative control over them was vested in the British political resident in the Persian Gulf, since it was more practicable for the British political agent Masket to visit them than it was for the political resident (later governor) at Aden. When British rule over Aden ceased on 30 November 1967, the islands were handed back to the Sultan Maskat, despite the protests of the Aden successor government, the People's Republic of South Yemen, that it was entitled to succeed to sovereignty over all the dependencies of the former colony. Since that time the islands have been administered as part of the wildys of Dhufar of the sultanate of 'Uman. Hallaniyya Island is still populated, the number of inhabitants having remained fairly constant over the past century-36 in 1883, 50 in 1936, 70 in 1947 and 53 in 1976. They still derive their living from the sea, and especially from the great shoals of sardines which appear off the islands in late October each year, at the end of the south-west monsoon. Of late, foodstuffs and medical treatment provided by the 'Unian' authorities in Salala have gone some way to alleviate the rigours of the islanders' existence.

KHUSDĀR [100 KALĀT]

AL-KHUSHANI, ABO 'ABO ALLIE MURAHMAD B. AL-HARITH, Maliki fakib and biographer, originally from Khushan near Kayrawan. After studying fikh at the latter place and at Tunis, he left his homeland ca. 311/923, passing through Centa, where he was held back time by teaching (he is said also to have corrected the orientation of the mosque there), and travelling to Spain. He resided in the Marches, and completed his legal training, especially from Kasim b. Asbagh (q.v.), and ended up by enjoying the Iavour of the helr to the throne, prince

at-Hakam, who procured for him the job of kiefi of inheritances (mandsith) at Pechina, then that of the shird of Cordoba and after that, summoned him to his own side. He was something of a poet (though accused of committing faults here), and sidered to have a certain manual dexterity and to practise alchemy; he seems also to have acquired some medical expertise which allowed him, after his disgrace following al-Hakam's death in 366/976, to live by making up electuaries (adhān). He is said to have died in 371/981, but this date II not accepted by all his biographers, who however knew very little information about the last years of his life.

Al-Khushani is credited with a hundred or so works and treatises composed at al-Hakam's behest, who was, as is well-known, a great lover of books. Amongst the titles cited here figure al-Ittifāķ wa 'l-ikktilāf fl madhhab Mālik, al-Takāşur ma 'l-mughālāt, al-Futyd, al-Tavif, al-Mawiid wa 'l-wafat, al-Nasab and al-Iktibas, which do not seem to have survived. His fame, however, rests on his biographical works. As well as a Ta'rikh 'Ulamā' al-Andalus and a K. Fuhahā' al-Mālikiyya, which are no longer extant, al-Khushani left two collections of especial interest. The first one which one thinks of is his T. Kudas al-Andalus, ed. and tr. into Spanish by Ribera, Madrid 1914. Basing himself on written sources, archives and oral traditions, the author traces the biographies of the badis of al-Andalus from the conquest till 357/ 968, in a lively and instructive manner; if he lacks a critical spirit in relaying, for instance, the fictitious story of the first three judges | Cordoba, he nevertheless does not omit items of information which are sometimes unfavourable to the Umayyads.

The second work which has been preserved, the Inbakat 'ulama' Ifrikiya, has been published by M. Ben Cheneb in his Classes des savants de l'Ifriqiya, Algiers 1915-20, as a continuation of the Tabakat of Abu 'l-'Arab (q.v.). These Tabasai, which the sadi 'Iyad (q.v.) utilises freely in his Madarik under | | | title of Ta'rikh ai-I/rikiyyin, calling the author in familiar fashion Ibn Hārith, contain blographies of scholars who did not belong to the Mālikī school, and remarkably, of converts to Shifism established in Ifriklya by the flatimids. It is the opinion of R. Brunschvig [Un aspect de la littérature historicogiographique de l'Islam, in Mélanges Gaudefroy-Demombynes, Cairo 1935-45, 150-1) that this exile, unable to come to terms with the doctrine imposed upon his native land, may have written this work at the domand of al-Hakam, who was eager to know about the situation there; in this respect, the Tubadds are interesting for the information which they give on the Fatimids, but the author, far from being impartial, paints a gloomy picture of the "ulama" who remained behind in Ifrikiya and were compelled, according to his view, to rally to the new masters, either out of financial cupidity in from fear of persecution.

KHUSHHÄL KHÄN KHATAK, Pashtun poet and a warrior chieftain (1022-1100/1613-89), Khushhäl Khän is recognised as the national poet of the

Pashtuns.

z. Life. Son of Shah-baz Khan and grandson of Yahyā Khán who, in turn, was the son of Malik Akoray, leader of a clan of the Khatak [q.v.], the boy Khushhāl accompanied his father in tribal wars. After his father's death in a tribal battle, Khushhal succeeded him as hhān or chieftain, and was recognized as such by Shāh Diahān, the Mughal Emperor, Khushbāl served Shāh-Djabān in his army's campaigns in Balkh and Badakhshān in 1055/1645, but later, in the time of the Emperor Aurangzib, the governor of Kābul aligned himself, along with some of Khushbal's uncles and cousins, against Khushbal. In 2074/1664, Khushhal, then 51 years old, was summoned by the governor to Peshawar, where he was arrested and dispatched in chains to a fortress in Diaypur. He was released two years later, but was not allowed to return home until 1080/1669. For the rest of his life, his sympathies rested with the rebel Pashtun tribes. In his poems he preached unity of the Afghan tribes to resist Mughal domination. Khushbal greatly admired the Airidi chieftein Darya Khān, who defeated the Mughal army Landi Kōtal in the Khyber Pass [see RHAYBAR Pass] in 1083/1672, while leading a confederation of Afridi and Muhmand tribesmen. Accompanied by one of his loyal sons, 'Abd al-Kādir Khatak, Khushhāl fought and defeated the Bangash tribe, which supported Muaual rule. He also had to fight his third son, Bahram, whom the Mughals sponsored in attempts to replace Khushhāl as chieftain. In 1085/1674, he voluntarily relinquished his chieftainship to his eldest son, Ashraf, also a poet who min later (1044/1683) jailed by the Mughais. Khushhal declared himself a rebel and spent rest of his life with Afridi friends in the inaccessible eyries of Tirah, a zone "never effectively occupied by any government is all history". He travelled from tribal area to tribal area, seeking assistance and refuge. He was releatlessly pursued by his treacherous son, Bahram, but evaded capture and died in the Afrīdī country in 1100/1689. The armed resistance which he encouraged by his pen and emphasised by his sword is "to be counted among the causes that brought about the dramatic collapse of the Mogul Empire in India" (Sir Olaf Caroe).

2. Literary Works. Khushhal, a prolific poet, constantly chanted his love of beauty, honour, and justice. As part of his opposition to Aurangzib and his forces, Khushhal preached union of all Afghan tribes and encouraged revolt against Mughal rule:

'My sword I gird upon my thigh
To guard Aighān bonour if fame:
Its champion in this age I,
The Khatak Khain, Khukhāl my name''.

Khushhāl also celebrates his successes and laments his subsequent misfortunes. He chastises those Pashtūns who accept gold rather than give battle to the

Mughals.

As well as poetry, he wrote manuals on falcoury, folk medicine, a dialogue between the pen and the sword, an account of his imprisonment and exile, and a geography of Swat. "His lyrics and epics, alike present his religious devotion, occasionally in mystic terms, his patriotic feelings, his moral code, his many loves in object or joyful mood, and many other subjects" (D. N. MacKenzie). Khushbal rightly claims to be the originator of Pashio poetic form and metre, but it must be remembered that he had a predecessor,

Mirzh Anşari. Both these early Pashtö poets used the Dari or Persian poetic mould, but instead of strictly applying the classical rules of prosody to Pashtö, they adopted the metres of popular Pashtö songs to verse forms known in Persian. "This metre is syllabic in nature, but the pattern is made by the stress usually recurring on every fourth syllable" (MacKenzio).

Khushhal further left many ghasals in Persian under the pen-name of Rühl, and a Persian hasida of ode in the futility of this world in some metre as the Bahr al-abrar of Amir-Khusraw Dihlawi; this Persian poetry is amongst the best of that written in the so-called Sabb-i Hind or "Indian style".

(RAYAN FARHADI) KHUSHKADAM, AL-MALIK AL-ZARIR ABO SA'ID SAYF AL-Din AL-NASIRI AL-MU'AYYADI, Mamluk sultan of the Burdis (regn. 19 Ramadan 865 - 10 Rabi^e I 872/22 June 1461 - 9 October 1467). By origin a Rumi (i.e. perhaps a Greek, but the term had a wide range of meanings), he was born on 815/1423. Brought as a boy to Egypt by the slave-merchant Kh "adia Nasir al-Din. III purchased by the sultan al-Mu'ayyad Shaykh, whence his two nishas. He rose through the grades of promotion of the Royal Mamlûks as hadssoki, saki and amir, finally succeeding al-Mu'ayyad Ahmad b. Inal = atdbak al-'asdhir in Egypt when the latter became sultan in Diumada I 864/Feb. 1461. The atabakiyya was at this time the highest in rank of the great offices of state, but had specific functions: its holder was also styled amir habir, i.e. the senior amir. The reign of al-Mulayvad Ahmad was soon disturbed by the Intrigues of Dianim al-Ashraft, the governor of Damascus, who sought to usurp the sultanate with the support of his khushddshiyya, the Ashratiyya, i.e. the Mamlük househoki of al-Ashraf Barsbay [q.v.]. The Ashrafiyya were at first opposed by their rivals, the Zahirivya, i.e. the household of al-Zähir Čakmak [q.v.], whose chief Djanibak al-Zahiri (formerly governor of Djudda) skilfully won the agreement of the two factions to the deposition of al-Mu'ayyad Abmad and the installation of Khushkadam as a compromise candidate until the arrival of Dianim from Syrin. Since Khushkadam was not of "the Nation" (al-djins, i.e. not a Circasslan), it would be easy to depose him at will. Thus Dianibak alleged, but he rightly calculated that once Khushkadam was recognised as sultan, he would 🔣 difficult to oust. He was accordingly proclaimed, and his supporters captured the Citadel of Cairo with little resistance, al-Mu'ayyad Ahmad being arrested and

The new sultan was thus faced in the outset with both an over-mighty kingmaker and a powerful rival. Dianibak, who was appointed damaddy kabir (a great office of state of growing importance in the later Circassian period), was at first the effective ruler (mudabbis al-mamlaks). When Djänim al-Ashrafi advanced to Khankah Siryakus, north of Cairo, Djanibak succeeded in obtaining an oath of loyalty to the new sultan from him, and Djänim returned, loaded with gifts, to Damascus (Shawwal 865/July 1461). Some months later. Dianim was removed from office. and fled to Uzun Hasan of the Ak Koyunlu [e.v.] in Şafar 866/Nov. 1461. With a force III Mamiliks and Ak Koyuniu Turcomans, he subsequently crossed the Euphrates and advanced to Tall Bashir (Shawwall 866/July 1462), but the invasion came to nothing, and in the following winter he was killed in Edessa. The sultan men now strong enough m procure the murder of Dianibak (Dhu 'l-Hididia 867/August 1463); an event which me followed by the arrest of leading members of the Zahiriyya faction. Khushkadam's coup against the Zahiriyya was, however, abruptly halted, probably because of a conspiracy against him in his own Mamilik household. A reconciliation was effected through Kayltbay at-Zahirl (the future sultan), and the offices and seed's of the Zahlriyya were restored.

sent to imprisonment in Alexandria.

There were no major foreign developments during the reign. Suzerainty was maintained over King James of Cyprus (who had been installed with the help of a Mamilik contingent sent by al-Ashrai Inal (g.v.) in 864/1460), although in a clash between the king and the sultan's resident in Cyprus, the latter killed, and Famagusta, which he had held, passed into the king's possession (868/1464). Another vassalstate, the march-principality of Elbistan [o.v.] under the Turcoman dynasty of Dulghadir (Dhu 'l-Radr [q.v.]), was disturbed by a succession-struggle following the murder of its ruler, Malik Arslan, in 870/1465. Two pretenders, Shah-Budak and Rustum, successively backed by Khushkadam, failed to hold their position against a third Dulghadirid, Shah-Suwar, who had Ottoman support and at the end of the sultan's reign was threatening northern Syria, Khushkadam sent orders to the governors of Tripoli and Hamah to assist Aleppo, and made provisional arrangements for an expeditionary force from Egypt (Muharram 872/August 1467). There are some indications of a resurgence of Arab tribal power during the reign. Five expeditions were launched between 866/ 1462 and 860/1465 against the Labid tribe of al-Buhayra: while a few months before the sultan's death, he sent a punitive force against Shaykh Mubarak of Banu 'Ukba, who had plundered the provisions for the pilgrims in the vicinity of Ayla. One of his last acts was to approve an expedition to Upper Egypt, where the kashif had been defeated in a fight with Yunus b. Umar, the chief of the powerful tribe of Hawwara [q.v.]. The sultan died ■ few days later. Shortly before his death, an assembly of magnates had elected the atabak Yalbay al Inali al Mu'ayyadi to succeed him.

KHUSRAW [see Anûşiirwân, Amîr Khusraw,

ICHOSREW, KISRA, PARWIZ].

KHUSRAW FIROZ, name of the last Büyid ruler, better known by his lakeb of al-Malik al-Rahim, He succeeded his father Abū Kālīdjār in Trāk in 440/1048. Most of his reign was spent in disputing with his brother Fuladh Sûtûn the possession of Fårs and Khūzistān and in trying maintain discipline amongst the Turkish troops of his general al-Basāsiri [q.v.]. There is no discernible doctrinal reason. for his adoption, in defiance of the caliph, of an epithet reserved for God. In any case, the enfeeblement of the Büyid dynasty allowed the caliph in question, al-Karim, to recover a certain amount of political authority, seen in the appointment once more of a vizier to the caliph, Ibn al-Muslima [q.e.]. A group within the caliphate, in which I'm al-Muslima was a driving force, hoped to throw off the Buyid tutelage as the Sunni suitan, the Saldiuk Toghril Beg approached, at the invitation also of Fuladh Sutun. In 448/1055 Toghril entered Baghdad, after having promised to respect al-Malik al-Rahim's position as his vassal, but m rebellion gave him a pretext to arrest the Büyid ruler, and the latter died two years later in prison at Ravy.

Bibliography: See the main histories of the period, and especially Ibn al-Diawzi's Muntagam, Ibn al-Athir's Kāmil and Sibt b. al-Diawzi's Mir'dt; H. Bowen, The last Bunayhids, in JRAS (1928);

and in general, the bibliography to BUWAYISIDS, to which should be added, H. Busse, Chalif and Grosskinis, die Buyiden im Ivaq (945-1055), Belrut-Wieshaden 1060.

(CL. Calen)

KHUSRAW MALIK [see CHAZNAWIDS]. KHUSRAW PASHA (see KHOSREW PASHA]. KHUSRAW SHÄH [see CHAZNAWIDS].

KHUSRAW SULTAN, eldest son of the Mughal emperor Djahangir (q.v.) by the daughter of Rādiā Bhagwan Dās, was born at Labore in 995/ 1487. I favourite with his grandfather, Akbar, who perhaps wanted to make him his successor. He rebelled against his father in the first year of the tatter's reign (sc. in 1015/1606), was defeated and imprisoned. He made a second conspiracy in Afghanistan, and this having been detected, he was, with one interval, kept in confinement for the cest of his life. He died at Asirgath near Burhanpur in the Deccan in 1031/1622, in suspicious circumstances, and was in all probability murdered by Shah Diahan. His sister had his body buried in the Khusraw Bach at Allahabad. His two sons, Dawar Bakhsh, otherwise Bulaki. and Carshasp, were put to death at Shah Diaban's percession.

Bibliography: The principal source is the Tazuk-i Diakangtri; see also the bibliography to maningle. (H. Bevernog)

KHUSÜF [see KUSÜP].

KHUTBA (A.), sermon, address by the khaito [q.v.]. The khuiba has mixed place in Islamic ritual, vis. in the Friday-service, in the celebration of the two festivals, in services held at particular occasions such as an eclipse or excessive drought. On the Friday it precedes the salat, in all the other services the salat comes first. A short description of the rules for the khuiba according to al-fahrazi (Tenbih, ed. Juynboll, 40), one of the early Shāfi'l doctors [q.v.], may be given here.

(a.) One of the conditions for the validity of the l'riday service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the health must ill in a state of ritual purity; his dress must be in accord with the prescriptions; he must pronounce the two hubbs standing and sit down between them; the number of auditors required for a valid dium's must be present

[SOC SALAT].

Regarding the sermon itself, there are obligatory: the handala, the salai on the Prophet, admonitions to piety in both handas, prayer (du's') on behalf of the faithful, and recitation of a part of the kur'an in the first hands or, according to some doctors, in both. It is commendable (sunna) for the hand to be on a pulpit or an elevated place; to salute the audience when directing himself towards them; to sit down till the adhan is pronounced by the mu'adhahin; to lean a bow, a sword or a staff; to direct himself straightway to his audience; to pray (du's') on behalf of the Muslims; and to make his higher short.

(b.) Regarding the khutbus on the days of festival the same author says (42) that they we like those of the Friday-service, except in the following points: the khatb must open the first with nine tabbirs, the second with seven. On the 'id he must instruct his audience in the rules for the sakit al-fit, on the 'id al-adha in the rules for the sacrifice of this day. It is allowable for him to pronounce the sermon slitting.

Regarding the hauthers of the service during eclipse, al-Shirazi (43) remarks that the preacher must admonish his audience to be afraid, and in the service in times of drought he must ask Allah's par-

don, in the opening I the first hydra nine times, in the second seven times; further, he must repeat several times the salid on Muhammad as well as salighfur, recite verse I of Sûra LXVI, elevate his hands and say Muhammad's do \$1° (which is communicated by al-Shīrāzi in full). Further, he must turn towards the hibia [q.v.] in the middle of the second hydra and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it on till he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker was the first to point to the celation between the Islamic pulpit and the judge's seat in early Arabla. This explains why the hhafib must slit down between the two hhatbas; it explains why he must lean on staff, sword or bow; for these were the attributes of the old Arabian judge. It is not easy to see why the happ precedes the services on Friday, whereas on the days festival and the other special occasions saidt comes first. Hadith tells us that Marwan b. al-Hakam was the first to change this order by pronouncing happs before the performance of the saidt on the days of festival (e.g. al-Bukhāri, Idaya, bab 6 and especially pathetic picture in Muslim, Idaya, trad. o).

Regarding prayer on behalf of the faithful (dusa) li "I-mu'minin) it must be observed that in this prayer before the Friday-saldt it has become customary to mention the ruling sovereign. The history of Islam is full of examples of the importance which was attached to this custom, especially ht times of political troubles, the name mentioned in this du'a" betraving the imam's political opinion or position. Though it is not prescribed by law to mention the ruler's name, the suppression of the at this occasion exposed the haffb to suspicion. In countries where Muslims lived under non-Muslim rule, even a prayer for the worldly prosperity of the ruler could expose the bhallo to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgrenie, Islam und Phonograph, 13 f. - Verspe. Geschr., ii, 430 f.; ident, Mr. L. W. C. and den Borg's beosfening van het Mohammedaansche recht, | Ind. Gids, vift, 800 f. = Verspr. Geschriften, il. 214 f.). The custom of mentioning the ruler in prayer is found = early as the 5th century B.C. in the Aramaic papyri of Elephantine (Pap. 1, line 26; cf. also Harnack, Mission und Ausbreitung des Christentums, 1, 286.

Several of the characteristics of the hinths prescribed by the doctors of the law occur also in hadth. The hinths of Muhammad usually begin with the formula amma ba'da (al-Bukhārī, Dism'a, bāb 29). Side by side with the handala (Muslim, Dium'a, tr. 44, 45) the shadda occurs (Ahmad b. Hanbal, ii, 302, 343: "A khuba without the shahda is like a muthated hand". In a large number of traditions it is stated that Muhammad used III recite passages from the Kur'an (e.g. Muslim Djum's, tr. 49-52; Ahmad b. Hanbal, v. 86, 88, 93 etc.). The hautha must be short, in accord with Muhammad's saying: "Make your salat long and your hhathe short" (Mnslim, Dium'a, tr. 47). Just like the salat the khudba must be right to the purpose (kasdon, Muslim, Dium'n tr. 41). The audience must III silent and quiet; "who says to his neighbour 'listen', has spoken a superfluous word", al-Bukhari, Dium'a, bab 36). The two hauther pronounced by the standing khatib, who sits between them, are based on Muhammad's example (al-Bukhārī, Dium'a, bāb 27; Muslim, Dium'a, tr. 33-5; Ahmad b. Hanbal, ii, 35, 92, 98). During the adden Muhammad used to sit on the minbar; the idama was spoken when he had descended (in order to hold the haufba standing); this order was observed by Abu Bakr and Umar (Ahmad b. Hanbal, iii, 440 bis).

Neither the term khutha nor the verb hhataha in their technical meaning occur in the Kur'an, Even in the passage containing an admonition not to abandon the Friday-service for worldly profit, it is only the saidt which is mentioned (Sûra LXII, 9-11). It would be wrong to conclude from this silence that the khatba did not yet form a constituent part of worship in Muhammad's time, Still, It is not probable that the different kinds of service were accurately regulated from the beginning. Hadith has preserved descriptions showing that Muhammad's <u>kh</u>ufba often did not have much to do with the regular sermon of later times. Abu Dawud, Kitab al-diyat, bab 13, reports, for example, that the Prophet pronounced Full khulbes at the end of a complaint raised against a collector of the takat. Still, it is not possible to distinguish between the kinds, as may appear from the following traditions. According to one of them related me the authority of Abū Sa9d al-Khudri II is said that Mubammad on the days | festival used to open the service with the salat; then he pronounced the Mulbs "and his khulba usually consisted in the command to participate in some mission or expedition" (Ahmad b. Hanbal, iii, 56 f.). A similar statement is to be found in Muslim, "Idayn, tr. 9: "When Muhammad had concluded the salat me the days of festival by the tasilm, he remained on his feet and turned to the sitting audience; when he wanted to send mission or when he desired some other arrangement, he gave his orders on it; he used also to say; give alms, give alms; ... then he went away. This state of things asted till Marwan, etc.". This is a very simple description of the service and would be considerable support to the view that a service with a fixed order only arose long after Muhammad's time. Yet it must not be forgotten that the description just translated betrays the tendency to contrast the simple service of the Prophet with the highly official style introduced by Marwan, who even had a minber built on the musalid. According to another tradition, the Prophet once interrupted his khutba in order to reply to a stranger who had asked for instruction in the Muslim falth (Muslim, Diuse's, tr. 60); he is also portrayed interrupting the hkulba to call out directly to a **(ibid., tr. 54-9)**.

However uncertain the value of these traditions may be, it seems not out of place to suppose that a fixed order of service I Friday and the days of festival only after Muhammad's lifetime. This order reposes on three elements: the early-Arabian Aintha, Muhammad's sums and the example of Jews and Christians.

In his study on the history of Muslim worship

C. H. Becker endeavoured to establish close connection between the services on Triciay and the days of festival on the one hand, and the mass on the other. But this view was opposed by Mittwoch, who found in the Jewish liturgy features corresponding to adhan and isama, to the hamdale, the recitation of the Tora (first halps) and the recitation from the Prophets (second happen). It is perhaps impossible to decide the question; probably the example of the Jewish as well in that of the Christian liturgy exercised influence on the final constitution of the Muslim worship.

It is customary to pronounce the kkeller in Arabic; nevertheless, this rule II not infrequently broken in

non-Arabic speaking lands.

The history of the khadba in Islam remains to be written, and the study of orntory from the minbar or pulpit likewise remains to m undertaken. On the latter point, the enquirer might utilise with profit the texts (of varying degrees of authenticity) of those sermons of the Prophet given in the Sire, in the kedita collections and in historical texts, - well in those adab works which have preserved specimens of famous khutbas. Collections like those of Iba Nubata al-Fāriķī (q.v.) and the specially-compiled anthologies of muse used by the professional khafibs, just as the secretaries used collections of model lettern, would also be found useful. Collections of this latter type are often arranged according to the calendar, Le, there are four sermons for each month plus supplementary men for festival days, the Prophet's birthday and his miliadi or night-journey (see Ahlwardt, Verteichnis der arab. Hss., iii, 437).

Mittwoch, Zur Entstehungsgeschichte des islamischen Gebels und Kultus in Abh. Pr. Ah. W., (1913), no. 2; see also Khatib.

(A. J. WEBSINGE) KHUTTALAN, Knurran, a region - the right bank of the upper Oxus river, in what is now Soviet Central Asia, lying between the Wakhsh river and the Pandj river (sc. the head waters of the Oxus), called the Wakhshāb and Diaryāb in mediaeval times. It was bounded in the west by the topographically similar regions of Caghaniyan and Wakhsh (qq.v.), and was often administratively linked with Wakhsh (Yakut, Buidda, ii, 402). Khuttal was a land of rich pastures in both the river valleys and on the upper slopes of the hills, where the famed horses of Khuttal, known even to the Chinese, were reared; the geographers advert frequently to the Khuttali and Tukhari breeds, and the men 🔳 Khuttal were celebrated for their knowledge of horse-breeding, farriery and veterinary science, and for their skill in making saddles and other accourrements (see Bosworth, The Ghamavids, 223]. The valleys me northwards towards the Buttaman mountains, which separated Khuttal from the upper Zarafshan river valley; gold and silver were mined there, and there dwelt in these mountains two fierce and predatory groups, the Kunddis and the Kandjina Turks, both of them probably remnants of Hephthalite peoples (see kunituits).

The form Khuttalän, with the plural ending, is early attested, for this is found in the very early New Porsian satisfical verses composed by the local

people against the Arab commander Asad b. 'Abd Allah al-Kesri when he unsuccessfully raided Khuttal in 108/726-7, m Tabari, ii, 1492, 1494, 1602. Later Persian poetry requires forms like Khutlan or Khatlan, whilst the Hudad al-Alam, tr. Minorsky, 119, spells Khatulán. Yákůt, loc. vít., gives both Khatlán and Khuttal, with his main entry under the latter form. In the Chinese annals we find forms like K'otut-lo, see Marquart, Erdnishr, 294-300. An etymological connection with the name of the Hephthalites, within whose northern kingdom Khuttal certainly fell [see HAYATILA] is certainly not impossible.

The principal town of Khuttal and the residence of its ruler - Hulbak to the south of the modern centre Kuláb/Kulyab, whilst Nučárá or Andičárágh is described as the main trading centre. Other towns enumerated by the geographers include the important centres of Halawand and Munk, the latter probably corresponding roughly to the modern Baldjuwan; according to Ya'kübi, Munk was me the borderland with Rasht and the Turkish lands, sc. those of the Kumidils, etc. Clearly, Khuttal was a prosperous and

well-settled region at this time.

In **III** pre-Islamic period, the local rulers bore the titles Khuttalän-Shäh or Khuttalän-Khudah and Sher-i Khuttalan (Ibn Khurradadhbib, 40). The Arab invaders did not gain full control of Khuttel till the end of the Umayyad period. The rebel al-Harith b. Suraydi (q.v.) received support from the local ruler, and in retaliation, Asad b. 'Abd Allah al-Kasri led two expeditions into Khuttal in 129/737. These provoked mappeal for help to the Khakan of the Türgesh or Western Turks Su-lu, and the Arabs had to retreat hastily (Gibb, The Arab conquests in Central Asia, 81-3). The region was not fully secured till 133/750-1, when Abu Dawad Khalid b. Ibrahim, governor of Balkh, drove out the ruler (malik) of Khuttal, who fled first to the Turks and then to China, where he was granted the honorific title of Yabgha (Gibb. op. cit., 95; E. Chavannes, Documents sur les Touties occidentaux, 168, 216.

In the ensuing century or so, Khuttal came under the rule of the Banidiurids - Abu Dawudids, who exercised power on both sides of the upper Oxus. In the Samanid period, the amirs of Khuttal in loose tributary status only to the Samanids, sending presents but not taxation to Bukhārā (Mukaddasi, 337), and they exercised suzerainty south of the Oxus, for the Huded al-calam, 109, says that the dikkan of the small principality of Yun in Badakhshan was tributary to the andr of Khuttal. In the warfare of 336-7/947-9 between the Saminid Nuh b. Nasr and Abu 'Alī Čaghāni, all the vassal rulers (mulik-i afrāf) along the upper Onus were stirred into revolt by Abû 'Ali, including the amir Ahmad b. Diafar of Khuttal, the amir of Rasht and the Kumidils (Gardizl, ed. Nazim, 36-7, ed. 'Abd al-Hayy Habibi, Tehran 1347/ 1968, 157-8, cf. Barthold, Turkestans, 248).

Under the early Ghaznawids, Khuttal was strategically important as being in the buffer zone between the Ghaznawids and their Karakhanid rivals. Khuttal is included with Caghaniyan and Kubadhiyan amongst the territories enumerated in the 'Abbasid Caliph's investiture diploma of \$22/1031 to Maschd b. Mahmild (Baybaki, in Bosworth, The Ghaznavids, 54), but it was also claimed by the Karakhanid 'All-tigin [see men-kniks), who stirred up the Kumidis to harry the region. Unlike In the neighbouring principality of Caghaniyan, where the Muhtadit amirs remained, no separate family of local rulers is mentioned for Khuttal at this time; Ghamavid influence exercised directly, seen in Mascad's appointment

of a \$44i 4-buddi for Khuttal (Bosworth, op. cit., 178). In the Saldjuk period, however, various local amirs are mentioned. An amir of Khuttal rebelled against Alp Arslan in 456/1064, but was killed [Ibn al-Athir, x, ss), and in 553/1158 there was a campaign by the lord of Khuttal, one Ibn Shudjas Farrukhshāh, formerly a vassal of Sandjar, against the important crossing-place of Tirmidh, taking advantage of the chaos in Khurksan consequent upon Sandiar's capture by the Chuzz and then his death; this Iba Shudiat is said to have claimed descent from the Săsânid emperor Bahrâm Gür (Ibn al-Athir, xi, 155). In the period of the Ghurids and Khwarazm-Shahs, no separate native dynasty is mentioned. Like Wakhah, It may have been part of the Gharid empire and may have become one of the small principalities into which that empire broke up, see Djūzdjāni, Tabakát-i násiri, ed. Habíbi", Kabul 1341-3/1962-4, i, 387, 392, tr. Raverty, 426, 236, 490. A Djalal al-Din Umar of Wakhsh, apparently from the Bamiyan branch of the Ghurids [q.v.], carried off into captivity in Kh *ārazm ca. 612/1215, according to Nasawi, Barthold, Turkesien³, 372.

In the 8th/14th century, Khuttal was likewise one of the small states which Caghatay's empire disintegrated; Sharai al-Din Vazdi records that the ruler of Khuttal Kay Khusraw was killed by Timur for treasonable contacts with Kh Tarazm (Zajar-ndma, Calcutta 1885-8, i, 243). Later, Khuttal was one of the dependencies of the region of Hişār [q.v.] and was controlled by the later Timurid amir of Kunduz. Then in the 10th/16th century it passed under Ozbeg centrol. The name Khuttal now disappears from use, being replaced by that of the modern town of Kulab; one of the last recorded uses of the old name is in the dynastic history of the Özbegs, the Baler al-asrar fi manāķib al-akhyār ol Mahmūd b. Amir Wali (begun in 1044/1634), After being included in the Khinate of Bukhårå during the 18th and 19th centucles, the mediaeval region of Khuttal now forms part of the Tadzhikistan SSR.

Yāķūt, *Buldān*, ii, 402, also mentions a villege of al-Khuttal in Trak on the Baghdad-Khurasan high road near Daskara.

KHUZA'A, an ancient Arab tribe of obscure origin. Muslim genealogists assuming a Mudari origin of Knuza'a based their argument on an utterance attributed to the Prophet according to which the ancestor of the tribe, 'Ame b. Luhayy [q.v.] was a descendant of Kama's (- 'Umayr) b. Khindif, thus tracing their pedigree to Mudar (ibn Hisham, al-Sira al-nabsaryya, ed. al-Saka', al-Abyari and Shalabi, Cairo 1355/1936, i, 78; al-Baladhuri, Ansab alashraf, ed. Muhammad Hamidullah, Cairo 1959, i, 34; sl-Fast, Shija' al-gharam bl-akhbar al-balad alhardm, Cairo 1956, ii, 44-5; Mus'ab b. 'Ahd Allah al-Zubayri, Nasab Kuraysi, ed. E. Lévi-Provençal, Cairo 1953, 7-8, xx; Ibn 'Abd al-Barr, al-Inbdh 'ald hababil al-sumah, al-Nadjal 1386/1966, 97-8; Ibn Huxm, Diamharat ansab al-Arab, ed. E. Levi-Provençal, Cairo 1948, 222-4; al-Sam'ani, al-Austib, ed. 'Abd al-Rahman al-Mu'allami, Hyderabad 1385/ 2966, V, 116). Some sections in Khuza'a asserted that KHUZĀʿA

they were deteendants of al-Şalt b. al-Nadr b. Kināna b. Khuzayma b. Mudrika b. Ilyas b. Mudar. The claims for Mudari descent made by some groups of Khuca'a were firmly rejected by genealogists, who asserted that both Kama'a and al-Salt died childless. (Ibn al-Kalbi, Diamharat al-nasab, Ms. B.M., Add. 23297, fol. 45, il. 9-10; al-Wazir al-Maghribl, Adab al-Mawass, Ms. Bursa, Hüseyin Çelebi, 19, fols. 84b-86a; al-Baladhuri, Ansab, i, 34 uk., 36-9; Mus'ab, op. cit., 11-12). Musiab, recording the Mudari genealogy of Khuzā'a, confirmed by an utterance of the Prophet, remarks cautiously that the pedigree uitered by the Prophet is certainly true, provided that it was actually said by him (Muş'ab, 8; Ibn 'Abd al-Barr, 41-1mb4h, 98). Harmonising traditions, trying In the usual way to bridge the contradictory reports about the origin of Khuza'a, claim that the mother of Lubavy married after the death of Kama'a the Yamani Haritha and the child traced his pedigree to the Yamani father who adopted him (al-Fási, 5h/fa'. ii, 46). Another tradition states that Kama'a married, begot children, but clashed with his relatives, left for al-Yaman and allied himself with the Azd (al-Baladhurt, Ansdb, i. 35, E. 1-2). The Yamani tradition, the other hand, records a lengthy list of ancestors of Khuza'a beginning with Luhayy (= Rabi'a) b. Hāritha b. 'Amr b. 'Āmir b. Haritha b. Imru 'l-Kays b. Tha laba b. al-A2d. The pedigree is traced back, of course, to Kahtan (a)-Fasl, Shifa', il, 45, il. 5-10; lbn 'Abd al-Barr, al-Indah, 97; Ibn Durayd, al-Ishtikak, ed. 'Abd al-Salām Hārām, Cairo 1378/1958, 468; al-Hazimi, 'Udiālat al-mubtadi, ed. 'Abd Allah Kanun, Cairo 1384/1965, 54)-

The traditions about the beginnings of the rule of Khuzā'a in Mecca, ascribing Khuzā'a to Azd, record a lengthy story about the migration of the tribal groups of Azd from al-Yaman to the North, While some tribal divisions continued their migration to Syria (Ghassan) and 'Uman (Azd Shanu'a), the Khuzā'a separated (inkhaza'at) and managed = get control of Mecca. One of the traditions reports that the leader of the Azd asked Djurhum [q.v.], the tribe which ruled Mecca at the time, to permit them to stay in the territory of Mecca until their foragers would find for them suitable pasture-grounds, threatening war if they were denied this. In fact, when Djurhum refused to grant permission, Khuzā'a fought them, defeated them and got possession of the Sanctuary of Mecca. Another tradition, on the authority of Abū 'Amr al-Shaybani, reports that the custodianship of the Ka'ba was gained legally by Khuza'a, as their leader Rabifa b. Haritha married Fuhayra, the daughter of al-Hārith b. Mudād al-Djurhum!; his son 'Anir b. Rabl'a (i.e. 'Amr b. Luhayy) had thus a legal basis for his claims to the custodianship. In the protracted battles which ensued between Khuzāfa and Djurhum, Khuza'a defeated Dlurhum, who had to leave the city. A third tradition ascribes the decline of the Djurhum in Mecca to their deterioration and moral decay. Afflicted by plagues, God's chastisement for their wickedness, they were extirpated, and only few survivors from amongst them left Mesca; the custodianship of the haram was then taken over by Khuza'a. A diverse tradition gives a quite different account of the events, sc. that Khuza'a took over the control of Merca from Iy2d (q.v.). A peculiar version of this tradition transmitted by al-Zubayr b. Bakkår reports | battle which followed | clashes between the ruling lyad and Mudar in which lyad was defeated. Iyad got permission to leave Mecca on the condition that Mudari women married to Iyadis would be returned | Mudar if they wished.

Among the returned women was a Khuza'a woman named Kudāma. Khuzāfa, the report states, traced at that time their pedigree to Mudar. As the Iyad failed to carry with them futo exile the pillar with the Black Stone, they decided to bury it. The Khuzā'i woman revealed III her people the place of the buried Stone and advised them to ask from Mudar the custodianship of the Karba as reward for finding the pillar with the Black Stone. Mudar complied and Khuza'a got control of the Ka'ba, and retained this office until the arrival of Kusayy [q.v.] (al-Fast, Shift), il. 26 f.: al-Ya'kubi, Ta'rikh, al-Nadjal 1384/1964, L 208; Muhammad b. Habib, al-Munammah, ed. arshid Ahmad Färik, Hydetabad 1384/1964, 344 (.; al-Isami, Simi al-nudium al-awaii, Cairo 1380, i. 183). Another tradition reports that Djurhum were driven out through a joint action of Bakr b. 'Ahd Manat of Kināna and the Banū <u>Gh</u>ub<u>sh</u>ān of <u>Kh</u>uzā'a (al-Fāsī, Shift, i, 370; "Bakr b. 'Abd Manat of Khuza'a", as recorded in the article Diurnum above is an error).

These stories allotting exceptionally long lives to the rulers of Djurhum and Khuza'a have the character of folk-tradition in which were embedded elements of mucammarin-tales, edifying stories about righteous and pious men (see e.g. the story of Waki' b. Salama of Iyad and his servant Hazwara, in al-Fast, Shifa', ii, 26, and Muhammad b. Habīb, al-Munammak, 346-7), accounts of battles and clashes in the popular style of the ayyam al-carab, and recollections of legends about in migrations of tribes caused by a dam breaking in South Arabia. The tradition focuses around the person of 'Amr b. Lubayy, almost unanimously putting on him the blame for the wicked innovations in the faith of Abraham and for the introduction of idol-worship, especially that of Hubal, into Mecca. There is, however, a contradictory tradition asserting that it was Khuzayma b. Mudrika, of the ancestors of Kuraysh, who introduced the worship of Hubal and stating that Hubal was consequently called "Hubal Khuzayma" (al-Baladhuri, Ansab, i, 37, no. 77; al-Fasi, Shi/a2, ii, 51 int.). As in the case of Iyad, some traditions mention among the Khuza'a a komo religiosus. Abu Kabaha, who in his search after the true religion worshipped Sirius. The unbelievers used to refer to the Prophet as Ibn Abi Kabsha in the early period of his prophethood, pointing out his deviation from the current beliefs of his people. (Muhammad b. Habib, al-Muhabbar, ed. I. Lichtenstaedter, Hyderabad 1361/1942, 129; 'All b. Burhan al-Din al-Halabi, Insan al-uyan fi strat alamin al-ma'mūn (= al-Sira al-halabiyya), Cairo 1382/ 1962, i, 333; al-Balāghuri, Ansdb, i, 91, 327; al-Suyūtī, al-Durr al-manthur, Cairo 1314, vi, 131; al-Kurtubi, Ta/sir, 1387/1967, xvii, 119; al-Makriei, Imta' al-asma', ed. Mahmud Shakir, Cairo 1941, i. 77. 158; al-Kāzarūnī, Sirat al-nabī, Ms. B.M. Add. 1490. fol. 2312-b, 'Abd al-Salam Hardn, ed., Nauddir elmakhiatat, Cairo 1370/1951, i, 🚃 (al-Fayrūzābādhi, Tuhfat al-abih fimon nusiba itá ghayri abih).

These conflicting and contradictory stories to indicate that the formation of the tribe of Khuza'a took place over a long period of time, ramifying into various tribal units. The main area of abode of the tribe was between Mecca and Medina.

When Kuşayy arrived in Meoca aiming to gain control of the city, he had to subdue the ruling Bakr b. 'Abd Manāt of Kināna, the Khuzā'a and their abettors, the Sūla. The different stories about the enigmatic Kuşayy resemble in their outline the stories about the former rulers of Mecca; his marriage with Kubbā mail Hulayl b. Hubshiyya gave legitimacy to his custodianship of the Ka'ba, Another manner of

KHUZĀGA

legitimisation, was tale of how this office was purchased by Kupayy for a goat's skin of wine from the drunken Abū Ghubshān, is recounted in the compilations of proverbs and stories of fools (al-'Askarl, Diamharat al-amthal, ed. Muhammad Abu 'l-Fadl Ibrāhim and 'Abd al-Madiid Kaţāmish, Cairo 1384/ 1964, i, 387, no. 585; Hamas al-Isfahānī, al-Durra alfahhira fi 'l-amthal al-sa'ira, ed. 'Abd al-Madild Katamish, Cairo 1972, I, 139, no. 126; al-Thatalibi, Things al-hulib, ed. Abu 'l-Fadl Ibrahim, Cairo 1384/ 1965, 135, 11 190; al-Maydani, Madimat al-amthal, ed. Muhyi 'l-Din 'Abd al-Hamid, Cairo 1379/1959, i, 116, no. 1167; Ibn al-Diawal, A hhor al-hamha, Beirut, n.d., 42). The court of Abū Ghubshān (dār Abī Ghubshin) was extant in Mecca in the second half of the 3rd century of the Hidjea (al-Pakihi, Tarikk Makka, Ms. Leiden, or. 463, fol. 456b, L15). Like the preceding rulers, he fought, according to another count, the two tribes Bakr b. 'Abd Manat and Khuza'a and crushed their power. His wife Hubba revealed, as in the story of lyad, the place where the pillar with the Black Stone was buried, and so the true worship of the Ka'ba could be resumed (al-Fåsl, 54 ifa', il. 73; al-Nuwayri, Nikayat al-arab, Cairo 1374/1955, avi, 31). The relations between Kusayy on the side and the Bakr b. 'Abd Manat and Khuza'a on the other were settled on the basis of the judgment of the arbiter Yasmar b. 'Awf of the Bake b. 'Abd Manat, called al-Shuddakh. The verdict granted Kusayy the custodianship of the Karba and provided that Khuza'a should be left in the area of the haram (Ibn al-Kalbi, Djomhero, fols. 518, inf .- 51b, sup.).

In the new regime set up by Kuşayy, in which the scattered tribal units of Kuraysh were gathered and settled in Mecca, the groups of Khuza'a played an important role in strengthening the power of Mecca, aiding Kuraysh to extend their influence among the tribes. Khuzara was included in the organisation of the Hums. Two tribal groups of Khura'a, the Mustalik and Haya, we included in the organisation of the Ahabish, the allies of Kuraysh (see e.g. Ibn Kutayba, al-Ma'ani 'l-Kabir, Hyderabad 1368/1949, 998, l. 4; Muhammad b. Habib, al-Muhabbar, 178; al-Häzimi, al-l'tibār fi-bayān al-nāsi<u>kh</u> wa 'l-mansü<u>kh</u> min al-athar, Hyderabad 1359, 150; Ibn al-Kalbi, Diamhara, fols. 48b-49a sup.; al-Fāsī, Shifa', ii, 41; Yākūt, s.v. Makka; al-Bakri, Mu'djam mā 'sla'djam, ed. al-Sakkā, Cairo 1364/1945, 245; Ibn al-Faklh, al-Buldan, ed. de Goeje, Leiden 1865, 18). Together with Mudari tribes, Khuzā'a worshipped al-'Uzzā and Manat; together with the Daws they worshipped Dhu 'l-Kaffayn (Yākūt, s.v. Manāt; Ibn 'Arabī, Muḥādarat al-abrar, Beirut 1388/1968, i. 415; Ps. Asme'l, al-Shimil, the section Tamarikh al-anbiva', Ms. B.M. Or. 1493, fol. 272; Muhammad b. Habib, al-Muhabbar, 318). The involvement of Khuza'a and Bakr b. 'Abd Manat in the affairs of Mecca and their influence can be gauged from the story about the agreement between Kuraysh and Thakii concerning the mutual rights of these two tribes to enter Mecca and Wadidi: the Thakit complied with the demands of Kuraysh. fearing the strength of Kuraysh, Khuza'a and the Bake b. Abd Manat (Muhammad b. Habib, al-Минатикаф, 280).

The considerable number of names of Khura's married by Kurashis recorded in the sources bears evidence of the close relations between Kuraysh and Khura's Indeed, when Khura's decided to ally thenselves with 'Abd al-Muttalib, they stressed that he was "borne" by Khura's women (fa-kad waladnéks). In the same style the Khura's 'Amr b. Salim addressed the Prophet with the words kad kuntum

waladan wahunnd walidd when he came asking his help against the Banu Bake and Kuraysh (Ibn Sayyid al-Nāz, "Uyūn al-athar fi funūn al-maghāsi wa'lghamā'ii = "1-siyar, Cairo 1356, ii, 164-5, 182).

When the Prophet and on his hidgen to Median he met, according to one tradition, Burayda b. al-Hueavb al-Aslam! [q.v.] with a large group of his people; he and his people embraced Islam and prayed behind the Prophet. These Aslam, a branch of Khuza'a, allied themselves very early to the Prophet and warriors of Aslam took part on the side of the Prophet in his campaign. The agreements of the Prophet with Aslam (see Hamidullah, Madimulai al-wathdlik alsiyasiyya li 'l-'ahd al-nabawl wa 'l-khilafa al-rashida, Cairo 1376/1956, 191-4, mm 165-70) bear evidence to the friendly relations between the Prophet and Aslam. After the murder of the people of the expedition of BPr Marana [q.v.], the Prophet invoked God's blessing for Aslum (ww-Aslam sälamahā Allāhu; al-Wäkidi, al-Maghāsī, ed. Marsden Jones, Oxford 1966. 350). When the Prophet mobilised the forces for the conquest of Mecca he summoned the Asiam, who dwelt in the neighbourhood of Medina, to present themseives in Medina. In fact, 400 warriors of Aslam, among them 30 riders, took part in the conquest of Meoca. The two standard bearers ____ Burayda b. al-Huşayb and Nādijiya b. al-A'dijam of Aslam (al-Fast, Shift, it, 123; Ibn Hadjar, al-198be, ed. All-Muhammad al-Bidiawi, Cairo 1392/1972, vi, 398, no. 8647; al-Wāķidī, 799-800). Aslam, along with Ghifār, Muzayna and Djuhayna, were pointed out by the Prophet = surpassing in virtues the mighty tribes of Tamim, Asad, 'Amir b. Şa'sa'a and Ghatafan (al-Kastallani, Irsadd af-sdri, Cairo 1327, vi, 11-13; Ibn Hadjar, Fath al-bart, Cairo 1301, vi, 395-7). Commentators of hadith are unanimous in saying that this high position was granted to them because they hurried to embrace Islam.

The attitude of the Mustalik, another branch of Khuza's allied with the Band Mudlidi of Kinana and included in the Ahabish organisation linked with Kuraysh, was however quite different towards the Muslim commonwealth of Medina. Their leader, al-Harith b. Ahi Dirar, gathered the forces of his tribe for an attack against Medina. The forces of the Prophet attacked the Mustalik at Murayst' in 5/627, defeated them and took captives and booty. The Prophet married the captured daughter of the leader.

Djuwayriyya (al-Wāķidi, 404-13).

Another branch of Khuza'a, the Ka'b b. 'Ame, played a decisive role in the struggle between Mecca and the Prophet. The dissensions and clashes between the Kath and their neighbours, the Bake b. 'Abd Manat, led the Kath b. 'Amr to opt for an alliance with the Prophet in the pact of al-Hudaybiyya, whereas the Bakr b. 'Abd Manat allied themselves with Mecca. A group of the Bakr b. 'Abd Mankt aided clandestinely by some leaders of Kuraysh attacked the Kath b. 'Amr at al-Wattr and killed some of them. The orator of the Kab, 'Amr b. Salim, appeared at the court of the Prophet in Medius and addressed him, reminding him of the alliance of the Ka'b with 'Abd al-Muttalib, pointing out the killing of the Ka% at al-Watir, and urging him me revenge his ailies. The Prophet responded and promised aid for victory (masta). The request **II** a man from the 'Adl b. Amr, the brothren of Kato b. 'Amr, to included in the promise was answered by the Prophet's remark that Kab and Adi are one corporate body (see kal Adiyyun illä Ka'b wa-Ka'bun 🔤 'Adl: Nür al-Din al-Haythami, Madima' al-sowd'id, Beirut 1967, vi, 164; Ibn al-Bakkāt, al-Famē id al-mentahāt, Ms. Zāhiriyya

KHUZÂſA

madima'a, 60, fol. 85b; al-Tabarani, al-Mu'diam alsaghir, od. 'Abd al-Rahman Muhammad 'Uthman, Cairo 1388/1968, ii, 73-5). It is evident that the tendency of this tradition is to establish the position of the 'Adl b. 'Amr in the Prophet's invocation and to stress their role in the expedition against Mecca. Whether the Ka'o b. 'Amr were already Muslims when they applied for help is disputed by scholars (Ibn Sayyid al-Nas, ii, 182, penuit, says that they were unbelievers; al-Kala'l, al-Iktifa', ed. Mustafa 'Abd al-Wabid, Cairo 1389/1970, ii, 288, that they were Muslims; and see Ibn Hisham, op. cit., iv, 36, a. 4). According to some commentators of the Kur'an, vv. 13-15 of Surat al-Tawba ordering fighting against the people who had broken their solemn pledges (aldtuhātilāna hauman nakathā aynıdnahum . . .) were revealed in connection with the wicked attack of the Band Bakr b. 'Abd Manat against the Ka'b b. 'Amr (al-Tabart, Tajste, ed. Shakir, Calto 1958, xiv, 158-62 (nos. 16535-16547); al-Suyuti, al-Dure al-manthur, iil, 214-15; idem, Lubab al-nubal, Cairo 1373/1954, 114; al-Kurtubi, Tafsie, vill, 86-7; al-Farra', Ma'ani i-Kur'ān, ed. Ahmad Yūsuf al-Nadjātī and Muhammad *All al-Nadidiār, Cairo 1374/1955, i, 425).

When the Prophet went against Mocca, was joined by the tribesmen of Kath who stayed in Medina; the main troop of Ka'b joined the forces of the Prophet in Kudayd. The troop of the Kab, numbering 500 warriors, had three standards corried by Bust b. Sufyan, Abu Shurayh (Ibn 'Asakir, Ta'siki, Damascus 1349, vi, 400; Ibn Sa'd, Tabakii, Beirut 1377/1957, iv, 294-5; al-Wakidi, Box ["Ibo Shurayh" in ibid. Lz is an error]) and 'Amr b. Sällm. It is noteworthy that the Prophet permitted the Ka® to fight the Bakr b. Abd Manat in Mecca for some additional bours after he had ordered all other troops to stop fighting (see shid, 839, al-Makrizi, op. cit., i, 388; al-Fasi, Shifa', ii, 144, al-Harimi, al-l'tibar, 153; 'All b. Burhan al-Din, op. cit., iii, 97 inf.). It may be remarked that a group of the Bakr b. 'Abd Manat hasted to join the forces of the Prophet. When Abû Sufyan looked at the marching troops of the Prophet and noticed the force of the Bakr he remarked sadly "By God, they are an inauspicious people; because of them Muhammad raided us" (al-Wāķidī, 820; Ibn "Asākir, vi, 401).

The meritorious attitude of Khuza'a towards the Prophet is fairly reflected in Muslim tradition. The Prophet is said to have stated that Khuza'a was intimately linked with him. (Khuzd'atu minel wa-and minkum; Khuzā'atu l-wālidu wa-anā 'l-waladu: see, e.g. al-Daylami, Firdaws al-a<u>kh</u>bār, Ms. Chester Beatty 3037, fol. 78b; 'Alt b. Burhan al-Din, iii, 83; al-Muttakl al-Hindl, Kans al-Jummal, Hyderabad 1385/1965, Xiii, 55, no. 316). The Kur'an is said to have been revealed to the Prophet in the dialect (lugga) of the two Kabs, Kab b, Lugayy and Kab b. Amr b. Luhayy, because they shared the same abode (al-Fast, Shiff?, II, 55; Ibn 'Abd al-Barr, al-Inbid, 99). A special privilege granted by the Prophet to Khuzara was that he awarded them the rank of muhādi wan, permitting them to stay in their abode (ibid., 100). It was a Khuza'l, Tamim b. Usayd, whom the Prophet entrusted with the restoration of the border-marking stones (angáb) of the haram of Necca. (Mughaltay, el-Zahr al-basim fl strat Abi 'l-Kasim, Ma. Leiden, Or. 370, fol. 319a, inf.-319b; al-Fast, n/-'Ibd al-thamin, ed. Fu'ad Sayyid, Cairo 1383/1964, lii, 387, no. 861).

The leader III the Kab, Busr b. Sutyan, according to one tradition, was appointed by the Prophet as the tax-collector of the Kab. In 9/630 they were prevented from handing over their taxes by groups of the Banu 'L-Anbar and Banu 'l-Hudjaym ("Ibn al-Utayr" and "Banu Djuhaym" in al-Wakidi, 974 are errors) of Tamim; against those two Tamim; groups the Prophet seat at troop commanded by 'Uyayna b, Bisn (al-Wāķidi, 974 f.). In the account it is emphasised that the Kab were believers, paying the sadda willingly. A special tax-collector was sent to the other branch of Khuzā'a, the Banū Mustalik (Ibn Sa'd, iii, 440 inf.).

'Umar b. al-Khattab used to carry the diude of Khuza'a to Kudayd and distributed there payments to the people of the tribe (al-Baladhuri, Futuh albuldan, ed. 'Abd Allah and 'Umar al-Tabba', Behrut

1377/1957, 634; Ibn Sard, iii, 298).

Khuzā's warriors participated in the conquests of Islam and groups of Khuzā's settled in the various provinces of the Arab empire. Some people of Khuzā's took part in the revolt against 'Uhmān in Medina (Ibn 'Abd Rabbihi, al-'Ikā al-farid, ed. Ahmad Amlu, Ahmad al-Zayn, Ibrāhim al-Abyāri, Cairo 1381/1962, iv, 300, 1.19). Some groups of Khuzā'a joined 'Ali and fought on his side in the battle of Siffin, and some Khuzā'is in Khurāsān were among the 'Abbāsid agents who naved the way for the new dynasty.

AL-KHUZAMA (A.) "laveader" has for a long time been considered as the origin of the name of Alhucemas, on the coast of the Ril of Morocco, and this etymology is still given # EP (art. Alkuchmas). Since the problem raised by this toponym and not vet been satisfactorily resolved, and since moreover Alhucemas has now, since Morocco's achievement of independence, been "arabised" to al-Husayma, it is under AL-HUSAYMA that m article on the place will be found in the Supplement.

KHÖZISTÄN, a province of south-western Persia, and the land of the Hüz/Hüz/Khüz (Hussi/ Kussi), the Ookoot/Uxil of Strabo and Pliny. The province of Khūzistān corresponds more or less to the ancient Elam and to the classical Susiana, and the names of its present capital. Ahwaz fo.v.l. its ancient capital, Susa [a.v.], and the town of Hawiza [a.v.], all reflect the name of its inhabitants in Elamite times.

Essentially, the province consists of aliuvial fans formed by the Karkha and the Karon [40.0.] rivers and situated between the Zagros mountains and the sea; near the Persian Gulf, partially saline mudilats merge into a zone of tidal marshes, and the coastline is pierced by deep tidal estuaries known as Ahor. The province is bounded - the by the Irano-Traki border; on the north by Laristan [q.v.]; on the south by the Persian Gulf; and on the east by the river Hindiyan - Hindidian. The chief towns are: Ābādān (see 'Annāpān); Ahwāz [q.v.]; Khurramshahr [q.e.]; Dasht Mishan; Diefül; and Shushtar [see SHUSTAR]. The population of the province (1,614,576 = 1966) is mainly hybrid Arab-Persian.

The climate of Khuzistan is not and, in summer, so humid that water drips from the trees. Both the Greek and Muslim geographers speak eloquently of the heat. Strabo, quoting an unknown source (Nearchos?), says that in Susa at mid-day lizards and snakes could not cross the streets quickly enough to avoid being frizzled, and that barley spread out in the sun jumped as though it had been placed in an oven (Geography, xv.j.10). There was general agreement that snow rarely fell in Khūzistān, and water rarely froze. The great heat is accounted for by: (1) the lack of elevation (average altitude in southern Khūzistān = 10 metres/32.80 feet, rising to 100 metres/328 feet in central Khūzistān); (2) the southerly inclination of the land, which exposes it to the maximum effect of the sun's rays; (3) the hot winds in summer from the Syrian desert and Arabia; (4) the clayey nature of the soil, which retains the heat; (5) the lack of open water, snow-covered mountains or forests to the west to moderate the heat of westerly winds. Because of its climate, Khūzistān did not bave segood reputation as a place in which to live; the Hudad al-Alam, tr. Minorsky, 130, describes the people of Ahwaz as "yellow-faced", and quotes a popular belief that "whoever establishes himself in Abwaz becomes wanting III brains, and every aroma that is carried there loses its scept in account of the elimate". Despite this, the province was noted for a perfume manufactured there from violets (B. Spuler, Iran in früh-islamischer Zeit, Wiesbaden 1952, 389).

Despite the disadvantages of its climate, Khūzistan from earliest times was noted for prosperity. Unlike the regions of the Iranian plateau, Khûzistan has never lacked for water, which is provided in abundance by the Karkha. Diz and Kartin rivers and their tributaries. The province was the breadbasket of the Achaemenid empire. Strabo states that "Susia abounds me exceedingly in grain that barley and wheat regularly produce one hundredfold, and sometimes two hundredfold" (Geography, xv.3.11). In Sasanid times, extensive urban settlements, and cultivated lands watered by large-scale irrigation works. were protected from the destructive raids of the bedouin by a defensive ditch known as khandak Sabar. In the 4th/10th century, Khūtistān had a monopoly of the sale of cane-sugar throughout Iran, Trak-i 'Arab and Arabia. Other important crops included citrus fruits, dates, melons, cotton and rice. The waters of the Persian Gulf provided abundant fish. The other basis of the province's prosperity was trade; from early times, Ahwaz had been the centre of an important road network and a recognised crossing-place on the river Kārun.

Under the two great pre-Islamic Iranian empires, that of the Achaemenids and that of the Sasanids. Kliuzistan was firmly under the control of the central government. To the Achaemenids, it was the province of Uvaja, and Susa was the administrative capital of the empire; for the Sāsānids, it formed part of the "super-province" (pddhehos) of Nem-roz (the South), and and divided into seven karas. In 12/638 the Muslim Arabs, after a reconnaissance raid across the Kārūo, launched a major attack on Khūzistān under 'Utba, captured Ahwaz, and completed the subjugation of the province by 19/640. In the 3rd/9th century Khūzistān, and particularly the city of Ahwaz, suffered as = result of the Zandi [q.v.] rebellion, and considerable damage was done to the irrigation systems. During the succeeding four centuries. Khūzistān was governed in turn by the Būyida [see sowaystos], the Saldjüka [q.e.] and the likhanida

[q.v.].

Is the 9th/15th century, following a onslaughts of Timur on the Iranian world, a local Arab Shin dynasty, the Musha'sha' [q.v.], established itself at Hawka, on the old course of the Karkha river the western edge of Khūzistān, and enjoyed about seventy years of independence. In 924/2508, however, Shāh Ismā'll Şafawi (see 15MA'll. 1), after his capture of Baghdad, occupied Hawiza, Dizful and Shushtar, and received the submission of the Musha sha aultana. Like the rulers of other petty states along the Ottoman-Safawid border during the 10th/16th to 12th/ 18th centuries, the Musharshar sulfans played one side off against the other, often very much to their own advantage. As a consequence of Musha shar rule, the western portion of Khūzistān became known, from early Safawid times, as 'Arabistan. In later Safawid times, the title of "mali of 'Arabistan" was conferred on the Musha'sha' sullans. In the Salawid administrative system, the walls were the highest in rank of the four categories of umera-yi sarhadd, or "amirs of the murches", and, of the four walks, the first in rank me the malf of 'Arabistan, who was "higher and more honoured than his colleagues, on account of his belonging to a sayyid family, his valour and the number of his tribes" (Tadhkiras almulah, tr. Minorsky, London 1943, 44). When the Afghans invaded Iran in \$135/1722, the Musha'sha' sulfans threw in their lot with the invaders. In 2140/ 1727 Khüzistän em temporarily occupied by the Ottomans, but in xx42/x729 Nådir Khan Afshår (see whom ggin) reoccupied the province and made the Musha'sha' sulfans his vassals.

In the course of the 18th and 19th centuries, the Musha'sha' dynasty steadily lost ground to Arab tribesmen of the Banu Ka'b and Banu Lam (eq.v.). The former had begun to migrate in large numbers from central and southern Arabia into southern Mesopotamia and southwestern Iran during the 11th/17th century; at the height of their power, in the latter part of the x2th/x8th century, their sway extended from Başra to Bibbihān (in the province of Fars, just east of the Khūzistān border). The Banû Lâm were nomads inhabiting regions along the lower course of the Tigris, was between 1788 and 1846 some 17,450 families from this tribe moved into Iranian territory. These immigrants lived a life that was neither completely settled **m** truly nomadic, but gradually a sedentary way of life became the norm. The Band Kach not only intermerried with Iranians, but adopted Shifism, and wore a compromise style of dress consisting of Persian tunic and trousers under an Arab fabd?. Still later Arab arrivals, however, the Muntafik [q.v.], who in 1812 migrated to Hawiza and ousted the Ka'b from that area, have remained Sunnls. As a result of this great influx of Arabs, the name of 'Arabistan was, by the 19th century, usually applied to the province as a whole. In the 19th century, control of the province virtually passed from the hands of the central government into those of the shayahs of Muhammara (Khurramshahr), and it was not until 1925 that Rida Shah Pahlawi [q.v.] overthrew the Shaykh of Muhammara and restored the proper name of Khüzistän.

After the collapse of the Safawid dynasty (1135) 1722), the prosperity of Khūzistān sharply declined. A number of factors seem to have been involved; (1) hostility between Iranian and Arab elements; (2) the extensive damage to agriculture and to the settled communities caused by both the recent Arab immigrants and by the indigenous transhumant tribes like the Lurs and Bakhtiyarls (A. K. S. Lambton, Landlord and prasant in Persia, Oxford 1953, 157-8); (3) the constant raiding of trade caravans by the Banu Lam; (4) the breakdown of the authority of the central government, which led to general neglect and maladministration, and the instability caused by frequent changes of governors; (5) oppression by taxcollectors. In some areas the Arab shayah levied taxes five or six times a year (Lambton, op. cit., 292). It was only after the discovery of oil at Masdild's Sulayman in Khūzistān in 1908 that the economy of the province began slowly to recover, and this trend was accelerated by the completion of the Trans-Iranian Railway in 1938; the line ran through Ahwaz, and its southern terminal was Bandar-i Shahpur.

In the last twenty years, Khūzistān's prosperity has increased exponentially. Many large oilfields are connected by road and pipeline with the relinery at Abadan and with the terminal at Bandar-i Mahshahr (formerly Bandar-i Ma'shūr). Abadan, a virtually uninhabited site fifty years ago, is now Iran's fifth city (estimated population, 1975, 320,000). In 1961, the deep-water tanker terminal on Kharg Island was opened. The construction of the massive Muhammad Rida Pahlawi dam on the Diz river (1962) has not only provided the province with hydro-electricity but with water for the large-scale development of marketgardening and other agricultural projects, including the resumption of the cultivation of sugar-cane; other dams are planned. Khurramshahr is now one of Iran's principal ports-of-entry on the Persian Gulf. More recently, the development of the natural gas industry has taken place III large scale; in 1973, 8.7 billion cu. m. of natural gas were exported to the U.S.S.R. The petrochemical industry is expanding at a great rate. The rapidly developing Djundishaphr University III Ahwaz now has over 2,000 students. The words of the author of the Hudad at falam, written one thousand years ago, now once again hold true: "This province is more prosperous than any province adjoining it. Great rivers and running waters are found in it. Its countryside is flourishing and its mountains are full of utility" (120-30).

Bagiey, A bright future after oil: dams and agro-industry in Khuzistan, in Middle East (R. M. SAVORY) Jual., xxx/1 (1976), 25-35. KHVARSHI (self-designation, Kedaes hikwa, Khuani, Khvarshal; in Russtan, Khvarshintsl) an ethnic group in the Caucasus whose language forms, with Bezheta, Ginukh, Dido and Khunzal

According to the 1926 Soviet cansus, there were 1,019 ethnic Khvarshis, of whom 1,018 gave Khvarshis as their maternal tongue. They formerly lived in five asis (including Khvarsh) and Inkhorari) on the upper course of the Ori-Tskalis, a southern affluent of the Andi-Koysu in the south-west of the Bagulal district of the Däghistän ASSR; in 1944, they were resettled in the district of Vedeno in that republic. They lived originally in an isolated region of high mountains, which long preserved them from any marked degree of outside influence and allowed them to retain their patriarchal customs. They are Summis the Shāfifī kegal school.

[qq.v.] the Dido division of the Avar-Andi-Dido group

of the north-eastern There-Caucasian languages.

Their traditional coonomy was based steeprearing, with a system of transhumance, and also on terraced agriculture and various crafts; their presentday economy is essentially similar, with the added element of cattle-rearing.

Marshi is purely a vernacular language; Avar is used as the first literary language, and also as the second (sometimes first) spoken language, since it is used in the medium for primary education. Russian is the second literary language. Both linguistically and culturally, the Khvarshis are now being assimilated to the Avars [see further avar, pagetstak, dido, at-sark].

KIBLA, the direction of Mecca (or, to be exact, of the Kaba or the point between the missb or water-spout and the western corner of it), towards which the worshipper must direct himself for prayer.

1 .- RITUAL AND LEGAL ASPECTS

From very early times the direction | prayer and divine service for the worshippers was not a matter of choice among the Semitic peoples. There already an allusion to this in I Rings, vili, 44 and it is recorded of Daniel (Dan., vi, xx) that he offered prayer three times a day in the direction of Jerusalem (which has remained the Jewish bible to this day). As is evident from the names of the quarters of the heavens. the whole life of the Semitic peoples was turned eastwards. The Essenes prayed in the direction of the rising sun and the Syriac Christians also turned eastwards at prayer (Ancient Syrias documents, ed. Cureton, 24, 60; Asia martyrum occid., ed. Assemani, il, 125). It may therefore very well be assumed in agreement with the tradition that Muhammad appointed a fible at the man time in he instituted the solds. It is certain that in the period immediately following the hidira the direction taken by I Jews was also used by the Muslims. Tradition places the alteration in the bible to 16 or 17 months after the hidges, in Radish or Shaban of the year 2, probably rightly, for in this period we have the important change in Muhammad's attitude to the Jews. Disappointed at the slight success of his preaching among the Jews Yathrib, he began to turn more and more to the old Arabian tradition and make the religion of Ibrahim the basis of all monotheistic religions. The Kacba brought into prominence as a religious centre and the kadidi began to be talked of as a Muslim rite. At the same time a beginning was made with the eviction of the Jewish tribes of Yathrib. The alteration in the kible is a not unimportant fact in this series of events and this train of thought. The Kur'an verses, II, 136 ff., refer to this: "What has induced them to abandon their former gible? Say: to Allah belongs the east and the west. He guides whomsoever he pleaseth unto the right path ... We only appointed your previous kible to distinguish him who follows the Prophet from him who turns back on his heels . . . Turn then thy face toward the holy masdid; turn your face | it wherever you are".

The importance placed by Muhammad himself upon the change is clear from these words. It is not necessary to with the tradition that it was brought about by scornful remarks of the Jews regarding bluhammad's dependence in the prescriptions of their religion (so Tabari, l. 1280). In other traditions, the new kible is represented as that of Ibrahim (Tabari, Tajsie, i. 378, ii. 13). Here we have a glimmering of the real truth III the matter, namely the connection with Muhammad's new politicoreligious attitude. According to one tradition (Bukhāri, Saldt, bdb 32; Tajstr, Sūra II, bdb 14) the revelation of the above quoted from the Kur'an was communicated to the believers in the morning saids in Kuba'; according to another story Muhammad had with a pertion of the community performed two rak'ss of the rake prayer in a mosque of the Banû Salima, when he turned round to the direction of Mecca (Baydawi, - Sura II, 139). The mosque received the name of margid al-biblatays, "the mosque of the two kiblas"

If it may then considered established that Muhammad and his community turned towards Jarusalem at the saids during the early years of the highen, the question still remains, what was his bible before

the hidira? In Tradition two answers are given to this question and a third deduced by harmonising the other two. According to one, Muhammad in Mecca observed the hole to the Kaha (Tabari, Tafele, ii, 4; Baydawi, on Sura II, 138); according m the other story the bibis had always been Jerusalem (Tabart, Tafsir, ii, 3, 8, Annales, i, 1280; Baladhurt, Putik, 2); according to the third (Ibn Hisham, 190, 228) Muhammad in Mocca was careful m have the Katha and Jerusalem in a straight line to front of him at the salar. The first view is influenced by the theory of the "religion of Ibrahlm" for al-Tibrizi also makes 'Abd al-Muttallb already know that Ibrahim anpointed the Kaba as hible (Hamasa, 1, 125). If the second opinion had not an historical basis, one does not quite understand how it could have arisen, for Tradition does not like to acknowledge Muhammad's dependence on Jewish practice. This view therefore to be the most probable. It is further mentioned as a distinguishing peculiarity of Bara' b. Matrur that even in the period before the hidira he would not turn his back on the Kaba (Ibn Hisham 294); this tradition would lose its point if the old sible had been in the direction of the Kacha. Besides these traditional views, others have been put forward in recent years. According to Tor Andree, Der Ursprung des Islams und das Christenium, Uppsala and Stockholm 1926, 4 (cf. Buhl, Mohammed's liv, 212) the original bible was to the east. Andree bases his view not on the material of Tradition but me the general agreement between early Muslim and Christian religious usages. Schwally said that the Jerusalem hible was introduced into Mesca, perhaps ... a Jewish-Christian institution (Geschichte des Queans, i. 175, note k).

The direction of the hoble was, or is, not assumed at the salls only and with the points of the toes (Bukhārī, Salāt, as as; Adhān, bāb 131; Nasān, Sāhw, bāb 25; Taibih, bāb 26), but also at the duid (Bukhārī, Da'ausāi, bāb 24), at the islid or ihrām (Bukhārī, Hadjāi, bāb 29) and after the stone-throwing at the central Djamra (Bukhārī, Hadjāi, bāb 140-2); the head of an animal to be slaughtered is turned to the bible and the dead buried with the face towards Mecca (Lane, Manners and cusioms, Paisley and London 1899; Snouek Flurgronje, Verspr. Geschr., iv/t 243; v, 409).

In the kadith it is forbidden to turn towards Mecca when relieving nature (Bukhari, Wada', bāb 11; Muslim, Tahāra, trad. 61; Nasa'i, Tahāra, bāb 18-20). On the question whether it is allowable in doing this to turn one's back to Mecca and thus in some parts of Arabia be facing Jerusalem no unanimity prevails (cf. Bukhāri, Wuda', bāb 14; Khums, bāb 4; Şalāt, bāb 29; Muslim, Tahāra, trad. 59, 61-2; Abū Dāwūd, Tahāra, 114 4); one should not expectorate in the direction of Mecca (Bukhāri, Salāt, bāb 33).

The observance of a kibla is given in old traditions along with the performance of the sakit and ritual slaughter as a criterion of the Muslim: The Prophet of God said: "The command has been given me to fight the people till they say: There is no god but Allah; when they say these words, perform our sakit and slaughter in our way, their blood will their property shall be inviolate for us", etc. (Bukhāri, Sakit, bāb 28; cf. Adāki, bāb 12). One of the terms for the orthodox community is and al-hibla we 'l-highest's. In many Muslim lands the word has become the name of a point of the compass, according to the direction in which Mecca lies; thus hible (pronounced ibla) means in Egypt and Palestine, south, whereas in the Maghrib, east.

KIBLA 83

In the mosques the direction of the salát is indicated by the militab [q.u.]; in classical hadith, this word does not occur and hible is used to mean the wall of the mosque towards which one turns. At a salát outside a mosque, a suira [q.u.] marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the hible (Lane, op. oil., 228). It should be noted that many mosques are not accurately but only approximately orientated (according to the disha, see below). It sometimes happens that this error has been later corrected by the drawing of lines or the stretching of threads. This is, for example, the many mosques of Indonesia where the faithful at the salát take their direction not from the miketh but from such indicators.

The laws relating to the kible are here given very briefly only and according to the Shafi's school as laid down in al-Shirazi's Kitab al-Tanbih (ed. Juyuboll, 20). The adoption of a kibla is a necessary condition for the validity of a soldt. Only in great danger and in a voluntary saids on a journey can it be neglected. But if one is on foot or can turn his steed round, it should be observed at the ihram, rukki and sudiad. One should turn exactly in the direction of the bible, and one who is near it can do so with certainty. According to others, when one is distant only general direction (gjiha) is obligatory. Outside of Mecca one turns towards the miledo within a mosque: when not in a mosque one follows the direction of reliable people; only a man who is in a deserted region is allowed to ascertain the direction for himself by seems of certain indications. For details of laws see the Bibliography.

ii.--ASTRONOMICAL ASPECTS

The determination of the kible was an important problem for the scientists of mediaeval Islam. Although essentially a problem of mathematical geography, the determination of the kible can also be considered as a problem of spherical astronomy. Thus most Islamic astronomical handbooks or side, of which close on 200 were compiled during the millenium beginning in 750 A.D., contain a chapter on the determination of the kible. In addition, several decan mediaeval manuals for timekeeping deal with the topic. In contrast, the number of treatises dealing specifically with the kible problem is quite few.

The hible at a given locality is m trigonometric function of the local latitude, the latitude of Mecca, and the longitude difference from Mecca. The derivation of the hible in terms of these three quantities was the most complicated of the standard problems of mediaeval Islamic spherical astronomy, and the solutions to the hible problem proposed by the leading astronomers of mediaeval Islam bear witness to the development of mathematical methods from the ard!

oth to the 8th/rath centuries and to the level of sophistication in trigonometry and computational techniques attained by these scholars. Already in the acd/oth century Muslim scholars had derived exact solutions using the construction of Greek mathematics known - the analemma (in which - various significant planes involved in a specific problem either projected or folded into a single working plane. whereupon the geometrical solution can be derived graphically or the trigonometric solution - be derived by plane trigonometry) or using the classical Theorem of Menelans for the complete spherical quadrilateral. Later bible methods included trigonometric solutions based on projection methods or on the simpler corollaries of the Theorem of Menclaces. Certain Muslim astronomers contented themselves with approximate solutions, which were adequate for practical purposes. The final mathematical solution to the kibbs problem was the table compiled by the 8th/zath century astronomer al-Khalill, displaying the hible for all latitudes and longitudes.

The mathematical problem

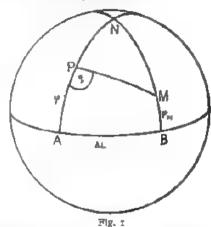

Fig. 1 shows a locality P and Mecca M on the terrestrial surface. The point N. represents the north pole, and the meridians at P and M are shown NPA and NMB, where A and B lie on the equator. In mathematical terms the kible at P is defined by the direction of the great circle through P and M. In mediaeval Arabic the angle | between the arc PM and the local meridian NPS was called inhiral alkibla, and the complementary angle between PM and the east-west line through P was called same al-kiblo. If m and our denote the latitudes of the locality and of Mecca (- PA nd MB), and A L denotes their longitude difference (= AB), then a is a function of ϕ , $\phi_{\rm M}$, and Δ L, and can be determined by spherical trigonometry. The modern formula, which can be derived from an application of the apherical con-

$$q = \cot^{-1} \frac{\sin \phi \cos \Delta L - \cos \phi \tan \omega}{\sin \Delta L}$$
.

tangent rule to ANPM, is:

The exact solutions proposed by the mediaeval astronomers we less direct but ultimately equivalent to this,

Although the problem of determining the fible is a problem of mathematical geography, it is mathematically equivalent to the astronomical problem of determining the azimuth m direction of m calestial body with given declination for a given hour-angle, and as such it was usually treated by the mediaeval

84 KTB1..4

astronomers. Indeed, the bible problem may be transferred to 000 celestial sphere simply by considering the zenith of Mecca rather than Mecca.

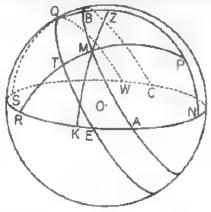

Fig. 2

Fig. 2 shows the zenith of Mecca M on the celestial sphere for a locality O. The local horizon is NESW and the local meridian is NPZS. EQW is the celestial squator, P is the celestial pole, and ABC is the day-circle of M. PMTR is the meridian of Mecca. Now:

$$PN = \varphi$$
, $MT = \varphi_M$, and $QT = \Delta L$,

and the problem is to determine the azimuth of M measured from the meridian by the arc SK = q. Most mediaeval methods involve first finding the altitude of the zenith of Mecca above the local horizon, measured by the are MK - h. This is equivalent to finding the complement of the distance between the two localities. Thus the problem of determining q (p, qu, \DL) is mathematically equivalent to determining the azimuth $= (\varphi, \delta, t)$ of a celestial body with declination & (measured by MT) when the hour angle is t (measured by QT) and the local latitude is ϕ (measured by PN). Indeed, several Islamic kibla methods state simply that if one faces the san on the day when the solar declination is $\phi_{\mathbf{m}}$ at the time when the hour-angle is ΔL (before or after midday, according as the locality is west or east of Mecca), then one is facing Mecca.

In the sequel a selection of methods is presented to illustrate the variety and sophistication of of the few mediaeval kibia determinations that have been investigated modern times. The notation has been modified order to relate to that used in Fig. 2. For the details of the original constructions the reader is referred to the secondary literature listed in the bibliography. Those methods that are trigonometric in character are represented by means of trigonometric equations; in the original texts the relations written out in words. The capital notation for trigonometric functions denotes that they are to a base other than unity; thus, for example, Sin $\theta = R \sin \theta$ where R is generally 60 and occasionally, in the case of works following the Indian-Sasanid tradition, 150. Likewise Cos 0 = R cos θ , Vers $\theta \Rightarrow \mathbb{R}$ vers $\theta = R (t - \cos \theta)$, etc. The radius of the celestial sphere is taken to III R.

The trigonometric procedures outlined by the Muslim astronomers can also be performed geometrically using a grid of the kind which occurs on the circular instruments known in mediaeval Arabic as al-dusifir and al-shakkisiyys, or the related quadrants known as al-rub' al-mudjeyysb and rub' al-shakkisiyys. Most Islamic treatises on these instru-

ments contain a chapter on the determination of the kible.

A pproximate solutions

A popular approximate method for determining the \$i0ls which occurs in the \$Zigi of the Syrian astronomer al-Battani (fl. Rakka, cs. 297/910) and in several unsophisticated Islamic astronomical works such = al-Mulakkas fi 'l-hay's by al-Djaghmini (fl. Khwarazm, ? cs. 725/1325) is the following.

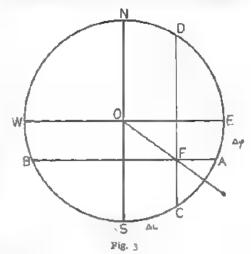

Fig. 3 shows the construction for a locality where Mecca is to the south east. Mark the cardinal directions NWSE an a horizontal circle centre O and radius R and measure arcs EA=WB=Δp=φ-p_W southwards and SC=ND=ΔL eastwards. Next draw AB and CD, and denote their point in intersection by F. Then OF defines the hible. This method is equivalent to an application of the formula

$$q = \sin^{-1} \left\{ \frac{R \sin \Delta L}{\sqrt{\sin^{3} \Delta \phi + \sin^{3} \Delta L}} \right\} =$$

$$= \tan^{-1} \left\{ \frac{R - \Delta L}{\sin \Delta \phi} \right\}.$$

Certain Muslim astronomers all used tables based on this formula and displaying values of π ($\Delta \phi$, ΔL) for each degree of both arguments from x^{o} to zo^{o} . A feature of these tables is that the entries for $\Delta \phi = \Delta L$ are all 45° O'.

Another approximate solution to the *kibla* problem is outlined in a treatise related to al-Kh "arazmi (fl. Baghdad, co. 215/830). Here the formula

$$q = \mathrm{Sin}^{-1} \left\{ \frac{\left[\frac{\mathrm{Sin} \ \Delta L \ \mathrm{Cos} \ \phi_{M}}{R}\right] R}{\sqrt{\mathrm{Sin}^{2} \ \Delta \phi \ + \left[\frac{\mathrm{Sin} \ \Delta L \ \mathrm{Cos} \ \phi_{M}}{R}\right]}} \right\},$$

with the trigonometric functions to base R=150 rather than R=60, is outlined in words. The table displaying $\mathbb{R}(\Delta \phi, \Delta L)$ that accompanies this treatise rather popular with later Muslim astronomers and exists in several manuscript copies, some of which are of Syrian, Yemeni, and Turkish provenance. Yet other approximate hibla tables based on non-trivial formulae are found in the Ashrafi sidi of the Persian astronomer Sayi-i Munadidim (fl. ca. 720/1310), the Zidi of the Persian astronomer Shams al-Munadidim al-Wäbiknawi (fl. ca. 723/1325), and

in a treatise in the quadrant by Ibu Taybughā (fl. Aleppo, ca. 751/1250).

Exact solutions

Four exact solutions to the hible problem are outlined below. The first and second illustrate the application and mathematical elegance of the analemma construction, and the way in which it can be used to derive complicated formulas of spherical trigonometry from a plane figure. The third and fourth illustrate the application and mathematical elegance of Theorem of Menelaos and its corollaries. Al-Khailli's kibls table, which is perhaps the most sophisticated trigonometric table compiled in the mediaeval period, Hinstrates the competence of an 8th/14th century scholar in the algebra of functions and computational techniques.

A geometric *hibla* construction proposed by Haba<u>sh</u> al-Hāsib (fl. Baghdād and Damascus, ca. 235/850) involves an analemma in which the working plane is considered consecutively as the meridian, equatorial, meridian, and borizon planes. Habash's method may summarised as follows (see Fig. 4). On a circle centre O and radius III mark the cardinal directions NWSE, and then draw are WQ = p, are QB = pm. and arc QT $\Rightarrow \Delta L$. Draw the diameter QOR and the parallel chord BC with midpoint G. Mark the point Ma on OT such that OMa = GC and draw the perpendicular M.M., onto BC. Next draw M.L parallel to WE and Mill parallel to SN to cut WE in I and the circle in J. Finally, construct point Ma on MaL. such that OM, = IJ and produce OM, to cut the circle at K. Then OK defines the kibla,

This construction may be explained as follows. Firstly, QOR and EGC represent the projections of the celestial equator and the day circle III the zenith of Mecca in the meridian plane. Secondly, M, represents the projection of the zenith of Mecca in the equatorial plane. If we then imagine the equatorial plane to be folded into the meridian plane, M. to Mi, which is thus the projection of the zenith of Mecca in the meridian plane. Furthermore, M,I] is the projection in this plane of the almucantar through the zenith of Mecca, whose radius is thus IJ. Also M, I and I J the distances from the zenith of Mecca to the prime vertical and to the line joining the local zenith to O, respectively. Finally, we consider the horizon plane the working plane; by virtue of the construction, Ma is the projection of the zenith of the Mecca in this plane. Thus OK defines the kibla.

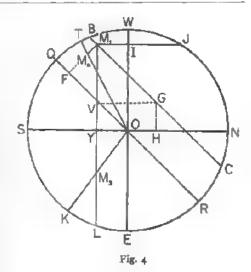

From such a geometric construction a trigonometric solution for the \$ibia problem can be derived with facility. Indeed, from the analemma construction for the \$ibia proposed by Ion al-Haytham [4.v.] fI. Cairo, d. 42c/1039: a single formula for q (φ , φ _w, L) equivalent to the modern one **m** be derived directly. Ion Yūnus [4.v.] (fI. Cairo and Fuṣṭāṭ, d. 399/1099) proposed the following trigonometric solution to the \$ibia problem. Firstly from the quantity

$$k = \operatorname{Sin}^{-1} \left\{ \frac{\operatorname{Cos} \varphi \operatorname{Cos} \Delta L}{R} \operatorname{Cos} \varphi_{M} + \operatorname{Sin} \varphi_{M} \operatorname{Sin} \varphi \right\},$$

ill then the kibls is defined by

$$= \sin^{-1} \left\{ \frac{\sin \Delta L \cos \varphi_{M}}{\cos h} \right\}.$$

Ibn Yanus offered in justification for this procedure, but his formulae can be derived from an analemma construction such as the one proposed by Habash.

If in Fig. 4 we draw the perpendiculars GH and GV from G to SN and M₁Y, then we have

$$M_1 V = \left\langle \frac{\text{Cos } \phi \text{ Cos } \Delta L \text{ Cos } \phi_{HI}}{R^4} \right\rangle,$$

since

$$M_1V = M_1G \frac{C_{05} \varphi}{P}$$

and

$$\begin{split} \mathbb{M}_1 \mathbb{G} &= \mathbb{OF} = \mathbb{OM}_1 \, \frac{\mathbb{Cos} \, \Delta L}{R} = \mathbb{GC} \, \frac{\mathbb{Cos} \, \Delta L}{R} \\ &\qquad \qquad \underbrace{\mathbb{Cos} \, \phi_M \, \mathbb{Cos} \, \Delta L}_{R} \, . \end{split}$$

Aiso

$$GH = OG \frac{Sin \, m}{R} \frac{Sin \, \phi_M \, Sin \, m}{R}$$

Furthermore, since the arc JN measures $\lambda_i = have$ $M_1Y = Sin \lambda$. But $M_1Y = MV + VV = MV + GH$. Iba Yunus' first formula follows immediately.

Next we observe that M₁Y and M₂F both measure the distance of the zenith of Mecos to the meridian and me hence equal. Thus

$$M_a Y = M_a P = OM_a \frac{Cos \Delta L}{R} \frac{Cos \phi_M Cos \Delta L}{R}$$

Also, since the arc JN measures h, and OMf is by construction equal to IJ, we have OMf = IJ = Cos h. Ibn Yūnus' second formula follows immediately, since q measures the arc SK.

Ibn Yūnus also compiled a table displaying the solar altitude in Cairo when the sun is in the azimuth of Mecca. His table gives values for each degree of solar longitude, corresponding roughly to each day of the year. Tables of this kind were contained in the main corpora of tables for timekeeping that were used in such centres as Cairo, Damascus, Jerusulem, and Istanbul, and an isolated table of this kind was compiled for the observatory at Marāgha in northwestern Persia. The solar altitude in the azimuth of Mecca is occasionally displayed graphically on the backs of astrolabes.

Al-Nayrizi (fl. Baghdad, cs. 287/900) solved the bible problem by four successive applications of the Theorem of Menchos. His solution involves finding

successively the arcs TR, SR, MK and KS in Fig. 2, m follows. Firstly, find TR using

$$\frac{\sin \square}{\sin SQ} = \frac{\sin PR}{\sin RT} \frac{\sin TE}{\sin EQ}$$

that is.

$$\frac{\sin (180^{\circ} - \varphi)}{\sin \varphi} = \frac{\sin (90^{\circ} + TR)}{\sin TR} \frac{\sin (90^{\circ} - \Delta L)}{\sin 90^{\circ}}$$

Secondly, find SR using

that is,

$$\frac{\sin 90^{\circ}}{\sin (90^{\circ} - 6)} = \frac{\sin 90^{\circ}}{\sin TR} \frac{\sin ER}{\sin 90^{\circ}}$$

whence ER and SR (= \overline{ER} = 90° \rightarrow ER). Thirdly, find MK (= k) using

that is,

$$\frac{Sin~(r80^{\circ}-\phi)}{Sin~90^{\circ}}=\frac{Sin~(90^{\circ}+TR)}{Sin~(TR+\phi_{mi})}\frac{Sin~MK}{Sin~90^{\circ}}.$$

Finally, find KS (- e) using

that is

$$\frac{\sin q}{\sin SR} = \frac{\sin 90^{\circ}}{\sin (90^{\circ} - h)} \frac{\sin (90^{\circ} - \phi_M)}{\sin (90^{\circ} + TR)}$$

Al-Birûnî [q.v.] (fl. Kh sarasm and Ghazna, d. after 442/1050) proposed several different methods for finding the kibla, based me a variety of different procedures. In his work on mathematical geography, the Takdid nihāyāt al-amākin, al-Birūni derived the longitude difference between Mecca and Ghazna mathematically using the distances between staging posts the major caravan routes, and then derived the kible at Ghazna using four different methods, including spherical trigonometry (using Menelaos' Theorem), solid geometry (using procedures equivalont to those standard in solving timekeeping problems), and the analemma. Al-Biruni's solution to the kible problem in his major astronomical work al-Kanan al-Mas'adt, compiled after the Tabeld, is more elegant than his solution by spherical trigonometry in the earlier work. It was also proposed about thirty years previously as an alternative solution by Ibn Yunus. Al-Birtini proved its correctness by spherical trigonometry. Ibn Yunus presented it algebraically with | justification, but he appears to have derived most of his formulae for spherical astronomy by projection methods rather than by spherical trigogometry. Al-Biranl's treatment of the problem illustrates the progress made by Muslim scholars in spherical trigonometry during the tenth century. Whereas his predecessor al-Nayrizi had laboriously used Menclaos' Theorem, al-Birûn! used its simpler corollaries, the spherical Sine Rule and the "Rule of Four Quantities"

Al-Birdni first outlined an algebraic procedure for finding q using four auxiliary area which we call θ_2 , θ_3 , θ_3 , and θ_4 . Since he used R - z rather than 60 his trigonometric functions are the same as the modern ones. First find θ_1 , "the distance on the day circle", thus $\sin\theta_1=\sin\Delta L\cos\theta_2$. Then find θ_L "the local latitude adjusted for the horizon (of Mecca)", using $\sin\theta_1\frac{\sin\theta_2}{\cos\theta_1}$, and θ_2 , "the correction to the latitude", using $\theta_2=\phi\theta_2$. Then find θ_4 , "the distance between the two localities", using $\cos\theta_4=\cos\theta_3$ cos θ_3 . Finally, q is given by

$$\sin q = \frac{\sin \theta_s \cos \theta_1}{\sin \theta_s}.$$

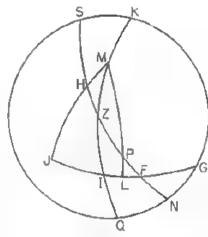

Fig. 5

Al-Biruni's justification of this procedure is equivalent to the following. In Fig. 5, which is essentially the same as the diagrams in the manuscripts of the original text, the base circle represents the horizon, with N and S the north- and south-points. The local meridian is SZPN where Z is the local tenith |m| | P is the celestial pole. M is the zenith of Meoc2 and GLJ and MPL are respectively the horizon and meridian at Mecca. ZMK is the altitude circle of M and MHJ is a great circle with F as pole. Thus PN = φ , PL = φ_R , and MPZ = ΔL , and it is required to find SK (= g). Al-Biruni observed that (by the spherical Sine Rule).

$$\frac{\sin MP}{\sin MH} = \frac{\sin \angle MHP}{\sin \angle MPH}, i.e., \frac{\cos \phi_M}{\cos \angle F} \frac{\sin \phi_0}{\sin \Delta L},$$

whence \angle F (= \angle PFL) is known. Thus \blacksquare_1 is the complement of \angle F. Similarly

$$\frac{\sin \angle P}{\sin \angle PLF} = \frac{\sin PL}{\sin PF}, \text{ i.e., } \frac{\cos \theta_1}{\sin 90} \frac{\sin \phi_{M}}{\sin PF},$$

whence PF is known.

$$\frac{\sin FZ}{\min \angle G} = \frac{\sin FH}{\sin HJ}, \text{ i.e., } \frac{\cos \theta_i}{\cos \angle G} = \frac{\sin g \circ^{\circ}}{\cos \theta_i},$$

(note that $\cos \angle G - \max \angle FGN = \cos \mathbb{I}Q = \sin \mathbb{Z}I$) so that θ_a measures $\angle G$.

Finally, he points out that (by me spherical Sine Rule)

$$\frac{\sin \angle G}{\sin \angle F} = \frac{\sin FN}{\sin GN}, \text{ i.e., } \frac{\sin \theta_s}{\cos \theta_s} = \frac{\sin \theta_s}{\sin GN},$$

whence a - SK - 90" - GN.

Al-Khalili [fl. Damascus, ca. 756]1365] compiled a still table based \blacksquare an accurate formula and displaying q (φ , ΔL) for each degree of φ from ro to 56° and each degree of ΔL from r to 60°. Al-Khalili's table thus contains \blacksquare total of almost 3,000 entries, and the sibla is computed to degrees and minutes. The vast majority of the entries are either correct or in error by \pm 1 \blacksquare \pm 1 minutes, \blacksquare 1 remarkable achievement. Table r shows a section of al-Khalili's table.

$$f\varphi(\theta) = \frac{R \sin \theta}{\cos \varphi}, g\varphi(\theta) = \frac{\sin \theta \tan \varphi}{R},$$

and $G(x, y) = \operatorname{arc Cos} \left\{ \frac{Rx}{\cos y} \right\}.$

The procedure for finding q (φ , ΔL) would be to first find h (φ , ΔL) using the simple formula of al-Marrākuṣhl and then to use the auxiliary tables to apply the formula

Table 1

Al-kihalili does not describe the way in which he compiled his kibla table. However, in his introduction to the table he expresses his approval of the kibla method of al-Marrākushi (fl. Cairo, ca. 679/1280). This involved first finding h using

$$\sin k = \sin (\dot{\phi} + \phi_M) - \text{Vers } \Delta L \frac{\cos \phi_M \cos \phi}{R^2}$$

and then applying the standard Islamic formula for finding the azimuth from the celestial altitude, namely

$$q = \operatorname{arc} \operatorname{Cos} \left\{ R \quad \frac{\left[\frac{\sin h \operatorname{Tan} \varphi}{R} \quad \frac{R \operatorname{Sin} \delta}{\operatorname{Cos} \varphi} \right]}{\operatorname{Cos} h} \right\}.$$

Both of these formulae can be derived from Fig. 4. If al-Khalili did use precisely this method to compile his kibla table, III may be that he also used his universal auxiliary tables (al-ájadeal al-ájáks) to facilitate the computation. These tables which were specifically designed for solving IIII of the standard problems of spherical astronomy for any latitude, display the three functions

$$q(\varphi, \Delta L) = G\{x(\varphi, \Delta L), h\}$$

where

$$x(\varphi, \Delta L) = g\varphi(h) - f\varphi(\varphi_M).$$

This latter procedure is easily shown to be equivalent to the standard azimuth formula.

Al-Khalili also computed the kibla for 44 localities in Palestine, Syria, and Iraq. These are likewise very carefully computed. Sample entries from this list some shown in Table 2. Several other kibla lists were compiled by mediaeval Muslim astronomers, and the geographical tables in late Islamic stais often display the kibla alongside the latitudes and longitudes of important localities.

Alignment of Mesques

Now even though the mediaeval astronomer might have been aware of mexact formula for computing the kibla, the accuracy of his kibla determinations depended the geographical data that he had at his disposal. Mediaeval longitude determinations, based either on simultaneous observations of lunar eclipses in different localities or on measuring distances between the localities, were generally not very accurate. Mediaeval latitude determinations,

Table 2

Sample Entries from al-Khallil's Kibla List (The errors are derived using the mathematically correct formula and al-Khallil's coordinates)

Locality	Longitude	Latitude	Kibla	Error
Gasa	5700	34*0"	42°46'	+ 3'
Hebron	56 30	3× 35	45 22	- 6
Jerusalem	56 50	32 0	43 24	3
Damascus	60 C	33 30	29 4	+ 1
Beirut	59 25	33 20	31 59	- 4
Baflabakk	00 O	33 50	28 25	+ 1
Hamā	6: 45	34 45	20 32	- 2
Aleppo	62 IO	35 50	17 42	0
Mardin	64 0	37 55	9.48	0
Baghdād	70 =	33 25	13 19	0
Kuta	69 30	31 30 ·	13 T2	+ 1
Mecca	57 0	21 30	-	-

we the other hand, based we observations of the solar meridian altitude, were generally more accurate. Even so, the most popular values used by Muslim autronomers for the latitude of Mecca were 21°, 21° 20′, 21° 30′, and 21° 40′, whereas the accurate value is 21° 26′. This explains why mediaeval mosques may be incorrectly oriented even though their milipads [4.0.] were erected in a field direction computed by competent mathematicians.

Another reason why mosques may be incorrectly aligned is that their kibles were not computed from geographical data at all but were inspired by tradition. Thus, for example, mosques in the Maghrib and the Indian subcontinent generally face due east or due west, respectively. Likewise, in early Muslim Egypt, the kible adopted was the azimuth of the rising sun at the winter solstice. Several mosques in Cairo face this direction, which was favoured in the kiblat al-sahaba but which is about 10° off the kibla computed mathematically using mediaeval geographical coordinates and about 20° off the true bible for Cairo. No survey has yet been made of the orientation of mediaeval mosques. Such a survey would be of considerable interest for the history of Islamic architecture as well as the history of science.

Bibliography: Several of the following secondary sources contain descriptions and analyses of mediaeval kible methods. There exist numerous Islamic astronomical works containing hible methods that have not been investigated in modern times. On the kible method of Ulugh Beg [q.u.] (fl. Samerkand, d. 853/1449), which is none other than the method of Ibn Yunus and al-Biruni, see L. A. Sédillot, Proligomines des tables astronomiques d'Olong-Beg: traduction et commentaire, (Paris 1853), 116-21. On the approximate methods of al-Battani and al-Diaghnilal, . C. A. Nallino, al-Battani sive Albatenii Opus Astronomicum (Milan and Rome 1899-1907), i, 318-9, and ii, p. xxvii; and G. Rudloff and A. Hochheim, Die Astronomie des Mahmid ibn Muhammad ibn 'Omar al-Gagmini, in ZDMG, xlvli (1893), 213-75 (esp. 271-2).

The first serious investigations of Islamic hible methods were conducted by C. Schoy (see his article kibla in EI²). The methods of al-Haytham and al-Nayrizi were discussed in his Abhandiung des al-Hasan ibn al-Hasan ibn al-Haigam (Alhasan) über die Bestimmung der Richtung der Qibla, in ZDMG, [xxv (1921), 242-53; and in his Abhandiung von al-Fadi b. Hdtim al-Nairisi über die Richtung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Bayr, Akad., Mathandiung der Qibla, in SB Ba

phys. Kl. (Munich 1922), 55-68 (also contains a list of bible values for various cities, taken from an 8th/14th century Syrian source). Schoy's other studies on the hible include Die arabische Sonnenuhr im Dienste der islamischen Religionsübung, in Naturvissenschaftliche Wochenschrift, N.F., zi (1912), 625-9; Mittagslinie und Qible, in Zeitschr. der Gerell. für Erdhunde zu Berlin (1925), 551-76; Die Mekka- oder Qiblaharte (Gegenazimuikale mittabstandstreue Projektion mit Mekka als Kartenmitte), in Kartographische und schulgeographische Zeitschr. (Vienna 1916), 184-5; and Gnomonik der Araber, in E. von Bassermann-Jordan, ed., Die Geschichte der Zeitmessung und der Uhren, Band 1F (Berlin-Leipzig 1923) (esp. 33-43 and 84-6 on the methods of al-Battant, [bn Yūnus, and Ahu 'I-Wafā').

On al-Birûni's kibla methods, see his al-Kānsīn al-Massūdi, ed. M. Krause, Hyderabad 1955, ii, 522-8; Schoy, Die trigonometrischen Lehren des ... al-Biruni ..., Hanover 1927, 70-1; and E. S. Kennedy, A commentary upon Bīrūni's Kitāb Takdid al-Amākin, Beirut 1973, esp. 198-215. Habash's construction is discussed in E. S. Kennedy and Y. Id, A letter of al-Birūni: Habash al-Hāsib's analemma for the Gibla, in Historia Mathe-

matica, i (1974), 3-11.

Al-Khalll's Ribla table is analysed in D. A. King, Al-Khalll's Ribla Table, in JNES (1975), (which also contains references to other mediateval kibla tables and a discussion of the determination of the bibla using a quadrant). Ibn Yūnus's table displaying the solar attitude in the azimuth of the bibla is discussed in idem, Ibn Yūnus' Very useful tables for reckening time by the sun, in Archive for History of Exact Sciences, x (1973), 342-94 (esp. 368). Considerable additional information on bibla determinations is contained in the forthcoming publication by idem, Studies in astronomical time-keeping in mediaeval Islam, it. A survey of mediaeval Islamic tables for regulating the times of prayer.

Several lists of geographical coordinates of cities and the corresponding kible values, taken from Islamic astrolabes, are given in R. T. Gunther, The astrolabes of the world, i, Oxford 1932, see esp. 24.6. On mediaeval Islamic longitude determinations, see Schoy, Längenbestimmung und Zantral-meridian bei den alteren Völkern, Mitt. der kaiserlich-königlichen Geographischen Gesell., xii (1915), 27-52; Kennedy's commentary III albuml's Takdid (mentioned above); and F. Haddad and E. S. Kennedy, Geographical tables of mediaeval Islam, in al-Abhälk, xxiv (1911), 87-102.

On the analemma in mediaeval Islamic astronomy, see the reference cited in the study by E. S. Kennedy and Y. Id (mentioned above). On the development of spherical trigonometry and computational techniques in mediaeval Islam, see P. Luckey, Zur Entstehung der Kugeldreischrechnung, in Deutsche Mathematik, v (1940), 405-46; Kennedy, Al-Birūni's Maqdild 'Ilm al-Hay'a, in JNES, XXI (1971), 308-14, and the references there cited; and King, Al-Khaiti's auxiliary tables for solving problems of spherical astronomy, in Jual. for the Hist. of Astronomy, iv (1975), 99-110. (D. A. King)

AL-KIBRIT, sulphur. The Arabic term is derived from Akkadian kupribu through Aramaic kujahrijhd. The Arabs knew both sedimentary and volcanic brimstone. Muhammad b. Ahmad al-Tamimi, K. al-Mushid, Ms. Paris 2870, f. 202, mentions II place where "white" brimstone was to be found on the

AL-KIBRÎT

shore of the Dead Sea and in the neighbourhood of ferusalem (see also Mukaddasi, 184), in fact the deposits of brimstone to be found in clay, mixed with gypsum and calcium carbide, on the right bank of the river Jordan at a mile from the Dead Sea (see C. Hintze, Handbuch der Mineralogie, i/1, Leipzig 1904, 68 ff.). Abu Dulaf al-Khazradli (al-Risila al-Maniya, ed. V. Minorsky, Cairo 1955, 22, tr. 14-5, ed. P. Bulgakov, Moscow 1960, 34) mentions already a sulphur spring on Mount Damawand [q.o.] around which brimstone crystalised, and this volcano showed immense deposits in brimstone. The same author (ibid., 43 - Yakût, ii, 619) knows also the sulphur springs of Dawrak [q.v.] in Khūzistān.

In general, four sorts of brimstone are distinguished: yellow, white, black and red (see WKAS, i, 536), Muhammad b. Zakariyyá³ al-Rázi, K. al-Asrár (ed. M. T. Dänish-Pazhüh, Tehran 1964, 3), however, differentiates these even further into 1, pure, massive, yellow brimstone; 2. pure, granular, yellow brimstone; 3. white, ivory-coloured brimstone; 4. white brimstone mixed with soil; 5. black brimstone, adulterated with stones; and 6, red brimstone. Descriptions like kibrit kāni? "bright red brimstone", hibrit dhahabi "golden brimstone", hibrit dhahar "male brimstone", hibrit baker "brimstone of the sea", kibrit nahri "brimstone of the river", etc. are also found. These descriptions indicate the various modifications and qualities: brimstone deposited by springs is mostly fine-grained and yellow-white; elementary brimstone is often contaminated with bitumen, selenium and arsenic. These various descriptions, however, were of course not used by the Arabs to indicate a strict classification.

A special case was the "red brimstone" (al-hibrit al-ahmar). According to Aristotles' Stone-book (ed. J. Ruska, Heidelberg 1912, no. 26, p. 161 = lbn al-Baytar, K. al-Diami, iv, 49) it shines by night over a distance of many parasangs, as long m it is left in its place of occurence. Others maintained that red brimstone was a mineral to be found in the valley of the ants, marched through by Solomon (Ibn Samadidn, in Ibn al-Baytar loc. cit.). These are fairy-tales. Al-Razī (K. al-Asrār, los. cit.) knew already that "red brimstone" does not exist as a mineral, and this scopticism was wide-spread. At Djablz (Risala fi 'I-Diidd - 'I-hasi, ed. P. Kraus, Cairo 1943, 93; ed. Harun, Cairo 1964, i, 271) remarks that "red brimstone" is easier to be found than a trustworthy friend. and the caliph al-Mustadid bi-liah (279-89/892-902) said that two things exist only in name: the phoenix ('anhi' mughrib) and al-kibrit al-ahmar (Biruni, Diambhir, 254). In this sense is also to be understood al-Maydani's proverb "more costly than red brimstone" (see Froytag, Arabum proverbia, i, 18, 220, ii, 149) and Bilawhar's saying (ed. D. Gimaret, Beirut 1971, 33) that his merchandise is better than red brimstone. The solution to this enigma is that alkibril al-almar is a pseudonym for the clixir, by means of which silver can be changed into gold (Biruni, Diamahir, 103, WKAS, i, 536 a25-b2).

The position of brimstone in the mineral system has been determined more than once: in Aristotles' Stone-book, compounds of brimstone and arsenic form one group together with salts and boraxes, without a fixed classification. The authors of the Corpus Gabirianum (3rd-4th/9th-10th centuries) counted red, yellow, black and white brimstone, together with orpiment, realgar, quicksliver, camphor and ammonia among the "spirits" (al-armāh, τὰ πνεύματα), as opposed by the "metallic bodies" (al-adjsām) and the "mineral bodies" (al-adisād). Ibn Stnā (K. al-Shifd). al-Tabi'iyyüt, v. ed. Madkür, Cairo 1905, 20-2) divides all minerals into four classes: the stones (al-abdide), the salts (al-amidit), the fusible bodies (al-did'ibdi) and the brimstone-like ones (al-habdrit). Brimstone has become here a general notion indicating those substances in which wateriness has been combined with earthiness and airiness and which have then been consolidated by cold. According to al-Kazwini, 'Adjā'ib, 203-45, brimstone, together with quicksilver, pitch, naphtha etc. belongs to the viscous substances (al-adisdm al-duhniyya).

89

Already in the Middle Ages brimstone was an important mineral raw material. It was for instance used in bleaching. Thus the "brimstone of the river" (ai-kibrit al-nahri) was also called kibrit al-kasşārim. the "brimstone of the bleachers" (Galen, K. al-Awdiya ai-mawdiuda bi-kuli mahan, lu Ibn al-Baytar, iv. 49, below). Together with bltumen, fats, oil, etc., brimstone was a component part of Greek fire (see MAPF], and from the 7th/13th century onwards it was used with salpetre and charcosl, to make gunpowder.

Brimstone was also widely used in medicine. According to Dioscurides (Mat. med., v, 107; Arabic tr. ed. C. E. Dubler, Tetuán-Barcelona 1952-7, 423) brimstone avails against a cough, against pus that is stuck in the chest, and against asthma. If a woman is furnigated with brimstone, she will have a miscarriage. Leprosy, cutaneous eruptions and other skin diseases are treated with brimstone, which, if mixed with natron, dissipates itching. Finally, beimstone avails against the stings of poisonous animals, against joundice, cold, sweat, podagra, ear-ache and deafness. The same indications - found in Galen, De simpl. med. temp. = fac., ix, 3, 9 (Vol. xii, 217, Kühn; Arable tr. in Ibn al-Baytar, iv, 50); 'All b. Rabban al-Tabari, K. Firdaws al-filema, 122, 224, 271, 322, 324, 407 (cf. W. Sahmucker, Die pflanzliche und mineralische Maleria medica 🖮 Firdaus al-Hihma der Tabari, Bonn 1969, 380-2), Ya'kub b. Ishak al-Kindl (cf. The medical formulary of al-Kindl, ed. M. Lovey, Milwauker 1966, if. 95b, 101b, 133b), al-Razi, K. al-Iláwi, xvii, 55, and Ibn Sīnā, Kānān, Rome 1593, i, 191. The dawd' al-kibrit is me of the important electuaries. It equals therine and avails against fever, cough, asthma, tetanus, dropsy, against stings of poisonous animals etc. (All b. Rabban 445; al-Madjust, K. al-Malaki, il, 336; Ibn Sine, Kanen, ii, 191).

The curative properly of sulphurous water is often praised: Abû Dulaf al-Khazcadjî (op. cit., ed. Minorsky, 12, tr. 43, ed. Bulgakov, 22, Yākūt, ii, 317) mentions the sulphurous springs in the neighbourhood of Hulwan [q.v.] in 'Irāķ, which avail against manifold diseases. According to Aristotles' Stone-book (no. 26, pp. 113, 162) bathing in sulphurous springs is good for open wounds, tumours, itching, scables and fever. Baths in sulphurous water avail also against teembling (irtifash) (Philagrises, in Razi, Hawt, i. 44, see Galen, De tremore et palpitatione, mil, 600, Kühn). Finally, sulphurous water a curative of articular pains (Rufus, in Razl, Ifduri, xi, 199), hemiplegia (fdligi, 'All b. Rabban, Firdines, 197) and elephan-

tlasis (<u>d/udh</u>dm, ibid.).

To the many palliatives which were recommended for expelling vermin from houses there are always included furnigations with sulphur (Razi, Hawi, xix, 320-33), which was will used in magic as an ingredient of talismans (Pseudo-Madiriti, Ghāydt al-hahīm, 243.6, German tr. by Ritter and Plessner, London 1962, 254-8).

Sulphur played a prominent part in alchemy (see AL-Kinty Ab). Distillation of sulphur and the action. of sulphurous vapour on metals gave occasion to many observations and conjectures. Since sulphur is liberated in the distillation of most materials, it was believed to be a fundamental part of all minerals. In particular, it was assumed that the metals consisted of quicksilver and brimstone. If the parts of both materials are in mideal ratio to each other, gold originates (see Dimashki, Nukhba, 50 ff.). Sulphur is therefore also called "the mother of gold" (umm al-dashab, see K. al-Kanz, ms. Berlin 4191, f. 51a).

The alchemists invented many pseudonyms for sulphur, like "the yellow, red or white bride") al-'arus al-safra', etc.), "the red soil" (al-turba alhamra'), "the colouring spirit" (al-rap al-sabigh), "the saliron" (al-sa'faran), "the divine secret" (al-sirr alilahl). The breath-taking smell of burning brimstone gave I the "the suffocater" (al-khannak). Bebrimstone combines quicksilver, it was also called "the fetter of the volatile" (kayd al-'dbik). Conversely, the term kibrit was also used in combinations as pseudonym of other substances, e.g. hibelta la taktarik "incombustible sulphur" (see WZKM, Iziti-Ixiv (1972), 168) designates the elixic of gold. (For the problem of the pseudonyms, see J. Ruska and E. Wiedernann, Alchemistische Decknamen. Beiträge LXVII, in SPMSE, Ivi-lvii (1924-5), 20-33 = E. Wiedemann, Aufsdize, ii, 599-612; A. Siggel, Decknamen in der arab. alchem. Literatur, Berlin 1951).

ULEMARR)

KIBT, the Arabic term for the Copts or native Christians of Egypt. The term | derivative of the Greek Aigyptos, a phonetic corruption of the Ancient Egyptian Ha-Ka-Plah, i.e. the house or temple of the god Ptah, signifying Memphis. The Greeks used the word for Egypt and the Nile, hence the word "Coptic" is originally the equivalent of Egyptian. Curtailment of both prefix and suffix from the Greek term gives us Gypt > Arabic rendering Kibt. According to Semitic sources, however, this term is derived from Kuftalm, son of Mizralm, a grandchild of Noah who first settled in the Nile valley and imparted his name to the city of Kult or Guft near Thebes or modern Luxor (see KIPT). This latter theory is commoner among Arab writers who call Egypt Dar al-Kibl, so, the home of the Copts who were the Christianised descendants of the ancient Egyptians at the time of the Arab Conquest of 20-1/640-2.

Apparently the Copts not unknown to the pre-Islamic Arab traders whose caravans penetrated the fringes of the Pertile Crescent and to some extent touched Egypt. More directly, the Copts came into the life of the Prophet Muhammad through Maryam the Copt who was m gift from al-Mukawkas [q.v.] and who hore him his short-lived and only sen Ibrahim. The Prophet is said explicitly to have told 'Umar

b. al-Khattāb that "Altāh will open Egypt to you after my death. So take good care of the Copts in that country, for they me your kinsmen and under your protection". This is said to have appeared in the first khatba by 'Amr b. al-'As after the conquest, and il it he subsequently admonishes his Muslim audience to "Cast down your eyes therefore and keep your hands off them".

Though the caliph 'Umar was hesitant to grant 'Amr approval for the conquest of Egypt, certain factors in the Egyptian situation favoured the invaders. The Copts were restive under Byzantine rule. In pursuance to the policies established by Justinian (522-65), the Emperor Heraclius (610-41) in 631 appointed Cyrus (al-Mukawkas in Arabic sources) as prefect, army commander and patriarch of the whole of Egypt in order to facilitate the securing of both political and religious uniformity in that crucial part of the Empire. Byzantine taxation also felt as oppressive. Cyrus forced the Copts to abjure their Monophysitism in favour of the Byzantine Chalcedonian profession and his legionaries pursued their native Patriarch-elect Benjamin 🛮 (623-62), who fled to the desert monasteries and remained in hiding until the removal of the Melkite Greeks from Egypt.

It was in these circumstances that 'Amr crossed the eastern frontiers of Egypt (see misa) and entered the country. Cyrus realised by then that he was lighting a lost battle, because the Copts wanted a change of masters at any cost. While the servitude of the latter was complete in civic, financial and religious matters, the Arabs cared more for the revenues from the province than for interference with the religion of the Copts. They did not distinguish between Melkites and Monophysites, and the Copts of Christians were regarded as a protected people (Ahl al-Dhimma), in return for payment of the distract quish.

When the Syzantine regime finally with the fall of Alexandria in 64z, the Greek Melkite population was granted safe-conduct to depart with Cyrus, and the native Patriarch Benjamin I was summoned to emerge from hiding. His appearance in Alexandria was honoured by Amr., and the Copts at last regained their religious liberty and even appropriated most of the Melkite churches and foundations then rendered vacant. Thus the new era angured well, and perhaps Muslim monotheism might have been interpreted as bordering on Coptic monophysitism, thus creating a temporary bridge between the two religions in the eyes of those who were unaware of their philosophies in details of doctrine and future developments.

From this moment, the relationship between the Copts and the Arabs was based pre-eminently on revenue and taxation. The Arabs recognised the elaborate system of government in Egypt, and left the administration unchanged in the hands of the Copts. In the first year, 'Amr was able to raise 12 million diadrs in revenue, but the caliph 'Umar was dissatisfied and removed 'Amr, nominating 'Abd Allah b. Sa'd b. al-Sarh [q.v.] to succeed him. The governor was then able to raise 14 million diadrs in the second year.

From 21/642 to 254/868, Egypt was directly under Caliphal control through a vicercy, and ninety-eight governors were appointed by the Umayyad and the 'Abbāsid calipha. The average tenure of each governor—about two years, too brief a period for any constructive work. But caliphal policy aimed at removing governors before they had sufficient time for

trying to break away from the central government. In the circumstances, a governor's sole concern was simply to squeeze the maximum taxation from subjects, not only to pay the necessary to the central government, but for his personal enchment. The depletion of the second encountry was also often aggravated by low Nike floods and the spread of disease plague.

The worsening of the economy meant heavier pressure and exactions for the Copts. The results of this situation were three-fold; many Copts fled to the desert monasteries to escape the poll-tax from which clarics were exempted, although this privilege proved to be ephemeral; some turned to Islam for the same reason, although wholesale conversions did not take place because the caliphs usually discouraged them in order to safeguard their revenue; and man rose in revolt, not infrequently reinforced in their insurrection by Musikm settlers.

Perhaps the Bashmuric Rehellion of 214-15/829-30 in the marshlands of the lower Delta was the most serious of these local insurrections. The calloh al-Ma'mun had to come in person to Egypt to fight the Bashmuric rebels and to pacify the Copts. The outcome of a steadily deteriorating situation was a neglect of the irrigation system, the blocking of canals with sand and silt, and the ruination of the Nile dykes. In addition to ■ decline in the number of Coptic farmers, the steady shrinkage in the arable soil led to the fall of the revenue to a million dindra by the grd/oth century until the last of the 'Abbasid governors, Ahmad b. at-Mudabbir [q.s.], assumed power in 254/868 and doubled the kharadi and the dilipa; now even the clergy and the desert monks lost their customary exemption from payment. In the same year Ibn al-Mudabbir was imprisoned by Ahmad b. Tülün. The latter soon introduced numerous financial reforms which earned for him the loyalty of the inhabitants. The leniency and understanding towards the Coptic subjects of the Tülünids (254-92/868-905) and the lkhshidids (323-58/935-69) [qq.m] stood in contrast to the rule of Ibn al-Mudabbir, from whose imposts the Coptic clergy were once again exempted.

It would be wrong to judge Ibn Tülün by his harsh treatment and incarceration of the Coptic Patriarchs Shenouda I (859-80) or his successor Khari III (880-90), caused by internal dissensions amidst the Coptic clergy themselves. An undeserving deacon and monk who wanted a pishopric hatched conspiracies against the Patriarchs, together with the bishop of Sakha, who had been excommunicated for misdemeanour. They went to the governor with false reports about the Patriarchs, including the worst of accusations in the eyes of a Muslim rules, that is, trying to bring Muslims into apostasy and sending them to the desert monasteries to become monks. As usual, this was coupled with accusations that the Patriarchs were avaricious and possessed masses of gold. The truth revealed in the end, and the Patriarchs regained their liberty after signing a warrant for debt, which they tried to repay through money raised from charity and from simoniacal practices.

The state revenue had declined to 3 million dindes at the advent of Ibn al-Mudabbir, and he aimed at doubling it without mending the cause of its decline. Realising that the cause of this deficit was the decline of agriculture, Ibn Tūlūn introduced land and irrigation reforms which ultimately improved the revenue. Even with exemptions, the revenue rose to 4 million dindes before Ibn Tūlūn's death, in addition to accumulated savings of multipost in the treasury and the execution of mextensive building program. With the help of Ibn Katib al-Firghant, accomplished Coptic architect, he constructed I Nilometer at the southern end of Rawda (Rôda) Island (see mikyls) and his famous mosque with its external spiral minaret. Muslims commonly destroyed churches in order to use their materials and pillars in building mosques. To save the churches, Ibn Kātib promised we governor to construct the mosque of Ibn Tulun without having to utilise pillars from churches. Thus the new pillars were built of massive masonry supporting pointed arches long before their in Gothic art in Europe, and only two small marble pillars were placed on the flanks of the hible. The mosque sim stands as a testimony to the architectural genius of the builder and the return of the country to affluence.

During the years of stability in the rule of both these dynasties of governors, the Copts enjoyed a great degree of tolerance and prosperity. It is recorded that Ibn Tölkn cultivated the habit of retiring to the al-Kusayr monastery south of Fustat for rest and recuperation, and the first lkhshidid, Muhammad b. Tughdi (323-34/935-46) used to participate in the celebrations of the Coptle Epiphany, according to the contemporary 4th/roth century historian al-Masfadi. Both dynastles entrusted the Copts with

key positions in government.

The really favourable position of the Copts, however, was still to come, viz. under the Shift Fatimid dynasty (358-567/969-1171), if we except the reign of al-Hakim bi-Amr Allah (386-411/996-1021 [q.v.]), who ended by persecuting Copts, Jews and even Muslims. Hence the Copts, whose religious freedom had been undisturbed and who had occupied the highest positions in the administration during the reigns of al-Mu'izz (358-65/969-75) and al-'Aziz (365-86/925-96) now faced forced apostasy or persecution by the unbalanced monarch, and many of their churches were levelled to the ground. However, towards the end of his reign, al-Hakim apparently fell under the spell of a priest named Anha Salomon during his visits to the monastery of al-Rusayr on the Helwan road south of Cairo, and eventually began to wear a monks' garment, while his atrocities ceased.

During the caliphate of al-Zahir (421-27/1020-36), the re-building of churches was again authorised, and Christians who had been forced to apostasise were permitted to return to their faith. Nasir-i Khusraw (q.v.), who visited Egypt in the reign of his successor, al-Mustansir, remarked that nowhere in the world of Islam had he seen Christians enjoy as much peace and prosperity as did the Copts. The strongest Fâţimid vizier, Badr al-Diamāli [q.v.], and his al-Aidai, both Armenian converts to Islam, favoured the Copts and relied on their service. Ultimately, the sluty-sixth Patriarch Christodouloa (1046-77) decided to move his seat from Alexandria to Cairo in order to be within easier access to the central government.

Only towards the end of Fāṭimid rule, when internal disorder grew, did Copts and Muslims alike suffer in the ensuing broils and confusion, and the fate of the Copts was further aggrevated by the outbreak of the Crusades. It would therefore that the Copts reached in height of power and prosperity, but also latterly some of their worst tribulations, during the Fāṭimid era.

The advent of Sunni Ayyübid dynasty (564-648/1169-1250) re-established internal stability and

eliminated the confusion of the age of the last Fatimid caliphs, but these times proved rather a mixed blessing for the Copts. In the course of his fighting the Crusaders in the Holy Land and the Christian kings of Nubia in the south, Selab al-Din's suspicions led him to dismiss the Copts from government service. It was probably on this occasion that Zakariyya' b. Abi 'i-Malih b. Mammati (a corruption of the Coptic Makemets) of Asyût, a Copt who held the joint secretaryship of the War wall and the Treasury, decided to apostasise with his family and become a Muslim, in order to retain his high office for himself and his descendants. His al-Asa'd inherited his father's office, and compiled one of the few cadastres of mediaeval Egypt (al-Rauk ai-Salāķā), leaving a record thereof in his Kilāb Kamanin al-dawawin. Şalāh al-Din's brother, Shams al-Dawla, who led the Nubian campaign, destroyed in the years 567-8/1172-3 the monastic settlement of Bawit in Middle Egypt, the Coptic city of Kuit, which sank into insignificance thereafter [see gipt]. and the important Convent of St. Simeon (Auba Hidra) across the Nile from Aswan, Salah al-Din further decided to remove the imposing building of the Cathedral of St. Mark in Alexandria for tear that it might serve Crusader inroads with a fortified site, and the Copts tried in vain to ransom this church.

It would however be arroneous to accuse the Ayyūbid suitans of continuous intelerance and persecution of the Copts. One of their first deeds was to suppress Ibn al-Mudabbir's substitution of the lunar for the solar calendar in order to shorten the year and thus get more taxes. They left most of the Coptic churches standing, and generally refrained from interference with religious freedom. Şalāh al-Dīn himself granted the Copts an Imposing monastery adjacent to the Holy Sepulchre, which they own to the present day . Dayr al-Sullan. The suitan's successes against the Crusaders and the recapture of Jerusalem in 483/1187 seem to have terminated his early apprehensions about the Copts. The Copt Şafi al-Din b. Abi 'l-Ma'ali, surnamed Ibn Sharafi. became his private secretary. Two Coptic architects, Abil Mansür and Abil Mashkür, were employed to repair and extend the fortified walls of Cafro and to build EE Cairo Citadel on the Mukattam hills overlooking the capital, Şalāh al-Din's most enduring monument which became the fortified seat of succassive governments and dynasties.

In the reign of Sultan al-Adii Sayi al-Din (596-615/1200-18 [q.v.]), the Saphadin of western chronicles, a Copt by the name of ibn al-Mikat assumed the administration of the War Office. In the Crusade of Damietta of 1218, the Coptic inhabitants participated in the defence of the city and with their clergy suffered greatly at the hands of the Latins. Again in the Crusade of St. Louis in 1249-50, notable Copts were to be found in the Sultan's camp. A number of Fâțimid and Ayyübid sources show that numerous Copts earned some of the highest titles of honour in the state such al-Ra'is, Hibat Allâh, al-Andjad, al-As'ad, al-Shayhh, Najib al-Dawla, Tâdi al-Dawla, and Fahr al-Dawla. The Church historian Ya'kūb Nakhib Ruinyla collected as a sample some 30 Coptic names bearing these titles.

Two important processes in progress since the Arab conquest, the Islamisation of Egypt and the Arabisation of Egypt, and these two processes should not confused. That there should be a measure of conversion to Islam under early Arab rule was inevitable. The apparent kinship between

Coptic monophysitism and Islamic monotheism might have played a role in a still amorphous body of doctrine, but the vexatious divine or poll tax. increasing at a steady rate, left the impecuaious Coptic taxpayer only way to escape, sc. that of Islam. It is known that most callphs discouraged wholesale conversion, in defence of a depleted inflow of revenue to the treasury. How we explain, therefore, the eventual numerical superiority of Muslims as against the shrinkage of the Copts in Egypt 7 E. L. Butcher implausibly ascribed it to the popularity of the monastic iii and called it "suicide of a nation". The Muslim social historian, Aly Mazahéri describes this phenomenon as "ethnic exhaustion", and discards the assumption of wholesale conversion. It does not seem that a single, facile answer can be given here.

The Arabisation of Egypt, on the other hand, is a more transparent process. A study of the papyri indicates that at first the Copts conducted the administrative records in Coptic, and that the Arabs, who did not know the native language, accepted their procedures thus. Then the year 86/205 witnessed the issuance of an edict by the governor 'Abd Allah b. Abd al-Malik imposing for the first time the use of Arabic in state records. At this point, bilingual papyri begin to appear in an intermediary stage. Meanwhile, the Copis hastened to master the language of the rulers, but the clerks persisted in the - of bilingual protocols in the papyri. As to the use of Arabic in public life, this must have been a clower process, although we may note the compilation of Coptic grammars and Coptic dictionaries in the 13th century, which is probably to be regarded as an indication to national Coptic efforts to keep the torch of the Coptic language burning amongst those who were fast losing it. Nevertheless, it would be a mistake to assume that Coptic was becoming extinct at that early date. The same century produced eminent Coptic writers such as Ibn al-'Assal [q.v.] and other members of his family, who were perfectly conversant with Coptic, Greek and Arabic. As late as 1673, the traveller Vansleb reported that he met the last Copt who really spoke Coptic; and Benolt de Maillet, = 18th century French consul in Egypt, stated that he found whole villages in Upper Egypt whose residents spoke Coptic. In the present century, Werner Vycichl is quoted by the Coptologist William Worreli to have discovered Coptic-speaking communities at Zéniya and other isolated villages la Upper Egypt. Of course, the liturgy is still celebrated today in Bohairic Coptic, together with Arabic, in Coptic churches. The Arabisation of Egypt is an undisputed reality, but the total extinction of the Coptic language is still a debatable problem.

The later Middle Ages brought difficulties for the Coptic communities. The Mamlüks (648-922/1250-1517) who were originally slave soldiers bought by the Ayyubid sultans, ended by selzing power from them, and they then continued to reinforce their army by more slave purchases. They were therefore men of varied ethnic and religious origins and had nothing in with the Egyptians except the bond of Islam; and it is doubtful whether any of them was fully aware of the doctrines of their faith or the language of the Coptic people. Internal insecurity and increasing poverty and isolation now began to drive the Coptic populace into desperation, Skilled Copts continued to work | the Muslim administration, but as me as they rose to wealth and power, the Muslim mob tended to clamour for their dismissal from office and to start a wave of

93

church destruction. As mob fury became overpowering, the Mamiltk sultans had often to yield to public pressure and unseat the Copts IIIII condone the assaults on their religious foundations. Yet after a short period, confusion usually supervened in the government machinery, and the sultans were constrained to relastate the Copts in office once more.

On one occasion, a group of exasperated Copts decided III retaliate against Muslim oppression. In 720/1320, m number of Coptic monks from Dayr al-Baghl ("The Monastery of the Mule") south of Cairo, formed a secret pact to me against mosques and Muslim quarters in the capital. Once while the city was ablaze, four of these monks seized carrying naphtha and other incendiary substances. The Sultan ordered them to be burnt and the Copts were again dismissed from office. The infuriated mob continued their destruction of churches. From 628/1270 to 851/1447, forty-four churches are reported to have been levelled to the ground in Cairo alone. The Patriarch Yohannes X (1363-9) was summoned by the Bahri Mamilik Sultan al-Ashvaf Shaban (764-78/1363-76), and he and the archons - elders of the Coptle community were subjected to abject humiliation and confiscation of property, partly to appease the populace and partly to raise funds for waging war against the Cypriots in retaliation for their sack of Alexandria in 766/1365.

Occasional spells of relief for the oppressed Copts came only as a result of foreign intervention from three main sources. The first was from Constantinople. where the Byzantinc emperor, himself barassed by the Ottoman Turks, pleaded at the Sultan's court on behalf of the remaining Melkite minority. The second was from Aragon, whose kings - for commercial reasons, usually on good terms with the Mamilik monarchs, though their intercession was essentially on behalf of the churches in the Holy Land and only incidentally for the Copts. The third and perhaps the most important meeting of mediation came from Abyssinia, whose Negus had a strong bargaining power on behalf of the Copts in the counter-threat of ill-treatment of the Muslims under his dominion, and in the imaginary menace of deflecting the course of the Nile to the detriment of

The hurassed Coptic patriarchs also hoped tentatively for an undefined form of assistance from the western world, without jeopardising their delicate position with the sultans. One such glimmer of hope appeared at the time of the Council of Ferrara-Florence (1438-9), which aimed at the union of the Churches of East and West, separated since the Chalcedonish schism in 451. We know that a certain Yuhannes, Abbot of the Coptic Monastery of St. Anthony on the Red Sea, was a signatory to the Decretum pro Jacobitis declaring the formal union of the Churches. But the agreement long remained in abeyance until 1586, when Rome sent a delegation to Patriarch Yuhannes XIV (1571-86) in order to discuss the practical application of the union. The Patriarch and a few bishops were agreeable, though the majority of the community remained apprehensive; the sudden death of the Patriarch ended this abortive mission.

By then the Ottoman Turks had been established in Egypt since its conquest by Selim 1 in 922/2517. Egypt became a dependent province with a vast empire, and the sultans derived their from a governor, an Ottoman Pasha, whom they invested with the provincial government for brief periods. There was a Turkish garrison headed by a general

independent of the governor, while the local administration was left in the hands of the surviving Mamitik amirs. Tax farming (illiadm [q.v.]) became the practice and the tax farmers and village headmen were subjected to all sorts of pressures for the payment of excessive dues, not only for the sultan in distant Istanbul, but also for the earlchment of a whole hierarchy of the administration. Within this framework, the Copts worked as clerks and tax colfectors mainly in local Mambak households. Though they suffered occasional, temporary dismissals from service, they were not goaded by the outbreaks of mob fury in Mamitik times. In fact, they suffered, together with the Muslim inhabitants, from the depredations of the Arab nomads who used to descend on villages in the countryside for looting. The land became isolated and its inhabitants sank into lethargy and ignorance until the French Expedition of 1798-1801 arrived under Napoleon and opened Egypt to western influences.

Perhaps the most significant Coptic document after the rout of the Mamittks and the settlement of the French was a petition submitted to Napoleon by a notable Copt, Girgis al-12; awhari, imploring him to lift Coptic disabilities, in keeping with the principles of liberty, equality and fraternity proclaimed by the French Revolution. However, the French, whose leaders feigned conversion to Islam in order to court favour with the Muslim majority, decided to overlook his plea and thus avoided the semblance of partisanship. Nevertheless, they did not hesitate to select the best candidates for the administration irrespective of religious considerations. Hence the Girgis al-Djawbari became the head of the taxation department. They also nominated a commission of twelve to administer local justice. Six of these were Copts and the chairmanship fell to Mu'allim Malati, a Copt about whom we possess no documentary evidence. But the real hero in Coptic annals emerged in the personality of Mu'allim Yackub Hanna (1743-1801), whose meteoric career began in the predominantly Coptic city of Asyût, In Upper Egypt.

Originally a humble civil servant under Sulayman Bey, a Mamlûk amir in charge of Asyût province, he learned the equestrian art and the rudiments of Mamilûk warfare from his master and even participated in Mamlük hostilities against the Turks. Later, when the French attempted to conquer Upper Egypt under Desaix, he played a prominent role in saving the French expedition from collapse. Then after the disastrous naval battle of Abülde, which gave Nelson and the British command of the sea, Napoleon left and Kléber succeeded him with an empty treasury, while Turkish infiltrators played upon religious sentiment and incited the Muslim population of Cairo to rebellion. It was in these precarious circumstances that Ya'kub, with the approval of the French authorities, recruited a Coptic legion of 2,000 Coptic youths to be trained by professional officers under his own command, first as Colonel, then in 1801 as General,

Still more spectacular in Ya'kūb's career was his dream of Egyptian independence from both the Turks and the Mamfüks. The documents pertaining to this chapter in his biography were discovered and brought to light by an eminent Muslim historian, the late Professor Shafik Churbāl. The departing French made the stipulation that any native desirous to leave with them should permitted to so thus the General, together with few companions, left Egypt with the French on the British ship Pallas, in the hope of convincing the rulers of Europe

that the only solution of the Egyptian question was the independence of Egypt. Ya\k\tilde{0}b died on the high seas on 16 August 1801 leaving the fulfilment of his mission to his accompanying delegation. Apart from his secret deliberations with the captain of the Pailas Joseph Edmonds, preserved in the memoirs of his interpreter Lascaris, \(\tilde{\text{M}} \) Knight of the Order of Malta, his correspondence was communicated or signed by proxy and addressed to Bonaparte and his foreign secretary Talleyrand (23 September 1801) \(\tilde{\text{M}} \) well as to the British Lord of the Admiralty, Rarl St. Vincent (4 October 1801).

Curiously, the man destined to realise Ya'kūb's vision was Muhammad (All (1805-49), the Macedonian soldier who came to Egypt as the head of a Turkish force and succeeded in founding the dynasty in Egypt which did not end till 1953. Under the new régime, the enfranchisement of MI Copts went a long way. With increasing security and acceptance, it became less necessary for them to congregate in fortified quarters for self-defence, and they began to scatter all over the big cities side-by-side with their Muslim compatriots. They even took courage to fight for the removal of a few remaining disabilities in the Coptic Congress at Asyat in 1911, clashing with a countermovement in the Muslim Congress in Alexandria. Both, however, were confined to a war of words and discouraged by the Khedive 'Abbās Hilml (1892-1914); eight years later both sides were engaged within the Wafd Party in the struggle against the British protectorate over their common homeland. The only cases of violence in contemporary history have consisted of localised incidents of arson against churches by the Muslim Brotherhood [see AL-1821WAN AL-MUBLINGN], whose organization was eventually suppressed by Diamal (Gamāl) 'Abd al-Nāṣir [q.v. in Suppl.] in 1966.

In recapitulating the story of the status of the liberated Coptic community in modern times, we should not forget two 19th century movements. The first was - educational and cultural one sponsored by the Patriarch Cyril IV (1854-61), known as the Father of Coptic Reform. He founded public schools including the first girls' school in Egypt, and imported a printing press, the second in the country after the press. On the international scene, he carried out with success a conciliatory embassy in 1855-8 with the Emperor of Ethiopia on behalf of the Khedive Sa9d (1854-63). But he did not live to realise his grand dream of an occumenical union with the Greek Church, the Russian Church and the Anglican Church; it is said that this enterprise disturbed the Muslim authorities and hastened the visionary Patriarch to his grave. The second movement | natural corollary to the first, for western adacation created - Coptic élite who strove in the pursuit of establishing more democratic system of government in community affairs and in the management of church property. This met with staunch resistance in the clerical conservatism of the age of Cyril V (1874-1927), and the project of ■ Community Council (Madjlis Milli) has been M abeyance ever

Within the framework of the Islamic legal atructure, the Copts made several gains of capital importance. The abolition of the diraya came to pass in 1855 during Sa'id's reign, and this was coupled with the acceptance of the Copts into military service. At his accession, the Khedive Tawfik Patha (1879-92) publicly proclaimed the principle of equality of all Egyptians in every way, irrespective of their ethnic origin or religion; this was later formalised in

a decree of 21 July 1913 and again in the Constitution of 1922.

In a period of more than thirteen centuries of Islamic rule, it was that the density of population of Egypt has varied from time to time. At the Arab conquest, judging from the papyrus was returns, the Copts must have been at least 22 millions. Owing to many hardships, occasional failure of Nile floods and diminution of cultivable soil, recurrent plagues, conversions to Islam and flight with the desart monasteries, we must assume the existence of a downward trend in the number of Copts throughout the Middle Ages and Ottoman Turkish times. We note that their number sank to approximately one million souls. However, the latest three official itemised consuses of the population rowest the following figures:

Year Total Muslims Copts Jews Other population religious

1947 18,956,757 17,397,946 1,501,635 65,639 1,547 1950 25,984,101 24,068,252 1,905,182 8,56x 2,106 1966 29,943,810 27,919,528 2,018,305 2,484 2,493

It is difficult to accept the above figures unhositatingly. This is largely due to the fact that Coptic villagers have always shown a reticence in divulging the real size of their families. The newlyfounded Census Department in the Institute of Coptic Studies in Cairo has been working with the local country priests in assessing the Coptic population; suggestions of a Coptic population from four to six millions in the year 1974 have been put forward.

The basic causes of the survival of the Copts both internal and external. Internally, the Copts clung to their Church as a cementing element in their private life. Coptic ethnicity and faith became profound faith, as way of life, and an intengible doctrine of ethnic consciousness. Externally, it is fair to admit that Islam shares in the credit of this survival. Under the aegis of Islamic dynasties, there came dark times when the violence of the majority could well have exterminated minority groups with the concurrence of the rulers; yet this did not happen, despite such difficult periods as the reign of the Fāṭimid Caliph al-Hākim in the sthirth century.

Bibliography: All chronicles and source material on mediaeval Egypt contain many references to the Copts; especially Makrizi, Khijes, Būlāk 1270; Suyūti, Historial-mahddara fi ahhāar Mişri ma'l-Kāhira, Cairo 1327; and 'All Bāṣhā Mubārak al-Khijas al-Taesfikiyya, Būlāk 1304-6. Equally, bibliographies of Egypt under Islam cannot be overlooked. On the Copts proper, see W. Kammerer, A Coptic bibliography, compiled in collaboration with Elinor Husselman and Luise Shler, Ann Arbor 1950; and the monumental work of G. Graf, Geschichts der christlichen arabischen Literatur, 5 vols., Vatican City 1953. Some of the books cited below also contain additional detailed bibliographical material on special subjects.

Perhaps the most important primary source is Sawiris b. al-Mukaffa^c, History of the Patriarchs of the Egyptian Church, ed. C. F. Seybold (to 567 A.D.), and T. Evetts (to 849), in the Patrologia Orientalis. The remainder to pointly edited with Rigish tr. by Yassa 'Abd el-Masth, O. E. H. Burmester and A. S. Atiya in 4 parts in the publications of the Society of Coptic Archaeology, Cairo 1943-59. An older chronicle,

written 50 years after the Arab Conquest. Il indispensable, John of Nikion's Chronicle, ed. H. Zotenberg, Paris 1833. See also A. Grohmann. Arabic babyri in the Ecuption Library, 6 volu-Cairo 1034-62; B. T. Evetts. The churches and monasteries of Egypt, by Abit Salih al-Armani, Oxford 1834-5 (a work probably written by Diirdiis b. al-Makin, not Abū Sālih, who must have only owned the manuscript); F. Wüstenfeld. Macrisi's Geschichte der Kopten, Göttingen 1846; I. M. Vansleb, Histoire de l'église d'Alexandrie Paris 1677; ibid., Yovage in Egypt in 1672-72. London 1678; Renaudot, Historia Patriarcharum Alexandrinorum, Paris 1713 (old but still useful): the Expédition d'Égypte contains records on Copts in the 18th century.

RIBTI [see Cirgane].

KIDAM (A.) in the technical vocabulary of philosophy and theology denotes eternity. It must distinguished from and and from abad (q.v.). Al-Tahanawl writes: "Axai is the constant duration of existence in the past, as shad is its constant duration in the future." As opposed to temporal origin (hudath), it is the fact of having been preceded by nothing else (al-la masbūbiyya bi 'l-ghayt); atal implies the negation of a first beginning (nafy aiawwaliyya); it is therefore a - eternity a paris onte, and abad is eternity a parte bost. Asal and abad are essentially identical in God (inna abaduku 'ays atalihi), for they mean that the two relative extremities which are the beginning and the end are both "cut off" from God (inhitat al-facofayn al-idāfiyyaya 'anhu'). For Him they are negative attributes (cf. Fakhr al-Dīn al-Rāzi, commentary on

the Most Beautiful Names of God, sura VII, 180: and and hadim are classed among the real and perative attributes. First, appeal is regarded as real. accompanied by relationship and negation (xi/a hakthiyya ma'a 'l-idafa wa 'l-salb). He is cternal. in the post of arek, that which is not preceded by nothingness, that which is in existence before any rational conception of a first beginning (kable ta'akkul al-awunlivva), and in the sense of abadi. that which persists beyond any rational conception of an ultimate term (ba'da ta'akkul al-akkirivya). Through these various definitions there come to light two conceptions of pre-eternity and posteternity. The first is that of endless duration (la nihāyata laku) which extends either towards the past, or towards the future (in which case it is also known as ul-le-vdsai, that which does not cease to be). This scheme (cf. below) raises many difficulties in the solution of the problem of the creation of the world, since it introduces the concept of an infinite time before the moment of this creation. The second is more philosophical: the two eternities are nothing more than negative conceptions, to which contemplative thought has recourse in order to grasp the idea of eternity in relation to time, but which do not correspond to the reality of an infinite time | the two senses: they are relative to the mode of thought belonging to the human spirit, which as al-Razi points out (cf. below), cannot conceive of itself side time. The reality which is hidden behind these lmaginary concepts is that of God and of His subsistence through His essence (bakā uhu bi-dhātiki). that is, of a being totally unaffected by time and temporality.

So what does kidam denote? Etymologically, the term should be associated with azal since it is a root expressing the sees of anteriority. The LA says of it exactly the same at Tahanawi says of azal: "It is the contrary of temporal origin (makid al-hud@th)". Ibn Mangur also explains it through the roots 'ataka and sabaka ("to precede in a race"). It should in fact be noted that the idea of anteriorness in time is space is linked to that of superior worth, as would appear from the substantive kadam and from its Kurianic use: kadam sidk (X, 2) which al-Zamalthsharl interprets as sabile ma-fudi wa-manzila raff'a, a priority, a higher abode that God is preparing for the Believers. Another explanation is that in advance a gift has been prepared for them on the part of God (kad sabaka lahum find Allah hhayr) which unites the two ideas of anteriorness and of the excellence of all divine gifts. It may be noted further, with regard to kadam ("step", whence the fact of being a step ahead of the others, of precedence) that the LA, as well = al-Kurtubi in his commentary, quotes verses of Dhu 'l-Runima [q.v.] where the expression of Bedouin mentality may be seen: kadam is associated there with high nobility and acts of splendour (majdkhis). Since the qualities of Bedouin athic were in general transferred by Islam God, it may reasonably be supposed that the root K-D-M served not only to connote the anteriorness of God, but also His ontological pre-eminence over all things, while it must be made clear that this in not an anteriority and a pre-eminence relative to others, as in the case of mufdhhera which implies rivalry, but qualities that are transcendental and absolute. It is in this were that the LA says that God is al-Mukaddim, because he precodes all things (yukaddim al-askya") and He puts them in their place (yada'uhā fi mawadi'ihd). But the terms hidam and hadim in the sense of eternity and the 6 KIDAM

eternal, are technical creations (istillhid); they are not Kur'anic. The had? 'Abd al-Diabbar, in the Shark, writes that according to the principles of the language badim is that which has existed for a longer time than something eise (må jahådama mudjudinchu) and he quotes the verse (XXXVI, 39) where God compares the moon m an old palm (ka 'l-'urdjun al-kadim). As for the word kidam, it does not occur in the Kur'an. The revealed Book conveys the idea of divine eteraity through that of transcendence. God is al-Muta'ali (XIII, 9), and this name, according to al-Razl, belongs to him on the grounds that he is utterly removed (managesh) in His essence, in His attributes and His actions from all that may not be asserted of Him. In consequence, He is outside time, Eternal, and it is thus that the term hadim, taken absolutely (al-Kadim) denotes God Himself.

Al-Tāhānawī also makes bidam the opposite of hudāļh [q.v.]. These two terms denote attributes of existence and are studied together. Essence [māhiyya] is qualified only in regard to the qualification of the corresponding existence. They may be applied to nothingness, according to whether it is preceded by existence or not; thus one may speak of an eternal nothingness or nothingness resulting from obliteration. Kidam and hudulh may be taken according to relation

(idafiyyan).

z. Real eternity consists in the fact of not being preceded by another thing according to an anteriority which is essential and sot temporal. This is what is known as essential eternity (hidam dhatt), which consists in the fact of needing absolutely nothing other than the self in order to exist. This implies the necessity of the being. The Eternal in this sense is the necessary Being. On the contrary, origin (hudain) is the fact of having been preceded by something in existence according to an essential anterlority, which in this case may me may not also be a temporal anteriority (for example, the world is essentially the result of an origin, it is muhdath, but nothing precedes its time; man is also essentially engendered, but his parents existed in the time previous to his birth). In a certain sense, time is the result of an origin (hddigh), because if it has been preceded by nothing which could have existed before it in a temporal way, an absurd hypothesis, it does not have the absolute existence of necessary Being and at every instant it renews itself. It is possible to understand in particular by eternity the fact of not being preceded by the non-existence of a temporal anteriority: this will then be called temporal eternity (hidam zamdni), and the eternal in terms of time is therefore "that of which the time of existence has no first beginning", Similarly, we may talk of a temporal origin (hudūth zamdni) where the existence of a being is preceded by non-existence in time. Thus we define that which is the fruit of a temporal origin (al-hadish al-samani) as that which is preceded in time by its non-existence, according to wellknown formula: lam yakun, thumma hana ("it was not, then it happened"). In this sense, time is hadith because nothing can pre-exist itself.

a. As for relative hidam, it implies that the past time of the existence of m being is greater than that of the existence of another. But this man cannot be conveyed by the word eternity. It the antiquity of a being compared to the avoilty of another, and hadim means ancient, old, like 'all's. Conversely, haddly will be novelty, haddly that which is new.

Al-Tāhānawī adds that essential eternity is = particular (akhass) than temporal eternity, which in its turn is particular than relative eternity or antiquity. Thus necessary Being, which is kadies dhalf, is also eternal according to a temporal point of view, since it is preceded neither by nothingness nor by that which is other than itself. But the converse is not true; thus the attributes of eternal Being, which are not preceded by nothingness since they concomitants of its eternal essence, are not eternal in themselves and so do not have bidam disti. The same could be said of the world which is kadim samani according to the falasifa, but which mot however hadim abdii, because it depends in its cause, which is other than itself. As for kidam idaft, it is not co-extensive with hidam samani. In fact, the past time of an existence may be greater compared with that which subsequently occurs for the first time. This applies to the father who is andim in relation to his son, but who is not thereby kadim samani, because he is born of parents. So if we compare the world to a man, both of these have a history made up of successive events. In relation to one of these events, the past I the world and of this man extend over a time greater than that of the new happening. Each of them will therefore be called hadim in relation to it. They are both hadim idaft, But the world is not only kadim in this context: it is in itself, because there has never been a time where it did not exist. Man is only kadim in relation, for example, to the event of his paternity: doubtless he preceded it, we precisely according to me antecedence which is only relative to it. On the contrary, in the context of origins, it is haduth idiff which in the most particular; then comes buduith eamons and finally huduith didit. This is because everything whose existence in the past covers a lesser time-span (akail): that is to say hadith idall) is preceded by nothingness, and is therefore hadith ramani. A fortiori, it is hādith dhātī. This analysis has clearly been influenced by the thought of philosophers who tend to associate eternity with the ontological necessity of the wadjib al-unidjed and bud@h with continuity. Theologians simply understand by kadim that which is not preceded by nothingness, in the vocabulary of al-Tahanawi, kedim samani.

To what does the notion of eternity apply? Kidam relates first to the essence of God. On this point all the philosophers and religious scholars are in agreement. On the question of the eternity of the attributes of God, there are differences of opinion among the mutakalliman. God is eternal because He is not subject = origin, and being, cannot be other than mulidath or kadim. So if God were subject to origin, in order to exist He would need another being to create him, a wwhiteh. But the question would apply to the latter was and so we to infinity. So one must affirm the existence of God as eternal Creator, in it is expressed by 'Abd al-Diabbar (al-Sani' al-hadim). This argument, which bears a philosophical mark, is not the exclusive property of the Muctazilla, It is found in the similar terms in the Kiteb al-Tambid of al-Bāķillānī, in the chapter where he shows that the agent which produces beings subject to origin (fd'il al-muhdathat) cannot itself be the fruit of an origin. It is found in the Kitab al-Irshad of al-Diuwayai, where m proves that the existence of the Eternal "does not inaugurate itself" (wudjud al-hadim ghayr muftatib); in the same place he gives an interesting and precise observation on the concept of an existence is has beginning; does this not imply an infinite succession of moments? He replies

KIDAM

that the moment of a thing is defined by the fact that it is contemporary with other things. Now God is not contemporary with any other thing. So the eternity of God is implied by his uniqueness.

The Ash art school admits the eternity of the divine attributes. On the contrary, the Muctazilis express the major principle that "God has no coeternal", according to the formula of 'Abd al-Djabbar in the Shark (ld kadima mat Allah). Nevertheless, they recognise meternal four attributes: existence, life, knowledge and power. In fact, according to al-Djubba? and the majority of the learned men of the school, these four attributes necessarily belong to God through his essence, therefore they are also eternal. His knowledge is His being in acts of knowledge (kawnuhu 'allman) and the same applies to the other sifat. Or furthermore, He knows through a knowledge which is Himself (Abu 'l-Hudhavl). etc. They do not say that He possesses eternal knowledge, but that he has not ceased to be in acts of knowledge (lam yasal falimas), etc. 'Abbad b. Sulayman refused to say that God possesses knowledge, any more than He possesses eternity (bidam); but it may be said that He is eternal (hadsm), Contrariwise, Ibn Kullab thought that God in acts of knowledge through a knowledge belonging to Him, and so on. To say that He is eternal, is to assert that He has not ceased to be in His Names and Attributes (lam yazal bi-asmā'iki wa-sifāliki; Makdidi). The essence of God alone is eternal, not in the sense that it is stripped of all attributes, but m the contrary, clad in all that belong to God. Some of his disciples claimed that God is eternal through an eternity (kadim bi-kidam), others that He is eternal, but not through an eternity (hadim lá bibidam). We begin to deal here with pure subtleties of language, as in the distinction between the two expressions "God has not ceased to be" and "God has not ceased to be through the eternal attribute of eternity." A passage from the Maḥālāt deserves notice, however; "The supporters of the theory of attributes (ashab al-sifái) differ in opinion concerning the attributes of the Creator; are they eternal or have they had morigin? Some say that they are cternal. Others declare: "If we say that the Creator is eternal in His attributes, we do not need to say that His attributes we eternal; so we say neither that they me eternal, me that they have had an origin." According to al-Tāhānawi, Abū Hāshīm added a fifth eternal attribute to the four abovementioned; holiness (al-ilāhiyya), which is distinct from essence. This is reminiscent of the divinitas of the 12th century theologian of Chartres, Gilbert de la Porrée. It is no doubt to this thesis that 'Abd al-Diabbar alludes when he writes that, according to Abo Hashim, attributes belong to God necessarily, and by virtue of that to which he confirms in his essence (li-mā Hwos 'alayhi fi dhātihi). So it is through divinity that these attributes are eternal. For Sulayman b. Diartr and other Sifatiyya, the attributes belong to God necessarily through "notions (R-matani) which can be qualified neither by existence un non-existence, nor by origin nor eternity" (Shork). It iii the concept of notional attribute (sife ma'newiyya), a term that has been translated variously as "essential", "qualitative", or even "entitative". It is nothing other than the qualification made necessary by the notion that one has of God. Ma'nd is always a notion signifying cum fundamento in rs. The attribute ma'nawi therefore is not ____; neither is it a "thing" in God. It is that which the reality of God demands that one says

of God. But, here too, that which is eternal is God and his essence, and the sife ma'maniyys escapes all ontological alternatives. Nevertheless, according to 'Abd al-Diabbār, certain disciples of Ibn Kullāb reified the ma'ānī and considered them to be eternal; for them the four aforementioned attributes are fitting to God by means of the ma'ānī analiyya, which may be translated by "eternal entities". (We may note with 'Abd al-Diabbār that here anali has the out however that these Kullābiyya did not dare employ this formula in its absolute sense, so most to run counter to the unanimity of the Musièms over the denial of co-eternal attributes.

97

From the same root as bidom is the 5th form maşdar, takaddum, which occurs in a very interesting commentary by Razi on Kur'an, LVII, 3: "He is First and Last". The word takaddum (antecedence) has several meanings: (1) al-takaddum bi 'l-ta'thir where the antecedent exercises infiltence over the consequent, for example, the movement of the finger entails that of the ring; (2) al-lakaddum 'I-hādja, based - the need which the consequent has of the antecedent; thus the number one is anterior to the number two without being its cause; (3) al-takaddum bi 'l-sharaf, according to worth; thus Abū Bakr has precedence over 'Umar; (4) altakaddum by "!-martaba, according to a hierarchical order, either sensible, such as the place of the imam in prayers before the faithful who pray; or rational, such me the place of the genus in relation to the species; (5) al-takaddum bi 'l-saman, temporal anteriority or sabliyya; to which al-Razl adds (6) "But I think that there is a sixth division which is like the anteriority of certain parts of time in relation to others; this anteriority is not temporal, otherwise it would be necessary for time to develop another time, to the point of infinity. Thus the present would be within another present which would be within third present... and all these presents would be present at the present moment (kulluhā hādira fi hadha 'l-an). But the ensemble of these moments would be posterior to the ensemble of past moments, to the extent that there would be another time for the ensemble of times (madimis al-asmina), which absurd, for, being a time, it would have to enter into the ensemble of times. Consequently, it would be both within and outside this ensemble, which is impossible. "Furthermore, this anteriority of parts of time in relation to one another is not an anteriority according a causality, nor according to need, otherwise they would co-exist; evidently it is not according to worth, nor according to space. It is therefore a sixth kind I tahaddum. Now the Kur'an shows that God is First (Primus, not prior) for all that is not Him, will al-Razi shows here that this qualification only fits the necessary, first and unique Being, for all that is not Him is possible (mumbin) and the possible exists only through origin: it is muhdath. But what is was nature of this divine anteriority? It is not owed to an act of influence, for the agent and the patient are relative one to another and co-existent. It is not a priority founded on need, since the precedence here is absolute. It is not m precedence owed to worth, for it cannot be said that God is more worthy or more noble (askraf) than possible, since He is incomparable (although in one sense, necessary existence implies a fulness of being besides which the existence of the possible is deficient). As for anteriorities according to time or space, they have no meaning for God, because time and space are possibles which depend on an origin.

God, being anterior to the totality of times, is not anterior according | time, otherwise the divine anteriority would have to enter into the ensemble of times, since it would be a time; but it would have to be exterior to it, because it would contain them all and that which contains is other than what is contained. This would be an absurdity, Apparently al-Razi is proposing, in so far as concerns God, a sixth kind of anteriority which is not without analogies to the anteriorities of parts of time in relation to another. However, identical and that II why al-Razi, when introducing his sixth division, does not say III is, but only that it is like ... III conclusion, we know that God is First in a universal " ("ald sabil al-idimāl), not in a detailed manner ('ald sabil al-tafell). As for grasping the scality of this priority (consaliyya), human intelligences have not the means, since they cannot escape temporal forms. We may note that a similar division of tahaddum is to be found in the Mahasid at faldrife of at Ghazall, except that the lahaddum bi 'l-hādja is called takaddum bi 'l-jab', in where the entecedent is not suppressed by the suppression in the consequent, but in the quent is suppressed by the suppression of the antecodent (as with a series of numbers), and except that tokaddum bi 'l-to'thir bears the name takaddum 🔳

'I-dhat (in the relation of cause to effect). The doctrine of the eternity | | | world [see ARAD] was upheld in Islam only by the falasifa, directly following the systems of thought of the Greak philosophers: Plato, Aristotle, Philo of Alexandria, Procius, and John Philoponos the Grammarian. The two Tahājut of al-Gharāll and of Ibn Rushd deal with it in a detailed fashion. The fundamental argument is that it is impossible to conceive a temporal beginning to the world, a moment of time in which it was created, in such a way that an empty time preceded the creation. In fact, if, as Aristotle maintains, time is the numerical measurement of movement (a theory taken up by the falasifa, see RARAKA), movement demanding a mobile thing, moving bodies, the physical world and in particular the stars, then it is impossible for time to have existed before the existence of the world. Furthermore, if it existed, it would be eternal or created. But starnity does not conform with time that is changing and elapsing (sayalda): each of its parts is new in relation to the preceding part, and time remove itself (yatadiaddad) in every one of its instants. If time is addith in each of its parts, it has all the more reason for being = I its totality. So it is created; but then the problem srices; is it created in time and did a time exist before time? That is absurd. This is the argument as taken on the part of the world. On the part of God, given a temporal creation, what did the Creator do before creating. Was He inactive? That is not his nature and it is written (II, 253) that "Neither weariness nor sleep take hold of Him". Besides, If He was first inactive, active, a change would have taken place in Him, which is inadmissible. What would have induced Him to create at the moment when He undertook His creation? A muradidith, something which could have turned the scales in the sense of the act of creation? But this muradidish is eternal or created. If it is eternal, the world must also be eternal, unless me other thing could prevent this muradidiib from acting; this is known as lark almuradidish. This tork is its turn will be created or uncreated. If it is eternal, there must have been, for creation in have taken place, the intervention of in

tark tark al-muradidiih, and so on. If now the muradidiik is created, the question applies is it is to the world.

For their part, the theologians who believe in the execution of the world in time object on the grounds that I the world is eternal, it has no beginning, it has to exist and consequently it has existed for an infinite period of time. Now, according Aristotellan principle, it is impossible to traverse an infinite time. If there is an infinity of instants to traverse in order to arrive at the present instant that exists, it is impossible to arrive there and it does not exist. This is a contradiction, The same reasoning is made in considering the infinite chain of causes: the effect that exists at present could not possibly exist. The difficulty arises from assimilation of eternity to an infinite time. But say that the world is eternal is to affirm that while remaining in the interior of the world and of the time which is linked to the world, one will never find a moment which could be its first beginning. One will need to go back indefinitely, but not to infinity: in other words, we are dealing here with an indefinite, or in the language of Aristotle, with an infinity in power, not infinity in action. In short, the objection supposes that the expression "not having a beginning in time" means "having a beginning in infinite time." Besides, an infinity may | traversed if is contained; between two points in a line, an infinite number of points is traversed. Ibn Sina seems to have held this view with regard to the problem of the first cause, analogous to the problem of the first beginning. If one considers the ensemble (djumla) of causes within this world, it is clear that each one of them is at once cause and effect. Therefore, one cannot insert into this ensemble a first which would be without came. "Every ensemble of which each unit is an effect caused demands a cause exterior to these units." In such a hypothesis of a causal chain "every series composed of causes and effects, whether finite or infinite, shows itself, if it contains within itself only caused effects, to need a that is exterior to it, but is definitely a continuity with it, as with a limit (tattasilu bihā ţarafan)". If the components of this ensemble infinite, are then dealing with a limited infinite ensemble. That is to say, that in the search for the first cause, it will be seen to stand out as a limit to the infinite which thought can never reach and towards which strives. But its action does not need to traverse the infinite discontinuity of causes and effects in order mact hic et nunc, for, as Ibn Sina points out "every cause of an ensemble which is not one of the units of that ensemble is in the first place cause of these units and in consequence cause of the ensemble," Such is one of Ibn Stna's points of view on this question, according to the Isharat. Another objection to the theory of the eternity of the world is based on astronomy. We have an example of I in the Fisal of Ibn Hazm. Having declared that to infinite time nothing, and having thus shown that the infinity of centuries to come adds nothing to the infinity of centuries passed, Ibn Hazm writes: "In its circular orbit, Saturn makes - revolution in thirty years, and it has never ceased to turn. The greatest sphere, in these thirty years, makes approximately 11,000 revolutions, and it has never ceased to turn. Now beyond any doubt, 11,000 revolutions is greater than one alone. Consequently, that which is infinite will be approximately 11,000 times greater than that which is infinite, which is absurd." This is a crucial variation on the same theme: the assimilation of eternity to an infinite time. The reasoning of IIII Harm is ingenious, but it ignores the powers of the infinite.

And what of the end of the world? Piato apart, the philosophers held the view that that which has a beginning has an end, and correspondingly that which has no beginning has no end. From a creationist perspective, we could, however, admit that God will not destroy that which He has created, in such a way will the world could have been created, but eternal a parts post. For the philosophers, the universe cannot perish, but a part of it may disappear. For the theologians who believe in the end of the world, there remain Paradise and Hell which are sternal in the sense of abadi; in fact, it is written that the Chosen and the Damned shall dwell there eternally (hum file hhālidān, as the Kur'an says in a number of places). But on the basis of the verse where God describes Himself = the Last, Djahm b. Şafwan supposed that Paradise and abolt also have an end, and he found a confirmation of his theory in verses to? and tof of Sûra XI, "To dwell there eternally as long as the heavens and the earth remain". Thus God will find Himself as absolutely alone in post-eternity m he was in pre-eternity.

(R. ARNALDEE)

KIPT, Kupt, Kapt, ancient Coptos, a small town of Upper Egypt situated where the Nile approaches its closest to the Red Sea (same 40 km, north of the ruins of Thebes, and about 2 km. to the east of the river). In Pharaonic times it was connected with the exploitation of the minerals in the hills between the Nile and Red Sea and with trade through the eastern part of Egypt, and enjoyed its greatest florescence in the Greek and Roman periods. Strabo describes the organisation of traffic up the Nile to Coptos, then by caravan across the desert in the Red Sea, and calls it a "town inhabited by the Egyptians and the Arabs together". In fact, it man a second of attraction for the peoples of the eastern desert coming trade there, above all, for the Bedia [q.v.], who doubtless received from there their Christianity; a bishop of the Bedia resided at Coptos-Kift. It formed the centre of a pagarchy, then of a kura, but then the position of Kift as a starting-point for tracks to the Red Sea (in 132/750 some members of the Umayyad family fled there temporarily, probably with the intention of escaping) lost importance when the mainstream of oriental trade started using the Persian Gulf instead.

The tribes of the Nile Red Sea deserts started attacking the Nile valley; kift was plundered with impunity in 204/819 by the Bedia, who were still Christian, and not till 212/828 was a rampart constructed to protect the settlement. In 1000 first half of the 4th/10th century, al-Masfull wrote that Kūs

important than Kift, whose lapse into disfavour he connects with the distance of the Nile channel from the town. In fact, the skilful traders of Kûs had been able to benefit by the river, the only commercial axis still flourishing, because 📰 🔤 commerce with Nubla, whilst the tracks were | deserted; when they me utilised once more, with the revival of oriental trade under the Fatimids in the sth/IIIth century, Kift revived, but by then Kils had the first place, by now a provincial capital. Kift nevertheless acquired a numerous, mixed population, especially as relations with the klidlas had long period led to the settlement there of 'Alid families. It no doubt their influence which explains the considerable expansion there of Shiffun and its fidelity to the Fățimids after Salah al-Din's assumption of power; a conspiracy, leading to a revolt in 572/1177, was savagely repressed. Consequently, Kift left to Kus the task of imposing the Suppl counterrevolution on the Said. The departure of certain families from the town (e.g. that of Ibn al-Kifti) is probably to the connected with these events; Kift does not seem to have had a madrasa like the other small towns of Upper Egypt, and it soon lost its kadi (it passed under the jurisdiction of the representative of the hadi of Kus). Its territory remained a week whose went to support the sharifs of Mecca. In the Mamlük period, Kift nothing than a small agricultural centre in a countryside where the cultivation of surar cane provided the main means of livelihood, and it has remained thus to ill present day.

EIHANA (A.) means divination in general.

La kihāna ba'd al-nubuwwa "there is no divination after the prophetic mission"; if it were necessary to be content with this dictum, frequently repeated in the Tradition, such a article at this would be out of place in an Encyclopeedia of Islam. But the precise sense of this term has a established and the range of concepts which it covers outlined, the reader will agree that it is, the contrary, far from superfluous.

The word itself, both in terms of the conceptual aspect (kikha) and the pragmatic aspect (kikha) is a legacy, through its root we least, from the earliest Semitic antiquity [see when]. Because of this fact, it covers all the concepts and all the practices which are connected, closely or distantly, to the general concept of divination the art of knowing that which cannot be spontaneously known. The current division of divinatory methods into inductive and intuitive is also to be found in the lamments Arablalamic corpus of Arab-Islamic mantic literature, without always taking on the nature of a rigid classification, in that the two types of method may overlap or be used concurrently.

It is fruitless to search for a theoretical definition of divination in the impressive mass of divinatory documents contained in the literatures of the Semitic languages, throughout the ancient period. At the most, there are to be found descriptive definitions,

KIHĀNA 100

consisting of a list of the techniques which it comprised, according to places and periods. It is such a pragmatic definition which may be drawn from the Arabic documentation reckaned to preserve pre-Islamic traditions.

But in mediaeval era, with the impact of Greek and Hellenistic philosophical thought, there was born, among Arabs and the Islamised Iranians, a taste for theoretical definitions and methodical classifications. Already, in the works of a polygraph like al-Mas'QdI (d. 346/956) there - recorded a number of attempts at theoretical definitions which have been summarised, by T. Fahd in La divination erabe, 43-5; of. Muradi, iii, 347 ff. = \$\$ 1233 ff. Some philosophers, such = Ibn Sinā, al-Ghazālī, Ibn Rushd and Maimonides, have tackled this problem and attempted to ejucidate it (cf. La divination grabe, 51-63). Then came Ibn Khaldûn who put together all these speculations (ibid; 45-51). He emphasises that as a branch of prophetic practice, divination constitutes the lowest echelon. Like prophecy, it is a divine gift entrusted to a privileged group, men women. In fact, according at Kazwini, there exist iliuminated and celestial souls which possess the faculty of knowing the names of the spirits. These are the souls of prophets and saints; they are also the souls of physiognomists, of soothsaying genealogists and of those who see the future by means of past and present events. "As for the souls of the soothsayers", he continues, "they receive spiritual knowledge and through it the contingencies of beings which appear in dreams and in other manifestations" (i, 317-22; La divination arabs, 50-51).

So, divination is seen to be theoretically legitimised by inclusion in the mainstream of prophecy (on divination and prophecy La divination grabe. 63-90). But, for practical purposes, it was necessary to strip it of all that was obsolete and too closely linked to paganism. From that point born, in Islamic literature, a detailed inventory of divinatory practices, with precise definitions of the techniques listed. In their taste for the classification of knowledge, encyclopaedists and bibliographers finished by conferring upon the concept of divination an epistemological quality. We shall begin with the most detailed classification, that of Hadidil Khalila (i. 34-5), who draws the data of his inventory from his predecessors, from Ibn al-Nadim (Fibrist) to Täshköprüzäde (Miftal al-sa'dda).

Islamic divination, a legacy and of ancient Semitic divination and of Hellenhole divination, is

divided into three categories:

I. Fisasa (q.v.), or physiognomancy, and its ramifications. Under this heading, eleven "sciences" are listed:

1. "ilm al-shāmāt wa 'l-khliān "beauty-spots and birthmorks" (see miluly and La divination arabe, 390-31.

2. "ilm al-asdrir, "chiromancy" (see AL-HAFF and La divination arabs, 393-5).

3. "ilm al-akidf, "omoplatoscopy" (see AL-HATIF and

La divination arabs, 395-7).

4. Silm Sydfat (read hiyafat) al-ather "observation of footprints (on the ground)" (see RIYAFA and La divination arabe, 370-3).

5. 'ilm biyafat al-bashar, "divination by morphoscopic and genealogical lines" (see FIRASA and RIVARA and IIII La divination erabe, 370-90).

5-7-8. 'Ilm al-ihtidā' fi 'l-barārī 🚃 'Lhifar, "the sense of orientation in deserts"; "ilm istinbil alma'sdis "the detection of minerals"; 'ilm al-rivifa, "the detection of wells". These three categories may be put together under the heading of "divinatory observation of the ground" (see MA' and La divination arabe, 403-6).

9. Sim nuril al-ghayth "the knowledge of (signs foretelling) rainfall". This consists in meteorological divination with its various techniques: neromancy, capnomancy, anemoscopy, phyllomancy, bralomancy, etc. [see AHWA", MALHAMA and La divination arabe,

407-17).

10. "ilm al-'inifa, "knowledge of the future by means of past events". This definition suggest that it is a case stricts seems of inductive divination, although initially "ird/a implied a certain intuitive. and consequently gnostic and esoteric, awareness (see KARIN and La divination arabe 113-19).

II. "ilm al-ikhlildij, "palmomancy" (see ikuru.ku

and La divination scabe, 397-402).

II. Sihr [q.v.] or magic, and its ramifications. 12. "Ilm al-hikana, "divination" (astrological divination, involving incantations and invocations in the stars). Thus the influence of Hellenistic ideas led to the division of divination into two types, traditional divination or 'srd/a and astrological divination. which underwent a great expansion in the Hellenistic period and which the Arabs came to know through the many translations of Greek, Syriac, Pahlavi and strological writings (see NUDION and La divination arabe, 478-97).

13. 'Alm al-nirandidi, "white magic" (see NIRANDI and T. Fahd, Le monde du corcier en Islam, in

Sources orientales, mit (1966), 184 ff.).

14. Tim al-<u>kh</u>āwas; "knowledge of the properties 🔳 divine names (al-asma' al-husna), of prayers (da'deel), of numbers (see place and HUROF) and various other special things" (see KHAWASS AL-MUR'AN; La divination arabs, 214-45; Le monde du sorcier, 175-6}. 25. "Ilm al-rukyā, "sympathetic actions or sorcery" (see RUKYA and Le monde du sorcier, loc. cit.).

16. 'ilm al-'and'im, "conjurations of demons incantations" (see SIRR and Le monde du sorcier, 164-5). 17. 'Ibn al-istibdar, "the evocation of spirits in physical form" (see istintal and Le monde du sorsier, 170年.).

18. "I'm da wat al-kawakib "the invocation of (the spirits of) the planets" (see NUDIOM and Le monde du sorcier, 169 [f.).

19. "I'm al-filabiliti (quantifical, "the ext of making phylacteries" (see kuxya and Le monde du du sorcier, 172 ff.).

20. "ilm al-hhafa", "the art of making oneself instantly invisible" (see xirang) and Le monde du sorcier, 184 ff.).

21. 'ilm al-kiyal al-sasdniyya, "the art of trickery and forgery" (see ibid.).

22. 'ilm al-kash' ad-dakk, "the art of disclosing frauds" (see ibid.).

23. 'ilm al-sia'badha, "conjury" (see ibid.).

24. Sim ta'allul al-haib, "charms" (see RUKVA and Le monde du sorvier, 272 il.).

25. 'ilm al-isti'dne bi-khandşe al-adwiya, "the art of employing the properties of drugs" (see ADWIVA).

III. Judicial astrology (see NUDIOM) and its ramifications.

26, 'ilm al-ikhtiydrát, "bemerologies and menelogies (see therry lake and La divination arabe, 483-8).

27. 'ilm al-rami, "geomancy" (see EMATT and La divination arabs, 193-204).

28. "I'm al-fa'l, "omens" (see FA'L, "IYAFA; La divination arabe, 431-519).

29. 'Ilm al-tur'a, "rhapsodomancy" (see gua'A; La divination arabs, 214-19).

30. 'dim al-fira, "ornithomancy" (see FA'L, 'IYAFA; La divination arabe, 431 ff., 498-519).

As can be seen, in this inventory, Islamic divination avails itself of methods belonging to magic and astrology. A single term embraces all these arts: "ilm al-ghayb," the art of apprehending the invisible". Any method permitting the acquisition of supernatural knowledge or assumed to do so is considered as relevant to divination.

The disciplines omitted in this inventory.

31. Divination by dreams (see Tacbia al-Ru'va; La divination arabs, 247-367; Fahd, Les songes interpretation selon d'Islam, in Sources orientales, it (1959), 127-58. The absence of oneiromancy among the divinatory techniques is justified by the fact that it occupies in Islam a higher place than that of divination in the sphere of religious inspiration. It is closer to prophecy, of which it constitutes one of the forty (or forty-six) parts (cf. Wensinck, Concordance, I, 343), while divination is the lowest echeion.

32-4. Among eleromantic practices, only rhapsodomancy and geomancy are mentioned. (32) Belomancy (see extremin: La divination arabe, 181-8), (33) lithoboly (see namy Al-plinian; La divination arabe, 186-93), (34) mayriv (see Al-mayriv; La divination arabe, 204-14).

The absence of these practices in the above inventory is due to the fact that they were associated with pagan culture and they were for this reason prohibited in the Kur'an.

35-41. The use of the oracle (in its various forms: sadj*. radjas, hatif (q.w.), ventriloquism, and necromancy; see, La divination arabs, 148-9), which was still popular in pre-Islamic Arabia, (36) extispisciny, (37) hepatoscopy, (38) teratomancy, (39) medical diagnoses, (40) lecanomancy, (41) ordeal, mantic disciplines much used in ancient Mesopotamia, are present only as vague survivals in Islamic divinatory literature (cf. the Index of techniques and ideas in La divination arabs, 591-3, and J. Nougayrol, La divination babylintenus, III La divination, studies collected by A. Caquot and M. Leibovici, i, 28-81).

If me diviner cassed officially to exist in Islam, divination survived, but considerably changed, adapted progressively to the taste of the period and enriched by new Hellenistic, Iranian and Hindu practices, to which were added the local practices of the conquered territories. At the end of this period of adaptation and enrichment, Islamic divination progressively lost its primitive oracular nature to become a τέχνη, an art or m science (film). It is thus, for example, that to belomancy, condemned by the Kur'an because of the its connections with paganism, there succeeded 'iles al-èur'a or rhapsodomancy, "ilm al-diefr and 'ilm al-burilf or onomatomancy, "ilm hhawass al-Kur'an, a combination of rhapsodomency and intromancy, Wilm al-rami or geomency and 'lim al-sa'irdia, a sort of machine for producing emeas. To oneiromancy, in the sense of dream-messages received directly from the divinity by a man or by his substitute and often expressed in explicit language, there succeeded Simal-la bir or oneirocriticism. To hiyala or physiognomancy, there succeeded 'ilm al-firdsa or physiognomony and the ramifications indicated above. The sphere of fa'll or omens was enriched by the transition of the Arabs from a nomadic to a sedentary culture, while preserving nevertheless, its original structure, especially where ornithomency was concerned (cf. La divination arabe, 525-6).

Islamic divination resembles a crucible in which the divinatory practices of Semitic and Hellenistic antiquity —— fused. The rich divinatory literature written in Arabic, Persian and Turkish conveys an Imposing heritage the study of which will contribute to a better understanding of ancient and mediaeval Weltanschausungen.

(T. FAHD)

KİKÂN/KİKÂN [see RILAT].

KHAB s. RAB! A, an Arab tribe belonging to the group of tribes called 'Amir b. \$a'sa'a [q.v.]. The territories and pre-latemic history of the tribe are described in that article. Kilâb was considered to have ten main divisions, of which the chief for a time _____ Dja'far b. Kilâb, from which _____ leaders of the whole of 'Amir. The most serious war of the Figjar [q.v.] resulted from the killing of 'Urwa al-Rabhal of Kilâb by al-Barrad b. Kays al-Kinanf. Divisions within the tribe _____ reflected in hostility to the Muslims and friendship with them. Two men of Kilâb joined in attacking the Muslims at Bi'r Ma'ûna [q.v.]; but al-Dabhāk b. Sutyân became = Muslim and both called on his tribe to accept Islam and raided a recalcitrant section (al-Kurță').

KILAT, KALAT, KELAT, the name of a town and of an extensive region, formerly a <u>Kh</u>ānate, of Balūčistān, now a District of Pakistan.

(t) The town (often called Kalat-i Baluc to distinguish it from the Aighan Kalat-i Ghiltay) lies in lat. 28°53' N. and long. 66°28' E. at an altitude of 6,800 feet, and has in recent centuries been the centre of the Khanate of Kalat; until the rise of Quetta as a military base of British India (see gwaffa] it was the most important town of Balticistän. The name Kalät m Kilät represents Arabic halfa and Persian hala halat, often pronounced hild/kilāi in Indo-Muslim usage; in Balūči - have hhilds "fortress, citadel", cf. Yule and Burneil, Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases, 480, s.v. kheldt, this last being the form of the name usually found in Anglo-Indian sources of the period. On locally-minted coins we find the seem of the town both as K.las and as Killi (W. H. Valentine, The copper coins of India, London 1914, it, 223).

In earlier times, the town was known as Kalāt-i Sēwa, from a legendary Hindu king, or
Kalāt-i Ničāri, after the local Brahūl tribe of Ničāris. The name is not found in any of the early Islamic histo-

rians and geographers, but it is very probable that Kalit marks mediaeval Kizkānān or Kikan, judging by the latter's position in the itineraries; it seems be the Ki-kiangna of the early 7th century pilgrim Hinentsang (see Marquart, Erdnsahr, 275-6). Kikan and Bukan were raided by the Arab commander Sinan b. Salama al-Hudhall and then by al-Mundhir b. al-Djarad al-'Abdi as early as Mu'awiya's caliphate (Baladhuri, Fidth, 433-4). In the 4th/roth century, Kizkanan is named as the residence of the local ruler of the region of Thran (on which see Minorsky in EI 1 s.v.), whom Ibn Hawkal 1, 324, tr. Kramers-Wiet 327-8, calls Mu'tazz b. Ahmad, adding that he recognised the 'Abbasids in his Musha (a point probably made by Ibn Hawkel because the adjacent province of Sind at this time acknowledged the Fatimids and the Isma'll imamate). However, the capital of the region was located not long afterwards at Kuşdâr, modern Khuzdar, 80 miles to the south of Kizkanan/Kalat [see KUSDAK]. In the early Chainswid period, it is recorded that Masend b. Mahmud went lion-hunting in the district | Kikanan (Bayhaki, Ta'rikh-i Mas adi, ed. Ghani and Fayyad, 126).

Since approximately the 9th/15th century, Kalāt has been in the hands of Brahûls of the Kambarani tribe, from whome the later Ahmadzay Khans of Kalit were descended. In the 18th century, tho Khans recognised the suzerainty of Nadir Shah Afshär and Ahmad Shah Durrani [44.v.] during their Indian campaigns, and their power in Balūčistān grew. The greatest of the chiefs | this period, Nasir Khān b. 'Abd Allah, tried to shake off Afghān control, and though Ahmad Shah defeated him in battle, the latter was unable to take Kalat town from Naşîr Khan, despite three attempts (1172/1758). It was Nasir Khān who built the citadel of Kalāt, known as the Mici, which became the Khin's palace. We possess descriptions of Kalat during the first half of the 19th century by travellers such as H. Pottinger (1820), who mentions the mud-brick defensive walls pierced with gun-holes and the ample water supply from a spring, which also turned assume mills (Travels in Beloochistan and Sinde; accompanied by a geographical and historical account of those countries, London 1816, 40-51), and C. Masson (1830s), who describes 🚾 colony in Kalāt of Bābī Aighāns, expelled thither by Ahmad Shah from Kandahar, and who numbers the houses there at as. 800, giving a population of say 3-4,000 (Narrative of various journeys in Balochistan, Afghanistan and the Panjab, London 1842, ii, 50-6, 96-8, 177-8).

In 1250/1834 the Afghan ruler Shah Shudia' al-Mulk took refuge in Kalät with Mihrab Khān b. Mahmud b. Nāşir after his failure to Kandahār from Klihandil Khān, governor there for his brother Düst Muhammad [q.v.]. During the First Aighān War (1839-42) Miḥrāb Khān was drawn into conflict with the British force which advanced Kandahār in 1254/1838 through the Bölan Pass in order to reinstate Shah Shudjas. Kalat was stormed in 1255/1839 and the Khan killed in the fighting; the districts of Kacchi, Shal and Mustang in the northern part of the Khanate were taken from Kalāt and ceded to Shāh Shudiā', temporarily placed on the throne of Kābul, and British Agent installed in Kalät. This last **me** killed by Brahül tribesmen soon afterwards, leading to a second British occupation in 1257/1841. The coded territories were now returned to the Khan, and with the annexation of Sind in 1843 and the Paujah in 1849, British influence was brought right up to - frontiers of the Khanāte. The Khāns themselves suffered several decades of disputed authority and tribal turmoil, till in 1876 the Government of India was compelled to intervene, and Capt. (later Sir Robert) Sandeman negotiated an agreement between the Khan and rival chiefs, making Kalat a protected native state, with a British Political Agent to be henceforth stationed at Quetta. The northern labsils of the Khanate, Quetta, Nushid and Naşîrâbâd were leased to Britain in perpetuity, to form British Balüčistan, and the right to levy transit dues at the Bölän Pass commuted for an annual subsidy (see T. H. Thornton, Colonel Sir Robert Sandeman: his life and work on our Indian frontier, London 1895, 39-87, 117-82, etc.). Even so, further intervention men necessary in 1893, when the tyrannical Mir Khudādād b. Mihrāb was deposed from his Khanate by the Government of India.

(2) The province. This included by the 18th century the districts of Sarawān, Djahlawān, Kačīhl and Makrān, and the tributary states of Las Bēta and Khārān. In 1955 all the provinces of West Pakistan were merged into one unit, and Kalāt became a separate District under ■ Deputy Commissioner, whilst Khārān, Makrān and Las Bēta formed separate Districts. Kalāt District is today the biggest in area of all Pakistan, covering 30,931 sq. miles ■ area and with a population, made up of Brahāla, Balūč, Jhāts, etc., ■ 341,420 (1967 census).

(C. E. BOSWORTH)

KILAT (KALAT)-I NADIRI, "the most famous fort of Central Asia", located some 70 miles north of Maghhad near the Irano-Soviet border, on a spur of the Karādja-Dāgh Mts. Kalāt-i Nādiri consists of a high valley (altitude 2,500-3,000 feet), the twenty miles long and running west-eart, which is converted into a natural fortress by wells of virtually unscalable rock the north and south. The height of the nouthern rampart is 700-800 ft; the northern rampart is even higher. These walls are breached at only five points: Darband-i Arghun on the south-west; Nafta on the north; Kughtani Darband the south-wast; Cūbast on the west; and Dihča the north-west.

m 683/1284, the rebellious Mongol prince Arghin took refuge there after his defeat at the hands of

the Highan Tektider. In 782/1380-1, Timur launched numerous assaults on Kalat-i Nadhri without success; the fortress eventually fell — a result of pestilence. In 1153/1741, Nadir Shāh, who had previously used Kalāt-i Nādhri — the headquarters from which he set out to free Iran from the Afghāns, chose it as the site for the treasure-house in which he deposited the loot from his Indian campaign; the treasure-house — built by Indian craftsman from massive blocks of Marāgha marbie. After Nādir's death, his son Rīdā Knil and fifteen members of his family were executed at Kalāt-i Nādiri by the future 'Ādil Shāh.

Today, Kalāt-i Nādirī has reverted to its earlier of Kalāt, and constitutes one of the five

bakhths of the plabristan of Darragaz.

(R. M. SAVORY)

RILBURUN (Kinburun), ■ sharp cape or headtand at the mouth of Duieper (Özi) river on the
Black Sea coast of South Russia; this Turkish name
was given to it by the Turks because it looked as
slender ■ a single hair (kll). It lies at ■ sea miles's
distance from the fortress of Özi or Oczakol, and at
the tip of the cape was a fortress built by the Ottomans. Within the Kliburus promontory is an inner
stuary 40 km. long and 8-10 km. wide (P. Minas
Bijiskyan, Karadenis tarik ve cofrafyasi, tr. H. D.
Andreasyan, Istanbul 1969, 100). The salt obtained
from the lakes in the vicinity of Kliburum increased
its importance economically.

Kilburun came into prominence at the beginning of the zith/17th century as a result of the Cossack invasions towards the Black Sea coastlands (Kātib Celebi, Fedkleke, Istanbul 1287, il, 72, 103), hence fortresses were built in various places, including Kilburun, against Cossack raids (Pecewi, Ta'ribb. Istanbul 1283, ii, 152). The constructed at Kilburun had a staff of 193 persons (Bashakanlık azaiv genel müdürlüğü, Kâmil Kopeçi tasnifi, no. 4891). It became of especial strategic importance to the Ottomans when the Russians started descending the rivers to the Black Sea, and major reconstructions were accordingly undertaken in 1709 and 1733-4 (Muzaffar Erdoğan, Lalo devri Mimari Kayserili Mehmed Aga, Istanbul 1962, 58-9, 81). In time of war, the Kilburua garrison worked in collaboration with the garrison of Özi (Ocsakof) opposite to it, in defence of the mouth of the Dniepr. The Russians succeeded in capturing Kilburun for a while during the 1736-8 Ottoman-Russian war, but were later obliged to return it after demolishing it. The fort was again captured in 1772 during the 1768-74 Ottoman-Russian war, and this fact was accepted by Turkey = the settlement of Kücük Kaynardia, Ottoman forces which tried to recapture it during the 1787-gr war failed decisively to do so (Djewdet, Ta'righ, Istanbul 1309, iii, 32). Kilburun fort was occupied by # French force on 17th January 1855 during the Crimean War, but finally demolished by Russia in 1860. Kilburun, on which there is a small fishing village, is now within the Ukrainian SSR.

KILÎD AL-BAHR (200 CANAK-KALE BOGHAZÎ). KÎLÎDÎ ALAYÎ (200 TAKLÎD-1 SAYP).

KILIDJ 'ALI PASHA [see 'ULUDI 'ALI]. KILIDJ ARSLAN I, also known to the Crusaders, like his father, under the name Sulayman/Soliman, son of Sulayman b. Kutiumush [q.v.], second Saldink prince of Asia Minor. At an early age, he was in Antioch when his father we killed in battle lighting Tutush [c.v.], and he me handed over as a hostage to Malik-Shah [q.v.] who conquered Syria in 1086. On the death of the latter (1092) he managed to escape, and arrived in Nicaea, his lather's former residence, where he seems without much difficulty to have had himself accepted as sovereign by the semi-autonomous Turcoman chieftains who were waging against Byzantium a policy of entente with the Basileus, who for his part, threatened on all his frontiers, sought to use against his other opponents those of I Turks whom I hoped gradually to assimilate or meutralise. Küldi Arslan was especially anxious to maintain relations with the Turkish East, which other Turks, in particular the Dănishmendids [q.v.] were threatening to cut off. In summoning his father to Nicaes, Alexis Commenus had in effect brought his Turks far in advance of what then was still the principal some of Turcoman population.

It was in these circumstances that the Crusadea intervened, enabling Alexis temporarily to abandon the task of dealing with the Turks. Killdi Arslan crushed the Peasant Crusade of Peter the Hermit, but was subsequently forced to give up Nicaea, along with his harem, to the Barons' Crusade, and was later beaten by the Christians again on the edge of the Anatolian plateau at Dorylaeum. These victories of the Christians enabled Alexis Comnenus to regain control of the entire Aegean coast of Asia Minor; but the Crusaders did not stay in Asia Minor. and the Turkish forces, who being sensi-nomadic in character had been repelled but not destroyed, returned behind the backs of the Crusaders. The danger had furthermore led to a temporary ciliation between Killdi Arsian and Danishmend, which led to annihilation, in 1700-1, of the rearguard troops of the Crusaders, an operation in which Danishmend, it is true, played the more significant role; ill latter, at the head of his troops, deprived the Franco-Armenians of the strategic centre of Malatya, vital to Killdi Arslan's links with the East. Also, when Danishmend died in 1104, Killdi Arsian, who had become reconciled with the Greeks to the point of sending them contingents to fight other enemies (1106), came and occupied the place.

From there he all able to control Upper Mesopotamia, where the lieutenants of his Eastern Saldith cousins were in conflict with another. When the member of Sultan Muhammad b. Malik Shāh [q.v.]

appealed to him for help, he confronted the army of the latter the Khabur, and killed (x107). This was for a long time the last intervention by the Saldjüks of Rûm in the East, and the roughlyconstituted Turkish state definitively enclosed within Axia Minor proper.

Bibliography: The sources include Anna Commena, Matthew of Edessa, Michael the Syrian and the Latin historians of the First Crusade; the Kdmil of Ibn al-Athir and the chroniciers of Syria (Ibn al-Kalanisi, Ibn Abi Tayyi² in the unedited part of Ibn al-Furat and Ibn al-Adim, ed. S. Dahan) and of al-Djazira (Ibn al-Azrak, unedited).

The modern bibliography is given in C. Cahen, Fre-Ottoman Turkey, London 1968, and O. Turan, Selcukiular ramaminda Turkiye, Ankara 1971). (CL. CABEN)

KILIDJ ARSLAN II, son and successor of Mas'ad I, and one of the most important sultans

of Ram (1155-92).

Mas'ud had, in dealing with the Greeks, succeeded in restoring the position of the Sakhiaks in relation to the Danishmendids who was divided by quarrals the succession. Klifd! Arslan at first maintained policy, and carried it to the extent of offering the Basileus Manuel Commenus at Constantinople 1162 a form of allegiance which, hi concrete terms, cost him nothing. He was then able to make himself master of a portion of the Danishmendid possessions, and he would have taken them all had he not been confronted by the powerful ruler of Muslim Syria. Nor al-Din. The latter, champion of the Holy War against the Christians, pretended indignation at Kilidi Arslan's relations with the Greeks. The two princes in fact were alternately allied and at odds, Killdi Arslan helping Nur al-Din to deprive the Franks of their possessions on Syro-Anatolian frontiers with III object of sharing them with his rival, and Nur al-Din extending his power over this territory as as the Saldiuk sultan withdraw. The conquest of Egypt by Nür al-Din's fleutenants Shirküh and Şalāh al-Dīn crowned his glory, and Kliidi Arslan's enemies persuaded Nür ul-Din 🖿 undertake an expedition into Asia Minor which forced Killdl Arsian m recognise what remained of Dānishmendid territories. On the death of Nür al-Din, he annexed them (Malatya in 1177) thus accomplishing, from the Byzantine territories in West almost to the furthest limits of the East, the political unity of Asia Minor.

He integer needed to deal with the Greeks, and on his side, Manuel Commenus, though strengthened by the general auccess of his foreign policy, muency at the growing power of the suitan, and decided that he must put an end to it. In 1176, the head of a powerful army, he advanced on to the Anatolian plateau, but was crushed at Myriokephalon. This was, after an interval of a century, a replica of Mantzikert, which showed that henceforward there existed in Turkey which could never be further assimilated. If Kiligi Aralan showed moderation in his official policy, the pressure of Turcomans on the irontiers led him to reach out to the upper valleys of the Aegean coast and, in spite of opposi-

tion from Rhodes, to the sea itself.

This expansion could not take place without risk. Trouble with the Turcomans, breaking out to the east of the Saldjük State, grew the intense, with these Turcomans supplying troops ready to serve any ambitious chief. Whether for this reason must, killdi Arslan divided the territories under his suserainty between his nine sons, a brother and

a nephew. Needless to say, the latter quarrelled among themselves and one of them, Kuth al-Din, with support from some Turcomans, forced his aged father to accept his protection III Konya. These events were interrupted by the Crusade of Frederick Barbarossa; the latter, an enemy of the Byzantines, had established diplomatic relations with Killdi Arslan who, indifferent | Syro-Palestinian affairs, was inclined to promise him passage. But Kutb al-Din's Turcomans attacked Germans, who converged on Konya (2790). Shortly after, the old sultan succeeded in escaping from the semi-captivity which his son was holding him, and took refuge with another of his sons, the son of a Greek mother, who was established in the western borders. It was there that he died, at the age of seventy-seven.

Bibliography: Sources include the Byzantine writers Cimnamos and Nicetas Choniatus, the Armenians Matthew of Edessa and Gregory Priest, Michael the Syrian, and Arab authors cited in the preceding Bibliography. References to modern works given the works of Cahen and Turan cited in this and in N. Elisséeff, Nür ad-din, Damascus 1968. (Ct., Cahen)

KILIDJ ARSLAN III, the young son of the sultan of Rum Ruku al-Din, who reigned only m few months (1204-5), after which the majority of the amus, worsed at the general dangers inherent in the rule of m minor, deposed him in favour of Kay

Khusraw I [q.v.].

KILIDJ ARSLAN IV. better known by his lakab of Rukn al-Din, one of the sons and successors of Khusraw II (1246). It was at the beginning of the period of the Mongol protectorate that, the three sons of the late sovereign all being minors, the senior amirs, in order a saleguard the unity of state, sought install, under their own executive power, a sultanate shared jointly between the three young princes; Kilidi Arsian a mission to the Mongol chief Batu to persuade him to accept this solution. This very mission alone established a special relationship between Kilidi Arslan and the Mongols, and for many years two opposing parties in conflict; the one, taking him as its figurehead, believing that the only possible course of action — to submit to the Mongols, the other, rallying behind his brother "Izz al-Din, seeking to organise resistance with the aid of the Turcomans of the West and in alliance with the Byzantines. Successive schisms resulted, leading on each occasion to a division, temporary at first, between the territories in the east, favouring the Mongols who were close by, awarded to Kilidi Arslan, and those of the west, left to 'Izz al-Din. United for the lime in 1260, the two brothers participated in a campaign against Syria under the orders of the Mongol chief Hülegü. Eventually, 'Izz al-Din fled to Constantinople, and Killdj Arabaz remained sole sultan. This did not mean that he exercised power; power in fact belonged to the persons Mu'in al-Din Sulayman, the favourite of the Mongols. When Kiffdi Arslan came of age and showed resentment towards him, the present had him strangled [1265].

Bibliography: Sources include the Muslim historians of Anatolia Ibn Bibl, Alsarayi and anonymous author from Konya of Salfjabnama; the Arabic historians Baybars al-Mansuri (unedited) and Yunial; and the Syriac Bar Hebraeus. General references to modern works are given in the works of Cahen and Turan cited in the previous Bibliographies. (Cl. Camer)

KILIFI, headquarters of Kilifi District in the Coast Province of Kenya, in lat. 4° S, is a small port which was an independent sultanate until 1592, including the present Kionl, Kitoka and Mnarani. The large Friday mosque, the wealthy dicor of the adjacent tombs, and the walls and gatehouse, show that Mnarani was the chief amongst these settlements in medieval times. The cometery is noteworthy for eleven inscriptions in 15th century maskly script. Excavations by J. S. Kirkman in 1954 showed that the site was occupied from the end of the LAIR century until some time in the 17th century when, as Capt. W. F. W. Owen recorded in 1833, it was destroyed by Galla tribesmen. The Sultan of Kilifi sent an ambassador to greet the Turkish commander Amir 'Ali Bey at Mombasa in 1586, and in 1589 joined him against the Portuguese in Mombasa, Fellowing a long leud with Malindi, Kilifi are rased by the Portuguese with local allies in 1592, but recovered. It was to Kilifi that Sultan al-Hasan b. Ahmad of Nombasa withdrew in protest against the Portuguese Captain of Mombasa's exactions in 1612.

(G. S. P. FREEMAN-GREEVILLE)

KILLAWRIYA, Calabria (in Yākut is found Killawriya, in Ibn Diubayr, Ripla, Kalawriya, both of these close to the Byzantine Καλαβρία, Kalavria, Italian Calabria).

It is very likely that the Arabs, coming probably from Spain, launched attacks across the sea against certain coastlands of Calabria even before Asad b. al-Furât [g.v.] landed in Sicily in 212/827, thus providing the Muslims with a base for military

operations against the Italian mainland,

According to Ibn al Athir (M. Amari, BAS, Leipzig 1857, text 228), followed by Iba Khaldun (ibid., 469), the first serious operation against Calabria took place in 225/839-40. With the capture of Messina in 228/ 842-3, it became easier for the Muslims of Sicily to undertake devastating raids and lengthy sieges, by means of which they were able to keep the Calabrian territory under continual threat from their incursions. This state of effairs lasted until the time when Constantinopie decided to take the offensive and operations for the recovery of this region - entrusted to Nicephorus Phocas, who in 272/885-6 inflicted severe losses on the enemy. The Saracens, however, speedily counter-attacked. Possibly encouraged by the traditional hostility in southern Italy between the Lombard princes and the Byzantine imperial governors, they managed in the of the following three years to assemble in Sicily . fleet meant for attacking Calabria, Operations began in 275/888, and ended in the waters of Proceed by the tout of the Byzantine army, the sack of the town of Reggio and the resumption of the raids, hence-

forth continuous, into the interior of Calabria.

However, it was at the beginning of the 4th/10th century that the Muslim offensive grew more violent, under the stimulus of the savage Aghlabid prince Abū laḥāḥ Ibrāhlm, who had been compelled, as a result of his unbridled despotism, to abdicate in favour of

his son 'Abd Alith [see AGELABIDS]; in order to expiate his misdeeds, he undertook "'holy war' in Sicily and Calabria, where he wrought, without any scrupies, anormous devastations, attacking persistently Cosenza, before whose walls he died in 250/202.

The first Kalbid (q.v.) ruler to resume military operations in Calabria with both regular land and naval forces was al-Hasan b. 'All, who captured Reggio in 339/950 and built there is mosque, which was however diverted from this usage after only four years; two years later, the same ruler gained is great victory over the Byzantine forces beneath Gerace.

The sequence of raids, sieges and movements of resistance on the part of the Christians continued until the point when, in 372/982, the Emperor Otto Il decided to end this situation by simultaneously attacking both the Muslims and the Byzantines, whose troops, in this state of affairs, helped each other against the Frankish ruler. The latter's troops gained an initial success, but had to flee when his army was defeated before Stille. In the period between this defeat and the occupation of Calabria by the Normans towards the middle of the 5th/11th century, the Calabrian region was once again the scene of clashes (in the course of the naval battle before Reggio in 395/2005, the Pisans inflicted a defeat and the Muslims), of unusual ententes between Christians and Muslims, and of exhausting trials for the local population, which suffered violent raidings and incursions and was never able to benefit from a stable Muslim régime which, in other places and in more favourable circumstances, was often the mediating force for the transmission of the genuine values intrinsic in its culture.

Bibliography: The texts of the greater part of the Arab geographers (above all, al-Idrisi), chroniclers and historians, which involve Calabria, may be found in M. Amari, Biblioteca arabo-sicula, Leipzig 1857, 134 Appendix, Leipzig 1875, 3nd Appendix, Leipzig 1887, and Storia dei Musulmani di Sicilia³, ed. C. A. Nallino, Catania 1933-9 (cf. the index s.v. Calabria, Reggio, Bruzzano, Gerace, Stillo, Tiriolo and Cosenza).

(U. RIZZITAKO) KILLIZ, a town of northern Syria, situated to the north of Aleppo between the two rivers 'Afrin and Kuwayk, north of A'zāz and on the road from Aleppo to 'Ayntab. It was apparently known to the Assyrians, since a letter in canciform script (Harper, no. 1037, Brit. Mus. K 13073, obv. 3) mentions a town Ki-li-si. In Roman times, Killiz was called Cilisa sive Urmagiganti (Itin. Ant., ed. Pinder-Parthey, 84). In the mediaeval period it seems to have been of no importance. It is mentioned by Ps. Denys III Tell-Mahré III the time of the revolt against the Patriarch Dionyslus in 817. One should read Killiz instead of Kalaz or Shalaz in Bar Hebraeus, Hist. cocl., ed. Abbeloos-Lamy, 1, 339, 342, and Killiz instead of HallI in Michael the Syrian, Chron. 137., ed. Chabot, iii, 23.

The Arab geographers do not geam to mention Killiz. Yākāt is somewhat confused. His Killiz (iv, 158, cf. 168) refers to somewhere which he places near Sumayeāt or Samoseta, but his Killiz (iv, 299) really does mean our Killiz, a town in the māšiya of 'Azāz (A'zāz) between Aleppo and Antich, and he believes that it should be written Killiz. The place in the region of Samosata is probably not Killiz but al-Kalls or al-Kalls, which Kudāma lists among the frontier settlements of Diyār and which Ibn Hawkall, 196 (1st edn., 131) places on the May-

yāfārikīn-Malatya route, and which is consequently not to Samoseta/Sumaysāt but to Shimāhāt (on this al-Kalls, m Markwart, Südarmenien, 249-50).

Killiz and Mardi Killiz are mentioned in verses of Abū Firas (in regard to Sayf al-Dawia's campaigns), which Yakut also cites (Diodu, ed. S. Dahhan, 115, v. 128, 150, v. 137). Since his successor Abu 'l-Ma'ali Sa'd al-Dawia neglected to pay tribute owed Byzantium according the treaty of 359/969, Domesticus Bardas Phocas led an expedition into Hamdanid territory, stormed Killiz and carried off its inhabitants into captivity. At the time of the Crusades, Killiz fell within the Frankish territories, no doubt after the capture of A'taz by Roger of Antioch in 1118-19, for in 1124 the Turcoman amir Balak, who had become master of Aleppo, attacked A'zaz and his troops laid waste the region of Killiz. Killis presumably fell into the hands of Nur al-Din at the same time andid A zaz, se, in rase.

Although Killiz is some distance away from the important meeting-place of routes near A'zaz, it has nowadays colipsed A^czaz in importance. The present town is in Turkey (see Guide blow under Killis), and co, 1948 had 24,000 inhabitants; Cuinet had given 20,000 in 1891, 15,000 of which were Muslims. The town was in the roth/roth century the residence of the Druze Jumblatt family [see planautar]. According to Hartmann, ancient Killiz was the modern Tanzimé Khan, where can still be found enormous pieces of stone, whilst the little garden Hezi Baghčesi, 20 minutes' journey to the east of Killiz, is traditionally pointed out as being the ancient site of the town or at least of part of it, since it is assumed that Hezl contains the name Killiz, and there - at that site traces of mancient settlement.

KILWA, the name of various localities and islands of the east coast of Africa, amongst which should be mentioned Kulwa Kivinya, in the mainland (8° 45' S.) about 140 miles south of Där al-Salām (Dar es Salam), and in particular, the Quillow of the Portuguese (Kulwa in Ion Bantuta, ii, 191 ff., tr. Gibb, ii, 379 ff., and in the tms. B.M. Or. 2666, but Kilwa in Yākūt s.v.). This last is today called Kilwa Kisawāki, and is situated on an its to the Tanzanian coast, 150 miles south of Dār al-Salām (8° 58' S., 39° 34' E.). It is the site, covering about one km.º, of the capital of a region

which stretched from the Rufiji River to Sofata in mediaeval times and was the greatest of the Islamic trading states in East Africa.

Barros, Da Asia, 1552, preserves an anonymous abbreviated Chronica des Reyes de Quiloa, composed perhaps before 1507; in independent Fill century Kitāb ai-Salma fi akhbar Kulwa, by an anonymous Shī'i author, survives only in B.M.ms.Or. 2666, dated 1862. Neither is complete. A 19th century Swahill History is of little value. Coins of at least seven rulers in certain, and with them, Ibn Baţſūţa and Muḥaromad al-Fasī sustain the historicity of the documents. After 1500, numerous accounts occur in Portuguese and French sources. In 1960-5 H. N. Chittick excavated the chief buildings.

The chronology is controversial. Chittick's deletion from the text of Barros of some lifteen rulers must be regarded as unacceptable. He dates the earliest occupation to ca. Soo. The finds agree well with the documentary sources as they stand. They describe a dynasty of "Shirazi" settlers from the Gulf established to. 657. The founder, 'All b. al-Husayn, bought the island from the preceding ruler, marrying his daughter. For two centuries the expanding trading centre was often at wer with neighbouring islands. In the 12th century it acquired the monopoly of Solala's gold trade with its hinterland; its former governor, Dāwēd b. Sulaymān, was Sultan of Rilwa ca. 1131-70, and "master of the trade" of Pemba, Zanzibar, Mafia and the mainland. Essentially, it was an entrepôt trade serving Arab Indian Ocean routes, in gold, ivory and slaves, against imported textiles, beads, and Near and Far Eastern ceramics. Under Sulayman b. al-Hasan, ca. 1170-89, many important buildings were erected in a new style, "All b. al-Hasan, otherwise unrecorded, issued the first coinage III the late 12th century. About 1294 Mahdali sayyids succeeded the original dynasty, possibly by female descent. the Battota visited Kilwa in 1331: the people were black, orthodox Shiffis, and devoted to dishad against mainland unbelievers.

Vasco da Gama sailed past Kilwa in 1498. In 1500 Pedro Alvarez Cabral was the first Portuguese to lavy tribute. Francisco d'Almeida took it by storm in 1505. Contemporary accounts attest its wealth. A Portuguese fort controlled it until 1512: its economy rulaed by the Portuguese seizure of the Sofala trade in 1505. A population of perhaps 20,000 in :500 had already dwindled to about 4,000 by 1587, when marauding Zimba massacred 3,000 inhabitants. Kilwa meen recovered. After the "Umani capture of Mombasa from the Portuguese in 1698, Kilwa also was made tributary to 'Uman. In the 18th century the slave trade developed greatly, but Zanzibar 🚥 the main entrepôt. Zanzibar finally absorbed Kilwa. in 1843, deporting the last sultan. When Germany acquired the mainland in 1886, some surviving coyalties threw their records in the sea, lest they fail

into infidel hands.

Strong [in Arabic], The history of Kilwa, in JRAS (1895), tr. G. S. P. Freeman-Grenville, Medieval history of the coast of Tanganyika, 1962, with detailed bibliography, and The East African coast: select documents, 1962, and in Num. Chron. (1936, 1939); Freeman-Grenville, Num. Chron. (1936, 1939); Freeman-Grenville, Num. Chron. (1954, 1957, 1963, 1971), and The French at Kilwa Island, 1965; H. N.

Chittick, Kilwa; an Islamic trading city on the East African coast, Nairobi 1974, with detailed bibliography; B. G. Martin, Arab migrations to East Africa in medieval times, in Internat. Inal. of Afr. Hist. Stud. (1975): S. A. Rizvi, in Safid Hamdon and Noël King, Ibn Bagtaja in Black Africa, 1975; R. W. Beachey, The slave trade of Eastern Africa, 1976; see also the Bibl. given by J. Walker in E/1, (G. S. P. FREEMAN-GRENVILLE) Suppl., s.v. AL-KILY, also AL-KILA, according to Abu 'I-Hasan al-Libyani also al-hille (see al-Dinawari, The book of olanis, ed. B. Lowin. Wiesbaden 1974, 170, § 643); the word is derived from aramaic kelya), potash, potassium carbonate (K₄CO₄), but also so da, sodium carbonate [Na₂CO₄] (both materials were not clearly distinguished, therefore the Arabic term is kept in what follows.) Al-Kily thus indicates the salt which is won from the ashes of alkaline plants, but is also confusingly used for the ashes themselves and the ive. As synonyms are given shabb al-tusfur and shabb al-asakifa (Ibn Maymun, Sharh asma? al-subbde, ed. M. Meyerhof, Cairo 1940, no. 345). The plants or families of plants rimit (Haloxylon articulatum Cav.) and bame (Chenopodiaceae) serve as the standard plants employed. According to Abu Hanifa al-Dinawari (op. cit. to4, § 411 = LA, s.v. &-i-y = Ibn al-Baytar, \underline{Diami}^c , IV, 31) the best potash is won from al-hurud (Arthroenomum c.g. Seldlitzla), the so-called "potash of the dyers" (bily al-sabbaghin). The other sorts sufficed for the fabrication of glass. The extraction of kily is concisely but accurately described by al-Layth, the editor of the K. al-'Ayn of al-Khalii b. Alimad al-Farahidī (d. co. 170/786): the plants el-ghadd (Arthroenemum c.q. Salicornia) and al-rim() are burnt while green; the ashes are slaked with water which then consolidates into kily (see L.A. s.v.).

Kily is used for various purposes: in the absence of soap (sābūn), clothes washed with it (see LA: Yākūt, iii, 465). Chemists used it to manufacture pungent lyes (Muhammad b. Zakariyyā' al-Rāzī, K. al-Asrār, ed. M. T. Dānish-Pazhūh, Tehran 1964, 76, 108 f.; J. Ruska and K. Garbers, Vorschriften ner Herstellung von scharfen Wassern bei Göbir und

Risi, in Isl. xxv (1939), x-34).

A prominent part is played by al-hily in the manufacture of glass. It is melted together with sand and magnesia and thus produces the "substance of glass" (diswhar al-audiādi, Masūdi, Murūdi, ii, 407). Above all, it happens that the glass casily absorbe the various colorations (see Dimanhil, Nuhhbat al-dahr, ed. Michran, 80; J. Ruska, Das Buch der Alauno and Salas. Ein Grundwerk der spätlateinischen Al-chemie, Berlin 1935).

Because of its biting, burning and purifying effect al-hity is used in medecine to treat skin diseases like vitiling (bahah), leprosy (baras), scabies (djarab) and also wounds and (dirāh, burāh). Morbid growths also etched with it (Masth al-Dinashki, who lived in the time of Haron al-Rashid, in Ibn al-Baytar, iv, 31; 'All b. Rabban al-Tabarl, Firdaws al-hikma, Berlin 1928, 322; Pseudo-Thabit b. Kurra, K. al-Dhahars, ed. G. Sobby, Cairo 1928, 114; Ibn Sina, Kānān, Rome 1593, l, 248; The medical formulary of al-Samarqandi, ed. M. Levey and N. al-Khaledy, Philadelphia 1967, 148; Kazwini, 'Adjā'ib, 233). Many people apply al-hity and vinegar on scarpion stings (Ibn Kutayba, 'Uyan, it, 102).

KIMAK (in the texts usually Kimak, often wrongly vocalised Kaymak), an early Turkish people living in western Siberia on the lower of the Irtish River and on its tributaries the Ishim and Tobol, possibly as Iar north the confluence of the Irtish and Ob and far west as the Uraf Mts.; they are mentioned in Islamic sources from the 3rd/9th century onwards.

The most detailed accounts of the Kimak and their territories are in the anonymous Hudud al-Jam (begun 372/982-3), tr. Minorsky, 99-100, 304-10, and in Gardin's Zayn al-ahhòde, ed. Abd al-Hayy Habibi, Tehran 1347/2968, 257-9. There is considerable confusion in these and other sources on the localisation of the Kinnak, possibly reflecting a unjor historical displacement of the tribe or else a confusion between their winter and summer pastures; but there must certainly have been confusion from the fact that the two major sources above believed that the Irtish flowed westwards through the Urals. becoming Kama and joining the Volga in Bulghar. The Hudid places the Kimak to the west of the Kirghiz and to the east of the Ripcak [qq.v.], but all the sagree that to the north of them lay the forest lands inhabited by savage peoples who exchanged their goods by dumb barter. The fur-trapping Kirghts tribe of the K.s.y.m (* Kishtim?) mentioned by the Hudud as living near the Kimak may have been Samoyedes or a Yenisei Palaeoasiatic people (see Minorsky, Sharaf al-Din Tähir Marvasi on China, the Turks and India, 107-8). The Kimak also had connections with the Oghuz to the south of them, and are said to have visited the Oghuz pasture-grounds in summer, possibly explaining why Mukaddasi, 274, says that Sawran the middle Sir Darya is a frontier post against the Ghuzz and Kimāk.

A legendary account of Kimāk origins given by Gardizi mentions component groups, such = the Imi, Imak, Tatar, Bayandur, Khiicak, etc., and in 🔚 section on the Yaghma tribe (ed. Habibi, 260), he gives to the chief of the Kimāk the titles shad and tutugh tutuh. The Huddd, however, mentions that the ruler of the Kimäk is called the Khākān and has under him eleven subordinate chiefs. Two routes northwards to the Kimak country from the northern fringes of Transoxania are mentioned; one from Taraz or Talas, taking 80 days by swift horse (Ibn Khurradadhbih, Kudama, the Hudud), and another more westerly route from Yangi-kant or Dih-i Naw near the Sir Darya mouth (Gardizi). The country of the Kimak was excessively cold, so that the Kimak lived in subtercanean dwellings in winter and hunted skis. They were in part pastoralist nomads, but were also trappers of sable and marten furs, which were exported to the Islamic lands; also mentioned is the hhalandi hardwood of the forest zone, brought from the Kimák lands and used for making bowls and such-like table ware (see Djāhiz, Bukhaid', ed. Hadiul, 54, tr. Pellat, 77: khalandiiyya kimakiyya). The only town, or rather encampment, of any significance, was the Khākān's summer residence, Namskiyya (*Yimakiyya?). The Kimak worshipped fire and water and venerated in Irtish; according to Abu Dulef al-Khazradit in Yakut, Bulden, iii, 448, the Turks' "magnetic rainstone" belonged to the Kimak.

The main significance of this remote people, who can never as such have been Muslim and who impines little I Islamic history, is that the much more important people of Kiptak [q.v.], the later Comans or Polovisi, apparently from them eventually overshadowed them. By the late 5th/11th century, the Kimak, whom Mahmud Kashgharl, iii, 22, tr. Atalay, iii, 29, names m the Yamak (*Yimāk). were reckoned as a group of Kipčak, but different in origin; it is clear that the remnants of the earlier Kimāk were now being absorbed into the rising tribal confederation of the Kipčak. In the ensuing period, the name "Kimāk" fades into oblivion, although we belatedly hear of the Yimak in association with the Kipcak and Kanghii [q.v.] at me time of the appearance of the Mongols; thus Nasawi, Sirat Sulfan Dialal al-Din, tr. Houdas, 44, 72, says that the Khwaram-Shah's mother Terken Khatun was of the Baya'nt branch of the Yimak.

KIMAR, the name given in Islamic geographical and travel literature to Khmer or Cambodia. The geography and political organisation of South-East Asia early became of interest to Islamic scholars because of trade links with Further India and China, and information was brought back by, inter alies, Arab and Persian merchants and navigators. Some of this information relates to the Khmer kingdom on the lower Mekong River, moutpost of Indian cultural and religious life, which fasted from the beginning of the 9th century to me of the 13th century (see R. Grousset, Histoire de l'Extrême-Orient, Paris 1929, 559-68, 587-8; G. Coedès, Les Hals hindonisés d'Indochine et d'Indonésie², Paris 1964, ch. vii, 1, viii, § 1, ix, § 1, x, § 1, xi, § 1, Eng. tr. The Indianised states of Southeast Asia, Honolulu 1968).

Thus Ibn Khurradadhibih (mid-3rd/9th century), 66, 68, mentions Kimar as a place on the route to the Far East. Some decades later, Ibn Rusta, 132-3, tr. Wiet, 148-50, devotes considerable space to the customs of the kings of Kimar, their justice, their severity against fornication, adultery and winedrinking, and he remarks on the flourishing state of the ascetic and eremitical life there; Muslim merchants welcomed and not molested, and me Islamic funerary inscription has in fact been found in Cambodia [see KITABAT. 8. South-East Asia]. Al-Mas-'adı, Muridi, i, 169 if., - 55 178 ff., has a lengthy anecdote on the relations of the king of Kimar and the ruler named mai-Maharadi, the usual designation in the Islamic sources for the ruler of the kingdom of Śrivijaya (Zābadi, Zābidi), centred 📟 Palembang in Sumatra but elso controlling the Malayan peninsula. Ibn Rusta names as his source one Abû. Abd Allah Muhammad b. Ishak who had resided for two years in Kimar, probably early in the 3rd/9th century under the great king Jayavarman II Parametvara of Angkor (802-50); information from this authority came first to Ibn Khurradadhbib, who referred to Kimir only cursorily, and was eventually

utilised even by al-Idrisi, see S. Magbul Ahmad, India and the neighbouring territories in the Kitab Nurbat al-mushtaq ti 'ithtiraq al-'afaq of al-Shorif al-Idrisi, Leiden 1960, 29, 142.

The Hudud al-falam (372/982), tr. Minursky, 86-7. mentions three great kingdoms of South-East Asia. sc. Kamaran (Kamarapa, Assam [see Assam and MAMROV), Sant (Campa, southern Annam or South Vietnam) and Kimär, and it states that two of the most precious products of Kimae were elephants' tusks and gloes wood. The gloes wood of Kimär ("## kimari) is much-mentioned in Islamic sources, as is that of Campa ("sid sanfi), but there is considerable confusion in the sources about the origins of the different kinds of aloes wood stemming from eastern India and South-East Asia, with a particular uncertainty over the wood of Kimar and that of Kamarupa. Moreover, Ibn Battuta, iv, 240-1, 241-2, when speaking of Diawa (possibly Sumatra, since Sumatra and Java were frequently confused or even regarded as one island by the Muslims) mentions Kimara as part of that land (min ba'd biladiha) and the Kanari variety of aloes wood as being particularly fine. See, in regard to these problems, the discussions about the various varieties in Yackubi, Buildan, 367-8, tr. Wist, 238-9; and also Magbul Ahmad, op. cit., commentary, 128-9, and J. D. Latham, Arabic into mediaoval Latin: Letter C. M.L.D., in JSS, xxi (1976), 235-7 (on the linguistic problems involved).

Ferrand, Relations de voyages et textes péographiques arabes, persans et tures relatifs à l'Extrème-Orient du VIIIe au XVIIIe siècles, Paris 1913-14. l. 229-30 (= Abn Dulai al-Khawadir's information un Kimär), and index s.v. "Khmèr" (C. E. Bosworth)

KIMAR is the most common Islamic term for gambling, which is strictly forbidden according to Muslim law. The prohibition hack to the references to maysir [q.v.] in Kur'an, II, 219/216, and V, 90 1,192 f. Maysir was expressly equated with simis in general, supposedly already by Abd Allah b. 'Umar (cf. al-Bukhari, al-Adab al-mufrad, Cairo 1375, 325). Voices querying this assumption, and the assumption that the Kur'an had the legal classification of "forbidden" to mind, were rarely raised, and then only for 🔤 sake of argument. For all 🚥 know, the Muslim ban - all gambling has existed - the time of the Prophet in the same form as later on, and has remained in force throughout. Gambling conceived as a transaction in which property changed hands arbitrarily and unproductively, something falling also under the injunction of Kur'an, IV, 29/33, against frivolous and worthless (bôfil) business transactions. Economic theory, and economic realities, tended to favour a strict view of what constituted gambling.

According to Muslim sources, universal and reckless gambling and endemic in pre-Islamic Arabia. Although the Muslim attitude toward the Djahiliyya no doubt contributed to this view, gambling probably widely practised, and in a variety of ways, among which the drawing of arrows and the stake racing of horses and camels were the most prominent. The actual maysir game, as painstakingly reconstructed from stray verses of poetry by later scholars, principal among them Ihn Kutayba, al-Mayeir we-'I-bidās (Cairo 1342), is presented to us as a kind of ceremonial lottery organised for charity.

KIMÀR 109

Several gambling stories lead into the time of the Prophet. Thus, wagering with unbelievers by Abu "before gambling was forbidden" is mentioned in the Kur'an commentaries in connection with Kur'an, XXX, 1-4/1-3; it appears to be a rather old story, though hardly historical. Another, no less famous story, reported in consection with the battle of Badr, that of Abū Lahab gambling with al-'As b. Hisham, may also be old, but its connection with gambling can be shown to be mostly a later elaboration. The Kur'en clearly indicates the mill and religious undesirability of gambling: it is something causing quarrels, and it interferes with the performof worship and prayer. However, the commentators were at a loss to cite any particular occasion for the prohibition. While there is much room for speculation, no convincing historical explanation can be offered, unless there is some significance in the fact that the aud'if literature credits a contemporary of the Prophet, al-Akra' b. Hāhis [q.v.], with being

the first to forbid gambling. In spite of its being prohibited, gambling, or what was considered as such, seems to have always flourished everywhere in the Muslim world and at all levels of Muslim society. Lotteries proper appear to have been unknown in Islamic times, and wagering on unstaged events is not much attested (cf. for instance, al-Răghib al-Ișiahâni, Mukadarăt al-udabă*, Balak 1286-7/1869-70, i, 127, 141). Favourite outlets for the gambling instinct were, among board games, backgammon (nord [q.v.]), played with six-sided dice, and, among sports, horse racing [see FURUSIYYA]. Other board-games, such as merels (kirk) and "fourteen" (shidjahardahjarbafata fashara), could involve stakes; chess (shatrandi [q.v.]) and draughts [see KHARBGA], when played for stakes, fell into the category of gambling. Important sports suspected of being devices for gambling were archery (ramy alaushshide [q.v.]) and pigeon flying [see HAMAM], as well - competitions such as footracing, swimming (ribdea), or, more significant as an organised activity. wrestling (musăra's). Fighting games of animals, looked upon with disapproval on the basis of the Prophetic warning against inciting animals against each other (tahrish, Concordance, i, 446b, 64-66) and humanitarian principles, included cock [see pix] and dog [see KALE] fights. Playing cards (kandjifa [q.v. in Suppl.]) are attested since Mamiūk times (cf. L. A. Mayer, Mamluh playing cards, ed. R. Ettinghausen and O. Kurz, Leiden 1971). All these activities, of course, could be, and were, undertaken and enjoyed for their own sake without any accompanying gambling, and the gambling habits connected with them differed considerably. According to Iba Taymiyya, Faideri (Calco n.d. [1384-6]), iv, 308, nard was mostly played for stakes, while chess usually was not. The gambling that did take place was commonly in the form of stakes put up by the participating players themselves or, in the case of sports competitions involving animals, by the owners of the animals. However, although our information on this point is most deficient, it is clear that spectators, too, engaged in gambling on the outcome of the games and sports they watched.

While gambling by outsiders was clearly and indubitably illegal, the main problem for jurists was the determination of what constituted gambling by virtue of the manner in which the stakes were put up. The hadith expressly permitted competitions with camels (hhaff), houses (haff), and arrows [nast] (Concordance, i, 480a, 16-18), and there is stories establishing precedents set by the Prophet. Later

jurists me inclined to deny the legality of stakes in connection with any other kind of sports contests and, in particular, board-games (of which need was often declared illegal, when played without stakes, because of its dependence upon dice). However, the permissibility of the legal sports was rationalised on the ground of their usefulness for military preparedness, an argument which, in practice, could be extended to other sports, even though jurists were usually hesitant to do so. The crucial question of how stakes, where they were at all admissible, could be legally established, was considered under three basic aspects: the establishment of stakes by a non-participant such as, for instance, the government, by one of the participants, and by both (or all) participants. The first two cases were legal (with some doubts in the second case as to what is to be done with the stake if the donor himself is the winner). The third constituted illegal gambling. In order to make it legal, the presence of "legaliser" (muhallil [q.v.]) was required, i.e. the participation of someone who are not contribute to the stakes. There exists a hadily to this effect (Concordance, ii, 4020. 15-17, etc.). However, the legality of this procedure was debated. Mälik personally did not admit the device of the muhatlil, with the consequence that later Mälikls differed in their attitudes. The Hanball Ibn Taymiyya and his followers rejected it forcefully. Legal attitudes towards potential gambling games in general can be said to cut across school lines, Shāfi'ism, whose basic text m games was Kitdb al-Umm (Būlāk 1324), vi, 213, was sometimes attacked. with little justification, for its alleged somewhat more leafent attitude. It should also be noted that by and large the legal literature paid comparatively scant attention to gambling, the reason being not so much the scarcity of gambling activities as the clearcut stand of the law as to its illegality. Occasionally we come across interesting statements, such as the one by the Hanafl Kādikhān, Fatārei (Calcutta 1835), iv, 587, suggesting that a Muslim could legally gamble with non-Muslims in non-Muslim territory.

The official handling of gambling offenders was determined by the peculiar nature of the circumstances under which gambling took place. Sporting events were mostly held in the open, but much other gambling went on in private. In the larger cities, there were gambling casinos (där al-kimär, kimärkkane, and other terms), where gambling was encouraged even to the extent of tempting being gamblers with offers of loans (cf. Ibn Sa'ld, Mughrib, ed. and tr. R. L. Tallqvist, Leiden 2899, 30/63). Ordinary taverus, as later on the coffee houses [see KAHWA], also had the reputation of allowing gambling (in connection with board-games) on their premises. These could be raided, if local authorities saw fit. to do so. However, unless public annoyance resulted, or complaints were lodged, the legal authorities, presumably represented primarily by the office of the muhiasib, had little power or incentive to interfere with voluntary activities undertaken by mutual consent in the privacy of the home. If brought before the authorities, gamblers were liable to discretional [fa^csir [q.v.]] punishment. Jurists considered habitual gamblers - having forfeited their 'addle and their capacity to function as witnesses, thus decisively downgrading their social and legal standing. Social degradation was commonly associated with gambling, at least in literature and theory. In real life, this probably affected only those who were unable to afford like losses incident to their gambling.

Excessive gambling, though evidently not un-

common, is not frequently attested. We hear about gambler in moderate circumstances who brought ruin upon himself and who neglected his family (cf. ibn 'Inaba, 'Umdat al-fdiib, al-Nadjaf 1381/1961, 210), or the poet al-Talla farl (q.v.) whose compulsive gambling made him a liability in court circles and kept him from advancement, or the-fictitious-\$4fl who intentionally freed himself from all worldly possessions by gambling them away (cf. H. Ritter, Das Meer der Seele, Leiden 1955, 202). Most gambling probably involved the minor losses that the losers were somehow able to absorb. It lies in the nature of gambling activities, especially where they are illegal, that reliable statistics with respect to are unobtainable, and we have, of course, nothing to go == in the way of statistical information for the Muslim Middle Ages. We was only guess that gambling as such, man as it was, was nevertheless III no way a major economic factor or disruptive social force.

In addition to the legal injunction against it, the social stigma it carried, and its unsuitability for the economic environment created by Islam, gambling also presented a challenge to the metaphysical presuppositions of monotheism. Gambling was felt to be a manifestation of trust in blind fate and of an attempt at interference with, and thus disrespect for, the divine government of the world. A clever story, circulating since at least the 3rd/9th century (cf. in particular, Aba Zayd al-Balkhi, Ristlat bikmat wede al-nord we 'l-shotrondf'), praised nord, with its reliance upon chance, as representative of the orthodox view of predetermination in trust in God, and blamed chess for the freedom of choice it requires of the player m something akin to Muftaziñ doctrine. The story appears to have been meant originally as the opposite of what it suggest, namely, as an argument for the superiority of the Mustazili view of free will, while taking a dim view of gambling as supporting the idea of blind chance in the realm of metaphysics.

Thus the factors that in Islam fought against the human propensity for gambling were numerous. They were, moreover, reinforced by the generally disdainful attitude toward "play and amusement" (18th—lahw) in all forms professed by religious scholars and intellectuals. This did not eliminate gambling in Islam but, to all appearances, succeeded in keeping its impact upon society largely under control.

Bibliography: T. Hyde, De ludis orientalibus, Oxford 1689-94; Mez. Renaissance, 382-4 (Eng. tr. 403-6). References to gambling are m sporadic in the modern scholarly literature as they are in the primary sources. A first attempt to bring the available information together has been made by F. Rosenthal, Gambling in Islam, Leiden 1975, which contains the full documentation for the present article.

(F. Rosenthal.)

A1-RIMIYA2, alchemy. The word is derived from Syriac kimiya which in its goes back to Greek yousia gypeia "the art of easting or alloying metals" (see Liddell-Scott, Greek-English tericon, 2013). The Arabs believed that al-kimiya2 was a loanword from Persian (Ibn Durayd, al-Djawalikt), from Hebrew (al-Aldan) or from Greek and had the meaning of "artifice and acuteness" (al-kila wa'l-kidhh, according to al-Khafadji) or "solution and division" (al-takili wa 'l-tafrih, according to Ibn Sallam, rithiyth century), As synonyms of al-kimiya2 were used al-san'a (for nolngue), al-san'a al-dikhiyas (for h Glea rixyn), 'llm al-sina's al-bikma, al-'amal al-a'ama (for nolngue), al-san'a al-dikhiyas (for h Glea rixyn), 'llm al-sina's, al-bikma, al-'amal al-a'ama (for no páyaz Epgoy) etc. In abbreviation alchemy is

also called al-hay, which man also m pseudonym (see WKAS, I, 439b, 29 ff.).

The Arabs have defined alchemy more than once. Its task is to make gold and silver without falling back upon the corresponding ores (san'at al-dhahab wa bfidda min ghayr ma'ddinibd, Ibn al-Nadim, Pikrist, 151); it should lend colourings to the metals which they did not have before (Djabir b. Hayyan, Textes choisis, ed. P. Kraus, Paris 1935, 141), and it should alter the specific qualities (hiswest) of the mineral substances so that gold and silver we be obtained through certain artifices (hiyai; Ghazall, Takafut, ed. M. Bouyges, Beirut 1927, 270); through alchemy harm and poverty - done away with (ikhwan al-Safa', Beirut 1957, iv, 186, 305). The theme of alchemy is therefore the transmutation of base metals into precious ones, And thus certain limitations are given: retrotogy and mineralogy do belong to alchemy in the strict sense, although the alchemist must of course have an exact knowledge of minerals (as well as of animal and vegetable substances). In the way, fabrication of glass and falsification of precious stones (see the Papyrus Grascus Holmiensis, ed. O. Lagercrantz, Uppsala 1913) belong m more to alchemy than metallurgical activities like extracting iron, gold and silver from their ores, m precisely and impressively described by al-Hamdani (K. al-Diewkersteys, ed. C. Toll, Uppsala 1968). Nor does the technical chemistry of the craftsman, namely the manufacture of tints, colours and perfumes, come within the field of alchemy. The title Kimiyd' al-'ifr (ed. K. Garbers, Leipzig 1948) which al-Kindl gives to his book on the faisification of performes is as metaphorical as the Kimiya' ofsaidda with which the mystics entitled their writings (see WKAS, i, 515b). Finally, it should be mentioned that the notion of "pharmaceutical chemistry" did not exist in the Islamic Middle Ages. The often very complicated "compound medicines" (al-adwiya almurakknos) are prepared by the physician or the apothecary actording to Galen's work De compositione medicamentorum or to many Ahrabadhinat [q.v] composed by the Arabs. There were of course points of contact between the various professions: the metallurgists and perfumers worked with the same instruments and appliances as the alchemists. Some of the latter also excelled in the related sciences, like Muhammad b. Zakariyya' al-Razi, who classified the minerals. Alchemy, however, the art of transmuting metals, has me be singled out from the other more technically orientated professions because of its theoretical foundations.

Alchemy originated among the Greeks. In order to prevent misunderstandings, it should be mentioned that the fourth book of Aristotle's Meteorology (the genuineness of which is disputed) is neither a writing about chemistry in the modern sense of the word nor was it a starting-point for alchemy. It discusses only the primary qualities as causes of all changes in nature (see J. During, Aristotle's chemical treatise Meteorologica, Book IV, Göteborg 1944; H. Happ, Der chemische Traktat des Aristotetes, Meteorologie IV. in Synusia, Festgabe W. Schadewaldt, Pfullingen 1965, 289-322). Co. 200 B.C. Bolus of Mendes knew certain techniques of colouring, and such techniques, combined with neo-Platonic, gnostic and hermetic ideas (Stole philosophy seems also to have had some influence) helped alchemy massert itself in Egypt (H. Diels, Antike Technik, 2, Leipzig-Berlin 1920, 121-54). From the period between the and and ard centuries A.D. (see F. Sherwood Taylor, The origins of Greek alchemy, in Ambix, i (1937), 30-47; J. LindAL-KİMIYÂ

say, The origins of alchemy in Graeco-Roman Egypt, London 1970) date a number of writings disseminated under the names of Hermes, Thoth, Agathodalmon, Cleopatra, Moses, Solomon, Mary, Jesus, Democritus (or Democrates), Zarathustra, Astanes etc. At the beginning of the 4th century these pseudographs are joined by the writings of Zosimus of Panopolis (-Akhmim [q.v.]), the genuineness of which is better vouched for. In the 6th century the neo-Platonic philosopher Alymiodorus and emperor Heraclius wrote also on alchemy. A not inconsiderable amount of these Greek writings were translated into Arabic, but we have no exact information about times and places of these translations. It seems however that the first were made towards the end of the 2nd/8th century and that the greater part of these writings came to the Arabs in the 3rd/9th century (D. M. Dunlop, in JRAS (1974), ■ ff., makes it clear that the assertion according to which a work of Zosimus was translated into Arabic already in 38/650, is false). It is possible that in meet cases there may have been intermediary translations in Syriac (for Syrian aichemy, see R. Duval in M. Berthelot, La Chimie an moyen age, ii, Paris 1893), but it is not clear whether Huneyn b. Ishak [q.v.] and his pupils took part in the work of these translations. Most of the Greek writings have only been preserved in a very poor and fragmentary way. The oldest codex is Marcianus 299 dating from the 11th century (see M. Berthelot and Ch. E. Ruelle, Collection and anciens alphimistes grece, i-iii, Puris 1887-8; J. Bidez, F. Cumont et alii, Catalogue des manuscrits alchimiques grees, i ff., Brussels 1927 ff.). Since the Arabic translations are thus two hundred years older, and the Arabs at that period still know an essentially greater amount of Greek writings than me do at present, the oriental tradition is of the greatest importance. It is certain that the study III Arabic alchemical literature will bring | light Greek works which have been lost in their original language.

Unfortunately, Arabic alchemistic literature has remained until now still a moles indigesta. Very many manuscripts have been preserved, but only an extremely small part of their contents has been disclosed through catalogues or published. Consequently, it is not yet possible to sketch out a history of Arabic alchemy. In particular, the beginnings of this science in the and/8th and ard/9th centuries are still largely wrapped in darkness. It may however be stated that already in the period in which the Corpus Gabirianum (end of the 3rd/9th-beginning of the 4th/10th centuries) and the works of Muhammad b. Zakariyya al-Rāzi [q.o.] were compiled, an important literature must have come into being, whose authors might have been Greek, Egyptian, Jewish, Christian, Persian or ladian wise and philosophers. This pseudographic literature uses to a great extent the same that served early Greek alchemy as designations. Some writings are in fact translations of Greek works; others were composed directly in Arabic but are imitations of Greek examples. It should however not be assumed that all sentences of Greek wise men, quoted by the Arabs, are taken from specific writings which are ascribed in these wise men. It make rather that some of them originate only from dexographical collective works.

Nevertheless, a great number of Greek notions are found in these writings. The etyma of the terms al-klmiyā, al-şan'a al-ilāhiyya etc. have already been mentioned above. The metals are called alagista, corresponding to the supera, quickellyer and sulphur are al-armed th necountry. Elixir, aliksie is the loanword to Enploy, the distilling apparatuses al-uthal and al-ambit are derived from τὸ αἰθάλιον and ὁ άμβιξ, the processes subyid, taswid, taswid, taswii, lasdi'a etc. are adaptations from λεύκωσις μέλανσις, έγκηρωσις, ζωσις. 🔤 the same way a number of pseudonyms are imitations of Greek models, e.g. sibah sharhi from uspkoyupoc ανατολική, zabad al-kamar from αφροσέληνου. kibrlia la tahlarie from Gelov Excustrov and labor el 'adhro' from γόλα παρθενικόν (for other pseudonyms formed with labor, = WKAS, ii, 25 (L). To these are added whole theorems: al-labl'a tajraje bi 4-fabife is the innumerably repeated ή φύσες τή quose represent and law teffal al-fables shay'en bāļilan lā fā'idata lahū corresponds to h piose oùdev moust marny. All this shows without any doubt the origin of Arabic alchemy.

We thus possess a great number of Arabic writings, fragments and quotations in which our attention is caught by the names of Pythagoras, Archelaus, Socrates, Plato, Aristotle, Porphyrius, Galen, Democritus, Zosimus and Theosebela, Secundus "the silent philosopher" and many others. Often Hermes Trismegistus (see arrays) is mentioned, who in the opinion of the alchemists was the first to speak about alchemy ("ilm al-san"a, Fibrist, 352). The writings attributed to him, al-Risdla al-falahiyya al-kubed, Risălat al-Sirr, Tadble Hirmit al-Harâmita, al-Dhakhira al-iskandariyya, etc. have introductions in which in a legendary way is described how these texts were found in temples, caves and sepulchral vaults. The "Emerald table", a brief text full of symbols, was considered to be the key to the ultimate secrets of nature (see J. Ruska, Tabida smaragdina. Ein Beitrag zur Geschichte der hermetischen Literatur, Heidelberg 1926; M. Plessner, Neue Materialien sur Geschickte der Tabula Smaragdina, in Isl., xvi (1927), 77-113). Sentences by Hermes me to be found in almost every Arabic alchemistic work (see e.g. H. E. Stapleton, G. L. Lewis, F. Sherwood Taylor, The sayings of Hermes quoted in the Ma' al-Waraqt of Ibn Umail, in Ambix, iii (1949), 69-90). Apolionius Tyana [see BALTHIS] is considered to be the intermediary of the hermetic wisdom. Under his name a big commentary on the "Emerald table", the socalled Kitab Sire al-hhalikā, an allegorical book on the seven metals, the Kildb al-Asnam ol-sabla, and other writings were disseminated. Agathodaimon see ASHATHODHIMON] is also associated with Hermes. In the Risdlet al-Hadkar he communicates before his death to his pupils the secret of alchemy. Finally they are joined by Cleopatra (see M. Ullmann, Kleopatra in einer arabischen alchemistischen Disputation, in WZKM, lxiii-lxiv (1972), 158-75). Mary the Jewess, the Persian wise men Djamasland and Ostanes, Mani. an Indian called Biyûn, Adam, Moses, Korah (Karûn) and many others, whose writings and sentences became known to the Arabs at a relatively early period. This largely still uninvestigated complex of the pseudographs was enlarged by the Arabs since the ard/9th and 4th/10th centuries and rendered even more opaque by stamping as alchemists the Umayyad prince |Coalid b. Yazid, the son-in-law of the Prophet, 'All b. Abi Talib, the Imam Diafer al-Sadik [eq.v.] and the myetics al-Hasan al-Başri, Sufyan al-Thawri, Dhu 'l-Nûn al-Mişri and Abu 'l-Kāsim al-Diunayd [qq.v.]. The alleged writings and doctrines of these Greek, Persian, Jewish and Arabic authorities form the groundwork for the two large alchemistic corpora which came into being at the turn of the 3rd/9th and the 4th/zoth centuries, namely the Corpus Gabirianum and the writings of

AL-KIMIYÄ

Muhammad b. Zakariyya' al-Rāzī (the mutual relation of these two cycles has been discussed by J. Ruska and K. Garbers, Vorschriften zur Herstellung von schorfen Wassern bei Gabir and Rasi, in Isl., xxv (1939), 1-34). Djabir b. Hayyan (q.v.), who may have died = 196/812, is considered to be the author of the first work. Meanwhile, P. Kraus has proved that these writings cannot have originated before the second half of the 3rd/9th century and that a team of authors must be supposed (for this problem see also F. Rex, in Isl. xlix (1972), 305-10; idem, In Deutsche Orientalistik am Beispiel Tibingens, Tübingen 1974, 86-8). Accordingly, the writings of the so-called ibn Wahshiyya and the Mushaf aldjame's, whose Latin translation carries the title Turba philosophorum, may have originated at the turn of the century. In the Turbs a congress of alchemists is pictured, in which Pythagoras takes the chair and Archelaus records the minutes, while nine pre-Socratic philosophers present their doctrines (J. Ruska, Turba philosophorum. Ein Beilrag ster Geschichte der Alekemie, Berlin 1931; M. Plessner, The place of the Turba Philosophorum in the development of alchemy, in Isis, xlv (1954), 332-8; idem, Vorsokratische Philosophie und griechische Alchemie in arabisch-lateinischer Überlieferung. Studien über Text, Herkunft und Charakter der Tutba Philosophorurs, forthcoming). In the 4th/10th century Muhammad b. Umayl [q.v.] outstanding with writings of a hermetic-allegorical character, followed in the 5th/11th century by Muhammad b. 'Abd al-Malik al-Kāthī, pseudo-Madiciți with the K. Ruthat alkakim and Muhammad b. Bishrun. In the 6th/12th century the most important alchemists were the poet and statesman Hosayn 'All al-Tughra's and the preacher in Fas, 'All b. Mast, called Ibn Arfa' Ra's. Around the middle of the 7th/13th century, Abu 'l-Kasim al-Simawi (Book of knowledge acquired concurning the cultivation of gold by Abu '1-Qdrim Muhammad Ibn Ahmad al-Iraqi, ed. E. J. Hoknyard, Paris 1923) worked in Trak, and in the 8th/14th century the Egyptian Aydamir b. 'Alī al-Dilidaki [q.v.] produced unprecedented number of books in which he summarised and commented upon everything which had been written before him on alchemy and magic. In the following period a number of authors still further appear who are of importance partly as compilers, partly m producers of brief original writings, like al-Iznīki (= 'Alt Čelebi), al-Maşmûdî, Bel Mughûşh al-Maghribi and others. In the second half of the 11th/17th century Solib b. Nasr Allah b. Sailtim, the court physician of sultan Mehemmet IV (1058-99/1648-87), tried to introduce into Arabic medicine the chemical concepts of Paracelsus, which gave the alchemists the chance to set about new ways. They did not however avail themselves of these; on the contrary, they continued until recent times the ancient fruitless search for the "philosopher's stone" (G. Salman, Archives Marocaines, vil (1906), 451 ff.; C. Snouck Hurgronje, Makka, ii, The Hague 1889, 215, Eng. tr. J. H. Monahan, Leiden-London 1931, 162 ff.; E. W. Lane, The manners and customs of the modern Egyptians, ch. xii; C. Barbler de Meynard, L'Alchimiste, comédie en dialecte turc aseri, in JA, 8º série, vii (1886), 5-66; Osman Nevres, in O. Rescher, Beiträge zur arabischen Possis, Iv/z, Istanbul, n.d., 92 ff.).

In the Middle Ages Arabic works were translated into Latin. We have in Latin versions the Tabula smaragdina, the Tabula chemics, III Practice Mariae prophetissae, the Liber de compositions alchemiae of Morlenus (translated by Robert of Chester in 1144;

partly translated by J. W. von Goethe, Dir Schriften zu den Naturwissenschaften, Part 1, Vol. vi: Zur Farbonichre, Historischer Teil, revised by D. Kuhn, Weimar 1957, 131 fl. Part 2, Vol. vi; Ergänzungen und Erhlärungen, Weimar 1959, 439-41), the Liber socretarum alchemias of Calid, the Liber de septuaginta and the Liber misericardiae of Geber (E. Darmstaedter, Eine laleinische Überseizung des grosseren Kiláb alrahma, in Sudhoffs Archiv, xvil (1925), 181-97) and many other works (see M. Steinschneider, Die europäischen Übersetzungen 🚃 dem Arabischen bis Mitte des 17. Jahrhundertz, repr. Graz 1956, passim). It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy [J. Ruska, Das Buch der Alauns und Salte. Ein Grundwerk der spätlateinischen Alchemie, Berlin 1935, 11]. Thus they introduced a process which leads via Arnald of Villanova, the Latin "Geber" and Paracelsus to Robert Boyle (1627-91), Joseph Black (1728-99), Joseph Priestley (1733-1804), Antoine Laurent Lavoisier (1743-94) and finally to the miracle of modern chemistry. But they also gave important impulses to European cultural history; it may suffice to mention Jakob Böhme, the Rosicrucians, Novalis and Goethe (see R. D. Gray, Goetha, the alchemist. A study of alchemical symbolism in Goethe's literary and scientific works, Cambridge 1952).

This concise historical survey makes it clear that Arabic alchemy holds m key-position in the development of chemical thinking as m whole. However, in glaring contrast to its importance, it has been regrettably neglected by research until new. Most of what historians of science have written on the Arabic alchemists is second-hand, based on obsolescent literature and disfigured by gross errors. A vast and fertile field lies here open to research; access

to it, however, is not easy.

Alchemy is m extraordinary complex phenomenou which combines many divergent trends. Muhammad b. Zakariyya al-Rāzi in his K. al-Asrāe exerted himself in particular to build up a sober system. The Diabir-writings contain concepts of the Isma-Tliyya [q.e.] which came into existence 64. 263/877. The authors introduce also into their thinking pragical, arithmological, astrological and biological reflections. The hermetic writings and those of Iba Umayi marked by gnosis, others are coloured by strong mysticism. So it becomes understandable that Ibn al-'Arabi (Futikis, ii, 357) can indicate elchemy as a "natural, spiritual, divine science" ("ilm fabl") rahani ilahi). As a whole, it was a natural philosophy which aimed not only at teaching the transmutation of the metals, but also at the whole connection of the world. For many scientists, however, the effort to refine matter was inseparable from purification of the soul. The alchemists expressed their insight in theoretical discourses, and also in allegorical atories. myths, visions and poems (Pseudo-Khālid b. Yanid, Ibn Umayi, Ibn Arfac Ra's). In order to protect themselves against prosecution by orthodoxy or against competitors, they used pseudonyms and availed themselves of obscure, encoded expressions. All this renders the writings apparently abstruce. It was therefore bound to happen that the "Aufklärer" counted the history of alchemy among the Geschichte der menschlichen Narrheit (J. C. Adelung, Leipzig 1785-9), and even in the first edition of the Excyclopardia of Islam E. Wiedemann still remarked: "Often it cannot be understood how reasonable beings could have written such things". Only the science of religion and depth-psychology have

AL-KIMIYÄ

smoothed the way for a more justified and significant explanation of alchemy. J. Evola, C. G. Jung and M. Eliade in particular have rightly shown bow alchemy is dominated by mythical, mystical and gnostic ways of thinking. There remains, however, the task of decoding the Arabic texts through exact historical-philological studies, and thus laying foundations which will no longer permit rash conclusions and approximate assertions.

Until now it has not been possible to say much about the theoretical foundations of Arabic cichemy, and even this little only incidentally. The way theories are built up differs considerably from one author to the other, and even in the corpus of writings known under the name of Pjābir b. Hayyān and thus claiming unity, they show quite varying concepts. Hence only a few basic notions can be given here,

which cannot be generally applied.

Transmutation is possible because the various sorts (anad') of metals form only one single species (drins). They are differentiated only in accidents (a'rad) which can be proper (dhatiyya) or occasional ('aradiyya). The accidents, however, are not stable but changeable, m can be seen in nature. Indeed, the metals grow in the bowels of the earth over long periods. In a sort of maturation process they change from base into precious metals until finally they become gold. According to some scientists, this conversion comes about under the influence of the stars. The alchemist is able to hasten this process in his retorts and to achieve by his skill in one day that for which Nature needs a thousand years. The literature gives hundreds, even thousands of recipes for making gold. Basically three methods can be distinguished:

z. The first method is based on the quicksilversulphur theory. In quicksilver water and earth are present, sulphur contains fire and air and thus both substances together hold the four elements. When the particles of sulphur and quicksilver are mixed and enter into a close compound, the heat generates a process of maturation and cooking which result in the various kinds of metals. If the quicksilver is clean and the sulphur pure, if the quantities (makadir) of both substances stand in ideal relation to one another and I the heat has the right degree (i'tidal), pure gold (dhahab ibris, 6\(\beta\)pu(ov) comes into being. If before maturation coldness enters, then silver originates; if dryness, then red copper. The more disturbing factors enter, the more low-grade the metals become: thus originate tin (rașăș kalăti), iron (hadid aswad), plumbago (usrub) and antimony (AuAl) (see lkhwan al-Safa), Beirut 1957, ii, 106 ff.; Kazwini, 'Adid'io, so4 if.). The alchemist, then, exerts himself to imitate nature. He tries to discover how much sulphur and how much quicksilver is contained in gold and how great the heat must be to bring about the maturation process. If he succeeds in establishing these conditions, he is able to synthesise gold. It should perhaps be added that "quicksilver" and "sulphur" did not necessarily mean for the alchemists the chemical elements Hg and S, but that by these terms they understood rather the basic principles of fluidity and inflammability (they speak of zi'bak radiradi and kibrit mediaris).

2. The second method is based on the doctrine of the relations of quantities ("ilm al-mandish") propagated by the authors of the Corpus Gabirianum. The alchemist tries to establish the mutual relation of the metals according to volume and weight (kadim wa-man) and to construct on the ground of these data a body with corresponding volume and weight (for details of these strongly speculative doctrines, see P. Kraus, Jábis b. Hayyán, ii, Cairo 1942, 187-303, ch. "La théorie de la balance").

3. The most important and most recommended method, however, consists in projecting an elixir [see AL-IKSI2]. An elixir [see AL-IKSI2]. An elixir [see AL-IKSI2] and animal matter. It is thrown upon a base metal which precedingly has been transposed into the passive (or black i.e. without any quality) condition; it permeates it like yeast pervades dough, and transmutes it into gold which is more valuable than mineral gold.

All these theories were based on premises which could neither be proved nor refuted. Therefore no real progress could be recorded in the dispute of the Muslim scientists about the possibilities of alchemy. It was significant that among the arguments advanced against the alchemists the reference to the defacto failure of all endeavours played only a small part. The alchemists admitted the difficulty of their undertaking, but emphasised that it must be possible to rediscover the secret of making gold, undoubtedly known to the wise men of old. The dispute we above all enected in the theoretical field. Philosophical and theological arguments were put forward and conclusions based on analogy were often drawn.

'Amr b. Bahr al Djāhiz's [q.v.] standpoint towards alchemy is not completely unequivocal. He is sceptical, but poses the question whether once in five thousand years it could be possible to make gold, when the various factors, like the quality of the elements, the right period, the correct position of the stars etc. would coincide accidentally (K. al-Hayawān, iii, 374 ff.). It paradoxical to him that it is possible to make glass from sand, but that it is impossible to transmute brass and quicksilver into gold and silver, although quicksilver more resembles molten silver than sand does pharaonic glass.

Ya'küb b. Ishāk al-Kindl composed the K. Ibhāk da'wā 'l-mudda'in şan'at al-dhahab wa 'l-fidda min ghayr ma'ādinihā, w refutation of those who pretended to be able to win gold and silver otherwise than from ore. According to him mankind is unable to achieve acts which are reserved to gature. This polemic writing immediately contested by

Muhammad b. Zakariyyā' al-Rāri. Al-Farabi (d. 339/950) was of the opinion that transmutation of metals is possible because, according to Aristotle's stonebook, the various sorts (axad') of the metals belong to only one single species (diins). But it was indeed extraordinarily hard to realise the transmutation, and a thorough study of logic, mathematics and natural sciences - prerequisite. The alchemistic texts were rightly veiled by pseudonyms and symbols, because otherwise, anybody might be able to find out the secret of making gold, and gold would become useless means of payment. This economic argument was repeated again and again by later authors (E. Wiedemann, Journal für praktische Chemie, clauriv (1907), 115-23; A. Sayılı, Edrabt'nin simyanın lüzümu kakkındaki risdiesi, in Türk Tarih Kurumu, Belleten, xv (1951), 65-79).

The geographer al-Hamdani (d. 334/945) worked with obvious analogies taken from metallurgy, of which he possessed a thorough knowledge. In the same way as iron and steal could reach various degrees of good quality and pureness through metallurgy, i.e. through the skill of man, in the same way man is able to make in an artificial way gold that otherwise maturates in a natural way in the bowels of the earth

(K. al-Diamkaratayn, ed. C. Toll, Uppeals 1968, ch. xxxvfl.

But the very assertion that man is able to imitate nature was contested peremptorily by Abb Hayyan al-Tawbidi and Abū 'Alī b. Sind: the alchemists were only able to make something that externally resembles the precious metals, but the meet do not perceive specific differences (fund) in the metals after the alchemistic operations, but only attributes and accidents (lawasim, 'awarig); the substance (gjawkar) of the base metals remains untouched (E. J. Holmyard and D. C. Mandeville, Avicennee de congeletione et conglutinatione lapidum, Paris 1927, 85 L; Ibn Sinā, K. al-Shifa', al-Tabi'iyyāt, v, ed. A. Muntaşir et alii, Cairo 1385/1965, 22 f.; G. C. Anawati, Avicenne et l'alchimie, in Comegno internazionale 9-25 April 1069 [Accademia Nazionale dei Lincei, Atti 23], Rome 1971, 285-341). Because of these utterances, Shik became the target for the polemics of all later alchemists, in particular of al-Husayn b. All al-Tughram and Aydamir b. 'All al-Djildaki.

With his K. Hakā'ik al-istishhād, written in 505/ 1112, al-Tughra'l produced the most important writing in defence of alchemy. He meets Ibn Sina's objection by stating that the alchemistic processes do not absolutely create . . differentia specifica (fayl), but that through them matter is only prepared to take in the differentia specifica which is granted to it by the Creator. Al-Tughra'i's argumentation thus takes account of the front of orthodox theologians, whose criticism found a mouth-piece in Ibn Hazm al-Andalūsi, Ibn Taymiyya and the latter's pupil Ibn Kayyim al-Djawziyya (d. 750/1349).

The latter's K. Miftah dar al-sa'ada contains a poternic of 200 pages against all secret sciences, especially astrology (see C. A. Nallino, Raccolla, v, 33 f.). Like Ibn Sinā, he is of the opinion that the aichemists only keep up appearances, but are in fact smalle to make real gold and silver. The economic argument adduced by al-Färlb! to justify the disguise of the alchemistic writings is used by Ibn Kayyim al-Diawziyya to refute alchemy itseit: if man were able to make gold and silver, the economic order of the world, created by God, would collapse. Gold would lose its value if it were available in abundance. The social order would also be destroyed because nobody would be willing any more to be the slave of a master (J. W. Livingston, Ibn Qayyim al-Jausiyyak: A fourteenth century defence against astrological divination and alchemical transmutation, in JAOS, xci (1971).

Ibn Khaldun also shows himself an adversary of alchemy, which in his opinion is in fact only a kind of magic (sihr). With regard to Ibn Sina and al-Tughra? his point of view is even somewhat more differentiated, without however alleging essentially new arguments (see G. C. Anawati, La réfutation de l'alchimie par Ibn Khaldun, in Melanges d'Islamologie, Vol. mem. A. Abel, Leiden 1974, 6-17). For this kind of polemic literature see also Abu 'l-Barakat Hibat Aliah b. Malta, K. al-Mu'labar, ii, Hyderabad 1358, 231-6; Fakhr al-Din al-Razi, K. al-Mabahich almasirikiyya, ii, Hyderabad 1343, 214-18; 'Abd al-Latif al-Baghdadi (A. Dietrich, NAWG, 1 (1964). no. 2, p. 106); Muhammad b. Ibrahim al-Dimashki, K. Nuhhbat al-dahr, ed. Mehren, 58-61; Khalil b. Aybak al-Şafadl, K. ol-Ghayth al-musadidiam, i, Cairo 1305/1887, 9-13.

The theoretical expositions and speculations of the alchemists were partly complete in themselves, and partly completed by experiments in the laboratory. The experiences gained in such experiments gave

again rise to new writings and theories. It is probable that alchemy had a greater part in the development of experimental science than medicine, pharmacology, physics and astronomy (see L. Thorndike, A history of magic and experimental science, i-vill, London-New York 1923-58). An important experimental achievement was the oxidation of quicksilver which had been exposed continuously to a very slow fire over forty days. Pseudo-Madjritt describes the process in his K. Ruibat al-habim and emphasises that the weight of the matter was the same before and after the experiment (E. J. Holmyard, Makers of chemistry, Oxford 1931, 78). The furnishing of a chemical laboratory is very impressively pictured by Ibn Shuhayd (382-426/992-1035) (see J. Dickie, in al-Andalus, xxix (1964), 243-310). There were many apparatuses: the uthal (Latin aludel), used to distil and to sublimate, the har' (oucurbit), a receiver over which was placed an alembic (al-anbiè [q.v.]), meltingpots (būlaš, pl. baudits), kilns (tannūr, pl. tanānir, Latin athannor) to generate high temperatures, phiale (hinnina), casseroles (hide, lingite), pans (suburrudja) and mortars (kdwds). Many apparatus are named after their alleged inventors, like attun Fithaghibras, the "oven of Pythagoras", the bi'v Zūsim, the "pit of Zosimos" and the homman Mariye, the bainmarie (see A. Siggel, Verteichnis der Apparate und Geräte, die in erabischen elchemistischen Hundschriften porkommen, in Deutsche Ah. d. Wiss. au Berlin. Institut für Orientforschung, no. 1, Berlin 1950. 9x-100; E. J. Holmyard, Alchemical equipment, in Ch. Singer at alii, A history of technology, ii, Oxford 1956, 731-52).

With such apparatus, vessels and ovens the procedures (tadábir), i.e. certain chemical processes, were achieved. The methods of these procedures were essentially the same as those of Greek alchemy, and most of the Arabic termini technici m translations of Greek notions. The "solution" (tabili, hiera) of a matter is achieved by water, solds | lyes; the "putrefaction" (tatfin, office) is a second of decomposition furthered by water. Distillation and sublimation are indicated with tay'ld and taktir, calcination with takliss. A substance is consolidated and fixed by tadjeted and ta'kid. "Blanching" (tabyle, λεύκωσης) indicates the making of silver, "reddening" (takesir) the making of gold. Many pichemists, however, me these and many other expressions only symbolically or in a completely different meaning for fear that they might reveal their secret. Thus the understanding of alchemical

texts is made extraordinarily difficult.

Since the alchemists were obliged from the earliest times to keep their esoteric knowledge secret (see Papyrus Leidensis, ed. C. Leemans, Leiden 1843, i. το, 9: έν έποκρύφω έχε ώς μεγαλομυστήριον, μηδένα δίδασκε), they used immunerable "pseudonyms", not only for the processes but also for the matters and clinics. The same matter was often indicated with dozens of different names, and conversely, one and the same name was used to design different matters. These pseudonyms also have a Greek tradition. Thus the names of the planets serve designations of the metals; al-shows is gold, aljamar is sliver, al-mirrigh is from, etc. Certain words contain the characteristics of a matter: al-fartar "the fugitive" is quicksilver, al-asthur "the reddish" is copper. Often names of animals are used: al-'ueab "the eagle" may designate sal-ammoniac, al-saleab "the scorpion" and "want al-bayye "the snakeneck" can stand for sulphur, fairus al-barba "the peacock of the Egyptian temple" for copper. The meaning of such pseudonyms varied from author to the other and from one workshop to the other; they had no general validity.

The first endeavours to solve this lexical problem were undertaken by the Araba themselves: they composed glossaries or added to bigger theoretical works lists in which the meaning of the psaudonyms was explained. But the value of these lists is small. Only careful critical editions and competent lexicographical revisions of the sources may enable us to travel further in this thorny field, but in not a few cases it will probably be impossible to uncover now the original meaning of the alchemical recipes.

KIHA [see gunk].

KİNALİZADE, 'ALÂ' AL-DIN 'ALİ CELEBI (926-Ramadan 979/1510-22 January 1522), Ottoman scholar. His grandfather, 'Abd al-Kādir from Isparta, was one of the tutors of Mehemmed the Conqueror, while his father with the Kadi Amr Allah, known also as a poet. His grandfather used to dye his beard with henne, hence was by-named bleath ("the one with honna"). This nickname was applied to other members of the family as well. Kinalizade All was born in Isparta in projects where he had his elementary education. His first tutor was one of his relatives, the Kadi-tasker Kadri Efendi. Then, he went to different madrasas and completed his education under such scholars as Mariol Emir, Sinān, Merhabā, Ķara Şālih, and Čiwizāde Muhyl al-Din. In 948/1541, he was assigned by Skaykk al-Islam Abu 'l-Su'ud (Ebüssu'üd) to the madrases of Husam al-Din (the Husamiyye) in Edirne at madereis. He next taught in the madrasas of Hamza Bey and Well al-Din-oghil Ahmed Pasha-both in Bursa-and in the two madrasas of Rüstem Pasha, one in Kütahya and the other in Istanbul, and in madrasas of Khūsseki and Semāniyye, also 🌃 Istanbul. In the year of 966/1559, when the construction of the madrasas of the Süleymäniyye Mosque was completed, he was assigned to one of them as milderris, thereby reaching the highest of the academic ranks. In Dhu 'l-Hididia 970/July-August 1563, he was appointed as kadi of Damascus to succeed Kurd Celebi. He remained in Damascus nearly four years. after which he are appointed to Cairo and then to Bursa. Two years later he was appointed hadi of Edirne, after which he became hadi of Istanbul. Shortly afterwards, in Muharram 979/June 2572 he became Kadi-cather of Anatolia. This same year, while in Ediruc with Sellm II, he died [6 Ramadan] 22 January 1572) from mattack m gout, a complaint he had contracted during his earlier residence in Edirne. His funeral, attended by many of the statesmen and acholars of his time, took place at the Eski Djāmit, and he buried in so-called Nazir cemetery on the road to Istanbul. In his youth, 'All Efendi was famous for his memory and knew by heart numerous hadilhs and poems in Arabic, Persian and Turkish. He was versed in most of the branches of the knowledge of his time, including mathematics, astronomy and rhetoric; and while in Egypt his mastery of the Arabic language was admired by all, His son, Hasan Čelebi, informs - that he wrote marginal notes to the Kashshaf of al-Baydawl up to Sitrat al-Had and that he corrected other versions of these manuscripts. According to his son's Tedhkiret al-shu'ara', 'Atayt's Dhayl al-Shake'ik and 'Othmanii mü'ellifleri, his works may be summed 🚃 💳 follows: (1) the Akhliki-i 'Ala't, his most famous work and an important source for the study of Ottoman culture. He completed this work on 25 Safar 973/21 September 1565 when he was the hddt of Damasous and dedicated it to 'All Pasha, the Beglerbegi of Syria, bence its title Akhläk-i 'Alä'i (For an analysis of the work and its sources, and in particular for its dependence on the AMida-i Nasiri of Nasir al-Din Tust, cf. the article by A. Adnan-Adivar in IA, Iv, 710-11). (2) his Diwan, which includes his poems in Turkish, Arabic and Persian; (3) the Haghiya-yi tadirid. He taught tadirid when he was muderris at the Hamza Bey Madrasa at Bursa, and wrote these marginal notes at that time; (4) Hāskiya-yi Durar = ghurar ilä mişfiki; (5) the Kilâb al-Karāhat min al-Hidaya; (6) Risalatāni fi haķķ al-wāķif, written = 2 reply to Shih Mehmed Celebi who had criticised one of his famous when 'Ali Efendi was kādī of Edirne; (7) the Es'āf; (8) the Risalet alsayfiyya wa 'I-kalemiyya; (9) the Hāshiya 'alā Haran Celebi II-Shaek al-Mauschif; (10) his Münghe at;

(11) the Häshiye-yi Kashshif; (12) the Häshiye-yi Baydiwi; (13) the Tabakii-i Hanafiyya; (14) 100 Shark-i Kaside-yi Burde.

Bibliography: Klasiliāde Hasan Celebi, Teāhkira al-shu'ard'; New Izāde 'Aţāyi, Dhayi al-Shakd'ik (originally called Hadd'ik al-haka'ik fl tahmilat al-Shakd'ik), 164-8; Stájüli-i Olhmāni, iii, 501; Olimānil mis'ellifieri, i, 406; IA, E.V. MERIKED CAVROGERI

EINALIZADE, HABAN CYLEB? (953-12 Shawwal 1012/1546 14 March 1604), Ottoman scholar and biographer. He was born in Bursa where I father 'All Celebi (see the preceding article) was milderis at the Hamza Bey Madrasa. He tirst followed the lectures of Nāzir-zāde Ramadān Efendi, who was mildereis between 067/2360 and 073/2562 at the Yelli 'Ali Pasha Madrasa founded by Semiz 'Ali Pasha in Istanbul. Afterwards he became a student of Abu 'l-Surud (Ebüssurud) Efeadi. He began his career in 975/1567 as a muderris at Bursa. One year later, upon the assignment of his father m kadi of Edirne, he was transferred to the Čukhādii Hādidii Madrasa as a milderris. Later he became milderris the Sultanivye Madrasa | Bursa, after which he taught at several modrasas in Istanbul, ultimately attaining an appointment to the Silleymaniyye, In Diumādā ai-Ākhir 998/April 1590 he was appointed hads of Damascus, following which he received the kadā's of Cairo again, Bursa, Gallipoli, Eyyüb and Eski Zoghra respectively. While in this last post he became ill and returned to Istanbul. He then requested and received the hada? of the small town of Reshld in Egypt, where he died shortly after his arrival. Although credited with several minor works, his fame rests on his biographical dictionary of the Ottoman poets, Tedhkiret al-shu'ara', the autograph of which is in the Library of Istanbul University (TY 1737). This is the fifth work in this genre after those by Schi, Latifi, 'Ahdi and 'Ashik Celibi. Though completed at 994/1586, his own copy shows later revision and corrections. It is dedicated to Murad 111 and includes three sections: the first devoted to the sulfans, the second to the spekeades and the third to poets proper, most of whom also mentioned in previous todikires. Hasan Colchi made use of the tedhkire of Latiff [q.v.] and, in particular, that of 'Ashlic Celebi. As may be seen from the alterations in his autograph, his method was to adopt the information given by these two predecessors, recasting it in his **man** individual, elegant style. However, he sometimes criticises their views on the marits of certain poets and advances his own opinions. The information he has to give about the poets and scholars with whom he was personally acquainted gives his work a particular value.

KINANA B. Kajukayma, an Arab tribe, genealogically related to Asad (b. Khuzayma) [q.e.]. The territories of Kinana were around Meoca from the Tihama on the south-west, where they were next to Hudhayl, with north-tast where they bordered on Asad. There were tik main subdivisions of the tribe, though more mentioned: al-Nadr (or Kays), ancestor of (kurayah (q.e.), which is reckoned a separate tribe; Mālik; Milkān (or Malkān); 'Amir; 'Amr; 'Abd Manāt. The latter was further subdivided. Bakr b. 'Abd Manāt was a strong group,

and included parts Mudikii, al-Du'il and Layth, as well as the more independent Damra. Chilfar [q.v.] is sometimes reckoned to Damra and sometimes said to be Chilfar b. 'Abd Manāt. Al-Hārith b. 'Abd Manāt was the main part of the Ahābīsh [see Ramash, end], who were probably a collection of small groups without common encestry (named as 'Adal, al-Kāra and al-Dish, all of B. al-Hūn b. Khuzayma, together with B. al-Muṣṭalit of Khuzā' and sometimes B. Libyān of Hudhay).

History. At an early date Fihr, the common ancestor of all Kuraysh, was leader of Kinana when they defeated a Himyarite force, His descendant Kusayy (q.c.) had the help of men of Kinana in the fighting which gave him control of Mecca, and his position was consolidated by the arbitration in his favour of Ya'mar b. 'Awf of Layth, though most of Bakr b. 'Abd Manat opposed Kusayy. In the of the Fidjar [q.v.] the "day of Naichla" resulted from the killing of a Kilabt by al-Barrad b. Kays, man of Dames rejected by his tribe but protected by al-Du'il, and a hell of Harb b. Umayya (of Kuravsh), In general, Kinana, including Bakr, supported Kuraysh against Hawazin, but parts of Bakr continued to feel hostility towards Kuraysh. especially after the chief of Bakr was killed in revenue for a youth of Kuraysh. Because of this matter Kuraysh besitated before setting out for Bade in 524. I a man of Mudlidi guaranteed that would not attack them from the After this, however, Bakr supported Kuravsh against Muhammad, and it was an attack by Ball ... Muhammad's allies of Khuza's which led to his conquest of Mecca in 630. In his force on this occasion Muhammad had men from Ghifar, Dames and Layth, Little in heard of the movements of Kinkna after this. A prominent member of the tribe, Abu 'l-Aswad al-Du'all [g.v.], known as a supporter of All, and is incorrectly alleged be the founder of Arabic grammar, in 230/844-5 al-Tabari mentions some Kindna = still near Mecca but apparently weak. They are also recorded in the Hawrin, and, in the 6th/rath century. in Upper Egypt and the western dolta.

Bibliography: Ibn Higham, 79 f., 430-2, etc.; Caussin de Percevul, Histoire des arabes avant l'islamisme, index; al-Kalkashandl, Subb al-a'shd, i, 350 f.; idem, Nihayat al-arab, mentions most subdivisions; Yakut, Mu'ajam al-buidan, index of tribes; Watt, Muhammad at Medina, index; Ibn Habib, Mukabbar, 156 f. (intercalators of months from Kināna), 195 f. (al-Barrād), etc.; idem, Munammak, index; al-Azraki, ed. Wistenfeld, 61-4. (W. M. Warri)

KINAYA (A.), a technical term of rhetoric corresponding approximately to "metonymy" and meaning the replacement, under certain conditions, of word by another word which has a logical connection with it (from cause to effect, from containing to contained, from physical to meral, by apposition etc.). Etymologically, this term implies a sense of dissimulation found also in the word keeps [q.v.], which is considered by such a grammarian as al-Mubarrad (Kāmil, 677) to be derived from kināya. Kindya constitutes a particular type of metaphor (isti'dra [g.v.]) and it is distinct from trope (madiax (q.v.) in that the latter in only to be understood if taken in its figurative sense (e.g. ra'aynā 'l-ghayth "we have caused the rain to feed", where chayth can only mean the grass appearing after a fall of rain). For some theorists, kinaya covers allusion (of which the various forms are called ta'rid, talwib, rams, ima' and sudges), but this is not so because, if it may be KINAYA 117

taken both in its proper and its figurative sense, it demands, if it is to be genuinely understood, an effort of imagination on the part of the listener, who may otherwise turn a deaf ear; after al-Tha'ālibī, Ibn al-Aṭhir saw fit to put together hināya and la'rig in naw' xix of al-Maṭhal al-sā'ir, so as to condemn the errors made by his predecessors in this regard and to make plain the differences which exist between the two concepts. On the other hand, exphemism, antiphrase and other methods of dissimulation of a more popular nature are to be included under the heading of hindys.

In general, if we are to follow Ibn al-Athir, kindya describes a word as a group of words which may be interpreted either in their literal or figurative sense and are used to replace other words which are to be rejected, sometimes simply for considerations of style, sometimes out of respect for decency, avoiding the use of words likely to shock or judged to be of bad omen; a logical relation must however exist between in literal and the figurative, the kindya and the maken fashe.

This I not the place to examine the other definitions proposed by the theorists and to take into account their disagreements regarding classification and nomenclature. We will simply observe that al-Sakkāki distinguishes three types: (1) tamthil or assimilation of one thing to another (e.g. **a** at-thaub "clean of clothing" meaning "exempt from moral vice". (2) intaf "implication", a term which Kudāma (Našd, 88) invariably me to the exclusion of kinaya (e.g. fawil al-nididd "with long crossbelt", meaning "tall in stature", because the cannot go without the other); in certain cases it is by a series of implications, more precisely of rid/s "pillion-riders" that the intended sense is reached (kathir al-ramad "having a great quantity of ash" to express generosity, hospitality: in fact the abundance of ash implies successively abundance of fire, then of wood and of cooking for a large number of guests). (3) mudjámara "proximity" "association" (e.g. the container for the contained: zwdjadja "bottle" = "wine").

Studies and chapters devoted to kindya contain lirst a number of quotations from the Kur'an and from hadilhs which may be interpreted metonomies; thus LXXIV, 4: wa-lkiyaba ka fafahhir' and your clothing, purify" where thiyab may be understood as meaning the soul, behaviour etc. Another characteristic example is provided by XXXVIII, 22/ 23: la-kû tie mwe-tistûne na'diatm wa-li na'diatm webids, which is translated as "he has ninety-nine sheep and I have only one sheep", but where some, influenced no doubt by popular usage according to which the wife is called no dia (al-Diabiz, Bukkala', 23, it. Pellat, 40; Hayawan, i, 212), sec a kindya. There little purpose in providing extensive examples of the ways in which the followers of ailegorical interpretation (ta'all) can take advantage of this concept of hisays in order to justify all kinds of daring interpretations.

It must be said that the fulaka? themselves are sometimes obliged to take it into account where they have to use verses directly concerning the Shari'a. This is the seem for example with IV, 46/43, V, 9/6 where two kindyos appear: are did's aladem min al-ghā'iti (dimestumu 'l-uisā' "if one (of you) has come from the place hidden from view or if you have touched women", then washing is obligatory; ghā'it comes to mean latrines, then excrement, and kimasa may be taken in a literal sense of "touching" or in the figurative of "having sexual relations with woman", this verb is of a type

which provokes discussions. Another notable example is the text which demands, for the application of the legal penalty to the fornicator, the presence of witnesses testifying that they have seen al-mil "I-muhuhla" the needle in the container for kohi"; but here the context leaves no doubt in to the true sense of the expression.

In these last examples it is a case of exphemisms whose purpose is to "palliate the ugly" (lahsin aléablé), as al-Thacalibl says (Kindyal, 55), and it is the examples of this genre that the authors most often quote, borrowing them from the Kur'an, from hadiths, from poetry; generally they woman, the sexual organs, defecation, various forms of uncleanness and everything which is of bad omen. Some kindyes testify to great finesse, notably that quoted by al-Mas'adi (Maradi, vi. 350-4 = § 2550), where, in a letter addressed to al-Rashid, the word thaysuran "bamboo", but also the name of the caliph's mother, is replaced by sudden. Others however are criticised, notably the use of Abu Aws to describe a stone (hadjar), because IIII father of Aws was called Hadjar (al-Askari, Sind atayn, 370). There was thus ample scope for the making of puns, and the humorists did not hesitate to take advantage of

In the introduction to the Kitab Mufahharat aldiawāri me 'l-ghilman, al-Diahiz makes (un of the hypocrites who cover their faces upon hearing a crude word, recalling that the most pious of the Muslims and the Prophet himself did not hesitate to such words, and he adds that these words were created in order to be used and that it would be necessary to withdraw them from the Arabic language if one were not allowed to speak them. In the Kittle al-Hayawan (i, 33), he notes the unwillingness of his contemporaries to use the specific term for excrement and their habit of utilising a number of suphemisms to describe latrines: ma<u>kk</u>ra<u>di,</u> ma<u>dh</u>hab, <u>kh</u>ala^a, hathshibushsh, mutawadda', and excrement: radii', ribl, gha'if; others could be added to this list. An anecdote probably invented for specific purposes figures in several sources (al-Mas adl, Muradi, viii, 330-3 - §§ 3490-2; al-Thafalibi, Kināyāi, 31; al-Sharishi, Sharh, ed. Cairo 1314, ii, 270-1; al-lioshibi, Musiatraf, ii, 225-6; etc.): mann is the victim of a joke in bad taste, in that he is asking for the latrines and appealing to a group of singing girls who protend not to understand him. He tries we by we about night different terms supposed to belong to various regions of the Arabic-speaking world (but the variants are 555 numerous 55 permit the drawing up of a linguistic map on the basis of this anecdote); to the words quoted by al-Diāhiz we may add here at least kanif, mustarah and mirhad.

In this regard, W. Marçais (Euphémisme, 395-6) comments that in classical Arabic "the plurality of nomenclature sometimes contrasts with the simplicity of the items described. If I'll latter by nature liable to shock, one's tendency is to attribute this discrepancy between and ends to the practice of euphemism." It is quite possible in fact that, independent of dialectical variants, the abundance of synonyms is sometimes due to the listing, by the lexicographers, of euphemistic terms whose origin is not indicated. It is thus for example that Ibn Mausir lists, according to Ibn Khâlawayh, eight verbs meaning "to menstruate" (s.v. root & y.d.): hādat can in fact be replaced by: naféjusat, darasat, ṭamiṭhat, daḥikat, kādat, akbasat and sāmat.

It is not impossible that certain of the cuphemisms which figure in the dictionaries belong to the language

of slang, but it is not always easy to determine the degree of decency of such and such a term of which the satirists make considerable use. In this cannection, we quote only one epigram of Di'bil ('Abd al-Karim al-Ashtar, Shi'r Di'bil, Damascus 1384/1964, 204) where the sixth verse contains the word kithiba, "cucumber" the sense of which is all the more readily understood because of the appearance in verse four of his in "ninety" which mans the anter. This last kindys I borrowed from dactylonomy (kisdb alwhads [q.v.]), which supplies I large number of less obscene examples (e.g. "93" or "99" — miver"); I mow Ch. Pellat, Textes arabes relatifs a la dactylonomy Paris 1977, 21-2 and passim.

As a result of its undeniable expressiveness, to which the numerous examples cited by rhetoricians bears witness, the kindys preserves all its force in colloquial Arabic, for not only do slang expressions abound here, but also convention demands a strict caution in circles where superstitions continue to be strong. To antiphrase (beir "clear-seeing" for "blind" already found in the name of Abū 'Alī al-Başīr (see AL-BASIR], who lost his sight; with this may be compared Kur'an, XI, 89/87; inna-ka in-anta 'l-haismu 'l-raskid "truly you - long-suffering and just", which must be interpreted in the contrary sense), to designation by a verb without subject känel skayba idyka "the situation === lamentable"), by adverb or a pronoun ("and-kā kādūk "she is having her menstrual period"; cf. in a seem of Abū Nukhayla, Aghani, ax, 382, barraktu-ku, where the pronoun refers to an obscene word not expressed (likewise adulu-ku, in Yākūt, Irghād, kvi, 209, l. 🛚 from bottom), and to suphemism pure and simple (in Morocco, fakin "glorious" to describe coal (falm) because of its black colour), there we to be added voluntary alteration (tas'iid [tas'ud] "you shall be happy" for the number "nine" because tes's also with "you shall be a beggar"), borrowing from other languages (the Turko-Persian shishma for "latrines"), the refusal to specify ("those who not to be named" = the dinns) and other procedures. On this subject, one can only refer to W. Marçais, Nouvelles observations sur l'euphémisme dans les parlers arabes maghribins, in Ann. de l'Inst. de Philol. et d'Hist. Or. et Slaves of Brussels (Mélanges Isidore Livy), xiii (1953), 331-98. For Berber, see E. Destaing Interdictions de vocabulaire en berbère, in Mdl. René Barset, Paris 1928, ii, 177-277.

III also Khamsa, Tawriya and the bibl. to 1811'aka. (Ch. Prilat)

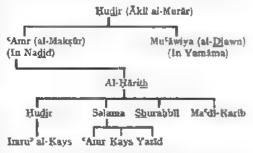

KINDA, a South Arabian tribal group, whose descent, real or imaginary, from Kahlin correctly identifies them marabs mind distinguishes them, as it does the Azd, from Himyar and other non-Arabiahabitants of South Arabia. The tribe spread all over Arabia in the 5th and 6th centuries A.D., from the south to the centre to the north, and played a decisive role in the military, political, and cultural history of the peninsula before the rise of Islam.

1. The pre-Islamic period.

From Kinda (a lakeb, nickname for Thawr) are descended Mu'awiya and Aghras, and from the latter

descended al-Sakūn and al-Sakāsik. The more distinguished branch was Mu'awiya, and within Bann Mu'awiya, the house of Hodir, nicknamed Ākil al-Murār, became the most illustricus.

Genealogical table of the III Akil al-Murir

It was this Hudir who, in the second half | the 5th century and supported by the power of Himyar, moved into central and northern Arabia and assumed supremacy over the Arab tribes of Mafadd. One of the celebrated Ayyam, battle days of the Arabs, Yawm al-Baradan, involves him with Ziyad b. al-Habola, the Salihi client-king of Byzantium. It was his descendants, the Banu Akil al-Murar, that dominated the political and military scene in Arabia for almost a century. He was succeeded by his son 'Amr, nicknamed al-Maksdr, while his younger son Mu'awiya (nicknamed al-Diawn) ruled over al-Yamama. Neither was distinguished, and it was his grandson, al-Harith b. 'Amr, who became the bestknown member of the house, an international figure known not only to the Arabs of the peninsula but also to Persia and Byzantium and to their Arab clients, the Lakhmids and the Ghassanids. Around 500 A.D. his two sons, Hudjr and Ma'dl-Karib, mounted molfensive against the Byzantine border and in 502 A.D. the Empire had to conclude a peace treaty with al-Harith. For a short time he ruled over Hira, adopting Mazdakism during the reign of the Persian king Kawad. Then leaving al-Hira, he went over to the Byzantines, who assigned to him a phylarchate in Palestine, but he quarreled with Diomede, the dux of that province, and fled to the desert where he was killed in 528 A.D. either by the Lakhmid Mundhir or by a member of the tribe of Kalb.

Al-Hārith had divided the Arab tribes of Ma'add among his four sons, Hudle, Shurabbil, Salama, and Ma'dl-Karib, After his death, rivalries broke out among them and brought about a bloody engagement, the first day of al-Kulab, in which Shurabbil was killed. Then the tribe of Asad rose against Hudir and killed him. It am at this juncture, after the violent death of al-Harith when III power of Kinda was in disarray, that Byzantium sent its two diplomats, Julian and Nonnosus, ca. 530 A.D., to Himyar, Ethiopia, and Kinda for an alliance against the Persians. The services of Kinda min indispensable, and Bytantine diplomacy was finally able to compose differences between the Himyarls and the Kindis by withdrawing Kays (probably the me of Salama) from central Arabia and arranging for the division of his dominion between his two brothers, Yazld and Amr. Kays visited Constantinople and was given command in Palestine.

In the second half of the 6th century, the power of Kinda in central and north Arabia was clearly dishtegrating. In addition to the fratrioidal among the of al-Hârith in Nadid, the Banu

KINDA 119

1-Djawa branch in al-Yamanna allowed themselves to be involved in the inter-tribal feuds of Tamim and 'Amir; these resulted in the two battles of Shi'b Djabala and Dhù Nadjab, which proved disastrous to the Banu 'l-Djawa. So precarious had the position of Kinda become that the tribe, according to the sources, decided to go back to its original home in Hadramawk.

A century or so of rule over such a vast area in the Arabian peninsula calls for an assessment of the role of Kinda in Arab history: (1) The dominion of Kinda represents the first attempt, however forcible, to impose unity on the tribes of central and northern Arabia; but this unity could not have been achieved without the support of Himyar. (a) Kinda brought from the Himyari South a tradition of sedentary life; it ruled the Arabs from such urban spots as Gharne Dhi Kinda, Batn Akil, and Hadjar. (1) The house of Akil al-Murar adopted Christianity, and must have been an important factor in disseminating it in central and northern Arabia. The most important Arabic Christian inscription of pre-Islamic times, commemorating the erection of a church in al-Hira, is that of Hind, daughter of al-Harith b. 'Amr; and the Banu 'i-Djawn must have done their share in spreading Christianity in al-Yamanna. (4) Kinda contributed towards the spread of literacy among the Arabs and one Bishr b. 'Abd al-Malik (from the Sakûn) is said to have learnt the art of Arabic writing in al-Hira and to have taught it in Mecca, where he settled and married a sister of Abū Snfyāp. (5) Kinda's greatest contribution, however, to the cultural life of the Arabs Imen' al-Kays [q.v.], the foremost poet of pre-Islamic Arabia, Through him and through the unification of the Arab tribes for a century, Kinda accelerated the development of a common and standard Arabic language, transcending dialectal differences. a circumstance that attained its fullest significance with the rise of Islam.

While the Banû Akil al-Murar were making history in the Fertile Crescent as well as in central and north Arabia, other kindi groups were not idle in the south, where they rebelled against, as well as fought for, the Himyaris, with whom their relations as ascillates as ascillates as ascillates as ascillates as ascillates as ascillates as ascillates as ascillates as ascillates as ascillates and the Lakhmid Munchir, against Nadjran and the Ethiopians, and also for Abraha [4.0.]. A second of the military power of Kinda, in both the north and the south, is provided by the fact that of the twenty-one Djarrārin (pl. of Djarrār, "leader of a thousand", chiliareh) of Yaman, eleven were Kindia. Their military role in the south is evidenced by references to them in the Sabaean

The Arabic corroborate the Sabaean inscriptions on the importance of Kinda in the south and give prominence to Kays b. Ma'di-Karib, also a member of Mu'āwiya but from the family of Banu 'l-Hārith. He was the lord of Kinda in Hadramawt, and is known to have adopted Judaism. Al-A'shā eulogised him and the famous al-Ash'ath [q.v.] was his son. Kinda is counted among the Arab tribes who adopted Judaism in pre-Islamic times, and it must have been this Kinda in the south that became Judaised. Their Judaism could possibly support the view that the Nasa'a (those in charge of intercation in the pre-Islamic calendar) had been Kindis before the tribe of Kinana took over the function after one of them had married a Kindi princess.

2. The Islamic period.

inscriptions (see below, Appendix).

Although it me in pre-Islamic times that Kinda, sc. Kindat al-Mulük, "Royal Kinda", had its heyday, the tribe retained some of its power and influence in the time of the Prophet and in Islamic times. In addition to the Bant Mu'awiya, the Aghraela, especially the Sakūnia, now come to the fore, and within the Sakūnia, now come to the fore, and within the Sakūnia, now come to the fore, and important group. The Kindis crossed the paths of Muhammad, the calipha, and their governors, who enlisted their talouts in the service of Islam, as is clear from the many personages listed in the pages of such works as Ibn Harm's Djamhara. They appear at critical junctures in the history of Islam, displaying the same unruliness and spirit of independence that had characterised their tribal others in pre-Islamic times.

Al-Ash'ath h. Kays [q.v.] led the delegation of Kinda to Medina and accepted Islam, and so did four other Kindi chiefs, Mikhwas, Mishrah, Dlamad and Abda'a, leading another branch of Kinda (in some sources the four chiefs are associated with the Hadramawi delegation); Tudilb also sent a delegation and accepted Islam. In 9/630 the Sakuni Ukaydir b. 'Abd al-Malik, master of the strategic point Dümat al-Djandal in northern Arabia, submitted to Khaild b. Walid. Perhaps the best for the continuing importance of Kinda in the newly-emerging world of Islamic Arabia is the fact that Muhammad contracted marriages with two, possibly three, Kindi princesses, but these do not seem to have been consummated.

After the death of Muhammad, Kinda led a furious insurrection in Hadramawt, in which al-Ash'ath and the four chiefs mentioned above were involved, and it was with great difficulty that the insurrection man finally put down; the four chiefs were killed, and Abb Bakr spared the life of al-Ash'ath, who espoused the cause of Islam onthusiastically, fighting at both al-Yarınük and al-Kadisiyya and later with Ali at Şiifin. Other Kindis distinguished themselves | the conquests: Shurabbil b. Hasana was one of the three four main commanders appointed by Abb for the conquest of al-Sham or Syria and his front was at-Urdunn, which he conquered and later govexned. Al-Simt b. al-Aswad, a member of Mu'awiya, and al-Ashfath b. Milnas, a Sakuni, took part in the conquest of Hims; the first is credited with the division of the city into quarters in which the Muslims settled.

It was during the caliphate of "Uthman that Kinda took part in what proved to be the turning point in the history of Islam, namely, the murder of the fourth Orthodox caliph. Many of the Sakunis had settled in Egypt, and in the rising against 'Uthman they formed part of the Egyptian party of rebels which advanced against Medina. The weapon that actually killed 'Uthman was wielded by a Tudjibl. Kināna b. Bishr by name, and two other Sakanis are also associated with the murder. A memorable event in the Second Civil War of Islam is also associated with a Kindl. It was al-Husayn b. Numayr, a Sakuni, whose catapults rained stones upon the Haram when in 64/683 he conducted for the Umayyad Caliph, Yazid, the siege of Mecca, during which the Kasba caught fire and was burnt down. More revelatory of the atavistic rhythm in the history of Kinda in Islamic times is the career of 'Abd al-Rahmān, commonly known as Ibn al-Ash'ath [q.u.], ■ member of Mu^cawiya, vividly aware of his KindI and South Arabian origins and worthy of his grandfather al-Ash'ath. After extending the boundaries of the Dar al-Islam by his invasion of Zābulistān ln 80-1/699-700, he raised the standard of revolt and marched against al-Ha<u>didlädi</u> in 'Irâk, where he was

finally beaten at the battle 🔳 Dayr al-Djamādiim, It was, however, in the Islamic Occident, in faraway Spain and malate as the 5th/11th century, during the period of the Multik al-toma'if, that the Kindis, unruly and rebellious **m** ever, achieved what figures such = Ibn al-Ash'ath in the Orient had been unable to achieve, namely, the carving out for themselves of an independent political existence, however shortlived this proved to be. The Tudibids settled in Sarakusta (Saragossa), Darawka (Daroca) and Kal'at Ayyūb, in which cities they ruled, - they did also in al-Mariyya (Almeria), 🛮 the Banû Şumadib were indeed Tuditbids, in is probable. Claims made by such historians as Ibn Khaldun that the Dhu 'l-Nunids [q.e.] of Toledo and the Affasids [q.e.] of Badajoz Tudjībids, do not seem to have been aubstantiated by recent research, which affiliates them rather to Berber ancestry.

Appendix. The relations of Kinda with Saba

and Himyar.

Pre-Islamic Sabaean inscriptions furnish us with some useful references to Kinda in its epigraphic South Arabian form Kdl. Unfortunately, one of the earliest of those references is not at present securely dateable, since the precise chronology of the Sabacan texts is still in dispute; however, a date in the 3rd century A.D. seems possible. This text, Ja 576 (published in full by A. Jamme, Sabacan inscriptions from Makram Bilqis, Baltimere 1962), according to recent re-interpretation offered by A. F. L. Beeston (Notes - Old South Arabian lexicography VIII, in Le Muséon, hxxxvi (1973), 448-51), depicts for us a situation in which Mälik king of Kinda was head of a confederation in which a certain Imru? al-Kays b. 'Awf, called "king of the KH\$\$T", was a subordinate member; the latter committed un act of agression against Saba, as a result of which the king of Kinda and his shayads were forced under dutess to surrender the person of the actual offender, to pay an indeninity, and to give hostages to the Sabacans.

In two other texts of approximately similar date (Ja 650 and 665) we find Kinila and Badhbidl, together with other bedouin groups, placed under the overall control of a Sabaean official with the title "kabir of the Arabs of the king of Saba, and Kinda, and Madhbidl etc.", and evidently acting as bedouin auxiliaries of the Sabaean army. In an inscription

published by Sharafaddin (Yewen, Ta'izz 1961, 44, bottom left), a mixed force ill Sabasans, Kindi Arabs and other elements, was commanded by lindividuals bearing the title "sairs" of Saba".

In the early 5th century A.D., the Himyarita king Yhauf (= Dha Nuwas [q.u.]) was similarly employing Kindis, together with members of the Murad and Madhbid tribes, under the control of sabaean commander belonging to the Yaz'an (in Islamic sources Yazan) family, as auxiliaries in his campaigns in central Arabia: = Ry. 508.7. (G. Ryckmans, Inscriptions sud-arabes X*ser., in La Musica, ixxvi (1953), 206) from Kawkab, an isolated rock northeast of the Kars mountains and on the edge of the

Empty Quarter.

AL-KINDÎ, 'ABD AL-MASÎH S. İSHÂR, the Dame given to the author of a defence of Christianity presented in the forms of a letter written in response to that of a Muslim friend, named 'Abd Aliah b. Ismä9l al-Håshimi, who invited his correspondent to embrace Islam. The second of these two characters supplied only by al-Barton [d. after 442/1050 (q,v.)) in a reference that he makes to this defence in his Chronology (ed. Sachau, 205). In fact, the author of the two letters, who states in the prologue that he does not wish to mention is names of the correspondents "for a certain reason", speaks only of a Hāshimi and a Kindi. But it should also be noted that the headings of certain manuscripts supply the name of Ya'kub b. Ishak al-Kindi, not to be confused with the name of the first Muslim philosopher (d. 256/870 [q.v.]).

The authorship of this defence is the object, among orientalists, of serious disagreements concerning his period and his sect. Taking as evidence the historical data supplied by the text, mention of the callph al-Ma'mun (198-218/813-33), of the sack of Mecca by Abu 'l-Sarāyā (199/813) and of the revolt of Bābak al-Khurrami (204/819), W. Muir believes that the date of the composition of the letter can be fixed at 215/830. But L. Massignon believes the composition to later than the year too/912, seeing that the author has borrowed from al-Tabari (d. 310/923) his criticism of an opinion of the Hanball al-Barbahari (d. 329/940). Similarly, observing ■ parallelism between certain criticisms contained in the letter and in a work of the Muslim heretic Ibn al-Rawandi (d. 298/920), P. Kraus concludes that the Christian author borrowed these criticisms from the latter and therefore the letter can only have been composed at the beginning of the 4th/10th century.

As for the sect to which the author of the apology belonged, the nunjority of orientalists make him a Nestorian, as is moreover indicated explicitly by his Muslim friend in his lotter. The fact that he himself mentions the convent ("now) of al-Rarkh, a suburb of Baghdad, and Sabat al-Mada'in, near Seleucia-Gresiobon, confirm this idea. But Massignon, con-

Ctesiphon, confirm this idea. But Massignon, considering that the distinction between the essence and

the attributes of the act is an "adaptation to Christian theology of the tenets of Islamic haldm", is led to identify the author with the celebrated Jacobite philosopher Yahyā b. 'Adi (d. 364/974). Similarly, M.-Th. de Alverny, on the basis of a fine in the Latin translation which treats the Nestorians as heretics, makes the author of the letter a Jacobite philosopher who, according to a concluding passage figuring only in the Latin version and I Karahdul manuscript (Paris B. N. syr. 204), must have composed a work against Arius.

Now the publication of the work of a Jacobite theologian of the beginning of the 3rd/9th century, Abū Ra'lta Habūb b. Khldma, shows that, contrary to the opinion of Massignon, this distinction between the divine attributes dates from a period considerably before that of Yahyā b. 'Adl, since it is found in the work of Abū Rā'ita, from whom the author of the letter borrowed it, as well in the whole of the philosophical-theological section dealing with the unity of God (ed. G. Graf, CSCO, exxx, 5-10). As for the fact of in Nestorian author borrowing from a Jacobite a discussion of the unity of God, this is not surprising, since there was no difference of opinion between them on this point.

Similarly, the publication of the Latin version has shown that III this version, conforming to the original Arabic, the Muslim tells his correspondent that of all the Christians, the Jacobites profess the worst doctrine while the Nestorians, his friends, are closer to the Muslims (379); and it is clear that the passage in the Latin version which describes the Nestoriana as heretics (413), and which is nowhere corroborated by the Arabic text, arises from the fact that the translator has "revised" the text in a "Catholic" manner (400); as for the concluding passage where there is mention of a work against Artus, it seems, judging from its content and style, that it does not belong to the original text, and that it is a later addition.

Finally, it should be noted that in a Karshini manuscript (Parls, B. N. syr. 205), the text of the letter of the Musian has been revised in manuscriavourable to the Jacobites, the name of the Jacobites being replaced by that of the Nestorians and vice-verse, and the writing of the name of Cyrillus being distorted (fol. 3b).

Presented as the work of a Nestorian Christian, senior official at the court of al-Ma'man, this defence of Christianity is also a refutation of Islam, and is thoroughly documented, assessing the respective worth of the two religions from m historical and moral viewpoint. Translated into Latin in 1141, by Peter of Toledo and revised by Peter of Poitiers, the letter of al-Kindi played a very important role, in illustrate will as in the West, in the polemic between Christians and Muslims.

AL-KINDÎ, ABÛ 'UMAR MUHAMMAD B. Yosur At-Tumilal, historian of Egypt, was born on yaws al-nahr (to Dhu 'l-Hididla) 283/18 January 897 and died on Tuesday, 3 Ramadan 350/Wednesday, 16 October 961. He heard al-Nast 7, the author of the Sunan, when the latter lectured in Egypt, and appears to have lectured m hadiff himself. Among his teachers and historical informants, Iba Kudayd (d. 312/924-5) seems to have been the most important one. His principal transmitters (cf. his Judges) was thn al-Nahhas (323-416/935-2025). This is about all that is known of his life. The authentic information goes back mostly to his contemporary, the historian al-Farghanl, who mentioned him in his continuation of al-Tabart's Ta'righ; this information has fortunately been preserved in biographical notices added in Ms. Brit. Mus. add. 23, 324. The name of the town where he was allegedly born is in fact to be read yours al-nahr; this shows that no independent biographical information is preserved in the notice on al-Kindi in al-Makrizl's Mukaffa, reproduced by N. A. Koealg, The history of the governors of Egypt, New York 1908, 1, n. 5.

Al-Klivdi's Histories of the (1) Governors (wulat) and (2) Judges (kudat) of Egypt are preserved in the above-mentioned Brit. Mus. manuscript. The definitive edition, provided with a careful introduction, is that of R. Guest, (GMS xix, Leyden-London 1912, reprinted in 1964, re-edition of the Governors by Husayn Nassar, Beirut 1379/1959). The Governors end with the year 334/946; they were briefly continued in the preserved ms. for m few decades to the coming of the Fathulds. The Judges end with the year 246/861 in the preserved text; they were perfunctorily supplemented by two hands through the first third of the 5th/etth century. Both works contain important information, and are early representatives of provincial historiography. As to political history, they afford a glimpse into events seen from outside the centre of empire. As to judicial history, they reveal a good deal about legal institutions and practices. We may suspect, however, that they do not really compensate for the loss of the older, and early Fatimid, literature - Egyptian history. In Mamiūk times, al-Kindl's works together with what was then still known of the literature now apparently lost, were much used.

Al-Kindl is further credited with works on (3) the Mardli (known from a considerable number of quotations), (4) the Khilai of Egypt, (5) the Khandak (the trench made by M Diahdam around Fustat in 65/684, cf. Governors, 46), (6) the Great Mosque of this Akl al-Räya (the mosque of 'Amr), (7) the Westers Contingents (al-djand al-gharbi m al-adjadd al-gharbd), and (8) Maruda b. al-Dja'd, presumably the last Umayyad caliph (unless it dealt rather with al-Sari b. al-Ylakam). (5) and (6) may have been parts of (4). The assumption that he also wrote an independent history (see Brockelmann, in El², s.v. al-Kindi) is quite uncertain.

A brief treatise in the Fadd'il Misr was compiled by al-Kind's otherwise unknown in 'Umar in the third quarter of the 4th/toth century. His authorship in indicated with some confusion at the beginning of the work and appears supported by the list of sources used, ending with Abū 'Umar al-Kindi and Ibn Yūnus. Its transmitter was again Ibn al-Nabhās. Later authors took it for in work by Abū 'Umar lalmeelf. It was first edited with a Danish

translation by J. Ostrup, in Oversigi over det Kongelige Danske Videnskabernes Selskab Forhandlinger, Copenhagen 1896, 173-245. Another edition, by J. A. al-'Adawi and 'All M. 'Umar, appeared in Cairo in 1971 (including a reproduction of two of the 'Akkā ms. supposedly dating from the 5th/11th century). Neither edition is complete with respect to the most of the available mss. material.

Bibliography: Given in the article, and Brockelmann, I, 155 f., S I, 229 f.; Sezgin, i, 358; Basan A. Mahmud, al-Kindi al-mu'arrich, Cairo n.d. (F. Rosenthal)

AL-KINDI, ABU YOSUF YA'KUB B. ISHAH, "The philosopher of the Arabe" whose distinguished genealogy is obligingly given by the bio-bibliographers, was born before the end of the 2nd/8th century and died in about the middle of the 3rd/9th (perhaps approximately x85-x52/80x-66).

An eminent universal scholar and philosopher, he lived in meriod of intellectual ferment in the sphere of the sciences as well as in that of kalām: the period of the translations, and of the controversies con-

cernine Mu'tazilism.

He was a companion of the caliphs al-Ma'mun and al-Muctasim. To the latter he dedicated notably his On first philosophy, and to his son Ahmad, who was pupil of his, he dedicated a number of other treatises. His association with these two sovereigns. plus the fact that he fell into disfavour during the reign of al-Mutawakkil (and was even deprived temporarily of his extensive library), lead one to suspect at least a tendency towards Mustazilism on his part. This hypothesis is supported by several passages from his known works (where there are references to the negation of the divine attributes or to the excellence of the works of God), as well as by the titles of works which are known only from the bibliographies. The latter show the extent and the variety of the work of al-Kindl: almost 250 titles (according to the Fibrist) concerning all the sciences cultivated in his day (these include astrology but alchemy, which he regarded as a form | trickery), also technical subjects of particular interest to the ruling classes. with whom he was associated; the manufacture of glass, jewellery, armour and perfume.

It is impossible to give a complete account of al-Kindl's thought because of the relatively small number of documents which has survived (less than to extant titles, in many of them philosophical as scientific; the task of editing and evaluating in number of unpublished ones is as yet incomplete). In the meantime, one is sketch the general outline, in at least note certain significant features, on the

basis of the available texts.

His general philosophical position is best expressed in the introductory chapter of On first philosophy. Besides certain definitions and technical statements concerning philosophy, so the principles of philosophy, the four "causea", the four "scientific questions", there is to be found there what is in effect both an advertisement for, and a defence of, philosophy (it should be remembered that this treatise is dedicated to the caliph).

Taking as his inspiration, and sometimes borrowing literally from, the opening of a book of Aristotle's Methaphysics, of which he quotes a passage (without, however, acknowledging his source), al-Kindl describes the progressive accumulation of true knowledge which has come about in the course of time, thanks the efforts of philosophers: from this he infers that "the truth must be acquired, from whatever source it comes", and the statements of

the philosophers must be re-examined and completed. He violently criticises the opponents of philosophy who attack it in an ame of religion, while they themselves, he says, are without religion. The content of "the science of things and their true nature", that is to say philosophy, is identical to that of the message of the prophets: the science of divine sovereignty and divine unity, the science of morality and ethics. Finally, a brief quotation from Aristotle's Protriptic (again not acknowledged), according to which it is logically impossible not to be a philosopher, is followed by a prayer invoking the assistance of God in the pursuit of knowledge.

Thus al-Kindi sets forth an intellectual orientation doubly opposed to that of the traditionalists; according to him, knowledge can come from various sources and at still be expected to develop; but equally, he claims to respect the prophetic message. In precisely the same spirit his epiatle Concerning the number of Aristotle's works compares human knowledge ('sim install) with divine knowledge ('sim iliahi'); whereas the first depends on prolonged effort and preparation regulated according to a precise scheme, God inspires the prophets, when He so desires, and without them having recourse to the methods of "human knowledge", with a type of revolution condensed into a few phrases whose sense the philosopher and only explain at the cost of a

lengthy process of elucidation.

This position of al-Kindl's, with regard to the sciences and to phibsophy, derived from various sources the hand, to revelation and religious speculation on the other, emerges also in some ways from the information supplied by the bio-bibliographers. These emphasise that al-Kindl had an unequalted acquaintance with the ancient sciences (lbn al-Nadim), that he of all the Islamic philosophers closest to Aristotle (Ibn al-Djuldjul), that he studied in depth the various branches of Greek, Persian and Indian wisdom (Kifit); but also that he combined in his works the principles of the Law and those of the rational sciences (Bayhaki) and that he wrote sessay on tanhid according the methods of the invicions (Ibn al-Djuldjul).

Also, in a systematic list of his works such as lifest to in found in the Fibrist, one notes the section of "books of dialectic" of "controversy" (kutub diadaliyya), many of which must have dealt with specific problems of kalām, such prophecy, istijā'a, divine unity, the creation of the body, of the atom,

As regards the Greek philosophers, al-Kindi mentions by name Plato and Aristotle and hardly any others. We know on the one hand that III used the Treatise on the heavens of Aristotle, that he commissioned a translation of his Metablysics and revised the translation of the Theology which was attributed to him. But careful scrutiny of his works shows that he must have been acquainted, directly indirectly, with certain others, such as Epictetus, Proclus and probably John Philoponus; we find also echoes of the last phase of the teaching of the school of Alexandria as it is expressed notably in the writings of David. These various references to other authors and implied borrowings pose many problems, both historical and critical, which are far from being solved. Without doubt there are questions still to be asked.

The variety of these borrowings poses in addition a philosophical problem, which could only solved by examining the entire corpus of works of our author and his precise chronology, and examining the sistency and the development of his thought, and his vocabulary 28 well.

Without attempting to enter into the details of the philosophy of al-Kindi as it is known to us, we say that he adopted from the Aristotellan tradition a certain number of concepts (the four causes, the categories in change etc.) and of propositions (the finiteness of the world, the impossibility of a corporeal infinitude as we act, the mechanics of intellectual perception etc.); from the Platonist tradition, he takes speculation on the soul in its relationship with the body and with the divine light and on its ascent to and beyond the beavens. Parenetic and semi-mystical in this last case, his style and method are by times extremely precise, very abstract, strained, proceeding freely and methodically by means of axioms and deductions of a geometrical regularity.

On the other hand, al-Kindi, who ceases to follow the Greeks where they are in disagreement with the Kur'anic revelation (i.e. with regard to the creation, and the life-span of the Universe), is interested in establishing or formulating agreements between cartain philosophical ideas and certain articles of the

Islamic faith, even Mu'tazili ones.

Thus the On first philosophy, after some reflections the "one" and the "many", where we detect echoes of Proclus, concludes (that is to say, the first part of the book, which is all that has survived, concludes) with the kind of philosophical tampid and with criticism of those who give attributes to God (the same theme is used the essay On the unity of God and finite nature of the world). The epistle Concerning the number of Aristotle's works contains the philosophical commentary on verses 78-82 of Sūra XXXVI and the epistle On the lowest prostration of the body another on verse 6 of Sūra LV.

There are other detailed references to other works which could be quoted. It would appear that al-Kindi was the same method in his choice of language where cartain words or verbal roots are common to the vocabulary of religion and to that of the Greek translations (thus he refers to God by the name alwabid al-habb, which is both Kur'anic and Neo-Platonist; he uses the word rabūbiyya, which belongs to the language of religion, in the title of the Theology attributed to Aristotle). It is important to analyse these various agreements and differences at this parly stage of the bistory of falsafa.

In m far m one is able to judge from the bibliographical lists and the few treatises, of various lengths, which have survived, the scientific work of al-Kindi follows the same scheme as his philosophical work, an to revise and develop the findings of the ancient scholars in the light of new interests. He wrote essays on Euclid, Archimedes, Ptolemy, m the astrolabe and on Hippocratic medicine; he also drew to meaning the considerable extent on Asiatic sources, particular

larly for his knowledge of remedies.

On the other hand he followed ideas which were specifically his own, notably in his studies optics and pharmacology. His article on perspective (known only in Latin under the title De causis diversitation entry in Latin under the title De causis diversitation has pecus; follows Euclid, though without following him blindly. Three points of et out here in succession: rectilinear propagation of light which Euclid postulated and which al-Kindl demonstrates; a theory of vision whereby the eye illuminates the object seen—this also is to Euclidean theory which al-Kindl modifies, giving three dimensions to the rays emitted by the eye (whereas for Euclid these were geometric lines); finally, theory of mirrors. Here too, his study of burning mirrors is an adapta-

tion, that is to say a revision, a criticism and moompletion, of what Anthomios of Trailes had written on this subject.

The same method II used in the treatise On compound medicines. The ancients had studied the proportions of the four qualities (bot, cold, dry, wet) in simple medicines. Now this method had to be extended to compound medicines, and al-Kindi takes pains to explain mathematically the relation between increasing the number of parts of each quality, and the corresponding increase in the effect of the medicine on the organism.

Al-Kindi left a few pupils (Ahmad b. al-Tayyib al-Sarakhsi, Aba Ma'shar), but not a school in the strict sense of the word. It is most of all as a universal scholar and an astrologer that he has survived (to the point that those of his works which were available in Latin, were still being read in medieval times), the Khaldan quotes him at various points in his Muhaddima, but does not include him in his

list of Islamic philosophers.

KINDIL [see missah]

KINKIWAR, Kankiwar, Kangiwar, a small town of western Persia (population in 1975, 13,144) situated in lat. 34°29′ N., long. 47°55′ E., and in the bakish of the same time in the skahristan of Kirmanshahan. The town is almost equidistant from the cities of Kirmanshah and Hamadan [qq.v.], and lies at an altitude of 1,467 m.; it is first mentioned by Isidore of Charax under the name "Concobar". The bakish comprises (1975) four divisions, with a total of some sixty villages and a population in about 38,435. The economy of the region is based

on agriculture and trade.

The Kangawar valley has since ancient times been an important staging post and centre of communications on the great highway from Mesopotamia to the Iranian plateau, and recent excavations have established that nearby sites such — Gawdin Tappa and Sih Gabi — occupied several thousands of years prior to the foundation of Kangawar itself, which probably occurred in Parthian times. The important temple to the goddess Anahita, recently discovered at Rangawar, — thought to date from the 2nd century B.C.; its construction —— erroneously attributed by early ————— writers to the Sasanld monarch Khusraw Parwin.

In Islamic times, Kangiwar to have flour-

ished up to the Mongol invasions of the 7th/13th century. At about that time, most of the Saldillk remains were destroyed by lire, and there seems to have been virtually no building on the site from Ilkhanid to Timurid times, and little under the Şafawids and Kādjārs.

In general, the Islamic geographers refer to Kangawar as Kasr al-Lustis ("Robbers' Castle"), Al-Tabari, 1, 2649, says simply that it acquired this name because the Arab army on the way to meet the Persians at Nihawand (21/642) had some of its baggage-animals stolen there. Centuries later, this reputation of the people of Kangawar still prevailed: Hamd Allah Mustawii, Nushat al-bulit [ed. M. Dabirsiyaki, Tehran 1336/1957) states that they were "first-class thieves" (Le Strange's translation in Hamd Alläh Mustawii, Nuoba, 107, is inaccurate). From the name Kasr al-Lusüs derived the nisha "Kasri" (see Barbier de Meynard, Dictionnaire de la Perse, Paris 1861, 450).

(R. M. SAYORY)

KINNASRIN, m succent town and military district in Syria; the name is of Aramaic origin and appears as Kenneshrin in the Syriac texts. Composed of kinna "nest" and nasria "of eagles", it is mentioned in the Babylonian Talmud in the form of Kannishrayya and the European historians of the Middle Ages called the area Canestrine. A distinction must be drawn between the town and the djund.

z. The town. At the present day, Kinnaarin is nothing more than a little village surrounded by ruins, a day's loarney to the south of Aleppo, on the right bank of the Kuwayk which flows into the nearby marshy depression of al-Matkh. The Arab geographers place it in the fourth climate. Yakut, who gives various explanations for the origin of the name, says that the place was already populated in the period when the Amalekites, coming from the south, sought refuge there, and that the town had once been prosperous and strongly fortified, but that in his time (beginning of the 7th/13th century) it was nothing more than a village, owing its survival to its position in the centre of a district where a number of highways converged. In ancient times 📰 town, founded by Seleucus Nicator, and called Chalcis ad Belum, and gave its usme to the Syrian-Arab limer. In the 4th century A.D. Kinnasrin was a commercial centre and a presperous agricultural market-town.

Set at a highway intersection and with a muchfrequented bids, the town occupied an important position in the defensive system of the Syrian frontier from Antioch to the Euphrates and from the hamad toward Tedmur. It played a strategic role of Importance for the Byzantine empire and at the

end of the 6th and the beginning of the 7th century A.D. it came under attack from the Persians.

After their victory on the Yarmük [q.v.], the Muslim Arabs went on to conquer northern Syria. At Kinnasrin, the garrison of local militia offered some resistance to the troops of Abū 'Ubayda, [q.v.] and in Shaban 17/August-September 638, the town was taken. Under the reign of Yazid b. Mu'awiya, the town's defences were dismantled. Profiting by the experience of the Byzantines, the Umayyads, in their turn, installed a military headquarters at Kinmarin, which rapidly became the capital of the rich agricultural region of which it was the centre. Until the 4th/roth contury, the history of the town was not marked by any event of importance.

In 331/943, it was me of the most solidly constructed localities of the region. Two years later, in the spring, the Hamdanid prince Sayf al-Dawla was defeated there by the troops of the lkhahld of Cairo. In the second half of the 4th/10th century, Kinnasrin became the object of contention in the struggle between the Byzantines and the Hamdanids. At the approach of the Byzantines, in 351/963, the inhabitants fled from the city in panic. After the Hamdanid period, Kinnasrin began to decline to the benefit of Alappo. In 355/966, when Nicophorus Phocas advanced against Aleppo, Sayl ad-Dawls fell back upon Kinnasrin, but being unable to defend it, he evacuated the town and the Byzantines came and hurned the mosques. Part of the population settled to the East of the Euphrates and the rest took refuge in Aleppo. Shortly after, the town was repopulated, but in 389/998 it was burnt down and reconstructed once again. In 422/1030, it was again sacked by the Byzantines. Rebuilt at the end of the 5th/rath century by Sulayman b. Kutulmush [q.v.], it was destroyed by his enemy Tadj ad-Dawla Tutush, [q.v.] brother of the sultan Malik Shah [q.v.]. It remained virtually uninhabited. Nasir I-Khusraw, passing that way in Radiab 438/January 1047, saw nothing but a poor village.

In the period of the Crusades, Kinnasria was to play only a strategic role and was searcely populated at all. In Muharram 513/April-May 1119, without occupying Aleppo, Il-Ghazī installed himself in Kinnasrla, made it a depot for military equipment and made raids against Harim, the Rudi and Diabal Summak.

Some years later, Tughtakin of Damascus joined forces with Aksunkur and together they attacked Aleppo. Sawar, amir of Aleppo in the name of Zanki, made Kinnasrin an operational base. In 529/1134-5 Pons of Tripoll laid siege to the place, which was relieved by Zanki, arriving in haste from Hims. The traveller Ibn Diubayr (end of the 6th/12th century) describes the town as being in a state of abandonment and ruln.

From the time of the Ayyubid period (7th/13th century). Kinnastin is no longer mentioned as a town, but its gids is noted as a halting-place for caravans journeying from Aleppo towards 🔤 south, and, beyond the crossroads al-Atharib, towards the west. Pligrims continued make their way to Tail Nabl 'Isa, one of the bills of the town, to the tomb (makām, kabr) attributed to the prophet Salls [q.e.] which is in fact the burial-place of the amir Şālīb II. 'Abd Allāb b. al-'Abbās. In the Ottomen period, Kinnaerin was nothing more than an impoverished village, bearing the name Etki Haleh. At the present day, it has returned to m original

2. The diund. Around Kinnastin there extends a

vast undulating plain (Mara); this is one of the most feetile regions of northern Syria where, with the aid in irrigation, cereals, fruit trees and vines are cultivated. In 375 Saint Jerome, visiting the province where at that time monasticism and asceticism were developing, testified to its agricultural prosperity.

On the horizon, there are visible to the south the Diabal Zāwiya, to the west the Diabal Barisha, to the north the Diabel Sam'an and the plain of Mardi Dabik punctuated by tells, while to the east there are the shining salt-marshes of Djabbul. The Arabs penetrated at an early stage the territory of Kinnasrin, which corresponded to one of the Byzantine administrative divisions of Syria, representing the Roman "Syria Prima" of which Antioch was the capital. In the 6th century, Arab tribes were camped it the eastern part of the region between the Euphrates and Kinnasrin. Among the battles which took place on this territory, one may note the victory won in 554 A.D. near the source of the 'Udhayya by the Ghassanid al-Hārith over the Lakhmid al-Mundhir of al-Hira.

After the Muslim conquest, Syria was divided into four adjudd: the djund of Urduan, that of Filastin, that of Dimashk and that of Hims. The creation of the djund of Kinnasrin is attributed by some (al-Tabari and al-Dimashki) to Mu'awiya, who installed refugees from Başra and Küfa there in 22/643, by others (al-Baladhuri, Yākūi) to Yazid b. Mu'āwiya, who detached districts from the djund of Hims.

In the 'Abbāsid period, following the conquests of al-Manşūr and his successors, the divind grew in size towards the north; at this time it covered its greatest expanse of territory. It absorbed to the north Kurūs, Tizīn, Dulūk, to the north-west 'Ayntab at a distance of two days' march, and Kai'at al-Rūm [q.v.] at m distance of tive days' march from Aleppo. To the south, it included the districts of the two Ma'arras (M. Misrin and M. al-Nu'mān) and of Hamāt, and the territory of Sarmin.

Under the reign II Hardn al-Rashid (170-92/ 786-809), the disself of Kinnasth was deprived, to the west, of the territory stretching from Antioch to the coast, to the east, of the region lying between Aleppe and Maubidi, and to the north, of the thughur, districts which were to constitute the region of the 'Awaşim (q.r.). The disad was then limited to the area lying to the south M Aleppo. This was the mile of its period of military importance, but economic activity continued, is shown by the increases in taxation illi in the tribute payed to al-Ma'mun. In the 3rd/9th century, the dissid of Kinnasrin paid 350,000 diades while that of Damaseus paid only 220,000. In the mid-4th/10th century, the divid paid 400,000 dinars of kharadi, the same as Dimashk, and 370,000 of kimaya [q.v.]. The capital was then Aleppo, and the principal cities Antakiya, Kinnasrin and Manbidi. Its limits was to the west, the coast from Lathikiya to Bayas, to the north, Marash and the 'Awaşim, to the east the Euphrates between Sumsysät and Balis, and to the south, the region of Hamat with Shayzar and Rafaniyya, a region claimed by both Kinnasrin and Hims,

In 349/961, Nicephorus Phocas attacked the region of Aleppo; he returned two years later to the ruins, and the population went in search of refuge elsewhere. The intervention of the Basileus led to the disappearance of "Awasim, to the advantage of the Byzantines who occupied Antāķiya. The reconstruction of northern Syria under the Saldilüks scarcely touched the disapt of Kinnastin. In the 12th century, the latter name under pressure from the

Franks of Antioch, especially in 495/1208 when Bohemoud demanded tribute. In Safar 527/Dec. 1438, Fulk of Jerusalem and the armise of Antioch attacked the territory of Kinnasrin and imposed a truce with the addition of tribute upon Sawar, the Aleppo representative of the Atabeg Zanki.

At the end of the 7th/13th century, the disnd, which retained its name in spite of the dominance of Aleppo, retrieved from the Franks the province of

Antakiya and the lands of Sarmin.

Under the Ottomans, in the mid-11th/18th century, Hādidil Khalifa still speaks of "the province of Kinnawin of which the capital is Aleppo". Later, the grand of Kinnasiin disappeared and integrated into the limit of Aleppo.

KINTĀR [see makāyīt].

KIPCAK, a Turkish people and tribal confederation; usually also written Kipčak or Kifčak; the forms Kifcakh, Khifshak, Kitshakh and Khifcakh are also found. The etymology of the man is uncertain: the origin of the Old Turkish word \$106a\$ (\$fb(a)), which is known only in the form blocale kool "unlucky" (Clauson, As stymological dictionary of pre-thirteenth-century Turkish, Oxford 1972, 581), is conjectural, as well the connection with the Sagai word sipeas "irate, hot-tempered". The proper name Kipcak is recorded in the Uyghur texts. See Radioff, Versuck einer Wörlerbuches der Türk-Dialecte, St. Petersburg 1899, fi, 843-5. In later popular and learned etymologies (first in Rashid al-Din, Diami' altawariah, ed. Beccuin - Trudy Vest. Old. Arkh. Obshe., vii, 23, later in Abu 'l-Ghazi, ed. Desmaisons, 19) kipćak is connected with hobus m kobi and explained = a "hollow tree trank"; at the same time a legend is told of the birth of a boy from a hollow trunk; the boy said to have been adopted by Oghuz Khan [cf. Kimak] and to have been given a separate territory as a finf. The relation of the tribe Kipcak, emerging in the Western Siberian steppes, to the other Turkish tribes is unclear. Gardizi (text in W. Barthold, Otček v pozadke v Srednymym Aniya,

82 - ed. 'Abd al-Hayy Hebibi, Tehran 1247/1958. 258) mentions the Kipcak along with the Imak as a division of the Kimak [see CHU22] who lived on the Irtish, [q.v.] although the earlier anonymous author of the Hudud al dlom (t. 19a tr. Minorsky, 101, § 21, comm. 315-17) says that the Kipcak had separated from the Kimāk and dwelled to the north of the Pedenegs. Ibn Khurraddädhbih, 31, l. 9, and, following him, Ibn al-Fahih, 359, l. 3, tr. Massé 388, mention the Kipčak along with the Kimāk as a separate people. Mahmud al-Kashghari, i, 273, describes the Yimak (sic) on the Irtish as a subdivision of the Kipčak, not of the Kimāk. In another passage of the same work (iii, 22) we are told that the Yimak are Turkish tribe (dill min al-turk), the "as we catl Klpčak" (wa-hum al-hifdjahiyya 'indana); the Kločak themselves thought they were a separate branch (thumma atrāk ķifdiāķ ya'uddūna anfusalum histon akhara). The Kimak mentioned by Mukaddasi, 274 l. 3, at Şawran must have been Kipčak. in connection with the advance of the Kipčak from north to south is the appearance (first in the 5th/11th century in the Dimin of Nasir-i Khusraw; cf. Browne, Lit. hist. of Persia, i, 227) of the name Dasht-i Kiplak for Mafdrat al-Ghurs, cf. ibid., il, 168. The Kipčak (Khličák) are already mentioned by Bayhaki, ed. Morley, 92, as neighbours of Khwarazm. According to Marquart, Oattliekische Dialektstudien, 102, the Kipcak appear in history for the first time in \$14/1120-1 in Ibn al-Athir, x, 399, allies of the Georgians; according to Marquart (ibid., 136) the kingdom of the Kipcak was founded by people who emigrated from Manchuria in connection with the rise of the Curc (the Chinese Kin Dynasty); cf. thereon, P. Pelliot, in JA, ser, ii, xv, 125 ff. That the term Dasht i Klpčak was also extended to South Russia is shown by the evidence of Hamd Allah Mustawli Kaswint, Nurhat al-bulub ed. Le Strange, 21, 238, that Dasht-i Kipčak is the as Dasht-i Khazar. Altogether it to m sure, that in the 4th-5th/roth-11th centuries a loose political unit of Turkish tribes (including the Kimāk) existed under this will in the above-mentioned territories. In the middle of the 5th/11th century, the Klpcak tribes moved to the Russian steppes, pushing M Oghuz toward the western areas of the Pontus region, (see GRUZZ). After 1064 they became the lords of these territories, which they kept until the Mongol invasion. Among the Kipčak tribes, the Kuman (called Polovizi by the Russians and Comani by Western Europeans) were the dominant element which played important role in the history of Byzantium, Bulgaria and Hungary. They me often identified with the whole of Mil Kipcak tribal confederation. The Kipcak in South Russia were exposed not only to the influence of Islam but also to that of Christianity; a prince of the Kipčak (Chinese Kin-č'a) in the time of the Mongol invasion (the prince is mentioned in Russian annals) was called George (Russ. Yuriy, hence Chinese Yu-li-ghi, in Bretschneider, Mediaoval researches, ii, 297 ff. and Pelliot, op. cit., 250). Ibn Battuta mentions Christian Kipčak at Kerč [q.v.]; the so-called "Codex Cumanicus" must be regarded as a memorial of the spread of Christianity among Kipčak, The Kipčak survived the Mongol invasion; it was later transferred to the empire of the Golden Horde. The Kipčak military slaves, coming to the Near East, especially to Egypt, played an important role in the history of this area as the Bahri Mamlüks [see AL-MARRIYYA and MAMLÜKS]. The first scant information concerning the language of the Kipčak is due to al-Kashghari. According to his

Diwan lughat al-turk, li, 253, iii, 23, the dialect of the Kipčak had the same phonetic pecularities as the dialect of the Ghuzz, with di for y at the beginning of a word. The first linguistic record relating to the Kipčak (Kuman) language is the Codex Cumanicus. From the Kipčak Mamiūks, several linguistic monuments are known. From the Armenians | Poland and in Ukraine, speaking a special Kipčak dialect, several literary and other documents have down to us. One section of the Turkish languages. according to the sthnic and historical relation of these peoples to the Kipčak tribes and regions, is also called Kipčak. The Kipčak me no longer mentioned after the Mongol period; like many other early names of peoples (Karluk, Uyghur, Nayman etc.) the name Kipcak is found as the name of a family or of a minor tribal unit among the Bashkir, Nogai, Kirghiz and Uzbek. The Kipčak are particularly associated with Farghana in the modern history of Central Asia, cf. KROKAND.

KİR _____ [see nirghener].

KIRA' (A.), a legal meaning the leasing or hiring out of things. This is a contract in every way like a contract of sale, but with this difference that a sale aims at transferring the possession of something in exchange for the sale price, whilst leasing in hiring out aims at the beneficial use or enjoyment of a thing for a fixed period to time in return for a hiring fee. It is accordingly the sale of a beneficial use (bay' al-manafi') and is built around the procedure for a contract of sale. The only differences are those which are inherent in the differing nature of the two contracts, but both of them come into the category commutative contracts (ost desaddi), of which sale is the leading example. The term "commutative contract" is used in practice for all procedures (sale, exchange, loan, leasing or hiring out, settlement, etc.) in which me have the transfer of property (mith) or beneficial use (manaft') in return for me handing-over of an equivalent.

The essential elements of a contract of leasing or hiring out are (a) the contracting parties, the lessor (hdri) and the lessee (nuthari); (b) the object in question (ai-ma'sid 'alayn), i.e. the thing hired out and the sum corresponding to its beneficial use (adjr); and (c) the form or embodiment of the agreement (righs). The effects of a contract in this kind in those of a contract of sale, except for the differences arising out of the specific natures of the two contracts.

The contract is not dissolved by the deaths of either of the two contracting parties; the heirs have the power to re-negociate the contract. Hiring or leasing can always be annulled when there is an excuse ('ughr).

The types of objects which may be leased or hired out. Whilst 'didra [see Injan] is the hiring out of a service of movable objects, with the exception of ships and beasts which are used for

transportation, the term hird is used for these last and for immovable property. Hence in practice, kird' may me contract for transporting something. According to Ibn 'Arafa, it is in this case the sale of the beneficial use of an animal or of something else like a ship for purposes of transport. But the transporting of objects must be distinguished from the transporting of persons. Malik sees there locatio operis. Other Malikas pronounce in favour of a hiring out of services. The Shafi's consider this contract as a hiring out of objects. But in any case, the hiring out of beasts m burden and ships (kird) al-saudhil wa 'l-su/wa) is perfectly admissible, whether the beasts are individually determined or not.

Hiring out can cover land (kird' al-ard), and the leasing of rural properties existed before Islam, under two forms: (a) kirá? involving payment of money; and (b) hird' involving the making wow of a proportion of the produce of the property (mukhabara). This last form must have been the commoner one,

in view of the scarcity of coinage.

The last type of hiring out of an object is hird? mu'abbad or conductio perpetua, the lease in return for a quit-rent of ancient French law. It is the equivalent of our emphytousis or emphyteutic lease. In Egypt, this institution is known under the name of mudda jawila, in Algeria = 'and', and in Morocco as hira cald I tabhiya; all these minim indicate the idea of a perpetual lease.

(A. M. DELCARBRE)

KIRA'A, reading. Applied to the Kur'an, \$iva's also recitation. In the present article the term bira'a is used as follows: 1. in the general sense of the recitation (a) of single parts of the Kur'an, as prescribed for the ritual prayer (salid), on the recitation (b) of the entire Kur'an, which has become, in the course of years, an accepted spiritual exercise $(kird^3a = recitation); z. to indicate a special reading$ of a word or of a single passage of the Kur'an (hird'a, pl. kirā'āt = variant); 3. to indicate a particular reading of the entire Kur'an (\$ira'a = reading). In the third case one speaks of the kira'a of Ibn Mas'od or of the aira's of the people of Kula as opposed to the kird's of other authorities or to the reduction authorised by 'Uthman.

The recitation of texts proclaimed by Muhammad as revelation played from the very beginning a prominent part in the Muslim community. This is already evident from the fact that the collection of these revelations was designated in hur an "recitation". However, the Kur'an had not yet been codified at the death of the Prophet and the form of Arabic letters used to note down single parts of it and later on the whole collection was very incomplete; in a group of consonants a choice between two or more readings was possible. Consequently, disagreements arose on exactly how to read the revealed text. The premulgation of a canonical redaction of the Kur'an under the third caliph 'Uthman (soon after 30/650) was intended to remedy this evil. Copies of this reduction were sent from Medina to Kufa, Bayra and Damascus, the most important cities of 'Irak and Syria. After a relatively short period, this reduction to have been generally accepted as the official text, finally even at Kufa where Ibn Mas'0d (d. 33/653), the distinguished Companion of the Prophet, who maintained a "reading" of his

own, had at first called upon his followers to resist. On the whole, the text of "Uthman had a strong unitying influence, which was felt to m increasing extent. But a really uniform bird's was not thereby guaranteed. During recitation, which was essentially based on oral tradition, readings deviating from the official edition continued to be followed. In = far as these readings went back to recognised authorities of the early period and to trustworthy witnesses, they also noted by commentators on the Kur'an and philologists, and turned to exegetic or linguistic account. Thus variant readings of Ibn Mas'ud, Ubayy b. Ka'b (d. 29/649 or 34/654) and other early "readers", which deviated from the official text, transmitted in early scholarly literature and have therefore come down to us, at least in extracts. The kird'a of al-Hasan al-Başri (d. 120/728) was later even inserted among the "fourteen readings" (see below).

Further development was on characteristic lines. The untramelled freedom with which the text bad been treated in the earliest times was followed by a period of systematisation and limitation of the possibilities of the "readings" which the consonantal text and the oral tradition offered. However, complete unification was not achieved. People neither would not could simply set aside the power of tradition. Thus the free choice me the sied's me limited. but not entirely forbidden. While reading the officially accepted consonantal text (already in itself constituting a limitation), the "reader" could still make a choice between a certain number of authorities. In its detail the history of Kur'an reading is very complex. The scanty and sometimes unreliable sources leave much uncertain. In general, however, the course of development is clearly recognisable, thanks in particular to the penetrating studies of G. Bergsträsser (in collaboration with O. Pretzl) and E. Beck (see Bibl.). In this article only the essential

aspects will be briefly mentioned.

Important progress in the standardisation of the "reading" was achieved by differentiating the letters b, s, th, n, y etc. by more of strokes (later dots) and by introducing vowel signs. The reduction of 'Uthman, being officially recognised, gained importance by this clarification. With the passage of time, other differences were gradually eliminated. Such a levelting seems at first to have been accomplished within single cities (amsår), and later on through the influence of one city another. Majority readings tended to prevail over minority readings, thus leading towards a general consensus. In the first half of the 4th/roth century, Iba Mudiahid (d. 324/936), the influential Imam of the "readers" in Baghdad, publicly and with governmental support brought this process to its logical conclusion. He banned further use of the hird at of Ihn Mas ud and other uncanonical readings. Ibn Shanabudh, a contemporary and fellow-reader of 1bn Mudjahid, complied with this ban only after he had been arraigned and flogged. In addition, the Mudiahid declared the reading of the 'Uthmanic consonantal text, standardised by tradition and consensus, to be obligatory, and compelled Ibn Miksam, an other fellow-reader, renounce the claim which he had maintained until that moment that he could deckte for himself in the punctuation and vocalisation of the text. As authorities on the traditional reading of the 'Uthmanic text, Ibn Mudjahid recognised seven "readers" belonging to the 2nd/8th century, among whom were 'Asim of Kūfa (d. 128/745) and Nāfic of Modina (d. 169/785), whose readings have both remained authoritative

KTRÅ24

to the present day, that of 'Asim me the east and centre of the Islamic world, and that of Nafiwith some exceptions-in North Africa from Egypt westwards. To the seven "readers" recognised by Ibn Mudjåhid were added later - three others, and afterwards another four, but these never attained the same standing as the first Furthermore, since Ibn Mudiahid, in mentioning 'Asim-one of the Seven -had often named two others, Abu Bakr Shuba (d. 104/809) and Hais (d. 180/796), who transmitted 'Asim's reading independently of one another, it became customary to add also the names of two other traditionists to each of the other six and of the "Three after the Seven". Thus originated the bewildering number of names in the list of readers recognised as canonical (Gesch, des Qor., iii, 186-9; Blachère, 118-23; Bell-Watt, 49 ff.).

After the readings had been limited to the "Seven" recognised as canonical, and to the other "Three after the Seven" and "Four after the Ten", all the others were eliminated in the practice of recitation. The "readers" henceforward had to keep exclusively to the canonical readings. This however did not completely rule out the uncanonical "deviant" (skawadhdh) readings. They were later adduced as useful evidence in the practical interpretation of the Kur'an and in the elucidation of linguistic problems. Besides his "Book of the Seven" (Kitab al-Sab's, ed. Sh. Dayf, see Bibl.) | Mudjahid also composed "Book of deviant readings" (Kitab al-Shawadhdh), which is not extant. The debate on the uncanonical hira'at was carried on throughout the centuries in a scholarly literature of growing importance. Ibn Abi Dawild al-Sidjistani's (d. 316/928) Kitab al-Maşahif and Ibn Mudiahid's works already mentioned were followed—to cite only a few of the most important names—by the monographs on uncanonical readings of Ibn Khālawayb (d. 370/980) and Ibn Djinni (d. 392/1002), by al-Dānī's (d. 444/1053) classical manual of the Seven Kur'an-readings (verse version by al-Shatibi, d. 290/2194) and his works on orthography, punctuation of the vowels and other punctuation marks, by Ibn al-Diazart's (d. 833/1429) works on the Ten readings and me the classes (tabahat) of readers, and finally by al-Bannan's (1117/1705) book on the Fourteen readings. For the practice of recitation, the literary tradition constituted, in contrast with early times, an almost indispensable complement to oral instruction.

The knowledge of Kurlan-reading ('ilm al-bira'a) had become a distinct theological discipline and had many practitioners, few of whom, however, wrote books on it. In this connection, it becomes understandable that the official Egyptian Kur'an of 1924 (following the reading of 'Asim in the tradition of Hafs) is not founded on early Kur'anic manuscripts, but is the result of reconstructions derived from the literature on the readings (see Bergsträsser, in Isl.

xx (1932), 5 ff.).

In the recitation by professional "readers" (see above), a distinction is made between an incantatory, a rapid and moderate tempo (tastil or takkik-bads fadele). The manufacture of execution can be designated antillation, but there are also intricate musical settings (see the studies by K. Huber and M. Talbi). The technique of reciting is laid down in detail in works on the hird 'at.

Special importance is attributed to im rules of pronunciation, including the theory of assimilation (idghām [q.v.], iddighām), the modification of a into s (imdla), extension (madd), forms of the pause (wat/) and the conservation or alleviation (tabdil) of hamea (see O. Pretzl's analysis of a typical treatise on the ușăl al-[neă]a, în Islamica, vi (1934), 230, 291-331). The time required for private oral instruction is greatly increased by the fact that, since Ibn Mudjahid. several different Imams and Schools of Readers have been officially recognised. According to a distinctive method known as "assembling" (djam') "the Kur'an verse is divided into small fragments, each one of which is recited as often as there are variants of it, each time with another variant" (see the instructive passage, "Koranlesungsunterricht", by Bergsträsser, in Isl., xx (1932), 36-42). When the whole of the Kur'an is recited, the separate readings must be considered as self-contained units; the "readers" are thus not free to combine the text of their recitation from different kird'st (Bergsträsser, sbid., 20 ff.). These, however, are details which concern only an élite of "readers". The great mass of the hiora", consisting largely of blind men, would in any case limit themselves from the start to the study of a single reading (Hals an Asim, in the west Warsh 'an Nafi'). In general, the originally large number of readings has given way in the course of centuries to a far-reaching uniformity both in the practice of recitation and in the theoretical 'sim al-kird'a.

The history of the text of the Kur'an and of the

bled'it has alm been studied by European and American orientalists, notably Nöldeke and Goldziher, followed by A. Jeffery, G. Bergsträsser, O. Fretzi and E. Beck (see Bibl.). Important sources have been published, and separate stages of development reconstructed. Jeffery, and likewise Bergsträsser in association with Pretzl, planned an apparatus criticus for the Kur'an. Bergsträsser and Pretzl had begun a systematic collection of photostats of early manuscripts of the Kur'an in the hope of discovering variants not registered in the literature. Because of their untimely death (1933 and 1941), this research to a standstill, Jeffery also died (1959) without having realised his vast project. The task, however, remains to evaluate the known and still unknown variants for the study of old Arabian dislects and in general for a future historical grammar of Arabic. Whether much will emerge to the profit of the historical interpretation of the Kur'an remains to be seen. The harvest me far obtained by Bergsträsser and Beck is rather meagre and promises no results of any importance. During the last years of his life, Pretzl himself had apparently "retreated from the generally high appreciation of the manuscripts and readings of the Kur'an". August Fischer, who noted this on passant in posthumous article (Isl. xxvili (2948), 5 f. n. 4), also cited a passage from Spitaler's obituary of Pretzl (ZDMG zevi (1942), 153 ff.). In Fischer's opinion the Kur'anic textual variants "for the most part

BIRA'A [see tadris].

FIRAD (also mutarada and mudaraba, cf. below), a commercial arrangement in which an investor (sābib al-māl) or group of investors entrusts capital or merchandise to megent-manager ('āmil, mutārid, mudārib) who is to trade with it and then return it to the investor with the principal and previously agreed-upon share of the profits. As a reward for his labour, the agent receives the remaining share of the profits. However, in case of a loss resulting from an unsuccessful business venture, the agent is in no way liable for the return of the lost investment. He loses his expended time, effort, and anticipated share of the profit, while it is the investor who exclusively bears the direct financial loss.

The birdd combined the advantages of a loan with those of a partnership (shariha); and while containing elements characteristic of both contracts, cannot be strictly classified in either category. In all Islamic legal writings, it is treated as a distinct and independent contract with a separate section or book (hitāb) devoted to it. As in partnership, profits and risks in the kirdd are shared by both parties, the investor risking capital, the agent his time and effort. However, in the kirad, unlike a partnership, no joint capital is formed and the investor does not become directly or jointly liable with me agent in transactions with third parties; indeed, third parties need not ever be aware of the investor's existence. As in a loom, the bisad generally entailed - liability for the investor beyond the money or quantity of commodities handed over to the agent; and in the event of its successful completion, the agent returned the capital plus a share of the profits (the latter, corresponding to the interest in interestbearing loan).

The agent's complete freedom under normal trading circumstances from any liability for the capital in the event of partial or total loss and the disjunction between the owners of the capital and third parties novel and distinctive features of the birdy which made it a particularly suitable instrument for long-distance trade.

Although commercial arrangements resembling the hirad were known in the Near Bastern and Mediterranean world from the earliest times, it appears very likely that its direct origins were indigenous to the Arabian peninsula, having developed in the context of the pre-Islamic Arabian caravan trade. With the Arab conquests, it spread to 📰 Near East, North Africa and ultimately to Southern Europe. Its introduction in the form of the commends in the Italian seaports of the late 10th and early 12th centuries A.D. em germinal me the expansion of mediaeval European trade. The binds was the subject of lengthy and detailed discussion in the earliest Islamic legal compendia (late and/8th century). Its legal treatment in these early treatises bears the hallmark of long experience with the hirad as an established commercial institution. Although not mentioned in the Kur'an, numerous traditions attribute its practice to the Prophet and his leading companions (e.g. Shirbini, Mughut al-muhtadi, ii, 309; Sarakhsi, Mabsüf, xxii, 18-19; Shaybani, Aşi mudaraba, fol. 42). From the sparse indications available, it appears that this form of commercial association continued through the early centuries of the Islamic era as mainstay of caravan and long-distance trade. In one of the very few mediaeval Arabic treatises of commerce, Dimashki's The beauties of commerce (probably 5th[rith contury], the \$inag is cited as we of the three methods by which trade is carried out;

Ghazali lists it among the six commercial contracts. "the knowledge of which is indispensable to anyone seeking gain in trade" (I hyd), ii, 66). The documents from the Cairo Geniza (5th-7th/11th-13th centuries) are replete with numerous examples of commenda agreements which account for a considerable share of the commercial activity reflected in these documents. Thus may conclude that not only in law, but in practice well, the bisad constituted one of the most widespread instruments of commercial

Three Arabic terms are used to designate this contract: birad, mukarada, and mudaraba and the terms are interchangeable with no essential difference in meaning or connotation among them, The divergence in terminology was probably originally due to geographical factors. The terms birad and muşdrada apparently originated in 🔤 Arabian peninsula, and the term mudaraba was of 'Iraki provenance. Subsequently, and difference perpetuated by the legal schools, the Malikis and Shafi'is adopting the term kirad and, to a lesser degree, muharada, and the Hanafis the term muddraba.

As in the case of several other commercial arrangements, Islamic law justifies the licituess of the birde contract on the religious grounds of traditional practice (sunna), the consensus of the community (idima') and, more interestingly, on the practical grounds of its economic function in society. After quoting a series of traditions describing the hirad's in trade by the Prophet and his companions, Sarakhsi adds that it is also allowed: "Because people have meed for this contract. For the owner of capital may not find his way to profitable trading activity, and the person who - find his way to such activity may not have the capital. And profit cannot be attained except by means of both of these, that is, capital and trading activity. By permitting this contract, the goal of both parties is attained" (Sarakhsi, Mabsüt, xxii, 19).

Sarakhst's summary of the hirad's economic function highlights one of the most important aspects of this contract's rôle in Near Eastern commerce, and helps explain its widespread use in mediaeval trade. For the investor, the kirad served = a means of hiring trading skill, and for the agent-manager, as a of hiring capital. Since, in the mediaeval commercial context, profit could | realised only by the combination of capital and trading activity, the birad, especially for purposes of long-distance trade, became an ideal instrument to attain a

profitable goal.

(A. L. UDOVITCH) KIRAN, ill Islamic astrology "the conjunction". Without further qualification, this refers to the mean or true conjunction of Saturn and Jupiter. The conjunctions of these two planets were combined, apparently by Sasanid astrologers, with the Hellenittic doctrine of the triplicities to form the basis of one of several methods of predicting the course III history available to mediaeval astrology.

The four triplicities were associated with the four

sublunar elements as follows:

Fire	Earth	Air	Water
Aries	Taurus	Gemini	Cancer
Leo	Virgo	Libra	Scorpio
Sagittarius	Capricorn	Aquartus	Pisces

Mean conjunctions of Saturn and Jupiter occur once in about every 20 years with a longitudinal increment of about 242;25°; for twelve or thirteen conjunctions, then, or about 240 or 260 years, they stay within the same triplicity, and it takes about 960 years (i.e. approximately a miliennium) for the conjunctions to return to the triplicity m which the cycle started. The return of the conjunctions to the triplicity of fire (to Aries) in about ■ millennium thought to indicate the appearance of a new prophet; the transfer of the conjunctions from triplicity to the next in about 240 or 100 years was taken to signify a possible change in the dominant dynasty; and the occurrence of each individual junction was believed to portend lesser shifts in political, military, - economic status. The details of these predictions depended upon the horoscopes of the beginnings of the solar years in which the conjunctions occurred.

This theory of conjunctions usually appears in consort with various other elements of political astrology, all of which seem to have originated in the Zoroastrian millennarianism of Sasanid Iran. These other methods are: the revolutions of the worldyears; the cosmic cycles—i.e. the mighty, big, middle, and small varieties of me bisma, the intiba', and the farders of the planets; the mighty years of the planets; and me planetary lords of the millennia, centuries, decades, and single years. These elaborate systems for predicting religious and political change, together with the related theory of the conjunctions of the maleficent planets, Saturn and Mars, in Cancer every 30 years, appealed strongly to dissident groups in the early 'Abbasid period and later, we especially to these with Iranian connections; in particular, one may mention the Karmatians and the Isma'llis. Many leading astrologers wrote expositions of the significance of the conjunctions, including Masha'allah and Abo Ma'sbar; through their writings, this form of political estrology was transmitted to Western Europe, where it became extremely popular during the Renaissance.

KIRÂT (see marayil). KIRD (A., fem. birda, pl. hurad, ahrdd, birad, birado, barida), a substantive having the general sense of "monkey", but representing in fact, among the simians of the Ancient World, only the members of two families, the colobids and the percopithecids, the only primates known in ancient Arabia. Egypt, Abyssinia, Somalia, the Yemen and Uman in fact constitute favourite habitats of baboons (genus Papio) and macaques or cynocephalous magots (genus Macaca). Both types live there in groups of which the total population can vary from a dozen to a hundred; each of these societies, which are based on polygamous family units, is subject to the authority of a male leader and this animal social organisation has not falled to attract the attention of those Arab writers who have spoken about monkeys. Since ancient times, peoples of southern Arabia have looked with respect and circumspection tinged with an element of superstitious fear at the colonies of hamadryad baboons (Papio hamadryas) and of green baboons (Papio anubis) infesting the areas of high ground. In the times of the Pharaohs, the Egyptians deffied these monkeys, and there was certainly a time when, in pre-Islamic Arabia, these animals were taboo. Were they demons incarnate, maleficent genii or metamorphoses of men? There was no shortage of questions for the credulous Bedouin to ask himself, and more especially, there was the ever-current legend according to which Solomon made a pact with the race of monkeys, setting them to guard the domans vanquished by the genii. Even in the 4th/ roth century, Ibn al-Fakih al-Hamadhani [g.v.] and al-blas'adl report, with complete seriousness, that among these troupes of monkeys there is found one larger than the rest wearing at his neck the seal bestowed by Solomon. Apart from the involvement of the latter in the world of monkeys, there was alive in the minds of men the legend, of Talmudic origin (Saskedrin, 109a), of the divine curse inflicted upon some of the builders of the tower of Babel; their expiatory punishment was to be changed into monkeys for all eternity. This curse was to be confirmed by the Kur'an (II, 61/65; VII, 166; V, 65/60) where It is said: "those whom He has cursed, He has changed into monkeys and pigs". Popular belief in such metamorphoses (maskk, pl. maskk) [q.v.], encouraged by successful tables such as the Thousand and one mights (for metamorphoses of men into monkeys, see nights 9, 12, 299, 624), was to persist for a long time in the bosom of Islam, in spite of categorical refutations on the part of the Prophet reported in certain hadiths (see al-Demiri, (layet, ii, 243-4), according to Ibn 'Abbas, More sceptical, al-Diahis did not omit to set these alleged retrograde mutations in the realm of fiction (Hayanda, i, 309).

By nature less inclined towards superstition than the nomads, the settled people of the Yemen and of 'Uman were familiar with the baboons of their region and also with other monkeys imported from East Africa, and were able at m very early stage to domesticate the young animals and to use them for such menial services as turning millstones; butchers and grocers used them to guard their goods (al-Damiri, op. cit.). The cumning and agility of the

monkey was exploited by thieves for picking pockets and housebreaking. So the monkey became a part of the every-day life of man, to almost the same extent as the dog, and the term bird was no longer sufficient to differentiate between ages and sexes; a terminology based on exterior traits filled this gap. Thus the large male baboon was called rubah or rubbah (whence the form II verb rabbaha "to train monkeys"); he was known also as #wrduld/ kurdáh, hawdal, hibn, and his thick fur hood earned him the epithets hebbar, hawbar. In the Hidjaz he was known as kidiris, a name for the fox in other countries. The female and the young monkey, smaller in stature than the male and with less hair, were known, according to different places and people, as dahya, kisksha, ilha. In spite of these cases of domestication, which were in fact limited in number, relations between men and monkeys men not always m peaceable, and it happened quite often that me result of the proliferation of the simian species, rural populations had to take issue with destructive and aggressive hordes; speaking of beboons, al-ldrist (Natha..., and clime, section 6) remarks that, in 'Uman, it is sometimes necessary to repel them with spears and arrows, and al-Makrizi notes (Khājā), and quoted in the Manhal al-saft of Ibn Taghribirdi) in referring to a kadi of Mogadishu in Somalia, that in about the year 800/1398 this town was actually invaded by monkeys which installed themsolves there firmly, and that in 839/1435-6, the date of his meeting with the hads, this permanent occupation was still going on, causing grave annoyance to the inhabitants.

In spite of a fundamental quality of mischlei, encouraged by captivity and a sometimes extreme lewdness, stigmatised by the adage and min hidjris, the Arabs recognised in the monkey qualities lacking in other animals, such as a contern for cleanlineas expressed through a continuous and methodical process of delousing, its extreme agility, its astonishing ingenuity and above all its exceptional talent for imitation; these qualities were defined in proverbial expressions such a alam min hidjris "more cunning than a monkey", akyas min hidjris "more sly than a she-monkey", amilah min rubbak "more pleasing than a baboon", akha min hid "more imitative than an ape", and they summed all of this up in the antithesis al-kird babih likinnahu malih "rascal though he is, the monkey is agreeable".

The maritime trade of slavers and of Arab and Persian merchants in the Indian Ocean made known to the Muslim world a number of new species of cercopithics and a considerable trade in monkeys developed in the ports of the III Sea and the Persian Gulf. The hunters, sea-farers from the coastal region of the Hadramawt, went by preference via the island of Socotra to the coast of East Africa (the country of the Zandi and the country of Sufala) in search of the magnificent guerers colobes (Colobus abyssinious) with its fine black pelt, an item of great luxury, exported at that time as far as Central Asia and Europe, Al-Idrisi (Nurka, 1st clime, section 7) speaks of an "Island of Monkeys" (diastra) al-kurad), in the Indian Ocean (perhaps the island of Pemba or that of Mafia?), where the hunters from Khuria-Muria and of Socotra went to trap monkeys (that is to say, the green monkeys Cercopitheous callitricks, the vervets Cere, pygerythrus, the moustacs Cere, cephus, the grivets Cerc. Authors and the nisnas Cerc. pyrrhonolus) with the aid of small boats propelled to the coast by the tide and the currents. These boats contained delicacies for bait and on the grawales

t32 KIRD

there were towing ropes manoeuvred by cords attached to the ship. Attracted by the food, the quadrumans soon crowded together in the boats and it was necessary only to operate the recovery ropes and to bring on board the teeming cargo; depending the species, some were killed and their pelts sent to the fur market, and others, with collars on their necks, were sold at a high price either to merchants or to aristocratic collectors of rare beasts or to itinerant animal shownen.

It is known, from the chroniclers, and al-Mas'adi (Muradi, i. § 485) confirms it, that princes of India and of China kept trained monkeys, whose role was to detect poison in food and drink; the 'Abbasid caliph al-Mahdi and advised by Chinese ambassadors to avail himself of the same precaution. But, a century earlier, the Umayyad caliph Yazîd b. Mulawiya already had his monkey which accompanied him in processions, mounted on an ess (al-Damiri, op. cit.). The 'Abbasid caliph al-Mutawakm received, from m king Mubia, two monkeys, of which one could sew and the other model in clay, On the other hand, the sea-farers of Sirai and of Umān, maintaining commercial links with India, the islands of Indonesia and China, were the principal source of information on Asiatic fauna and flora, information exploited by Arab geographers and encyclopaedists from the 3rd/10th to the 7th/13th century; these hardy adventurers brought back, on their return, spechwens of quadrumans native to these regions, such as thesus macaques (Macaca mulatta) and crab macaques (Macaca irus) and semmopithics or langues, including the hanouman entellus (Presbytis entellus), and these being untouchable beasts to the Indians. Certain of these monkeys were offered, at the beginning of the 4th/10th century, by the amir of 'Uman, to the 'Abbasid callph al-Muktadir bi-liāh to complete his menagerie (Misrādi, i, § 487); with hunting dogs and falcons, monkeys were regarded as princely gifts and they were to ligure among the presents sent by Harim al-Rashid Charlemagne on the occasion of the two exchanges of ambassadors between the two sovereigns (181-5/ 797-801).

For its part, the Maghrib was well acquainted with monkeys through the numerous colonies of apes, known as Barbary macaques (Macaca insus) in the Atias. Very tame and friendly animals, they a tourist attraction in the valleys of the Chiffs, in Algeria, and it is well known with what vigilant care the British keep their few specimens imprisoned

on the Rock of Gibraltar.

The monkey has always and everywhere had, with its grimaces its mimicry, its mischief and its agility, the power of amuse crowds; among showmen and jugglers, the exhibitor of monkeys (karrad, kuradāti, burayddil) was assured, in the Islamic countries, of success in the company of strolling players, in public places, at fairs and in markets. Yemenis and Somalians were the experts in this profession, which, while relatively lucrative, was held in considerable contempt by the upper classes; so, according to Ibn al-Fakih, Khālid b. Şalwan, in the course of oratorical contest between the people of North and South Arabia, threw this insult at Ibrahlm b. Makhrama al-Kindl: "You other Yemenis, you are nothing but exhibitors of mankeys. .. " In spite of this disapproval of public entertainers who were, it must be said, in many cases regues, the mass of the people, both rural and urban, were attracted to open-air entertainments and to exhibitions of rare and "clever" animals, whether these were monkeys,

dogs, bears, m goats. As trained quadrumans were a source of hilarity, the people readily abandoned the term kind to designate them, substituting expressions of a happier psychological effect; thus, in Syria and in Lebanou, the monkey was called satisfied "lucky charm" and his trainer became the said dut. while in Iran, 'Irak, Turkey and Egypt it was may main! mimun "fortune" which prevailed and which by a coincidence perhaps not fortuitous could quite well be linked to the Greek μιμώ "ape" from the verb μιμούμαι "imitate, mimic". In the same spirit, the entire Maghrib instinctively adopted, in parallel to the classical substratum, kerdjøerd (pl. krad, krada) grad, grada) and the Berber ibbi (pl. ibban) and idda (pl. iddawn), the arabised Persian adjective shadi (pl. shrada, shrāda, shrādī) "gay, joyous" which must have been introduced by the Turks and which Trak also made its own. Also in the Maghrib, the popular negro Ba Sa diyya, parodying black magicians, to the terror of small children, is often accompanied in his acts by a trained monkey, which he makes dance to the sound of the tembourine or of the charle [q.v.].

Arab authors have said very little about the tricks which the exhibitors of monkeys trained their pupils to perform. Al-Mas'adl notes simply that the Nubian grivet exhibited in the fairs astonishes the audience by his surprising agility in climbing to the top of a spear fixed in the earth. As for al-Diahiz who, as an objective naturalist, enquired into the behaviour of monkeys employed by the ashāb al-kirada (Hayawān, passim), he makes no mention of the kinds of acrobatics that were displayed in public. It is nevertheless easy to imagine them for anyone who has witnessed the displays given in Merocco by the wandering troupes of the Ulad Sidi Ahmed Musa, the native showmen of the Sus, with their performing monkeys, and this on the occasion of local patronal festivals like that of Ldlla Kassaba (see E. Laoust, Noms et ceremonies des faux de joie, in Hespéris (1921), 44). In addition, the ambience of these travelling shows with their dense crowds of curious onlookers has been linely caught by Badi' al-Zamān al-Hamadhāni [q.v.] in his delightful maķāma ķirdiyya (Maķāmāt, Cairo 1923, 104-6; Fr. tr. S. de Sacy, Chrestomathis arabe, Paris 1827, iii, 246-7) where the Adread is none other than the waggish Abu 'I-Fath al-Iskandari constrained by vicissitudes to occupy this dismal condition. One of the most familiar street characters, the exhibitor of monkeys, is not absent from the stories of the Thousand and one nights, notably in the very salacious tale of the nymphomaniac princess who ravished one of animals (Nights 355-7).

In Islam, as elsewhere, to liken a monkey was one of the most degrading insults. Among the Muslims of Spain, in periods of friction between the communities, while the pig and the dog were used as epithets for the Christians, the man "monkey" was generally reserved for the Jews, in reminiscence of the Kur'anic verses quoted above (see H. Pérès, Poésie andaiouse, Paris 1953, 240-1). In Itrikiya, under the Aghlabid dynasty, the kadi, in his zeal for dithad [q.v.], enjoined upon Jews and Christians the wearing on the shoulder of a square of cloth bearing the picture of a monkey in the case of Jews, and a pig in 🚻 case 🖪 Christians; these same symbols were to be shown on a board nailed to the door of their houses (according to al-Māliki, Riyad al-nufüs, apud H. R. Idris, Contribution à l'histoire de l'Ifrihiya, in REI (1935), ii, 142). The satirical poets did not hesitate to use derogatory comparisons with monkeys to brand those whom they were attacking; this was

ĶIRD 155

done by the Andalusian Ibrāhīm al-Hasanī in referring to the famous amir al-Manşūr Ibn Abl 'Amir (Pérès, op. oit.), as was done before him by Abū Nuwās, proclaiming his hatred of the Barmakids [see sarkhika] in this opening verse kādhā zamānu 'I-kurādi..., 'This is the age of the apes...' (Diwān,

Cairo 1953, 519; Beirut 1962, 415).

Under the scheme of Kur'anic law, eating the flesh of the monkey is forbidden, since the animal is omnivorous and has canine teeth; an additional and fundamental reason for this prohibition is the instinctive revulsion, which is natural to the primates, the family to which the human race belongs, for the idea of devouring another member of the same family. For the evolved human being, eating the meat of the ape would be close to cannibalism. Nevertheless, ancient medical opinion held the flesh of the monkey to be effective preventive agent against elephantiasis (dindhām). Certain other parts of the animal, such as the teeth, the hair and the skin, possessed "specific qualities" (khawāss) (see al-Damiri, loc. cit.), which modern science has relegated to the rank of absurdity.

Finally, regarding the term hird, it should be noted that in astronomy the asterism ζ , λ Canis majoris and $\dot{\alpha}$, κ , θ , γ , λ , μ , ε columbas is wrongly called al-Kurûd "the Apes" in some treatises, a mistake arising from a misspelling of al-Furild "the Hermits" (see A. Benhamouda, Les noms arabes des

Hoiles, in AIEO, Algiers (1951), ix, 181).

With hird, there has not = far been any reference to other than colobids and cercopithecids; it might also be asked what conception the Arabs had of the large anthropomorphic, or anthropoid, ages. These number no more than eleven species world-wide, seven gibbons, two chimpanzees, one gorilla and one orang-outang; none of these species exists in Arabia, and to find them one must go either to Indonesia or to central Africa, It is impossible, however, not to see in one or other of these primates the mysterious nasnās/nienās (pl. nasānis) of the mediaeval Arab writers, and there can be no doubt that such a "demi-man" with human face, and vertical stance, without a tail and possessing the faculty of speech, but also covered with a thick fleece, usually cusset-coloured, was originally nothing other than an anthropomorphic ape observed by sea-faring Arab merchants of the Indian Ocean, and only the gibbon (Hylobates lar), found in Malaysia, Indochina, Burma and the Himalayas, corresponds fairly accurately to this description. Ibn al-Fakth, who is quoted by al-Kazwini ('A did'ib, in the margin of al-Damiri, op. cit., i, 191) and Muhammad b. Zakariyyā al-Rāzī [q.v.] say, with reference to Sumatra (djastrat al-Rāmni - Lambri), that "there are found there human beings of both sexes, who go bare-footed and without clothing. Their speech is incomprehensible and they live in the tree-tops. They are entirely covered with hair and they live on a diet of fruit; they constitute an innumerable people who flee at the approach of man . . . these beings are four spans in beight, their language is a kind of whistling and their faces are covered with russet-coloured down. . ." Al-Idrisi (Nutha, 1st clime, section 8) adds that their movement through the trees is accomplished by means of the arms alone and use is made of the feet, which gives the impression that they are flying from one branch to another. In the 8th/rath century, Ibn Battüra (Rihla, il, 136) writes of the colonies of siamang glbbons (Symphalangus syndactylus) with black fleece and white mask which he encountered on the southern coasts of the Indies. As for the recently-discovered Asiatic orang-outang, the gorilla and the chimpanzees of Africa, these remained on the peripheries of knowledge until the 12th/18th century. Besides, in so far as they were known, their height, greater than that of man, meant that they could not be identified with the half-man which the nasnas is, by definition; the root n.-z.-n.-z. evokes in fact the idea of smallness and weakness. The reports of those who saw gibbons were rapidly distorted by the imagination of those who transmitted them to the point where the nasnas became monstrous semi-anthropomorphic creature, one-eyed and one-legged, moving with successive bounds at a tremendous speed, in times past hunted for its meat in the Yemen. With the shift, another half-human monster, the nasmas is not without analogy with the monoculus and the satyrus of Pliny. Understandably, sceptical minds demanded visual proof of the existence of such phenomena and to this end the 'Abbasid caliph al-Mutawakkil, according to al-Mastudi (Murādi, i, | 49r), instructed the famous doctor and translator Hunayn b. Ishāk [q.v.] to find for him some of these curiosities; it seems that the scholar brought back from his explorations two authentic nasnas, but nothing further is known of the episode.

Modern philologists, like P. Anestase-Marie, have gone so far as to see in the term marmis the Greek ναννος "dwarf" (see Amîn Ma'fûf, Mu'djam alhayawan, Cairo 1932, s.v. Ape, 13-18); it cannot be denied that the two words have the same sense and one would thus be led to see, in the origin of nasnds, besides the gibbon, a human pygmy. Al-Dlahiz, while not believing in them, lists a number of these fabulous beings which really existed in the popular imagination, and, this being an interesting fact, he assimilates the nasnas to the wak-wak and to the people of Gog and Magog (Hayawan, i, 189; vii, 178). Now the Arab geographers recognised three countries jointly said to be the land or the island of the Wak-Wak (or the Wak-Waks), the first situated below the country of the Zandi [q.v.], beyond Sufala "of gold" (Mozambique); the second in the most eastern islands of Malaysia (the Philippines, Celebes, the Molaccas); and the third in the extreme north of the Sino-Asiatic continent; it is found that these three countries correspond quite closely to those inhabited by particularly small peoples, the Negrillos and the Aldras in Africa, the Negritos in Malaysia, in Deccan and in the southern Himalayas, and the Lapps, the Samoyedes, the Tungus and other nomadic ethnic groups of the arctic and sub-arctic regions. It may thus be supposed that those who encountered these pygmy people by chance identified them in their accounts with the wasnas, as had also been the case with the gibbon; and a detail which may corroborate this interpretation is the insistence of the authors on the faculty of speech attributed to the narnds. Nevertheless, there remains the mystery of the alleged existence of the masmis in the Yemen, and we can hardly be satisfied by the hadith (see LA, under u.-s.-s.) according to which the nasnās were the metamorphoses of **most from the two cursed tribes of** 'Ad and Thamnd [q.vv.]. Was there, in Arabia, a small anthropoid age, or a race of human pygmles? The question and its solution belong to the realm of palaeontology and of prehistory.

In fact, in historical times, the Arab peoples, having never encountered this fabulous masnas in their own countries, quite naturally applied the term to all the small long-tailed flat-faced African monkeys with which the exhibitors made them

tamiliar (see af-Damiri, op. cit., il, 353-4), and modern systematic practice has simply ratified the populi in retaining the "misnas" and applying it to the Somalian Corcopillerus pyrrhonoius. In conclusion, having been born out of confused images of the gibbon and a pygmy in travellera' tales, to become subsequently a monstrous human mutation blighted by divine punishment, the nasnās has finally been placed, by coramon logic, in one of the families defined by bird.

EIRESUN (see CIRESUN). KIRG12, a Turkish people, mentioned as early as the oldest Chinese accounts of Central Asia (from the and century A.D.) under the name Kien-Kuen, which according to P. Pelliot (JA, Ser. 2, vol. xv. 137) goes back to a Mongol word, singular hirkun. The lands of the Kirgiz are not exactly defined in these sources; according to a very reliable source, the land of the Kien-Kuen lay worth-west of the land of the K'ang-Kiu, i.e. of Sogdiana. The name Kirghiz first appears in the Orkhon inscriptions of the 8th century; at that time the Kirgiz (as the contemporary Chinese annals also tell us) lived on the Upper Venisei (Turkish Kem), north of the Kög-men or Sayan mountains. The same name (Kükmän) is also mentioned in Gardizi (W. Barthold, Otčel o poezdke u Sredn<u>ynevu</u> Azivu, 86 = od. 'Abd al-Hayy Habibi, Tehran 2347/2968, 262); according to this source, the capital of the Khan of the Kirgiz was 7 days' journey north of these mountains. There is also said that the Kirgiz had red hair and a white colour of skin (surkhi-i may we sapidi-i pust), which suplained by their alleged relationship with the Slavs; the same anthropological features, of which there is no longer any trace among the modern Kirgiz, mentioned in the Chinese T'ang-sku; linguistically, the Kirgiz were then already Turkiclsed. They did not come to the fore politically till about 840 A.D., when they succeeded in conquering the lands of the Uyghur in Mongolia. Nothing was known in Muslim lands of this event; Marquart's undeavour (Osteurophische und ostasiatische Streifrige, Leipzig 1903, 91-2) to connect with this the story in Diahiz of the defeats of the Toghuzghuz, can be utterly rejected; like Kudăma (ed. de Goeje, 262, 1. 13) Dishiz only refers to the hostility between the Toghuzghuz and the Kharlukh (Kerluk [q.v.]). Istakhri (ed. de Goeje, 9-10) and others mention the Kirgiz (Khirkhiz) as castern neighbours of the Kimāk (see KIMĀK) and morthern neighbours of the Kharlukh and Toghuzghuz; in the east their lands are said to have stretched to the ocean. The

most important article of export for trade with Muslim lands was musk. The ethnic and historical continuity between the Kirgiz and the people living today under the same name in the USSR is supposed but not proved. The Kirgiz were probably driven out of Mongolia in connection with the foundation of the empire of the Khitay in the beginning of the roth century [see gark KHIPAY] and the advance of the Mongol peoples; on the other hand, a body of Kirgiz must have migrated mearly as this century southwards to the present abode of the genuine Kirgiz (Kara Kirgiz); according to the Budud alfalam (f. 18a, tr. Mimorsky, 98, comm. 293-4, even the town of Pancol (the modern Alesu in Chinese Turkestan) was in possession of the Kirgiz. The Kirgiz are not mentioned again in this region till the r6th century; what the Chinese C'ang-Te, who was there in 1259, records of the Kirgiz (especially on the use of dog-sledges, cf. Bretschneider, Med-iaeval researches, i, 129) he had only been told, and did not me himself, and these stories probably do not refer to the people of the land he passed through. The main body of the people had probably remained in the Upper Yenisci; the Kara Khitay when driven out of North China had to fight with these Kirgiz during their trek westwards. In the fertile region of the modern administrative district of Minusiask the Kirgiz gradually adopted agriculture and a settled mode of life. According to the Hudud al-falam (f. 176, tr. Minorsky, 92, 286) there was only one town among the Kirgiz, called Kemidikat, where their Khākān lived, and no other towns - villages, but only tents; on the other hand, Rashid al-Din says (ed. Berezin, Trudi Vost. Old. Arkh. Obshe. vii, 168-9) that the Kirgh. had "many towns and villages". From these and similar statements Radioff has drawn the conclusion (JA, Ser. 6, vol. ii, 328) that the present state of Kirgiz culture is much lower than it used to be.

In the 13th century the Kirgiz = the Yentsel had to submit to the Mongols under Cingiz Khan [c.u.]. Negotiations for their submission were already begun in 1207, but it was only settled in 1218 when the last rebellion was put down. After the decline of the empire of the descendants of Cingiz Khan the Kirgiz had sometimes to be under the yoke of the Mongois, sometimes of the Kalmucks, and sometimes of the Russians; in 1607 they recognised the suzerainty of the Kazāk, but by 1609 we find them killing a taxcollector sent by the Kazāk. In 1642 they were described by the Kalmuck Khan Batur as Kalmuck, in 1646 by the Russian plenipotentiary Daniyil Arshinskiy as Russian subjects. In 1703 they were transferred by the Kalmucks, by arrangement with Russia, southwards to the region of the modern Semiročye; they are then said to have numbered 3,000-4,000 tents. As mentioned above, = portion of the Kirgiz had migrated at a much earlier date; shortly after 1514 a certain Muhammad is mentioned as being invested as Khan of the Kirgiz by Sa'id Khan the ruler of the Mongols (Ta'rikh-i Raskidi, tr. E. D. Ross, London 1895, 141); in the 16th century the Kirgiz were for the most part under the rule of the Khana of the Kazak. The Kirgiz were called Burnd by Kalmucks; they were nearly all driven out from Semiredye to Farghana and Karategin; it was only after the destruction of the Kalmuck empire by the Chinese (1758-9) that they returned to their old settlements in the southern part of Semiredye. At this date the name Kirgiz was transforred to the Kazāk by the Russians; to distinguish them from the latter, the true Kirgis were called

Black Kirgle (Kara Kirghls). The term "Kara" was never adopted by the people themselves and is now definitely repudiated. In Semiredye, the Karā Kirghiz, outwardly at least, professed Islam; their epic, which takes its meet from the principal hero Manus, the wars against the Kalmucks described as wars of religion. Unlike the Kazák, the Kara Kirghiz had neither princes or nobles; the elders, called Manap, were not chosen by any kind of election but owed their position entirely to their personal influence. Owing to the continual state of war, the tribes of the Kara Kirghiz did not break up into small subdivisions was the case with the tribes of the Kazāk; = aut (camp) of the Karā Kirchiz comprised the members of a whole tribe and therefore occupied much greater area than an aul of the Kazāk. In the 18th century authority over the Kara Kirghiz was claimed by the Chinese, in the 10th first by the Ozbers in Farghana and later by the Russians; the final establishment of Russian rule dates from 1864. The prosperity of the Kari-Kirghiz has been seriously affected by the Russian colonisation and particularly by the rising of 1016. when a considerable portion of the people migrated to China; the Russian government resolved-but nothing came of it owing to the revolution of 1917 -to take from the Kara Kirghiz all their grazinggrounds except the valley of the Tekes and to throw these lands open for Russian colonisation.

Until recently in both Russia and Western Europe the name "Kirgis" meant particularly the Kazāk; they are sometimes called also "Kirgiz-Kaisak" (Kaisak, corrupted from Kazak, to distinguish them from the Russian Cossacks). On the separation of the Kazāk, from the Orbeg, cf. and tokhayn and KAZAK. The whole of the Kazāk people was for long under the rule of one Khān who therefore had a considerable military force at his disposal; Khān Kāsim (d. 924/2518) was particularly powerful. In spite of several defeats from the Mongols allied with the Özbegs in the 16th century, the Kazák still had a strong nomadic kingdom at the end of this century under the rule of Khan Tawakkul, who, during the last years of the reign of Khan 'Abd Aliah b. Iskandar fe.v.) was able to make a successful incursion into Mā wara al-Nahr, and later still even held the town of Tashkent. In the 17th century the power of the Khans only rarely extended over the whole people; but about this time Tashkent and Farghana were usually in the possession of the Kazak, somethnes under nominal recognition of the suzersinty of the Khāns of the Özbegs. At this time must have taken place the division of the Kazak into three "Hordes" (called by the Kazak themselves dies "hundred"; the great horde (who distr) occupied the most easterly, the little (kishi dills) the most westerly part of the so-called "Kirgiz steppes" and between the two the central horde (orta disks). Towards the end of the 17th century this division was already an accomplished fact. Khan Tynwka, celebrated m the law-giver of his people (in 1694 | Russian embassy was received by him in the town of Turkistan and in 2698 one from the Kalmucks), still ruled all three Hordes and had a representative in each of them. In 1717 unsuccessful negotiations for the submission of all three Hordes to Peter the Great were conducted; in 1723 the towns of Sayram, Tashkent and Turkistan were conquered by the Kalmucks. For a short period after this, the suzerainty of the Khan of the Little Horde recognised by all the Kazak and the agreement embodying this was sealed by the sacrifice of a white horse; but the treaty had no practical

results. In 1730, Abu 'l-Khayr negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the 18th century; but II was not till the 19th century, especially after 1847, when the Russians and firmly established the southern frontier of the Kirgis steppes on the Sir Darys, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from Orenburg; regulations for the government of the Siberian Kazāk were published in 1822 and again in 1868. Even after the abolition of the Khan's authority, the descendants of Cingiz Khan or "Sultana" exercised a considerable influence over the people as a nobility (among the Kazāk called "white bones", at suyet; their authority has been gradually destroyed by the measures of the Russian Government. The last popular leader of the Kazāk was Kenesarl, who fought against the authorities in Siberia and Orenburg from 1842 in the mountains of Ala Tau; several risings were stirred up until 1573 by his son Sadik (so-called by the Russians, property Siddik). Another son, Abmad, later wrote the life of his father Kenesarl and of his brother Sadik, entitled: Sultani Kanisara i Sadih. Biografičeskiye očerki sultana Ahlmeta Kenisarina. Obrabotano dlya pelati i znableno primelaniyami E. T. Smirnovim, Tashkent 1860 (review by V. Rosen in Zap., iv. 122-3).

The most southern part of the Kirgiz steppes was conquered in the 19th century by the Ozbegs of Farghana and Khiwa and partly colonised; the advance of the Russians in this part was therefore assisted by the Kazak. After the foundation of the general-gouvernement of Turkeston (1867) and the general-gouvernement of the Steppes (1882) (Semirecyc belonged at first to the latter, but was later again united to Turkestan), the government of Kirgis steppes had less unity than before. On the other hand, after the Revolution an administrative unit was established called at first by the Russians the "Kirgiz Republic" and by the people themselves "Kazāķistan". Today the Kirgiz form one of the Union Republics in the USSR. The number of the population in the Kirgiz Socialist Soviet Republic was 3,145,000 in 1973 (43.8% Kirgiz, 24.1% Russians, 11.3% Uzboks, etc.). The whole number of Kirgiz living in the USSR was 2,452,000 in 2970. The number of Kirgiz living in China and Afghanistan is over 100,000. The Kirkiz language belongs to the northwestern (Kipchak) group of Turkte languages.

KIRIM, a peningula juttles out into the Black Sea south of the Ukraine (Russian Krim; English Crimea; French Criméo; Gorman Krim; with an area of 25,500 km2), connected with the mainland by the isthmus eg. 8 km. wide of Perekop (in Turkish Or Kapl), and ending to the east in the peninsula of Kerd [q.v.]. The northern and central parts are flat; to the south lies a mountainous area consisting of three ranges, the most southern of which, Mt. Yayis (2.545 m. high), falls down steeply to the coastal strip. The climate is relatively mild and on the southeastern coast similar to that of the Mediterranean area. The water of the few rivers and brooksespecially that of the Saighir-is used for irrigation. The flat grounds cultivated: in the mountains there are pastures besides woods, and wine-growing is not without importance. Some minerals - found (fron ore near Keré, fluorspar www Sevastopol) and at present there is also | kinds of industry.

In antiquity, the peninsula was inhabited by the Scythians. From the 6th century B.C. onwards, Greek colonies existed on the coasts. Around 480 B.C. these formed the Bosporean State, whereas in the est century B.C. they belonged for a short time to the Pontian kingdom. From 63 B.C. onwards, the Roman Empire wielded supreme rule (see Paulys Realessyklopääie der klassischen Altertumsmissenschaft, ed. by G. Wissowa, vi. Halbband, Stuttgart 2899, cols. 2254-69; H. G. Gundel, Dis Krim im Allortum, im Das Gymnasium, lili (1942), 117-38). In the 4th century A.D. first the Goths came, then the Huns. Until 1230 the Byzantina empire held the Chersonese (Old Russian Korsun'), while the main part of the peninsula belonged to the territory of the Khazars [q.v.]. During the 10th and 11th centuries there was the Russian colony Tmutarakan' (probably near modern Taman'), important in relations with Byzantium. From around rote the peninsula was dominated by the Kumans or Klpčak [q.v.], and from 1239 by the Tatars of the Golden Horde. They also wielded a sort of supreme rule over the Genoese colonies that came into existence here (since 2261-5, especially in Kaffa, mod. Feodosiya, see MEFE). These colonies took over the role of the Byzantine Chersonese and became of great significance for trade with Byzantium and the Mediterranean area until their downfall in x475. They were to a certain extent tributary to the Tatacs. Occasional plunderings of these towns by the Golden Horde (see BATU'IDS), e.g. in 1208-o, or sieges, e.g.

2343, remained incidental.

Kirim is only rarely mentioned by the Arab geographers (and even then partly following the Italian reports, as by Idrisi). The first contact with Islam dates from a campaign of the Rüm Saldjükid sultan Kav Kubad 'Ala' al-Din II [a.v.] (616-34/1219-36). After the Golden Horde occupied the peninsula, first in 1223 and then, definitively, in 1248-o, the religious situation did not change immediately. At the instigation of the Egyptian Mamlüks (who entertained trade relations with the peninsula) a mosque was erected at Old Kirim (also Solkhat/Solghad); another was built later by the Khan Ozbeg (712-42/1313-41)

During the latter's reign, Sunni Islam had gained if firin footing manual the Tatars of Kirlm, like among the rost of the Golden Horde. From Egypt shortlived influences of the futures (q.v.) asserted themselves.

Next, there existed of oid also Jewish settlements, but little is known about them in these conturies except from tombstones. Karaites ... Kara'Im [a.u.] were found at Cufut Kale, and the Orthodox Christjans had a bishopric of Gothia at IIII Kirim, Western or Latin Christianity, supported mainly by the Franciscans, was represented by the Genoese until the downfall of the latter in 1475. Already in 1261 a Latin hishop is mentioned, and in 1318 the hishopric of Kaffa was founded. Its jurisdiction stretched from Varna (in modern Bulgaria) to Saray [q.v.], the capital of the Golden Horde. The bishopric of Cherson, which came into being in 2303, was definitively established in 1333, with parishes in the individual towns. From here efforts were made to effect a union with the other Christians and to start missionary work among the Tatars, but at the end of the x4th century these attempts came to an end for lack of success. From 1351 until after 1370 there had even existed a Latin bishopric at Saray.

In the 14th century, during embittered fights with the Venetians in the Mediterranean and the Aegean Sea, the Genoese founded trading factories in Sughdak (Russian Surož), in Balaklava (then Cembalo), in modern Sevastopol, in Tana (Azóv, Turkish Azak [g.v.]) and in Moncastro (Ak Kirman [g.v.], Rumanian Cetatea Albá, since 2368) to the west of the mouth of the Dnestr. Until 1343 the Venetians had a colony at Tana (Azóv). Besides Italians, who had their min rule and system of justice, there were living in these towns Arabs from various Near Eastern lands; Turks from Anatolia; Lurs [q.v.]; Greeks; and above all, such a large number of Armenians that Kirim was sometimes called Armenia Magna or Armenia Maritima. About the Crimean Goths we me informed by reports of the 13th century, and latterly in the 26th century by Augier Ghislain de Busbecq, ambassador of the Austrian emperor to Süleymän II (see E.S. Forster, The Turkish letters of Ogier Ghiselin de Busberg, Oxford 1927, repr. 1968; W. von den Steinen, Vier Briefe Busbecgs aus der Turkei, 1926). Since that time they have merged with the Kirim Tatars.

The Mongols of the Golden Horde had a governor on the peninsula (hākim or udli), who kept up his own diplomatic relations with the Nile valley. We hear also of an "amir of the right wing" and "of the left wing of the army". Until the middle of the 15th century Kidm, thinly populated except for the coasts, remained a centre, especially through Byzantine intermediaries on the Dardanelles, for trade with Egypt. For a long period via the Kirim slaves KlRim

(Mamiliks) were sent to that country, while all kind of goods (fine shawls, perfumes and the like) found their way from there to Kirim, and further to the Volga along the road of Sughdals, Old Kirim, and Perekop. Trade with Anatolia was also important. The traffic was later taken over by Trebizond, which had remained Byzantine until 1462. The Genoese brought European goods (linen and ceramics) to Kirim and to further on, in the 13th century especially, the commercial highway ran along the bank of the Bug ris Luck and Lemberg to Breslau.

Both in Old Kirim, the peninsula's seat of government in these centuries, and in Eski Yurt, many goods were warehoused. The currents of trade manifested themselves also in the artistic construction of buildings and in ceramics. These showed influences from Sarky, Saldjukid Asia Minor, Egypt and the Genoese colonies, as we know since the excavations of 1924-8. Besides trade, a part was played by the manufacture of salt, the gathering of honey (which went in far as Kin*2razm) and grapes, and by horse-breeding and tanning.

Notwithstanding, all these developments, Kirlin remained until the 15th century only an annexe of the Golden Horde and occasionally a refuge for ambitious claimants in their struggle for power, like Nokhay in 1291 and Mamay in 1399, Around 1345-8, 85,000 persons allegedly fell victim to the Black Death, and in 1395 the peninsula was ravaged by Timûr. Attempts of the double kingdom of Poland and Lithuania to push as far as the Black Sea and medanger also Kirlin were foiled in 1399 by the victory of the "mayor of the palace" Edigil (Russian Yedigey) on the Vorskia. The latter had his base here during his struggle with Witold of Lithuania, until he died in 1410.

During the civil wars which ravaged the Golden Horde from 1359 enwards, princes of the Mongol ruling dynasty who were descendants of Cingiz Khan and his grandson Togha Temur (the son of Djoči), had settled on various occasions in the peninsula, At the beginning of the 15th century they had apparently adopted the family-name of Giray [q.v.] or Kerey. Relying upon the noble family of the Shirin, Deviet Berdi had established himself in Kirlm after 1426, and in 1427 be tried to enter again into relations with Egypt. But he (and since 1427 also his brother Hadidil Giray [q.v.]) encountered opposition from the ruler of the Great (until then, the Golden) Horde. In August 1449 Hādidil formally declared himself ruler of Kirim. With the help of the Turkish sultan and the Polish-Lithuanian king Casmir IV, he was able to hold out until his death in 1466, first in his residence Kirk Yer and later in the valley of Baghče Saray (q.v.). He and later his son again and again took in fugitives of the decaying Great Horde, and they thus became rulers of the strongest among the Tatar states that came into being. On the northern shore of the Black Sea a strip of land where the Noghays [q.u.] lived, and since 1484 also the Budjak [q.v.], came gradually under the rule of the Kirim Khāns.

After rather lengthy succession disputes, Mengli Girây I [q.v.], one of Hādidīl Girây's eight sons, got the upper hand. Im was to become the real founder in the independent Kirlin state, in spite of the fact that he had to recognise Ottoman supremacy after the conquest of Kaffa in 1475 by the Sultan's troops. The Girây family was then recognised as enjoying in Kirlin the sole rights of succession and immunity. Since Islâm Girây II [992-6/1384-8] [q.v.], their name was mentioned in the Ahubba after the Sultan's; they

had the right to strike their own coins; and they could grant asylum. They remained independent in internal policy and had at their disposal a righly-ramified officialdom which followed more and more the Otto-Turkish pattern. Under the continuous political preponderance of the Sultan, co-operation between the two states generally passed off without too much friction, in spite of many dangerous tensions at times. Joint military expeditions were regularly organised; in 1476 and 1538 into Moldavia, in 1543 for III first time into Hungary. From the time when Turks had conquered Kilia and Ak Kirman (1484) and the Poles had been defeated in Moldavia (1497), the khanate of Kirim was in direct contact with the Turkish dominions in the Balkan peninsula. In the north-east the Cerkes [q.v.] and Kabards [q.v.] were subjects of the Klrim-Khans, and thus the Black Sea became until 1739 a Turkish-Tatar inland

Relations with the Christian powers in the north changed when, from 1470-2 onwards, Casimir IV decided to co-operate more and more with the Great Hords. The Kirim Khans turned to the Grand Dukes of Moscow, who between 1468 and 1571 were exempted from paying tribute. With certain fluctuations in details, both states remained loyal to this alliance until the fall of the Great Horde in 1502, and even extended it, while the kings of Poland-Lithuania in \$480 and later repeatedly neglected their commitments to the Horde. From that period onwards, this double kingdom was exposed to attacks from both the Muscovites and the Kirlm-Tatars, who again and again invaded Podolia, Volhynia and Galicia and more than once laid Kiev. Cernigov and other towns under contribution (for the Tatar incursions between 1474 and 1569, 🚃 J. Ochmański, Organisacja obrony przed Tatarami w Wielkiem Księstwie Litowskim "The organisation of the defence against the Tatars in the Grand Duchy of Lithuania"), in Studio i materially do historii majskowości ("Studies for the history of the army"), v (1960), 349-98, esp. 362-4). Under these circumstances the Great Horde got into great difficulties, especially after the death of Khan Ahmed in January 1481. Until the very end of this state, officers, soldiers and even princes of the ruling house continued to desert to the Kirlin-Khans (see M. Malowist, Kaffa: holonia genuzuska 📟 Krymie i problem wechodni w latach 1453-1475 ("Kaffa, the Genoese colony in the Crimea and the eastern problem. in 1453-75"), Warsaw 1947 (Prace Instylute Historycanego Universyteta Warsanuskiego ("Publications of the Historical Institute of the University of Warsaw"), ii). Even after a temporary treaty of peace between the Grand Duchy of Moscow and Lithuania in 1493, the latter's contact with Kirim remained so close that the Khans was able to mediate in 2496 for the establishing of diplomatic Russian-Turkish relations, initially in the main for commercial reasons (see V. E. Syroečkovskiy, Pati i snosheniva Moskvi a Krimom na rubeke zvi veka ("Ways and relations of Moscow with the Crimea at the turn of the :6th century"}, in Izrestiya Akademii Nauk SSSR, iii (1932).

When in June 1502 the Great Horde was finally defeated to the east of Kiev and close to where the Desna joins the Dayeps, and their last Khan was forced to flee to Lithuania (where he was executed in 1503), the Kirim Khan, in accordance with his claim, assumed the rights of the former Golden Horde and demanded tribute "without subterluge" from Mescow and Lithuania. To the Grand Duke of Lithuania he offered a treaty "after streightening

KIRIM

ont relations". In addition, Mengli Girāy felt himself responsible for the security of the khānates of Kāzān [q.v.] and Astrakhān [q.v.] and thus ran into increasing difficulties with Moscow (K. Pulaski, Mendli-Girāy (sic), chan Tatarów perekopskich ("Mengli-Giray, Khan of the Perekop Tatars"), Warsaw 1882). Under these circumstances, a treaty with Sigismund I Augustus [1506-48] of Poland and Lithuania was of great importance to Mengli Girāy I. But the negotiations had not yet been concluded when the Klrim Khān died at a great age in 1515 [J. Pajewski, Projekt przymierza polsko-tureckiego — Zygmunta Augusta ("A project of treaty between Poland and Turkey under Sigismund Augustus"), in Kriega kw Chei Oskara Halteckiego, Warsaw 1935).

Under Mengli Giray I, Kirim reached its cultural zenith. The area was opened up to Ottoman Turkish culture. Artists from the Islamic cultural environment and also Italian, often Genoese, artisans who had remained in the country after 1475, such as Augustino da Garibaldi and Vincento da Zugulli, found work here, especially as architects and stone carvers. Intellectual and literary circles came also into being, Of special artistic importance the Khān's palace at Bāghte Sarây [q.v.], whither Mengli Girāy had transferred his residence from Old Klrim. It is actually in ruins today, but the Zendjirli

Madraca has been preserved.

In view of the position of power which Mehmed Giray I (1515-22) [4.v.]) had inherited from his father (V. E. Syroeckovskiy, Muchammed-Geraf i ego vassali ("Mehmed-Giray and his vassals"), in Uttiniye Zapishi Moskovskogo Gosudarstvennogo Universiteta, Ixi (1940)), the new Khan also aspired in the position of the Golden Herde and wanted to unite all Tatars under his rule. His - Sabib Giray [q.e.] in 1522 succeeded in driving away w Khān of Kāsān who was friendly to Moscow and, in spite of the resistance of Astrabhān, in incorporating his territory into that of his father. Having become Khan (1532-51) after his father had been murdered and Islam Giray I [g.v.] had been put aside, he did not however succeed in holding out after a defeat inflicted on him by Moscow on the Oka in 1341 (Ö. Gökbilgin, Tarik-i Sakib Giray han (1538-1551), crit. ed., tr., notes and glossary, Erzurum 1973 (Atatürk Universitesi yayınlart 212)). On the contrary, Ivan IV the Terrible (1533-84) who had born the title of Tsar since 1547, carefully collected his forces for a campaign which brought under his control Kazan [q.v.] in October 1552, and Astrakhān [g.v.], firstly in 1554 and definitively in 1556. Thus the Volga valley was opened up to Russia right down to the Caspian Sea, the waterway to Caucasia and the north coast of Persia lay free and the Russians got an extensive new region for settlement. Dawlat (Dewlet) Girây I (1551-77 [q.v.]) finally saw himself confined to the Kirlin Khanate and its northern hinterland. After the manifold disturbances of the preceding decades he tried to collaborate again with Poland-Lithuania, which saw itself and more threatened by Moscow and both of which merged into one single state in the Union of Lublin in 1569 (Ö. Gökbilgin, 1539-1577 yılları arasında Kırım Hanlığı'nin tiyasi durumu, Ankara 1973 (Atatürk Universitesi yayınları 280)).

However, the Khān was dissatisfied, as was Sultan Süleymān II, by the fact that so many Muslims had become subject to Orthodox Christian sovereignty. The two sovereigns entered upon a close treaty of alliance and for the time being supported Tatar revolts against the supremacy of Moscow; these revolts are echoed in the legends around Cora Batir (Sa'adat

Sakir, Cora Batvr. Eine Legende in dobrudscha-tatarischer Mundari, Cracow 1935). Dewlet Giray attempted m relieve them by marching against Russia to 1555. But his fear that the Sultan might enlarge his influence in Kirlin by stationing his was troops there made him abandon a plan of supporting the Ottomans effectively. Thus the Sultan received little help from the Kirim Khan for his attempt to connect with a canal the Volga and the Don, at the place where they draw the nearest to each other (near modern Volgograd). He could rely only on the Noghays [q.t.]. Consequently, when in the winter of 1560 the Turkish troops were defeated between Astrauhan and the Sea of Azov, the enterprise of Selim II fell through. He had hoped to establish in Kirim a base for his campaign against Shi'i Safawid Persia, and III activate from there economic relations with Central Asia (H. Inaicik, Osmanle Rus rekabetinin mensei ur Don-Volea kanais tesebhusit (1460). in Belleten xii 146 (1948), 349-402; Eng. III tin AUDTOFD (1947), 47-106; A. N. Kurat, Turkiye ve Idil boyu. 2560 Astarhan seferi, Ten-Idil hanglı ve XVI-XVII viisvel Osmanlı-Rus milnasebetleri, Ankara 1966 (AUDTDF Yayınları 151); P. A. Sadikov, Pohhod Tatar i Turok ... Astrakhan v 1569 godu ("The campaign of the Tatars and Turks against Astrakhan in 1569"), in Istorileskiye Zapiski, xxii, Moscow 1947, 132-66). When in 1571 the Turkish fleet became decisively weakened by the defeat at Lepanto [see AVMA-BARGET!], any plan of a Turkish advance against Russia had to be abandoned. On the other hand, Kirlm was thus freed from the feared guardianship of the Sultan, although it also lost his direct protection.

The Khān availed himse's immediately of this freedom at his rear to march against Moscow. In 1571 the city fell for the last into Tatar hands and was burnt down. The Tsar was forced to declare himself prepared to resume paying tribute (tishtiyla). It was only Peter the Great who able to free himself decisively from this obligation. At this point, the Tsar anable to counter-attack, as a result of his military engagements in the west in regard to Livonia.

Ķāzān and Astrakhān thus remained in Russian hands. In order m change this situation, Khan Mehmed II, the Fat (Semiz; reigned 1577-84) made new endeavours (Kreenli Abdulla oğlu Hasan, Ihinci Mohmed Giray Hanf Khan Mehmed Gudy II, in Azerbaycan Yurt Bilgisi, ili (1934), 1). Since Tuzkish help failed to come because of the war with Persia (1578-90), the Khan sought an alliance against Moscow with Poland, Lithuania and even with Pope Gregory XIII. He held out a prospect of conversion to Roman Catholicism, which caused the Popes to send several ambassadors between 1571 and 1583. A Kirim embassy was honourably received at Vilna in 1579 (Stanisław Kryczyński, Nisudana misje katolicka wśród musułmanow litewskich w XVI w. ("A failed Catholic mission among the Lithuanian Muslims in the 16th century"), in Przegiąd Islamski (1935), 3/4, 11-14).

achieve real success. He was forced to put ea. 5,000 soldiers at the disposal of the Sultan for the war against Persia. When the successor to the through the Kaighāy [q.m.], and taken captive by the Persians, the Khān himself interfered in the war against the Shāh. This led to friction with the Sublime Porte and in course of the ensuing unrest in Kirim, the Khān murdered \$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1}{2}\$\$\frac{1

The new Khan, Ghazi Giray II (1588-1608) [q.v.],

ĶĪRĪM 139

ant the upper hand after lengthy disturbances. He also came forward as a poet (H. Ertaylan, Gasi Guay Han, havak ve eserleri, İstanbul 1958; C. M. Kortepeter, Gazi Giray 11, Khan of Crimea, and Ottoman policy in eastern Europe and the Caucasus, 1388-1594. in The Slavenic and East European Review, xliv/102 (1966), 139-66). His attack against Moscow in 1591 failed, and during the Turkish campaign against Hungary of 1392-1606 he had, in the same way in his predecessor, to provide troops for the Sultan, which on various occasions led to friction (B. Kocowski, Wyprawa Tatarów na Wegry press Polske w 2594 t., Lublin 1948; M. Alekberli, Bor'ba Ukrainskogo naroda protiv turatsko-tatarskoy agressii vo utoroy polovine XVI pervoy polovine XVII rehor ("The struggle of the Ukranian people against the Turkish-Tatar attack in the and half of the 16th and the 1st half of the 17th centuries"), Saratov 1951.

During these various wars, Kirim itself remained free of military incursions, and so the administration there could follow its even course. Public roads and ians wert secure, and documents which survived the conflagration of the Khan's palace (in 1736) testify to well-organised archives and the regular proceeding of the Islamic law concerning justice, inheritance and marriage, Customary law ("Ada [q.v.]) also played a côle. The horse trade and rates of exchange of foreign currency were officially supervised. As in other Islamic countries, the diwis [q.v.] was the supreme court of judicature. There were 48 judicial regions in the lowlands and 29 in the mountains, where, except for the infliction of the death penalty, convictions could be pronounced without right of appeal "insufar as the conviction in accordance with the laws". However, in the administration of justice, corruption always played a rôle that could not be disregarded.

The Tatars enjoyed personal freedom and, as in earlier centuries, passed for a friendly and hospitable people. Women were entitled to personal property, and took part now and then in public life, diplomatic negotiations or even in military expeditions; and occasionally they devoted themselves to poetry and literature.

Until the age of fifteen, the education of children the ruling house was often left to Cerkes [q.v.]. who taught them riding and the use of weapons. (Upto the 19th century other Caucasian peoples, inoluding the Ossats, also had their children brought up by Cerkes.) The hardships thereby endured were supposed to influence many khans up to their old age and to counterbalance Ottoman urban culture. In the course of time, however, rulers and high officialturned more and more to Istanbul for the education of their children; also, many a Giray prince lived there as a hostage. Thus Turkish cultural influence became and more important during the 17th and 18th centuries. Ottoman Turkish gradually began to supersede Kirim Tatar as the written language; Turkish melodies (played on drums, clarinets and later also violins) may well have merged into local musical tradition; but confinement of women in harems increased.

In this way, the ties with Turkey were strengthened, but they also reinforced dependency upon the Sultans, who more and more intervened, by deposing, and occasionally reinstating, many a khés. Thus the stability of the regional government was undermined both by the power of Istanbul and by the growing independence of the Begs, who possessed wide powers within their fiefs and fought out among themselves many a personal feud. The noble families, the prominent ones being the Shirin, the Kuhik, the Bārin, the Mansūr and the Sulesh, enjoyed tax freedom. The state revenues consisted largely of certain customs duties, payments by individual governors, indirect taxes (mainly on salt) and an annuity of the Sultan. Direct taxes, in far as they were levied, consisted (at least officially) of the "ushr [a.v.] and sahāi [a.v.].

The interventions of the Sublime Porte bound Kirim the more closely to Turkey because no other policy of alliance was now possible with any power to the north (B. Baranowski, Polska . Talarsscryma w latech 1624-1629 ("Poland and Tartary in 1624-9"). Lock 1948). Bad harvests in the Crimea, whose agriculture normally secured the subsistence of its inhabitants, may have caused the Tatars to plunder again and again the south-western regions of Poland and Lithuania (W. Czapliński, Sprawa najazdów latarshich na Polske w pierwszej polowie XVII u. ("The problem of the Tatar incursions into Poland in the first half of the 17th c."), in Kwartalnik Historyczny Ixx/3 (1963), 7x3-20; M. Horn, Skulki skonomiczne najardów tatarskich a lat 2605-2677 na Rus Czercong ["The economic consequences of the Tatar invasions in 1605-33 in Red Russia"), Breslau 1964; J. Coldberg, Chronologia i sasigg najasdoulatarskich na ziemie Rzeczypospolitej Polskiej = latach 2600-2647 ("Chronology and reach of the Tatar ininto the land of the Republic of Poland in 1600-47"), in Studia i Materialy do Historii Wojsko. wości, vli/1, 3-71). Properly speaking, these incursions had no political motivation, but they were to such an extent prejudicial to relations with the neighbours to the north-west that there could be no weeklon of combined action against the members enemy Moscow, which now became and more threatening to both parties; also, the Kirim Khāns themselves suffered repeatedly from the unrest of the nomads. When at the treaty of Percyasiavi in 1654 the Cossack betman Bohdan Khmel'nitskiy, who had been supported by the Tatars, changed sides and joined Moscow, the Tsar became a direct neighbour of the Crimcan Midns. Now at last the Polish-Lithuanian king sought alllance with Islam Giray III (1644-54 [q.v.]}. They undertook a common military expedition against Moscow, which ended in 1655 with the victory of Ochmatów (J. Rypka, Aus der Korrespondens der Hohen Pforte mit Bohdan Chmelnythyj, in Festschrift für Jar. Bidlo, Prague 1928; idem, Weitere Beitrage sur ..., in Archiv Orientalni, ii (1930); idem, Dalis přispěveh ke korespondenci Vysohl Porty s Bohdanem Chmelnickym ("Further contribution to the correspondence. . "], in Casopis Národního Musea, 1931; idem, Briefwechsel der Hohen Pforte mit den Krimchanen im II. Bande von Feeidlins Münse at, in Festschrift für Georg Jacob, Leipzig 1932, 249-69: O. Pritsak, Das erste fürkisch-ukrainische Bündnie (2648), in Oriens, vi (1953), 266-98). The Tatars now also took part in the campaigns of the Poles against the allied forces of the Russians, Swedes, Brandenburgers, Transylvanians and Cossacks (in the period of the "Deluge") and fought in ro56 together with them before Warsaw, in Prussia and in Greater Poland, Many captives and rich booty were brought to the Crimes. Khan Mehmed Giray IV (who reigned for the second time 1654-66) concluded a treaty with the Polish king over the partition of the conquered regions; the Islamic areas, like Kāzān and Astrakhān, were **I** fall to the Crimean khanate. Both peoples fought shoulder-to-shoulder against Transylvania in 1657 and against Moscow in 1660 (the Battle of Tsudnov) (L. Kubala, Wojna brandenburska i najasa

z40 Ķīrīm

Rahocsego i wojna moskiowska ("The Brandenburg War, the invasion of Rakôczy and the Moscow War"), Lemberg-Warsaw 1913; A. Hnilko, Wyprawa sudnowska w 1660 r. ("The campaign of Tsudnov in 1660"), Warsaw 1931). The Tatar army numbered at this time 20,000-30,000 troops at the most; higher accounts (up to 150,000 and even 200,000) are probably false (O. Gócka, Liczebność Tatarów krymskich i ich wojsk ("The number of the Crimean Tatars and their armies"), in Przegląd Historyczno-Wojskowy, vili/2, 1936). Single military units had their standards, while the cavalrymen brought spare horses along with them. Victuals consisted mainly of millet. which was milled in leathern mortars. Prisoners of were enabled to ransom themselves as far as possible; not infrequently they were humanely treated. In accordance with Islamic law, there may have been many freedmen.

The alliance between Poland-Lithuania and the Crimean khānate came iii an end when Mehmed Girāy was deposed in 1656 and the armistice of Andrusovo, between Poland-Lithuania and Moscow, was concluded in 1667. The political situation changed further when Peter Deroshenko (1665-76), the hetman of iiii Cossacks "of the left bank", submitted to the Sultan out of dislike for the equalising policy of Moscow (D. Dorošenko and J. Rypka, Hejiman Petr Dorošenko a jeho turecka politika ("Hetman P. D. and his Turkish policy"), in Časopis Národního Musea, Prague 1933; Ch. Hilbert, Oslewopa 1648-1681 bei den Zeugendssischen osman, Historihern, typewr. thesis, Göt-

tingen 1948).

At the Instigation of the Turks, Khan 'Adil Giray (1666-71) had to collaborate with the Cossacks and therefore fell out with Poland-Lithuania. The ensuing made Podolia M 1672 into m Turkish province, and thus the Sultan's empire reached its greatest expansion ever to the north of the Black Sea. Attempts by Khān Sellm Girāy I (1671-8) at mediation failed because of the Sultan's uncompromising attitude (J. Woliński, Pośredniciwo tatarskie ie wojnie polsko-tureckiej 1674-1675 r. ("Tatur mediation in the Polish-Turkish War 1674-5"}, in Polityka narodów iv (1954)/4). The new khān, Murād Girāy (1678-83). tried to free himself from subordination to Turkey and wanted to replace the Shari'a by "the Law of Cingiz Khān" (Töre, Yasa), a daring enterprise which naturally angered the "ulams". In accordance with his political principles, he remained aloof during the Turkish march against Vienna in 1683, and his army corps did not take part in the battle of the Barren Mountain Kahlenberg. As a punishment, he was banished to Bulgaria (Kırımlı Abdullah oğlu Hasan, Viyana onunde Kirim supariteri, in Azerbaycan Yuri Bilgisi ii (1933), 21-2, 348-53). Nevertheless, relations between the Tatars and Poland-Lithuania remained tense until the Peace of Carlowitz (1699 [See KARLOVČA]).

The Tsars availed themselves of this dissension. After the Cossacks of the left bank of the Dnyepr had come again under their control, two Russian armies marched against the Crimea in 1686 and 1687. While Khān Selim Girāy (who reigned for the second time in 1684-91) succeeded in defending the peninsula itself, Azòv was lost III Peter the Great in 1699, and thus the khānate was divided for several years into two parts, so, the peninsula and the region towards the Caucasus. In order to counterbalance Azòv while it was in Russian hands, the fortress of Yeñi Kal'e was founded near Keré (B. H. Sumner, Peter the Great and the Ottoman empire, London 1949).

During this turbulent period, the cultural signifi-

cance of the khānate declined. Artistic creativity was small, although Islamic influences from Crimea and from Turkey of clearly recognisable in contemporary Poland (T. Maikowaki, Ssinka Islama of Polses w XVII i XVIII wieku ("Islamic art in Poland in the 17th and 18th centuries"), Cracow 1935; F.-K. Spuhler, Seidene Representationsteppiche der mittleren bis spitten Safawidenseit: die sog. Polenteppiche, doctoral thesis, Bertin 1968).

The victory of the European coalition over the Sultan in the great war of 1682-99 was of serious consequence for Kirlm. Pressure from the north made itself more and more felt. The planned cooperation with the Swedish king Charles XII (1697-1718) and with the hetman of the Cossacks Ivan Stepanovič Mazepa, in which Ghāzī Girāy III (1704-7) [q.v.]) was very interested, failed owing to the Russian victory near Poltava in 1709. It is true that the allies succeeded in forcing Peter the Great, hemmed iii by Turkish troops near the Pruth, to retrocede Azóv, but this was all that could be achieved: m protest of Khan Dewlet Giray II (who reigned for the second time 1708-13) remained unsuccessful (A. N. Kurat, Prut seferi ve berest ("The Pruth campaign and peace"), Ankara 1951). More and more the Tatars began to fear and reject the adversary from the north (G. Veinstein, Les Talars de Crimée ■ la seconde élection de Stanislas Leszcsyński, in Cahiers du monde russe of slave, xi (1970), 24-92), especially when the Russians invaded Kirlm in 1737 and 1738, destroying many cultural monuments, among them Bäghee Saray [q.v.]. In 1739 the Tatars and Turks had to abandon Azóv definitively to the Rossians (Z. Veselá, Turciskij traktat ob osmanskišti krepost'yakh smernogo Priternomor'ya = natats XVIII veka ("A Turkish treatise on the Ottoman fortresses on the north coast of the Black Sea at the beginning of the 18th century"), in Vostočniye istočniki po istorii narodov yugo-vostačnog i tsentraPnog Europi, ii, Moscow 1960, 98-139). As in Poland-Lithuania, the strength of Kirlm was diminished by the beavy toll of human life, the demoralising defeats, the increasing interference of the Porte in Crimean affairs, the manifold struggles among the princes of the ruling house, and a fairly protracted revolt of the Noghays [q.r.] around 1758 (see B. Kellner-Heinkele, Aus den Aufzeichmengen des Sa'id Giray Han. Eine zeitgenossische Quelle zur Geschichte des Channis der Krim um die Mitte des 28. Jahrhunderts, Freiburg i. B., 1975). An attempt at # new alliance between Poland-Lithuania, Kirlm and Turkey remained without further result during the z8th century (W. Konopozyński, Polska = Turcja ("Poland and Turkey") 1683-1792, Warsaw 1936; D. Oljančyn, Do istorii terhorli Uhrainy a Krymon ("Contribution to the history of the trade between the Ukraine and Kirlm 1754-8"), Lemberg 1933). An offer of alliance made to the Crimean khan by Frederick the Great in 1761, at the most difficult moment of the Seven Years' War, led to no result either (H. Scheel, Ein Schreiben des Krim Giray Khan an den Prinzen Heinrich, den Bruder Friedrichs des Grossen, in Jean Deny Armagans, Ankara 2958, 213-20).

On the other hand, the devastations of the war years stimulated zest for living of the Crimean Tatars which, during the last decades of their freedom, flowered into a second cultural bloom, and which found its most important expression in the reconstruction of the hids's palace at Baghte Saray in 1740-3. The Sultan made a present of m valuable library, and in 1763 m new stateroom (Diagla) was erected, richly decorated with paintings and sculp-

KIRIM

tures. Former hydraulic works, like aqueducts and canals, were restored and preparations made for a new period of prosperity.

But already in 1771, Russian armies had again marched into the Crimea. Khas Selim Ciray Ill (second reign 1770-1) tried to make a stand against them, in vain, because the Sultan himself pressed hard by a war (2768-74), against the Tsarina Catharine 11, was unable to render effective help. Many people perished and many places were destroyed. The Russians marched as far as Kaifa and the Khan had to flee to Istanbul (A. Macanov, Bor'ba Tsarskov Rossli i Turtsii sa obladeniye Krlmshim Khanstvom ("The struggle of Imperial Russia and Turkey for the domination of the Crimea"), Moscow 1929).

Thereupon the nobility decided to appoint a khan who was friendly to the Russians and to accede to the Russian occupation of the fortresses of Kerc. Yehi Kal'e and Kaffa. Thus the independence which the Sublime Porte was forced to grant to the Kirlin at the peace of Kücük Kaynardie [q.v.] in 1774 (E. I. Družinina, Kyučukkayandardžiyskiy mir 1774 goda: ego podgotovka i raklywieniye ("The peace of K. K. in 1774: preparation and conclusion"), Noscow 1955), and the renunciation of its rights over these fortresses, on the Kubań and - the Taman peninsula, were only fictions, the so because Kerć and Yehi Kal'e were at that time already directly subject to Russia (V. D. Smirnov, Shornik ulbora važačyskikh dokladov i ofitzialnikh dokumentov otnosyash! ikksya k Turitii, Rossii i Krimu ("Selection of the most important reports and official documents with reference to Turkey, Russia and the Crimea''), St. Petersburg x881 (bearing mainly on the period 1768-74); F. A. Unat, Kirim tarihi voya Necati ejendinin Rusya sefaselnamesi 2769-75, in Tarih sesikaları ili (1944), 599 (with continuations in later issues); Mubadele. An Ottoman-Russian exchange of ambassadors [2775/76], annot, and tr. by N. Itzkowitz and M. Mote, Chicago-London 1970).

Even the Russian concession at the treaty of Aynall Kavak in, 1779 to declare the Sultan "in his capacity of caliph" to be the head of all Muslims could not prevent Crimean independence from coming to an end. Already two years earlier, the successor to the throne, Shahin Giray, had succeeded as Khan with the help of the Russians and the Noghays (F. F. Lashkov, Shagin-Giray, posledniy krimskiy Akan ("Sh. G., the last Crimean khon"), in Kiyevskaya Starina, Sept. 1886, 36-80). He was educated in Salonica and Venice, had become acquainted with Russia while living there as ambassarlor, and open-minded to European and especially to Italian culture. Like the last Polish king, he thought about reforming the state, mainly after the Russian example. He thus transferred the capital to Kaifa, on the sea coast, probably after the example of the Russian transfer of their capital to St. Petersburg. Invited foreign instructors to train his army of 6,000 troops, limited the makes [q.v.] while indemnifying the 'uland' with a peasion, and introduced under foreign supervision a new silver coinage. A council of ministers consisting of 12 members was created, and finances were set up anew by introducing financial registers. These reforms burdened the country with considerable debts, and Russia availed itself of the ensuing discontent. Besides, the khanate became upset by a new revolt of the Noghays in 1781 and a rebellion of two brothers of the Khan, who saw himself forced to flee to Grigoriy Aleksandrovič Potěmkin, the governor of the regions newly conquered by the Russians in the south

(the Ukraine). After the Khan had returned to his country with Russian help, Catharine II pressed him under deceitful promises to abdicate. Shahla Giray saw no escape from giving in to this pressure and from abandoning his country to Russia, to which it has belonged ever since (A. W. Fisher, The Russian ameration of Crimsa 1772-1783, Cambridge 1970; N. F. Dubrovin, Prisoedineniya & Rossii Krima. Reskripti, pis'ma, relatsii i doneseniya ("The union of the Crimes with Russia. Rescripts, letters, accounts and notes") i-iii, St. Petersburg x855; idem, V'ezd poslednyago krimskago khana Shagin-Giraya iz Rossii v Turtsiyu ("The journey of the last Crimean Khan Shahin Giray from Russia to Turkey"), in Zapiski Imperatorskago Odesskago Obshčestva istorii

141

i drevnostey, xiii (1883), 132-56).

The annexation of the peninsula to the Russian empire (first as the Tauris region, and then from 1796 onwards as the New Russia Government) brought about shiftings of the population which must be mentioned here. Already in 1779 the Orthodox Christians of the Crimea, for centuries subordinated to "the Bishop of Gothia", had been removed ... Southern Russia at the latter's instigation: 31,280 people from 6 towns and 60 villages settled around Mariupolo (A. L. Berthier-Delagarde, K istorii khristiansina v Krimu ("Contribution to the history of Christianity in the Crimea"), in Zapiski Imperatorskago Odesskago Ob<u>sk</u>čestva istorii i drevnostey, xxvili (1910), 1-108; A. I. Markević, K voprozu o položeniš khristian v Krintu = vremyg tatarskago vladičestva ("Contribution to the situation of the Christians on the Crimen during the Tatar reign"), Simferopol 1910). Also the Armenians left the country (likewise with their own hierarchy) and settled in (New-) Nakhičevah, now a suburb of Rostov-on-Don. In order to be able to remain in their home country. many Christians, among whom were probably the last remnants of the Crimean Goths, embraced Islam, (E. I. Družinina, Severnos Pricernomor's ("The northern edge of the Black Sca"), 1775-1800, Moscow 1959). But also, many Tatars left the country at that period and in the 19th century to settle in Turkey (G. I. Levitskiy, Pereselenie tatar iz Krima o Turtsiya ("The settlement of Crimean Tatars in Turkey") in Vésinik Europi v (1882), 596-639; A. Markevič, Pereseleniya krimskikh tatur v Turisiyu v Ivyari s dviteniem naseleniya v Krimu ("The settlements of the Crimean Tatars in Turkey in connection with the movement of the population on the Crimea"), in Irvestiya Akademii Nauk SSSR (1928), 375-405). In the place of all these people, came first Russian newcomers, and then also Czechs and Serbs, but furthermore some 7,000 Tatars from the Kuban area (M. Pinson, Russian policy and the emigration of the Crimean Talars to the Ottoman Empire, 1854-1862, in Guney-Doğu Avrupa Araşlırmaları Dergiti, i, (1972), 37-62). Most of the Crimean Tatars who had remained were moved to Central Asia in 1945 (and have not until now been permitted to return-New York Times, 13 July 1972—in spite of their official "rehabilitation" (New York Times, 5 May 1967; Frankfurler Allg. 21g., 13 Sept. 1967)).

Until February 1954, Kirim belonged to the Russian Socialist Federative Soviet Republic (RSFSR), but has since been combined with | Ukraine,

KIRK KILISE, also Kirk Kinise and Kirkulia (Ewliya Celebi, Seyāhai-nāme, Istanbul 1928, viil, 66) is town in eastern Thrace, modern Kirkurali. This region to the east of Adrianople is Edirac (e.v.) had a centre in classical times, but its name is unknown (for the view that this place was called Heraclea, see J. von Hammer, Histoire, i, 234). The Byzantine name of Kirk Kilise was apparently Sarante Eklesiai, and the name Kirk Kilise must mean the church of forty saints and not forty churches (F. W. Hasluck, Christianity and Islam

under the Sultans, Oxford 1929, ii, 391.2).

The later writers Kātibi Čelebi (Djihān-numā, Rumeli section, Topkapı Sarayı Müzesi, Hazine kütüphanesi, no. 443, f. 17a) and Münedidim-Bashl (til, 295), record the date for the conquest of Kirk Kilise as 770/1368-9 (see Feridan Bey, Munshe'at al-soldin, Istanbul 1274, i, 71-2). The early historians do not mention its capture, but the implication is that it was conquered few years after the conquest of Edirne in 763/135t (for this, see Halil Inalcik, The conquest of Ediene (1361), in Archivum Ottomanicum, it (1971). The first Islamic building constructed in the town after its conquest was the Atīķ mosque (Başbakanlık arşiv genel müdürlüğü, Tapu defteri, no. 370; this building was in a ruined condition in 1426/1807). Nomade (viirilla) brought from western Anatolia were settled in the region of Kirk Kilise, and were during the 9th-roth/15th-16th centuries known = "the yuraks of Kirk Kilise" (M. Tayyib Gökbilgin, Rumeli'de yorükler, tatorler ve ovida-i Fdtihan, Istanbul 1957, 84, 180 and passim), Kirk Kilise me first attached to the Vize sandiab of the province of Rumelia, but was then established müsellem sandjağ (idem, Kanuni Sultan Süleyman devri başlarasında Rumeli eyaleti, livaları, şehir 🔳 hasabaları, in Belleten, lxxviii (1956), 255, 269).

In the roth/roth century, Kirk Kilkse consisted of quarters or makalles: Djāmi'-i 'Atik, Djāmi'-i 'Rebir, Hādjdji Zekeriyā, Sultān Bāyezid Khān Ketkhādāsi, Yaprakli and Karadja Ibrāhim, containing 283 households (Tapu deftert, no. 370). During the rith/roth century, Kirk Kilkse was a small town will a few shops and cet tile-roofed houses set among the vineyards, and visitors noted the Old Mosque (Eski Djāmi's), the bedestån or covered market, will Köprübashi fountain, and the coffee-house, meeting-place of the learned man, situated by m fountain (Ewliyà Celebi, Sayāhai-nāms, Istanbul 1315, v, 79-80). For the remaining monuments of the town today, see Sālnāme-i vilāyai-i

Edirne, Edirae 1309, 145 ff., 247 ff.; A. Riza Dursuakaya. Kurklareli viláyetin larik, coğrafya, kültür ve eski eserler yönunden tetkik, Kıcklareli 1947, ii; Ozcan Mert, Kirklareli kitabeleri, in TD, no. 25 (Istanbul 1971), 155-62. During the 12th/18th century, the Greeks in the town almost equalled the number of the Muslims (see Rucer Yosin Beskovic'in 1762 tarible Istanbul-Lehistan seyakatine ait haltro defteri, tr. Ismail Eren, in TD, no. 16. (Istanbul 1962), 98-9). In the sandiak of Kirk Kilise of the province of Editne there was in 1899 an important number of Greeks and Bulgarians, and the population of the region was 18,325 (Sálnáme-i viláyet-i Edirne, Edirne, 1317, 398-9). For a time, the town was included in the boundaries of Bulgaria after the treaty of San Stelano (3rd Merch 1878), but was given back to the Ottomans after the Congress of Berlin (13 June-14 July 1878). It again passed into Bulgarian hands for a short while during the Balkan War of 1912-3, but was recaptured on 8 July 1913. It was under Greek occupation for two years after the Mudros truce (1918), but was recovered by the Nationalist forces atoth November 1922. The population of the town fell when the Greek population was transferred to Greece after the Treaty of Lausanne settlement in 1923. The name Kirk Kilise was changed into Ricklarell by a law taking effect from 24th December 1024. Under the Republic, Kirklareli has become the centre of a province or vilayer of the same name. Its population was 13,000 in 1927, 19,097 in 1955, 27,431 In 1970 and 33,260 according to the latest census (2075).

Kırklareli.

KİRKLARELI (200 KIRK KILISE). KİRK WEZİR (200 <u>SK</u>AY<u>KR</u>ZÂDE 11).

KIRKOK, the biggest town of the region of Mesopotamia (44° 25' E., 35° 25' N.,) bounded by the Little Zab in the north-west, the Diabal Hamrin in the south-west, the Diyala in the south-east and the mountain chains of the Zagros in the north-east. It is identified by see (e.g. C. J. Gadd in Rev. d'Assyr. et d'Arck. Or., xxiii (1926), 64, and by Sidney Smith) = the site of the ancient city of Arrapha, and so Kirkuk participated in the revolt of the son of Shalmaneser II (850-814 B.C.) against his ageing father; again it rose up in the reign of Ashur Dan III (771-754 B.C.). It me the victorious troops of Nabopolesser pass through in 626 B.C. before being taken by the Medes under Cyaxeres at the end of 515 B.C. (G. Roux, Ancient Irag, Loadon 1964, 247, 251, 312, 312). From the time of the ancient Babylonian empire and during the Assyrian empire the town and its surrounding territories were very exposed to raids by the mountain peoples from the north-east.

Under the Sāsānids (226-651 A.D.) the province of Kirkūk — calted Garmakān (Meses of Khoren) and in Syriac sources, Beili Garmai; here the town of Kirkūk itself is called Karkhā of Bēth Selökh (G. Hoffmann, Aussings aus syrischen Akten persischen Māstyrer, M Abh. für die Kunde des Morgenlondes, vilija (1880), 257 ft.). This name could have come from

the king Seleucus I Nicator (ca. 255-280 B.C.) who is said to have had constructed a tower in the citadel. During the Sasanid period the town also became a famous centre for the Nestorians. The metropolitan of Both Garmai had his residence there (J. M. Fiev. Assyrie chreitenne, iii, Boirut 1968). Christians suffered persecution under Shapur II (310-79) (Fiey, Histores de Karha d'Bit Slob, in Analido Bollandiana lxxxii (1966), 203-9) and especially in 445 under Yezdegard II, who made victims of thousands of them. Their situation later improved when Christian of the town of Y42din became chancellor under Chosroes 11 (592-628) and achieved such fame that his native town took the name Karkh Yazdin, (Fiey, Assyria Chritienus, iii, 23-8). Beth Garmal of the Syriac sources is called Badjarma by the Arab historians. Yākūt speaks of a town Karkhina (iv. 276) which Hoffmann (ob. cit., 272) believes can be identified, correctly it seems, as Kirkük. Even today the people of Shaklawa and 'Ayn Kawa, when setting out for Kirkük, still say that they are going to Karkhina (Fiey, op. cil., iii, 44).

In the 6th/12th century the region of Kirkuk belonged to the territory dominated by the Begtegiald dynasty (q.v.), who had their residence at IrbII. After the death of Muzaffar al-Din Kökburi in 629/1232, the possessions of this dynasty reverted to the 'Abbasid caliphs, but not long afterwards were conquered by the Mongols. The name Kirkuk appears for the first time in the history of Timur of Sharat al-Din 'All Yazdi (Zofar-ndina, written ca. 823/1424-5, tr. Pétis de la Croix, Delft 1723, ii, 259). Then the reign of the Ak-Koyunlu, followed by the conquest of Mesopotamia by Shah Isma'll I in the early years of the 10th/16th century. When finally Mesopotamia and 'Irak had fallen into the hands of the Ottoman sultans Selim I and Sulayman I (according to the first Turco-Persian truce at Amasya, 29 May 1555). Kirkûk again took on its rôle as an important bul-

wark against the enemy from the East.

The town fell again to the Persians after the fall of Baghdad in 1032/1623, but was reconquered by Khosrew Pasha (q.v.) in 1039/1630; in 1048/1638 Murad IV passed through the town on his march to reconquer Banhdad. But the true masters of these regions were the local Kurdish hordes, lords of the province of Ardalan (Hadidi Khalifa, Dishan-numa, 445). But shortly afterwards the Ottoman power became established there by the activity of the pathas of the syalet of Shahrizur (q.v.). This syalet was composed of 32 sandjahs, of which one was that of Kirkûk, and this town became the residence of the pasha of Shahrleur after the castle in the town of this name had been rased by Shah 'Abbas (1571-1629) (Djihan-numd, loc. cil.). In 1732 the future Nadir Shah besieged the town III vain. A great battle took place near Kirkuk in the following year, when the Turks were completely beaten under the grand vizier Topal Othman Pasha, who died there. In 1743 Kirkük fell again into the hands of the Persians, but returned to Turkey after the truce of 1746.

The town remained in the Ottoman empire until the end of the First World War; it was occupied by the British on 7 May 1918, but abandoned litteen days later. It was re-occupied at the end of October and remained occupied until the time of the Mudros armistice. Having remained outside the sphere of activities of Shaykh Mahmad (November 1918 until May 1919), Kirkūk and its district were administered peaceably. There in the Turkish newspaper published there and sixteen schools were opened. At the time of the referendum of July 1921 Kirkūk

rejected the Amir Faytel - king of Irak, and from that moment Turkish propagends developed in the region, supported by a Turkish committee founded at Kirkük by the family of the Naftčizāda and other Turcophiles. On 17 March the Turks named a Karim-makam at Ruwanduz, and at the end of July, Col. 'All Shafik, who was called Oz Demir, "Pure Iron one", appeared and made and advances towards the territory; but he was unable to retrieve all the villyet of Mosul. The Turks tried again to claim it at the Lausanne Conference (20 November 1922 until 2 February 1923) but without success. The Treaty of Lausanne (24 July 1923) still left the question of Month undecided, and so it was referred to the League of Nations. A committee of enquiry was sent by them, will in its 34th session in Geneva on 16 December 1924, the Council gave a definite ruling: 'Irak was given the territory south of the so-called "Brussels line". Thereafter Kirkük was incorporated into the kingdom of Trak.

The present-day town is built partly on top of an artificial mound or halfs about 40 m. high, and partly at its base, me the two banks of the Khasa Cay. These waters join with those of the Awa Spi to form the Adhaym which flows into the Tigris 30 km, south of Balad. On the right bank of the Khasa Cay, in the middle of a fertile plain, rises the restdential district of Arrapkha. In 1912 the population estimated to be 15,000 (by E. B. Soane, To Mesopolamia and Kurdislan. . , 120), in 1922 to be 25,000 (by C. J. Edmonds), and in 1965 official statistics, determined according to maternal language, gave 184,000 inhabitants, comprising 71,000 Kurds, 55,000 Turcomans and 42,000 Arabs, plas others. The present population is certainly over 200,000. It should be noted that, for many years, the authorities have made strenuous efforts to replace the Kurds by Arabs. Kirkuk is the centre of an administrative region, formerly | lize? and now since 1975 | muhāfata, and has had its name changed; it is now called ai-Ta'mim ("Nationalisation") in honour of the nationalisation of oil on 1 June 1972 and also in the intention of "de-Kurdicising" the town (though the latter has however kept its Kurds). The population of the muka/aga is rapidly increasing thanks to the development of the oil industry; its 388,900 inhabitants of 1957 increased to 523,000 in 1970, with a majority # Kurds. The Kurds, Arabs and Turcomans of the town are Sunni Muslims, but the Turcomans of the villages belong to an unorthodox and secret sect, the Kizilbash. The Christians mainly Chaldaean (about 4,500) with an archbishop, and the Nestorians; who are less ous, have a bishop - Harir. There was a small colony of Jewish merchants, and of whom was sent as a delegate to the Parliament in Baghdad and another was at the head of the Department of Finance of the kinds of Kirksk, but it has disappeared since the Arab-Israeli War of 1948. It is thought they were the descendants of the Jews who were deported to Babylon by Nebuchadnezzar after the capture of Jerusalem (586 B.C.) they continued to speak Aramsic. The little mosque of Nabi Daniyal on the slope of the hill of Kirkiik commemorates the Hebrew Prophet who was deported at the same time. This must be an ancient church which existed until ca. 1700, just like the Utu Diamic mosque. The oldest church in the world was that of the martyr Mar Tahmazgerd, built by the metropolitan ca. 470 A.D., to the east of the citadel of Kirkûk; it was known as the Great Martyrion, but during the Turkish retreat of 1918 it was being used as a powder magazine and blown up (C. J. Edmonds, Kurds, Turks and Arabs, 267; Fiey, Assyria, iii, 54).

Urban planning in Kirkilk has made the centre a large circle of broad streets. Christians have been established there since earliest times, and always to have maintained positions of greater lesser importance. The presence of a Turcoman minority in Kirkük, within its Kurdish majority, must go back considerably before the conquest by the Ottoman sultans; their origin could ill sought in Turkish garrison which the caliphs may have installed there in the 3rd/9th century, or in an immigration in the time of the Saldiüks, and the Begteginida or Atabega of Jebil (C. J. Edmonds, op. cit., 267, has drawn attention - other opinions). Whatever may have been the circumstances of their coming to the region, the Turcomans of Kirkûk have always provided strong support for the Ottoman empire and its culture, and an abundant source for Ottoman officials (see Türk Yurdu, 1915).

Kirkûk's position as administrative centre has varied through the ages: "In the 18th century Kirkük was the chief town of the evilet of Shahrizur which included the modern live's of Kirkuk, Irbil and nominally Sulaymani under mudasailim appointed by Baghdad. With the reforms of Midhat Pasha, well of Baghdad from 1869 to 1872, the name of Shahrizur was given to the sandjah of Kirkük, corresponding to the present-day lima's of Kirktik and Irbil, whereas the historic Shahrizur remained outside, in the new sandjak of Sulaymani. The vildyet of Mosul was formed in 1879 and Kirkuk remained an important garrison town" (Edmonds, op. cil., 265-6). Under the Turkish regime, the vilâyst of Mosul was divided into three sandjaks or lima's: Mosul, Kickuk and Sulaymant; in 1918 three \$adā's situated to the north of the Little Zab were detached from Kirkuk to form the New? of Irbit. In the constitution of 1925, the me Iraqi state was formed of three Ottoman viláyets: Baghdad, which became the capital; Başra; and Mosul. The lives' of Kirkük was composed of four kada's: Kirkük, Kifri, Camcamal and Gil. Today, the musifare of al-Ta'mim, with a muhifit at its head, includes five hadā's, as follows: Kirkūk, Tuz Khurmātu, Čamčamāl, Huwaydja and Kifri. Each hada' bas at its head a haim-makam. The hadd' of Kirkak has five nahiyas, = follows: Taze Khurmatu, Kara Hasan, Altun Köpri, Dibs and Shuwan, and each sabiys is administered by a mudic. Kirkuk is the seat of the regional court and of a court of appeal, and it possesses a garrison and m airport. There is also an association of Turcoman writers,

Kirkük is an important commercial centre and an agricultural market for the cereal and animal products of the neighbourhood. It is well served by good roads to Baghdäd through Ta'tik and Kifri to Mosul through Altun Köprü and Irell, to Sulaymäniyya through Camcamāl with branches to Sanāndadi and Hamadān in Iran. A narrow-gauge railway links Kirkük with Baghdād in the south and with Irbil in the north. The region around Kirkük is undulating and it is populated mostly by Kurds. The Mesopotamian steppe begins to the west of an and is inhabited chiefly by Arabs. The immediately-surrounding district produces much fruit.

The region of Kirkük abounds in sulphur and bitumen products and it is especially rich in petroleum deposits, extensively exploited even in ancient times. It should be noted that the petroleum had a 146 KIRKOK

certain importance in Ottoman times, being used by the army (V. J. Parry, Materials of war in the Ottoman empies, in Studies in the economic history of the Middle East, ed. M. A. Cook, London 1970, and A ferman of 1049/1639 recognised the monopoly of rights this petroleum to a group of Turks in the region of Kirkûk, the Neftéizädeler. But their systematic working dates from March 1925. At that time a concession was granted to the Turkish Petroleum Company (T.P.C.) which was founded in 1914 to exploit the deposits of the vilayets of Mosul and Baghdad; royalties of gold shillings per ton of extracted petroleum were payable. Before the and of 1925, geological work was begun and roads were constructed, water supplies, pipe lines and buildings were installed in the vilayet of Mosul, and there were 50 British and 2,500 Iraqis employed in the work. The drilling sites were chosen in the Diabal Hamrin, near Tuz Khurmatu, in the neighbourhood of Kirkûk. The drilling programme was formally inaugurated in April 1927 by King Faysal I, and the first oil gusbed forth on 27 October 1927 at Bābā Gurgur, Kirkûk. The years 1927 to 1931 were given to preparing the whole region of Kirkük for production by middling, scientific observation and arranging the necessary services; production units, reservoirs, workshops, housing etc. were estabfished and at the time negotiations were conducted with the Iraqi government to extend the period for selecting areas, according to the convention of 1925. In March 1931 the company, which had become the Iraq Petroleum Company (I.P.C.) in 1929, was able to operate in the whole territory in the north-east of Iraq, m condition that by 1935 they constructed a pipe-line to the Mediterranean with a capacity of 3,000,000 tonnes, with a branch at Hadithe on the Euphrates to Hayfa and Tripoli, and that they make an annual payment of £ 4,000 as an overall payment to the government.

It was also in 1931 that the operational headquarters of the I.P.C. was moved from Tuz Khurmatu to Kirkuk, and the headquarters for pipe-line operations was established at Hayfa. The drilling for crude oil at Kirkûk began at the end of 1934 and, from 1935 onwards, the annual production of 4,000,000 tonnes put Iraq in the sighth position among the oil producing countries. In January 1935 the double 12' pipeline from Kirkth to the Mediterranean was formally opened, but because of the Arab-Israeli war of 1948, the branch leading to Bayla was closed. This caused a loss of almost 2,000,000 tonnes and the corresponding royalties. The Tripoli pipe-line was, however, doubled by a second (16") pipe in 1949 and this trebled the export figure. In 1952 a third (30') pipeline was brought into service between Kirkûk and Banias (Syria). From then on the world market for Iragi oil was to increase to 14,000,000 tonnes per year. On 3 February 1952 . agreement was signed between the Iraqi government and the I.P.C. for the distribution of personnel, production and revenues. A minimum production of 22,000,000 torines was expected annually from 1953 and a revenue of € 30,000,000, in 1952 to reach € 60,000,000 in 1955. The profits gained from the oil workings would be shared equally.

The Iraqi revolution of 1958 did not change the agreements between the government and the petroleum companies. The objective was to obtain exports worth xoo m. in revenue from a capacity of 70 m. tonnes per year. This target was reached in four years, but m few problems of interpretation persisted. In April 1961 negotiations were begun and, after

different interruptions, they finally reached deadlock. They were concluded by Law b of 12 December 1961 which dispossessed the company of 99.5% of the territories where they had prospecting rights and left I.P.C. with only = sites, 22 of them at Kirkük in an area of about 478.75 sq. kms., 6 at Bay Hassan of about 182.5 sq. kms., and 4 at Diembar, of about 86.5 sq. kms. (Vernier, L'Irak. . , 435). New installations were planned between May 1964 and June 1965 and were completed, with future plans taking into consideration the Iraqi National Oil Company (I.N.O.C.) which had recently been founded on 30 October 1962. More new laws were enacted as a consequence: Law 97 (6 August 1967) forbade any concessions to foreign companies and Law 123 (October 1967) authorised the I.N.O.C. to exploit the remaining sectors, which seemed m put an end to the monopoly of oil production which the foreign I.P.C. enjoyed. On 14 June 1972, the I.P.C. itself was nationalised, and thus Iraq gained for itself all the profits from its rich petroleum deposits. The annual production of crude oil in Iraq has regularly increased from the 47.5 m. tonnes in 1960; by 1925 it had reached more than mm m. tonnes, mm m. of which were from the Kirkûk region. In 1923 the tragi reserves of crude oil were estimated to 1 4.143 billion tonnes.

If the petroleum inclustry with all its subsidiary operations gave a favourable social status to its workers, for their standard of living is superior to that of other workers in the country, it did not suppress all the movements for social reform. Several important strikes were called in Kirkûk among the oil workers. The most notable were those of 1937 which coincided with the workers' strikes at the Kût barrage, the drillers of the B.O.P., the railways, the stevedores at Bayra and the weavers of Nadiaf. These showed a bardening of class-consciousness and the discovery of a new political weapon (Longrigg, fraq, 252). In July 1947 a serious strike aggravated by politicians of communist leanings broke out at I.P.C., and it claimed several victims (ibid, 338).

Other demonstrations have had more political tone. The mere announcement of the Treaty of Portsmouth (15 January 1948) produced a general strike for three days. At Kirkük the British consulate attacked, but the most tragic of these events the so-called "purge of Kirkûk". On the occasion of the first anniversary of the republic (14 July 1959) Communist elements helped by bands of Kurds, massacred the Turcomans of the town, for they considered to be anti-Communist. There were probably 120 killed and about 200 wounded. The particlpation of the Kurds in the affair was interpreted not as a sign of mantagonistic nationalistic rivalry against the Turcomans, but one of social competition. The Turcomans, who are more socially and culturally advanced, occupied more high-ranking positions in the 1.P.C., while the Kurds had to content themselves with more subordinate work (cf. M. Khadduri, Republican Trag, 125).

It must not be forgotten that one of the obstacles to a definitive solution to the Kurdish problem is precisely the claim of the Kurds to the territory and the revenue of the Kirkûk oil-fields, which they would like to see included in 1111 territory of autonomous Kurdistan. These claims 1111 categorically refuted by the central lraqi government. In October 1970 11 plebiscite was to settle this point of contention, but it 1111 adjourned indefinitely (E. O'Ballance, The Kurdish revolt, x6x f.). This at least in part provoked the outbreak of hostilities in

March 1974, Just as the Kurdo-Iraql agreement of 12 March 1970 was being implemented. The law of 12 March 1974 awarding autonomy to the region of Kurdistan defined this region in terms of the 1957 census, carried out under the monarchy. At that time, the Kurds were afraid to declare themselves such, and thus the census did not give a Kurdish nutjority to Kurkük; hence the town and the muhāfapa were accordingly excluded from the autonomous

A well-known personality of Kirkük was the Kurdish poet Shaykh Ridā Tāiabāni (ca. 1840-1910). More-or-less an agnostic character, but at the same time fanatical also, he had gifts of satire and improvisation and a sometimes obscene verve, and composed poems in Kurdish, Turkish, Persian and Arabic. They were published in Baghdād in 1935 and 1946 and he is remembered as one of the most popular poets of Iraqi Kurdistan (cf. E. B. Stoane, op. cit., 134-5; Edmonds, op. cit., 57-8, 290-5; Edmonds, 4 Kurdish Ismpoonisi: Shaik Risa Talabani, in

IRCAS, xxii/1 (1935), 111-27).

KIRMAN, the name of a Persian province and of its present capital. The goes back to the form Carmania, which is found in Strabe (xv, z, 14), and which is said to be derived from the name of an ancient capital, Carmana (Ptolemy, Geography, vi, 8; Ammanianus Marcellinue, xxiii, 6, 48. See further Marquert, Erânsahr, 30, on the name Carmania, and Browne, Lit. Hist. of Persia, i, 145, for the later

popular etymology of the name).

The Province.—The province of Rirman is situated to the south-west of the great central desert of Persia, the Dasht-i Lût, which narrows to some 100 miles in width where it divides Kirman from Sistân. It bounded on the north by Yazd and Khurāsān, on the east by Sistân and Makrān (Baldtistān), which was regarded by most of the early geographers as separate from Kirman, though Hamd Allâh Mustawil states that it paid tribute (kharādī) to Kirman (Nushal, 141), in the south by Makrān and Fârs and on the west by Fārs. Its boundaries have varied slightly from time to time. Ibn Rusta states that Fahradī was part of the tax district of

Kirman but that the ruler of Makran claimed that it belonged to him (286). Kh ash, which is today included in Balôvistan, and Rigan were both reckoned by Istakhri to belong to Kirman, though the former was, he states, part of the tax district of Sistan (x62). ldrist, on the other hand, includes Khwash in Sistan (417). Shahr-i Bābak was at various times included in Fars, at others in Kirman, in 1258/1842-3 it was placed, for revenue purposes, under Yazd (Ahmad All Waslet, Dingheafiya-yi mamlahal-i Kirman, ed. Muhammad Ibrahim Bastani Parizi, in Farhang-i Iran Zamin, xiv/x-4, x63). Baik, which had earlier belonged to Kirman, was also placed under Yazd about the year 1774 (Waziri, 175), though Khinaman. one of its districts, continued to belong to Kirman, During the reign of the Saldink malik of Kirman, Arslan Shah (494-536/2100-41), Yazd and Tabas appear to have been under Kirman (Afdal al-Din Abū Hāmid Kirmāni, 'Ihd al-'ald, ed. 'All Mubammad 'Amir' Na'tel, Tehran 1311, 76). Furg Tarum, both placed in Fars by the Hudad al-'dlam (129), were considered by Afdal al-Din to belong to Kirman ("Ikd al-"ald, 75). Ibn Balkhi wall that Rūdān, which had belonged to Fars, was put on the Kirman side of the frontier in the reign of Alp Arslan (Fdrs-sidma, ed. Le Strange, 121), but according to Idrist, although it formed one of the dependencies of Kirman, was under Fars for purposes (416). Hurmuz [a,v,] sometimes counted belonging to Fars, sometimes to Kirman, we has often been in different hands to its hinterland.

According to Arab geographers, the western part of the province, which included Shahr-t Rabak, Sirdian, Urzuya, Aktat, Kushk, Şawghan, Islandaka, Djiruft and Riddar, was in the third clime, and the eastern part, including Anar, Kübanalın (Kühbanan) Zarand, Guwashir or Gawashir (also known as Bardsir and later as Kirman), Rawar, Khabis, Rahn, Sardüya, Bann and Narmashir, in the fourth clime, while Hurmuz, according to Hamd Allah Mustawii, was in the second clime

(Nuzhat, 141).

In the variety of its topography the province is not dissimilar from Persia . whole, A series of mountain ranges, with me general trend from northwest to south-east, runs through the province. Much is tangled broken country, but there are many fertile upland districts, pastures and mountain valleys with orchards, cultivated places, and many streams. Some of these have a high elevation: Sa'Idabad, near the site of the old city of Sirdian. lies at melevation of 5,600 ft. and Pariz at over 7,000 ft. There are also numerous arid waterless mountain districts and desert tracts. The main desert area is in the north and north-east on the borders of the Dasht-i Lut, and is encreaching on the neighbouring fertile districts. The Lut is defined in the south by the Bam-Zahidan road and thus excludes Narmashir and the desert regions of southeastern Kirman and Rigan, though physically these belong to the Lut proper. There are also some stretches of arid land between the south-west highlands and the Dibal Baris which run south-east from Sirdjan to east of Dileuft. Salt swamps (kafa) are found isolated depressions, notably the Kafa-i Katrû near Sirdian (for a description of this, see K. E. Abbott, Geographical notes taken during a journey in Persia in 1849 and 1850, in JRGS, xvv (1855), 56-7). In some parts of the province the towns and villages tend to be separated from each other by broad stretches of uncultivated land (cf. Istakhri, 163, Ibn Hawkal, it, 309). Along the nor-

thern littoral of the Persian Gulf and the Gulf of 'Umlin there is a narrow coastal plain.

The most northerly of the mountain ranges stretches from the neighbourhood of Yazd to Khabis (the modern Shahdad) and south-eastwards towards Sarvistan. The fertile upland district of Kübanan in the north, and, further south, the acid district of Rawar lie along its eastern base. A second range, further to the west, which contains Mt. Didpar (11,000 ft.) south of Kinnan city, and Mt. Hazar (14.500 ft.) to the south-west of Ralin, runs towards Bam, while a third, still further west, runs southeastwards from north of Shahr-I Babak through Strdian and Baft, and contains Mt. Cihiltan (12,000 it.) Mt. Cahargunbad (13,000 ft.) Mt. Lalazar (14,350 ft.). A lesser range, with Mt. Cahhazar (0.450 (t.), lies to the south of Sandabad, while the Mt. Dina range of Fars is prolonged in a southeasterly direction to Bandar Abbas. South of Sarvistan and to the east of Dizruft, lies the Diibal Băriz range [see pragat săgrz în Suppl.], which also trends from the north-west to the south-east and rises to zg,000 ft. in the north and zg,450 ft. in the south. The Dibal Kufe region of the Arab geogranhers (see Istakhri, 164; Hudud al-alam, 124; al-Mukaddast, 471; Ibn Hawkal, ii, 309-10; C. E. Bosworth. The Kufichis or Oufs in Persian history, in Inen, xiv (1976), 9-18) probably lay in the south-east in Bashākird, on the borders of Makrān and Rūdbār.

In the upland districts, notably in the Difbal Bariz, there exist remnants of a dry forest, consisting mainly of thin stands of pistachio trees, several species of almond, maple, celtis, juniper and other shrubs; stands of pistachio trees, almonds and other drought-resistant species also found at lower levels. In the garmsir the vegetation tends to be scattered trees and shrubs with a steppe-like ground cover. The kundir will (ritibles thing Christi) has a wide distribution, as also do several species of acacla. myrtle, tamarisk and cleander. Deforestation from charcoal burning and animal grazing has taken place, and present day cover, though in places still considerable, would appear to be appreciably less than the "forests" of both the early and mediaeval geographers and the 19th century writers.

There we important rivers reaching the sea. The largest of them, the R. Minab, rises in the bills of Bandar 'Abbas, It has a considerable drainage and flows into the Persian Gulf _____ jo miles east of Bandar 'Abbas. The only considerable inland river is the R. Haltl, which is joined by its tributary, the R. Shur, in the neighbourhood of Dilruit and disappears in the Diaz Murian. According to Istakhri, it had enough water to turn 20 (166), or, according to Ibn Hawkal, 50 mill wheels (ii, 311). The province relies, for the most part, on sandts [q.v.] and mountain streams for water. In many districts the sub-soil warm is brackish and the soil is often imprognated with salt. Rainfall is low and decreases towards the south-east, though the relief of the land gives rise to many local variations. The maximum precipation is in winter. Kirmān town has an annual average rainfail of 7.9 in., Bandar 'Abbas in, and Bam 3 in. Drought, sometimes accompanied by famine, has not been uncommon in the history of Kirman. The "Idd al-"did mentions one such in the dearadis year 570 (97). In 1879 and 1880 Kkman, like many other provinces, suffered severely from drought. Flash floods are also a hazard, such as the floods which occurred in Kirman (and many other places) in 1001/1503 (Mahmūri b. Hidāyat Allāh Natanzi, Nukámat al-digár, ed. Ihain l<u>sh</u>ráki, Tehran 1971, 531).

According to the Arab geographers, while threequarters of the province belongs to the warm regions. (discribm, earnesis) and man quarter to the cold regions. (stored, sardsir). In the rarmsir the districts bordering the central desert have a hot dry climate, but in the southern parts of the province, especially in the Persian Gulf littoral, the climate in summer is hot and unhealthy. Bam is thus reckoned to have a better climate than Diruft (Istakhri, 166). The latter is described by Afdal al-Din an a paradise for four months of the year but as hell for the rest of the year ('Ikd al-'ala, 60). The 5th/10th century Persian translation of Istakhri adds | the latter's text the statement that the climate of Hurmus was noxious (ed. Isadi Afshär, Tehran 1340, 130). The upland country of Aktas and Sirdian has a temperate climate, while Kirman, Raisindian, Zarand, Rawar and Kübanan have a hot summer and mild winter. Barley is harvested in Rüdbär at the Persian New Year (21 March) and wheat twenty days afterwards. In Aktā barley is not harvested until five months after the New Year and wheat a month later.

Outside the coastal area, where the annual range of temperature is lowest, the difference between the coldest month, January, and the warmest, July, is considerable. At Kirman, with an elevation of 5,680 it., the average maximum temperature in January is 55.4' F and the average minimum 33.8° F, with ... absolute maximum and minimum of 75.2" F and 7.6° F respectively and a mean monthly average of 42.8° F. In July the average maximum and minimum temperature is 95° F and 64.4° F respectively with an absolute maximum and minimum of ros.8° F and 48.2° F and a mean monthly average of 80.6° F. At Bandar 'Abbās the average maximum and minimum temperatures in January = 73.4° F and 57.2° F respectively with an absolute maximum and minimum of \$6.0° F and 41.0° F and a mean monthly average of 66.2° F, while the comparable figures for July are 102.2° F and 87.8° F, 113.0° F and 82.4° F and 95.0° F. In some parts of the province, notably Kirman, high surface winds are common at certain times of the year, especially in spring. In Khabis district a poisonous wind (known as bid-i timer) blows in the desert in the middle of the day for about forty days in summer.

Ibn Rusts states that Kirman we divided into live Adeas, Bardstr, Sirdian, Narmashir, Dilruft and Hurmus, each kore being called after its chief town (a66), Mukaddari also states that the province had five Miras, but lists them differently, omitting Hurraus and including Bam (460). Hamd Allah Mustawfi states that it consisted of fifteen districts (ahahr) (Nushat, 139). By the 8th/14th century the province was differently divided. In the 19th and 20th centuries there appears to have been a further proliferation of districts (bulkkåt), the which are variously given. Waziri in his Diugarafiyayi mamlakal-i Kirman, written between 1874 and 1876, mentions the following districts: Guwashir (the modern city of Kirman and its surroundings), Kühpäya, Khahis and Gawk (which two, he states, in reality formed one bulak), Bam, Narmashir, Rafin, Sardiya, Ditruit, Dibal Bariz, Isfandaka, Rūdbār, Kūshk and Sawghān, Bardsir, Akţā' (earlier known - district of Batt), Urzuya, Sirdian, Shahr-i Babak, Rafsindjan, Baik, Zerand, Anar, Kübanan (which, he states, had been administered with Yard for revenue purposes for nearly a hundred years) and Rawar. Later the boundaries appear to have been slightly redrawn; Aktār and Urzūya were united into one district, as also were Bam and

KIRMÂN

Narmäshir; was transferred to Yazd, the district of Khinaman only remaining with Kirman, Pariz and Rabur, which had formerly belonged to Sirdjan and Akţat respectively, both became separate districts, while Rüdbär was now called Rüdbär and Bashakird (Houtum-Schindler, art. Kerman in Encyclopaedia Britannica, 1911, xv, 756). Under Rida Shah the province was divided into six shahristens; Kirman (which included the sub-districts of Zarand, Kühpāya and Kübanān), Dam (which included the sub-district of Ralin), Djiruft (which included the sub-district of Sardüya, which in turn included Islandaka, and Kahnudi, which in turn included Rūdbār), Bandar 'Abbās (which included the sub-district of Rūdān), Sirdjān (which included the sub-districts of Pariz and Baft, which in turn included Urzûya, Râbur, Kuşhk and Şawghân) and Rafsindjān (Husayn 'All Razmārā, Farhang-i djughrāfiyā-yi Iran, viil).

Agriculture and Livestock.—The Arab geographers describe Kirman = a rich and prosperous province. The Persian translation of Istakhrl mentions that it produced all kinds of fruit (139), while Yakut states that It was rich in date palms, cereals, cattle and beasts of burden and that it produced fruits belonging to both the cold and the hot regions in great variety, including an abundance of walnuts and dates (Barbier de Meynard, Dictionnaire de la Perse, 483). The author of the Hudad al-falam notes that Dilruft, Baft and the mountain country between Diruit and Manudian, known as the Kühistän-l Abū Ghānim, were prosperous and pleasant places (124). According to Mukeddasi, the last-named district had many date palms (467). Rūdbār is described by the Hudud ai-diam as consisting of woods, trees, and meadows (124). The mountain region between Sirdian and Bardsir was also very prosperous and pleasant according to the same authority, and contained 260 populous places. Mukaddasi mentions a multitude of orchards and an abundance of fruit in Sirdjan (464), and many orchards and citrus trees in Mughin (467). Aiual al-Din speaks of the excellence of the pastures of Rudbar and states that animals thrived in them (70). He also praises the fertility of Narmashir and states that it produced the fruit of both the garms is and the sards in (72). Mukaddasi notes the great quantity of fruit belonging to the sardsir will the garmsir-dates, walnuts and citrus fruits--in Dilruft (466; cf. latakhrī 166). Plenty prevailed in the Difbal Bariz, which, like the Kufs Mts., were difficult of access (Iştakhri, 264; Ibn al-Hawkal, il. 310). Bam and Khwash had many date palms (Iştakhri, 166; Ibn Hawkal, il, 313), which also grew in great profusion in Hurmuz (latakhri, 166; Ibn Hawkal, ii, 311) and in the Kufs Mts. Honey was also produced there (cf. Idrist, 420). Indigo and were cultivated in Diruit and the district which extended from Mughin and Walashgird to the neighbourhood of Hurmuz, and also sugar cane (Mukaddaxi, 467; Iştakhri, 167; Ibn Hawkai, ii, 312). Idrisi mentions the excellence of the quality of the indigo and states that the inhabitants of Mughun and Walashgird occupied themselves much in its cultivation and took a great deal of trouble over it because it sum a source of considerable profit to them (424). Wheat and barley were grown in the sardelr, but in Hurmus millet was the staple crop and the food of the inhabitants (Iştakhri, 227; Ibn Hawkal, il. 311; Hudüd al-Alam, 124, Idrīsi, 424). Cotton, well as grain dates, grown in Sirdian and Shahr-i Babak (Nushot, 141). Silk was produced in Bam ('Ibd al-'sla, 71). Asalostida

and gum tragacanth were found to parts of the province.

149

in the Middle Ages, apart from a period of prosperity under the Saldiuks of Kirman, agriculture suffered a decline. There were temporary fluctuations and local variations, but in general the agricultural recession continued until the second half of the 19th century. At that time a wide variety of crops were cultivated. Wheat and barley, though grown in most parts of the province, were not important in terms of the amount grown and some districts had a deficit. In the province as a whole, the yield and low. Some millet, and a small quantity of rice was also grown. Pulses, roots and edible gums also produced. Cotton regrown in Rafsindian (which was later, in the 1930s, to turn much cotton land over to the cultivation of pistachio trees), Kühpäya, Därzin (Dardiin), Baca, Narmā<u>sh</u>īr, <u>Di</u>iruft, Zarand and Anār. Dates were still one of the most important products of the province and came from Balk, Khabis, Bam, Dārzin, Růdbär and to a lesser extent from Küshk and Sawghān. Rāwar was noted for its figs, Bāfk for its apricots and Khabiş for its citrus fruits. Cumin was grown mainly in Küshk and Aqtas. Pistachios, almonds (mainly from Sirdjan and Shahr-i Babak) and walnuts (from Sarduya, Bardsir and Aktas) were important products. Sugar and indigo were no longer grown except on a very small scale, though an attempt was made by Wakil al-Mulk to re-introduce sugar cane together with indigo, pepper, ginger and various other Indian plants into Khabis (Houtum Schindler, Reisen im südlicken Persien 1879 . . . in ZG Erd. Berlin, xvi (1881), 357). Dye plants included henna in Narmashir, Khabis, Djiruft, and Urzūya and madder in Sirdjan, Rafsindjan, Bātk, Kübanan, Anar and Zarand. By 1880 the cultivation of benna in Bam had brought about in some measure a revival of prosperity in that district (Firuz Mirză Farmân Farmā, Safarnāma-i Kirmān wa Balūlisiān, ed. Manşûra Nizâm Māfi, Tehran 1963, 6). Silk, though a little was still produced in Bam, Rafsindjan, Bafk, Djupar, Baghin and Kubanan, had also lost its importance, though some attention appears to have been given to the cultivation of mulberry trees during the reign of Muhammad Shah (1834-48) (R. G. Watson, A history of Persia, London 1866, 354). Tobacco was grown in Zarand and Bäfk, and potatoes in the district between Sirdian and Pariz. From the late t870s opium cultivation became important in Māhān, Djūpār, Narmāshīr, Sirdjān, Bāfk, Kūbanān and elsewhere. Honey irom Akta, Bardsir and Sardüya. (See further Watlri, who gives a list of the agricultural produce of each district (buildh), and also references in E. Stack, Six months in Partia, London 1882, i, 184-238).

Sheep and goats were important throughout the province. There was much movement of flocks from the mountain districts to the plains in winter. Those from Råbur, Istandaka and the neighbouring districts went mainly was Rådbär and Djiruft. Much wook was produced, including a fine soft wool (kurk) produced by a special breed of goat. In Rådbär there were also many herds of cattle, Buffaloes were found only in Djiruft.

Minerals.—Various minerals existed in the province and many of these were exploited. Ibn al-Faidh states that there were mines of gold, silver, iron, copper, sniphur, and zinc oxide (206), but their location is not clear from his account. Mukaddasi describes how zinc oxide (faliya) was mined and fired to produce tuity (459, 470). Hamd Allah mineral describes the process as carried out in "the village

ISO KIRMÂN

of the tutty makers" as follows: the crude was brought out from the mine, moistened and made into bars imit) was gaz long, dried and put into a furnace. the action of the fire then causing the tutty to form in a thin film (Nurhat, 201), Marco Polo, who locates the mines in Kübanan, gives a somewhat similar account. Mukaddasi also states that there ____ iron and sliver mines in the province (470), the latter presumably located | the Silver Mine Mountains west of Dilruft (cf. also Hudild al-'dlam, 64). The linded ai-falore mentions lead, copper and lodestone in the mountains between Ditruft and Bam [65]. Hamd Allah Mustawii states that there was a turquoise mine and a lapis lazuli mine in Kirma. but that the turopoises were immature and unformed and therefore not of much value (Nuthat, 204, 206). Marco Polo also mentions turquoise in the mountains of Kirman, while Waziri states that there was a turquoise mine near the mountains of Maymand in the Shahr-i Babak district (164). He also mentions lead mines in Sirdjan and Zarand, of which the former produced the best quality lead (156, 178). Abbott records the existence of a lead mine in the mountains of Zarand near the village of Tugradia and states that the government took ro% of its produce (op. eit., 27). Wastri mentions a sulphur mine in Kübanân, which was in operation when he was writing (175); he also states that there were copper mines in Sardûya (113), a copper mine in operation in the mountains of Bazindian in Akta (139), and many disused copper mines in the mountains of Rabur (142-3). Salt was obtained from deposits near Khabis, Strdlan, Ra'in and elsewhere. Curzon mentions coal north of Kirman city and in Kabanan, manganese oil in Räwar, borax in Shahr-i Bābak and asbestos in Kübanan (Persia and the Persian quastion, ii, 518). Extensive mining operations are being carried on in various parts of the province at the present day. Coal and other minerals are mined in the mountains between Rawar and Zarand and copper in the Părle district.

The cities of Kirman .-- The main city of Kirman under the Muslims until the middle of the ath/roth century was Sirdian (the form Shiradian is also found), which was situated some five miles to the east III the modern town of Safidabad (Le Strange, Lands, 300). It was here that the governor (udli) resided (Ibn Khurradhbih, 49). Ibn Rusta describes Sirdiān as the greatest city of Kirman (286), as also does Istakhri (167), Ibn Hawkai (ii, 312) and the Hudad al-'alam. The last-named states that it was the capital of Kirman and the seat of the king (124). though by the time the Hudûd al-falam was written, Ibn Ilyas, the Buyid governor, had, in lact, moved capital to Bardskr. Mukaddasi states that it was the biggest town in the province (although no longer the capital) and me extensive than Shiraz (464). Hafis Abra refers to Strdian as the second city of Kirman (Diughrdfiyd, f. 140a), although it had, in fact, been destroyed in 798/1396 (before he wrote) after a long resistance by the armies of Timur. After the city was laid in rules, the name Sirdjan was novertheless still applied to the district of which it had been the centre. Towards the end of the 18th century Sandābād was founded near the site of the city. Abbott, who visited it in 1850, describes it one of the most flourishing towns in Kirman (op. cit., 63). In 1881 it was 8,000 inhabitants and appeared to be in a flourishing condition (Stack, i, 181; cf. also Waziri, 151). At the present day, the town of which Saldabad is the centre | known as Strdjan.

Bardair (Bardasir), which became the capital of the province under the Būyids, is the mediaeval name of the city now called Kinnan (Le Strange, Lands, 303). It also known as Guwäshlr. The two names, Bardsir and Guwashir, may represent the form Beh-Ardashir, the name of the town built by Ardashir, the founder of the Sasanid dynasty (Hamea Isiahani, ed. Gottwald, 46; Ibn Baikhi, Fars-name, 303). Muhammad b. Ibrāhim the names Bardsir and Guwäshir indifferently. The copyist of Iba Hawkal, writing in 550/1155, states that Bardsir in his time was a small town. It was, however, very prosperous and its surroundings, which had been brought under cultivation, were more flourishing than the town itself (ii, 309). Afdal al-Din, writing some decades later, states that it was a large city with a wall (rabad) and a subuch (shakristan). Adjoining the city outside the wall and surrounding it were orchards and villages. It had a temperate climate, good soil and good water (72). By the 10th/ 16th century the name Bardsir appears no longer to have been applied to the capital of the province. which, although still called Guwashir, was by this time more usually known as Kirman. It bad the lakab of Dar al-Aman. The name Bardsir, although it had thus consed to designate the capital of the province, was still applied to a district (Zayn al-Abidin Shirwani, Bustan al-siyaha, lith. Tehran n.d., 164). This, however, did not include the town of Kirman its environs, but was bounded on the north-west by Rafsindlan, on the west and south by Aktat and Sirdian, on the south-sest by Rain and on the north-east by Kirman (Waziri, 133). The main centre of this district, Māshīz, is also known as Bardsir.

Bam (q.v.) was the second major city of Kirman in the early centuries. The third, Dilruit [g.r.], was prosperous, commercial centre, having trade with Sistan and Khurasan (Istakhri, 166; Ibn Hawkal, ii, 311; Mukaddasi, 466; Idrisi, 422). According to Hamd Allah Mustawil, when the Muslims conquered Kirman, the region of Ditruft was wooded and occupied by wild animals. The Muslims cleared the country and made villages (140). Ditruft and its suburb Kamadin flourished until the end of the Saidiūk period. Its buildings decayed during the reign of Malik Dinar (582-91/1186-95), although the surrounding district continued to be cultivated ('Ikd al-'ald, 40). Subsequently the district decayed also. Addott, who visited it in 1850, states that is possessed only four or five collections of huts which could be termed villages, each of which had a mud fort; for the rest tribal groups from the mountain regions resided in scattered groups over the plain in winter (K. E. Abbott, op. sit., 46). Today the town which has grown up round Sabsawārān is also known as Dilruft.

The fifth of the great cities of Kirman in early and mediaeval times was Hurmuz [q.o.], situated on the Persian Gulf, It was 🔤 emperium of Kirman. Its merchanis, perhaps because of its bad climate, lived in the surrounding countryside (lytakhri, 166). In 700/1300, because of repeated raids by marauding tribesmen, the ruler of Hurmus moved all the inhabitants to the island of Djarun where he founded the town of New Hurmus (see further, J. Aubin, Le royaume d'Ormus au début du XVI : siècle, in Marc Luso-indicum, ii, Haules études islamiques et orientales d'histoire comparés, iv/5, Geneva 1973). Other important towns were Manudjan, Zarand and Narmashir. Many of the towns and villages mentioned by the early and mediaeval geographers have disappeared or have not yet been identified.

Communications.-- In the early centuries Sirdian the main centre upon which the principal roads converged. This, no doubt, in part accounted for its importance until it and destroyed in the 8th/ rath century. Three roads led from it to Fars, one via Shahr-i Bahak, epother through Sahik and a third to Navriz. Other roads went south to Furz. Tarum and Suru on the Persian Gulf, south-east to Balt, Dilruft, Manudian and Hurmus, north to Unas in Rūdan, north-east to Māshlz, Bāghin and Kirman, north-north-east to Mahan, Khabis and Khurasan, and cast to Shamat and Rahn. From Kirman (Guwashir) two roads went north-west to Yazd, one via Zarand, Rāwar, Kūbanān and Bāfk. and the other via Rafsindian and Anar. From Rawar and Kübanan roads went north-north-east across the Great Desert to Tabas and Khur respectively. South-east from Kirman a road went to Mahan, Rādn, Dārzin or Dārdilo, Bam and Narmāshir, where it bifurcated, one branch going to Faradi and Zarandi in Sistan and the other to Rigan, where It again divided, one road going east to Khwash and the other south-west to Manudian. From Darzin another road went south to Dilruft (see further Le Strange, Lands).

In the 19th and early 20th centuries communications still very backward. Generally speaking, the roads were fit for pack transport only. Moreover, many often shut for months at a time owing to the activity of bandits. In 1901 a convention wasigned between Britain and the Persian government for a three-wire telegraph line iron posts from Kashan to Baldcistan via Yazd, Kirman and Bam. It was begun in December 1902 and finished in

March 1907.

Manufactures and Trade.-In the early centuries, the province had manufactures of silk, cotton and woollen goods, which were important articles of local and long-distance trade. A cotton cloth (batā'in). which appears to have been used as lining for clothes, produced in Zarand and exported to Fars and Trak (letakhri, 167-8). Ibn Hawkal states that it was called al-Zarandiyya and taken to Egypt and the most distant parts of the Maghrib (ii, 323). There was also trade in cloth made in Sirdian (Mukaddasi, 470). The people of Bam were noted for their craftsmanship, and the cloths which were made in Bam were of great elegance and lasting quality. They fetched a high price and were exported to Khurasan, Egypt and Irak (Ibn Hawkel, ii, 312; Mukaddasi, 465; cf. also Istakhri, 167-8). Idrisi states that the cloaks of goot hair made in Bam equalled the best to be found anywhere in the world (423). Turbans of fine material were also made 🖩 Bam and were in demand in Khurasan, Egypt IIII 'Irak (Ibo Hawka), il, 312). There had mone time been a royal workshop for firax in Bam (ibid.). Cotton cloths (akmisha) were still produced in Bam at the turn of the 8th/ 24th century (cf. Rashid al-Din, Mukatabat, ed. Muhammad Shaffi, Lahore 1945, 190). In the middle of the century it was appearently still an important trading centre with India, Sistan, Khurasan and Kabul (cf. Hamd Allah Mustawfi, Tarikh-i guzida, ed. E. G. Browne, G.M.S., London 1910, 729), By the 9th/15th century, however, the textile industry appears to have no longer existed in Bam (J. Aubin, Doux sayyids de Bam an XV siècle, Wiesbaden 1956, 91-2).

Idrist states that there were teather workshops in Zarand and that girths were exported to 'Irak and Egypt (427). Marco Polo mentions the manufacture of saddles, bridles, spurs, swords, quivers and other arms in Kirman. Al-'Umari also states that swords were made in Kirman (Masālit al-abṣār, ed. K. Lech, Wiesbaden 1968, 120). In the 17th century pottery (blue and white) was made in Kirmān. According to Du Mans, the best examples of this were difficult to distinguish from Chinese porcelain (Estat de la Perse,

Paris 1890, 197).

There was considerable trade, local and long-distance, in agricultural produce, Indigo and cumin were exported to distant regions (Istakhri, 167; Mukaddasi, 470; Idrīsī, 424). Narmāshir had trade with Khurāsān and 'Umāu, and ==== collecting centre for dates, which were exported to different parts (Mukaddasi, 463). Dilruft also had a large export of dates to Khurāsān. Mukaddasi states that nearly 100,000 camels used to == out every year. The trade appears to have been carried out == a munāsafa basis, i.e. the profit === divided equally between the producer and the camel-driver (469). Khabts also exported dates to distant parts ('Ika al-'qla', 74).

Afdal al-Din states that much trade from India, Sind, Ethiopia, Zangibar, Egypt, the Arab countries, Uman and Bahrayn entered the port of Hz (which he places on the frontier of Kirman, though usually it is reckoned as belonging to Makran). Imports included musk, ambergris, indigo, valvets, cloths, and other luxury articles. Hurmuz was also an important trading centre, to which merchants came from the most distant parts (71). Later, in the reign of Shah Abbās (006-1038/1387-1620), Bandar Abbās (Gombroom [a.v.] became important port, but this did not bring at first much additional trade to Kirman, since goods appear to have gone into the interior mainly through Fars rather than Kirman. How early the long distance wool trade became important in Kirman is not entirely clear, or when carpets became an article of export and carpet weaving became important. In the 17th century wool was being taken from Kirman and Yazd to Europe. By the end of the century it am an important export in the East India Company from Persia and was used in feltings, suitings, and coverings for buttons, while III the 18th century Kirman wool for hats and shawls ----modity consistently sought after. This wool from goats and in different colours, black, white and red. The last named me highly prized (see Gombroom diery for a discussion of the arrangements for obtaining Carmanian wool. See also A. A. Amin, Britisk interests in the Persian Gulf, Leiden 1967, 126-7). During the reign of Nadir Shah (1148-60/1736-47) wool for export was in short supply because it was used for the clothing of his army, and some of the Zand rulers appear to have prohibited the export of wool because they wanted it for the internal manufacture of shawls. The situation was not improved by the desolution which Aka Muhammad Khin Kādjār carried out in Kirmān in 1794.

In the early 19th century, the main manufactures of Kirman were shawls, carpets, felts, silk and ootton cloths, leaf-sugar, matchlocks and earthenware (Malcolm, History of Persia, London 1829, ii, 166). Macdonald Kinneir in his Geographical memoir of the Persian empire states that "the trade of Kerman is still very considerable, and it is celebrated for its manufactures of shawls, matchlocks, and carpets, which they chiefly export to Khorassas and the northern provinces, receiving in return drugs, ikins (from Bockhara), furs, silk, steel, and copper. These articles as well as pistachio-nuts, carpets, roce-buds for preserves, and buillon, they send to Iedia; and import from hence tin, lead, iron, chintz, wrought silk, spices, indigo, muslin, khoemishob, gold brocade,

RTRMÄN

china and glass-ware, broad-cloth, hardware, etc." (London, 1813, 198-9). Abbott, m the other hand, states in a report made in 1840-50 that the commerce of Kirman was much restricted, though its woollen manufactures thrived. Such little importance as it had was due to the manufacture and trade in shawls and other woollen fabrics. He estimated the number of looms for shawls in Kirman city at probably 2,300 (though some put the figure at nearly double that number), for other coarser woollen fabrics some 220, and in addition was 125 looms in nine of the surrounding villages (Great Britain, Public Record Office, F.O. 60, 164, K. Abbot's report on commerce of the south of Persia. Trade report. Notes on the Trade, Manufactures, and production of various Cities and of Persia, visited by Mr. Consul Abbott in 1840-50). Wagiri, writing rather later, states that shawls were exported to Transoxania, Anatolia, Arabia and Turkistan and that there were nearly 12,000 workshops in Kirman (Djughrāfiya-yi mamlakat-i Kirman, 33). His editor states that there was a great expansion at the end of the 19th century in carpet weaving, which displaced the manufacture of shawls, but that carpet-weaving declined again very shortly afterwards (33-4). Karbas (a kind of cotton weave) was woven in many parts of the province, and there was some export from Zarand for the local market. The karbas of Rafsindjan was reported to be of excellent quality (171, 178).

In the mid-19th century some of the transit trade between Central Asia and India passed through Kirman, and there was also some direct trade between Kirmān and India. Gums, asafoetida, madder, roots, carraway seeds, siik, saffron (from Khurasan), wool, cotton and dried fruits was exported I India and Arabia via Bandar Abbās. There also some imports of English goods via India, Tabriz and Yazd (Abbott, Notes on the Trade, etc.), Abboit states that caravans from Birdian reached Khabiş several times a year. They brought wool, grain, dried fruits, silk, saffron (from Ka'in), will clarified butter, etc., a great part of which went on to Bandar 'Abbas for India. Returning caravans brought groceries, spices, indigo and English cotton manufactures for Khurasan (Geographical notes, op. cil., 34-5). Curson states that Bandar Abbas in 1880-00 me the start of the important caravan route running north to Kirman and Yazd and ultimately to Khurasan. Kirman and Yazd were mainly supplied from India with piece goods, prints and yarn, copper sheets, iron bars, lead, tin, sugar, tea, dyes, spices, glass and china; and exported in return opium, wool, cotton, madder, almonds, pistachio nuts, etc. (Persia and the Persian question, ii, 571-2). According to Waziri, various districts of Kirman took part in the long-distance trade. Among the articles which went to Bandar Abbas and thence to India from Kirman were cumin we wool from Akta and Bardsir (op. cit., 136, 138), and a variety of dried and fresh fruit and nuts, namely pears and apples from Aktac and Rabur, quinces from Akta', and raisins from Gawk; almonds from Shahr-i Babak, Gawk and Akta', walnuts from Sarduya and Aktas, and pistachlos from Shahr-i Bâbak; cotton from Sirdjan (to Bornbay) and Anar, peas from Aktat, and Bardsir and sometimes wheat from Aktas and Urzuya, and barley from the latter district also.

Abbott mentions exports from Kirman to Yazd and other neighbouring towns and villages, which included shawls, woollens, wool, opium, lead, soap, henna, indigo leaves, figs, gums and wild asses' skins (Notes on the Trade, etc.). There was also, ac-

cording to Wazīrī, some internal movement of wheat from Zarand to Yazd and Rāwar and sometimes from Urzūya to Kirmān; Sīrdjān aiso exported wheat to Yazd and Kirmān. Peaches were exported from Gawk to Kirmān and other districts, dried apricots and dried mulberries from Bāfk to Kirmān, and dried figs from Rāwar to Yazd, whence they were exported to other parts of the country and firigusafi; dates from Khabis to Yazd and Khurāsān; peas and lentils from Shahr-i Bābak to Yazd and Kirmān, henna and rang from Narmāshir a Kirmān, whence they were distributed to neighbouring regions; sometimes henna and exchanged in Sistān for clarified butter and swansdown.

Milk products were an important article of local commerce. Rūdbār exported clarified butter (rawghan) to Kirmān. Bardsir also supplied Kirmān with clarified butter and haṣḥk (a kind of whey). Shahr-i Bābak supplied Yazd, Raisindjān, and Sīrdjān with clarified butter, haṣḥk and cheese, while Kūbanān exported haṣḥk to various districts boyond the bounds of Kirmān. Lastly, wood was exported from Akṭā' to the surrounding districts and to Fārs (see further Wattri).

In 1904-5 a British commercial mission visited south-east Persia in order to encourage British trade in the area. Russian efforts were also made to increase their trade, and Russian trade agencies were established in Kirman, Bam and Rafsindjan.

Population.-The settled population appears to have been mainly of Iranian stock. Strabo states that the customs and language of the population of Kirman were similar to those of the Medes and Persians (xv.2, 14), Idrisi describes the inhabitants of Kirman (apart from the tribal population) in favourable terms. He states that they were remarkable for the purity of their customs and the grace of their character and that the merchants especially were marked by an amiability, sincerity and docility greater than elsewhere (421). Stack, writing several centuries later, remarks on the quiet and orderly habits of the people (ii, 182). Barfurashi, on the other hand, gives unfavourable account of the people of Kirman and accuses them of being given to sedition (Mufarris al-kulūb, B.M., Or. 3499, f. 1982).

The geographers of the 3rd/9th and 4th/toth centuries mention a number of tribes as inhabiting Kirmān, namely the Ķufş, (Kūlidjis, Kūč (see kurs), Balûs (Balûz, Balûč [see BALÜČISTAN]), the Djibal Bărizīs, and the Akhwāsh, all of whom were harried and, to some extent, displaced first by Muslim armies, and then by the Şaffarids, Büyids, Sāmānids and Saldjüks. When Masfüdl refers to Kurds (Ahrad) in the province it is probable that he meant seminomadic or nomadic tent dwellers rather than ethnic Kurds. The Kufs were a mountain people, as their name suggests. They possessed hards of cattle (dara') and also practised agriculture. Their main occupation was alleged by Muslim sources to be highway robbery. The Kufs mountains in which they fived consisted, according to Istakhri, of impregnable fastnesses. They were bounded on the south by the Gulf of 'Uman = the north by Dilruft, Rudbar and the Mountains of Abu Ghanim, on the east by Khwash and the desert of Makran and on the west by Manudian and Hurmuz. There were seven different mountains each of which had a chief. The early Muslim governments, unable to bring the region under their direct control, gave the Kuis leaders allowances to keep them quiet, but they nevertheless raided the surrounding districts up to Sistan and Fars. Istakhrl mentions that they men reported to have accumulated much wealth. He states that they were lean and swarthy; and that some said that they were, by origin, Arabs (253-4; cf. Ibn Hawkal, ii, 3x0; Mukaddasi, 492). The Hudid al-'diam adds that the government tax-collector ('dmil-i sulfan) did not go into the Kuis mountains and that their chiefs responsible for the collection and payment of the government tax, which would appear to have been assessed by a mukaliata contract, it also states that they spoke a special language (65).

The Balus were, according to Islakhri, herdsmen and tent-dwellers living along the western base of the Kufs Mountains were rich in flocks (164; Ibn Hawkal, ii, 310; Mukaddasi, 472). Iddisi, writing in the mid-6th/12th century, however, states that they lived at the base of the mountains to the north of the Kuis (429). They were the only people whom the Kufs feared. Istakhri's claim that they were peaceable and did not commit highway robbery like the Kuis (164) is not born out by the Hudud al-'diam (124) or Mukaddasi, who couples them with the Kufs in the matter of brutality and bloodthirstiness and in their propensity to raiding the caravan routes (488-90). Mukaddasi states that the Balus had been very numerous until the Büyid 'Adud al-Dawla [q.v.] destroyed them. The language of the Kuls and Balds, according to Mukaddasi, was incomprehensible and resembled Sindhi (471).

It would seem that, in general, Muslim writers made no clear distinction between the two groups, and frequently mention them together. Miskawayh states that the Kufs and Baios, together with the people of Manūdjān, joined Sulaymān b. Muḥammad b. Ilyas when he attempted, with help from the ruler of Knurasan, to seize Kirman from the Buyids. They were defeated by a Büyid force in 360/970, with heavy losses, and suffered further casualties when the Büyid forces pushed down to Hurmuz. The Balds, however, did not remain quiet for long. Spreading into the districts of Sirdian they made 'Ali b. Muhammad al-Bărizi their leader, and began to commit disorders. 'Adud al-Dawla then marched against them in person. They retreated into the Dibal Bariz, but were defeated in 361/972 (it, 298 ff.). Miskawayh states that those who were not killed were removed from the mountains by 'Adud at Dawla, who replaced them with peasants who received the land en a crop-sharing agreement and with persons who were not well-off (al-ahara al-mutara lo wa 'l-masturin min adjuds al-ra'iyya) belonging to various races among his subjects (if, 300). There is mention of a detachment (diayah) of Kufs in "Adud al-Dawla's army in 366/977 (Miskawayh, II, 368, and see further C. E. Bosworth, The Kulichis or Quis in Persian history, 9-28).

The decline in the power of the Kuls and Balüs ■ result of 'Adud al-Dawla's operations was only temporary. By the beginning of the Saldiuk period they were again in control of the garmate from Diffuit to the Gulf of 'Uman, though, according to Muhammad b. Ibrahim, their main location was in the Dibal Bariz ('Ikd al-'ala, 65; Muhammad b. Ibrahim. 6 ff.), They were reduced by Kawurd b. Caghri Beg [q.v.] (Afdal al-Din, Baddyi' al-arman ma wakavi' Kirmin, ed. Dr. Mihdi Bayani, Tehran A.H.S. 1326. 6 ff.). By the end of the 6th/12th century they were again operating in Dilruft and the garmeir of Kirman (Muhammad b. Ibrahim, 5ff., 182; Tarikh-i Afdal, 5 ff.). There are no references to the Kufs in the later Middle Ages, though there are, of course, many references to the Balac, who were established in Makran from the 5th/12th century and who may or may not have been the descendants of the Balüs [see MALÜČISTĀN].

Waylri claims that the Mihni tribe were the descendants of the Kufs, but produces no evidence in support of this claim. When he was writing the Mihal numbered some 700 families. They had # separate assessment, i.e. they were not included in the assessment of Diruit and Islandaka, where they had their winter quarters-and this, perhaps, suggests that they had at one time been more important. Wazīrī states that up to fifty or sixty years before he was writing the Mihni leaders had enjoyed a considerable degree of independence. In 1259/1843-4, the government seized Fath 'All Khan, their leader, and confiscated the many estates which he held in Islandaka and Dilruft (Djughrafiya, 56, 213-14, 721). According to a tradition current among the tribe, however, the Mihni came originally from Khurasan to Isfandaka in Şafawid times, when a number of tribes formed # federation under their leadership. This would more probable, and would suggest that at most only most of those recknned as Mihni today are the direct descendants of the Kuis. Their leaders claim to be descendants of Abū Sa9d b. Abi 'l-Khayr (q.v.). In 1969 the Mihni consisted the following eleven sub-tribes: the Sulaymani, Luri (who are alleged to have come to Kirman from the Mamassani in the reign of Nadir Shah or, according to another account, in the reign of Shah 'Abbasi, the Bahr Asmani, the Marki, Mukhlit, Saiar Barkh wurt, Lurt, Rahi Barci, Iskandari, Kahhuri, Pushtkuhi, and Musaffari. Washi gives a list of twenty-three sub-tribes (199), which differs slightly from the above list.

The Dibai Barizis, according to Istakhri, even worse robbers than the Kuis. They me not adopt Islam until 'Abbasid times and he alleges that they persisted, in spite of their conversion, in their evil ways. They were eventually pacified by Ya'kūb ... Layth and 'Amr b. Layth and their leaders destroyed. They too had a special dialect (Istakhri, 164, 167; Ibn Hawkal, ii, 310; Mukaddasi, 471). Whether 📖 a result of the operations of the Saffarids or because of the movements of the Kufs and Balüs, they appear have been pushed out of the Dibal Bariz region. About the beginning of the 19th century the Manzari Tawakulli tira of the Dibai Barizi apparently moved to Bazindjan, where they numbered some 4-500 persons in 1966. Waziri mentions Diabal Bărizis in Păriz (199), but whether they were the direct descendants of the earlier Djibal Barizls is not clear, Wazirī states that their prosperity is the numbers of their sheep, cattle and horses had decreased, especially from about 1860. They were engaged to some extent in trade, taking hurk, wool and cumin mainly to Bandar 'Abbas for export to India and clarified butter and kashk to Kirman (120). The Gautteer of Persia records the existence of 50 families of Diabal Barizis in Akta" in 1903 (iv (Calcutta 1910), 338). În 1960 there were a few families of Diibăi Bärizis who had manner quarters between Bäft and Rabur and winter quarters near Guláshgird (Walashgird).

The Akh "ash, the fourth of the tribes mentioned by the early geographers, centred on Kh "ash, were said to be semi-nomads. They had camels and date pains and tived in houses made of reeds (Istakhri, 168; Ibn Hawkni, ii, 313). They are not separately mentioned in later times.

Although there appears to have been some immigration of Arabs into Kirman before the Islamic conquest (Nöldeke, Gesch, der Perser u. Araber, 57)

there does not most to have been widespread settlement by Arabs in the province during the early Islamic conquests. For the most part, the Arab atrules pushed on through Kirman into Sistan and Khurāsān. So far as settlement took place, those who settled became, as in other provinces, largely assimilated to the local population. Small groups may also have been settled in the province after the period of the conquests. Yakat records the existence of descendants of the Banû Azd [see Azn] and Banû Muhallab in Difruit (Barbier de Maynard, 185). Waziri mentions the survival in Ditruft of m few families who still spoke Arabic (Djughrafiya, 119). The village known 🖿 Karyat al-'Arab, near the city of Kirman, is believed to have been originally settled by the 'Amir' tribe, who came there from Simnan. In ____ of the coastal districts, such as Bandar "Abbas, however, much of the population was Arab origin, though not necessarily Arab-speaking (cl. Houtum Schindler, Reisen im südlicken Parsien 1879, 344).

Turkish tribes, Chuzz and others, came into Kirman from the 5th/rtth century onwards. It is, however, difficult, if not impossible, to trace the changes in their locations and numbers. Whether the Saladiika, who today are to be found in Rabur, are descendants of the Saldjuks is extremely doubtful. They do not appear to have any tradition among themselves of such an origin and are now Persian-speaking. They mainly engaged in trade and for the past forty is lifty years have ceased to move from summer to winter quarters. The Khaiu, centred on Rabur with winter quarters in Shastfie, whom Waziri reckoned to be fifty families (Djughrāfiyā, 199), are related to the Salādjika. They are so called because Fath 'All (during the lifetime of his uncle Ākā Muhammad Khān) took one of their women, Fâtima Khānum, to wife after he had defeated the tribes of Rabur. She in due course became his chief wife and was known - Sunbul Bādit.

On the break-up of the Great Saldjuk empire there was a new influx of Ghusz into Kirman under Malik Dinar. The Radal tribe claim to be their descendants. In the middle of the 19th century they numbered 200 families and lived in black tents in Narmashir, Rigan and Rudbar. Their hidens lived in the fortress of Kahnû in Rûdbâr, which had been built by Malik Dinar (Waziri, 108, 123). In 1903 they are recorded as comprising 700 families (Gasetteer of Persia, iv (1910), 337). In 1960 their winter quarters were in Minab and Rudan and their summer quarters in Ustur, Balward, Sirdjan and Cahargunbad.

There was further movement of Turkish tribes into Kirman during the Mongol, Tlmurid and Şafawid periods. When exactly the Afshar [q.v.], who appear to have migrated westwards with other Chuzz tribes in the 5th/11th century, settled in Kirman is not known. There - already an Afshar presence in the province at the beginning of the roth/r6th century (cf. 'Alamard-yi Shah Ismil'il, ed. Asghar Muntazir Şahib, Tehran A.H.S. 1349, 326). Their hhans held governments there in the Şafawid period. On the death of Nadir Shah, Shahrukh Khan Afshar, who was settled in Zarand, temporarily extended his power over the whole province. In the 19th century the Afshar were the most important of the tribes of Kirman. They consisted in Waziri's day of 52 subtribes (#ra) and ca. 1,000 families (ibid., 145, 198-9). Sheil, writing rather earlier, put their numbers 1,500 houses (Note m the tribes by Sir J. Sheil, in Lady Sheil, Life and manners in Persia, London 1856, 398), which would suggest that Wazirl's

figures may be an underestimation. Today their summer quarters are between Baft and Sirdian and their winter quarters in Urzaya and Dasht-I Bar. Their numbers in 1960 were estimated at ca. 20,000 and they were divided into 18-20 fires. Among other Turkish tribes in Kirman in Safawid times there were the Kara Oghlanu, a branch of the Karamaniu. whose khāns held governships in Aktā' and Urzūva towards the end of the period. By the time Waziri writing, the tribe had become much weakened (ibid., 143). A few Tekkelu are said to have fled to Akta' in the reign of Tahmasp and to have been absorbed in due course by the Kara Oghland (ibid., 144). Of the various other Turkish tribes, the most important were probably the Kara'l and the Bućakči. The former, according to Sheil, numbered 700 families (op. cit., 308). Wazirt put them at 800 (ibid., 100), but by 1003 they appear to have declined to some 600 (Gazetteer of Persia, iv [1910], 137). The Bučákčí, according to a tradition current among themselves, was brought from Kara Dagh to Fars in Safawid times to act as wardens of marches and later moved to Kirman, According to Waziri they numbered 200 families, and many of them settled in their summer quarters around Balward (ibid., 154, 199). Some of them had winter quarters in the neighbourhood of Bandar Abbas. By 1903 their numbers had changed little (Gazetters of Persia, ix [1910], 337), but by 1960 they numbered some 2,000 families. Some of their three were Turkl-speaking, others Persian-speaking, and some of them were settled. The Shul, who formerly belonged to the Alshar federation, had by 1903 Joined the Bučakči and numbered some 90 familles (ibid.). In 1960 there were fifty families of Shul Turks settled near Sirdian, who claimed that their forefathers had come from Fars at the beginning of the 19th century. The Gasetteer of Persia mentions 250 families of Kara Koyumlu in Aktac in 1903 (lv, [1910], 338). It is possible that they were descendants of families left behind in Kirman by the Kara Koyunlu in the 9th/15th century. They appear to have been subsequently absorbed into the Alghar and in 1960 were reckuned among the Aishar ifras.

In the early 18th century a number of Lak tribes moved from Färs to Kirman and established their winter and summer quarters in Urzūya and Aktat respectively (Waziri, Diughtafiya, 144). They numbered some 2,000 families in 1903 (Gazetteer of Persia. iv [1910], 338-9). Shell put the 'Ata Ilabi, whom he described as Laks, at 3,000 tents and houses (Note on tribes by Sir Justin Sheil, in op. cit., 398). According to Wazīrī, the Atā Ilāhi had cultivated land and cettle in Sirdjan and Shahr-i Babak. They were Ismifils and numbered some 150 families (Divehedfiye, 157, 199). In 1960 there were ____ 2,500 Laks in the neighbourhood of Basindjan. There are, or were, various other tribes and sub-tribes in the province whose origins and difficult to establish. Most of them are semi-nomadic and their numbers very

small.

The internal organisation of these various tribal groups appears to have been broadly similar. Most of the tribes had a ralls or leader, whose office appears usually to have been hereditary within a family. Larger tribes m federations, such as the Aishar, had an Ilahanl. Each tribe was composed of a number of tires, under a keakhudd, whose office was sometimes hereditary but more often subject to election by the elders (righ safid) of the Mrs. The latter were composed of ihsham, i.e. groups of, perhaps, 5-12 families, each under a risk sajid. The

number and size of the firm varied widely with the presperity of the tribe. Success brought new followers, while faikure or weakness caused the dispersal of its existing followers. The collection of taxes from the tribe and the decision of disputes were usually an outsider became responsible for the payment of the taxes to the government. Thus Muhammad Ibrahim Khān, the grandson of Zahw al-Dawla, became responsible for the taxes of the Mihnt tribe and for those of Islandaka and Rahur (ibid., 56), while Muhammad 'AB Khān Waziri was charged with the collection of the taxes in the Afshār of about 1870 and had the title ilbegi (ibid., 51). In recent years the tribal structure has largely broken down.

In the present state of our knowledge it is not possible to give a breakdown of the population at different periods. From time to time, conquest brought about a transfer of power from one group to another, a redistribution of land and the emergence of new factions, but we are ignorant of the details of these events. It would seem likely, in view of the flourishing trade of Kirman in the carry centuries that the merchants formed a prosperous community, but that their importance declined with the decrease in trade. Aubin in his monograph entitled Drus sayvids de Bam an XV sidele has studied the functions and influence of local religious leaders in the Timurid period. Some information on the leading families in the 19th century is to be obtained from Waziri (op. cit.). In Kirman, as elsewhere, in Persia, the atyan were composed of landowners, triba! leaders, religious dignitaries and merchants. dividing lines were not always clearly drawn. Marriage alliances between them were common. Governors and local officials were also included in the acyan, and often used their official position to acquire wealth and land. In the 5th/12th and 6th/12th conturies the leading officials of the bureaucracy were rich and influential. It is not always easy to decide what was the basis of a family's influence, whether it was government office, trade, landownership or religious leadership, for all might be combined in one family. But governors changed frequently and though they sometimes settled in the province, the government of which they had held, the system did not make for the emergence of families who retained their pre-eminence over a long period. Some of the local sayyids were among those who could perhaps trace their influence back furthest. Waziri states that there were families of sayyids in Bam and Narmashir who had held property there for over 400 years (thid., 202). One, the Kadi family of Bam, had held the office of hadi there from generation to generation (ibid., 97). There appears also to have been some movement among sayyids. Thus, the Mirza'l sayyids, who came to Bam about 2770, were by origin from Tabria. One of their number, Hadidii Sayyid 'Alī Khān b. Ḥādidil 'Abd al-Wabhās, --made ralls of Bam and Narmashir by Muhammad Isma'll Khan Wakli al-Mulk (who became governor of Kirman in 1860) and put in charge of diwas taxation and the thallisadiat of Bam. This, however, proved disastrous for the family: he was a spendthrift and men dismissed, and all his estates and those of his apphows were taken in lieu of arrears. But their fall was only temporary, and when Waziri was writing they were again a rich and respected family (ibid., T00-11.

As elsewhere, it was not uncommon for the religious classes and the merchants to be closely affied, either through marriage — by actual participation in trade,

Thus, Hadidi Sayyid Mustafa b. Hadidi Sayyid 'Abi 'I-Ma'sum, II Ridawi sayyid, who owned numerous villages and hamlets and many hards of carnels and flocks of sheep and goats, had agents and partners in Bandar 'Abbās, Yazd and elsewirero, who traded on his behall (ibid., 158-9). There was also movement from merchant families and craftsman into the religious classes. Hādidi Akā Ahmad b. Hādidi 'Ali Kirmāni, who belonged to a merchant family, studied jūkh and became a muditahid. He owned much property in Rafsindjān and elsewhere (ibid., 44-5).

Two families were especially prominent in Kirman in the 19th and 20th centuries, those of Zahir al-Dawia Ibrahim Khan b. Mihdi Kuli Khan b. Muhammad Hasan Khān Kādjār Kuwanlu and Muhammad Isma'il Khan Wakil al-Mulk Nuri, both wbom had been governor of the province. Their fortunes illustrate the with which government officials were able to acquire wealth and property and become part of the local atjust. The first, Zahlr al-Dawla Ibrahim Khan (d. 1240/1824-5), who became governor of Kirman in 1216/1801-2, settled in the province. where he and his descendants acquired property (ibid., 54 ff.). He himself bought some of the estates of the heirs of Aka 'Ali Waziri (see below) in lieu of arrears due from Mirza Husayn b. Aka 'All (ibid., 170). His grandson, Muhammad Ibrāhim Khān, acquired villages in Islandaka and Ditruft through marriage to a daughter of Fath 'All Khan Mihul. He also founded new estates in those regions libid., 56). [Jādidjī Mūsa Khān b. Zahīr al-Dawla's daughter married Mirza Abu I-Hasan b. Aka Ibrahim of the Miczā Husayn Khān family. Wazīri alleges that whoever in Kirman married into the Zahir al-Dawla family tended to become pulled up with pride because of the wealth of his wife (ibid., 69-70). The second, Muhammad Isma'll Khan Wakil al-Mulk, whose family came from Nur in Mazandaran, was sent as pishkêr to Kirman and Balacistan in 1275/ 1858-9. In 1277/1860 he became governor of the province, holding office until his death in 1284/ 1867-8. He exerted great efforts in the development of Kirman and Balüćistan. He made a number of kandts and gardens, and revived much khalisa land which had fallen out of cultivation or into a bad state of repair. He rented these for a lump sum, which transaction proved extremely profitable. He was also a great builder and made many caravansarals, hammins, ribājs and other huildings. His son Murtada Kuli Khan Wakii al-Mulk was governor from 2286/1869-70 to 1295/1878 (see further Asad Allah Nuri Islandiyari, Tarikh-i Khanawada-i Isfanaiyari, Tehran A.H.S. 1329). Both Muhammad İsma'lı Khan and Murtada Kulı Khan acquired extensive estates in the province and established links with the local a yan through marriage alliances. Muhammad Isma'll Khan gave one of his daughters to Mirza Chulam Busayn b. Aka Ibrahlm, who owned estates round the town of Kirman. This Gholam Husayn belonged to a family of sayyids originally from Diruft (Wastri, op. cit., 69), and his maternal grandmother was a sister of Mirza Husayn Wazir (see below).

In the local government offices there was often an hereditary tendency. For example, the office of halantar [q,v.] of Kirman had been in the Kalantar family since the time of Shah 'Abbas. From towards the beginning of the 19th century they also held the office of dabit of Khabis and Gawk and from about the middle of the century the collection of taxes of the environs (hauma) of the town of Kirman was also entrusted at them. Muhammad Zaman Kalantar

and his father Mirzh Kaşim Kalântar were blinded by Āķā Khān Mahallāti in 1257/1835-6. Ḥādidīt Mirzh Abu 'l Ḥasan b. Mirzh Ḥasan Khān, m nephew of Mirzh Kasim Kalāntar, was the kalāntar and dimil of Sirdiān, and also the head of the Ni'mat Allahi order. Another member of the family, Mirzh Husaya Khān b. Mirzh Yûsut, acquired many masdrs' and gardens in Khabiş and Gawk, where he was for years in charge of the collection of dimin taxes. Mirzh Mihall Khān b. Mirzh Muhammad Khān (muhāshir) iii the tax administration in Khabiş, where he too acquired desirable estates. He was m capable man, but tyrannical in the matter of tax-collection ('timili) (ibid., 63-5).

Another family which to have risen to prominence through the holding of government office was the family of Mirza Mail, who was made musicust of Kirman in the reign of Muhammad Shah. His son, 'All Akbar, became kadkhuda and darugha of Kirman city and dabt of Strajan in 1238/1842-4. While holding the latter post he acquired riches and bought property in the environs of Strajan and in Bardstr, but dissipated much of his wealth towards the end of his life. His son, Yabya, became kalantar of Kirman. Another branch of the family held the office of kadhhuda of Kirman. When Waziri writing, Mirza Zayn al-'Abidin was kadhhuda and known the kadhhuda-bāṣhī although he did not have any authority over the kadhhudās

of the other quarters (ibid., 65-8).

Among the oldest families of Kirman was the Waziri family, who traced their origins back to the Kutlugh Khan, Barak Hadib (see Bunas Hadis), the founder of the Kara Khitay or Kutlughkhani dynasty [q.v.], who died in 632/1234 (see below). At the turn of the 18th century the family was mainly engaged in trade but also owned land, Aka 'Ali, the head of the family at the time, having many estates in Aktās, Kushk and Khināmān. He 🚥 taken as a hostage by Karim <u>Kh</u>ān Zand to <u>Sh</u>irāz, **——** be became acquainted with Aka Muhammad Khan. On the death of Karlin Khan, Diastar Khan gave money to Akā 'All and sent him back to Kirman on the understanding that he would bring Kirman over to Dja'far Khan's side. After the death of Dja'far Khān, Ākā 'Alī threw in his lot with Āķā Muhammad Khān and refused Lutf 'Alt entry | Kirmān. The latter, when he subsequently took Kirman seized Akā 'All's possessions, put two of his nephews. Mad! Khan and Sadik Beg, in prison, and fined his son, Mirtà Husayn, heavily. He also took one of his daughters to wife and gave another to his uncle, Nasr Allah Khan. The former was later married to 'Abd al-Rahim Khan, the brother of Hadidi Ibrahim Shirati [q.v. in Suppl.]. Aka 'Ali, who had been sent to Tehran by Baba Khan (later Fath 'All Shah), reported these happenings to Aka Muhammad Khan and encouraged him to set out for Kirman, which he did in 1208/1793-4, accompanied by Aka 'All. When Aka Muhammad Khan, after defeating Lutt 'All gave the town of Kirman over to pillage, he exempted from this mi residence of Aka 'Ali, and several thousand persons are alleged to have taken refuge there and escaped slaughter. Akā Muḥammad Khān made Āķā 'Alī's son, Āķā Muḥammad Taķī, governor of Kirman, which office M held until the death of Aki Muhammad Khan, and another son, Mirzā Husayn (d. 1270/1853-4), his treasurer (pundukdar). The mother of the latter, an Işfahânî, === a Mir Muhammed Raft' sayyida on her father's side and a Şafawl sayyıda on her mother's side. When Aka Muhammad Khan returned to Shiras he took

Aka 'AE and Mirzi Husayn with him. The former apparently died in Shirks shortly afterwards. Towards the middle of the reign of Fath 'All Shah, Husayn was appointed waste of Kirman, which office he held until about the middle of the reign of Muhammad Shāh. He had many estates in Akta", Urzūya and Kūthk. The office of ea'ts and 'amil (tax-collector) of the districts of Akta', Urrilya, Küshk www Şawghan remained in his family for many years, and his descendants owned villages, gardens, flocks and herds in these districts. Muhammad 'All Khān, Āķā 'All's grandson, was 'dmil of the districts of Aktā', Urzūya, Kūshk and Sawghān and of the Afshar tribe for over twenty-five years. From about 1870 he had the title of sibest. In addition to the properties he inherited, Muhammad 'All founded many villages in Urzūya and Aktā". His position as tax-collector enabled him to usurp the estates of his uncle Mirză Husayn Wazir and his cousin 'Ali Muhammad Khān after their deaths (ibid., 6t). His brother, Abn 'l-Käsim Khån also usurped **en o**f the properties of 'Ali Muhammad in Akta' and Urzūya. He founded other properties us well and gradually became a wealthy man. A third brother, Murtada Kull, bad numerous estates in Urzūya, Aktac, Kushk and Bardsir, some usurped, some bought and some founded by himself. He put money out with merchants and others. He owned herds of borses and flocks of sheep (ibid., 5 ff., 58 II., 62). A grandson of Aka 'All, 'All Muhammad Khan, mar-ried his cousin, | Kūčik, | daughter of Mhra Husayn b. Aka 'All: their son was Ahmad 'All Khān Wazīri, author of the Diughrafiyd-yi mamlakat-i Kirmān and IIII Tārīķķ-i Kirmān. Ali Muhammad Khan is said to have brought back six handis in Sawghan into a flourishing condition (ibid., Aḥmad 'All Khān Waxlri, unlike his forebears, did not enter government service, but occupied himstif running his estates. He appears, however, to have received a government pension (mugarrari) (Waziri, Tári<u>kā</u>-i Kirmān, ed. Bāstānī Pārizi, Tehran 1961, introduction).

Waziri mentions another old family, the Akayan of Anar, who traced their origins back to Bahadur Idgu Bariss, who had been governor of Kirman in the time of Timur. For years we tamily had held the office of ra'ts of Anar, but by Waziri's time they had fallen on evil days and become poverty-stricken (Diughrafiya, 183). For the rest, most of the families mentioned by Waziri had risen to prominence in recent times.

In the middle of the 19th century, partly as a result of the increase in the price of agricultural produce and the revival of long-distance and local trade, there appears to have been a revival in the prosperity of the merchant class and also m strengthening of their links with the landowning class. This was notably the min Rafsindjan. Waziri relates that a certain Hadidii Aka 'All of Rafsindian had landed estates worth over 100,000 filmdns and partners and agents in Bombay, Yazd, Işfahān, Tehran, Mashhad, Tabriz and Istunbul, whereas thirty years before he had not owned property worth 2,000 tilmdes (ibid., 168-9, 172). Among merchant families in Kirman city, Waziri mentions that Hádidi! Muhammad 'Ali Amin al-Ra'aya b. Hádidi! Muhammad Ibrāhim b. Hādidi! Aliāhvardī Kirmāni, who was the ra'le al-tudidiar of Kirman. His father and grandfather had built many caravansersis, baths and mosques in the city of Kirman and elsewhere. He himself had acquired many estates in the district of Khabis and in Mahan. According to Waziri, he

showed little seem for the poor and the deserving (ibid., 78).

Warlt meets that between about 1844 and 1874 there was a great increase in the wealth of those holding land, due, he states, I the high prices for cotton and madder which had prevailed for several years in India and for grain in Persia. Persons whose property thirty years before he was writing had been worth 1,000 thindes were then receiving an income of 2,000 tumbes from their estates, and those who had formerly been prepared to sell a hamlet or piece of cultivated land for a song to pay their tax demands would not then sell for 3,000 m 4,000 thinkins. This was especially the case in Sirdian, Rafsindian and Urzūya. 📰 alleges that the condition of agricultural labourers had also improved, so much so that they were better off than had been the seems of hamlets formerly. Many of the agricultural labourers of Raisindian become hadidis. Flockmasters, because of the rise in the price of kurk, had also become rich men (ibid., 168-9, 158).

Religion.-In Sasanid times, there were in addition to Zoroastrians a number of Nestorian Christlans in Kirman. The bishop of Kirman was under the metropolitan of Fars. Conversion to Islam after the Arab conquest sees slow. The province was exposed to Kharidil influence in the 1st century and to some Isma'll activity in the late 5th/11th and early 6th/rith centuries (see below). Mukaddasi states that the Khawaridi had a Friday mosque in Bam. According to his account, the dominant rite was the Shafi'l one except in Dilruft. The fuhaha' were not numerous; among them the aki al-kadilk formed the majority except in Hurmuz (468-9). Aidal al-Din praises the good religion and orthodoxy of the people of Bardair. He alleges that Kirman was free from every kind of heresy and that the people were either Hanafis or Shatists. Yakut states that the inhabitants of Kirman will virtuous, honest, and very attached to Sunnism and orthodoxy (483). Under the Safawids, Kirman, like the rest of the empire, accepted Ithea 'ashari Shi'ism. In the roth century Shaykhis [q.v.] gained many adherents in Kirman, as also did the [q.v.]. The office of Shayah al-Islam in Kirman was held in the middle of the 19th century by Ridawi sayyids, who were Shaykhla (Waziri, Diugheafiya, 52-3). Factional strife between Shaykhis and Balasaris was common. Under the Timurids the Ni mat-Allahi dervish order. founded by Shaykh Ni'mat Allah Wali (d. 843/2432), gained many followers in Kirman and elsewhere. Shaykh Ni'mat Alläh's ahrine at Mähän, near Kirman, has remained one of the main centres of the order.

Zoroastrians appear to have maintained themselves ■ community in Kirmān city, though in greatly reduced numbers, until modern times. Tavernier puts their numbers at 10,000 in the middle of the 17th century. In the reign of Shah Sulayman (1077-1105/1667-94) they man removed from the city at the demand of the 'ulama'. They built a suburb to the north of the town. They were plundered by the Alghans in 1133/1720-1 (Waziri, Dinghedfiyd, 28; Tärikh-i Kirmän, 294). Khanikoff states that there wure 12,000 Parsi families in Kirman before its destruction by Aka Muhammad Khan in 1794. Thereafter, their numbers declined. According to Abbott, there were only 250 families in Kirman in the middle of the 19th century. Of these some 40 families lived in the villages around Kirman, and the remainder in the town (Notes on the trade, etc.). Waziri put the number at 200 families (Djughrā/iyā, 40). În 1903

the total number of Zoroastrians was said to be 1,700 persons (Gazetteer of Persie, iv (1910), 349). A small community of Hindus from Shikarpüt to have settled in Kirmän time after 1810. They were engaged in banking and trade with Karachi, Bombay, Sind and the Punjab (Stack, I, 215; Curzon, il. 244). The export trade of Kirmän was largely in their hands in the 19th century (W. M. Floor, The merchants (hujjar) in Qājār Iran, in ZDMG, exxvijt (1976), 121).

History.--Kirman in many ways developed along different lines from the rest | Persia. It was distant from the early capitals of the caliphate. Its mountain fastnesses could not be easily controlled and local leaders were often able to their independence. Thus each of seven mountains which constituted the Diabal Kufs region had ■ separate leader in early islamic minus The Lut prevented easy access from Khurāsān and Sistān, while the inhospitable country to the north-west discouraged expansion from and into the Dibal. It was ideal country for dissident groups and - of the regions where the Azarika [q.v.] carried un their resistance to the caliphate. Its abundant pastures attracted tribal groups, but the broken nature of the country militated against the formation of large tribal kingdoms. Lack of communications tended to isolate the province but trade with Central Asia, India and the Far East and with other parts of Persia was, nevertheless, important, though subject to interruption by local outbreaks of disorder.

The Arab conquest of Kirman as recorded by ai-Balādhur! (Fulāh, 315, 391 ff.) was begun about 17/638 by al-Rabl' b. Ziyād, who was sent by Abū Mūsā al-Ash'arī [q.u.], then governor of Basra on behalf of the caliph 'Umar. Al-Rabi' conquered Singian and made terms with the inhabitants of Bam. Another Arab expedition was sent about the same time by the governor of Bahrayn, 'Uthman b. Abi 'l-'Aş al-THakafi, who killed the maraban of Kirman in the island of Abarkawan. The conquest of Kirman was not, however, completed. In 29/649-50 Yazdagird, the last of the Sasanid kings, fled from Isfahān to Kirmān and thence to Khurāsān. Most of the Arab army under Mudiashi' b. Mas'ild al-Sulami sent by 'Abd Aliah b. 'Amir in pursuit of him perished in the snow at Baymand (in the district of Sirdian). Mudiashi', appointed governor of Kirman by Ibn Amir, subsequently took possession of the chief towns up to the Kuis mountains. A counter-attack by the Persians from Hurmuz was defeated. Further details concerning the early conquests are uncertain and variously recorded (see al-Ya'kūbi, Buldan, 286).

Under the Umayyads, Kirman became a theatre for the activities of the Khāridits. In 68/687-8 the Azārika fled to Kirmān. About 73/693 they sembled and under Katari b. al-Fudjā'a [q.v.] seized Fars and Kirman, being joined by a number of the local inhabitants. They extended their activities to Trak. Harried by al-Muhallab, they withdrew again to Kirman. By about 79/608-9 they had been exterminated by him. Kirman nevertheless continued to be a hothed of rebellions and a lavourite asylum for rebels. Ibn al-Ash ath [q.v.] took refuge there briefly ca. 82/701-2 or 83/702-3. I 201/719-20, the rebel Yazid b. Muhallab, who, during his father's lifetime had for a period been governor of Kirman, appointed a governor over Kirman. After the failure of his rebellion, from about 102/720 the Umayyads (in whose name several coins struck at Kirman survive) seem to have exercised control over the province, often through the governor of Khurasan,

who would administer the province through a deputy. In \$20/738 Muhārib b. Mūsā, a supporter of 'Abd Aliāh b. Mūsāwiya b. Dia'iar, who had turned out Marwān's governors from Fārs, made inreads into Kirmān but was later routed by the supporters of Marwān. In \$31/748-9 an Umayyad army set out from Kirmān to oppose the 'Abbāsid army under Kahṭaba, which had advanced on Ray, and was defeated near Isinhān.

Under the early 'Abbāsids, governors were appointed over the province, which continued for the most part to fall under the general control of Khurā-sān, 'Abbāsid coins struck in the province in the year 165/781-2 and 167/783-4 survive. During the reign of Hārûn al-Rashid rebellion spread to Kitmān when Hamza b. 'Abd Allāh al-Sharī occupied Harat in 179/795 and extended his authority to Fars and Kirmān, where there were still a considerable number of khārīdjis, who appear to have recovered from defeats inflicted on them in late Umayyad times (see further Gb. H. Sadighi, Les mouvements veligieux venniens au II' et au III' siècle de l'higira, Paris 1938, 54 ff.).

Ihn Balkhî gives figures for the revenue of Kirmân at this period. In 200/815-16 Fârs, Kirmân Wumân were assessed at 2,600,000 dinārs, a new assessment having been necessary because the registers had been destroyed in the civil war. Another assessment made by 'All b. 'Isâ in the reign of al-Muktadir was rather lower, namely 2,331,880 dinārs, of which Kirnân and 'Umân accounted for 444,380 dinārs. After various deductions the net sum going the diwân was 364,380 dinārs (Ibn Balkhī, Fârs-nāma, 171).

A succession of governors, some of whom from the time of al-Muftaşim onwards were Turks, ruled the province until the callphate of al-Muhtadī, when Muhammad b. Waşil al-Tamimi rebelled in 250/864-5 and seized Färs and Kirman. Al-Muftamid - his accession to the caliphate sent an army against him. The two armies met near Ahwas and the caliph's force was defeated. About the same time Ya'kûb b. Layth moved into Kirman and took possession of it. Some of the supporters of Muhammad b. Waşil joined him, while the remainder set out for Fårs. Ya'küb after spending some two months in Kirman, marched into Fars in 253/867. Both he and his brother 'Amr after him appointed governors over Kirman. The latter, after he was defeated by al-Muwaffak in Fars, retired to Sistan in 274/887-8. but in 280/893-4 al-Mu'tadid made peace with him and re-appointed him over Fars, Kirman and Sistan. After the death of 'Amr, his grandson Tähle governed Fars and Kirman until 205/907-8, when it passed into the hands of Subkarl (?Sebük-eri), who was defeated by a caliphal army in 298/911 or 299/912. in 317/929, however, the Saffarid Abu Djaffar Ahmad b, Muhammad b. Khalaf b. Layth was able to send a military force to Kirman to collect revenue.

Meanwhile, the Samanid kingdom was in the throes of revolt. One of Nasr b. Ahmad's amirs, Ahū 'Alī Muhammad b. Ilyās, had seized Nīshāpūr. When Nasr recovered the town in 320/932, Muhammad b. Ilyās went to Kirmān and established himself there. In 322/934 Mākān b. Kākī drove Muhammad out and took possession of the province on behalf of the Samanids. In either 323/935 or 324/935-6 Makān left the province to undertake operations against Wushrnghr in Gurgan. Muhammad b. Ilyās returned and attempted to restore his authority. Meanwhile Ahmad b. Būya (later Mu'izz al-Dawla) had advanced Ekirmān and when he reached Sirdjān in 324/935-6

the Samanid amir, Ibrahim b. Simdiar, who besieging Muhammad b. Ilyas, withdrew to Sistan while Muhammad b. Ilyas retired to Khurasan. Mutizz al-Dawia then undertook operations against the Kufs and Balus, the details of which are variously recorded (see above). In 326/937-8 he was recalled to Baghdad. After the withdrawal of the Buyids, it appears that Muhammad b. Ilyas returned to Kirman. He acknowledged the Samanids in the chuthe and received in 348/959-60 m banner and robe of bonour from the caliph al-Muti'. Somewhat later, quarrels broke out between Muhammad b. Ilyas and his sons, and he was finally persuaded to abdicate in favour of Llyasa'. In 356/967 'Adud al-Dawla took 'Uman and invaded Kirman. Bardsir fell in Ramadan 357/August 958 and Hyasa' fled to Khurasão. 'Adud al-Dawla, having received a diploma for Kirman from the caliph, then appointed his son Abu I Fawaris Shirail (later Sharaf al-Dawla) governor and returned to Shīrāz. In 359/969-70 an abortive attempt me made by the Samanids to regain possession of Kirman with the help of Sulayman b. Alf b. Ilyas. In 364/974-5 al-Husayn b. (?) Muhammad b. Ilyas placed himself at the head of a group of malcontents in the garmsir but was defeated and captured (see further C. E. Bosworth, The Bank Hyas of Kirman (320-57/932-68), in Iran and Islam, ed. idem, Edinburgh 1971, 107-24). The period of the Banû llyas at time of disorder during which the revenues of the province dissipated (lbn Hawkal, ii, 315). Under Adud al-Dawla the province appears to have been highly taxed compared in the reign of al-Muktadir. According to Ibn Balkhi, the total revenue of Färs, Kirmän and Uman, together with 'ushr levied at Strat and Mihrüban on goods imported by sea (?"nghr-1 maghra'a-yi darya?1), in the time of 'Adud al-Dawla was 3,346,000 dindrs, of which Kirman, Tiz and the coastal districts of Fars (? bulkk) accounted for 750,000 dinars (Fars-nama, 172). After IIII death of 'Adud al-Dawla in 372/ 982-3, his descendants began III fight among themselves for the province and a period of some confusion followed. Mahmud of Ghazna in 407/2016-17 attempted to instal his nominee in the province but without lasting and in 424/1033 Mastud b. Mahmud temporarily occupied it (C. E. Bosworth, The political and dynastic history of the Iranian searld, in Cambridge History of Iran, v, 13; = also abū kālī<u>di</u>ār).

In 433/1040 the Saldiuks defeated Masfud at the battle of Dandankan [q.v. in Suppl.], and some two years later in 433/1041-2 Kawurd Kara Arslan Beg b. Caghri Beg b. Mikā'li b. Saldjūk [q.v.) was sent by Toghril Beg to conquer Kirman. This attack was repulsed by Abū Kālīdjār in 434/1042-3. A second expedition in 440/1048 was more successful, the governor, Bahrām b. Lashkar, surrendering the province without war. The Kufs, however, resisted but were defeated (see above). Käwurd, who established his rule in Kirman, made two attempts to usurp the sultanate. On the first occasion in 459/ 1066-7, Alp Arslän marched against him and defeated him, but reinstated him in Kirman in his former position (Ibn al-Athle, x, 36-7). After Alp Arsian left the province, Kawurd went to Balüčistan, repaired the port of TIz and appointed governors over Makran. He also conquered 'Uman, which remained in Saldiük hands until the death of Arslan Shah in 536/1141. When Alp Arslan died in 465/1072, Kawurd inade his second attempt to claim the sultanate. According to one account, he wrote to Malik Shah stating that he was more fitted to succeed on the grounds that he was Alp Arsiān's eldest brother [Sayyid Şadr al-Din al-Ḥusayni, Akhbār al-dawla al-Saldjūkiyya, ed. Muḥammad Ikbāl, Lahore 1933, 56). According to another account, some of Maik Shāh's assure invited him to come (Muḥammad b. Ibrāhīm, 12-13). He — defeated near Hamadān, and taken prisoner and killed. The Saldjūks of Kirmān did not, however, come to an end with Kāwurd: the dynasty founded by him was to last some 130 years, during which the province enjoyed, on the whole, prosperity and peace.

The Saldinks of Kirman bad a reputation for justice and caring for their subjects. Käward took measures to establish security on the roads, and erected pillars at intervals along the Barn-Fahradi road so that travellers would not lose the way: he also built caravanserals and water tanks (Muhammad b. Ibrahim, 10-11). Kawurd, Turan Shah b. Kawurd. Arslan Shah b. Kirman Shah and his wife Zaytūn Khāton, and Mubammad b. Arslan Shāh were all great builders. The latter built a library for the Turan Shah diami, which contained 5,000 books on different branches of learning. Some of them were also patrons of the religious classes. In the reign of Arslán Sháh b. Kirmán Sháh, the 'ulama' are alleged to have come to Kirman from far and wide. His son, Muhammad, gave pensions to the fukaka' and during his reign there was, according to Muhammad b. Ibrahim, a spread of learning and a tendency for craftsmen to send their sons to study fikh (20). Some of the officials and amirs of the Saldjüks were also builders and patrons of the religious classes. The atabeg, Mu'ayyid al-Din Rayban, made many charitable foundations and constituted awaif for their upkeep (Tärikh-i Afdal, 36).

Although the Saldjuks of Kirman were familiar with city life, their existence was closely bound up with the well-being of their flocks. They habitually spent seven months of the year in Bardsir and five (from Adhar (Nov.-Dec.) to Urdl Bibisht (April-May)) in Diruit, their flocks moving with them. Their financial position to have been favourable until towards the end of the dynasty, and Bahram Shah b. Muhammad, under whom the decline of the dynasty set in, succeeded to well-filled treasury. Throughout Kawurd's seign of 34 years the value of the coinage remained stable (Muhammad b. Ibrahim, 4). Trade probably contributed to this favourable situation. Kamadin, even towards the end of the period, was still imimportant centre of long-distance trade and ""a place where strangers from Anatolia and India and travellers by land and sea lodged, and was full of wealth" (Tärikh-i Afdal, 41, 69). Some of the ministers and amirs owned considerable estates. Mu'ayyid al-Din Rayhan appears to have let his money out to merchants and others, who presumably worked it for him (cf. Taribb-i Affai, 40). The pay and allowances of the military following of the ruler (hasham) were controlled from the centre [cf. Tárikh-i Affal, 34]. The troops mainly Turks, but there were also some Daylamis. They received allowances and idda's, mainly, according to Afdal al-Din, in the district of Sirdian, where "a great amir with a large force was always stationed because it was on the frontiers of Fars" ("Ikd al-"ald, 74). The total number of the military following of the rulers and their amirs was not large. Kāwurd, when he came to Kirmān in 433/1041-2 had, according to Muhammad b. Ibrāhim a farce of 5,000 = 6,000 (2). The rival groups who disputed supremacy in the province at the end of the period and during the period of Ghuzz ascendancy were on the whole not large. Malik Dinar is said to have ruled over 20,000 men (*1kd al-*4la, 20). Muhammad b. Ibrahim credits Kuth al-Din Muhariz and Nizām al-Din Muhamdd, the Shabankara swirs, with having a force of 10,000 men, horse and foot, when they came to Kirnay in college to the communication.

when they came to Kirman in 596/1199-1200 (179). Kawurd was succeeded by his son Kirman Shah, whom he had appointed to act in his stead during his absence me the campaign against Malik Shah. Sultan Shah, who had been taken captive with his father Kawurd, escaped from captivity and was brought to Kirman, His brother had meanwhile died. and in 467/1074 he ascended the throne in Kirman. in 472/1070-80 (or according to some sources rather earlier). Malik Shah went to Kirman and besieved Sultan Shah in Bardsir. After some seventeen days the siere was raised. Sultan Shah was confirmed in his government and Malik Shah returned to Istahan. Sultan Shah was succeeded by his brother Toran Shah in 477/1085. His reign was me the whole uneventful. In 487/1094 he made an abortive expedition into Fars. He was followed by his son, Iran Shah in 190/1009. The latter appears to have been won over to the Ismáfilis. A number of amirs had recourse to the Shaykh al-Islam, the hadi Djamal al-Dia Abu 1-Me'ali, who issued a fajæa for his death. Iran Shah Red, but was overtaken and killed, and Arslan Shah Kirmān Shāh placed the throne in Mubarram. 495/October 1701 with the joint support of the amirs and the hadis. He reigned for 42 years and under him the dynasty reached its greatest heights. He married a daughter of Muhammad b. Malik Shah. He appointed, as had his predecessors, skillings over Uman and attempted also to extend his dominion over Fars. He defeated Cawit Sakāō in 508/1114-15. and the death of the latter in \$10/1216-17, Muhammad b. Malik Shah appears to have considered the threat posed by Saldiths of Kirman to Fars to be a real one (Ibn al-Athlr, x, 364). Towards the end. of Arsian Shah's reign, disputes arose between him. and 'Ala' al-Dawla, the ruler of Yazd, Bahram Shah b. Mas'od, the Chaznavid, when he was defeated by his brother Arslan Shah, sought the help of Arslan Shah b. Kirman Shah. The latter treated him with layour, but refused to help him on the grounds that he did not wish to interfere in affairs which properly concerned Sandjar. In 537/1142, Muhammad b. Arslan Shah | his father aside because of his advanced age and seized the throne, in spite of the fact that another son, Kirman Shah had been appointed. salf 'ahd. A third son, Saldjük Shah, after making an abortive attempt to seize the kingdom, fled to 'Uman, where he continued to constitute a potential threat to Muhammad. The fact that the latter is said. to have appointed sakib ahabars in the towns within his kingdom and to have had an excellent information. service perhaps suggests that there was unrest or hidden opposition to him. However that may be, Kirman continued to prosper under Muhammad. He extended his rule over Tabas and his successors conlinuad to appoint shikes over that city for some years. There was also a proposal by Rashid Diamadar, the governor of Isfahan, to hand that city over to Muhammad, but the death of both parties in 551/x156 brought the plan to nought.

Muhammad was succeeded by his son Toghril Shah, a somewhat trivolous character, and there was during his reign a decline in public morals. However, Kirman still enjoyed security and prosperity under his rule (*1&d al-*&id, 2; Tarikh-i Afdal, 30; Muhammad b. Ibrahim, 35). There was a total eclipse in the month of Urdl Bihight 557 hheralil/April-May

1160 ("The al-"did, 8; Terikk-i Aidal 30). In the last years of Toghril Shab's reign, power was in the hands of the Atabes Mulayvid al-Din Rayban, who, on the death of Toghril Shah in 565/1170, placed the latter's son, Bahram Shah, on the throne, though not before Turkish troops had plundered Ditruft and carried off the cattle (mardhib wa suturan) of the non-Turks and the bureaucracy (Tārikh-i Afdal, 33, 36). His succession and disputed by his brother Arslan, who was joined by the Atabeg Kutb al-Din Muhammad b. Buzkush, and a period of internecine strife ensued. A third brother, Turan Shah, sought help from the Atabeg Zangi of Fars and advanced on Sirdian, but was put to flight by Arslan, while Bahram Shah retired to Khurasan to seek help from the Ghuzz leader, Malik Mulayyid, A second attempt by Turan Shah to seize the province also defeated. Bahram Shah, having obtained reinforcements from Malik Mu'ayyid, advanced in 566/1171 via Sistăn and Makrăn on Difruft and put Arelân's forces, which had been weakened by disease, to flight at Kamadin, which the Khurasan army then plundered. Subsequently, heavy impositions were laid upon the people of Bardelr, who were reduced to misery. Arslan, meanwhile, with support from the Saldick ruler of Trak, Arslan b. Toghril, returned and besieged Bahram Shah in Bardsir. After six months, Bahram Shah and his supporters, who were short of suppties, made peace. Bardsir, Sirdian, Dilruft and Khabis went . Arslan and Bam and Makran to Shah. Peace, however, did not last; Bahrām Shāh again appealed to Khurasan for help while Arslan had to 'lzz al-Din Langar, the ruler of Yazd. Shah was put to flight and Arslân entered Bardsir in 560/1174. Some years later, Bahram Shah retook Bardsir. In 570/2174 be died. A further period of strife and disorder ensued, the main roles being played by the stabegs and amira acting in the name of one or other of the Saidiūk princes: inroads into the province were also made by the forces of the atabegs of Fars, Yazd and 'Irak. Under Türän Shäh, who eventually defeated Arslän, the Mu'nyyidi ghulams (i.e. the followers of the Atabeg Mu'ayyld ai-Din Rayhān) played a dominant role (cf. Tarikh-i Afdal, 79). The Atabeg Rayhan was persuaded to return to Kirman from Yazd, to which he had withdrawn seven years earlier, but retired again almost immediately because of his advanced age. By this time, the province had become improverished. Aidal al-Din describes its condition in the following words: "every year the unfortunate peasants used to take loans or sell their substance (khān u mān) to buy soed grain from Tabas or elsewhere. They would sow it only for another to harvest it and eat it" (81; Muhammad b. Ibrahim, 99; cf. also "Ihd al-'ala, 13 ff., 77 ff.). At! kinds of impositions and fines were meanwhile laid upon the population by the contending amirs in order to support their forces. Little money remained in the treasury, and in 575/1179 the Turks rioted and killed a number of leading officials of the bureaucracy (Tarikh-i Afdal,

New disasters were meanwhile in store for Kirman. About 574 or 575/2179, Suitan Shah turned the Ghuzz out of Sarakha and some 5,000, with their families and flocks, came to Kühinan, plundered the countryside and went on to Zarand and Baghin. The Atabeg Tekelle of Fars, who at the time held Sirdian and Furg, sent a force against them. Together with the Kirman army, it was defeated in 575/2179-do and the Ghuzz spread into the garmair, where they committed pillage and waste. In the years 575-6/

1179-80 or 576-7/1180-1 there was a severe famine in Bardsir (Tarikk-i Afdal or: "Ikd al-"ald, 97). In the winter of \$77/1181-2, the Ghuzz again set out for the garmstr. Afdal al-Din states that since they had now come to stay, they began to develop and cultivate the districts of Dilcuft and Narmashir and paid some consideration (mura all to the peasants (bdsyde), and brought from Isfahan, Sistan and Fars goods, beasts and booty which they took from caravans and accumulated in the garmeir and the sardsir. (Tarikh-i Afdal, ost. They also took several fortresses into which the remnants of the Turkish forces had retired. The sandsir, however, to which the nominal rulers of the province were confined, remained in a state of distress. In 579/2283-4 Türin Shah was killed by a group of amirs, who released Muhammad Shah b. Bahrām Shāh from the fortress where he had been imprisoned and placed him on the throne. In 580/ 2184-1 famine again broke out in Bardsir. In the following year 581/1185-6, Malik Dinir with some 80 mm to Rawar and Khabis from Kabanan, intending to join the Chuzz in Narmashir. Some 300 men from Bardsir set out to prevent his advance, but did not dare to join battle with him (Tarikh-i Afdal. 105). In 582/1186 Muhammad Shah set out for 'Irak to seek help against the Ghuzz. The following spring, Bardsir surrendered to Malik Dinar. Muhammad Shah, who had failed to obtain belp from either Trak or Tekkele in Fars, returned briefly to Bam. He then went to Sistan and from there to the court of the Kh "arazm-Shah Takish. He finally took refuge with Shihab al-Din, the ruler of Ghur and Ghaznin, In \$83/1182-8 = abortive attempt was made to read the khadea in Bardsir in the name of a Saldink princess, Khatun Kirmani, a daughter of Tochril (Muhammad b. Ibrāhīm, 146).

Malik Dinar, having established himself in the district of Dilruit, struck coins and read the kantha in his own name. In Diumādā I 582/July-August 1186 he set out for Bardsir, but lack of pasture and the ruin of the countryside appear to have provented him from establishing himself there, and the town remained for some time in the hands of the Saldiak forces until it surrendered on Radjab 583/11 September 1187. During the next two years, Malik Dinar was occupied in extending his power and putting down local pockets of opposition. He then made expedition to the south, took Manudian and extracted 2000 diadra tribute from the ruler of Humbit (Muhammad b. Ibrāhīm, 154). Revenue um also collected from the Makranat (al-Mudaf, 5). Bam, which had been in the hands of an amis, Sabik 'All, did not however submit until ca. 588/1192. In 589/ 1193 Mailk Dinar was again in the south and met the ruler | Kays, who promised him tribute. The death of Mailk Dinar in 591/1195 was followed by new outbreaks of disorder. He man succeeded by his son Farukh Shah, who rapidly dissipated the conof the treasury which Malik Dinar had laborlously accumulated (ibid., 164). Unable to establish himself, he had recourse to the Khwaraum-Shah for help, but died in 592/1196 before this could arrive. Meanwhile, on the one hand the Ghuzz began to commit disorders and pillage m unprecedented scale while on the other the amirs were rent by faction and disunity.

The period of Ghuzz ascendancy, was a time of misery and distress for the people of Kirman. The province was subjected not only to the ravages of the Ghuzz, but also to incursions by the rulers of Fara and Khurasan, or their assers, who from time to time established a temporary ascendancy in different

parts of the province. Trade was brought to standstill and agriculture to ruin, even though the members of the warring factions were small—to be numbered in hundreds rather than thousands. The Chuzz flocks commonly grazed the crops of the settled people, and in addition they levied a quarter of the share of the crop remaining to the landlord, after the payment of government dues to provide for their followers, although certain persons, mainly belonging to the religious classes, see exempted from this leve (at Mudol, 10-20).

For a time the situation was extremely confused. until the Shabankara amirs, Kuth al-Din Muhariz and Nizām al-Dio Mahmūd, defeated the Ghuzz in sor/1200, appointed a deputy over Kirman and cetired to Färs. Shabankara rule proved no less harsh than that of the Ghuzz (Muhammad b. Ibrahim, 183 IL, al-Muddf, 10 fl.). Finally, the population rose against them. Further disorders ensued until a group of the amirs, townspeople and imims of Bardsir. fearing renewed attacks by the Ghuzz, decided to hand the town over # 'Adjam Shah b. Malik Dinac, who, after a period spent at the court of the Khwarazm-Shah, had returned to Bam and placed himself at the head of the Ghuzz in that district. New forces arrived from Fårs under Umåd al-Din Muhammad b. Zaydan, Sa'd b. Zangi's nephew, and they recaptured Bardsir, About 601/1205 an expedition into Kirman made by Kh "adja Radi Zawzani, a Kh "arazm-Shahi amir, who had been M Kirman on several me casions and acquired many estates there. In 603/1207 another expedition came from Fars. Later Sa'd b. Zangi came himself to Kirman and undertook operations against the Ghuzz. They submitted in 605/1200 and Sa'd b. Zangi returned ■ Färs. When he appointed officials over Bardsir in that year, he is reported by Aidal al-Din to have levied a quarter of the net income of the landowners by way of tax, but in 606/1210 this appears to have been increased to one-third and the exemptions formerly allowed by the Ghuzz to certain members of the religious classes and others withdrawn (al-Mudof, 20, 42). Wassal states that the taxes of Kirman were not sufficient for meeds of the kingdom and the wages of the army, and so Sa'd b. Zangi issued # decree for additional levy of one-tenth ("usbri) on funded estates, which was called fidyat al-mullah. The people complained of this levy and it was abolished (Tárikh-i Wassaf, 151). According Aldal al-Din, Sa'd b. Zangi bought up much dead [and spent its development whatever he received from the diman of Kirman (al-Mudaf, 42). Meanwhile, Khwadia Radi Zawzani's forces, who alleged to have committed great oppression, came into conflict with 'Izz al-Din Fadiun, Sa'd b. Zangl's representative, we returned to Khurāsān in 606/1210.

Zangid supremacy in Kirman was fleeting. In 600/1213, a Khwarazm-Shahi amir, Kiwam al-Din Mu'ayyid al-Mulk, also from Zawzam, asked the Khwarazm-Shah Muhammad b. Takauh to give him Kirman and in Ramadan of that year, having received the title of malik, he set out from Zawzam for Kirman (Fasihi Khwaii, possibly mistaking the kharādif year for the kalāli, appears to put these events in the year 603, Mudimal-i Fasihi, ed. Mahmud Farukh, Mashhad A.H.S. 1239-41, ii, 281, Djiruft and Barn surrendered and also Bāfk and, tinally Bardsir in Salar 610/June 1213, Mu'ayyid al-Mulk then made an abortive expedition against Fars, which he abandoned when part III his army deserted. In or about this year there was an outbreak

of plague (? mebi) which spread from the south to Bardsir and was accompanied by heavy loss of life (at-Muddf, 46 ff.).

Among the amies of the Khwarazm-Shabs was a pertain Abu 'l Fawiris Kutlugh Sultan Barak Hadjib (see BURAK HADJIB), who had been in the services of the Gur Khan of the Kara Khitay [q.v.]. He rose to the position of hidish to the Kh "arazm-Shah 'Ala' al-Din Muhammad and became atabog to his son Ghivath al-Din Pir Shah. The latter, after the fall of 'Als' al-Din, appointed him governor of Islahan, but he, seeing the disorder into which the affairs of the Kh arazm-Shah had fallen, set off with his followers for Kirman intending to proceed to India. Having reached Kirman, he joined battle with the governor of the province, Shudjas al-Din Abu 'l Kasim, defeated him and besieged his son in Bardsfr. When Djaiāl al-Din Mangubirnī returned from India some months later, Barāk Hādilb requested from him the government of Kirman, Dialat al-Din, having little choice in the matter, agreed and gave Barak Hadib the lakeb of Kutlugh Khan (for which reason, the dynasty which he founded is sometimes known as the Kutlugh-Khānid dynasty), and went himself to Trak and Adharbaydian, Barak Hadiib later apparently demanded and received from the caliph the title of "sultan," and the sources refer to the rulers of the dynasty m sulfan and their rule as saltanat. When Ghiyath al-Din subsequently to Kirman and sought to establish himself there. Barak Hadjib, after first temporising, finally seized and killed him. He then sent an envoy to Ögedey offering submission and in return confirmed in his possession of the province of Kirman, which he held for fifteen years. He had four daughters, the eldest of whom, Sevinč Khatôn, was married to Čaghatay, while the other three married into the family of the Atabegs of Yazd. His son, Rukn al-Din Kh "adiadiak was sent to and at the Mongol court and was with Ogedey in the time of his father's death, which took place on so Dhu 'l Hididia 632/6 September 1235 (the accounts of these events given by Nasir al-Din Munshi Kirmani, Simi al-vila, ed. Abbas Ikbal, Tehran A.H.S. 1327, 22 ff., Djuwayni, Djakan-gusha, and Nasawi, Histoire du Sultan Dieigl al-Din Mankobirii, ed. and tr. O. Houdas, Paris 1891-5, vary somewhat).

After the death of Barak Hadib, the Kutluch sultans, although their status was that of local rulers rather than governors, had mill independence. Mongol amies who had come m baskaks to Kirman are mentioned at the court of Kuth al-Din = 655/ 1257 (Simt al-fuld, 38). All the contenders for power among them appear to have found it necessary to obtain the support of the Great Khan or the Ilkhan for their cause. Many of them made marriage alliances with the Mongols. Barak Hadib was succeeded by his nephew, Kutb al-Din, who shortly after his accession, married Barak Hādjib's daughter, Kutlugh Terken. However, when Rukn al-Din, who had obtained a yarken for the province of Kirman from Ögedey, approached the province, Kuth al-Din felt it necessary to set out himself for the Mongol court to seek support. Rukn al-Din, having reached Bardsir in 633/1236, took possession of the province and suled for some fifteen years. Kuth al-Din, unable to oust his cousin, who was supported both by Ogedey and Caghatay's wife, Sevine Khatun, remained for a while at the Mongol urds and was then sent to Mahmud Yalawač, the Mongol governor of Khitāy. In 646/1248, when Mengu Ka'an successed Güyük, Kuth al-Din obtained a parifek for Kirman

and set out for the province. On his approach, Rukn al-Din abandoned the province. After appealing in vain for help from the caliph al-Musta'sim, he went to the urdu of Mengu Kā'an, where 🖼 case between him and Kuth al-Din was referred to the Mongol court (yargha). After examination, Mengu handed Rukn al-Din to his cousin, who killed him and then returned M Kirman. Diuwayni mentions that he saw Rukn al-Dīn in Almāligh in Ramagān 651/ December 1253-January 1254 (Diahan-gusha, il, 217). When Hülegü crossed the Oxus in 654/1256, Kuth al-Din came to his camp at The and was given permission to return to Kirman provided he came back with an army to join the Mongol forces in their march on Baghdad. He fell ill, however, in 655/1257 and the following year.

Terken Khaten, Kuth al-Din's wife, was put the throne iii Kirman amid general acclaim, and subsequently received, after she had had recourse to Hülegü in person, a yarligh authorising her to act for Kuth al-Din's sons, who were still children. She ruled some 25 years, during which time Kirman prospered. Many learned men among the 'ulama' and merchants resorted to Kirman during her reign. It was then also that Marco Polo visited the province. When the Caghatay horde crossed the Oxus in 668/ 1270 to attack Abaka's domains, Terken Khatun sent Hadidiādi Sultān b. Kuth al-Dlo to Khurāsān with an army to support Abakā. She also tried to strengthen her position by marrying her daughter, Padisháh Khātūn, to Abakā. However, when Hadidiādi Sultān came back to Kirmān be sought to curtail the influence of Terken Khatun. See repaired to Abaka's court to complain of this and was well received. On her return to Kirmin, Hadidiadi Sultan retired to India, where he spent the next ten years. Finally, and sultan of Dihli provided him with an army to retake Kirman. III will out, but died en route and the army returned to India. (The Simt al-fuld gives 690/1291 in the date of his death. It is presumably an error.)

Dialal al-Din Suyürghatmish b. Kutb al-Din, Terken Khātūn's step-son, who governed the western part of Kirman on her behalf, also apparently went, with her approval, to Abaka's ande while he was in Khurāsān. On his return to Kirmān, Suyūrghetmi<u>sh</u> had his own name inserted in the khujba alongside of Terken Khātūn. To complained to Pādighāh Khātun, and received a yarligh forbidding the interference of Suyunghatmish in the affairs of Kirman. The latter then had recourse himself to the Mongol court. When Abaka died in 680/1281, Terken Khaton immediately set out for Tabriz to ensure her position. The Ikhân, Ahmad Tegüder, however, dismissed her and appointed Suyürghatmish in her stead. She was imable to make her reinstatement, and spent the winter in Barda'a. The following summer, she went to Tabriz where she died. Suyurghatmish, who reached Kirman in 681/1282, took possession of the province unopposed. After **accession** of Arghina (683/1284), Bib! Terken, Kuth al-Din and Terken Khatun's eldest daughter, whose son, Nuprat al-Din Yülükshäh, was powarful at the Mongol court, accused him of peculation in the collection of taxes. He was dismissed, his accounts demanded, and officials sent to Kirman to collect the taxes. By the expenditure of considerable sums of money, Suyürghatmish appears to have obtained permission to go to the Mongol court and there, by further penditure, to have reached a compromise with the Mongol authorities. By this his half-sister, Padishah Khātān (who had been marxied to Abakā) was given marriage to Gaykhātū, while Suyūrghatmish was married to Kürdüdjin, the daughter of Mengil Temür b. Hülegü and Abish Khātun, the daughter of Sa'd b. Zangi, and Suyürghatmish undertook to pay annual sum for Kirman of 600,000 dinars, against which, however, he was allowed as expenses (ikheadial) for his administration and military forces, etc. 390,000 dindes (Simf al-fuld, 57). During Suyurghatmigh's absence, there was apparently an outbreak of famine in Kirman. The price of wheat rose and the Turkomans rioted and plundered the city. He restored order on his return. He then proceeded to expend considerable sums of money mucharitable works: he built a madrese, a thankah and a hospital, and constituted webfs out of khelisa property for their upkeep. He also extended his patronage m the religious classes (Simt al- ala, 58). During his reign. Makran was reduced and tribute exacted. There were, however, renewed encroachments into the province by the Karawan (Nikūdāris), who had already in 677/1278-9 invaded Kirman from Statan. In 680/1281-2 they penetrated to the Persian Gulf and in 683/1284-5 plundered the neighbourhood of Bardsir (see further P. Pelliot, Notes - Masco Polo, I. 183-96 (art. Cerannas) and J. Aubin, L'athogonèm des Caraunas, in Turcica, I (1969), 65-94).

On the death of Arghun in 690/1291, Suyuruhatmish, taking advantage of the disorders which had ensued, asserted his independence. In the winter of the following year he went to the garmair and took Hurmuz. Returning to Bardsir, he reassessed the kingdom and laid down that the taxes should be colected in three instalments (Simf al-fuld, 63). Meanwhile, Gaykhātu had sent Padishāh Khātun to Kirman as governor. She immediately seized Suyürchatmish and imprisoned him (691/1292). His wife Kürdüdin contrived his escape, but he was recaptured and killed in 693/1294 (the sources differ in their relation of these events). In 694/1294-5 Kürdüdjin, encouraged by the rise of Baydû, laid siege to Bardsir and captured and put to death Padishah Khatun. Kürdüğin than ruled the province, though there was beside her ■ Mongol bashāh (Simt al-fulā, 77).

Bayda we overthrown almost immediately by Ghāzān Khān, who while still in Khurāsān appears to have sent Mels to Kirman to collect money for the Khurasan army (mál-i čieth-i Khurasan) (Sim) alfuld, 78). Once Châzân had established himself 🖿 likhān, he appointed Muhammad Shāh b. Hadidiadi Sultan, who had been m his court, over Kirman. During the early years of Ghāzān's reign, Kirmān was the scene of internecine and factional strife between Muhammad Shah b. Hadidiadi and Süyükshah, we of the sons of Bibl Terken and brother of Nusrat al-Din Yillükihäh, and between rival amira and officials (Simi al-fuld, 79 ff.). Demands for ever revenue, including taxes for the Khurasan army, were made; on one occasion a yarligh was issued for the payment of two years' is from Kirman (Simt al-'wid, 83). There were also renewed attacks by the Karawun E 698/1298-9. In the following year, Fakhr al-Din, who had well appointed menis of Kirman by Ghasan, proceeded to the province accompanied by a number of smirs. His behaviour provoked an uprising and he and his followers were seized and killed. The revolt spread. The rebels took refuge in the town of Bardsir and besieged by the Mongol forces, which, although they received reinforcements from Fårs, Luristån and Yazd, were unable to take the town. Chāzān, who 🖿 the time was in Diyar Bakr 🖿 the neighbourhood, summoned Muhammad Shah IIII sent him back to Kirman m governor with a number of other officials. The siege continued for ten months. The defenders were reduced by famine and finally, according to Wassal's account, the city's defences were destroyed by siege engines brought from Fars, where they had been made by experts summoned from Mawsil, and the city fell. The ringleaders were put to death and Suyükshah Tabriz, where he me executed (Simt al-tula, 85 ff.; Wassaf, 426 ff.). The province was in a miserable condition and the treasury empty. The Karawun meanwhile renewed their attacks. A substantial remission of taxation given (Sint al-fula, 94), but the ensuing improvement was cut short by the death of Muhammad Shah in 703/1303-4 (Wassal gives the date of his death = I Diumada I 702, 434). Shah Diahan b. Suyurghatmish, who was at the time at Ghazan's court, was appointed to succeed him. At some time during the reign of Chazan or Öldjeytii, Rashid al-Diu's son Mahmud appears to have been governor of Kirman and to have committed extortion against the people of Bam (cl. Muhdiabdi-i Rashidi, ed. Muhammed Shaff', ro ff., and also 261). On the death of Öldleyill, Shah Diahan attempted unsuccessfully to establish his independence. He was dismissed after a reign of some two-and-a-half years, and with him the dynasty to an end. He was replaced by Nāşiz al-Dîn b. Muhammad b. Burhan, a descendant of Shihab al-Din Churi, in 704/2305 (Kāshāni, Tāribit-i Öldieytii, ed. M. Hambly, Tehran 1969, 43).

Kirman was ruled for the next few years by Mongol governors until it was taken in 740/1340 by Mubaris al-Din Muhammad Musaffar, who was married to Kutlugh Khan, the daughter of Shah Djahān b. Suyūrghatmish. An attempt made by Kuth al-Din b. Dialal al-Din b. Kuth al-Din to regain the city with the help of reinforcements from Harat was repulsed and Mubariz al-Din, who had temporarily withdrawn, retook the city in 74t/ 1340. Bam, which was ruled by a governor appointed by Abo Sa'd, held out and was not captured until three or four years later. Meanwhile, the Ilkhan empire was rent by war and faction. In 748/1347 Abu Ishāk b. Mahmūd Shah, the Indjū'id ruler of Isiahan, attacked Sirdian and destroyed the town, but left the citadel unreduced. After continuing his march Kirmán, he then retired M Shiráz without joining battle with Mubariz al-Din. During a second expedition, he was deleated by Mubariz al-Din and again retired to Fars. Meanwhile the Diurma's and Ughānān, some of whom may possibly have been the descendants of the Mongol detachment which had been sent to Kirman in or about 683/1284 under the leadership of Ughan (Simt al-fuld, 58), were committing renewed disorders III the south of the province. Mubăris al-Din marched against them. The campaign was inconclusive and the Ughanan and Diurma's continued for many years to disturb the province, in spite of the fact that they frequently served in the ruler's army (in which they proved to be an extremely unreliable element). In 753/1352 renewed encroachments into Kirman by the Indju'ids were repulsed near Rafsindjan. Mubariz ai-Din then extended his power over Fars and appointed his son Shudia al-Din governor of Kirman in 754/1353-4 (though he did not reside permanently in the province, taking part in military expeditions in Fars and 'Irāķ-i 'Adiam). In 757/1356 Mubāriz al-Dīn was again briefly in Kirman and undertook a campaign against the Ughanan and Diurmans, who had been committing disturbances. Muhāriz al-Dīn's death in 765/1364 was followed by a period of internecine strife

and faction. In Kirman, the governor Pahlawan Asad rebelled. After an inconclusive battle with Shāh Shudjat - Kirmān, Pahlawan Asad retired into the city, but submitted after a siege of several months (Ramadan 775-Radjab 776/March-December 1374). On the death | Shah Shudias (286/1384), his son, Sultan Ahmad, went to Kirman as governor. In 787/1335-6 he read the khulbs in the name of Timur. When the latter set out for Fars in 789/1387, Sultan Ahmad repaired to Timur's camp, was favourably received and given the government of Färs, 'Irak and Kirman, Internecine strife, however, continued the Mugaffarids in Kirman and elsewhere, until finally they were overthrown by Timbr in 795/1393 and Idgü Bahādur Barlās appointed governor of Kirman (see further, the supplementary chapter on the Muzaffarids in the Tarikh-i guzida). The province was in a state of disorder, and Idgu had to establish his authority by ■ series of military operations. On Timur's death in 807/1405, he recognised Shihrukh. The province was nevertheless subject to pillage and disorder in the struggles which ensued between the various Timurid princes. Idgü died in 810/1407 and was succeeded by his son Safid Sultan, who was assassinated almost immediately on the instigation of his brother, Sultan Uwaya, Disorders continued (see further, J. Aubin, Deur sayyids de Bam au XVe siècle, 20 ft.). Agriculture declined; Hafiz Abrit states in the Zubdat al-tandchh-i Baysunghuri that wherever the army of Mirrà Iskandar (d. 818/1415-6) passed through, no building or cultivation was left, and in the Djughrafiyê he says that wherever Mirzê İskandar went he sacked everything, destroying buildings, cutting down trees and sending troops into all districts so that there was not a single would of Kirman which not devastated (quoted by Aubin, op. cit., 35-6). In 819/1416 Sultān Uways - besieged in Kirmān by a Timurid army, and in the following year there a severe famine in Kirman accompanied by a heavy loss of life. Shahrukh then sent Sayyid Zayn al-'Abidia to the province to restore agricultural prosperity. He devoted his efforts to the revival of amid) which had fallen out of cultivation. In the tirst year 250,000 manns of wheat were sown. Various tax reductions and remissions were also given to the peasants (Häliz Abrū, Dinghrāfiyā, f. 173b, quoted by Aubin, 50). On the death of Shahrukh in 850/1447. there was renewed anarchy until Djahanshah b. Kara Yusuf, the Kara Koyunlu, sent his son Abu 'l Hasan Klaim Mirza to take possession of the province. Conditions showed little improvement (see Abū Bakr Tihrani, Kitāb-i Diyar Bahriyya, ed. F. Silmer, Ankara 2964, ii, 334 ff., and Aubin, 58 ff.). Heavy taxes and dues were imposed m summer and winter crops and irregular levies made on the peasants; many properties were usurped by the government and walf revenues selzed for the payment of the military (Aubin, 69-70). Abu 'l-Kasim Miras adopted the practice of billeting his followers the province with all the attendant evils of such a practice (Kitáb-i Diyar Bakriyya, 302). On the death of Djahanshah, confusion and disorder prevailed in Kirman until the Ak Koyuniu succeeded in establishing their rule. For a time Kirman was governed by Zaynal, the third son of Uzun Hasan. In 909/1503 the province came into the possession

In 909/1503 the province came into the possession of Shah Isma'dl. Some six years later, Kirman, was invaded by the Uzbegs and suffered much damage ("Alamārā-yi Shāh Isma'dl, 326 fl., 333). According to Wazirl, the first Safawid governor of Kirman was Muhammad Khān Ustādilu (Tārlāh-i Kirman, 255;

KIRMĀN

see also K. Röhrborn. Provinces und Zentralespalt Persions im 16, und 17, Jahrhundert, Berlin 1966, 111. From 930/2524 to 2000/2592 the province was under governors belonging to the Afshar tribe (ibid., 31, 37). According to the late Salawid manuals, the Tadhkirat al-mulük and the Dastile al-mulük, Kirman was one of the thirteen beglarbegis of the Safawid empire (Tadhkirat al-mulak, ed. V. Minorsky, G.M.S. London 1943, 163; Muh. Taki Danishpazhuh. Dastur al-mulük-i Mirza-Rafi'a wa tadhkiral al-mulük-i Mirra Samt'a, in Rev. de la Faculté des Lettres et des Sciences Humaines, Tehran, 1vil1-2 (1068), 75). For one or two years from 998/1590, however, part of the province, and from 1068-0/1658 to possibly 1106/1694 the whole of the province, was khassa i.e. under the direct administration of the central envernment) (Röhrborn, 120, 122), From 1005/1506 to 1011/1621-2 it was under the governorship of Gandi 'Ali Khan, though during that period he was frequently absent from the province with the Kirman army on military campaigns with the shab. During his government he built a number of caravanserais and bazaars in Kirman city and elsewhere in the province.

During the reign of Shah Sultan Husayn, Kirman subject to renewed inroads by the Balac. In or about 1234/1722 the Kirmanis appear to have appealed to the Aighan Mahmud for help. Fill came to Kirman and stayed for nine months, when he returned to Kandahar because of disturbances there. In the following year he came back, but it seems that the people were not prepared to receive him on this occasion and resisted his entry. He laid siege to the citadel, which fell. After plundering the countryside he continued his march to Işfahān (Miczā Mibdl Astarābādī, Djahāngushā-yi Nādiri, ed. Sayyid 'Abd Allah Anwar, Tehran A.H.S. 1301, 12). In 1139/1726 Mhzā Sayyid Ahmad, who was descended from Shah Sulayman's eldest daughter, who had married Mirza Dawod Mar'ashi, seized Kirman and assumed the title of skills. From there he to Fars, where was defeated. He came back to Kirman, but whatever support be may have had there had disappeared, and so he went via Bam and Narmashir to Bandar Abbas, which he temporarily occupied. Eventually, after further adventures, he me captured by the Afghans and executed in 1140/1728 (J. R. Perry, The last Safavids, 1722-1773, in Iran, ix (1971), 59-20). After Nädir Shah defeated Ashraf at Isfahan in zraz/zyao, the Aighans abandoned Kirman.

Under Nädir Shäh, the province suffered further disasters. In the winter of 1149/1736-7 he marched through the province on his way to Kandahär and so denuded the people of supplies that there in famine for seven or eight years afterwards (L. Lockhart, Nadir Sheh, London 1938, 112). Disturbances in southern Persia in 1156/1744 and in Sistan in the spring of 1139/1746 brought the province into a state of confusion, and in the summer of that year a revolt broke out. It was on a small scale, and was speedily suppressed. In 1160/1747 Nädir Shäh again passed through Klimän and treated the province with great severity (ibid., 259). His death in that year was followed by anarchy and renewed encroaching by the Afghäns and Balló.

It was not until 1272/1758 that Khuda Murad Khan Zand took possession of Kirman on behalf of Karlm Khan Zand. During the period of his rule, Kirman was less troubled by disorders and impositions by the government than had been the case under the Afshars, and on the death of Karlm Khan in 129/1779 remained little affected by the struggle

between the Zands and the Kadiars until 1205/1700. when Lutf 'Ali [a.v.], the last of the Zands, marched against Kirman. Its governor, who had been appointed by Aka Muhammad Khan, agreed to submit but refused to come to Luti 'All's camp. The latter thereupon besieged the town. Lack of supplies forced him to raise the siege and leave the district. Subsequently, having been defeated by Aka Muhammad Khan near Shiriz in 1206/1700-1, he fied to Tabas. Offers of support from some of the khans of Narmashir induced him to return to Kirman. He attacked the city and took possession of it in 1208/1701-4. Akh Muhammad meanwhile advanced and faid siege to the town. After some four months, the population were reduced by hunger and a group of the defenders opened the gates on 20 Rabi' I 1200/24 October 1704. The surrender of the city was followed by a general massacre-the culminating disaster in the long series of calamities which the province had suffered during some four centuries. Lutt "All escaped, but was captured in Bam and handed over to Aka Muhammad Khān. Meanwhile Akū Muhammad Takl b. Ākā Ali [see above] became governor of Kirman and held office until the death of Aka Muhammad Khān.

There appears to have been some lear that the disaffection caused by Aka Muhammad Khan's brutality towards the people of Kirman, coupled with the failure of the government to control raiding and disorder by the Balue might give rise to a desire for secession from Persia. Because of this, and partly, perhaps, as an result of the influence of Sumbul Bādjī, Fath 'Alt's Kirmāni whie (see above), Fath 'Ali Shah appointed Ibrahim Khan Zahir al-Dawla (see above) governor in 1218/1803. He held office until his death in 1240/1824-3 and was the first of a number of Kādjār princes to be appointed governor of Kirman. Under him the province enjoyed for the first time for many years a period of security. He repaired sandts, fostered trade and agriculture (acquiring many estates himself in the process), and encouraged a revival of learning, inviting to the province 'ulama' from Bahrayn, Khurasan, Fars and elsewhere (Shaykh Yahya Ahmadi Kirmani, Farmandihan-i Kirman, ed. Bastani Parizi, Tehran A.H.S. 1344, introd., 3). He also made a successful expedition into Balüćistan. This favourable situation did not, however, last. His son, Abbas Kuli Khan, who succeeded him as governor, attempted to throw off control, and in the succeeding years there were a number of disturbances and perennial outbreaks of disorder by the Balûć. In December 1831 'Abbās Mirch was sent to the province to restore order. His efforts were only partially successful. After he left the province there - renewed disturbances by governors and others, and in 1835 further inroads by the Baltic Meanwhile, Muhammad Shah had succeeded Fath 'Ali Shah and in 1835 = 1836 appointed Aka Khan Mahallati, the leader ill the Ismā'ilis, as governor of Kirman. On his withholding revenue from the central government, a force was sent to collect arrears. Unable to resist, Aka Khan fled in 1837 to Barn, where he was besieged by Firûz Mîrză Nușrat al-Dawla. He surrendered and was sent 🖿 Tehran. Later he was allowed 🖿 return to Kirman in 1840 and renewed his rebellion. After number of skirmishes he me defeated, and took refuge in Afghānistān and later India, whence, it was alleged, he carried - a - correspondence with his supporters in eastern Persia. His brother, Muhammad Bäkir, made a movement into Balüčistán in 1844 or 1845 but was repulsed. Balddistän 🚥 meanwhile gradually reduced by the governors of Kirman, and by the middle of the 19th century Persian control had been extended southwards from Bampur over the Makran cast of Diask.

From about 1858 Kirman once more had a period of security and good government, this time under Muhammad Isma'il Khan Nori Wakil al-Mulk (see above), first as pishkar during the nominal government of Gav@marth Mirzā, and then as governor from 1860 until his death in 1284/1867-8. His period of office was marked by an increase in prosperity which continued during the subsequent decade. During the government of his son, Murtadă Kuli Khān Wakil al-Mulk, who was governor from 1869-1878. Čáh Bahár was brought under the control of the Persian government. In 1877 there was moutbreak of factional strife between the Shaykhis and the Bălăsaris, which led to the resignation of Murtada Kull Khan and the despatch of a force from Tehran to restore order. Towards the end of the reign of Nasir al-Din Shah there appears to have been considerable intellectual activity in Kirman, and when the movement for reform became overt towards the end of the 19th century and in the early 20th century. a number of Kirmanis, notably Mirza Aka Khan Bardsiri Kirmani (who became the editor of Akktar, the Persian newspaper published in Constantinople) and Nazim al-Islâm, played important part (see DUSTÜR, and also, Nāzim al-Islām, Tārīkh-i bīdārī i Irán, ed. 'All Akbar Sa'idl Sirdiani, Tehran A.H.S. I349].

KIRMANI, AWHAD AL-DIN HIMID B. ABI 'L-FARER (not to be confused with Ruka al-Din Awhadi of Maragha in Adharbaydian who was also called Awhad al-Din al-Islahani and who died in 738/1337-8) an eminent Iranian mystic (cf. Hamd Allah Mustawil, Ta'rikh-i gurida, ed. 'Abd al-Husayn-i Nawa'l, Tehran 1339/1960, 667-8; Diami, Nafahit ed-uns, ed. Mahdi-vi Tawhidi Pir, Tehran 1331/1962. 588-02). He a pupil of Rukn al-Din al-Sidiasi (Sindjant), of the affiliation of Kuth al-Din al-Abhart and Abu Nadifb al-Subrawardi. On his numerous travels, he came Damascus where he became acquainted with Muhvi 'I-Din b. al-'Arabi, who mentions him in Futshat al-makkiyya (ch. viii), and was deeply influenced by his ideas. Awhad al-Din knew Shams al-Din Tabrizi (ci. B. Furuzaniar, Risdia dar tahkik-i akwal wa zindaran-i Mawiana Dialdi al-Din Muhammad mashhur ba-Maulawi, Tehrani 1333/1954, 53-5), www probably with also Dialal al-Dia Rūmi, 'Uthman Rumi, Şade al-Din al-Kūnawi and Fakhr al-Din al-Iraki. He spent the last period of his life as a well-known mystical teacher in the neighbourhood of Baghdad and was honoured by the 'Abbasid caliph al-Mustansir in 632/1234-5. He died probably on a Sha'ban 633/21 March 1238.

Awhad al-Din belongs with Ahmad Ghazili and Fakhr al-Lin al-Irāki to the representatives of shahidbasi, the contemplation of the divine beauty in earthly forms, preferably in beautiful boys. The basic concepts of his mystical philosophy are surat (outer form, image) and maind (inner meaning, easence), in conformity with Ibn 'Arabi's key terms şākir and bāţin. The tamous maţķnawi poem Mişbāḥ al-aradh, often attributed to him, was actually written by Shams al-Din Muhammad Bardasiri Kirmani, The poetical heritage of Awhad al-Din is marked by short forms (i.e. only some tardist bands and a few shazals, but a large number of subdivivide which prouped into 12 chapters), and is of a gnostic-mystical character. The rubd'ipyāt, which are sometimes influenced by 'Umar Khayyam, not always of the best literary quality, but they show a deep mystical thought and experience, (as is found in verses of Dialal al-Din Ruml, Abmad Ghazali, 'Ayn al-Kudat al-Hamadhani and Pakhr

al-Din al-firāki.

Bibliography: B. Furüzanfar (ed.), Mandhil-i Awhad al-Din Hāmid ihn-i Abi al-Fahir-i Kirmani, Tehran 1347/1969, with an extensive introduction in the life and writings of Awhad al-Din; B. III. Weischer, Auhaduddin Kirmani und seine Vierzeiler, in Isl., lxi (1979); B.M. Weischer and P.L. Wilson, Hearis's witness. The sufi quatrains of Awhaduddin Kirmani Tehran 1978; (cf. also H. Ritter, Das Most der Seele, Leiden 1955, 474-6). (B. M. Weischern)

ALLAH, was a prominent dail of the Fatimids during reign of al-Häkim bi-amr Allah (386-411/996-1041) as well as the author of many works on the theory of the Imamate and on Isma'ili philosophy.

The life of al-Kirmani is known only in its main outlines, which can be traced on the basis of statements contained in his own works. Some other details can be derived from unpublished Isma'll sources, as has been done notably by Mustafi Ghilib (op. cit., 41 l.) who, however, does not specify these sources. His misba points to his origin from the Iranian province of Kirman. It is evident from bis works that he continued to be in touch with the

Isma'll community in this area. It is not very likely that he was a pupil of the well-known dd'l Abū Yarkūb al-Sidizi [q.p], as Ghālib states, for Abū Ya'kûb was not only ai-Kirmanl's senior by half a century but there appears to have been a difference of opinion between the two on many doctrinal points as well. A great part of his life seems to have been spent in the service of the Fatimid dates in the missionary district (diastra) of Irak. The title hudidial al-'Irakays, which is often added to his name by way of an honorific rather than as a designation of his rank (cl. W. Ivanow, Nasir-i Khusraw and Ismailism, Bombay 1948, 44; W. Madelung, op. cli., 63 f., p. 117), implies that this district also included the parts of Iran known m 'Irak-i 'Adiami. At least one of his larger works (Kitáb al-Masdbih) was composed in Iran, while two shorter risalas (al-Hawiya fi 'l-layl wa 'l-rakar, dated 300/1000, and al-Kdfiya fi 'l-radd 'alâ 'l-Hârani al-Hasani were addressed to a subordinate in Disruit (Kirman). The title of his Kitāb al-Madjālis al-Baghdādiyya wa 'l-Başriyya, which has not been preserved, refers to his personal activities in these cities of Trak. Ghalib ascribes to him a part in winning over the 'Ukaylids of Mosul to the cause of the Fatimids. In the early years of the sth/11th century, al-Kirmani came to Cairo, where a serious crisis had developed among the Fatimid dats concerning mature of the imamate as it was represented at that time by al-Hakim. Quite a few of them, among whom ___ the founders of the religion of the Duras (g.s.), propounded the doctrine of the divinity of al-Hakim. Either at the request of the chief of the religious organisation, the day al-dust Khattigin al-Dayi, or of the caliph himself, al-Kirmani interfered in the controversy. In 405-6/ 1014-15 he wrote the risain called Mabisim albisharat upholding the tenet that the imamate of al-Hakim was, in spite of its exceptionally blessed condition, of an ordinary kind and that the theory of his divine nature was incompatible with the Ismā'lli dogma of the absolute transcendence of God. The risale called al-Wacita fi nafy da we ulikiyjat al-Hākim bi-amī Aliāh (ed. M. Kāmil Husayn, in Madjallat Kulliyyat al-Addb (Cairo), ziv/1 (1952), 1-20), composed in 408/1017, was a reply to a pamphlet by al-Hasan al-Akhram al-Farghani, one of the supporters of the extreme point of view. Apparently, al-Kirmani returned afterwards to Trak where he completed major work, Rahai al-'ak!, in 411/1020-1. The latter date provides also a dating post quem for his death.

Works. The late of al-Kirmani's work after his death has been determined by the further dogmatic history of the Ismā'iliyya. While the later writers of the Fāṭimid period appear to m hardly influenced by him, he left a lasting imprint in the religious literature of the Tayyibiyya [q.v.] which continued a part of the Fāṭimid tradition in the Yaman and in India. This influence can be traced from the time of the second dâ'i mailah of the sect, al-Hāmidi [q.v.], up to the present day (c.t. e.g. R. Strothmann, Gnosis-Texte der Ismailiten, Göttingen 1943). Thanks to this continuous tradition of Kirmāni studies, the main part of his works has been preserved, although all the copies that have been brought to light so far

very recent.

mdmiyya) and those of other Shift pretenders (in ai-Kafiya, being a warning against the propaganda of the contemporary Zaydi lmam Abu 'l-Husayn al-Mu'ayyad bi 'llah al-Haranl). In his Kitab Tanbih al-hadi we "-musichdi, the polemics against these opponents combined with a plea in favour of the validity of the religious law for anyone without exception, addressed towards the antinomian strain current in the Isma'ill movement. His fullest treatment of the theory of the imamate, constructed as a support of the claim of al-Hakim, is contained in al-Majabla fl ithbat al-inama. In the course of his argument, al-Kirmani frequently resorts to Jewish and Christian scriptures, which he quotes in Hebrew as well in Syrian (cf. Paul Kraus, Hebrdische und syrische Zitate in ismailitischen Schriften, in Isi. xix (1930), 243-63, and A. Baumstark, Zu den Schriftritaten al-Kirmants, in Isl. xx (1932), 308-13).

Of equal importance in the work of al-Kirmant is his preoccupation with metaphysical speculation, to which his most important works are devoted. In the Kitab al-rivad fi 'l-hikam bayn al-şadayn şahibay al-Islah wa 'l-Nusra (ed. by 'Arif Tamir, Beirut 1960), he attempts to settle the debate over a great number of philosophical questions which had well going on among the Isma'llis in Iran during the preceding generations. The starting-point of this discussion was the Kiláb al-Mahsül, a work by al-Nasall (d. 331/942), to whom the introduction of neo-Platonism in the speculations of the Isma'llis has been attributed. Al-Nasafi had been criticised on several points, which according to al-Kirmani are of fundamental importance, by Abu Hatim al-Warsinani (fl. about 322-34/934-46) in his Kittlb al-Işlab, but the tenets of the former had been defended by Abū Yackūb al-Sidizī (d. after 360/971) in a work entitled Kilab al-Nusra. Klemani, who on most issues takes the side of Abû Håtim, approaches these problems from a point of view to which he attributes authoritative weight and which he denotes as "the canon of the guiding mission" (banks al-do'wa al-hadiya); see further W. Ivanow, An early controversy in Ismailism, Leiden 1948, 115-59; and ed. Bombay 1955, 87-122.

The Rabat ai-'abl ted. by M. Kamil Husayn and M. Mustafa Hilmi, Cairo 1371/1932; ed. by Mustafa Ghailb, Beirut 1967) contains a summa of Isma'll philosophy written for adepts who have prepared themselves for the study of the fundamental truths both morally, through the fulfillment of the commands of religious law, and intellectually, by the study of less abstract works of earlier Isma'll authors and of al-Kirmani himself. The subject-matter has been arranged in chapters and paragraphs which have been styled "walls" (asmor) and "crosstoads" (mashdri') according to the allegory of a city of gnostic knowledge. By travelling along the fifty-six crossroads enclosed within the seven walls of this city, the searching soul acquires an acquire of the real structure of the universe, which consist of four separate but fully congruent worlds: the world of Divine creation ('Alam al-ibda'), encompassing the purely spiritual beings, the world of bodily existence or the realm of nature ('alam al-girsm, dar al-tabi's), the world of religion ('alam al-ain), which is the hierarchy of the Ismā'lli da'we, from 🚃 nājik up to the lowest delegate (ma'dhan), and, finally, the world of the \$470m where this universe returns to its primordial one-ness in its second perfection (al-hamili al-(hdnd). In complete analogy to this macrocosmic process, the individual human soul, which by origin is only a virtually-existing first perfection, through

acquisition of this metaphysical knowledge, can realise itself completely as an intelligent being.

The Rāḥat al-ʿaḥl is the earliest attempt at a complete and systematic exposition of Ismā'lii philosophy. In comparison to older works, and even to al-Kirmāni's own Kilāb al-Riyād, it shows a profound influence of the metaphysical theories of the falāsifa. This is particularly evident in his concept in the world of creation as a decade of intelligent beings which has come into existence by way of "being rent out" (inbi'ālh) from the universal intellect, the first created being (see further ISMĀPLIYYA. Doctrine).

Like many other Ismā'ili dd'ia, al-Kirmānī attacked the writing of the arch-herstic Abū Bakr Muḥammad b. Zekariyyā' al-Rāzī. In the Kitāb al-Aḥadī al-dhahabiyya fi 'l-tibb al-nafaān, he supported the criticism of his predecessor Abū Hātim on al-Rāzī's ideas about the therapy of the mind expounded in the latter's al-Tibb al-rāḥānī (cf. P. Kraus, in Orientalia, v 11936), 36 f.; idem, Rasā'lī falsafiyya/Opera metaphysica, l, Cairo 1939, lauti'a, 7-13, and the excerpts from the first part of al-Tibb al-rāḥānī.

Bibliography: The editions of al-Kirmani's works mentioned in the article all contain more or less extensive introductions to his life and work. Surveys of his works and of the manuscripts known to exist are given in W. Ivanow, A guide to Ismaili literature, London 1933, 43-5; and ed. Ismaili literature, Tehran 1963, 40-5; Brockelmann, S I, 325-6; Mu'izz Goriwala, A descriptive catalogue of the Fysee collection of Ismaili manuscripts, University of Bombay 1965, 37-57, nos. 51-65; Sezgin, GAS, i, Lelden 1967, 580-2. Fragments of some of the works of al-Kirmanl are contained in the great Isma 'ill compilations of 'Imad al-Din ldris (d. 872/1468), Kitab 'Uyun al-akhbar, and Hasan b. Nuh al-Bhardel, Kuldb al-Ashar (written 932/1525), which are still unpublished. Excerpts from his al-Risāla al-lārima fi saum shahr Ramadén have been edited and translated into Urdu by M. H. A'zami, Nisâm al-saum 'inda 'l-Fâțimiyyin, Karachi 1961, 18-60. A work of doubtful authenticity has been edited by 'Arif Tamir, Arba' rasa'il isma'iliyya, Beirut 1952, 59-66. On the Kharinat al-adilla, which is really the work of pupil of al-Kirmani, see W. Ivanow, A creed of the Fatimuds, Bombay 1936, 10-2. See further: E. Griffini, in ZDMG, txix (1915), 82; H. F. Hamdani, in JRAS (1933), 372-5; idem and H. S. Mahmūd, al-Sulayhipyūn wa 'l-haeakat al-Fājimiyya fi 'l-Yaman, Cairo 1955, 258-61, and passim; W. Madelung, in Isl., xxxvii (1961), 119-27; Henry Corbin, Trilogie ismaslienne, Tehran-Paris 1961, passim; idem, Histoire de la philosophie islamique, Paris 1964, 130-1; S. H. Nast, in Combridge history of Iran, Iv. Cambridge 1973, 436, 440. (J. T. P. DE BRUIJE)

KIRMANI, KAWAL AL-DIN See SUF ADIO KIR-

KIRMÂNSHÂH, a town and province in western Persia. The province is situated between lat. 34° N. and 35° N. long. 44° 5' to 48° 0' E. It lies in the east and north of 'Irāk and Luristān-i Kūčik (or Pusht-i Kūh) and to the 2011h and west of Kurdistān and Asadābād. In the early 20th century the province was divided into nineteen bulāks. These were Bālādih, Wastām, Kiyān Darband or Bīlawar, Pusht-i Darband or Bālā Darband, Dīnawar, Kuliyān, Sahan, Kanguwār, Asadābād, Harsin, Camdamāl, Durā Faramān, Māhldasht, Hārūnābād, Gārān,

Kirind, Zuhāb, Aywan and Hulaylan (Government of India, General Staff, Army Headquarters, Intelligence Branch, Gasetteer of Persia, ii, Simla, 1914, 358). At the present day it is bordered by Sanandadi the north, Asadābād on the north-east, Shāhābād the south, Nihāwand and Tūysirkān on the east, Khurramäbåd on the south-cast, and Kasr-i Shirin and Rawansar-i Diawanrud on the west, and contains the following districts: Sunkur and KuliyaT, Kanguwar, Sahna, Harsin, Sandiabi, Güran and Thalath (Razmara, Farhang-i dinghrafiya-yi Iran, A.H.S. 1329-32, v). The town of Kirmanshah (also known - Kirmanshahan, a name which appears to be used first in the 4th/roth century) is situated approximately at lat. 34" 19 N. and long. 47" 5' E. at a height a 1322 m. on the Kara So River, which runs to the north-east of the town in a south-easterly direction until it joins the River Gamasiyab (Gawmāsa) (also known as the River Şaymara) which flows into the River Karkha. A series of mountain ranges, trending from north-west to south-east, run through the province. Between them there are extensive plains and valleys, containing pastures and cultivated lands. From Asadābād, with an elevation of 2,340 m., there is a gradual descent through a succession of peaks and valleys III Kesr-i Shirin, which is at 575 m.

The climate is mild in summer but cold winter, except in the Zuhāb district and the plains the 'Irāķī frontier and in the lower parts of the Ralhur country (in the region of Mandall) where it tends to be hot in summer. Snow on the mountains is heavy in winter and spring rains are normally pientiful. The maximum July temperature of the town of Kirmānṣḥāh is 37.2° C. and the minimum January temperature ~3.5° C. Annual rainfall is 372.7 inm (H. M. Gan]i, Climate, in W. B. Fisher, ed., Cambridge history of fran, Cambridge 1963, i, 247).

Parts of the province in the south, notably districts in Hulaylan, Bilawar and Güran, are wooded. Oak, elm, sycamore and some coniferous trees and wainut trees are found in the mountains; willows, poplars and oriental planes are common throughout the province; palm trees are found in Sar-I Pul-i Zuhāb and Kaşr-i Shirin. Fruit is abundant in some districts. especially in Kandula, Harsin and Sahna; Kirind produces excellent seedless grapes, Ridjab in famous for its figs and Gahwara for its apples. Gum tragacanth was formerly plentiful in the province, but indiscriminate tapping has caused supplies to diminish. Gum mastic (sakkis) is obtained from Hulaylan and me formerly exported to Russia (Government of India, H. L. Rabino, Gazetteer of Kirmanshah, Simla 1907, 163, 163).

Dry farming is practised in most parts of the province. In the valleys river water is used for irrigation. Kandis are not numerous. The province is rich in grain land. Formerly, in a normal year the province had a large grain surplus, though from time to time this would be cut by insufficient rainfall, ravages by locusts and other pests, and by disorders. Surplus grain was exported to other parts of Persia, Ottoman Turkey and, later, to 'Irak. The proportion of wheat to barley was usually two-thirds wheat to one-third barley. Both are grown as unirrigated crops. Grain land is left fallow in alternate years or in many districts for longer periods. Rice is grown in some of the river valleys, including Raziyān, Bilawar, Dinawar, Camcamal, Zuhab and Kalhur. It is of inferior quality and mainly consumed locally. Peas (sughed) are produced in quantity and expected to other parts of Persia. Sugar beet has been an important crop since the 1930s and is grown especially in Mahldasht. Cotton, castor oil, tobacco, saffron, opium, the cultivation of which on magnificant scale probably did not begin until the late 19th century (United Kingdom, Foreign Office, Diplomatic and Consular Reports, Annual series, 3189, Report on the Trade of Kirmanshah and district for the year 1903-04, a2, and see further G. G. Silbermann, The Persian Constitutional Revolution: the economic background 1870-1906, unpublished Ph. D. thesis, University of London, 1974, 132 ff.), indigo, maize, ciover, alfalfa, and vegetable crops, such as melons, water melons, cucumbers, egg plants and tomatoes, are, or were, grown for local consumption (see further Rabino, 153 ff.).

The province has rich pasture lands. Transhumance is widely practised. Formerly, nomedic tribes commonly migrated annually across the Ottoman-Persian frontier and later across the Trakt-Persian frontier. Animal husbandry is of great importance, not only among the nomadic tribes but also among the settled peasants. After grain the most important product of the province is wool. Part of the spring wool crop was formerly exported. The autumn wool was less in quantity and inferior in quality and mainly used for the manufacture of felts (namads). Formerly, the manufacture of carpets was a thriving industry in the villages and among the tribes, but declined towards the end of the 19th century. By the 20th century it had virtually disappeared. Goat's hair was made into tents, saddle bags, ropes and yarn. Goat skins were dried and exported and were used for coverings for clarified butter and water skins. The markets of Tehran, Hamadan, Kumm and Baghdad were largely supplied with sheep from Kirmanshah (see further Rabino, 158-9).

Mules and horses were bred in considerable quantities in the 19th century. The horses, which had much Arab blood in them and were well adapted for both draught and saddle, highly (cf. J. P. Ferrier, Carman journeys, London 1856, 26; Gantleer of Persia, 341).

The extensive oil belt extending from Kirkük in Träls to Khuristän passes through the south-western part of the province of Kirmänshäh, and the extraction of oil has been carried on at various centres since antiquity (Gautter of Persia, 343). Other mineral resources include marble, porphyry and lime.

The province is mainly inhabited by Kurds, nomadic and sedentary, and Lurs. Most of the tribes have their own winter and summer quarters (see further LAT). A rough estimate of their numbers in the early 20th century put them = some 60,000 families = some 300,000 persons. Among them were the Kalhur, partly settled and partly nomadic, who were estimated at 12,000 families. They owned large stretches of irrigated land in the fertile plains of Mähldasht, Gilan and Kalleh Shahin, the two lastnamed purchased by the Kalhur chiefs from their Turkish proprietors at the beginning of the 19th century (United Kingdom Foreign Office, Diplomatic and Consular reports, Miscellaneous Series, 590 (1903) Report on the trade and general condition of the City and Province of Kermanshah by Mr. H. L. Rabino, 46). The Gürän, also partly settled and partly nomadic, were estimated at 4-5,000, the Sandjabl at 4,000, the Kuliya't, mostly sedentary in Sunkur, at 4,000 and the Zangana, who were mainly settled Mahidashi, at 2,500 (Gazztteer of Persia, 339; Rabino 171 ff.). Apart from tribes near the 'Iraki frootier, who are Sunni, most of the Kurdish tribes of Kirmān<u>sh</u>āh 🚃 <u>Sh</u>l?. 'All 🚃 are also found in considerable numbers (cf. Zayn al-'Abidin Shirwani, Busian al-siyaha, Tehran lith, 1313, 4921

Gasetteer of Persie, 356).

The town of Kirmanshah or Kirmisin (var. forms Kirmāsin, Karmāsin, Kirmāsin, Karmashin) as it was known by the early Arab geographers was founded in the Sasanid period. Hamd Allah Mustawii attributes its foundation to Bahram IV (588-99 A.D.) (Nushat, 208), who had acquired the title Kirmanshah me governor of the province of Kirman [s.u.]. The town founded by him was, however, more probably the small town II Kirmanshah situated between Yazd and Kirman (cf. Tabart, in Nöldeke, Gesch, der Perser u. Araber, 71). Another tradition attributes the foundation of Kirmānshāh to Kawēdh b. Firus (488-531 A.D.; cl. esp. Mukadriasi, 257 ft.). The Sasanid kines often resided there, and their example was from time to time followed by later rulers, notably the callph Harun al-Rashid and the Buvid Adud al-Dawle, who built a palace there (Mukaddasi, 303). The province is rich in monuments of the Achaemenians and Sasanids, such as the sculptures of Tak-I Bustan, three miles east 📑 Kirrnanshah, the rock inscriptions at Bisutun [q.u.] and various remains | Kanguwar [see KINKIWAN].

Kirmānshāh was peacefully occupied by the Arabs after the capture of Hulwan in 21/640 (Baladhuri, Futüh, 301). It became part of the province of the Dibal and was known, together with Dinawar [q.u.] Mah al-Kufa. Although situated on the great Khurasan road almost midway between Baghdad and Hamadan, it was less important in the early centuries than Dinawar - Hamadan, Ibn Hawkal does not mention it among the best known towns of the Dibal, though he describes it ma pleasant place with running water, trees and fruit, in which living cheap, and maying abundant pastures, where numerous flocks grazed, and much water. Many articles of commerce and also to be found there (i, 359). Later, Kirmanshah with Hamadan, Ray and Islahan became one of the four great cities of the Dibal, though it did not rival them in importance. It was ruled successively by the 'Abbasids, the Buyids, the Hasanuya (see HASANWAVH) and the Saldiüks.

In 594/1197-8 Kirmanshah was laid waste by the Kh"arazmshahi amir Miyadiuk (Rawandi, Rahat alandir, 398). After the Mongol conquest, the Djibal appears to have been divided into two unequal parts, the larger in the east being known as Persian Grak the smaller in the west, which included Kirmanshāh, as Kurdistān. Hanid Allāh Mustawfi states that Kirmanshahan (which, he writes, was known in books as Kirmisin) had been a medium-sized town (shahri wasaf) but that in his time it was a more village (Nushat, 108). Camcarnal near Bisutun, because of its excellent pastures, was a regular camping ground of the Mongoi establishments, and, according to Hamd Allah, Öldieytü b. Arghon built a town (kasaba) there (shid., 207). It would seem from Hamd Allah Mustawii's account that there was a decline in production in Kurdistan as in the neighbouring provinces after the Mongol invasions (Tārikh-i gusida, 371),

During the 9th/15th century Kirmánsháh lay outside the main course of events in Persia, but with tier province (acing the Ottomans, Many of the Kurdish tribes enjoyed a degree of local independence, and it does not appear that central control was established throughout the region in the early Safawid period. The sources make little mention of Kirmanshah, though there is mention of Safawid governors in Dinawar-Solugh Husayn Tekkelu in the mign of Shah Isma'll and Cirach Sultan in the reign of Tahmasp (Biditsi, Sharaf-name, Tehran A.H.S. 1343, 410, 270). Intermittent warfare with the Ottomans kept the frontier regions of Kirmanshah in state of instability and often disorder, though the main theatre of operations was Adharbaydjan. By the peace treaty made by Shah 'Abbas in 999/2090 the western provinces of Persia, including Kirmanshah, were ceded to Turkey, and it was not until the campaign begun in 1011/1602 that Persian rights were reasserted and the lost provinces recovered in the following year. After the death of Shäh 'Abbas an Ottoman expedition led by Khusraw Pasha penetrated up to Hamadan (1010/1610). When peace was again signed in 1048/1639, Sultan Murad IV recognised the frontier more or less along IIII line which it occupies at the present day.

About the middle of the 11th/17th century, the Zangana family began to emerge the most powerful of the local leaders, and from then in frequently. beld the government of Kirmanshah, which usually included Sunkur and, from the reign of Shah Saft (1038-52/1629-42), Kaihur (K. Röhrborn, Provinten und Zentralgewalt Persiens im 16. und 17. Jahrhundert, Berlin 1966, 9). Shaykh All Khan Zangana became governor under Shah Abbas II in or about 1058/ 1648 (Rida Kull Khan Hidayat, Rowdat al-safa-yi Nasiri, Tehran, A.H.S. 1339, viii, 475). Members of the family also held important offices at court, which further strengthened their position. Shaykh All Beg became amis ekhur to Shah Sulayman (1077-1105/1667-94). His son Shaykh 'Alf Khan, who also held this office, became governor of Kirmanshābān and finally I timād al-Dawla, which office he held for fifteen years. He dled in 1101/1689-90

libid., viii, 490).

After the fall of the Safawids, Kirmanshab again occupied by the Ottomans in 1136/1723, the deputy-governor Husayn 'All Beg submitting without resistance. By the terms of the peace made by Ashraf with the Ottomans in 1140/1727 Kirmanshah, Hamadan, Sanandadi, Ardalan and Nihawand and various other places were allocated in perpetuity to Turkey (L. Lockhart, The fall of the Safavi dynasty, Cambridge 1958, 292). Kirmanshih was retaken by Nādir Kuli (later Nādir Shāh) in 1142/1729-30 (Mirza Mihdi Astarabadi, Taribbi djabangugha-yi Nadiri, ed. Sayyid Abd Allah Anwari, Tehran 1962, 219 ff.), and when peace was again made in 2145/1732 Kirmanshah remained with Persia. It was reoccupied by the Ottomans later in the year, but evacuated after a brief siege by Nadir. The Zangana Ahans were still powerful, and in 1156/1743-4 Ibrāhim Khān b. Zahir al-Dawia Zangana was appointed signisalis of Kurdistan and Lucistan i Faylf (ibid., 400). On the death of Nadir in xx60/x747, Mirca Muhammad Taki, who had been made governor of Kirmanshah by Nadir, took the part of Adil Shah against his brother Ibrāhīm. The latter, sent an army to Kirmānshāh. which plundered the town and took temporary possession of the district (ibid., 429), but when Ibranim defeated and dethroned 'Adii Shah, Muhammad Taki made himself virtually independent. In 1179/ 1766 Karim Khān took the town of Kirmānshāh after besieging the fortress for two years. The defenders were linally reduced by famine. 'All Murad Khān was then made governor of Kirmānshāh. (See further Abu 'l-Hasan b, Muhammad Amin Gulistàna, Mudimal al-laudelhi, ed. Mudarris Ridawl, Tehran A.H.S. 1344.)

In the 19th century the commercial and strategic importance of Kirmanshah increased. It became the capital of Persian Kurdistan. The latter formed a separate province from Ardalan [q.v.]. The capital of Ardalan, which also known in Kurdistan, was Sinna, Already in 1800, Sir John Makolm noted the importance of Kirmanshah m a mart for trade between Turkey and Persia (Melville papers, quoted by C. Issawi, The economic history of Iran 1800-1914. Chicago 1971, 268). Sir John Macdonald Kinneir states that it am a flourishing town in 1801, containing about 12,000 houses (Geographical memoir of the Persian empire. London 1813, 132), which would have given a population of some 60,000 persons.

Fath 'All Shah appointed his oldest son, Muhammad 'Ali Mirzā, as governor-general of Kurdistān and Luristan in or about 1806, and I became one of the most thriving provinces of Persia, Muhammad All disposed of a considerable army, mainly cavalry. composed largely of Kurds and trained by French officers, and under his rule Kirmanshah formed a bulwark against the advence of the Ottomans, Because of the rivalry which existed between him and his brother 'Abbas Mirza, the wall 'and and governorgeneral of Adharbaydian, and the likelihood of a struggle between them in the event of Fath 'Alt Shah's death, he felt the need to attach the population to his interests. Ferrier states that he "administered the affairs of his government in a truly paternal manner. His charities enriched the town and the people lived in the enjoyment of plenty" (Caravan journeys, 24). Zayn al-'Abidin also comments on the expansion of the town under Hubammad 'All Mirzā's government. He states that the number of its buildings surpassed those of most other towns in Persia (Bustán al-siyāha, 492). In addition to buildings in the town, Mubammad 'All Mirza surrounded the town by walls, flanked with loop-holed towers. and by a most three miles in circumference.

Prior to the Turco-Persian war of 1821, the southwestern boundary of Kirmanshah had been some seven miles west of Kirind at Sar-i Mil. Muhammad 'All, having embarked on successful operations against the Ottomans, annexed Zuhāb and advanced on Baghdad, but was forced to abandon his advance by an outbreak of cholera, to which he himself succembed. The war continued until 1823. By the terms of the treaty then concluded, the districts acquired by either party during the me to be respectively surrendered and the frontier line was to be restored to where it had been in Safawid times. Zuhāb, although claimed by the Porte, nevertheless remained part of the province of Kirmanshab. Having been acquired in war, it became kadlisa [q.v.] and ___ farmed by the chief of the Gûrân tribe (H. Rawlinson, March from Zohab to Khusistan, in JRGS ix (1830), 36).

After the death of Muhammad 'All Mirea, the town of Kirmanshah decayed as a result of the extortion and tyranny of the governors who succeeded him. Zayn al-'AbidIn, writing about 1832, states that there were then no meet than 10,000 houses in Kirmanshah (loc. cit.), while Ferrier, writing in 1845, states that its splendid basears were described, nine-tenths of the shops were shut and three-fourths of the population had emigrated, the townspeople to Adharbaydian and the nomads to Turkey (op. oil., 25). All sign of Muhammad 'Alt's fortifications had disappeared by the 20th century, Cholera, plague and famine added to the misfortunes of the town, notably the plague of 1830, which is said to have reduced the population to 12,000 (Gazetleer of Persia, 355; cf.

also Zayn al-Abidin, loc. cit.); and in 1832 floods washed away about me fifth of the populated area with heavy loss of life (ibid.). These disasters, coupled with the rapacity of the governors, reduced the province to | low ebb. Consul Abbott, writing in 1840-50 states that there were some 5,000 inhabited houses (United Kingdom, Public Record Office, F. O. 60: 161, K. Abbott's report on the commerce of South Persia . . .], which would have given a population of about 25,000. Another report written in 1868 estimated the population at 10,000 (Report on Persia. accounts and papers 1867-68, 19, quoted by Issawi, 28). By the end of the century there had been degree of recovery, and in rors the population put # 60,000 (Gasatteer of Persia, 355). This figure, which was probably a conservative estimate, was the same as that given by Sir J. Macdonald Kinnelr rather over a century earlier.

Various Kādjār princes held im government of Kirminshih after Muhammad 'Ali Mirza. The first was his son Muhammad Husayn Mirza Highmat al-Dawla, who held office for some ten years. Another of his sons, Imam Kull Mirzā Imād al-Dawla, also held the governorship for some twenty-one years under Muhammad Shah and Naşir al-Din Shah. In 1842 relations with Turkey again became critical, and a mixed commission was appointed to delimit the frontier, an operation which was not finally completed until 1914 (see further C J. Edmonds, Kurds Turks and Arabs, London 1957, 125 ff.). When Nasir al-Din Shah passed through the province on his way to Karbala' and Nadjel in 1871, a huge petition was presented to him complaining of the oppression of the governor. It was not answered. From 1881 at 1888 the province was included in the immense region coming under Zill al-Sultan, the governor of Islahan [q.r.]. When he was deprived of all his governments except Isfahan, his nominees in Kirmanshah and Kurdistan were dismissed. For some years after that the government of Kirmanshah was given to the highest bidder, with the result that the people were greatly oppressed.

In the last quarter of the 19th century the volume of trade coming through Kirmanshah markedly increased (Gazetteer of Persia, 343-4). With the opening of the Suez Canal in 1860 and the establishment of a steamer service on the Tigris, it became the port of entry for all goods entering Persia from Baghdad and coming from England and India via the Persian Gulf and the Tigris. By the end of the century the province equalled, if it me not excel, any other province in its general state (Gaustieer of Persia, 336-7). Consul Preece wrote in 1899 that "There but few towns in Persia which show to-day flourishing a condition, from a trade point wiew, as Kermanshah, and this in spite of oppression by the local Governor, and badness and unsafety of the roads radiating from it" (quoted by Rabino, 206). There was a customs post at Kirmanshah, which normally farmed. In 1882 the sum paid was 20,000 hedrs. For the year ending 20 March 1897 the figure had risen to 480,000 krains and for the year ending 20 March 1899 to 670,000 kráns. Ou 21 March 1899 the customs were taken over by the Belgians (see further Gasetteer of Persia, 350 ff.).

Kirmanshah also benefited greatly from the pilgrim trade, lying as it did on the direct route from Persia to Nadjaf and Karbala'. In the late 19th and early 20th centuries it was estimated that 150,000 to 200,000 pilgrims passed annually through the town. They brought money to exchange or tried to pay their way by selling things, and m gradually

added to the well-being of the town (Gasetteer of

Persia, 344).

In rore there were about 200 merchants III Kirmänshäh dealing mostly in Manchester goods obtained direct from Manchester or through Baghdad, in sugar from Marseilles, and in opium, gums, coatskins, carpets and wool, which they exported to Baghdad and England. One of the most prominent of these was Hadidil Abd al-Rahim Wakii al-Dawie. who combined trade with banking and landownership (for the man of his father and the rise of the family to wealth and influence, see Silbermann, 207). There were about twenty Ottoman Jews, who had in their hands the greatest part of the foreign and export trade. Kāshī merchants imported from Kashin tohacco, native silk goods, copper-ware, to a total amount of some roo,ooc tamens, which they covered by exports to Kashan of prints and foreign goods received from Baghdad. Yazdi merchants imported henna and Yazdi silk from Yazd to the amount of 20,000 tilmans, and exported an equal amount of foreign goods to Yazd. Isfahānī merchants imported native prints and cotton goods, such as kalamhars, prints, lakafs, cabas, etc., and gar and eleas from Isfahan, and exported to Isfahan Manchester prints, iron, tea, cowhides, wool and gillms. Their imports came to 100,000 tumuns, but were exceeded by their exports. Hamadan merchants imported naphtha, rice, Russian prints, glassware and hardware (coming from Rasht), and exported to Hamadan dates from Mandalf, gall-nuts, grease, ghee, raw hides, ten, spices, iron, lead, Manchester goods and window glass. The exports exceeded the imports. Some Hamadan merchants worked exclusively as commission agents for releasing goods from the customhouse and forwarding them to Hamadan (Gazetteer of Persia, 355-6). There were also a few Persian Jows, who lived by small trade and hawking, and a very small number of Chaldean Christians. some engaged in trade and some living by the manufacture of arak.

Kirmānshāh played little part in the constitutional revolution, but in 1911 Salar al-Dawla entered Kirmanshab in the name of the ex-shah Muhammad All. In the following year III advanced on Tehran with a force of Kalhurs, Sandiable and other Kurdish tribes. He was defeated near Hamadan and government troops retook Kirmanahah. Operations continued until the autumn, during which time Kirmanshah repeatedly changed hands. In the first world war Kirmanshah was sol the centres of the muhadjaras movement. A local committee for national defence was set up (humita-yi difat-i milli) and in December 1915 the central committee, which had retired from Tehran to Kumm and Isfahan in November of that year, withdrew to Kirmanshah. A provisional government had barely been established when the muhādji-Fin evacuated Kirmanshah in March 1916 in the face of a Russian advance. Turkish forces later occupied the town but evacuated it in 1917 (see further Yahya Dawletabadi, Hayat i Yahya, Tehran n.d., iii, 313 ff., Hoseyn Sami'l Adib al-Saltana and Aman Allah Ardalan Izr al-Mamalik, Awwalin hiydm-i mukaddas-i milli, Tehran A.H.S. 1332, 30 ff., 75 ff., P.M. Sykes, History of Persia, London 1963, it, 446 ff.).

(A. K. S. LAMBTON) KIRMASTI, chef-lieu of a kada' in Anatolia. 15 miles south-east of Mikhalidj (cf. J. H. Mordtmann, in ZDMG, lxv [tgtt], rot) and 40 miles 5.W. of Bursa with about 16,000 inhabitants (1960). The town lies on both banks of the Edrenos Cay (Rhymdacus), now called the Mustafa Kemal Paşa Cay. The origin of the name, often wrongly written Kirmasli, which points to a Greek *Kepmacri or *Kpenaorn, is uncertain, nor is it known what ancient town was here. Perhaps the Kremastis in the Troas (cf. Pauly-Wissowa, ii, 743) mentioned in Xenophon, Hist. iv. 8, is to be connected with it. In the Byzantine period Aorata is said to have been here, where the troops of Alexius Comnenus under Kamytzes were defeated in 506/1113 by the Saldiúks (cí. Anna Comnena, ii, 279 ff.). In any case there is close to Kirmasti a Byzantine castle in ruins which resembles that 6 miles farther up the Edrenos Čay 🔳 Kesterlek and presumably was intended with similar defences at Ulubad (Lopadium) and Bursa to keep back advance of the Ottomans. In the town, which has 6 mosques, including one large very old one with a tilebe, and 14 masdiids, there are ancient remains (sarcophagi, inscriptions on the walls, ornaments) which do not were yet to have been studied. The history of Kirmasti under the Ottomans is quite obscure, as there are no records. Ewliyà Čelebi (v. 200) and European travellers fet. W. Hamilton, Researches in Asia Minor, London 1842, i, 77, 80, ii, 93) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmästl, which ill not suffer from the Greek occupation, was in 1925 renamed Muştafa Kemâl Pasha in bonour of the Turkish President. Kirmastl is the birth-place of Seyvid-i Wilâyet (d. 929/1522-3 in Istanbul), son-in-law of the historian 'Ashlk-Pasha-zāde (cf. Tashköpruzāde-Medjdl, Shaha'ik al-nu maniya, 352, 13), known from the Monakib-i Tadi al-'Arifin (i.e. Sheykh Ebli '-Wefa); cf. Pertsch, Lat. Türk. Handschr. Gotha. 137, No. 166 and Tornberg, Cat. Uppsai., 211, No.

Two hours' journey from Kirmästi are two hot mineral springs, called Dümbüldak and Akardja.

\$!RMISIN [see girninggin] KIRSH [see sikka]

KIRSHEHIR, modern Turkish Kussenta (formerly Kieshehei "town of the steppes", incidentally also called euphernistically Gulstehei "town of the roses"), a town in central Anatolia, ca. 400 m. above sea level, situated at 37° 9' N. lat., and 34° 10' E. long., m a small river called the Kilk Ozii which flows into the Klzil Irmak [q.v.], the ancient Halys. The town, with a total population of 14,168 in 1950. lies on the road from Ankara (res km. distance) to Kayseri (140 km. distance). Another road leads after 15 km, to the Kesik Köprű, a long bridge over the Kizil Irmak of 13 pointed arches, built in 640/1248 by a Saidiūk vizier cailed "Izz al-Dīn Muhammad (see Taeschner in Festschrift Ernst Kühnel. Aus der islamische Kunst. Berlin 2050, 200-2, and A. Dietrich in ZDMG, cx (1961), 310-13). Close to the bridge, on the eastern bank of the river, is a khan or caravanserai, erected in 667/1268 by Nûr al-Din Djibra'll b. Baha' al-Din Diadia, amir of Kirshehir (see K. Erdmann, Das anatolische Karavansarav der 13. Jahrhunderts, Istanbuler Forschungen, xxi/1, Berlin 1961, no. 21, 74-7). In the neighbourhood of the town medicinal springs.

Kirshebir is certainly an old settlement, as may be deduced from the hippih (a hill indicating ancient cultivation) in the centre of the town, which, however, has not as yet revealed its secrets. The accient name of the town is not known; the denominations proposed for antiquity are disputed. So far as is recorded by inscriptions and architectural monuments, its history starts only in the early Turkish (Rüm-Saldjükid) period. Then and shortly afterwards, from the middle of the 7th/13th until the middle of the 8th/14th centuries, the town must have been an important cultural centre.

After the battle of Malazgird (1071), the Turks took possession of great parts of Anatolia, and Kirshehir became also Turkish, but the control of the city changed were than once; sometimes it fell to an amir of the Danishmandids of north-eastern Anatolia (Sivas and Malatya), sometimes to a sultan of the Anatolian collateral line of B Saldiukids, the so-cailed Rüm-Saldjükids who resided III Konya. Under sultan Kille-Arsian II, the amirate of the Danishmandids was incorporated (ca. 1173) in the territory of the Rüm-Saldiükids, who remained the overlords of the town until the end of their power in 1307. Then governors of the Mongol II-Khans of Iran started to rule the whole region, including Kirshehir, which served = a place of coinage for them until 728/1328. In his Nurtat al-kulüb (ed. G. Le Strange, i. Text, London 1925, mil. 13 ff., it. Tr. London 2929, 99, II. 22 ff.], Hamd Allah Mustawff designates Kirshehir as "a big town with high sacred constructions ('imdréf), which enjoys a fine climate; the revenue of its Diwan amounts to 57.000 dinart".

After the disintegration of the II-Khānid state, Kirshebir again became a controversial issue between independently-behaving governors, like those of the Eretnids (see ERETNA) and other dynasties, until it was taken by the Ottoman sultan Bāyazid I. After the latter's defeat near Ankara in z402, the town was at first added by the conqueror Timur to the tecritory of the Karamanids (Konya and Laranda), but afterwards changed masters several times until it became definitely Ottoman when Selim incorporated the principal ty of the Dulkadir, to which Kirshehir had belonged ultimately. As capital of kwad (sandjūk), the town mastached to the sydies (wildyst) of Karamān.

When the wildyst system was reorganised in the middle of the 19th century, the sandjat of Kirthehir was assigned to the wildyst of Ankara. The town became a wildyst in 1924 when the former wildysts were abolished and the sandjats raised to wildysts. But in 1954 the wildyst of Kirthehir was suppressed; parts of its territory were added to the wildysts of Ankara and Yozgad, but the greater part was assigned to the newly-formed wildyst of Nevsehir.

The heyday of Kirshehir the late-Saldiükid and Il-Khānid period between ca. 1240-1340. The town must then have been really important; there was in any case an active intellectual life of a mystical-religious character, as may seen from imposing architectural monuments which have survived until today (see Ali Saim Ulgen, Kersehir'de Türk eserleri, in Vahiflar Dergisi, il (Ankara 1942), 253-61, figs. 1-25; Halim Baki Kunter, Kersahir heldbelari, in ibid., 432-36, figs. 4-23; W. Ruben, Kersahir'in dikkalemete çeken tan'al abideleri. A. in Belleten, xi [Ankara 1947], no. 44, 603-40, pls. CX-XCVI; idem, B, in Belleien, xii [Ankara 1948], no. 45, 123-93, pls. XXXVII-XLVI; Idem, Eigenartige Denhendler aus Karşehie, in ibid., 194-205; Cevat Hakkı Tarım, Kirşekir tarihi üzerinde araştırmalar, Kurechir 1938; idem. Tarikte Kersehri - Gillsehri - Babailer - Akiler - Bektasilee, Istanbal 1948).

The oldest cultural institution in Kirshehir is possibly the madrasa of Malik Muzaffar b. Bahramshah, called Mailk Ghazi, of the Mangucakdynasty, whom sultan 'Ala' al-Din Kaykubad I had invested with Kirshehir as compensation for the principality he had taken away from Ghazl's family. Of the madrasa allegedly built in 644/1246, only the relatively simple portal has been preserved. When the ruins of the madresa were carried away, the portal was used in 1312/1893 for the reconstruction of the 'Ala' al-Din Mosque on the hillock of the town. The still-standing graceful mausoleum of Malik Muşaffar, the Malik Ghazi Kümbedi, constructed by his consort in the style typical for the high-Saldifficial period, indicates the original site of the madrasa.

For the next period, the madrasa of the amir Nur al-Din Diabra'di b. Baha' al-Din Diadia served as a centre of intellectual life. It belonged to an extensive foundation which a deed of foundation (mak/iyya) in Arabic and Mongol, dated 670/1272, provides information (see Ahmed Temir, Kursekir amiri Cacaogiu Nur el-Din'in 1972 torikli Arapça Mogalça vakfiyesi, Ankara 1010). Of the constructions belonging in this toundation, only a group of buildings in the centre of the town has survived. It consists of the madrasa, built in 671/1272-3 and presently as the Friday mosque, its minaret and the tomb of the founder. The tomb is included in the north-eastern angle of the madeasa and can only be reached from the inside; on the outside, it is only marked by a window in the northern wall, of the same style as the portal of the madrasa.

To the north-west of the Malik Chāzi Kilmbedi, at a distance of as, 200 m. from the Diadia Beg Madrasa, lies the Lâla Cami ("Tolip mosque"). A tale has it that its name is derived from a tulip of particular beauty, which the builders received from a pupil of the Diadia Beg Madrasa; proceeds of its sale then allegedly enabled him to build the Lâla Cami. The building, which lies in ruins and does not bear any inscription at that nothing is known about its construction and original use, apparently was not a mosque at the outset; during the II-Khānid period it served at the mint, but was used a mosque later,

probably still in the tath century, as is shown by its

milede built in Saldiükid style.

In the north-eastern part of the town, on a hillock in the Imaret ward, lies the tomb of Shaykh Süleyman-i Turkomani, who is said to have introduced to Kirshehir the Mewlewi order, and to have built a Mewlewi khan, nothing of which has survived. The tomb has no inscription and so nothing is known about its construction or about the death of the man who is buried there. A wooden panel - the tomb gives 601/1204 m the year of his death, but this can not be correct there exists a foundation deed (mak/ione) of Shaykh Turkomani, dated Muharram 607/Ociober-November 1207 (see C. H. Tarim, Kirsshis tarihi, 82-5). The biographical work Natahat al-uns of the Persian poet Diami (Turkish tr. Lamifi. Istanbul 1289/1872, 652; M. F. Köprülüzäde, Türk edebiyyātinda ilk millasamolflar, Istanbul 1918, 236, n. 1) mentions 714/1314 = the year of his death; this seems more probable. Until recent times, descendants of Shaykh Süleymän-i Turkomani have been known in Kirshehir, may be seen from inter alia their tombs, all of which carry Mewlowl characteristics. It seems probable that the dignity of Shavkh of the Mewleyl community in Kleshehir was hereditary in their family.

The poet Güishehri in all probability also originated from Kirshehir. He was one of the first to write poetry in Rům Turkish, and by doing so was largely Instrumental in this language's, the later Ottoman-Turkish, finding its place among the literary languages of Islam. Nothing is known about his life, nor is there any trace of his tomb in Kirshehir or elsewhere. But on the basis of his pen-name (makklas) Gulshehr! [a.v.] there be doubt that he originated from Kirshehir. Because his Mantik al-Jayr contains many references to the prophet Süleyman (Solomon), it has been supposed that Gülshehri can identified with Shaykh Silleyman-I Turkomani. The identification, however, is in no way proved and

remains controversial.

From an artistic point of view, the most important building in Kirshehir is the turbe of the poet Ashik Pasha [q.v.; also M. Fuad Köpetilti, in IA, s.v.], born at Kirzgehir in 670/1272. His grandfather Baba llyas had been the founder of the Baba's sect, and of his followers, Baba Ilyas, had been the leader of the great dervish revolt which had been crushed with great difficulty in E242 on the Maliyye plam near Kirshehir, 'Ashik Pasha, himself a dervish also, died in the odour of sanctity on 13 Safar 733/ 3 November 2333; his tomb at Kirshehir became a highly-visited place of pilgrimage. The magnificent turbs, which guards the mortal remains of the poet, was built after his death and has a style of architecture all of its own. It has nothing in common any more with the Saldjüsid tombs, generally called Mimbed ("cupola"), but it departs also from 📶 customacy style III the Ottoman libres. A characteristic feature of 'Ashlk Pasha's türbe is that before it extends a closed entrance hall which is accessible at the side through a grand portal.

From an historical point of view, the most remarkable monument W Kirshehir is perhaps the modest sanctuary of Akhl Ewran which consists of the saint's Niebe, a tehiyye and a mosque. On the role of this sanctuary in the economic life of Kirshehir, see ANH! BARA and AKH! EWRAH. When in 1925 the dervish monasteries were closed, the role of the takiyye of Akhi Ewrin came also to an end, and so Kirshshir was reduced to the status of a provincial town.

KIRTAS stands for 1. papyrus, papyrus roll. 2. parchment, and 3. later also rag paper: from the Arabic texts, it is not always clear which material is meant. The word kirtas, kartas, kurtas, or kirtas, kartas, has been adopted from the Greek word victor through the Aramaic; from the Arabic, it has been adopted by the Spanish as alcartas meaning "bag", and by the Portugese as cartas meaning "paper. permit: placard". In the Kur'an, it is mentioned in the singular, biefas (Sûra VI, 7), and in the plural, harāfis, meaning "[written] papyri" (Sûra VI, 91). Sometimes a genuine Arabic word is used: warak al-kasab, "reedy sheet", and warab al-bardi or alabardi, "sheet made of the papyrus plant" [see KASAB, PAPYRUS]. The Arabs attribute the invention of the sirias, "papyrus", to the biblical Joseph (Ibn Kutayba, Malarif, Göttingen 1850, 274, etc.). Nothing is said about its production. Only in the Fibrist of Ibn al-Nadim (d. 380/990), 21, and in al-Biruni's India, 81, completed in 421/1030, are there two statements; that kirks is obtained from the reed of the papyrus (kaşab al-bardi), or else from its pulp (lubb al-bardi). Only in the 7th/13th century after the termination of the production of papyrus in the 5th/11th century, Ibn al-Bay(ar (d. 646/1248) related in his Diami' ii-mufradat al-adwiya wa 'l-aghahiya, Cairo r291/1874-5, i, 87 from his teacher Abu 'l-'Abhās al-Nabātī (d. 637/1239), that the Egyptians, in former times, used to split the stalk of the papyrus in two parts, cut [the pulp obtained thereby] into strips, put them (crosswise, in two layers) on an even pad made of wood, spread size on them which they had obtained from the seeds of the blue lotus (Nymphasa costules Sav.), dry [the strips combined thereby], and beat them carefully with a beetle until they got an even [piece].

Kirjās was not usually sold as pieces, but rather ... rolls of pieces stuck together. From these rolls, pieces could be cut, irrespective of the glued joints which were usually not visible. The smallest piece used in trade was a sixth of a roll, which was called a famár (Greek τομάριον) οτ tümür kirtüs (Greek τομάριον ydorou). On the front surface (redo), the strips of the papyrus ran horizontally, hence parallel to the writing, while on the reverse-surface (verse), the strips ran vertically. In the early 'Abbasid period several sheets were, sometimes, bound into a booklet (Aurrasa). Because of the high price of the material, it was usual to write on the reverse surfaces as well or to wash the written papyri and write me them again (thus forming an opistograph m palimpsest). The sizes of the sheets were probably generally the same as those of Mi Ancient World. The usual size was 30-40 migh and 20-30 cm. wide, but the width later was increased. The manufactories producing the different kinds of papyrus were run by the government or were under governmental supervision; it ssems that this governmental control was certified by an official note on the back side of the first sheet of m roll.

The word hirtis did not remain confined to

"papyrus", "roll of papyrus", but me used for "bag" and, in medical science, for "dressing", "a kind of absorbent gauze", and things like that (cf. Ibn al-Baylår, op. cii., i, 87, and his sources, sc. Dioscorides, Galen, Ibn Sinā, etc.,, or else was applied to writing paper obtained from other materials, e.g. "parchment" [see numb, nast] and "rag paper" [see Kāghap].

(R. Sellmein)

AL-KISA'I, ABU 'L-HASAN 'ALI B. HAMZA B. 'ABD ALLAH B. BAHNAN B. FAYRUL, maula of the Band Asad, well-known Arab philologist and Kur'anreader (ca. 110-59/737-805). Descendant of ... Iranim family from the Sawad, he was born in Bahamsha, Dudiayl, north of Baghdad (Yakat, Mu'diam, i. 458 s.v.; M. Strock, Die alte Landschaft Babylonien, Leiden 1901, ii, 226) and when still a boy, came to al-Kufa (Zubaydl, Tabakot, 138; Ibn al-Diazari, Ghava, i. 535). It is related that he had difficulties with the 'arabiyya and therefore sought to attach himself to the grammarian Mu'adh al-Barra' (Ta'ribh Baghdad, xi, 404). Al-Khalil's [q.v.] authority in the tield of Arabic philology allegedly caused him afterwards m go to al-Başra; at his advice, al-Kisā'ī said to have stayed for time among the Bedouins in order to become fully conversant with the secrets of the 'arabiyya by direct association with them. As is shown by the explanations and interpretations of details which are to be found in grammars and lexicographical works of the native philological literature and which are to be traced back to al-Kisa'l, it is in any men certain that he attributed more importance to linguistic usage then to learned systematisation, as was aspired to by Sloawayh [q.v.], another pupil of al-Khalil, who laid this down in his voluminous al-Kitab. Even if al-Kisāñ, in his discussions and investigations, made use of the generally accepted method of analogy (hiyds [q.o.]), he nevertheless, in his learned observations, left, as was fitting, wide space to the anomalous ways of speech as presented especially by colloquial speech or dialect; he took mon not to squeeze into ■ system such anomalies, exceptions and discrepancies from the general rule (against Yākūt, Udabā', v, 190; Suyūţi, Bughya, 336). In this way, be and those who followed him in this method preserved for us vestiges of the everyday language, which was not acknowledged by other scholars and therefore concealed and suppressed. Three or four generations later, in connexion with the controversies between al-Mubarrad and Tha lab [q.w.] in Baghdad, the more independent treatment of the Arabic language by al-Kisan, and not least that of his pupil al-Farra [q.v.], became straightaway the method of the grammatical school of Kofa; ex events, he and his teacher al-Ru'asi [q.v.] have entered the history of Arab philology as the real founders of that school. In his introduction to Ibn al-Anbari's Kitab al-Insaf (Leiden 1013), G. Weil pertinently characterised this method as the "anomalous" one, in opposition to the strictly "analogous" un of the school of Başra, which has generally prevailed among the Arab grammarlans. Apart from the material preserved in the Kilab al-Insaf with respect to the school of Kuta and in particular to al-Kisā't's teachings, see also Tha'lab, Madjālis Tha'lab's, Cairo 1960, Index; al-Zadjdjādis, Madjālis al-'alama's, Kuwalt 1962, index; al-Suyūṭī, al-Muzhir's, Cairo 1958, i-ii, Index; idem, al-Aghhān sa 'I-naṣā'ir's, Haydarābād 1360/1941, iii, 15, 18, 42; al-Sayyid Şadr al-Din al-Kanghrāwī (?) al-Istanbālī (1278-1349/1861-1931; Kahhāla, Mu'djam, v. 17, 292), al-Mūjī fš 'I-naḥw al-hūjī, ed. M. Bahdjat al-Baytār, in MMIA, xxiv (1949), 417-32, 560-82; xxv (1950), 223-46, 399-414, 511-34; xxvi (1951), 55-100, 199-222, 407-22, 577-89 (cf. too A. sl-Himsi, Zāhiriyva, Nahw, 510; al-Kanghrī).

Al-Kisa'T's learned studies, more concerned with a description of reality than with scholastic systematisation, apparently sprang from a basic attitude. which must also have enabled him to maintain for many years those manifold good and close relations. with the 'Abbasid court in Baghdad, where he had moved. There the scholar, as original in knowledge as he was in ideas, was all the welcome as teacher of the princes since he was also able to act as a Kur'an-reader (Azhari, Takdkib, 15). The caliph al-Mahdi had entrusted to him the education of the young al-Rashid, who in his turn later caused his sons al-Amin and al-Ma'mun to be taught by al-Kisa'i (Yakūt, Udabā'), v. 186, 194 if.). Al-Rashld promoted his teacher al-Kisa'l among his personal companions and confidents (al-diulasa) wa 'I-mu'anisin) and requested him to accompany him - the hadidi and other journeys (Yakût, Udaba', v. 183, (86), thus manifesting the intimate relation between pupil and teacher. During one of these journeys, probably the road to Khurasan in 189/805 (Tabari, iii, 202 ff.), al-Kisa'i died at the age of seventy (Kiftl, Inbah, ii, 269), probably in Ranbuya in the neighbourhood of Rayy. Fragments of an elegy we him and on the jurist Muhammad b. al-Hasan al-Shaybani [q.v.] by his antagonistic colleague Yahya al-Vazidi [q.v.] have survived (Matzubani, Muktabas, 290; Zubaydi, Tabahāt, 142; Ta'rikh Baghdad, xi, 413 ff., and ii, 182; Yahut, Mu'diem, ii, 824 f.; idem, Udabā', v, 183, 199; Ibn al-Diazari, Ghaya, i, 540); for the lakab "Kisa'l", see Ta'rith Baghdad, 21, 404 f.; Suyūtī, Muthir, ii, 445; etc.; O. Rescher, Beitrage sur arabischen Poesie, 1963-4, viii/1, 108.

It is evident that the opinion of al-Kisar's colleagues an man who seemed to be favoured personally by fate because of his good relations with the court of the caliph, was not always positive (Abu 'l-Țayyib, Marātib, 74), all the more so becauseas indicated above-in controversial questions he preferred to rely on the reality of the spoken language rather than on speculative assertions of the learned (Yākūt, Lidabā', v. 180). It was the Bedouins, undisputed authorities on the current language, who assisted him . the famous discussion with Sibawayh on the so-called al-mas al-sunburiyya (Zadidiādii, op. cit., 8-10; Marzubāni, Muhtabas, 188; Ķifţi, Inbida, il, 358 t., etc.; A. Fischer, in A volume of oriental studies presented to E. G. Browns, Cambridge 1922, 150-6). He is also reproached with being a pederast and fond of date-wine (nebidh) (Marzubani, Muktabas, 284, 289; Yakūt, Udabā', vi, 185, 194, 198).

Al-Kisā'ī's authority as a Kur'ān-reader was generally recognised, both at the court and among the public of Baghdād, al-Rakka and elsewhere (Ta'rēļā Baghdād, xi, 403). At first, he represented the reading of his teacher Hamza al-Zayyāt [g.u.], but in the course of time he developed his own (Fibrist, 30). How highly al-Kisā'ī's reading was appreciated in shown by the fact that it became the seventh of the seven canonical readings [see gurā'a].

Probably his reading was as little established by its reader, al-Kisā-T, as were the others by their readers. This was first done by al-Kisā-T's pupil Abū 'Ubayd [q.v.], when he compiled 32 \$ivā-\tilde{a}i. As in parallel cases, the Mufradat al-Kisā-T, which exists in Ms. Tehrau University 4867,x (M. T. Dānish-Pashūh, xiv, 3897), could be a later extract from the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the sta

Of al-Kisa's 14 = 15 works enumerated in the Fibrist, 65 ff., 165-for some of them, see Azhari, Tahdhib, 15 ff. and Zubaydi, Tabahat, 278 (or should we read Sibawayh here instead of al-Kisa'i ?}--nothing apparently has come down to us. According to the titles, they were devoted to questions of grammer, lexicography and the Kur'an, and also of poetry, of which he allegedly did not have much knowledge (Yakut, Udaba', v. 193; Ibn Khallikan, ii, 457). According to Brockelmann, I, 118, S I, 178, three other treatises which - connected with his name and are lacking in the enumeration of the Fihrist, have been preserved: Risāla fi laķn al-'āmma (ed. Brockelmann, in ZA, xiii (1898), 29-46; cf. Th. Nöldeke, toid., 111-15, 'Abd al-'Aziz al-Maymani, Cairo 1925, and R. 'Abd al-Tawwab, Laku al-Samma, Cairo 1967, 111 f.); Kitāb al-Mutashābih fi 'l-Kur'ān (other mss. e.g. in Zähirlyya ("Izzet Hasan, Kur'an, 391], Chester Beatty [A. J. Arberry, 3165,1] or Baghdåd, Awkāf ['A. al-Djubūrl, i, 744, no. 431]; a remark on the falak formula in a verse (British Museum [Ch. Rieu, Supplement 1203, 12]), preserved in detail in Zadidladit, op. cit., 338-42 (for similar traditions, see e.g. Maraubani, Mukiabar, 285, Tairikh Baghdad, zi, 406).

KISA' [see tinks].

KISAI, Madio at-Din Abu 't-Hasan, a Persian post of the second half of the 4th/10th century. In later sources his kunya is given as Abū ishāk, but the form given above can be found already in an early source like the Cahar makala. The Dumyat al-hass by al-Bakharzl contains a reference to the "solitary ascetio" (al-muditahid al-muhim bi-nafsihi) Abu 'l-Hasan 'All b, Muhammad al-Kisa'l of Marw who might very well be identical with this poet (cf. A. Ates, giris to his edition of Kitth Tarcuman albalaga, 97 f.). The pen name Kisa i would, according to Awfi, refer to the exectic way of life adopted by the poet, but it can also be explained otherwise, e.g. as a wisbs derived from the trade of tailoring. From the very beginning the title al-Hakim has been attached to his name.

His origin from Marw is confirmed by the early sources. It is also certain that he made at least a part of his career as a poet in that city. In one of his poems, a lament of old age, he has inserted a precise dating of his birth: Cahārshamba, 26 Shawwāl 341 (Wednesday, 16 March 953) as well as the statement that he had reached the age of fifty. From this poem, the conclusion has been drawn that he must have died in or shortly after says? 397/1000-x. The actual date of his death is, however, unknown.

The diwin of Kisa'i was still extant in the 6th/rath century. After that time, its transmission appears to have been discontinued. Hardly any complete poem has survived. The fragments that have been collected so far from a great variety of sources are generally not longer than a few lines. It is, therefore, difficult the statements concerning the nature of his work that have been made both by ancient and modern writers. It can be regarded me certain, anyhow, that Kisa'i did enjoy a great reputation = a religious poet during the two centuries following upon his death as well as in his own lifetime. 'Awfi describes him in the first place as a poet who practised the genres of devotional poetry (suld) and religious admonition (ma's), and quotes a few specimens of his eulogies (manāķib) on the members of the House of the Prophet. The Kitáb al-Nakd, an apology of the Imam! Shi'a written about the middle of the 6th/ 12th century, establishes Kisa'l with some emphasis as a Shi'll poet.

The Isma'll poet Naşir-i Khusraw (died ca. 465/ 2072), who cultivated the same genres as Kisan, acknowledged his indebtedness to this predecessor, indirectly, by using a claim to the superiority of his own poems over those by Kisa" as a topos of the epilogue in a number of basidas. As E. G. Browns has pointed out, these instances of poetical faller need not be taken as evidence of a sectarian controversy between these two poets (as it had been suggested by H. Ethé). The opposite conclusion reached by Sa'ld Naffai -- namely, that they both belonged to the same branch of the Shifa-is equally untenable. The exchange of poems between Kisa'l and Nasir-i Khusraw quoted by Rida Kuff Khan Hidayat from the Khulasat al-ashide by Taki Kashi, is an anachronistic forgery made up from poems that actually belong to the diudn of the latter only.

The paucity of the primary sources available now does not permit us to estimate how far Kisan specialised in the writing of religious poetry. It is also impossible to define the social groups to which he addressed himself in these poems. It is evident, on

the other hand, that he did not stay aloof entirely from the profuse practice of poetry. He was patronised by a minister III the Sămănid amir Nûh b, Manşūr, and in his later days he wrote at least one panegyric ode to Sultan Mahmūd of Chazna. 'Awil praises his descriptions and quotes several specimens which show that Kisā'l used all the poetical themes current in his age.

Bibliography: The fragments of Kisan's poetry were collected for the first time by Ethé, Die Lieder des Kisa'i, in SB Bayr. Ahad. (1874), il, 133-53. This collection, based on manuscripts of a number of tadhkiras, is now outdated. More material has come to light from various other sources, such as dictionaries and modimic's-manuscripts. New collections have been published, in particular by M. Dabir-Siyaki, Gandi-i bar-yafia, ii, and Pishahangan-i shi'r-i parsi, Tehran 1351/1972; see also Lughat-nāma, no. 182 (1351/1972), s.v. Kisā?t. The most important primary sources on his life and work - of Naşîr al-Din, al-Kazwinî al-Răzi, Kitāb al-Naļd, ed. Dialāl al-Din Muḥaddith-i Urmawi, Tehran 1331/1952, 252, 628; Muhammad b. 'Umar al-Rādilyāni, Tardiumān al-balagha, ed. A. Ateş, İstanbul 1949, printed text 13, 22, 46, 47, 104; Asadi, Lughat-i Furs, ed. M. (J. H. KRAMERS-[J. T. P. DE BRUIJN])
AL-KISAT, SAUIS KISIQ AL-ANSIVA, unknown
author of a famous Arabic work on the lives of
the prophets and pious men prior to Muhammad.
Some small passages of this book were first edited in
1898 by J. Eisenberg in his thesis me Muhammad b.
'Abd Allah al-Kirat, A complete edition was published in 1922.

In his thesis, Eisenberg tried to prove that author of the Kisas al-ambiya' was the well-known philologist al-Kisa's, to whom Harûn al-Rashid had entrusted the education of his sons al-Amin and al-Ma'mūn. But what renders this identification impossible is that Iba an-Nadim in his Fibrist does not make any allusion to any book of the philologist, the contents of which could have bean the legends of the old prophets; furthermore, the name of al-Kisā's the philologist ii Abu 'l-Hasan 'Ali b. Hamza, and not Muhammad b. 'Abd Allah, as indicated in the text edited by I. Eisenberg. Thus the identity of the author of the Kisas al-ambiya' remains an enigma.

Moreover, recent enquiries into the subject have proved that the legends of the prophets as written down in the numerous manuscripts of al-KishTa Kisas al-anbiyd³ belong to the popular narrative tradition of mediaeval Islam and can be compared with works such as the romance of 'Antar, so far as the narrative style is concerned. So it would be of little use to search for an individual author al-Kisa' who could have compiled the Kisas al-anbiya' at a certain date; he is as vague a figure as the narrator al-Asma' in the romance of 'Antar. The mediaeval story-tellers (hussa's [see \$455]) apparently held al-Kisa's Kisas al-anbiya' in high esteem; but they were not anxious preserve one standardised text of the logends. It is for this reason that the scripts, the oldest of which date from the early 7th/23th century, differ considerably in size, contents, and even arrangement of the stories.

The legends of the pre-Islamic prophets as related in these compilations under al-Kis27's name, or handed down unto us in many other anonymous manuscripts, must be considered as the vivid expression of the religious feeling of the average mediaeval Muslim. It is in this respect that al-Kis27's Kisa; al-anbiy22' mm sources of great value for scholars who want to carry out further investigations of the popular religious life of the Islamic world, a task which has been somewhat neglected up till now.

KISANGANI, the former Stanleyville, is a city now of well over 250,000 inhabitants, the third city in Zaire, and the capital of the province of Upper Zaire, formerly Province Orientale. The most important urban centre in north-eastern Zaire, it is situated on the bend of the river Zaire, formerly called Lualaba (upstream) and Congo (downstream from the city), just where it turns west and a few miles north of the equator.

In 1877, Henry Morton Stanley set up camp here to me from the exhausting weeks during which he negotiated the seven cataracts still called Stanley Falls, In 1882, Hamed Muhammad al-Murjebi, better known as Tippu Tibb [q.v.], founded a town on the northern shore of the island in the Zaire river that formed by a creek called the Abibu. The new settlers, about 1500 in number and III nominal Muslims, called their town Kisangani, Swahili for "On the sandbank". In 1883, Stanley returned with instructions from King Leopold II to found a government station at the upper end of the navigable part of the Congo river. This became Stanleyville, with its centre me the right bank just north of the original Kisangani. By that time the Muslims (called "Les Arabisés" by the administration) had settled on the left bank, calling their new town Kisingitini, Swahill for "On the threshold". Their language of culture and literature is Swahili; their tribal background is mainly Kusu, Tetela and Genia, the Genia (Wagenia) being the original inhabitants of Wanie Rusari = Wanye Lesali, the island of which Kisangani formed part. Stanleyville became important trading centre, exporting coffee, cocoa, palm oil, timber and lvory. Modern Kisangani has a university; it was part of the policy of authenticity of President Mobutu to replace the name Stanleyville by Kisangani as the name for the whole city.

The Muslims flourished with the city. More adaptable to urban culture and more conscious of their cultural dignity than the tribal peoples, they were more self-confident in their attitude vis-à-vis the Europeans, since their religion claimed equality with Christianity. The Belgian Congo government tried to restrict the activities of the Muslim missionaries, but could not prevent Islam from spreading to the country districts south of the city. The Muslims called themselves Waungwana "free men", the name by which all the Swahili peoples once called themselves. Their language is called Kinngwana, a dialect of Swahili (q.n.). This Swahill became the lingua franca of the entire country east of the Lomann river.

Always rebellions against the colonial administration, the Muslims were among the first groups to form a nationalist party about the time of independence, so, the Mouvement National Congolais, from which the late Patrice Lumumba drew an important part of his support (he was a Tetela himself). No longer isolated, the Muslims in Kisangani, elthough they number only some ro,coo, are in contact with, and receive support from, those in Egypt, Arabia and Pakistan. Two neighbouring states, Uganda and the Central Airlean Empire, have been ruled by

Islamic governments until 1979.

F. M. de Thier, Singhilini, la Stanleyville musulmane, Publications de Centre pour l'Etude des Problèmes du Monde Musulman Contemporain, Brussels 1963, is the only work that deals specifically with the history of Stanleyville-Kisangani, The Wagenia (who call themselves Waenya) have been described by A. F. Droogers, De Geraarlijks Reis. Jongensinitiatie bij de Wagenia van Kisangani. (J. KNAPPERT) Amsterdam 1974.

KISAS (A.), synonymous with towad, retaliation ("settlement", not "cutting off" or "prosecution"), according to Muslim law is applied in cases of killing, and of wounding which do not prove tatal, called in the former we kight fi 'l-mafs (blood-veugeance) and in the latter kight fi-mad dim al-mafs.

z. For hisch among the pagan Arabs see Well-hausen, Reste arabischen Heidentume!, z86 ff.; Procksch, Über die Biutrache bei den vorislamischen Arabern und Mohammeds Stellung zu ihr; the collection of eszays Zum Eliesten Strafrecht der Kulturvolker. Fragen zur Rachtsvergleichung, gestellt von Th. Mommsen, Sociena v-vii; and Juynboll, Handbuch des islämischen Gesetzes, 284 ff.

2. Muhammad takes it for granted that the

bloodyengeance of Arab paganism-in which in contrust to the unlimited blood foud, definite retaliation. aithough not always on the person of the doer himself, forms the essential feature of the vengeance (of, Procksch, op. cit., 6 and n. 5)-is a divine ordinance with the limitation assumed to be obvious, that only the door himself can be slain: Kur'an XVII. 35; XXV, 68; VI, 252 (cf. KATL, i, 2; in these passages only the ins falionis can be understood by the right to kill another; already in XVII, 35 the avenger of blood is forbidden to kill any one other than the guilty one); II, 173 ff. (before Ramadan of the year 2); "To you who are believers the kisks is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone is pardoned anything by his brother, he shall be dealt with equitably . . . and pay him compensation as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In bisas you have life, you of understanding . . . " (the first verse says that a free man can only be slain for a free man. a slave for a slave and for a woman only a woman fbut probably a slave or a woman for a free man. but this is not expressly stated and must be deduced), naturally, of course, only the guilty one, and that in all other cases the payment of compensation (diva) takes place. This is an extension of what is presumed in the earlier passages: the treatment of the free man in relation to the slave is matter of course. according to old Arab views, and that of the woman, which cannot be completely explained from them, represents an independent decision of Muhammad's based them (there is quite a different interpretation of the verse in Procksch, op. cit., 75 m. 5). The commentators had difficulty in reconciling the passage with later developments (cf. below, 4). Only one explanation, thrust into the background and later completely abandoned, interprets the quite correctly, but makes it shrogated by v. 40 (see below). By "prescribed" is meant not a duty but a rule not to be transgressed; pardon is the abandonment of kisas with a demand for compensation instead: the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood faud of pagan times, because only the guilty one is slein and the life of the innocent thus preserved); v. 49 (after the first encounter with the Medinan Jews, but before the outbreak of open hostilities): "and we have prescribed for them (the Jews) in it (the Torah): a life for a life, an eye for an eve, a nose for a nose, an ear for an ear, a tooth for a tooth, and kissis for wounds; but if anyone remits it, it is an atonoment for him (i.e. for his sins) . . . " (this verse of course does not cancel II, 173). In the years 3-5, with IV, 94 ff. there came the distinction between deliberate and accidental killing (cf. KATL, i, 1); in this the application of kisds is excluded. In II, 190 (before the campaign of the year 6), bisds is used metaphorically in the sense of retaliation of like with (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the Sira, the records of the tife of Muhammad, are in agreement with this. In the so-called constitution of the community at Medina, which belongs to the early Medinan period, it is laid down that if any one slays a believer and is convicted (proof of guilt in a trial before IIII authority—Muhammad—is therefore required as a condition for the carrying out of \$i\times do,\$ talion takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the

176 KISĀS

murderer and must take an active part against him. Here the bisas is brought from the sphere of tribal life into that of the religious-political community (wmma), which finds an scho in the law, not however to be taken literally, that believers are one another's blood-avengers for their blood spilt for the sake of Allah; but it is also throughout recognised as a personal vengeance, is also is down in the case of the Medina lews, and no-one is to be prevented from avenging a wound. A limitation of hipse, logical from the standpoint of the summa, lies in the fact that the believer is forbidden in the ordinance of the community to kill a Muslim on account of an unbeliever. On two occasions, when Muslims had killed heathers who had however treaties with Muhammad. he did not allow hises to be made "because they were heathen" (this does not any way follow from the ordinance of the community), and even paid the compensation himself; his utterance regarding the possibility of leads a propos of the second of these is, however, illogical. On two occasions, also for political reasons, he obtained the acceptance of compensation when the avenger of blood undoubtedly had the claim to bisas, but in one case he cursed the murderer-again an illogical attitude, Muhammad in his turn after the capture of Mecca, in keeping with the regulation of the ordinance of the community, abandoned his claim to compensation for the slaving of a nephew of his, which had taken place during the beathen period, In this connection, he is said III have laid down the principle that any blood-guilt attaching to a Muslim dating from the period of heathendom was to be disregarded (cf. gart, i, 2). But Muhammad also intensified the operation of sisds, and on two occasions had the murderer executed, when there were aggravating circumstances, without offering the avenger of blood the choice between bisas and compensation; the proscription and execution of murderers who were also murtadds [q.v.; cf. gart, ii, 5], is however to be interpreted differently; from everything, it is clear that Muhammad also supervised the carrying out of bisds.

Taking the evidence of the Kur'an and the Size together, it is evident that Muhammad did not recognise the blood-feud, but allowed kirár to survive as personal vengeance. Moreover, he subjected its application to certain limitations and endeavoured to free it from tribal customs of pagan times, all important advances by which it was brought in character to a punishment. That Muhammad at the sum time, according to the demands of the individual case, sometimes gave decisions deviating

from his own rules, is intelligible.

4. Among the traditions (hadiths) is one that must be genuine, according to which Muhammad had a Jew, who had smashed the head of a Muslim diāriya (slave girl or young woman) with w stone, killed in the same way, because in this case there was no question of me avenger of blood. At a later period when Kur'an, II, 173 (cf. a. above) was interpreted in a new way, the attempt was made to in it evidence that a might be killed m bisks for a woman, without observing that the tradition referred to munbeliever while the Kur'an passage and only concerned with Mutlims. But this Kur'anic prescription regarding the woman was very early neglected and interpreted differently; it is true that 'Umar II. 'Abd al-Azk, al-Hasan al-Başrī, 'Aṭā' and 'Ikrims are quoted as representatives of the Kur'anic view that mean cannot be put to death for a mean (al-Zamakhshari on Kur'an, Il, 173) but Sa'ld b. nl-Musayyab, al-Sha'bi, Ibrahlm al-Nakha'l and

Katāda had held the opposite view (shid.), and the letter opinion prevails in the law-schools without any opposition (al-Zamakhsharl's statements on the point are not quite accurate); at the same time it I remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the lawschools, the following is important. For the view that highe could be inflicted on several, account of one individual, I they had committed the crime jointly, unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the bisks is to be executed is also disputed; the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muhammad's. There are also varying opinions as to whether a man can be put to death on proof by kasama (cl. 5. below), and ancient authorities quoted for both; the historical truth is perhaps that Muhammad wished to apply hasems in a see of bloodshed and when it could not be managed, paid compensation himself; besides it is said (certainly wrongly) that he confirmed basame as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there was only bisas and no possibility of paying compensation (this is wrongly cited in explanation of Kur'sa, II, 174) and that Muhammad granted the blood-avenger's request to abandon claim to éiças, laid great stress m forgiveness, and even asked him to do m (cf. above 3.—in these historically certain cases, however, his attitude men in-[luenced by purely political considerations]; finally, we are told that he who raises a claim for blood without cause is one of the me hateful to God. Other traditions agree with the regulations mentioned and still to be mentioned, and need not therefore be quoted, especially as the hadiths on this subject are collected in Guillaume, The traditions of Islam, 107 H.

Summing up the results of the traditions as the expression of opinion of authoritative circles of Islam in IIII sarly period, we must notice in contrast to Muhammad's period the important change in the treatment of women, which marks an undentable advance, just as the request for forgiveness is evidence of a lotter point of view.

5. The bisds fi 'I-nass according to the Shart's. In the cases of illegal slaying noted in the article KATL, i, 5-7, bisds comes into operation, i.e. the next-of-kin of the slain man, who in this capacity is called walf 'I-dam ("avenger of blood") has the right to kill the guilty man under certain conditions. From what has been said above, it is obvious that this punishment still partakes for the most part of the character of personal vengeance; this is also clearly seen in the regulations—disputed in points of detail proscribed for the case when the avenger in any way mutilates in murderer and only occasionally illii idea of punishment by an authority for the sake of justice crops up. (Thus in all cases of culpable, illegal slaying in which hists cannot take place, tales intervenes; the competent authority is therefore regarded as the wall of one who has no wall; therefore anyone who kills a ghisunt, mu'dhad (an unbeliever connected with the Muslim state by a treaty) or a musta'min

KISĀS

(an unbeliever who enters a Muslim country after being given a sale conduct) must, according to Mailk, be put to death and the mail has no right to abandon claim to disids. On the other hand, however, it is laid down that anyone who kills a make slave goes scot-free). But that this point of view is found at all is a step forward, for Muhammad's decisions in this connection (cf. above, 3) must only dictated by the demands of the individual case; in other matters also, in certain points we see a loftier attitude adopted, at least in some of the schools.

For the application of kinds, the fulfillment of the following conditions is necessary: (1) The life of the person slain must be absolutely secured by the Sharf'a; this is the case with a Muslim, dhimmi and mutahad, at least m long as they are in the Dde at Islam [a.v.], and Dde at-Suth [a.v.] (in the sum of the slaving of a Muslim prisoner in the Dar al-Harb [g.v.], it is unanimously agreed that there is no bisds, and for the slaying of another Muslim there kisas, according to the Hanaft school; there are corresponding regulations for the dhimmi and muidhad) in contrast to the musta min, murtadd and karbî (but kişâş may be inflicted on a murtadd if be kills another swetadd, and Mälik makes kisds the general rule if anyone kills a murtadd, without the authority of the Imami. This point of view is to be distinguished from the conception of the illegality of the slaving (cf. KATL, i. 4) although the two ideas have a certain amount in common; the killing of a mustarmin is illegal, but there is no hisas (apart from the special case just mentioned), (2) The slain man must not a descendant of the slaver, nor the slave of the slave of one of his descendants, nor must there be a descendant of the slayer among the heirs of the slain man. (1) It is further taken for granted that the man when he committed the deed was of years of discretion and was in full possession of his faculties. (a) The further conditions are disputed (cf.

Any alteration in these relations of the door after the deed makes no difference to the old blood-guilt (it is, however, to be noted that the adoption of Islam by a harbi wipes out all previous blood-guilt) with the exception of lunacy (in which with kişāş cannot be inflicted), nor does, for example, an alteration in the relations of the slain man after the doer has decided on the deed but before it is actually committed (but there are various views on this point). If one of several men who have slain someone jointly cannot be put to death for me or other of these reasons, the others also escape bisas; this is also the case if a further reason for killing leads to the action of the slayer. If the slayer dies before kisa; ■ carried out, all claim by the avenger of blood ceases according to Abú Hanlía and Mālik; according to al-Sharin and Ahmad b. Hanbal, compensation can still be claimed.

Malik, al-Shali's and Ahmad b. Hanbal further demand, before kisss can be allowed, in addition to the conditions mentioned, that the slain man is at least the equal of the slayer as regards Islam and liberty, — that they certainly uphoid Muhammad's intentions, while the Hanafis—of course interpreting differently the evidence cited—take no account of this, — therefore occupy an undoubtedly higher position. A particular view of Malik's has already been mantioned. According to Malik, the slayer — turther be put to death, if he has deliberately slaughtered his descendant, and this view is also admitted in the Shali's school. Several may be put to death for the killing of one, according to Abû Hanlia,

Målik and al-Shålia, if they have done the deed togother, provided the part taken by each was such
that if he had acted alone, the result would have been
the same (Målik alone excluded basāma (cf. below)
on the basis of which, according to him, only maingle
individual can be put to death). There is unanimity
on the point that anyone who has killed several people
is liable to bisās; on the question whether compensation has also to be paid there med different
viaws.

Kirds can only be applied after definite proof of guilt is brought. The procedure of proof in a murder trial is essentially the same as in another case; in Kisas fi 'l-nufs there is however also the old Arab institution of the hasama (cf. HASAM and Goldziber, Zeitschr. für vergl. Rechtswissenschaft, vill, 412 fL; Wellhausen, Reste grabischen Heidentums, 187 ff.) which Islam allowed to survive (cf. above); according to Mälik, Ahmad b. Hanbal and al-Shāli T's earlier opinion, kisas can be inflicted on the accused (but according to Mälik on one only) if the kasama is performed and the other conditions are fulfilled; according to Abû Hantia and the later view of al-Shaff'i, which became predominant in all school, he has only to pay compensation; the Shaff's, with the limitation that he may be put to death if in the course of the trial the accuser swears to his guilt twice with fifty caths each time. If the person, entitled to inflict kisks does so without previous judicial proof he is punished with tactic.

The execution of kists is open to the avenger of blood, and according to Abū Hanifa consists in beheading with the sword or similar weapon; if the avenger stays in another fashion he is punished with Latzir, but not imprisoned. According to Mālik and al-Shāfi'l, the guilty person, with certain limitations, is killed in the same way as he killed his victim; both views are given by Ahmad b. Hanbal.

Kisas takes place-among other conditions-only when the next of kin (wall) of the slain are or the of the slain man, I he was a slave, demands it. If there me several (equally nearly related) avengers of blood, all must express this desire; if one of them remits bisas, the refusal affects all. Views are divided on the case where the avenger of blood (or one of several) can give no definite expression of opinion. The wall, or the wounded man before he dies if the case occurs, is permitted to remit the sisas and he is even urgently recommended to do so, either in return for the payment of compensation or for another equivalent or for nothing. There are many special regulations on detailed points and many differences of opinion between the schools of law.

 Kisās fi-mā dān al-mafs according to the Sharf'a. If any me deliberately (with 'amd, opposite of khaf'; of, EATL, 1, 5) and illegally (this excludes the wounding of one who tries to murder or injure or rob a fellowman, if it is not possible to repel him otherwise; it is for example permitted to strike someone in the eyes or throw something in the eyes of a man who his way into another's house without permission) has inflicted an injury, not fatal, which we inflicted on the doer's person in an exactly similar way (what is meant by this is very fully discussed in the Fibi. books), he is liable to bisds on the part of the wounded man, (except that Malik makes it be inflicted by an expert), if the conditions necessary for carrying out the hisas fo "I-nass are present with the following modifications: according to Abu Hantfa, hists fi-ma dies al-nafe is not carried out between man and woman or slaves among themselves, but it is according to Mālik, al-Shāli'l and Ahmad b. Hanbal; Abū Hanlia and Mālik further allow no kisās fi-mā dān al-safs between free men and slaves. According to Mālik, al-Shāli'l and Ahmad b. Hanbal, this lisās is inflicted for one me several, but not according to Abū Hanlia. A sound limb man not be amputated for an unsound one; if the guilty person has lost the limb, there can of course be no kisās. In the case where he loses it after committing the deed, there is a corresponding difference of opinion, as in the case of his death before the execution of kisās fi-lenāfs.

The further regulations correspond to those quoted in section 5.

2. If retribution is not permutted or if the person entitled to gigas voluntarily remits his claim, compensation may nevertheless be demanded; for an unlawful slaying, the blood money (diya [q.v.]) is to be paid to the avenger(s) of blood, in an unlawful but not mortal wounding, according to the particular case either the full dive or a definite part it it as a contribution defined by the law (arch) = a percentage of the diya laid down by the judge (the so-called sukama) to the injured person; all this, of course, on the supposition that the slain or wounded man was a free man. If he is a slave, his value must be made good. If the culprit is a slave, his owner has to pay these contributions for him; he can bowever escape by handling over the slave (parallel in the Romano-Caltic institution of in noxum dedere; cf. e.g. Girard, Nouvelle Revue Historique (1887), 440 ff.).

8. Of the regulations of the Shl'a fith books, which need not be gone into fully here in they are essentially the same as the Sunni, we need only mention that among the Twelver Imamis, for example, it is taught that if a man has killed in woman, higher can be carried out if the walk of the woman pays the relatives of the man the difference between the bloodmoney on in side; an isolated interpretation explains Kur'an, II, 173, in this way. Here we can scarcely have il late effect of the Kur'anic rule regarding woman, as similar calculations in also made in other in the same in the same in the same and the same also made in other in the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the

9. On the practical carrying out of bisis, cf. Kart, ii, ro, in which we may note that breaches of his regulations are recorded of mean the Prophet's companions.

KISAS AL-ANBIYA', the 'legends of the pre-Islamic prophets', is the title of several works relating the lives of the prophets of the Old Testament, the story of Jesus, and some other events into which pious heroes mensules of God are in-

volved (on the etymology of bissa = "story", mgissa). Very famous and widely-spread books on this subject were the 'Ara'is al-magidis by Abū lahāk Ahmad al-Tha'labi (d. 427/1036) and the different versions of the Kissas written down in the name of a certain Muhammad b. 'Abd Allah al-Kisa'i (see Al-Kisa'i).

The origins of this type of literature must be traced back to pre-Islamic Arabia. Knowledge of the tales of the Old and New Testaments and the apocrypha must have been transmitted to the Arabs through the Jewish influence in Yathrib and through Christian missionary work, the effect of which can be ascertained not only in the regions close to the Byzantine and Sāsānid empires, but also on the shores of the Red Sea and in South Arabia (see Baumstark, in Islamica, iv (1931), 552 ff.; Altheim and Stiehl, Die Araber in der Alten Well, iv. 306 ff .: v/1, 316 ff.). Umayya b. Abi 'l-Salt [q.v.], a poet of al-Ta'if and contemporary of Muhammad, seems to have made use of some of these oral traditions; there are pieces of poetry ascribed to him dealing with Abraham, Isaac, the Deluge, etc., though their authenticity remains doubtful.

It me the Prophet of Islam who gave to these legends an entirely new meaning, finding the events of his own life reflected in them; his vocation for prophecy, his being rejected by his own people, the impending punishment, which might have meant the destruction of his own people. All these psychological implications of the Kur'anic legends, and their didactic aspects, were studied at length by Khalafallah in his book on the Kur'anic art of storytelling. From the Muslim point of view, the lives of the pre-Islamic prophets are awful examples ('than) warning against the evil fate of those who me disobedient to God and His messengers. Thus the Kisas al-ambiya" became part of universal history, as history in general was often considered as a series of "ibor [cf. Tabari, Ta'rikh, preface and pre-Islamic period).

The edifying character of the legends became even more stressed when they were separated from historiography; this was, so IIII as we know, first done by Tha labl. Moreover, Tha labl's narrative is mainly based on the tafele-literature. It must be mentioned that even in modern times the legends retained their importance for edifying sermons, as is proved by 'Abd al-Wahhāb an-Nadidjār's compilation, which was published in Egypt in the thirties of this century. The wide-spread and various versions of the Kipas al-andiva? which were written down in the name of al-Kisal show another form of this type of literature; they mus the result of the imaginative art of storytelling cultivated by the popular narrators (\$45545 [see xAss]), and they are an abundant source for the study of the religious feeling and thinking of the average mediaeval Muslim.

The historical sources aliude to the activities of the husses since the first Islamic century, but the oldest manuscripts of the popular legends date from the 7th/13th century. In certain circumstances, the activities of husses and the legends of the prophets could acquire a political significance; thus the story about Moses and Pharaoh used in the anti-Umayyad propaganda, and the early Shi'ls held that the history of the Muslim community similar to that of the Israelites during Moses' lifetime, the Shi'ls being the equivalents of those few who cot apostatise from the true faith when Moses up on Mount Sinzi.

RIGH, Kishsh, the later Shahr-t Sabz, a town of mediaeval Transoxenia, now in the Uzbekistan SSR and known simply as Shahr, but in early times in the region of Soghdia (Ar. Sughd [a.v.]). It lay on the upper reaches of the landlocked Khashka Darvå in m area where several streams came down from the Savām and Buttaman Mountains to the east, forming a highly fertile valley, intersected with irrigation canals. The town lay on the Samakand-Tirmidh high road, two days' journey from Samarkand; after passing through Kish, this road continued for four more days' journey to the famous Iron Gate, the Bozgala defile [see DAR-I AHANIN] which guarded the approaches to the Oxus. Further down the Khashka Darya lay Nakhshab or Nasal or Karshi [see KARSHI], a town with which the fortunes of Kish were often linked.

Kigh was clearly an important town in pre-Islamic Soghdia, and had its own prince. According to Ya'kobi, Buldan, 299, tr. Wiet, 122, at the time of the Arab conquests in a carly 2nd/8th century, Kigh was the chief town of Soghdia and was accordingly, by the common process of applying the name of a district to its main urban centre, actually known Sughd also. It appears in several Chinese sources, e.g. in the travel account of the early 7th century Buddhist pilgrim Hinen-Tsang as Kie-siangna; cf. E. Bretschneider, Madiastal researches from eastern Asiatic sources, London 1888, i, 82, and Marquart, Érānsakr, 55, 303-4, giving various Chinese renderings of the town's name.

When the Western Turks defeated in Central Asia by the Chinese invasion of 645-8, the Chinese forces are said to have penetrated as far as Kish and the Iron Gate, after which the whole of Transoxania was nominally annexed to the empire and placed under the vicerovalty of Firuz, and of the last Sasanid Yazdigird 111. The raid across the Oxus of the Arab general Safid b. 'Uthman in 56/676, when according to Tabari, ii, 179, the Arabs defeated the Soghdians and captured their city, may well have reached to Kish rather than to Samarkand (see H. A. R. Gibb. The Arab conquests in Central Asia, London 1923, 19-20, 22). When Qutayba b. Muslim [q.v.] became governor of the East, al-Hadidiadi ordered him to "crush Kish, destroy Nasaf and drive back [the local Soghdian ruler] Wardan" (Tabari, ii, 1199). But he unable in 88/707 to make headway against the Soghdian defending forces and bad to fall back on Marw. was not until 91/710 that he returned to subdue a revolt by the local ruler of Shūmān in upper Caghaniyan [q.v.], and then marched through the Iron Gate and reduced Kigh and Nasaf. The Arabs seem thereafter to have held on to Kish during the period of the Turkish revenche in Central Asia, but the town did rebel in 133/730-1, at the time of the final appearance of a Turkish army west of the Altai, in the expectation of Chinese aid. However, Abū Muslim's general Abū Dāwūd Khālid b. Ibrāhīm kilied the local prince or Ikhshīd (ai-Ikhrīd in the text of Tabari, iii, 79-80) of Kish at Kandak just north of the Iron Gate, locted his treasures (which included many luxury goods from China) and appointed his brother Tārān in his place (Barthold, Turkesian), 196; Gibb, op. cit., 28, 96).

Two m three decades later, in the caliphate of al-Mahdi (158-60/775-85), the Kish district figured prominently in the anti-Muslim religious movement of Hashim b. Hakim, known as al-Mukanna', "the Veiled Prophet of Khurāsān". The revolt began in the Sayam Mountains just to the east of Kish, and it was in the Kish and Nassf district that al-Mukanna drew strong support. Narshakhi states that the first viilage ioin the rebel leader was Subakh in the Kish district (cf. Sam'ani, Ausab, facs. ed. Margoliouth, f. 316b) under a local leader 'Umar Sübakhl, who killed the Arab amir there. Kish welcomed al-Mukannae and supplied him with much wealth, and it was in a nearby fortress that al-Mukanna finally shut himself up against the Arab general Sa'id b. 'Amr al-Diurashi, dying there in 161/779-80. Even two centuries later, the common people of the Kish and Nasaf districts were still accounted Mubayyida "wearers of white" and awaiters of the messianic return of al-Mukannas (Narshakhi, Tabrikh-i Bukhārā, ed. Mudarris Ridawi, Tehran = 1939, 77-89, tr. R. N. Frye, The history of Bukkara, Cambridge Mass, 2054, 65-75; Ya'kübi, Buldan, 304, tr. 132-2; Barthold, Turkestan, 199-200; E. G. Browne, Lit. hist. of Persia, i, 3x8-23; Gh.-H. Sadighi, Let mouvements religious iraniens au III et au III siècles de l'hégire. Paris 1918, 163-86).

The geographers of the later grd/9th and the 4th/ 10th centuries give good descriptions of Kish. The town, whose buildings were of clay and wood, had the typically eastern Islamic tripartite division of citadel (kuhandis), an inner city (madina dākhila), in which lay the prison and Friday mosque; and an outer city or suburb (rabed) called al-Musalia, where was situated Där al-Imära or government beadquarters. In Ibn Hawkal's time (mid-ath/roth century) the citadel and inner city were both rulnous. The madina had four gates, and the rabad two. The whole administrative region or 'amal of Kish contained 16 rural districts or rustaks, stretching up river to the mountains. It was watered by two constituent streams of the Khashka Darva, so, the River of the Fullers or the Butchers (Kessarin or Kassabin; on this ambiguity, present in both the Arabic and the Persian sources, see Tuskeslan, 194, n. 2) and the Asrudh, and was highly productive, its early fruits and vegetables being exported to Khurasan. Also stemming from the region were manna; therapeuticsubstances found in the mountains; red salt (the red rock-salt of the Oxus lands me known since the time of Pliny, see Marquart, Wehrot and Arang, Leiden 1938, 76-7); and mules and other livestock. Mukaddasi nevertheless comments on the unhealthiness of the place, a judgement endorsed by later travellers. The salaries (Schrinippa) of the Sahibliarid, the Kadl and other officials of the Samanid administration there amounted to 300 dirkams each per annum. The ruinous state of the inner parts of the town show that under the Samanids, Kish had declined in status and given place to Bukhārā and Samarkand, so that only the rabad me occupied and a new town was being built on to it (see istanced, 324; Ibn Hawkal, ii, 470, tr. il, 452-3; Mukaddasī, 284; Budad al-'dlam, tr. 113, | 25.15; Turkestan,

134-6; Le Strange, The lands of the Eastern Caliphate, 460-70).

In the period of the Karakhānida and Saldjūks, little specific is heard about Kish, which seems to have continued its decline into secondary status. In spring 1223 the Taoist holy man and traveller C'ang-c'un passed through what he calls Kie-shi on his way from Samarkand to Cingis Khān's encampment south of the Oxus; and in autumn 1235 Hülegü met Arghun, governor of Khurāsān, and certain Persian magnates, and spent m pleasant month at Kish (Djuwayni-Boyle, il, 511; Bretschneider, op. cit., ii, 113, 147; Barthold, Turkestan, 452, 483).

Kish revived, however, under the Caghataylds and Timurids, and Timur himself was born in the Kish district in 736/1336. (according to Ibn 'Arabshāh, at a village called Khodia-Hghan). Since the mid-7th/ 13th century, the region had apparently been occupied by the Barlas tribe of subsequently Turkicised Mongols, from whom Timür manus and from whom he derived much support in his struggles to achieve power in Transovania (cf. Barthold, Ulugh Beg, in Four studies on the kistory of Central Aria, ii, Leiden 1958, 14-16). He seized control of Kish from the chief Hādidi Barlās in 762/2360, and used it and the Barlas tribesmen for further expansion. Timur's fondness for the Kish district perhaps depended less on a sentimental feeling for his birthplace then on his need to draw on the support of the Barlas there; after Timits's death, these men a numerous element in Utugh Beg's army during his campaign into Mogholistan of 824/1425. In 781/2380 Timur made Kish his summer residence and the second capital of his empire after Samarkand. He rebuilt the town, constructing a madrasa and a mausoleum for his dead first-born son Djahängir, and above all, splendid white-walled palace, the Ak Saray. This new importance of Kish doubtless accounts for the detailed description of K'o-shi in the Chinese Ming annals, which expatiate its fine palaces and mosques; and the Spanish traveller Clavijo, who passed through Kish in 1404, mentions the stilluntinished mosque of Timur there (Sharaf al-Din Yazdi, Zafar-nāma, Calcutta 1887-8, i, 4, ii, 18, 28; Bretschneider, op. eit., it, 179-4; Rabur-nama, tr. Beveridge, 83-4).

It is in the post-Mongol period that the old name Rish was gradually supplanted by that of Shahr-i Saba "the green city". The 8th/14th century was the transition period; the Caghatayid usurper Bûyan Kult Khôn struck dimêrs at Shahr-i Saba in 752/1351, whereas other coins of his have Kish as the mint named on them. But the old name still persisted in literary usage for some time, since Bâbur uses Kish as the primary name for the town (Bâbur-nāma, loc. sit. and passim). The new name must derive from the greenness of the whole oasis, as Yazdi states, and was applied by the local people to the whole area, m well as to the town; local legend also gives other, fanciful explanations for the name. The identification of the recent Shahr-i Saba with the older Kish

seems fairly conclusive.

In the time of the florescence of the Özbeg Khins, the towns of Shahr-i Sabs and Kitäb just to its north were often semi-independent under m beg of their own. It was therefore the constant ambition of the Khins of Bukhirā in the 18th and 19th centuries to bring Shahr-i Sabs under their own control, although the desert to the west and the mountains to the north acted m effective barriers against attacks from the directions of Bukhirā and Samarkand respectively. In the 19th century, the Mangit Khins

Haydar Türa, his son Naşr Allâh and the latter's son Muzaffar al-Din all repeatedly tried to reduce Shahr-i Sabz, and in 1856 temporarily captured it. It only lost its virtual independence in 1870, when the Imperial Russian General Abramov was sent by Kaufmann against it. He besieged Shahr-I Sabz, and captured it after fierce resistance. The Beg fled to Khohand, and the Russians handed over Shahr-l Sabz to the Khan of Bukhara. See E. Schuyler, Turkistan. Notes of a journey in Russian Turkistan, Khohand, Bukhara and Kuldja, London 1876, i. 243 ff., ii, 62-76 (who estimated the population of Shahr-i Sabz at approximately 20,000 and that of Kitab at 15,000), and F. H. Skrine and E. D. Ross. The heart of Asia, a history of Russian Turkestan and the Central Asian khanates from the earliest times, Enndon 1899, 214-15, 219-20, 256.

In the 20th century, Imperial Russian and then Soviet scholars have shown considerable interest in the place and its antiquities, and a full-scale archaeological and architectural survey was commissioned in 1942; special attention has been directed to the imposing ruins of Timūr's Alt Sarāy, to mosque built by Ulugh Beg and to the two buildings known as the Dār al-Siyāda and the Dār al-Tilāwa. For a detailed account of these and the other surviving monuments, see M. E. Masson and G. A. Puga-tenkova, Shahāri Syabs pri Timure i Ulug Behs, in Trud! Sredneaziatshogo Gosudarstrennogo Universitela, zlix (Tashkent 1953), 17-96, Eng. tr. J. R. Rogers, in Iran, Jual. of the British Inst. of Persian Studies, xvi (1978), xvii (1980), and also BSE¹, zlvii, 557-8.

KĪSHLAK (r., < bisk "winter"), winter quarters, originally applied to the winter quarters, often in warmer, low-lying areas, of pastoral nomads in Inner Asia, and thence to those in regions like Persia and Anatolia Into which Türkmens and others from Central Asia infiltrated, bringing with them their nomadic ways of life: Kāshgharī, Diuān lughds altersk, tr. Atatay, i, 464-5, defines kishlak as al-mushattā. Its antonym is yaylak "summer quarters" (< yay "spring", later "summer"), denoting the upland pastures favoured by nomada for fattening their herds after the harsh steppe or plateau winters (cf. Radlotf, Versuch eines Wörterbuches der Türk-Dialecte, ii, 837-8; Clauson, An stymological dictionary of pre-likiteenth century Turkish, 670, 672-3, 980-1).

The basic terms &ish and \$1561a- "to spend the winter" are ancient Turkish ones, appearing in the Orkhon inscriptions. In the Caghatay Turkish of Central Asia, the sense of highlah evolved from that of "the Khan's residence, winter quarters of the tribe" into the additional me of "village". Within the franian world, the word spread into such tengues Kurdish, Pashto and the Pamirs languages; through Ottoman Turkish, it spread into Balkan languages, but here with the derived Ottoman sense of "barracks" and the form kielia (G. Doerier, Türkische und Mongolische Elemente im Neupervische. iii. Türkische Elemenis im Neupersische, Wiesbaden, 1967, 479-81, No. 1496). This meaning has in fact passed into the Arabic colloquials of Syria and Egypt, as has also that of "hospital, infirmary", so that in Egyptian Arabic - have both hughter "burracks" and kashla "hospital" (S. Spiro, An Arabic-English vocabulary of the colloquial Arabic of Egypt, 488, cf. Dozy, Supplement, ii, 351).

In Arabic, we find such terms for "winter and summer quarters" as masked and mask, e.g. in the 4th/toth century geographers (the original sense of the name for the Umayyad palace in Jordan, Mahatta [g.v.], is presumably that of "winter residence".

mughatta).

in Persian, approximate synonyms to bighlah and vaviab are sardsir (lit. "cold region") and garmsir ("hot region"). But as well as denoting the seasonal pasture grounds of nomads, these Persian words were early used a geographical terms to denote, on the one hand, cooler, temperate highland regions, and on the other hand, hot, desert-type or subtropical lowland climates. Already by the time of the classical Arabic geographers, these topographical terms had been borrowed into Arabic, e.g. by Ibn Hawkel and Mukaddasi. Thus the geographers use carmste its arabised form diarm, pl. diuram, for the hot, coastal region of the Persian Gulf shores and the regions bordering on the great central desert, and sardsir, arabised form sard, pls. surad and masarid, for the mountainous Zagres hinterland of Fars and Kirman (cf. Le Strange, The lands of the Eastern Caliphate, 249). This distinction is carried further into the realm of their characteristic products, called by e.g. Mukeddasi ai-ashya' ai-mutadadda "products of the two opposing regions" (cf. A. Miquel, Aksan at-tagasim ... traduction partielle, Damascus 1963, Glossary 390, 404-5), and of local populations fef, the Diurumiyya, inhabitants of the part of Kirman bordering - the Straits of Hormuz, attacked by 'Adud al-Dawla's forces in 360/970. Miskawayh, in Eclipse of the Abbasid caliphate, it. 299, 359, tr. v, 321, 392).

KISHM (Diazīra-yi Kishm, or in Arabic, Diazīra al-Tawila, "the long island") is the largest island in the Persian Guif. It lies off the southern (Lāristān) coast of Persia between Linga and Bandar Abbās [q.v.], and is separated from the mainland by Carence Strait, the width of which varies from three to twelve miles. The island measures nearly 70 miles kength, from north-east to south-west, and an average of seven miles in breadth (20 miles at its widest point). Its general formation kent of condendary from a sharp, rocky scarp onthe seaward side. The highest point, almost in the centre of the island, is 1,000 feet.

Kishm now is virtually a desert, though it once produced grain, vines, fruit and vegetables in quantity. Salt is still mined from the great salt caverns, and there are workable deposits of sulphur and legrous oxide, along with some naphthe springs in the south coast, salth. The population, some few thousand souls, mostly Arab and Sunnt, lives by fishing, limited cultivation and salt-mining. Kishm town, at the north-eastern tip, is the only populated

centre of any size.

The fleet of Alexander the Great, under the command of Nearchus, anchored at Kishm on its voyage from the Indus to the Euphrates in 326 B.C. The sporadic references to Kishm that appear in the next dozen centuries or to tell ut nothing of its history. By the middle ages it was a dependency of the kingdom of Hurmuz [q.e.], and it remained until Hurmuz (ell to Portuguese in 921/1513. When the Portuguese driven from Hurmuz by Shāh 'Abbās I, with the assistance of ships of the English East India Company, in 1031/1622, Kishm was incorporated in the Safawid empire. It of the company in 231/1737.8. Sometime after his death in 1160/1747, Kishm felt under

the control of the Bani Ma'in (or Mu'ayn) Arabe, who held it, along with Bandar 'Abbas, in farm from Karim Khān Zand (regn. 1163-93/1750-79). They retained possession of the island, despite attempts by the Kawāsim [q.v.] of Ra's al-Khayma and Linga to dislodge them, until 1208/1793-4 when Kishm, together with Bandar 'Abbās and Hurmuz, was conquered by the Āl Bū Sa'id ruler of Maskat, Suitān b. Ahmad. He was afterwards confirmed in possession of Bandar 'Abbās by #firmān from the Kādjār court, granting him the lease of the town and its dependencies in return for an annual rental.

In 1219/1804-5 the Maskat garrison evicted from Kishm by the Bani Ma'in and the Kawasim in combination. Subsequently, the Bani Ma'in joined the Kawasim in piratical attacks upon British-Indian shipping, and in reprisal their stronghold at Lait, on the northern coast of Kishm, was attacked and destroyed in Shawwal 1221/November 1309 by the British expeditionary force sent from India to subdue Ra's al-Khayma and the other Kasimi ports. After the reduction of 1.21, Kishm island was returned to the authority of the ruler of Maskat, now

Safid b. Sultan (1221-73/1806-56).

Ten years later, after the second expedition to the Pirate Coast, a British military detachment was stationed on Kishm, from Shawwill 1235/July 1820 to Raby II 1238/January 1823, to keep watch on the Kawasim. The Persian government objected its presence on the grounds that Kishm was Persian territory. Said b. Sultan, however, maintained that his father, Sultan b. Ahmad, had acquired title to Kishm by right of conquest, and that the island had passed to him in full sovereignty. It was not listed among the dependencies of Bandar Abbas in the original firman granting the lease of the town to Maskat; nor was it mentioned in any of the annual receipts for the rental of Bundar 'Abbas. When the British detechment was withdrawn from Kishmbecause of the island's unhealthlness and the danger of the detachment's becoming involved in military operations on the Arabian mainland-the sovereignty issue was left unresolved. In Rabl' II 1239/December 1823 a stores depot for the Gulf squadron of the Sombay Marine was established at Basida, at the western and of Kishm, without protest from the Persian government.

The Maska; lease of Bandar 'Abbās and its dependencies was renewed in Shabān 1272/April 1856, shortly before Sa'ld b. Sultān's death. Kishm and Humnuz were declared to be Persian islands, and classed as "dependencies" of Bandar 'Abbās. The lease, which are restricted to Sa'id and his sons, was terminated in 1283/1866-7 after Sa'id's successor, Thuwayni b. Sa'id, had been murdered by his son, Sālim. A new lease of eight years' duration was awarded Salim in Diumādā I, 1285/August 1868, only to rescluded two months later when Sālim overthrown. Despite attempts by Turki b. Sa'id after his accession in 1283/1871-2 to renew the lease, it was never granted again.

The British stores and coaling depot at Basida fell into gradual disuse, and it was finally abandoned in Muharram 1354/April 1935 to humour the wishes

of Rida Shah.

(I. B. KELLY)

KISHN, a small town on the south coast of Arabia, some 40 miles west of Ra's Fartak. Formerly it was the mainland capital of the Mahri sultanate of Kishn and Sukutra (Socotra), which up to 1387/1967-8 formed part of the Eastern Aden Protectorate. After that date it was designated the sixth governorate of the People's Democratic Republic of Yemen.

The inhabitants of <u>Kishn</u> live mainly by fishing pastoralism and trading, the principal exports being frankincense, dried fish and salt. The ruling family, now dispossessed, was the Bin 'Afrār clan of the Mahra. The reigning sultan, from the senior branch of the family, traditionally resided on Sukūtra, while the head of the cadet branch acted as his deputy at

Kishn.

Kishn was several times raided by the Portuguese during their operations oif the Hadrami and Mahri coasts between ca. 929/1522-3 and ca. 956/1550-1. The period of Portuguese activity coincided with a successful war of conquest by the Kashiri sultans of Shihr against the Mahra, which cuminated in the capture of Kishn in 952/1545-6. The Bin 'Afrar appealed for help to the Portuguese, who responded by expelling the Kashir from Kishn, reputedly in Safar 955/April 1548.

A revival of Ottoman interest in South Arabia after 1287/1870-1 led the British authorities in Aden to secure an undertaking from the sultan of Sukūtra and Kishn in Lhu 'l-Hididia 1292/January 1876 not to alienate Sukūtra or its island dependencies to any foreign power. A treaty of protection followed in Radiab 1303/April 1886, which was extended in Sha'ban 1305/May 1888 to include Kishn and the mainland dependencies. The treaties lapsed when British rule over Aden colony and protectorates ended in 1387/1967-8.

EISMA (A.), Kisher (T.), a term used for "fate, destiny". In Arabic, kisma means literally "sharing out, distribution, allotment", and an of its usages is as the arithmetical term for "division of a number". It later came to mean "portion, lot", and was then particularised to denote "the portion of fate, good or bad, specifically allotted to and destined for each man". It is in this final sense, and especially via Turkish, that kismes has become familiar in the West as a term for the fatalism popularly attributed to the oriental (the first attestation in English being, according to the Oxford English Dictionary, in 1849; see also K. Lokotsch, Etymologisches Wörterbuch der Europäischen ... Wörter orientalischen Ursprungs, Heidelberg 1927, 95, No. 1187).

As noted by H. Ringgren, the noun &ioma does

not occur in the Kur'an in this sense (Studies in Arabian fatalism, Uppsala-Wiesbaden 1955, 106), but only in its basic sense of "division, apportionment" (IV, 9/8; LIII, 22; LIV, 28). In a verse like XVII, 14/13, the word \$6'ir, originally "bird of ill omen", seems to convey the idea of a man's personal destiny as decreed by God (elsewhere in the Kur'an, this word means rather "evil augury"), cf. Ringgren, op. cil., 57-9; and T. Fahd, La divination arabe, Leiden 1966, 218, 436-8, 518). Concerning the more usual terms of early Islamic theology and philosophy for "determinism, predestination", kapa" and al-gapa" WA 'l-gapa's however, it should be noted that \$isma makes an appearance in Arabic poetry of the rat century A.H. ('Umar b. Abl Rabi'a, Dismil) in the sense of "the share of human life allotted to a man by God" (Ringgren, op. cit., 151, 156).

By Ottoman Turkish times, sismet was less a theological and philosophical term than adenoting a general attitude of fatalism, the resigned acceptance of the blows and buffetings of destiny (the same concept being often expressed in Persian and Turkish poetry by words like falak, gardim and larkish peterence to the blind, irrational influences of the heavenly bodies of mankind). The climate of popular belief in fate and chance is well seen in many stories of the Thousand and one nights [see ALF LAYLA WA-LAYLA] and in much of the Perso-Turkish moralistic literature; thus these attitudes loom large in the stories in chs. v and vi of Sa'dl's Bustan, on ridd "acceptance" and kind'at "contentment" respectively.

Also in Ottoman usage, firmet was a technical term of the bassdmile, the official department of state responsible for the division of estates between the various heirs, the military branch of this being the hismet-i 'askeriyye mahkamesi. For this service, a fee called the resm-i himset was exacted; for further details see massam.

Bibliography: (in addition to references given in the text): Sami Bey Frasheri, Kamas-i türki, s.v.; ERE, vi, 794-5 art. "Fate (Muslim)" and viii, 738-9 art. "Kismet" (both by Carra de Vaux); E. Littmann, Morgenlandische Wörter im Deutschen, Tübingen 1924 s.v. (C. E. Bosworth) KISRA, Arabic form of the Persian name Khusraw, derived from Syriac Kesro = Korsro by the 6th century A.D. The consonant and vowel changes occurred because a was used for both & and hh in Syriac, and used here for the Persian kh, became & in Arabic. The first a became i by vowel dissimilation in Syriac, and the final vowel became alif maksura by approximation to the fill form. Arabic lexicographers said there was no Arabic word ending in waw with damma after the first consonant, so Khusraw was put in the fiff form and the kh became I to show that it - Arabicised.

Although Khusraw occurs in Arabic, Kisrā was usually employed for proper names, especially for the Sāsānid rulers Kisrā Anūshirwān (531-79 A.D.) and Kisrā Aparwiz (591-628 A.D.). Because these two Kisrās dominated the late Sāsānid period and Arab memories of it, their name was identified with the dynasty. Arabs came to regard Kisrā as the name (ism), surname or title (lakab) of Persian kings, the Sāsānid dynasty as the house of Kisrā (āl Kisrā), and crown lands in 'Irāķ as arā Kisrā. Women of the royal family were called "daughters of Kisrā". By the and/8th century, the tendency to call all Sāsānid rulers Kisrā produced the broken plurals ahāsīra (the one most commonly used), hasāsīra, ahāsīr, and ānsār, all contrary to analogy.

Kisrå personified Sasanid royalty for the Arabs, who viewed him with an ambivalent combination of envy, awe and fear. They called Ctesiphon Mada'in Kisrå, the great audience hall there the Iwin Kisrå, the detensive ditch the Khandah Kisrå, spoke of the crown, treasure, dazzling carpet, sword and armour of Kisrå, and associated polished manners, lavish hospitality, haute cuisine, golden tableware and the arbitrary exercise of power, with his court. Kisrå provided a symbol for Arab assimilation to Persian high culture, for feelings of common nobility, and represented the Persian monarch in lists of kings of the world and in the murals at Kusayr 'Amra. He was a poetic symbol of past glory and of fate that overtakes even mighty kings.

Kistå's worldiness contrasted with Muslim spiritual values. Hadili emphasised Muhammad's lack of pretence, his avoidance of royal trappings, and his followers' greater respect for him compared to Kistå and other rulers. Kistå tore up Muhammad's letter inviting him to Islam, and hadili promised the destruction of Kistå and Kaysar and that Muslims would spend their treasures. In the simile ascribed to Hummuzan, Kistå is the main enemy of

Islam (the head of the hostile bird).

A fictionalised Kisra emerged by the ard/oth century as a vehicle for editying tales, a person who conversed with a Bedouin on the virtues of camels exchanged the lethal gift of a leopard for eagle with Kaysar. He was quoted as a source of proverbs and someone who knew these stories might in nicknamed "Kisra".

Relative nouns kisrawi, kisri, and kisrawini were formed from Kisra. The form hipsrawini, directly from Persian, referred to the greatest of the akisira and meant a kind of drink or a very line, royal silk used for clothing and used to cover the Kasba in

the late 1st/2th century.

AL-KISRAWI, ABU 'L-HASAN 'ALI B. MAHDI AL-ISFARANT AL-TABARI, vawi of the 3rd/9th century who was also a poet and man of letters. He was the teacher of Hāran, the son of 'Ali b. 'All b. Yabya al-Munadiditm, and transmitted historical and literary traditions, and especially on the authority of al-Diahiz, He was in contact with Badr al-Muftadidi (q.v. in Suppl.) and exchanged verses with Ibn al-Mu'tazz. His knowledge of adab led him to compose several works, amongst which are cited a Kitáb al-Khisál, a collection of literary traditions, maxims, proverbs and poetry, a K. al-A'yad wa 'l-namāriz and = K. Murāsalāt al-ikhwān muhdwardt al-khillán. His poetry consists mainly of occasional verses which were improvised. He died at meet point between 283/895 and 289/902, although Hadidil Khalifa, ed. Istanbul, i, 705, places his death in ca. 330/941-2.

Ribliography: Fibrist, 214; Yakūt, Udabā, xv, 88-96; Suyūti, Bughya, 356; Marzubāni, Maraykshah, index; DM, iv, 251. (ED.)

\$1\$\$A (a.), pl. kisas, the term which, after a long evolution, is now generally employed in Arabic for the novel, whilst its diminutive uppaşa, pl. ahāşiş, has sometimes been adopted, notably by Mahmud Tayniur [q.i.] as the equivalent of "novella, short story", before being ineptly replaced by a calque from the English "short story", kissa hasira. The sections of the following article are largely devoted to these literary genres as they are cultivated in the various Islamic literatures, were if the word kissa is not itself used by them. Although some Berber tongues use the Arabic term (leisst), it has not seemed necessary to add a section on the story in that language [see BERBERS], but a brief section is devoted to the hisse in Judaeo-Arabic and Judaeo-Berber.

The ensuing article is accordingly divided as

1. The semantic range of \$1550 in Arabic.

 The novel and short story in modern Arabic literature.

3 (a) The bissa in older Turkish literature.

- (b) The novel and short story in modern Turkish literature.
- 4. The genre in Persian literature.

5. The genre in Urdu.

- The genre in Malaysia and Indonesia.
- The hissa and its modern developments in Swahili.
 The hissa in Judgeo-Arabic IIII Judgeo-Berber.

r. The semantic range of hissa in Arabic.

Judging by the contents of the articles in the Arabic dictionaries devoted to the root 8:5-3, one may consider this as the result of a convergence of several different "roots". Among the various meanings shown here, two of them seem to be totally distinct from each other: "to clip the hair, wings, etc." (cf. Hebr. 327) and words made up of "27) and "to follow the tracks of a man or animal",

186 KIŞŞA

Taking into account the realities of Bedouin life. this last sense, to which hisse can easily be connected. is certainly old, if not the primitive signification. It is from the verb kasse taken in this sense that the of the kass, pl. bussas "a kind of detective responsible for examining and interpreting tracks and marks on the ground" (al-Mes'Odi, Maridi, iii, 343 - 1 1227; cf. al-'Uzayzl, Kamūs al-'4441 . . Amman 1973-4, iii, 85, who points out the in Jordan of hassas with the generally-developed of habif al-ather (see KIYAPA)) has evolved). Moreover, the Eur'an provides two attestations of this old meaning of the root &-s-s. Moses' mother says to his sister kussiki "follow his tracks" [XXVIII. ro/rr), and in XVIII, 63/64, it is said that Moses and his page boy "followed their tracks back again. retracing them" (fa-rtadda 'ale atharihima kaşaşa). Nevertheless, the verb keeps is most frequently found in the Kurlin with the derived sense of "to tell a story, narrate", or meet exactly, "to give a circumstantial account of some happening, to recount an event by giving all the details successively"; this nuance is usually lost in translation, though it may sometimes be conveyed through an adverb like "exactly". One may note, with repetitions within the same verse, 19 occurrences of this verb: the account is given by God to the Prophet (IV. 162/164, VI. 57, VII, 6/7, 99/tor, XI, 102/100, 121/120, XII, 3, XVI, 119/118, XVIII, 12/13, XX, 99, XL, 78), by the Kur'an (XXVII, 78/76) and by Moses to Shu'ayb (XXVIII, 25); Jacob tells Joseph not to recount his dream to his brothers (XII, 5); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35); and God instructs the Prophet | recount "the affair" (VII, 175/176).

In this last verse, the word sayas, which has the general sense of "narrative, explanation, report, story" in its five other attestations [III, 55/62, XII, 3, 111, XXVIII title and v. 23), has been translated by "affair". Doubtless one should not neglect the avance of precision and exactness contained in bases, but it is perfectly certain that the term's tends to become attenuated in order to similate it to that of hadilh. It could be perfectly easily substituted for the latter word in at least five occurrences out of 23 (XX, 8/9, LI, 24, LXXIX, 15, LXXXV, 17, LXXXVIII, 1), mill furthermore, the verb haddethe is clearly equivalent to hasse in three verses (II, 71/76, XCIII, 11, XCIX, 4). Also close to basas are bhabar (XXVII, 7, XXVIII, 29) and especially the pl. allower (IX, 95/94, XLVII, 33/31, XCIX, 4), and also make', with attestations out of the 17 in the singular (V, 30/27, VI, 34, VII, 174|175, IX, 71/70, X, 72/71, XIV, 9, XVIII, 12/13, XXVI, 69, XXVIII, 2/3, XXXVIII, 21/20 and LXIV, 5) and 7 out of the zr in the plural (III. 39/44, 51, 122/120, VII, 99, XII, 103/102, XXVIII, and LIV, 4) corresponding fairly exactly to bases in the sense of "narrative, story, tale". Thus four terms of very different origins converge here in the Kur'an and tend to assume a common signification, whilst losing at the same time the nuances implied in their original etymologies [see BIKAYA].

Kissa itself does not appear in the Holy Book, but one can point to some examples in the hadily with a general meaning of "thing, affair" (= some, sha'n), close to one of the meanings of hasas; but this term ====== however to have kept well its original nuance of meaning in the traditionists' vocabulary, to judge by the expression side al-hadily bi-dispatible "he cited the hadily in all its details, giving it word-

for-word" (Muslim, Sahih, Salim, bdð al-sihr, trad. No. 44). The word also very rapidly became a technical term of Arabic grammas. Sibawayh cartainly uses the verb bassa in the sense of "to narrative" (-badih, i, 60) and "affair" (i, 4r5, 4r8, 432), but above all he applies it (52 instances) to the idea of "state" (-bái; see G. Troupeau, Laxique-index all Kitāb de Sibāwayhi, Paris 1976, 172); consequently the expressions damir al-shaha and damir al-bissa are absolutely synonymous (W. Wright, A grammar of the Arabic language, index.)

At the moment when Sibawayh wrote his work, the verb kassa meant, from the time of the Prophet onwards, "to practise as a popular preacher of and edifying tales "[see #Ass], this profession being called hass or hasas (see Wenninck, Concordance, v, 392-2, 394, 395). The more serious among the husses made a speciality of siving a commentary to their audience on the miraculous events referred to in the Kur'an and of recounting, in particular, in reference to the lives of the prophets, edifying stories. The kases of the Kur'anic text was then specialised in meaning, as we have just seen, and replaced, in order to designate the material in the répertoire of the popular religious story-tellers, by hissa, pl. hisas, without the term having, at least at the outset, the least element of the pelorative in its However, in the 3rd/9th century, al-Diable. following other authors, reserves for sissa the a of "religious tale", but sometimes adds, with his usual irony, some fairly precise nuances of "story full of marvels and somewhat unbelievable", of "myth" and of "traditional explanation of a supernatural happening" (see Tarbit, index).

At this period, the August were already mingling with their discourses stories totally lacking in ediffcation, but it seems that \$6550 did not yet mean a secular tale, and even in the next century. Ibn al-Nadim does not use the word in the chapter devoted to stories in the Fibrist. Moreover, a few decades later, hissa appears with me religious sense which I had when used by the first kussas, in the title of al-Tha'labl's (q.v.) popular work, the 'Ard'is almadialis fi bisas al-anbiya"; the expression bisas al-antiva" [q.v.] was to become the title of quite a considerable number of works. Despite the precise meaning implied by this latter expression, the lexicographers, who devote quite a lot of space 10 the 11000 h.s.s. hardly give the precise sense of hisse at all. The LA limits itself to asserting that the term is wellknown, and then glosses it by atabar, hadiff and ame, though it does however give a pejorative nuance for \$ass, in fact equivalent to "words, chatter" opposed to semai "action". In the Misbak, hissa la defined only by sha'm and amr; and in the Salah, amer and hadiff are further used to gloss this term, whose plural hisas would therefore only be used for the hisps when it was written (likewise, also, in the LA and Kamus). Assuming that = are probably not concerned here with the hisas al-anbigd', this rather enigmatic explanation is probably to be used with a technical mean different from that signalled in grammatical terminology; starting from the meaning of "affair", early attested and found from Kur'anic times onwards, bissa very soon came in fact to mean "a written exposition of an affair or matter, a mémoire presented to a judge, a request placed before a ruler, a petition". Quatremère, in his Sultans mamelouds, i, 236 n. III, gives a certain number of examples of this meaning and mentions the existence ill an official, the hissa-dår, who was

concerned with such requests (see also Gaudefroy-Demombynes, Le Syrie, p. XLIV; Dosy does not appear to have interpreted the material in the dictionaries relative to the written bissa in the same way as we have done, since he includes this term in his Suppiement). Al-Kalkashandi, in Suba, iti, 487-8, does not cite the bissa-dir but provides some details about the manner in which kisas al-mardlim were treated.

Since some busses began regularly to narrate stories which had no religious character at all, hisse, without ceasing at the same time to characterise a serious, even a historical narrative (e.g. the 27 mss. called bissat gharmat. . "narrative of the expedition of ..." classified by Ahlwardt in his Berlin catalogue) tended to be applied to any story, sacred or profane, and to become a synonym of hikaya, and secondarily, of kadish and khabar. As an indication, the above-mentioned catalogue has a total of 276 works beginning with kissa; that of the mss, in the B.N. of Paris drawn up by G. Vajda has 115 (of which 75 have been restored according to their contents); hikāya appears there 47 times, hadith 22 times and khabar 4 times. In the group at a whole, there are certainly some edifying stories (e.g. the Kiesas Ahl al-Kahl), but titles like Kissas Sulayman ma'a Bilkit or Kissat Tawaddud reveal true romances. In this way, the modern use of the term is to be justified, and this, conversely, has brought about a revival of kasas, now specialised in the sense of "narration", the narrative genre and the narrative art", leading to the creation of the word basasi "narrative" (adj.). (CH. PELLAT)

2. In modern Arabic literature.

The modern and technical meaning of this word: "fictional narrative", "nove!" has come to be accepted without eliminating the more general, older sense of "story", "account". Furthermore, it should be noted that, in this case in many others, the neologism has not been immediately accepted and does not cover the same semantic field for all those who it, even today. From the start, it is to alternate with other words.

In an article appearing in al-Abrām, = 11 May 1881, where the Mayth Muhammad Abduh drew attention, without otherwise deploring it, to the taste of his contemporaries for the novel, we find the word rumaniyyat. The definition of the genre remains somewhat hazy since the emigent reformer included under this beading Kolila wa-Dimna and the stories of traditional adab along with the recent transiation of the Aventuses de Télémaque by al-Tahtawi and the serial stories then published in el-Abram. Besides this borrowed term-which was not long to remain in use-there are words drawn from the Arabic vocabulary which come to mean the same as buse. Understandably in the and of works on the borderline of the novel genre, the terminology appears uncertain: the Alam al-dis-(1884) of 'All Mubarak is presented by its author as a hikāya (story) while Ibrāhīm al-Muwaylihī gives the title hadish (talk) to his very interesting mahimal: Hadith 'Isd b. Hishām (1907). It is all the same curious to note that in 1917 a certain Diubran Khalil Djubran, suggesting to the editor of the review al-Hildl the holding of a competition for the best story-to promote a genre that has proved its worth ■ Europe—uses the term kikdys to describe the genre. Little by little, however, hissa came to prevail, and Tāhā Ḥiusayn was some claiming back his liberty a creator and refusing to apply rules whose validity he did not recognise by saying in substance: the bisse

is taught nowhere, and besides, what I write mot birse but a hadith (cf. Sälih, in al-Mw'adhdhaban fi leard).

In fact, the lack of precision remains, mainly result of the differences in length among the various kinds of story. It is possible to account for these without departing from the root hese. For the abstract "harration", "narrative hiterature" we have kasas, while the "story" of indeterminate length is called hisse, the novel being distinguished from the "tale" or from the "novelette" by an adjective (hisse lawile in the one case, hisse hasire in the other). The range of meanings may be conveyed in a still more precise lashion: a suitable adjective expresses the midway term, the long short story so popular with the British (hisse mutawassife), while wassise (pl. akāsis) denotes the very short story, the short novelette.

But in practice, things are not so simple. The first Arabic story-teller to be universally known, Mahmad Taymar, published successively two collections of stories, calling the first abdsis (al-Shayh Djum'a wa-abdsis whid, 1925) and the second bisas ('Amm Metwalli wa-kisas whid, 1926). At the other end of the scale, there are some who prefer simily a to bissa lawlle to denote the novel; this neologism once specifically reserved at the end of the 19th century to denote a "theatrical piece." Without it being an absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule, it may be stated that at the present day absolute rule at the condition of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the rule of the ru

Considerations of length are not the only ones to be of relevance. It should also be noted that some have tried to solve the ambiguity inherent in the word "tale" which exists also in English. If one wishes to differentiate the brief, realistic, truthful or plausible narrative [the short story] from a narrative of the dimensions but imaginative, extraordinary or extravagant (the tale), one must call the latter by the name hissa (or shinks) followed by adjective (hhaydiyya or hhurdfiyya), while being careful not to the word hhurdfa in isolation lest to be understood in a non-technical sense and with a pejorative flavour: "a cock-and-bull story".

The birth and evolution of Arabic flotional literature. The modern bissa owes nothing to Arab tradition. It is linked neither with the folklore of the Thousand and one nights nor with tales of chivalry nor with narratives of adab. The tradition of classical makina, although taken up by two men of imagination and dual culture (Faris al-Shidyik for al-Sak 'ald 'l-sak, x855; and Muhammad al-Nuwaylihi, cf. above, 1907) has left no legacy. It is from Europe that the Arabs have borrowed this literary genre totally unfamiliar to them, sc. the novel.

The press, which has been remarkably prolific in Cairo and Beirut ever since its first appearance there in the middle of the 19th century, has in a short space of time put into circulation stories of various lengths translated from French and English. Some periodicals, like fladiba al-ahhhar (founded in Beirut in 1858) publish examples from time to time, others, like al-Dinān (Beirut 1870) regularly devote a part of each issue to such translations, and the same applies to the reviews that the Lebanese resident in Egypt have subsequently launched in Cairo (al-Hiddl, al-Muldafaf, al-Dinā). Even the dally al-Ahrām founded in Alexandria in 1875 has its serial story. Furthermore, some weekly or monthly

entertainment publications are entirely devoted to them (Silsilat al-fukāhāt, Beirut 1884; Muntahabāt al-rindyāt, Cairo 1894). A certain degree of decentralisation has even been achieved with the appearance of Silsilat al-rindyāt al-futhmāniyya at Tanţā in 1908 and al-Samīr at Alexandria in 1911. The second stage is the editing of the translated aovels in volumes.

The essential object of this type of literature is to entertain. Publishers and translators search out stories of extraordinary adventures, of unhappy love-affairs, of poignant grief, rather than works of established quality whose authors — universally known. Fidelity to the original text was not regarded as an obligation in the period where the translator most in demand. Tanyits 'Abduh, a Lebanese who had settled in Egypt, was renowned for the imagination which he put into his work. The tendency was to adapt rather than to translate.

Quite naturally "original" composition has followed translation-adaptation and obeyed the same rules. It has even in some cases been exactly contemporary with it, and there are times when the translator is at the same time = author. This was the case with Salim al-Bustani, who published less than five original works in serial form between 1870 and 1884 in al-Diinan, at the time in he was translating French novels. His sister Alice and his cousin Sa'ld were also involved in the same sort of work. In serial stories of this kind - well as in the copied models there abound coups de thédites, unexpected meetings, unsuspected relationships, etc. In order to avoid offending a very sensitive public moral sense, the scene of the plot still tends to be exotic, or if the action takes place in Egypt, the whole or the majority of the cast of characters must be foreign (Fatāt al-akrām by Muhammad Mabmad, Fatat Misr by Ya'tab Sarrai), Sa'id al-Bustant discovered to his cost the powerful force of this unwritten rule; a resident of Egypt for ten years, a friend of Shaykh 'Abduh, this Lebanese was nevertheless savagely criticised in conventionallyminded circles for having published Dhat al-khide (1804) which claims I show the disastrous results of m ill-matched marriage. . . in a wealthy family supposedly living in Alexandria!

Obliged to show some degree of discretion, limited in its intellectual ambitions, this newly-arrived genre would doubtless never have interested an enlightened Arab public had it not found sponsors and promoters. Shaykh 'Abduh took an interest in it, as has been seen, because he reckoned it capable of having a reformatory effect, if carrying a well-formulated message. For Dirdit Zaydan (1862-1914), it was the ideal didactic means to put into the service of history, and this Christian author of a History of Islamic civilisation therefore brought to the novel the caution of the scholar. Whereas Djamil Mudawwar had published in Belrut in 1881 a single historical novel about 'Abbāsid Baghdād, he was to publish twenty-four such novels between 1889 and 1914, of which the majority appeared in serial form in Cairo in the review al-Hildl which he edited. Serious information being in his view the essential part, the amorous element of the plot would serve only to jure the reader; this element seems therefore to be somewhat stereotyped from one volume to another; but at least, the construction is solid and the language clear and precise.

After reason, sensibility. It would be impossible to overestimate the role of Manfalüți (1876-1924) for, in his two collections (cl-Nașarăt (1920-1921)

and al-tabards (1925)), he superbly analises French romanticism to the point where, under his pen, translations, adaptations and original creations seem to flow from the source. Having found a style and tone, be knows how to stir emotions while dealing, in a context of traditional morality, with the problems posed by the irruption of European civilisation into the modern Orient. At the opposite extreme regards content but with a similar degree of emotional intensity, is the message of "The American" Djubrān (1883-1931). Tears flow in abundance here too, but the romanticism is noble, protesting at the injustice practised by the powerful of this world as observed in the microcosm of the Lebanese village where the mayor and the priest seem to be constantly united in the effort to prevent the children from loving each other; al-Adjunta al-mutakassira (1912) hardly deserves to be called a novel, it is rather a long poem in prose devoted to an unhappy love affair of the author. "Broken wings" and "Tears", these are the two works, of Egypt and the makdier, which have moved or irritated several generations of Arabs all must the world.

But the first Arabic novel meet nothing to Manfalūtī or to Diubrān. It written in Paris and perhaps partly in Geneva-by s young Egyptian student. Haykai (1888-1956) - feeling homeslek when he wrote Zaynab (1914), and it is the Egyptian countryside that he attempts to re-create with its poetry, its variety, also its characters, simple and poverty-stricker. But this evocation is centred around two victims of injustice in Egypt, sc. the peasant and the woman. Even though the first edition is signed under the pseudonym Misri Fallah, the poverty of the farm worker hardly holds our attention, while the fate of two women, equally unfortunate, illustrates the sorry condition of an entire and recalls the courageous protest of Kasim Amin at the beginning of the century. The hero ultimately makes his indictment: life has no appeal in a land where youth passes too quickly, where love is not allowed, and where the individual has no time to look at what is beautiful.

Even if the problems of writing and construction are not always perfectly solved, even if the influence of La nountile Heloise of Rousseau is obvious, this rich composition does not only have a historical interest, for it conveys an authentic tone, that of a desperate confession.

In spite of these promising beginnings, other novels were not to appear for a further fifteen years, In the interval, it is only short story writers who make a name for themselves, putting forward within the dimensions of shorter narratives technical solutions borrowed this time from the best European specialists. The stories that they tell, on the other hand, always deal with the reality that surrounds them. In "wringing the neck of rhetoric", these young pioneers feel that they are laying the foundations of mow literature. The first of them, -and paradoxically the only survivor-Mikha'll Nu'ayma (born in 1889) began publishing his stories III the beginning of the First World War in al-Salik, then in al-Funda, the reviews edited by Syrian Lebanese settlers in New York. The best, later collected in an anthology (Kána má Mána, Bairut 1937), are striking for their simple language, the transparency of the characters, the significant choice of situations where ancestral customs like the journey to America play a central role-and perhaps even more for the firmness with which the story is

told, a story where, however, emotion and humour make themselves discreetly felt. On Egyptian soil, slightly later, Muhammad Taymür (d. 1921) publiabed in al-Sufas some stories of which the bestknown dates from 1919-an important year for Egyptian nationalism of which this writer was a passionate advocate. It to this element the interest taken in social injustice and in poverty, and we have the principal source-material of the stories of Muhammad Taymur and of his comrades-in-arms. This expression is not an exaggeration when applied to his brother Mahmud, who describes himself as taking the torch from the hands of his brother, dead at the age of thirty. It is without doubt Mahmud Taymur (d. 1974), the greatest story writer of the time, who has exerted the strongest influence in Egypt and in the other Arab lands, so of the most prolific of modern Arab writers and one of the most widely-translated too. Following the school of Maupassant-to whom his brother introduced himhe learnt to construct a plot firmly centred on a character who is bizarre to say the least, or on exceptional incident. But he does not ignore the dominant themes of Egyptian social life, to which the brothers 'Ubayd and Mahmud Tähir Läshin (d. 1955) also come to apply themselves, each according in his temperament and his special talent, Lashin being of the three the one whose palette would appear to be the best equipped both for varieties of subject and of resources of expression. Let It also be noted that this writer has written one of the few Arabic novels to appear before the Second World War: Hawad' bild Adam ("Eve without Adam"), 1934.

Furthermore, it may be appropriate to note that this novel is distinct from the others in that its subject (the pitiable failure of a feminist schoolteacher who believed in love and social advancement) owes nothing to the life of the author, while Tähä Husayn (d. 1973) Ibrāhīm 'Abd al-Kādir al-Māzinī (d. 1949), al-'Akkād (d. 1964) and Tawilk al-Hakim (b. 1902) had written nothing before 1939 but works largely autobiographical in character. What these men have in common is that they not true imaginative writers, but rather they are part of the Egyptian intellectual élite. It should therefore surprise no-one that they look for material for their stories in their own experience. Besides, for these great thinkers of their generation also, this is means of assessing the exact condition of their country, for carrying on, in short, the worried analysis conducted by Haykal in Zaynab, As chance would have it, the year 1929 saw both the second edition of this novel and the publication of the first part of Taha Husaya's al-Ayyam. The accuracy in tone of this book, written with finesse and modesty, explains its immediate success in Egypt and the rest of the world; one feels that the blind boy struggling in a world that is hostile or indifferent or stepid symbolises more than an individual destiny. Even before the appearance of the second part of al-Ayydm, Adib (1935) represents a split in the personality of the author, whose Egyptian half looks on helplessly me the folly and wreck of the Europeanised part.

The debate between the two civilisations—with their customs and culture—also interests Tawfik al-Hakim in two of his autobiographical novels, while in the two others [Awdat al-rūl, 1933; Yawmiy-yāt nā'ib fi 'l-aryāf, 1937] we find a number of the elements of the dessiers opened on Egyptian society by the short story writers. Superficially,

the enquiry is less emphatic, there are times when the reader roars with laughter, but do not the laughter and the careless airs conceal a deep disquiet into which the faint-hearted lover and the Deputy Prosecutor both plunged?

In drawing his self-portrait in *Ibrākim al-kātib* (1931), Māzinī speaks of disappointments in love which may be fictitious, but he is most certainly honest when he shows himself irresolute and easily discouraged. As if in spite of himself, he gives us suggestive insights into the three milieux that he sets himself to evoke and, when he does not overstep the bounds, his glibness does not lack charm.

Outside Egypt, a single novelist deserves mention for this period; the Lebanese Tawfik Yusuf 'Awwad, who published al-Raghij in 1939. It is the Lebanen of the period of the First World War, the Lebanen "in the hour of the Turk", ravaged by famine, that we find here, the repression of nationalist movements coming to an end on the gallows of Beirut's Place des Canons. With a great deal of sobriety, a very sure sense of crowd-scenes, a properly romantic conception of history and politics, here is a writer who knows how to give to his narrative a depth which nobody else, Haklm included, has yet succeeded in obtaining.

'Irāk at that time was still at a hesitant stage, with Mahmüd Ahmad al-Sayyid (d. 1937) publishing from 1921 onwards, in Cairo, stories which are admittedly rudimentary but where the effects of Turkish rule on 'Irāk' society are succinctly shown; with Anwar Shā'ul (lirst collection of stories 1930), the influence of Taymūr is clear. In his stories and those of 'Abd al-Madjid Luṭfī (b. 1908), influenced by Tolstoy and Gorky, one feels that the seeds of promising harvest have been sown in 'Irāk.

Among the pioneers mentioned above, a certain number have lived on after the war. Their prestige has increased and they have attained immortality. Young Arabic literature has found in them its ancestors, its sponsors, its classics, it could be said. Each of them otherwise remains imperturbably faithful to his style. It is still the same self-centred man dissatisfied with home and love that Mazini indulgently analyses (Ibrahim II). From an incident of everyday life, the Lebanese Mikhā'li Nu'ayma draws the material of an intimate diary (Mudhakkarit al-arkash, 1949), where meditations on good and evil, the solitude of the soul and its mystical vocation, count more than the narrative plot. In the same way that Tawfik al-Hakim hardly descends from his ivory tower to stigmatise feminine duplicity and to comment ironically in the sacred bonds of marriage (al-Ribāt al-muḥaddas, 1944), Tāhā Husayn pursues his dialogue with destiny, but through interposed characters, in a tragic family chronicle with slow tempo (Shadjarat al-bu's, 1934). The famous Mahmûd Taymûr still composes short stories his last collection appeared in January 1967—but he also writes novels where he expresses in the mine pure language the qualities for which he is well known; very close to his times in Ilá T-liká' ayyaká 'l-kubb (1959), he is halfway to fantasy in al-Masabih al-rurg (1960). In this group, II is without doubt Haykal who has produced the least expected work for Hákadhā hivilikat (1956) presents, on the me of his death, a portrait of a woman that contrasts totally with the Zayrab of his youth; this cold, dominating female really existed, so well-informed contemporaries assert.

But the new-comers are henceforward very numerous, some of them belonging

Arab countries not

KISSA

mentioned above. Reviews have been founded: in Egypt of course, but also in Bahrayn, where a literary periodical of this name appeared when the first printing-press in installed in the Gulf (1939), most of all in Belrut where al-Adab, founded in 1953, and al-Adib give young writers the opportunity to become known, in Tunis where, since 1944, the review al-Mababith awards prize (Bahlawan) to a writer every year. Henceforward, Arabic fictional literature is sufficiently vigorous and varied to convey trends which are to be noted elsewhere in the world.

The romantics. It is clear that romanticism has solid roots at its disposal-it is enough to recall the genre of the first European novels translated, the Importance of Manfaluti, the tone of Zaynab. A younger generation dissatisfied with its condition finds at last the means of expressing its revolt and its dreams. Evidently it is love that polarises all attention. This lyricism is a phenomenon of youth in three senses: the youth of the writer, the youth of literature and the youth of mi public. The theme of the impossibility of amora relationships is treated at length by the Tunislan Rashld Ghall in the short stories that he has published in the review al-Fikr since 1060; an encounter without future constitutes the subject of al-Bahr Id and? fth, a story which gives its title and dominant tone to a collection published by the Libyan A. Ibrahlm al-Fakih in 1066; the Sudanese Sabbar (b. 1927) published ten years ago a novel on a small scale: Sire al-dumit's.

It should not, however, be assumed that this type of novel is always attributable to an "indiscretion wouth." Writers of considerable renown who are no longer adolescents have built their success upon this specialised genre, and their prolific output shows that they know how to pluck the string of emotion. In this context, one could hope for no better example than the Egyptian trio W Yusuf Siba's (d. 1978), 'A. H. 'Abd Allah (d. 1973) and Ibsan 'Abd al-Kuddus. The systematic exploitation of sentimental problems is their common denominator, as well as their ability to impose their personal style. The first emphasises the dramatic, or melodramatic quality of the situations that he imagines; the second does not flinch from a certain moralistic purring owed for the most part to the very literary nature of his language; finally, the third flirts with scandal, and his gallery of pretty girls at once innocent and greedy for liberty has aroused many adolescent dreams.

Readers unmoved by the magic of these masters perhaps would allow themselves to be seduced by more subtle forms of romanticism. In Egypt, 'Abd Allah Jukhi finds in his native countryside (Fi dam' al-kamer, short stories, 1960) or in a cruise on the Nile (al-Nahr, a novel 1952) the appropriate setting that his dreams require, while Muştafa Mahmûd (b. 1931) studies the relationship of married people (al-Mustakil, 1960) with much tact and sensitivity. In Syria, the short story writer Shamil Rami (al-Kajā'if, 1960) even seasons his outpourings with a fair dose of fierce satire. Finally, we draw attention to a short story by ma Algerian Tahir Wattar (Mamarr al-2yyam, in al-Fihr, 1959) for this distillusioned statement by one of his heroes: "There is youth in the Arab world. The Arab knows only two ages: childhood and adulthood." We shall have occasion to speak again of this = of malaise.

The realists. These writers have inherited a populist or poverty-oriented tradition that is not very old. On the eve of the war, the Syrians T. 'Awwad, K. M. Kuram, and the 'Iraki Dja'far Khalili were concerning themselves with frateraity, tearful commiscration or indignant horror at the sufferings of the lower classes.

We find this same interest in poor people with a great number of writers of the following period and in countries that have come to the novel more recently. From Morocco, we may mention two collections of stories; al-Sabi by Muhammad [brahim Abū 'Allū and Radiul wa-mar'a (1969) by Zaynab Fahmi. Taymur has really created a school, for we witness an impressive parade of pitiable or laughable "cases"; Y. Hakki's petty tradesmen, the charlatana of the Tunisian Mustafa Farisi, the baggage carriers of the Syrian Samim Sharff, the water-carriers of the Egyptian Siban. These specimens of idle poverty-stricken humanity, true to type even when they live on the fringe of society, clearly lend themselves to living in novels. Who could deny the vividness of the portrait of Tarnannuh, kiler and football fanatic, product of the imagination of Rashad Hamzawi (Tunis, al-Filer, 1959) or that of the "maker of grotesque cripples", the negro 2lte who introduces a kind of Court of Miracles in the lane (Zukāk al-midakk, 1947) described by the Egyptian Nadjib Mahfuz.

Apart from the hero, the writers strive to recreate whole ambience to which they are deeply attached. Thus, thanks we the pen of a Tayyib Tarkis or of a Hamzāwi, there appear before the coloured quarters of Rabt and of Turbat at Bey in Tunis, while the shrines of Old Cairo, Sayyidnā Husayn and Sayyidatnā Zaynab, inspire the best works of Hakki and Mahfūr, and the seascape of the Shatt al-Sarab we recreated in a story such as Children al-mading (1975) by the "Irāki Abd al-Rahmān

Madild al-Rubay L

It would m surprising if me countryside were to remain outside the fictional repertoire, when rocall that, with Zaynab, the Arabic novel was born there. It is in fact the same love of nature that shines through in a simple account of olivepicking in Tunisis, told by Muhammed F. Ghasil (b. 1947) in a short story (al-Filer, 1961). But it is most of all in the novels of the Egyptian Sharkawi (al-Ard, 1954, Kulüb khāliya, al-Fallāh) that the rural life is conveyed in all its richness, at a time when new ideas we shaking the system of traditions that used to be thought immovable. On the contrary, Huxayn Nasr (Tunixia) evokes the full force of the past in a few pages; this "Ox that my father left us" (al-Fike, 1961) is slow to die and imposes his presence when the young men, rejecting the experience of the old, wish that the page had been decisively turned.

It will come as no surprise to find political involvement accompanying this meticulous survey of an entire people. At the same time that al-Ard appeared in Cairo, Hanna Mina published in Damasal-Masābik al-xuek. We may thus me side-by-side two exemplary narratives: a peasant revolt in the Delta, and the resistance of I Latakians to the French Mandate at the end of the Second World War. The heroic times of such and such = country have inspired a considerable mass of stories. The Moroccan Khanatha Bannuna celebrates inter-Arab solidarity scaled in combat in a recent collection of short stories (al-Ndr wa 'l-ikhtiydr) and his compatriot Mubarak Rabis makes the participation of Moroccan troops in the battle of the Golan Heights, in 1974, the central subject of his novel: Riffest al-silāh. . . wa 'l-hamar (1976). Sometimes one finds them to be too verbose and not sufficiently alive. This is especially the with the entire output of Muță Şafadi (Syria), a real propagandist of the Arab Revolution (That'is muhtarif; Dill al-hadar; Ashbah abial, 1959). On the other hand, an 'A. H. ben Haddüka (Algeria) succeeds in interesting us in the conscience of man who has just committed m political crime (in Zilel djaza istyya, 1960). It is the analysis of the social and psychological quences of war of liberation which interests him in his first novel appearing ten years later (Rik al-diamib), of which the form catches the attention. His compatriot Tähir al-Wattar also distinguishes himself in his two recent novels by the originality of his vision of guerilla warfare (al-As) or the traumatic after-effects of independence (al-Zilrāl). Similarly, the Palestinian tragedy is presented, free of forced sentimentality, in fascinating novels by the Lebanese Hallm Barakat and the Palestinian Chassan Kanafani (Ridjāl fi 'l-thams).

Oriental society is evolving to waried rhythm in its different aspects. Industrialisation, for example, has scarcely been reflected by the appearance of workers in romantic literature. To our knowledge, only two writers have taken an interest in this: H. Mina (Syria) mentioned above, who has made a study if its Gorky of type-setters in a printing-press, The invisible thread, 1960; and hluhammad Sidki (Egypt), who through the experience of a self-taught man trained in a number of occupations, gives me an insight into the daily life of the working classes (in the collections al-Anfair and al-Aydi "I-hhashina, 1956 and 1958).

On the other hand, the number of Arab = writers is already remarkable. Quite naturally, they are interested in problems that me specifically feminiae. Since professional involvement of is still somewhat limited in their countries, it is most of all "psychological realism" that they aim at. The older ones-Bint al-Shāți? and S. Kalamāwi in Egypt, Widad Sakakini in Syria have born witness to the deep transformation affecting the female mentality. The younger women writers-Samira 'Azzām in Irak, Colette Suhayl in the Lebanon, Safi 'Abd Allah in Egypt-seek to re-establish, with regard to their sex, the truth misunderstood or distorted by men. The Egyptian Latlia al-Zayvāt thes not claim to make any extraordinary revelations in her novel al-Bāb al-maftāh, 1960, but points 🚃 succinctly that the poble protests of the sterner sex are not yet fully convincing.

So as not to distort the perspectives, it is important to draw special attention to the work of three Egyptian novelists whose tenown extends over the entire Arab world: Yahyā Hakkī, Yūsuf Idrīs and Naglīb Maḥtūz. The first the first, who was born in 1905, is linked with the difficult emergence of the Arabic short story in the years around 1925, but he has only become well-known since the war. His first collection Kindil Umm Hāṣhim dates from 1943. His collections of stories, his short novel (Sakha 'I-naum, 1954) and his memoirs (Khallihā 'alā 'lāh, 1959) have made him known to the public at large as a writer of prose that is firm but not grudish, and one who treats his characters with sensitivity and humour.

As for Yüsuf Idris, he has been writing "committed" stories since 1949. With the appearance of his first collection (Arkhas laydis, 1954), there is the feeling of a talented writer making himself known. His subsequent works (al-blasem, novel, 1959; al-

"Askari al-aswad, a short story, 1961, among many others) testify to his dramatic sense, and his condensed style, on the borderline of grammatical correctness, counts as one of the most original of all.

Nadifb Mahfür enjoys an even wider readership. He this perhaps to his uncompromising adherence to the classical language but most of all to the and depth of his analysis and to a remarkably prolific output—some twenty novels and a dozen collections of short stories published to date. His Trilogy (1957, 1958) is considered to be the perfect masterpiece of Arabic realism. It gives us the key to an understanding of the generation of contemporary Egypt through a wealth of passions reminiscent of the Russian novelists, but with a concern for datail that is exclusively his own, and most important of all, from a perspective such that every Arab reader feels himself involved.

The existentialists, in a society in a state of flux, there was some who feel resentful, distillusioned, alignated, and who find in existentialism a philosophy in tune with their mood. The Lebanese Suhavi Idris. has done much to install this philosophico-literary doctrine in the Orient. He has been the prime in a major series of translations that have introduced the Arabs to Sartre and Simone de Seauvoir in particular. But his role has not been limited to that of translator nor to that of editor-in-chief of the major review al-Addb. He is also the author of a number of novels. In the first (al-Hayy al-lating, 1953) he too examines the reactions of the oriental to the European way of life, but the analysis is different from one given by Tawfik al-Hakim in *Usfür min al-shark nearly twenty years earlier. In spite of his love for # European sweetheart—shared this time—the Arab student returns to the Lebanon to place himself beneath the yoke, and perhaps the protection, of the customs of his homeland. His resigned acceptance of the absurdity of life shows that his stay in the Latin Quarter has left deep marks on him.

The Lebanon is thus the favoured land for existentialism. There who take pleasure in a type of fiction that is closer to the debate of ideas than to the novel as strictly defined, like Emile ... Abl Nadir in al-Fordgh (1961). But the more interesting writers are able to bring to light in their plots the implacable character of life. A story by George Shami shows to what extent a personal sentiment, however sincere and profound, is helpless in the face of the tyranny of the family spirit, and another by Diamil Djabr (Kalak, 1961) finds the correct tone for describing, in the first person, an impossible love. The Lebanese novel does not however attain the level of despair except in the work of the woman-writer Layla Ba'labakki; in And abyd (1958) and in al-Alika al-mamsuhha (1960) there is a vivid account of the revolt of a feminine sensibility stifling in a male society, made-taboos includedfor men.

Although she has become known more recently, the Syrian Ghāda Sammān is closely akin to her. One of her collections of short stories (Laylat aighusahi?, 1966) presents us with a study fundamentally of a single character in a variety of settings: the woman who feels herself involved neither with the family nor with the revolutionary ideal, a "stranger" always and everywhere, her too-clear intelligence and her too-vivid sensibility making of her a person who suffers and sees no other future than this suffering, which she broods were with a kind of masochistic delight.

KISSA 102

Trak shows another kind of existentialism, less intellectual, visceral. Among story-writers of talent, the first place belongs to 'Abd al-Malik Nert (born in 1921). Between 1946 and 1954 (Nathid al-ard) III has created a genre: from the first to the last line, his fiction expresses malaise, an infinite despair or a fatal torpor. With Mahdi 'Isa Sake and Fu'ad Takarli (al-Wadih al-akhar, 1961) = are steeped in the same unrelieved black that to be the dominant colour of young Trakt literature.

The basic problems. During its sixty = so years of existence, Arabic fictional literature has been obliged essentially to cope with two basic

problems.

The one, purely internal concerns language. For obvious reasons, the novelist must choose the type of language that he is to lend to his characters, dialect or /usha. A writer as eminent as Mahmud Taymur has, to his credit, carefully tried each of the two elternatives and subsequently remained absolutely faithful to the academic language, of which he is besides a perfect master. The no less eminent Yahyā Hakkī has shown ■ quite original attitude, proclaiming everywhere his loyalty to Arabic and wielding in a delicious manner in his short stories the Cairoese of his childbood or the 5a9dian patois dear to his heart. These examples should not be misinterpreted; the question does not only apply to Egypt. Throughout the whole Arab world, from 'Irak to Morocco, there movelists who believe that they would be betraying their mission - creators and artists if they were to avoid using a type of language that is natural, living and immediately evocative of the correct sentiment, the spontaneous idea. Conversely, in every Arab country there are today writers who would consider themselves unworthy of their art and traitors to Arabism if they were to adopt—even in dialogues—a language other than "pure" Arabic obeying the rules of declension, more or less modernised in its vocabulary. but effectively unchanged in its Syntax. The question of the two languages has been debated so often since the beginnings of the makes that there is nothing to be gained by dwelling on it here. The adherents of one or other mode of expression may be confident of finding themselves in excellent company and having no shortage of arguments. In particular, the equation frequently proclaimed in the last fifty years (dialogue in dialect = literature in the service of the people) is no longer put forward today, when the purists too "committed". At the most, we may attempt a risky generalisation: the tendency to use the spoken "popular" language is more widespread in countries where the literary public is greatest and which, believe, rightly wrongly, that they have a better-established "Arab" character-thus in Egypt, rather than in Algeria. Whatever the answer may in to limit formal-and importantquestions, there is no likelihood of provincialism raining precedence over | Arab heritage that is easily recognisable through the entire spectrum of fictional literary production from "the Ocean to the Gulf" and through all the trends that me have attempted to unravel.

The other problem concerns | relationship of the Arabic novel to Europe, the master, in both senses of the word, pedagogic and colonialist. This relationship first applies on the level of content. The dialogue of a floundering East with a West that is too sure of itself constitutes one of the themes and sometimes the central theme of novels that have become famous. It is natural, with regard to

novels, that this ill-fated or violent confrontation should take the form of mamorous encounter between a practical or fickle or dominating European woman and an Arab emigrant, usually student, convinced that he owns a share of the truth but naive and maladroit. Furthermore, the character of the latter and the general physiognomy of the work change in the course of the years. In 'Usfur mist al-shark by Tawfik al-Hakim (Egypt, 1938) Mubsin is incorrigible idealist, an incompetent pursuer of working-girls whom the author mocks and admires at once, while the hero of al-flayy al-latted discovers in Paris, but returns to the fold of ancestral custom in Beirut. The English girl married by al-Duhtur Ibrahim by Dhu 'l-Nun Ayyub (Irak, 1939) = only the first stage of an ambition which comes to light on his return to his country. If [smac] repudiates his God on leaving Mary's embrace, he finds Him again on the banks of the Nile (Yahyā Hakki, Kindil Umm Häshim, Egypt, 1949). The experience of Adib (Taha Husayn, Adib, Egypt, 1935) is at the same time more profane and more desperate, but that described by the Sudanese al-Tayyib Salih in Mausim al-hidjea ila 'l-skamal (1966) is violent, and it disconcerts because hatred here is

Nobody is deceived; whether sex and suffering intervene or not, it is always the impact of a culture that is in question, an invading, besieging, disruptive culture. Two Moroccan novels examine in detail its traumatic aspects: Dafanná 'l-mádl by Ghallab (1966) and al-Gharba by Lafrwi (1971). Quite naturally, another level of connections with Europe appears. Has this literary technique been tearnt, assimilated or, on the contrary, has there been constant re-adaptation to a model which, as time passes, remains indispensible? It is in reality Impossible to this question. It may simply be stated that this common Arab heritage mentioned above adapts itself well to the most recent trends in universal fiction, that the surrealism of Zakariyya? Tamir (Dimashk al-hard'ik, Damascus, 1973) with its nightmare universe, takes up and carries to an obsessional and hardly bearable degree, the taboos and desires of a sick society. It is madness—superficially, for what the mastery resides in the cascade of images and the narrative twists!-that succeeds the meticulous and classic analysis of 'Abd al-Salam al-'Udjayll and the cruel realism of Faris Zarzūr. two Syrian novelists who have achieved renown in the sixtles. Echoes of such trends arise from elsewhere: from Egypt, of course, where established novelists like Yusuf Idris and Nadith Mahitiz have begun in the sixties and at the present day to turn towards the short story in preference to the novel, a wild and implacable type of short story, to which the younger writers are also drawn: the Arslans, the Tübiyas; but Algeria has not lagged behind with the stifling compositions of a writer such as Tahlr al-Wattar; this is taken even further in Bahrayn, where 'Abd al-Kidir 'Akil sets in motion with al-Nasil a series of dream-like sequences that express his continuing anticipation of revolutionary liberation.

Finally, if such-and-such a name made famous by the European "new novel" suggests itself to the readership of one of these narratives, it should be recognised that the Arab intelligentsia in henceforth in sympathy with the evolution of ideas and tastes throughout the world, that purely internal lines of influence are clearly visible in Arabic fiction and that the contemporary proliferation of works,

multiplicity of devoted talents in all provinces of Arabism, are signs of the flourishing state of the kissa.

Bibliography: Arabic journals. The literary journals are very numerous, and some have only mathematic statement. Among the most important are al-Adib, al-Adib (Beirut), al-Madjalla, al-Taira (Cairo), al-Ma'rifa (Damascus) and al-Fihr (Tunis). Those in European languages include MIDEO, Orient, OM, Inal. of Arabic Literature, and Bulletin d'études arabes of the IPEA of Rome.

For the beginnings of the novel, the general histories of Arabic literature may be consulted

[see SARABIVYA. B. (V)].

Anthologies give a very representative picture of contemporary novel writing, general introductions and valuable biographical details about the authors covered: Anthologie de la litterature arabicontemporaine, Paris 1964. I. R. and M. Makarius, Le roman et la nouvelle; Mahmoud Manzalaoui, ed., Arabic teriting today, the short story, Cairo 1968.

Studies most of these in the Arab short story and novel centre upon Egypt. In particular, note 'Abd al-Muhsin Taha Badr, Tajawwur al-riwayo al-Carabiyya al-haditha fi Misr (1870-1938), Cairo 1963; R. Francia, Aspects de M littérature arabe contemboraine, Beirut 1963; Yahya Hakki, Fadir al-kissa al-misetyya, Cairo 1962?; 'Abbas Khidr. al-Kişşa al-başira fi Mişr mundhu nash'aliha batta sassal 1939, Cairo 1385/1966; H. Kilpstrick, The modern Egyptian novel, Oxford-London 1974; Fatma Moussa-Mahmoud, The Arabic novel in Egypt (1914-1970), Cairo 1973; Muhammad Yüsuf Nadim, al-Kissa fi 'l-adab al-'arabi al-hadith (1870-1914), Beirut 1961; Hamdi Sakkut, The Egyptian novel and its main trends (1913-1952), Cairo 1971; P. J. Vatikiotis, Egypt since the revolution (ch. on cultural life by Louis Awad), London 1968; Ch. Vial. Contribution à l'étude du roman et de la nouvelle en Egypte, des origines à 1960, in ROMM, iv (1967); idem, Le personnage de la femme dans le roman et la nouvelle en Egypte de 1914 à 1960, in the press, (CH. VIAL)

3(a), In older Turkish literature.

As a generic term, hissa in Turkish texts was synonymous with story, tale (hihāya) and legend (mankabe, afsām). Fakhrī in 778/1367 calls his version of the romance of Farhād and Shirin [q.v.] a hissa; Mehmed, writing in 800/1397, says that meopy which he found was old but the hissa (story) was new, and Sheykhī [q.v.], in the first half of the 9th/15th century, found the mere teiling of mhissa (story) no longer sufficiently enjoyable (B. Flemming, ed., Fahris Husrev w Sirin, Wiesbaden 1974, vv. 2915-16 and p. 140 f.; S. Yüksel, ed., Mahmed. Ish-name, Ankara 1965, v. 406; F. K. Timurtas, Seyhfinin Husrev w Sirin'i, Istanbul 1963, v. 1565).

Narrative works in verse and prose dealing with epico-religious and heroic themes (see Hikara, iii) were often called bissa, the term alternating with destan. This is true for the 'Antar, Abn Muslim, Saltuk and Ghāzī Dānishmend stories [see Hamāsa, iii] or the tales around Kirān-i Habeshi and Bahmān Shāh b. Firûz Shāh (see A. S. Levend, Türk edebiyast tasihi. I. Giriş, Ankara 1972, 113, and Kahramān-māma) and Dielāl Shāh and Diemāl Perl (see H. Sohrwelde, Türkische Handschriften. Teil 3, Wiesbaden 1974, 276, no. 316); not a few tales still await examination.

The lives of holy men and great Suffs of Islam such

Ibrahlm b. Adham [q.v.] were treated collectively in the genre called todakira, the most famous

being the extensive Persian prose work Tadhkirai al-awliya' by 'Attar [q.v.]. An early Turkish example is the Tadhkira-yi swliya' adapted from the Arabic and presented to the prince of Aydin [q.v.], Muhammad Beg, by an unknown author (MS. Istanbul, Veliyüddin 1643).

In a more restrictive sense, these designated stories of the Prophets before Muhammad, whose own life history gave rise to the siyar genre [q.w.], whereas events of the lives of members of his family inspired other books such as the ghasaudt of the caliph 'Ali; the mattal works commemorated miracles and happenings around the martyrs of the house of the Prophet, particularly his grandson Husayu (see HAMASA, ill and HIKAYA, ill), especially famous being the Hadihat disu'ada' by Pudoli [q.v.].

In the Mysas some prophets were dealt with separately, such as Moses (Niysa-yi Musa — Khidis, see Levend, op. 40., 120), and Sotomon; such works being also known as name [see wikkra, iii] the most voluminous of the Sulaymān-nāmes being the compilation made by "Ulum" Firdewsi [q.v.]; Iskandar [q.v.] — also treated separately (see M. Götz, Türkische Handschriften. Teil 2, 161, no. 234 and ISKANDAR-MAMA, iii).

Joseph or Yūsut [q.v.] was a favourite hero of the histories of Prophets; his ascetico-mystical romance with Zulaykhā, based on the Sūrat Yūsuf, has been treated in many Turkish mathmatis and prose works. The oldest appears to be the Kissa-yi Yūsuf by a certain 'Ali, a work of uncertain provenance supposedly composed in the Crimea im 630/1232 (see N. Pekokay, Islami fürk edebiyatı. I. Istanbul 1967, 77 if.; Levend, op. cit., 92, 123).

In Anatolia, Sheyyad Hamza wrote a makinawi version (ed. D. Dikin, Istanbul 1946); for Čaghatay, Mamlůk, Adharbaydjáni, and many Ottoman versions in the list compiled by Levend, op. vit., 128-30; for 19th century Kazakh versions, Fundamenta, ii, 744.

Collectively, the prophets have been dealt with in the Kisas al-autiva? [q.v.], which made their appearance in Turkish literature in the 8th/14th century. In 710/1310 Nășir al-Din al-Rabghūzi, working for a Mongol amir, composed his Eastern Turkish Kişas al-anbiya' on the basis of a Persian version (facsimile ed. K. Grønbech, Copenhagen 1948). Other Turkish authors consulted the Arabic Klsas al-anbiya' by al-Kisa'i, the 'Ara'is al-madialis by al-Thadabl and others (see K. Erarslan, Kisa Inia Bod'i d Dünya ve Kışaşı l-Enbiya adlı eserinin Istonbul'daki tercümeleri, in TDED, xviii (1970), 125-32; N. Hacteminoğlu, in TDED, xi (1961) and xiii (1964), on an anonymous translation in the MS. Bursa, Ulu Cami 2474; and A. Ates, in TDED viii (1958), 93 f., on the Yozgat MS. of the translation made by Iznīķi (d. 833/1429-30).

In 987/1579 an Ottoman writer, Hindl Mahmüd, composed a Kişaş-i subiya? [G. M. Meredith-Owens, Traces of a lost autobiographical work by a courtier of Selim II. in BSOAS, xxii/3 [1960]). Later, more complex titles and used for genre, such as Mir?a! di-safā' fi aḥwāl di-subiyā' written by Kara Celebizāde (d. 2068/1658).

A highly esteemed educational Kisse-i subjud's written by the Ottoman statesman and historian Ahmed Diewdet Pasha [g.u.] as late as the end of the 19th century, in no less than twelve volumes, is evidence for the tenacity of the genre.

3(b). More recent Turkish literalure.

After the Mukhayyelat of 'All 'Aziz [a.v.] (1206). which form a transition between the old and the new, a series of translations, mainly from the French. followed some sixty years later, e.g. Fénélon's Telemague as Terdjeme-yi Telemak (1862), Victor Hugo's Les Mistrables | Maghdurin hikavesi (1862). Daniel Deloe's Robinson Crusoe, as Hikdre-vi Robenson (from the Arabic, 1864), followed by Bernardin de Saint Pierre's Paul et Virginie (1870). Voltaire's Micromégas (1871), Alexandre Dumas père's Le Comte de Monte Cristo (1873), Lamartine's Graziella (1878), Abbé Prévost's Manon Lescant, Octave Feuillet's Le roman d'un joune homme pauvre (1880) and many others. Except for the Telemagne, which was translated in a most flowery and ornate style, in the best Ottoman inches tradition, most of the rest were rendered in a comparatively simple language, not far removed from spoken Turkish. This translation movement mectivity coincided with the emergence of the literary Tangimat school, and the first generation of modernist writers provided the early examples of Turkish short stories and novels in the modern

I. The short story

The pioneer of the short story is the popular author Ahmed Midhat [q.v.]. Although he did not belong to the literary school initiated by Shinasi [q.v.] and his associates, and was looked down upon by them m a conservative in outlook, as informal in style and as lacking in technique, was consequently unfairly judged, he was avidly read by the general public and youth intellectuals alike and greatly influenced the succeeding generation of writers witnessed by many of them (see BUSAYN RABBE and EMALIE DIVA'). Alimed Midbat published two collections of short stories: Kissadan hisse (1870) and Lefa'if-i rindyat (in 25 parts, 1870-95). His mostly remantic stories with m occasional touch of realism, some adapted from the French, became immensely popular and soon made the genre fashionable.

To this formative period belongs a collection of short stories in three volumes, the Musimustinams ("The Book of sairées", 1872-5], inspired in structure, by Boocaccio's Decameron, and written by me Emb Bülend, a civil servant about whom we know almost nothing. These are entertaining stories of uneven value, a mixture of traditional narrative and the new approach. Different from Ahmed Midhat's works, the Müsamustinams's language and style vary in places from the ornate to the straightforward colloquial. A younger member of MI Tansimiliterary period, Sami Pasha-Zade Seza'i [s.v.], is also reckened among the placeers of the modern

Turkish short story. His modest output (two volumes. of which Kücük sheyler "Little things", 1308 Rümi/ 1892), began the realist trend in the short story. He used m good technique and developed m tidier style and avoided ornate language. The great master of the Turkish short story is, however, Khālid Diya? of the Therwel i Fanan [e.v.] literary school, who perfected the genre, of which he made a study in his work Hikaye (1307/1892). Khālid Diyā', who tends in his novels to concentrate on the life of Istanbul upper and upper-middle classes and to me a precious language, by contrast in his numerous short stories. (collected in wolumes) describes mostly ordinary people of the middle and working classes, and a comparatively less ornate style. Among minor writers of the school the povelist Mehmed Ra'uf and the critic and journalist Huseyn Diabid [s.v.] also wrote short and of uneven value. Two prominent writers who remained outside the Therwet-i Funda school, the novelist Huseya Rahmi and the essavist Ahmed Rasim [a.v.] contributed realistic short stories which are vivid sketches of everyday life in Istanbul of the 1890-1920 period,

The restoration of the Constitution (July 1908) followed by the movements of Turkiam [see TORKOLOKI, Populism (Khaika doghru) and the New Language (Yesti lisän), sponsored by Diyal-Gökalp [q.v.] and 'Ömer Seyf ed-Din [q.v.], revolutionised the whole approach to narretive in Turkish literature. Most short story writers (and novelists) switched from the capital (Istanbul) to the provinces and made matterpt to introduce colloquial Turkish into literary language and avoided, on the whole, elaborate psychological analysis for straightforward

realism.

The prominent woman povalist, Khālide Edīb [g.v.], wrote realistic short stories mostly based on her own experiences or observations. Omer Seyl el-Din (1884-1920), who left ten volumes of short stories (posthumously collected in book form), led the reaction against the precious language of the Therwel-i Funun school and wrote in spoken Turkish stories on the reminiscences of his childhood or on episodes of Turkish history. A hasty writer, his easy, even facile language is not always polished. But his deliberately direct style, avoiding the "literary", established a me tradition in Turkish narrative. The outstanding essavist and political satirist Refik Khalid Karay (e.v.), wrote his famous Memlekel hikâyeleri ("Stories from the provinces", 1919), during his five years' exile in Anatolla. These stories the types and customs of the villagers and provincial townspeople and told with a care virtuosity of natural style and powerful realism unprecedented in modern Turkish literature.

Most novelists of the period (e.g. Y. K. Kara-'Othmānoghlu, R. N. Güntekin, Peyāmi Şafā, etc.) also wrote short stories. But others excelled in the genre; Memdth Shewket Esendal [q.v. in Suppl.], ■ politician and diplomat, wrote, irregular intervals, stories which are different in subject matter, plot and style from the "classical" Maupassant-type stories of his contemporaries. F. Dielal el-Din, a psychiatrist by profession, left remarkable sketches and short stories, written in a very personal style, about eccentric types and harmless maniacs of Istanbul, against an authentic "local" setting of the Hüseyn Rahml tradition. They are character studies or sketches of the moods of ordinary people, with emphasis on women, written in spoken Turkish, without any elaboration or embellishment and inbued with human warmth and optimism. The KISSA

novelist Halikarnas Ballkėlis [q.v. in Suppl.] who belongs to the same generation, but who published work in the Republican period, after the age of fifty, wrote fascinating stories on the life and struggles of the mm folk of the Aegean.

The 1930s inaugurated a new era in contemporary Turkish literature, and witnessed the emergence of two prominent but very different story writers: Sabah al-Din 'Aff (also a govelist [q.v.]), who pioneered social realism, writing powerful stories on the true life experience and hardship of the village and small town communities of Anatolia. Sa'ld Fâ'ik (1906-54), perhaps the greatest name in the Turkish short story, described, in his compelling stories and sketches, written in a forceful and romantic style, the life and milleu of the simple people, workers, fishermen, vagabonds, etc. of Istanbul, based mostly on his personal experiences, with a deeply human touch, Ahmed Hamdi Tanpinar [q.v.], poet, critic and novelist, and adept of the neo-classicist Yahya Kemāl [g.u], wrote nostalgic, evocative short stories where unresolvable psychological issues are the leilmotiv. The playwright and essayist Khaldun Taner (b. 1915) writes stories flavoured with humour and social criticism, Ilkhon Tarus (1907-67), a civil servant, described in his stories the intricacies of bureaucracy in the provinces.

In the 1940s, 1950s and 1960s, most novelists (e.g. Kemal Tahir, Kemal Bilbaşar, Orban Kemal, Samim Kocagoz, Yaşar Kemal, etc.) also wrote short stories in which concentration is on the plight of the peasantry, provincial townfolk and suburban dwellers (see below). This is particularly true of writers of peasant origin (e.g. Fakir Baykurt, Talib Apaydin, etc.), Aziz Nesin (b. 1915) the great humorous writer of unsurpassed popularity, has been writing innumerable stories and sketches where he uses his art to fight social evils and bigutry by ridicule. Oktay Akbal (born 1923) writes individualistic and romantic stories, mostly based on personal reminiscences, full of nostalgia for things past. Necati Cumali (b. 1921), poet, playwright and novelist, differs from most of his contemporaries in not concentrating on any one given theme, but writing stories - a

Contemporary short story writers dwell as a rule on the social, political, economic and cultural problems of Turkey, a society in rapid transformation, linking them to the personal problems of the individual. From several dozen names (some of them also novelists), the following stand out: Mehmed Seyda (b. 1919), the poet S. K. Aksal (b. 1920), Yusuf Atılgan (b. 1921), Wiis'at O. Bener (b. 1922), Muzaffer Buyruken (b. 1928), Bilga Karasu (b. 1930), Tahsin Yücel (b. 1933) and Bekir Yıldız (b. 1933). Among women writers in notes Nezihe Meriç (b. 1925), Adalet Ağaoğlu (b. 1929), Leyla Erbil (b. 1931), Füruzan (b. 1935) and Sevgi Soysal (1936-76) who dwell on the problems of women of all classes in present day Turkey.

2. The novel.

The outstanding lexicographer and scholar Shems el-Din Saml [q.v.] wrote the first Turkish novel in the modern sense: $Ta^*askshuk-i Tai^*ai = Filmai$ (1872). This is a love story used as a background to criticise the traditional marriage custom, marriage of pariners unknown to each other. Namik Kemai [q.v.], the great poet and patriot of the Tansimai school, expecimented with = romantic (Intibah, 1876) and a historic (Diesmi, 1880) novel. One of his younger colleagues, Sami Pasha-Zade Sesa? (1860-1936), wrote an anti-slavery novel (Sergisephi,

1889), while another, Redis'i-Zade Ekrem [q.v.] produced a social-antirical novel (Araba social-attrical novel (Araba social-attrical novel (Araba social-attrical novel (Araba social-attrical novel (Araba social-attrical novel) where 1896), which is a forerunner of later novels where the "westernising snob", the blind imitator of European manners and customs, is ridiculed (see below); and Näbl-Zāde Nāzim (1862-93) wrote examples of realist novels (Kara Bibib, a long short story, 1890, and Zohrā, 1895).

Outside this literary school of the "élite", the most important representative of the genre the prolific popular writer, publicist and journalist Ahmed Midhat who flooded the post-1870s period with several dozen novels on subjects of all types: adventure, history, social satire, science fintion, realist and naturalist narrative, etc. He owes great deal of his narrative technique, his dialogue and his handling of episodes to the traditions of Turkish popular art and literature (i.e. Karagos, the meddah, the fulu at technique in the Oria oyunu and folk tales of various kinds), and also to the French novels of adventure. Many of his novels, particularly Hassn Meliak (1875), Hüssyn Fellah (1875), Süleymän Muşli (1876), Henüle on yedi yashinda (1882), Dürtöne Hönim (1882), were enormously popular and read avidly by generations of readers of all classes until the roros. His novel Eflatun Boy ile Rakim Efendi (1896), pioneered a series of novels which satirise the alla france way of life of Istanbul snobs.

In the following period of the Therwes-i Fanun school, and great representative of the novel is Khálid Diya?. Although = a boy writer, like most of his contemporaries, he greatly admired Ahmed Midhat, there is hardly any trace of the old Turkish popular narrative technique or the influence of the French novels of adventure and entertainment, even in his early novels of the formative period, which were romantic love stories with some elements of realism. He completely broke with traditional methods of story-telling and developed a well-disciplined narrative technique where there is no room for irrelevant digresssion or asides to the reader. Khalid Diya' perfected this technique in his later novels (e.g. Ma'l ve styah, "Blue and black", 1897, and "Ashar mennul" "Forbidden love", 1900), inspired mainly by the method and style of the French realists. His works remained the best examples of realism in Turkish literature until the mid-roses. The setting and characters are often chosen from the upper and upper-middle classes of Istanbul. the type of people with whom he came into direct contact during the strict Hamidian régime. He chose, in his novels, to write, like most of mi colleagues of the movement, in an extremely precious and artificial language, thus deviating from the trend of the first generation of modernists (the Tanjimal writers) who had made matempt m create a style which could be understood by a larger audience.

As Khālid Diyā' dominated the scene in prose, minor writers were hardly noticed. One of them, Mehmed Ra'uf (1875-1935), a naval officer, wrote m (probably autobiographical) novel, a poignant story of desperate love: Eylül ("September", 1900), which is the only work still remembered of his dozen novels.

Hüseyn Rahmi, who did not join any particular literary group, began his career during the time of the Therwet-i Fünün movement, and remained one of the most popular novelists from 1890s until the late 1920s. At the beginning, he followed in the steps of his master Ahmed Midhat, but he gradually pol-

rg6 KIŞŞA

ished the elements taken from Turkish popular arts and adopted them to his own purpose, blending them successfully with the technique of the French realists and naturalists, particularly of Maupassant and Zola. With his accurate observations of the life and types of Islanbul lower and lower-middle class families in the period approximately 1890-1920, his penetrating analysis of the burning social problems of his time and his acute sense of humour and satire, Hüseya Rahmi is perhaps the most original of all Turkish novelists. Like his prominent contemporary the essayist Ahmed Räsim [q.v.], his work is of great documentary value. He studied meticulously the everyday life of families and individuals and their development within disintegrating Ottoman society and all the social problems arising from the impact of Western ideas and customs. His best novel, Shipsevdi, "Afways in love" (written and partly serialised in 1901, published in book form 1912) is a further development of the theine already treated by his predecessor and himself: a character study of the "Westernising snob".

During this period, two works were the pioneers of the so-called "village novel" (hoy romant) which was to develop during the Republican period: Nabl-Zade Nazim's long short story Kara Bibik, already mentioned, and Fhübekir Hüzlm Tepeyran's (1864-1947) Karink Paska (1910), which describes life in a central Anatolian village during the last

decade of the 19th century.

During the post-1908 era, with the freedom of the press restored and in the midst of warring idealogies (Ottomanism, Pan-Islamism and Turkism), see that most writers of the young generation gather around a new trend called "National literature" (Milli edebiyyat), led by the sociologist and guiding spirit of intellectuals of the epoch, Diya Gökulp and his associates (particularly Omer Seyf el-Din, see above]. In this period, the prominent woman writer Khālide Edib's early novels have considerable autobiographical elements, and with their passionate, independent, strongwilled heroines, outline the author's ideal of semancipated Turkish woman. Under the impact of the Pan-Turkishmovement, she wrote Your Twide, 1912, and her contemporary colleague, a minor woman writer Müfide Ferid (Tek, 1892-1971) followed her example with a similar novel Aydomir, 1918). However, Khālide Edīb later rejected this ideology and espoused the new nationalism of the resistance movement in Anatolia which she joined in April 1920. She wrote novels on the national struggle and life in Anatolia, based on personal experiences or observations (e.g. Atestden gomiek, "Shirt of fire", 1922; Vurun habbeye "Strike the whore", 1913). During her long exile abroad (1925-39) after her return to Turkey, she continued to write, mainly period novels. Already by 1930s the approach to the novel was beginning to change (see below). Khālide Edīb's prominent contemporary, Ya'kūb Kadri Kara-'Othmanoghlu (1889-1974 [q.v.]) the most powerful novelist of his generation, excelled in studies of periods and institutions. In a series of novels he described the disintegration of a family caught between the old and the new towards the end of the Empire (Kirally konat, "Mansion to let", 1020); life in a convent of the decaying Bektashi order of dervishes (Nes Baba); party strife in the post-1908 period (Hukum gediesi, "The night of the judgment", 1927); life in occupied Istanbul in the early 1920s (Sodom ve Gomére, 1928); a poignant description of the gap between an educated man and the peasants (Yaban, "The stranger", 1932), a pioneer "village novel"; the life of a young Turk exile in Paris (Bir särgän, "An exile", 1937), etc. He also experimented with a roman-flause, covering the second and the third decade of the Republican era (Panorama, 2 vols. 1953-4).

The humorist and essaylst Reflik Khalid Karay is the author of **seem** twenty novels, mostly of mediocre literary value, except for the first, Islanbulud it yasti (1920, Roman script edition as Islanbul'un bir yilsii, 1939). This is written in the form of a diary and is a series of masterly aketches of Istanbul "society" between 1900 and 1920, in which the last vestiges of the old regime, the influential magnates of the all-powerful Committee of the Union and Progress and the degenerate nonvenuxrickes of the war years - depicted with brilliant, merciless Peyaml Şafl (1899-1961), a self-taught writer, produced in the early 1920s novels which described various characters of the changing Turkish society, emphasising the clash between the traditional mill the new (e.g. Stade klular, 1922, Makther, 1924, Fatih-Harbiye, 1931); later he studied cases of psychological stress and crisis and also supernatural phenomena. His partly autobiographical ounce hariciye hogusu ("External ward No. 9", 1930) is so of the best examples of the psychological novel in Tuzkish literature.

The best-seller of the early 1920s was Calleushu (1912, Eng. tr. The autobiography of a Turkish girl. by Sir Windham Deeds, 1950) by Reshad Nuri Güntekin [q.v.], who published several similar novels le.g. Aksham gunezki, 1926, Eng. tr. Afternoon sun, by Deeds, 1951). These were sentimental romances mixed with realistic observations of Anatolian life. With the publication of Yeshil godie ("Green night", 1928), where the influence of religious fanaticism in Anatolia m studied, Reshād Nūrī changed his manner and wrote - series of novels dealing with social change brought about by the reforms of the 1920s, (e.g. Yaprak dökümű, 1930). Güntekin perfected the literary language based on spoken Turkish initiated by 'Omer Seyf el-Dln and was recognised as one of the masters of modern Turkish proce until the middle of the 1930s, when a profound transformation of the language, style and literary teste began to take place.

The early generations of novelists of the Republican era inaugurated a new approach to the novel which began in the 1930s, and gathering momentum in the 1940s, matured in the 1950s and 1960s. For the majority of contemporary writers, the novel is only a vehicle to convey ideas, to prove a point and to discuss the burning problems of modern Turkey. Except for sporadic cases, for nearly forty years novelists have been concentrating mainly on the

following themes:

(r) The background and various episodes of the War of Liberation; (2) The plight of the villagers and provincial townspeople; (3) The struggle of the peasants against exploiting land-owners and corrupt bureaucracy; (4) Unemployment in the villages, and peasant migration to labour areas (cotton fields, etc.); (5) The peasant migrations to the clites in search of work and its consequences; (6) Peasants turned brigands as a result of gross injustice; (7) The problems of the peasant populations of the shanty-towns (geschonds) in city suburbs; (6) The problems of illiteracy and educating children (particularly girls) in villages; (9) The influence of religious exploitation on the manus in villages and towns; (10) The plight of peasant migrant workers in Europe,

ĶIŞŞA 197

particularly Germany; (11) Problems arising from long-sojourn of Turkish worker-families in Europe; (12) The exploitation of the defenceless citizens by the nouveous-riches business classes in the cities; (13) The ravages of partisan politics in villages and provincial towns; (14) The problems of women in general and working women in particular; etc.

In short, all the problems of mapidly developing and industrialising, once mainly rural, society where a population explosion and a universal yearning for better living defy the desterity of all government. The days of the "art for art's sake" principle of the Thermet-i Fands days are left for behind: the contemporary Turkish novelist has no time or leisure for telling stories of personal woes.

Leading names of the modern period are: the pioneer Sabah al-Din 'Alt (1907-48), already mentioned) whose novel Kuyucahle Yusuf ("Yusuf from Kuyucak", 1937) is a masterly description of life in a small western Anatolian provincial town at the beginning of the century; Orhan Kemal (1914-70), who wrote with a warm and deeply human style the spic of the Turkish "little man"; and Kemal Tahir (1923-73 (q.v.)), who spent long years in Anatolian prisons where he collected his material on a series of novels on the life and problems of the central Anatolian peasantry and small town communities. He also wrote several period novels on episodes of early and modern Turkish history. Further, Samim Rocagoz (b. 1916) wrote on the peasant-landowner relationship in the Aegean area and also related episodes of the Anatolian resistance movement; Yaşar Kemal (b. 1922) excels in describing, with an epic style inspired by Tutkish folk tales, the life and struggles of the peasantry in the Adana area; and Fakir Baykurt (b. 1929), of peasant origin himself, describes the life and problems of southern Anatolian villages, etc. (The majority of short story writers cited above are also known as novelists, and most of them should be counted in this category.)

Outside this category, there are novelists who belong to previous generations but who published their work in the 1930s or later: The short story writer Memdüh Shewket Esendal (1863-1952), published a remarkable novel Ayaşlı ve kiracıları ("The man from Ayes and his tenants", 1934), a powerful study of a group of disparate types during the early years of the new capital, Ankara. Midhat Dismal Kuntay (1885-1951), a minor epic poet and biographer, wrote a single novel, Ue Islanbul ("Three Istanbuls", 1938). Planned as a period novel, it is rather a series of loosely-connected sketches = the life and character of Ottoman society and government in Istanbul during the period of decay and disintegration of the Empire (1890-1920). It is a fascinating panorama of events and of personalities, Ottoman, Levantine and foreign, told with a personal, elaborate and, in places, precious style. 'Abd al-Hakk Shinasi Hisar (1883-1963 (q.r.)), who published some poems and critical essays III the 1920s, produced his first novel in 1941 at the age of fifty eight, Fahim Bey se bit ("Fahim Bey and our family"), a powerful character study of an Istanbul type at the turn of the century, an inefficient civil servant turned businessman. After m great success of this novel, Bisăr wrote several others, all in 🖿 anachronistic style which nostaigically evoke the Istanbul of 1900. Lastly, the unusual writer Halfkarnas Balfkilds the famous exile of Bodrum (Halicarnassus), must mentioned, who produced his first novel at the age of sixty (Aganta, Burina, Burinate, 1946) and

devoted his entire work to the epic of the sea and seamen of the Aegean.

(Fanix 12)

4. In Persian literature.

In Persian the term kissa (together with its approzimate synonyma kikāyat, afsāna, dāstān) covers = number of different literary forms, and while this article must be concerned primarily with the modern application, it is also true that the more traditional manifestations have had some influence on recent devolopments. One of the earliest uses of the term seems to have been in the sense of "biography". Examples of this range from the bisas al-andival, the title given to a number of works, of which one of the earliest and most popular is that by Mawisna Muhammad Dinwayri, said to have been written in 352/963, containing biographies of the prophets from Adam to Muhammad, to, at the other extrame, the bisas al-'ulama' written by Muhammad b. Sulayman Tunakābuni in 1290/1873 and consisting 🔳 accounts of leading Shiff divines, to which frequent reference is made in R. G. Browne, Literary history of Persia, iv, 354-449 passims. A condensation of this work was published in 1941 by Muhammad 'All Diamalzada under the title Kissa-yi kissa-hd.

A second group includes pseudo-blographical works of a largely fictional nature. A classic example of this genre is the kissa-yi Hamsa or Hamsaname, the hero of which was a contemporary of the Prophet Muhammad and the story of whose exploits is said to have been commissioned by a namesake who led a rebellion in Sistan at the end of the and/8th century. The story is extant in a number of versions, some parts of which, judging from their style, may well go back to the graigth century. Another example in slightly different class is the Bakhtipar-nama, the account of the deeds of a putative descendant of the legendary hero Rustam, said to have been a contemporary of the Sasanid monarch Khusraw Parwiz; the earliest surviving version of this is the Rahat alaredd, composed (in prose) by Shams al-Din Muhammad Dakayiki Marwazi in the 6th/12th century.

From this phase we move by a natural progression to the traditional remance with low or no historical or religious overtones. Some of these are by known authors-ranging from the famous matheautis of classical poets like Nipami, Amir Khusraw Dihlawi and Diami, rotelling the stories of Layla and Madinun, Khusraw and Shirin, Yesul and Zulaykha, and so on-to the works of lesser or otherwise unknown writers, like Fakhr al-Din Gurgani's Wis w Ramin, 'Ayyuki's Warka we Gulshah, or the prose version of Samak-i 'Ayyar by Faramars b. Khudidad, 🔳 these dating from the 5th/12th century. Many such romances have been handed down orally in more or less corrupted versions, until they finally achieved permanence in manuscript or, most recently, in "chapbook" form. Characteristic examples are the stories of Husayn-i Kurd, Bahram and Gulandam. Hatim-i Tah, Shiruya, Falakuas and Khurshidafarin,

198 KIŞŞA

Malik Djamehid, Nadjmä-yl Shirazi and Nüsh-afarin. Many of these must be of considerable antiquity, while others (for instance, the story of Amir Arslân, known to have been composed, though doubtless on a foundation of traditional material, by Nasir al-Din Shah's storyteller, Mirza Muhammad 'All Nakib al-Mamālik, during the second half of the 13th/19th century) are comparatively recent. Such stories, often qualified by such epithets as shirin, shirin-libdrat, m part of the stock-in-trade of the nachal or bissa-ga, both professional and amateur. who provide entertainment alike for the clients of coffee-houses, the children of private households, and the peasants of rural villages. In a similar tradition - the humorous anecdotes of Mulla Nasr al-Din and Mulla Buhlül-i 'Akil, whose Iranian versions have not yet been given the attention they have received, for instance, in the Turkish folkliterature This vast reservoir of oral narrative, which in addition to the long romances provides Innumerable examples of every category of folk-tale -animal tales, fairy stories, tales of magic, moral and satirical anecdotes-has been sadly neglected in the past (in spite of early collections IIII Kalila wa Dimna, Mareban-nama, Sindbad-nama, Diawami' al-hihāyāt and Riyād al-hihāyāt), and it is only within the present century that serious attempts have been made by scholars and anthropologists, both privately and officially-sponsored, to collect and preserve this treasury of popular literature.

This neglect may account for the fact that, when the art of story-telling and novel-writing was revived on the literary level during the early years of the present century, models sought not in Iran's own literary tradition but rather from the flourishing ateliers of Western Europe. Indeed, it is significant that the Persian language does not yet have a word for "novel", but still uses the French roman (runda). In making this judgment, we are consciously leaving out of account such works as Rulya-yi sadika (1900). Masalik al-muhsinin (1903), and Siyahal-nama-yi Ibrakim Baye (1903-9), since the story element in these is subordinate, the primary purpose of the semi-anonymous authors being to expose social and political abuses in pre-Revolution Iran through the medium of a fictionalised travelogue. The authors of the first novels proper may indeed have had similar motives in setting their tales in remote historical periods, but the European influence is unmistakeable, not only in the clear debt owed to the historical novels of such writers - Alexandre Dumas (several of which had been translated into Persian), but even in the use of European forms of Persian names from the Achaemenid and Săsănid periods. Among the more noteworthy of these novels are the trilogy by Muhammad Bakir Khusrawf, Shams n Tughra, Mari-ye Winist and Tughral u Humay, published in 1909-10, three independent novels whose common link is their single here and their setting in the period of the Mongol invasions of the 7th/13th century; another trilogy by Shaykh Mūsā Nathri, Sithk = saifanat, Sitāra-yi Lidi and Saegudhasht-i Shahsada Khānum-i Bābult, published in 1919, 1924-3 and 1931-2 respectively, and set in the reign of Cyrus the Great; Dastan-i Bastan, by Hasan Badi', the Achaemenid background of which is a mixture of elements drawn indiscriminately from the Shah-name of Firdaws and the works of Herodotus; and a long series of works by 'Abd al-Husayn San'ati-zada Kirmani, beginning with Dámgusiarán, a two-volume novel published in 1921 and 1926 and set in the period of the rebellion of Mazdak and the fall of the Sasanid dynasty, and continuing with storles from such widely separated historical periods in the reign of Shapur the Great (Dāstān-i Māni-yi nahēāsh, 1927), the rise of the Sasanid dynasty (Salahshur, 1933), the overthrow of the Umayyad dynasty by the Abbasids (Siys) puchan, 1944), the reign of Nadir Shah (Nadir, fatih-i Dihil, 1956), and even the science-fiction future (Rustam dar karn-i bist u duwwum, 1935). Most of these works are noteworthy as pioneering efforts rather than through intrinsic literary value. Their language is literary, and even in the dialogues shows little attempt to adjust style to speaker, let alone to use colloquialisms; they are discursive and rambling, and historically full of Inaccuracies and anachronisms. Their inspiration comes from the romantic historical novel of 19th century Europe rather from any native source. If they do reflect any particular society, it is rather that of the writers themselves, and in this respect at least the novels throw interesting light - contemporary Iran.

However, the popular success of these early works encouraged many other writers to follow their example, and a long list of such books, of varying merit, have appeared and continue mappear up to the present day. A fairly comprehensive list will found in Kamshad's Modern Persian prose literalure, 52-3, and it is sufficient here to mention a few of the outstanding names. The list includes a number of recognised scholars-Sarid Nafisi, Yahya Karlb, Rida-zāda Shafak, Dhabib Bihrūz-whose writing is marked by a greater attention to accurate detail than some of their rivals, like 'All Djalālī, Rahlmzāda Şalawl, Husayn Masrur, Haydar 'Ail Kamalı, Diawad Fadil, Shirazpur Partaw, and others whose novels show almost a tendency to revert to the style of the popular romances. Few writers have ventured into the field of contemporary history. A notable exception is Husayn Ruknzāda Ādamiyyat's Dalirān-i Tangistāni, first published in serial form in roas and recounting in episode in the southern tribal disturbances during the ffirst World War; though it appeared a year or two later in book form, it subsequently suppressed and only reappeared after the abdication of Rida Shab.

However, although contemporary history was too dangerous a subject for most writers, this did not apply to general social criticism, which indeed was quite consonant with the reforming mood of the years of Rida Shah's reign. The theme that attracted most attention, partly perhaps because of the opportunities it offered to less talented and scrupulous writers to exploit sensationalism, was that of the position of women in traditional Iranian society. One of the first novels to take up this sublect was Mushfik Kāzimi's Tihran-i mahhaf (1922), a somewhat rambling work woven round the subject of true love thwarted by family greed and social custom. Like a number of his successors, Kāzimī devotes a good deal of space to the discussion and description of prostitution. Abbas Khalth, Rabi Ansåri and Djahångir Djailli are other writers of this period who base their criticism of social conditions and the trustrations of youth on the oppression and in particular prostitution of women. The chief merit of these works is the light they throw on Irenian society, particularly of the middle class, under the impact of modernisation and western influences. Otherwise their style is rambling and discursive, with frequent digressions into moralising, while the language is still literary and ponderous.

A few writers of this category deserve fuller

ĶĪŞŞA

mention. Muhammad Mas'od (Dihāti), who was assassinated in 1947 in consequence of his editorship of an outspoken and often slanderous newspaper, Mard-i imrās, wrote a trilogy in 1932-4-Tafribāl-i shab, Dar talash-i ma'ash and Ashraf-i makhlakat-in which he draws - his own experience of lower middle class life in the provinces and Tehran. These novels were variously praised for their frankness and condemned for their pessimism and ribaldry. A later unlinished trilogy--Gulhā'i hi dar jahannam mirayad (1942) and Bahar-i sumr (1946)-is in the same vein, but shows m greater degree of maturity and objectivity. 'All Dashti is also well-known as a journalist and politician, and in addition has achieved distinction m an essayist and literary historian and critic. He earns mention here, however, for his three novels Films (1943), Djadil (1951) and Hindu (1955). Like the others, these take the position of women in society as their central theme, but here it is the women of the upper classes that are under the microscope, and Dashtl's work has been criticised for its concentration on a rather narrow and repetitive stratum of Iranian life. His language, while no better suited to his subject than the others, is enjoyable for his skill in the handling of words and for his admittedly sometimes rather forced employment of Arabic and European terms. Muhammad Hidjāzī is noted for a series of novels-Humá (1927), Parléihe (1929), Zībā (1936-48), Parwāna (1952) and Sirishk (1953)—which also, as the names of the first four imply, have a woman as the central character. Hidjaal's view of middle-class society, however, is less satirical and caustic than those portrayed by Dashti and Dihati, and sentimental philosophising expressed in high-flown language plays a greater part. Hidjarl may also be regarded as one of the pioneers of the art of the short story, which during and since his time has tended in Iron to overshadow the full-length novel, perhaps because of its conciseness and discouragement of diffuseness and prolixity. Hidjāzī's many thort stories are buried in some half-dozen collections of essays and sketches, notably Apine. Andigha, Nosim, published at intervals over the period 1932-60. Other novelists who deserve mention include Mahdl Hamidi, for his three-part novel "Ishk-i dar-bi-dar (completed in 1940), though he is better known as a poet; Fakhr al-Din Spādmān for his Tārlāl wa raushnā'i (1950); and 'All Muhammad Alghani for his two encyclopaedic novels Shawhar-i Ahii Khanum (1961) and Shādhāmān-i darra-yi Kara-sā (1966), the first of these being hailed at the time as a major breakthrough for the Iranian novel, though apart from its length it cannot be regarded as weem than a worthy continuation of the tradition set by its predecessors mentioned above,

The true innovators are rather to be found in the field of the short story, and here the first name to be mentioned is that of Muhammad 'All Djamālzāda, whose first collection appeared in 1921 under the title was bad we yaki nabad. The title itself is indicative of a me approach to the art of storywriting, for it is the conventional phrase used to open the traditional folk-tale ("Once upon a time"). In fact Djamāizāda's stories do not owe = much to folk-literature in this might suggest, though at least one of the six in this collection takes its basic plot from a well-known folk-tale (Dasti-yi Khala Khirsa). His contribution to the development of Persian prose lay rather in his insistence - the importance of using language that the ordinary people understand, and although he does not

go quite so far as to employ colloquial and dialect forms, except occasionally, his writings are nevertheless a rich mine of idiomatic and proverbial expressions. Indeed he has been criticized for using this stock rather in the manner of a card-index, instead of attempting to reproduce the tones and rhythms of common speech. Djamālzāda, like most writers of his time, indulges in social criticism; but the effectiveness of this II largely discounted by the author's long residence abroad and his consequent ignorance of present-day conditions. After his first volume of stories, Diamālzāda published nothing more for twenty years; but then there followed four more volumes of short stories, Amil Husayn All (1942, extensively revised = Shahkar, 1967), Talkh u Shirin (1955), Ghaye az Khudā bičkas nabūd (1961), and Asman u Risman (1964), and six novels, Dar al-madianin (1942), Sahrá-yi mahthar (1944), Ķnita<u>sk</u>an-i dīwāu (1945), Rāk-i-āb-nāma (1947), Matsama-yi Shirazi (1953), and Sar a lah-i yak harbás (1955). Djamálzáda's literary life of more than forty years has assured him a high place in Iranian literary history, even though the momentum of his original incursion into the field was not maintained in his subsequent writings.

100

The credit for changing the direction of Persian prose writing must go rather to a somewhat younger man whose literary career lasted only half as long, well as to others who associated with him or followed his example. Şādik Hidayat's [q.v.] first published work dates from 1923, when he was only twenty, but his contribution to story-talling began in 1930 when, shortly after his return from studying in Paris, he published Zinda bi-gur, a collection of eight short stories. The next four years marked the first fruitful period of creative writing; during this time he was the leader of a group of friends known to themselves and others as the Rab's, the "Group of Four", who included in addition to Hidayat himself Mascad Farzad, with whom in 1934 he collaborated = a volume of satirical sketches (Wagh wagh sahab), Mudjtaba Minuwi, with whom he wrote an historical drama in three acts (Masyar, 1933), and Buzurg Alawl, the only other member of the Four to achieve distinction as a writer of fiction (the other two had noteworthy careers as scholars). From Hidayat's pen came two more volumes of short stories, Sik haira khan (1932), Saya-yi raushan (1933), and a short novel, Alawiyya Khanum (1933), = well 43 = satirical play, Afrana-yi Afarinasi (written in 1930 but not published until 1946), books and articles on literary topics, folklore and magic, and translations from French. The range of this output shows the lines along which Hidayat me developing. Like Dismaizada, he wanted to write in the language of the people; but he achieved this not by having at his elbow a stock of idlomatic expressions, but through me ear well-attuned to the speech of his contemporaries, particularly those of the lower social classes. Moreover, he did not confine himself to any one milieu or class, but wrote with equal insight of all, though his sympathics were always with the underdog. This period in his writing culminated in an astonishing work, Baf-i ker (not published until 2937, and then only in a privately duplicated edition in India—full publication had to wait until 1941), So much has been written about this essay in surrealism that it would be futile to attempt to add enything here, and it is sufficient to say that this one work has established Hidayat as a writer of international calibre.

After the change of regime in 1941, Hidayat began

200 ĶIŞŞA

to write fiction again (the intervening six years had seen only a handful of literary articles and some translations from Pahlavi), and by 1947 he had published two more collections of short stories (Sag-i wilgard, 1943, and Willangart, 1944), a novel (Hādidis Akā, 1945), and two long stories (Ab-i rindegl, 1944, and Farda, 1946), as well = a quantity of articles and translations. The work of this period shows market greater awareness of political questions and even for a time a degree of optimism quite out of character with the prevailing trend of his writing. However, this mood was not to last. In 1947 he wound up his fiction-writing with a searing and in places scurrilous satire on Iranian society, east in the form of a mock history of the Pearl Cannon that used to stand in the centre of Tehran and served as a point of pilgrimage and petition for the uneducated women of the city (characteristically, the manuscripts of this work, which has never been published, carry the "spoonerised" "byline" Hadl Sidāķat). Also possibly from this period, though probably earlier, is another unpublished and undated work, al-Bi'<u>th</u>at al-islāmiyya ilā 'l-bikīd al-afran<u>di</u>iyya, a satirical account of a fictional Muslim mission to Europe, in which he takes the opportunity to lampoon typical figures in the religious and political establishment. Four years later Hidayat died in Paris by his own hand.

His close friend and colleague, Buzurg 'Alawi, though sharing many # his aims and ideals, differed from him in a number of respects. He took less interest in literature and folktore, and was more deeply influenced by Freudian psycho-analysis and Marxist political theory. This latter enthusiasm led to his imprisonment in 1937 and to prominence in the newly formed Tuda Party after his release in 1941. Prior to that experience he had written only one volume of short stories (Camadán, 1934), apart from a single story contributed to the volume Aniran (1931), one of the other two contributors to which was Hidayat. In 1941 he published a second volume of short stories (Warah-pāra-hā-yi zandān), and in 1952 a third collection (Nāma-hā) and movel (Cashm-hāyash). In 1953 he left Iran for East Berlin, whence his output of liction has been negligible. The fact that his reputation stands so high on such a small founds. tion is a tribute to the quality of his writing, which shows a strong sense of realism and profound understanding of character.

The "school" of writing started by IIII Rab'a attracted a number of imitators and followers, some of whom achieved status as independent writers. Among these must certainly be mentioned Sadik Cabak and Dialal Airi Ahmad [q.v. in Suppl.]. Cabak's reputation was established with his first book of short stories, Khayma-i shabbari, published in 1945, and this was followed by a second collection, Antari ki lüftyash murda büd (1949). Like his colleagues, he is interested primarily in the lives and characters of members of the lower classes, and he depicts these with a strong sense of realism, which often leads him to me expressions and idioms that shock his elders. He is also were of the first writers to use colloquial language freely throughout. His second volume of short stories was followed by more than ten years of silence, but in 1963 he published . novel, Tangsis, set in the Tangistan area of his home province of Fars, which gives a vivid picture of the provincial and tribal life of the south of Iran. Two more volumes of short stories followed, Rile-i award-i kabr (1965) and Ciragh-i Akhir (1966), and finally (for so far nothing else has appeared) in 1967 a long kaleidoscopic novel, Sang-i şabür, written mainly in dialect, and with passages in dramatic dialogue form introducing characters from history, poetry, and

Dialal Al-i Ahmad, who died in 1969, has a wider range of writing than Cobak, being interested in sociology, folklore, and political questions, on all of which subjects he wrote articles and books. In the field of story-writing he has four volumes of short stories, Did u bazdid (1945). As randil ki mibarim (1947), Silár (1948), and Zan-i ziyádi (1952). A further five stories published posthumously under the title Pandi daslan. He also published four novels or long stories, Sargudhashi-i kandū-hā (1954), Mudir-i madrasa (1958), Nun wa 'l-halam (1961), and Nifrin-i zamin (1968). Al-l Ahmad's sociological interests show clearly in much of his work, but this is not a criticism of his writing. which is concise and economical, allowing his characters to develop in their words (which are usually in their colloquial form) rather than through the author's description. Other writers who may be considered as having been influenced by the same school of writing include Muhammad I'timādzāda (Bih-Achta), Ibrahim Gulistan, Ibsan Tabari, Rahmat Mustafawi, Shari'atmadari (Darwish). and Dialal Al-i Abmad's widow, Stinin Danishwar.

The interest in folklore shown by Sadik Hidayat was shared by other writers, some of whom could indeed claim to have preceded him, for instance, Amir Kuli Amini, Kühi Kirmani, and Şubhi Muhtadi. Only the lastnamed, however, ventured briefly into the field of original fiction, with a short novel in lolk-tale form, Hadidil Mulla Zulf 'All (1947). The two threads rejoined - the writings of Samad Bihrangi [q.e. in Suppl.] and Ghulam Husayn Saidt. Both these writers, born in Tabria, use the folk-tale form m a medium for allegorical works commenting contemporary social questions. Bihrangi, who was drowned in 1968, is the author of a series of ostensibly children's stories, all published between 1966 and 1969, of which mention may be made of Üldüt wa kulâgh-hã, Kačal-i haftar-báz, Afsana-yi mahabbat, Māhi-yi siyāk-i hūčūlū, and Kūrughlū wa Kadul-i Hamsa. A posthumous collection of short stories, Talkada, was published in 1970. Saidl, who writes his fictional work under the pseudonym Gawhar-l Murad, is best known for his plays, mimes and film scripts; his short story collections include Khana-ha-yi shakr-i Rayy (1955), Shab-nishini-yi bazhakuk (1960), Dandil (1966), Wakima-ka-yi binam-unishan (1967), Taes u m and Tap (1968). Like Al-1 Abmad, he is interested in sociology, and ■ the author of ■ number of monographs. Other writers in this category include Şādik Humāyūni, Diamal Mir-Sadiki and Shapur Karib.

The latest phase in fiction-writing shows a trend towards a more introspective approach, perhaps encouraged by current political and social conditions, which are felt to preclude open discussion of current questions. The writers of seategory choose a somewhat obscure and allusive mode of expression, which leaves the reader free to make his must interpretation; they are also more concerned with inner feelings and psychological states. One of the first writers in this vein was Taki Mudarrisi, whose novel Yakulya wa tanki'i-yi u appeared in 1956, This was followed I 1966 by Sharlf Didn, a novel of the 1930s. Bahman Fursi is known chiefly as a playwright, but **s** collection of short stories, Zir-i dandan-i sag (1964), attracted favourable notice. Two poets, Mahmud Kiya-Nūsh and Mahmud KISSA

Tayyārī, are also known ■ story-writers. Two other writers deserve special mention: Hūshang Guishītī for his three novels Shānda Ihsidjāb (1968), Krīstīn wa Kid (1971), and Ma*jūm-i duwwim (1972), and Nādir Ibrāhīnī, who since the late sixties has published a steady flow of novels and short stories. Other names include Kāṣim Sādāt-i Inhkiwarī and Bahrām Sādīķī.

Bibliography: Apart from the works of the authors mentioned in the text, the following surveys may be listed. For the traditional literature: JiH Cejpek, ch. Iranian folk-literature, in J. Ryples et alii, History of Transan literature, Dordrecht 1968, 607-709; William L. Hanaway, Jt., Formal elements in the Persian popular romances, in Review of National Literatures (New York 1971), ii/1, 139-60; idem, Introd. - Love and war: adventures from the First Shah Nama of Sheikh Bighami, Delmar, New York 1974, 1-24. For the modern period: E. G. Browne, LHP, iv, 458-90; Rashid Yasimi, Adobiyyat-i mu'asir, Tebran 1937; P. N. Khanlari, Nathr-i farsi dar daura-yi akhir, in Nakhustin Kungra-yi Nawisandagān-i Irān, Tehran 1946, 128-87; D. S. Komissarov, Očerki sovremennoi persidskoi prozy, Moscow 1960; R. Gelpke, Die iranische Prosaliteratur im 20. Jahrhundert, Wiesbaden 1962; Bozorg Alavi, Geschichte und Enweichlung der modernen persischen Literatur, Berlin 1964; H. Kanishad, Modern Persian prose literature, Cambridge 1966; Mahmud Kiya-Núsh, Bar-rasi-yi shi'r u nathrei farti-yi mu'aşir, Tehtan 1967, 4th ed. 1976; Vera Kubíčková, ch. Persian litersture of the 20th century, in Rypka, op. cit., 355-418; L. P. Elwell-Sutton, Recent developments in Persian literature, in Bullotin of the British Association of Orientalists, New Series, v (London 1970), 12-18; Muhammad İsti'lanı, Bor-rasi-yi adabiyyat-i imrāz, Tehran 1970, repr. 1971, etc.; ibid., Naşm n nothe-i dawta-yi mashrifa un mu'aşir, Tehran 1973, 3 vols.; Mohammed Ali Jazayery, Recent Persian literature, Review of National Literatures, ii/1, 11-28; Ehsan Yar-Shater, The modern literary idiom, in E. Yar-Shater, ed., Iran faces the seventies, New York 1971, 284-310; Manoocher Aryanpur, Retrospect and progress: a short view of modern Persian literature, in Books Abroad, xlvif2 (Norman, Okiahoma 1972), 200-10; P. Chelkowski, The literary genres in modern Iran, in G. Lenczowski, ed., Iran under III Paklavis, Stanford 1978, 333-64. [L. P. ELWELL-SUTION]

5. In Urdu.

Until the beginning of the 19th century, prose literature was almost unknown in Urdu. A few prose works had been written in the Deccan as far back = the early 17th century, but they were mostly on religious subjects. A notable exception, however, was Wadihl's story Sab Ras (1635). This is based = the Persian allegorical mathnawi, Dastur al-ushshda, by Yabya b. Sibak, who is generally known as Fattāhi Nisāpūri (d. 852/1448). Sab Ras is written in ornate rhymed prose, and like its Persian source, it tells the story of the romance of Princess Husn (Beauty) and Prince Dil (Heart). All the characters bear similarly allegorical names. The work appears to have been an isolated piece. and it cannot be considered a progenitor of modern Urdu fiction.

There did exist a kind of versified Urdu fiction in the 18th century, namely, the narrative matinawi, of which the outstanding example is Sièr al-bayds, 201

Another precursor of modern Urdu fiction is to be found in certain collections of short stories within a "Irame", which were recited to general audiences, as well as to royal courts and rich households. They are the Urdu equivalents of Arabic collections like Alf layle we-loyle and Sirat Anter, and are termed dastan (pl. dastaned). Ralph Russell (op. cit. in Bibl., 107) refers his readers to E. W. Lane's Manners and customs of the modern Egyptians for a "generally accurate account of how the dastans were recited in India". These cycles of legends were subsequently printed in Lucknow in the press established there in 1858 by Nawal Kishor (d. 1895). Amir Hamsa Sākib Ķirān kā ķissa recounts the wonderful exploits of a famous uncle of the Prophet Muhammad in 17 volumes totalling about 17,000 pages. The most popular sections were Tüsim-i Höshrubá (7 vols.) and Nawsherdn-nama (2 vols.). Vying in popularity with this vast collection was the sevenvolume Bustan-i khayal. These works are generally considered to be of Persian origin; but it is not clear whether the reciters employed by Kishor to produce his Urdu versions were actually translating Persian texts themselves, or using existing Urdu versions which had been passed from mouth to mouth. The language is highly-coloured and most thymes; but the stories recounted were apparently well-known and appreciated in India. The adistance were tales of chivalry, and, like the mathrauf, contained a strong element of the supernatural, B whereas a mathraud might have a well-formed story, the ddstas consisted of a series of short stories or incidents, with little attempt at characterisation.

in the evalution of the Urdu novel, we find the dastan gradually giving way m the European-style novel. Indeed, in some _____ gradually merged into the other. But the prejude to this transformation takes us to Calcutta, where, in 1800, the British East India Company established Fort William College, to train British officials in the languages, laws and customs of India. The first Principal, John Borthwick Cilchrist, assembled a number of Indian writers, whom he commissioned to produce prose works which could be used as text-books for Urdu and other languages. While not discouraging a sense of style and modicum of linguistic embellishment, he required fairly simple language. A number of Urdu books were written, some of them fiction, which became popular classics. They were all adaptions from other languages, chiefly Persian but occasionally Sanskrit. The emergence of the Urdu novel later in the century diminished the importance of these works, though they served until the Second World War as text-books for British officials and army officers.

The best-known was Mir Amman's Bill-o-bakir (1801) based on a Persian tale by Amir Khusraw ig.v.]. It tells the story of four dervishes who are supernaturally guided to a city. There, aided by the King, they discover their long-lost loves. The scene is supposedly Istanbui; but it is described like Dihli in the last years of the Mughals. Since the original Calcutta edition, this book has been frequently reprinted, and an English translation by Dumcan Porbes appeared in London in 1861. S. A. B.

202 ĶIŞŞA

Suhrawardy (op. cit., in Bibl., 18) describes it m "the first prose classic in Urdu... still read for enjoyment". Like other Fort William products, it is written in reasonably straightforward language, and includes good dialogue and characterisation. Amongst other Fort William fiction was Ard'igh-i mahfil by 'All Alsos, and Mirza 'All Kazim Diawan's Shakuntala, based mu the drama by Kall Das. Not all the fiction written for John Gilchrist was published at the time. Two previously unpublished men have recently been edited by Ibadat Barelwi. They are by Mazhar 'All Khân Wila. Haft gulghan (Karachi 1964) is a collection of fables; while Machinal aur Kām Kandalā (Karachi 1965) is a short dāstin, in 20 chapters. Finally, mention must be made of another Fort William publication which provides link with the mathauri-Mir Bahadur 'All Husayni's Nathr-i bēnagēr (Calcutta 1803). It is a prose version of MI: Hasan's Silv al-bayda, including verses quoted from the poem from time to time. Strange to relate, it was published two years earlier than the machinered itself,

Whether the liction produced III Fort William forms a definite stage in the evolution of the Urda novel and short-story, or was merely an interlude, is a matter subject to dispute. Muhammad Sadiq (op. cit. in Bibl., 212) denies that it was a "formative factor in the development of modern Urdu prose". He adds that, had it never existed, Urdu prose would not have developed any differently. On the other hand, Suhrawardy (op. cit., 22) maintains that it not only furthered the simplification of Urdu prose, but also popularised prose romances. It is certainly arguable that the simpler prose fostered by the 'Allgarh Movement, and exemplified by the writings of Sir Sayyid Ahmad Khan and Altaf Husayn Hall, and even 'Abri al-Hallm Sharar, is at times reminiscent of "Fort William prose". But of those three, only Sharar wrote fiction.

Whatever the merits and demorits of the Fort William products, they were important enough to stimulate controversy as to what features constituted good Urdu literary prose. Many considered the Fort William prose style IIII simple to be literary. In fact, the first original prose romance in Urdu, Fardne-yi-fadjā'ib by Mirzā Radjab fAlt Beg Surur (d. 1867), was regarded, and perhaps intended, as reply to the Fort William style. He wrote it in about 1824, but it was not published until between 1839 and 1842. It may fairly be described = # dastan, for it B a series of stories of chivalry, with a certain amount of the supernatural, set in a "frame"; but it is in one volume only. The frame in the love-story of Prince Djan-l 'alem and Princess Andjuman-ara. The stories or incidents describe the dangers, and fights with men and magicians, that the hero has to face in order to win her. The frame is a familiar one, and recurs in Sarshar's Fasdna-yi-daid. The language contains much rhetoric and thyme, and it is interesting to note that Surur wrote it in Urdu only because I feared that his command of Arabic and Persian was inadequate.

However, it was not until the 1860s and 1870s that the Urdu novel, in the European sense, emerged. There were good reasons for this. English became not only the language of government and higher education, but also a common medium of communication between the various peoples of India. English novels became familiar in the original language, Later, mumber were "translated", or, more accurately, adapted into Urdu, as were selections of abort stories. But as far as can be ascertained, these

Of the three great novelists writing in this period, the first, chronologically, was Nadhtr Ahmad (1836-1972). But it is more logical to discuss Pandit Ratan Nāth Sarshār (1845-1963), first, m his stories retain. some features of the dasters. Born in Lucknow, after sketchy education he worked for the newspaper Awade pane, then for its rival, I Awade akhoer, of which the proprietor Nawal Kishor appointed him editor. His gigantic picaresque novel Fasana-yi-Andd. on which his fame rests, appeared in this newspaper instalments in 1878 and 1879, and was then published in book form in Lucknow in 1880, in four volumes totalling about 1700 double-columned pages. It is more like a collection of short stories and anecdotes than a novel, reflecting both Sarshar's untidy and disorganised way of life and the demands of serialisation, which required him to produce regular instalments with or without inspiration. According to Khurshid (op. cit. in Bibl., 183), the idea of the work arose from a discussion about Don Quirole among members of the staff of the paper. Sarshar's book was a tremendous success, and it was imitated by many subsequent novelists.

The "frame" of Fasting-yi-dail is that the noble and chivalrous Azad, of the city of Lucknow, falls in love with the beautiful Husa-ārā. In order to win ber hand, he has to go and fight for the Turks against the Russians, and his adventures are recounted in the book. He has a companion, Khodil, who a figure of fun. In fact, in many ways, the roles of Don Quixote and Sancho Panza are reversed in Azād and Khôdil. The work is so rich in characters, incidents and scenes that it defies description in | brief account. There are major sub-plots - well the main "frame", and the incidents described are both sumerous and varied, ranging from fighting and flirtation to discussions of poetry. It is notable for its pictures of Lucknow life. But above all, it is full of dialogue, often racy, and suiting the language to the speaker. A Western reader picking it up for the first time might think, from many pages, that it is a drama, with each speaker's name in bold letters at the beginning of the line, followed by "stage directions" and then what he m she says. This method of setting out dialogue was followed by a number of Urdu novelists-for example, 'Abd al-Haltin Sharar.

The hero, Azad, resembles the distin hero—handsome, brave, mercal lover and a champion of what is right. The realistic pictures, however, are modern, sometimes reminding of Dickens; and there is very little of the supernatural. Thus it is a transitional work, between the distin and the novel; though by the time it was published, three of Nadhir Ahmad's novels had already appeared, with their realistic contemporary social themes. However, Sarshar wrote mentertain his readers. The abundant variety of characters, including many from the underworld

KIŞŞA

and the dami-monde; the wit and humour; the basic realism, despite a veneer of exaggeration—all these appealed so strongly to the readers, that it is said that when it first appeared in serial form, each new instalment ——avidly awaited, and people rushed to buy the Aradh akkôd because of it.

Such a tour-de-force is hard to repeat; and Sarshar's Hohemian life-style, especially his addiction to alcohol, seems to have affected his work. Of his later novels, Khudd'i faudidår is an abridged and adapted version of Cervantes' novel. His Kānni is his only novel with a Hindu background—which is rather surprising, since he was himself a Hindu.

Nadhir Ahmad (1836-1912) is considered by many to be the first modern novelist in Urdu, especially by those who prefer a novel to be a study of contemporary social life, and who like it to have a message. Strange to relate, he became a novelist by accident. Educated at Delhi College, he worked first as a schoolmaster, then an inspector of education, and subsequently in various posts in the Revenue Department. His first "novel", Mira'at al-'aras ("The bride's mirror") (1869) was written for his own daughters to read privately; it was a moral tale to teach them the qualities required of a good and successful wife. A British Director of Public Instruction saw the manuscript, and urged Nachlir Ahmad to have it published. Because of its educational value and high moral tone, the Indian Government bought a thousand copies. Nadhir Ahmad achieves his didactic aim by describing two sisters and comparing their married life. Akbarl is a spoilt girl who proves incapable of running a house; while Aughari is efficient and practical, almost a model of all the virtues. In 1873 he followed it with a sequel, Bindt al-naish. Its subject is girls' education, but ■ is more like ■ series of lessons than a story. Tambal al-Nassia (1877) is a more ambitious family tale. It tells how Naşûb, while ill, repents; and, having previously allowed his children to do as they like, he now tries to reform them as well as himself. Fasana-yi-Muhtald (1883) treats of the evils of polygamy. Ibn al-wakt (1888) describes the troubles of an Anglicised Indian who shins his fellows Indians. But when his only British triend leaves the country, he finds himself isolated. All these novels, then, are stories with moral, and the very names of many of the characters me descriptive of them: thus Nasah (repentant) and Mubtala (afficted).

These novels struck a new note and have many attractive qualities. They are straightforward stories of manageable (one-volume) size, in uncomplicated yet elegant style, dealing with the contemporary social scene and its problems. Their high moral tone, somewhat reminiscent of Victorian England, made them suitable reading for people of all ages and both sexes; and they were widely read, and frequently re-printed up to the Second World War. Nadhir Ahmad improved with experience, and his later novels are superior to his earlier ones in both character development and plot construction. But his earlier ones remained the most popular-especially Mira'at al-taris and Tambat al-Nasuk. More recently, Ibnal-wakt has attracted attention, because of its relevance to the last years of the British Radi.

The main objection to these novels has been on grounds of the domination of the didactic aim; so much so, that it has been suggested that they are not real novels at all, but pleas for social reforms in the guise of novels. There is also a lack of himour in them. Nevertheless, they mark the advent of the social novel in Urdu.

Two distinct genres of novel, then, had emerged by the last quarter of the 19th century—the picaresque type of Sarshar, and the social type of Nathir Ahmad, Both writers were imitated, and there was a burst of activity in both genres. The picaresque type gradually jost its appeal, and though many later examples could be mentioned, none achieved anything approaching Sarshar's _____ The social novel, however, was continued unabated until the present time, and in 1899 m outstanding example appeared—Umrāš Djān Add, by Mīrzā Muhammad Hadt Ruswa (1858-1931). Ralph Rusself describes it as the first true novel in Urdu (op. cit., 132). It is the story of a retired high-class Lucknow prostitute, whose name forms the title, and who tells her lifestory to the author. Like Sarshar, Ruswa tells much of the story in dialogue form, and the book is very readable and entertaining. As Muhammad Sadiq says (op. oit., 355), the didactic element emerges before the end. But what is remarkable in Ruswa's approach is his sympathetic and perceptive attitude to his heroine. He does not blame her, neither does he condone her sinful life, which has made her virtually a social outcast. He shows understanding without being sentimental. Ruswa wrote several other novels, but were unable to repeat the success of Umrād Djān Adā.

As the 19th century drew its close, a third genre of Urdu fiction appeared, the historical novel. Its pioneer was 'Abd al-Hallm Sharar (1860-1926), a journalist and historian, and a leading figure in the Aligarh Movement, Born in Lucknow, he worked there for 5 years as Assistant Editor of the Awadh pant. In 1887, he started the magazine Dil gudda, which he continued, with interruptions, until his death. His earlier novels were first published in serial form; but later ones were published whole, and sold cheaply as supplements to the magazine. The idea of writing historical novels came to him while reading Sir Walter Scott's Talisman during a train journey. Struck by the unfavourable light in which Scott depicted Muslims, he decided to try to redress the balance, and produced Malik-i-1/212 aur Wardjana. He had previously published a social novel, Dilkasp. But though he did not completely abandon this genre, the majority of his novels, numbering about 35, m historical. They contain unashamed propaganda for Islam, and paint Christianity in a poor light; but they are vivid and exciting stories of heroism and romance, with brave heroes, cruel villains, and beautiful heroines—the latter often Christlans girls who fall in love with Muslims. They achieved enormous popularity, because Sharar knew how to write a good story and sustain interest. His descriptive passages are convincing without being over-long, and there is considerable dialogue. But the drama often deteriorates into melodrama. His dénouements 📖 frequently bloodthirsty, and he tingers too long over crueity and killing for modern tastes. Historical veracity is often lacking, and there are anachronisms. Still, there is no doubt that he could draw characters credibly if not subtly. His language is eclectic and attractive, without being forced; it still well. And though overladen with Arabic expressions for some tastes, this suits his themes.

His novels span the Islamic world from Spain
Africa, Turkey, the Middle East and India; whilst
in time they range from the 7th to the 19th centuries.
Fibra Fibriada (1897), a tale of Christians and
Muslims in mediaeval Spain, is regarded as one of
his best novels. The heroine, Fibra, is the daughter

KTŞŞA

of a Muslim father who is brought up . Christian. She is later raped by a "patriarch", whose sales she bears, and whom she kills in the end. The story is highly involved, and the swift denouement which occupies only 13 pages out of a total of 350, leaves almost all the main characters killed. Equally popular was Firdame-i-barin (1899), which to the present writer, I more convincing. The background to the story is the conquest of will valley of the Assassins (Hashshdshiyya) and their fortress of Alamat by Hallago Khan in 1257. The here and heroine, Husaya and Zamurrad, have been in the power of the Assassin leader, Khūrshāh, but in the end they side with Hülägü against him. There is a vivid description of the final battle and the destruction of the "sublime paradise" of the Assassins, with the hero Husayn playing a major rôle. Finally, H028g0 arranges for Husayn and Zamurrad to marry, and they leave together for Mecca and the Piigrimage. This accords somewhat ill with Husayn's obvious enjoyment of prolonging the agony of those whom he kills in the final battle. But it is the sort of melodrama which doubtless appealed to the readers of 1899.

It is difficult to single out and of noth century Urdu novelists who continued social and historical novels. Some of them, like Prem Cand and M. Aslam, are better known m short-story writers. Rashid al-Khayrī (1868-1936) me one of the most successful, and though best-known for his social novels, he also wrote a number of historical ones. His social novels. though not without humour, earned him the nitkname of Musawwir-i-ghamm ("depicter of sorrows"). The main theme is the position of woman in Islamic society. His trilogy Subh-i-rindagt, Shām-i-rindagt and Shab-i-tindaei, is worthy of note. Among his historical novels, 'Aras-i Karbaia deserves mention. The "bride" of the title is a Christian widow who feels drawn to Islam, and finally marries 'Ubayd, a partisan of al-Husayn at the battle. Subrawardy (op. cit., 118) regards Rāshid al-Khayri's historical novels as "poor stuff", lacking social colour and realism.

The Urdu short story is held by most Indian and Pakistani critics to be an importation from the West, although some of its elements may seen in stories and anecdotes of the distan, especially Fasano-yi-fadjā'ib and Fasana-yi-fadd.

M. Aslam in his introduction to one of his shortstory collections, Habibatén awa hihayatén (Lahore 1972, 3) maintains that IIII reverse is true, and that the Europeans really took the short-story from the Muslims! He goes on to say that the short-story originated in religious literature such as the Old Testament and the Kur'an, and attempts to substantiate this from stories in the Kur'an. However, there is no doubt that the creator of the genre in its modern sense, in Urdu, was Prêm Cand (real -Dhanpat Rā³ē) (1880-1937). Born Benares, he was m Hindu, and wrote in both Hindi and Urdu: indeed some of his fiction appeared in both languages or in both scripts, Arabic and Devanagri. He started his writing career me a govelist, then turned to the short-story, which was at that time in its infancy in India. He was a prolific writer, and his short stories were collected in a number of volumes, including Prem pactist, Prem battist, Prem tallist, Waridat and Zad-i-rab. Prem Cand is noted for his pictures of village life. He depicts the poor and humas inherently good, but compelled to do wrong by the pressures of poverty and temptation. They exploited by landowners and rich employers, and are a prey to fear, superstitions and religious bigotry. For such people little acts or accidents may have dire effects. Prêm Cand, then, was no less a pleader for social reform than Nadhir Ahmad. But whereas the latter concentrated on the middle class, Prêm described the lower classes, especially in villages. A master of characterisation, style and form, he made the short story his métier, and whilst his novels are now neglected, many of his short stories are acknowledged masterpieces.

Among later short story writers, mention should be made of M. Aslam (Em Aslam), the author of over a hundred books. Many of his short stories meromantic, and he depicts the instability of middle-class society in a period of change. Finally, there have been several brilliant writers of humorous short stories, and essays in story form. They include Shawkat Thanawi, Mirzä 'Azim Beg Cughta'l and

Patras Bukhāri (1898-1958).

A word must be said about the nomenclature of Urdu fiction, which includes Hindi, Persian, Arabic and English terms. Dāsiān has already been mentioned. Kahāni was used chiefly for fables, anecdotes and short stories. Throughout most of the roth century, the term fasāna, with its variant, afsāna, was current. Nadhīr Ahmad's movels were called bissa, but as we have seen, he also used the term fasāna. Hihāyat has been used considerably, particularly for the short-story. It seems likely that Sharar was the first to employ the English word "novel" (Urdu, nāna) and this is now the ommonest name for m novel. A short-story is now usually called afsāna—more properly, mukhasar afsāna.

Bibliography: Shaista Akhtar Banu Suhrawardy, A critical survey of the Urdu novel and thort story, London 1945, provides a full history to 1939, with critical accounts and plots of many individual novels and short stories. Ralph Russell, The development of the modern novel in Urdu, in T. W. Clark, ed., The novel in India, its birth and development, London 1970, 102-41, is valuable for its detailed accounts of Umras Disn A44 and Flord Florinds, with shorter accounts of previous novelists. Muhammad Sadiq, A history of Urdu literature, London 1964, contains saveral sections. on Urdu fiction; Wadibl, 50-1; a highly sympathetic account of Fort William's contribution, 210-21; Surur, 143-4; Nadhle Ahmad, 316-24; Sarshär, 326-38; Sharar, 339-44; and Prem Cand, 344-55; together with a lukewarm account of Umrāš Diān Adā, 355-6. Ram Babu Saksena, A history of Urdu literature, Allahabad 1927, contains information . Urdu tiction, 239-50, 257-97, and 318-45. In Urdu there is a remarkably full account of the short story from its beginnings to 1943 by Ibadat Barelwi in Taneidi zewine, Karachi 1957, 309-82. Sayyid 'Abdu 'i-Latif, The influence of English literature on Urdu literafure, London 1924, contains min interesting background information, but no details of novels. Lists of Urdu novels and short stories which "translations" (usually more properly "adaptions") of English and other Western literature, are given by Mawlwt Mir Hasan in his Maghridt fasdnif 🖩 Uren tarādim, Khayratābad, 1939. Finally, in view of the important rôle of the Urdu press in the development of the novel and shortstory, reference may be made to 'Abd al-Sallam Khurshid, Sahdfat Pakistan-o-Hind men, more especially 183-4 (Sarshar) and 186 (Sharar).

(J. A. HAYWOOD)

KISSA 205

6. In Malaysia and Indonesia.

In dictionaries of older Malay, kitsa is defined as "story, narrative episode". It occurs regularly in this sense in literary words from the 17th century onwards, and, in addition, is used in Malay historiographical works and romances as a kind of pericope marker to introduce a new stage or episode in a longer narrative.

It appears in the title of a Malay adaptation the Stories of the Prophets, Kiṣāṣ al-antiyia² (largely the of al-Kiṣāʾ) which became popular from the 17th century onwards, and in more recent times was the title of an Indonesian magazine, Kiṣah (Jakarta 1953-8) devoted to the short story. It appears in the title of a collection of short stories, purely western and totally secular in theme and content by Armijn Pané, Kiṣah Antara Manusia. Nevertheless, it did not establish itself as the title of a genre. For shorter length narratives, the Sanskrit-derived cerita (story) was preferred, with, in imitation of Europan usage, the qualifying adjective pendek ("short"), the two words now being abbreviated to cerepon.

The short story is currently the most popular literary form in Indenesia and Malaysia. Its roots are to be found in local tables and animal stories. in short narratives of Perso-Arabic origin, especially those set within frame-collections, and in the flowering of the genre in late 10th century Europe, Although none of the great Arabic collections of stories such as al-Bukhald', al-Agkani or the Alf layla wa-layla has accompanied the islamisation of the Malay world, one of the very oldest Malay MSS (ca. 1615) is a fragment of the Persian Tati-name: a rendering in Malay of a Persian version of the Sukasaotali or "Tales of a parrot". Other frame-stories such as Kalila ga-Dimna and the Sindibād-nāma established themselves in Malay renderings relatively early. The large number of MSS, of such works is an adequate index of their popularity.

All of these stories belong to the popular domain. The composition by individuals of realistic short stories did not begin until the 20th century with the development of a popular press, and the possibilities that newspapers and periodicals offered for the development of such soften of narrative fiction. It established its present popularity in both regions

during the roses.

In Malaysia, during the 2030s, the authors of short stories were graduates of Malay stream education and religious schools. The majority of their stories were moralistic, concerning such issues as the backwardness of the Malays, the problems of forced marriage, and the need for a reformist understanding of Islam. In Indonesia during the same period the secular stream was dominant. But just as since Malayan independence in 1957, the short story in Malaysia has become secularised, in Indonesia some short stories by Muslims have brought a consciousness and sensitivity to the perception of religious experience which is characteristically modern. In many cases, the concern is purely with man as man, and while a religious dimension is suggested. it is not worked out within the dogmatic frame-work of a single identifiable religious tradition. In a few, however, and A. A. Navis (see Bibl. below) presents the best example, a religious problem lies at the very heart of the story, and is the reason for its existence. Nevertheless, apart from contributing the word bissa to the Malay vocabulary, the Muslim religious and literary tradition has played only a limited role in the shaping of the short story in

Malay. The Western secular tradition has been, far and away, the most important single influence.

7. In Swabili.

In Swahili literature, the word kissa was first used in the context of the Kisas al-anbind³ [q.v.]. The numerous Swahili authors (i.e. writers as well as composers of oral traditions) had at their disposal rather more elaborate versions than those of al-Kisa³1 or al-Tha⁴labl from which to borrow their themes for the prophets' legends, extremely popular in East Africa. Also, several of the Swahili versions of the legends have their parallels in Indonesia; see J. Knappert. The Qisaşu 'l-Anbiyâ'i as moralistic tales, in Procs. of the Seminar for Arabian Studies, vi (1976), 103-16.

In written Swahili literature, the legenda of the pre-Islamic prophets are always treated in verse. Full-length epic poems are extant about Adam and Eve, Job (Ayyüb) and Joseph (Yüsuf), but fragments have also come to light dealing with Müsä, Ya'küb, Yünus, Sulayman and Dāwūd, Burahimu (Ibrāhim), and Zakariyyā' and 'Isā; see Knappert, Four Swahili epics, London 1964; idem, Traditional Swahili poetry, Leiden 1967, ch. 2; idem, Swahili Islamic poetry, Leiden 1971, i, ch. 3. Many of these legends, and especially those with miraculous elements, circulate in oral tradition, see Knappert, Myths and legends of the Swahili, London 1970. It is

probable that these tales have to the Swahlli Coast with sailors from Arabia, Pertia and India; the latter country in particular clearly to have influenced Swahili literature.

From this semi-religious usage, the word kissa (now spelt kisa with purely Swahili plural eisa) acquired an extended range of meaning to that of "miraculous tale in general", "fairly tale of the type found in the All layle ma-layle collection" [a.v.]. The connection here is obvious, since many of the latter tales are variations on Kisas al-ambiya2 themes or employ their characters, e.g. the tale of the fisherman who found a bottle that had been sealed by King Solomon, a tale well-known amongst the Swahili. These proce stories were not written down by the Swahili themselves, but missionaries with folicioric interests collected them in the roth century; e.g. E. Steere, Swahili tales, London 1869, and C. Velten. Märchen und Erzählungen der Sunheli. Berlin 1808. These pisa were never composed in verse, until very recently, whereas the haddhi, traditions about the Prophet Muhammad or other holy men, were often composed in verse and written down, in Arabic script of course. As well as the above two genres, traditional Swahili storytellers distinguish also the agene, an invented tale or fable, of which last there are several in Swahili oral literature, some apparently derived from the Indian treasure house of fables, of the type represented in Islamic literature by Kalila wa-Dimna [a.v.] and the Anudr-i Suhavii [see KASHIF!]).

It is only in the last thirty years or m that the word kisa has come to be used in the meaning of the modern novel, though Swahili novels have neither the extended treatment nor sophistication of European-language novels. Indeed, secular Swahiii prose literature = medium for artistic expression is still very much in its infancy. In the earlier, traditional society, prose was the vehicle for the conveyance of factual information, such m topics of history, law and theology. Artistic expression was channelled exclusively into poetry, even for subjects that in the West have not been represented in poetry for a cantury or so, such as theology and the rules of personal behaviour. Fable and fairy tale belonged to the realm of the (often illiterate) story-toller, The short story and novel have only come to the scene a generation after the influence of English literature, bringing with it an entirely new appreciation of the possibilities of prose writing, has affected the minds and creative faculties of Africans educated in mission secondary schools. Hence a major problem is now the adaptation of the Swahili languagepreviously largely a trade language, apart from its function in didactic and epic literature, where it has been bound by rigid conventions-into a flexible, modern medium for literature and belies-lettres.

The names of some recent Swahili novelists, with details of their works, are given below. No claim to completeness nor to any attempt in ranking in importance can be given, in view of the uncertain future course of development of Swahili proce. Mulemmad Said Abdullah has written the first Swahill detective novel, Misima in water wa kale "The ghost of the old people" (1960), with a sequel Kisima cha Giningi "Mrs Giningi's well" (1968); in both, the chief character is Bwaoa Msa, in taciture, pipe-smoking detective, obviously inspired by Sherlock Holmes. A. J. Antir's Nahoda fikirimi "A captain in thoughts" (1971) is in semi-historical novel describing life on the Swahill Coast in the Haji Chum's first novel in Kisa cha many sales "The

tale of the seven brothers" (1000), after his two epics Vita vya Ukrd "The battle of libro" and the unpublished Utenzi wa Nushuri "The Day of Judgment"; born in Zanzibar, he writes within the Islamic tradition. David Diva is a writer of short stories (haditki) in the Islamic tradition, and one of the first modern writers in this genre. Abdullah Saleh Farsy, from a prominent family of Islamic scholars in Zanzibar, has written Kurwa - Ndolo "K, and N." about two young people getting married. with a concentration on the rites and ceremony of the Swahili wedding, Salim A. Kibao's Mateiu va thamani "Three priceless proverbs" (1975) describes how these proverbs save the life of a young who buys them and make him into a king; the story has echoes of the Kur'anic Yusuf story so popular in Swahili. G. Ngugi wa Thiongo's novels are set in central Kenya and have the life of the Kikuyu as their background; Manya museusi "The black hermit" and Usilis mpensi mangu "Don't cry, my darling". F. V. Nkwera's Maishi wa baba ana radhi "The who buries his father will receive his blessing" (1067) is partly autobiographical. Abdullah Shartif Omar's Kiss cha Hasan il Basiri "The story of Hasan al-Basir" is an adventure story in the Arabian Nights' mould, still very popular in Swahili, Shaaban Robert is the only Swahili author of more than local fame, a poet, essayist and storyteller, and a writer of fine prose with a strong religious philosophy behind it: his Kusadikika "The credible country (1951, 1960) and Utubera "Human excellence" both have moral implications behind their stories. John Ndeti Somba's Alipanda pepo na kuvuna tufani "He planted the wind and reaped the storm" [1959] and Kuishi kuingi ni kuona menei "To live long is to much" (1968) both deal with the author's own experiences in up-country Kenya.

Bibliography: Given in the article.

8. In Judaeo-Arabic and Judaeo-Berber.

The written and oral Judaeo-Arabic and Judaeo-Berber literature is a genre of intellectual activity which has me place in the cultural field of the Muslim West which is by no means negligible. In this sphere of the expression of Jewish thought, the eissa enjoys a certain favour both among the educated and among the wider public and the masses. The themes and genres are very varied; thymed versions of Biblical stories | liturgical poems, | of joy | of lament (kinot), eulogies, and panegyrical and hagiographical pieces glorifying the saints of Palestine in Jewish antiquity (Rabbi Shim'on Bar Yobay, buried Meron in Galilee, and Rabbi Me'ir Ba'al Hannes, buried at Tiberias) is local saints (Müläy Ighghi, Rabbi Ibys Lakhdar, etc.), venerated by more of hillules and by local pilgrimages. Also connected with the signs are the property of folklore celebrating family ceremonies (e.g. rites de passage such as circumcisions, burials and periods of mourning), except that these form a genre devoid of any literary or intellectual pretentions, made up in a language closer to the local spoken tongues, whilst the hista proper has a more studied form and a more precise expression. It is written in a special language, comparable in the malban, a kind of poetic hoins in Arabic dialect given literary touches, largely stripped of Hebraisms or outside linguistic influences, and generally to be understood by the Jawish communities of the Maghrib as a group, even though differing from the current spoken language.

As well in the folkloric setting which it describes

and the precious linguistic materials which it represents, the bissa reveals on examination deep structures and a content attaching it, at the hand, to the general cultural ambience of the Maghrib, but the other, to universal Jewish thought. A rigorous and minute analysis of the written text the oral discourse, and of their direct or allusive references, throws light on their literary foundamed on a cultural substratum of great richness.

The present author has given a sketch of all this in various publications (REI, REJ, JA, ROMM, etc.). Thus L'histoire de Job en judéo arabe du Marce, in REI (1968), 279-315, surveys a considerable number of Jewish, Arab-Muslim, Morisco and Coptic chronicles and legends, the (Greek) apocryphal text of the Testament of Job, as well as the conflicts and

speculations of the Biblical text.

The pieces involving parodies, published in REJ. exxviii (1959), 377-93, as La parodie dans la litérature hebrolque et judéo-arabs, folklore de Purim au Marce, borrow from local ceremonies, the Jewish homblectic literature of the Midrath and Aggadah, and Arab-Muslim legends. L'hymne d Ber Yokey, in REJ. exxvii (1968), 365-82, is a hisse from Tinghir of the Todgha which derives its sources from local mystical folklore combined with the texts of the Zohar, the Kabbalah, the Talmud and the Midrath.

(H. ZAFRANI)

KIST [see makäyil]. KI-SWAHILI [see swahili]. KIT'A [see mukatta'a].

KITAB (A., pl. kutub) "book". The beginnings of the Arabic book go back to the early Islamic period. According to traditions, sheets (suguf) with verses of the Kur'an were collected and put between wooden covers (lawhayn, dafjatays,) kept thus and called by the Ethiopian word for "book", mashaf/mashaf [q.v.]. Following Christian and Jewish patterns, this form of a codex was generally maintained for the Holy Book since the authoritative reduction done under 'Uthman; by that means, the Kur'an was distinguished, by its material form, from profane writings m rolls made of papyrus [see KIRTAS] and from the kitāb pure and simple which meant, in that early period, "something written", "notes", "list" or "letter". As writing material, sheets of parchment (see DILD, RAKK, TIMS) were used, which, folded into four pages and placed within one another, became quires (kardris); it is uncertain whether these quires were sometimes stitched. Presumably covers made of wood or papyrus were covered over and kept together with leather and, like contemporary Coptic or later Islamic covers, decorated with coloured wood, bone or ivory.

With the rise of the 'Abbasid caliphate, books and book knowledge, additional to knowledge of the Kur'an, became a general aim of Islamic society. The interest of the government was evoked by questions concerning the legitimation of its power and by problems of administration connected with these questions, as a background to the theorratic claim to power [see \$HU OBIYYA]. During this period Arabic learning concerning problems of theology [see MU TAZILA], hadith, fikk, history, philology, etc. and medicine, alchemy, etc., had its heyday, and this florescence was connected with the emergence and spread of rag paper [see KAOHAD] from the end of the and/8th century onwards. These scholars wrote books at the suggestion of or on order from the caliphs and the ruling classes, in the expectation of being honoured by presents and payments, in opposition to the organs of state and their policies, ■ Just for the sake of belief lcf. Sura LXVIII. 1: XCVI, 4). Apart from treatises on different subjects, ceneral works written by authors who were employed as secretaries = kadis in state chanceries and offices, where the rather expensive writing materials were at their disposal. Others copied books only for personal purposes, but for their living: moreover, they dealt in paper, ran a bookshop or a book-bindery, or combined one with one the other. It is surprising to note how quickly books were widely disseminated and did not remain confined to schools and learned institutions [see MADRASA], where also notes taken in lectures, enlarged by additional material, were made into books. Certain kinds of transmission of books and their authentication, including lists of students in a fecture audience, were formed [see IDJAZA]; adoptations or quotations from other works were often marked by special terms, texts and copies were compared with each other, collated, complemented and glossed. In writing rooms which were sometimes associated to public libraries [see MAKTABA] books were multiplied commercially. An author could safeguard himself against dubious activities of scribes in these writing rooms through issuing his books by authorisation, only; e.g. al-Harlif (d. 516/1122 [q.v.]) himself wrote a note in 700 copies of his Makamat, during a period of ten years. The production of such books and their trade was immense in quantity and was widespread. Titles of books which had in the past been simple and short became ornate and flowery in the course of time, consisting of two phrases rhyming with one another (sadi'). First the titles were given in the prefaces, which usually contained the author's name and which started on a b-page; later the previous page (a-page) became the title page with the author's name. Already in this period, autographs or copies made by learned men or calligraphers [see e.g. 📖 AL-BAWWAB) were sold for high prices. There was a blg demand for the libraries of learned men; some of them went to pious bequests (see WAKF), others were put into the stacks of an academy when an attachment to heretical ideas of their deceased owner was known. Bibliophiles, from the caliph to the craftsman, competed in searching for valuable or rare books. As early as the Fibrist of Ibn al-Nadim (d. 380/990 [q.v.]), compiled = 377/987, we find that this work gives, before its information on books and biographical notes me their authors or compilators, informative details about these matters. There is also the voluminous biographical literature, with its innumerable seems of learned and literary men, secretaries, calligraphers, etc., and the multiplicity of manuscripts with their countless, often very personal, notes of the owners and readers, to be found in libraries situated even in remote places and containing thousands or tens of thousands of volumes. These considerable survivals, give us an ample idea about books and their quality in the Islamic Middle Ages; these books have in one thing only, so, the basmala [q.v.] at the beginning.

The upright quarto size was widespread, sizes in folio or oblong sizes being usually reserved for special occasions, e.g. presentation copies for high-ranking persons. The cover, writing materials, format and type of script [see KRATT] were determined by these purposes. The kinds of leather used for the covers, their colouring, workmanship and decoration sometimes refer to patterns of the Pre-Islamic period, e.g. in Egypt to Coptic, and in Persia to Säsänid ones; they were developed in forms charac-

teristic for the respective countries, e.g. regarding the different kinds of workmanship in leather. Moreover, in regard to the arrangement of the areas on the covers, there are, apart from general principles like lines parallel to the edges of the book, features characteristic of certain places or periods, e.g. the treatment of the centre, and the application of innumerable geometrical patterns and ornaments in certain variations by using brasses. The triangular flap to protect the edge and the clasp and eyes, appear at an early period. Asphodelos paste was used in the Syrian-Palestinian area, and paste made of wheat in South Arabla. While rag paper was used for books in general, parchinent was sometimes used for copies of the Kur'an and other de luxe editions. Fine paper imported from China reserved for books valuable to their owners, like books of sects. These books were not written with the usual ink [see KITABA] only, but also with ink made of sliver and gold, and their pages and lines were decorated with coloured ornaments (arabesques [g.p.]). There were always illuminations [see #0RA, TASWIE, in spite of the prohibition of depicting living beings with a rad or soul, but these were exceptional. A quire (kurvāsa) usually consisted of five double sheets, and several quires combined together, sometimes by chain stitches, made a sewn book. The quires marked by consecutive numbers which were written out in words, and the right order of the sheets was controlled by catchwords, which appear early. The pagination of sheets or, sometimes, of pages, I only found later or in modern times; the pagination of sheets was more widespread. Many books ended with a colophon containing the name of the scribe, and often the date well as, though not so often, the place; but in certain the dates given there are not correct, e.g. when taken from texts which had been copied. For the post-Mongoi period, the following features of the books should be noted. The sizes and the writing became smaller, and the kinds of paper became thinner, stronger and smoother. Coloured paper was used and, from the Ottoman period, imported paper from Europe also, firstly from Italy, and with watermarks. The ink became darker more shiny; the writing surfaces were framed with lines in different colours or in gold, and an 'untoon [q.2.] and drawn on the first page of book. Owner's stamps appear in considerable number for the late period; and bookbinders' brasses with their names shaped like a medallion, can be found on the covers, even on lacquered ones. Splendid, calligraphic specimens of large size, with covers superbly wrought (these being mostly works of Persian poetry, often illuminated by unique minlatures), were produced mainly at the courts of the Timurids, Şafawids, Mughals and Ottomans; splendid copies of the Kur'an were produced also at the court of the Mamfüks. The painter is often identical with the decorator, the "gilder" (mudhakkib); he came next in prestige to the highranking calligrapher. The bookbinders formed their own guild from the time of Bâyazid II (886-918/1481-1512 [q.p.]] onwards. Even after the introduction of printing (see MATBACA), books were written by hand, increasingly by European ink and nibs, and bound in the traditional way until the beginning of this century.

KITAB AL-DJILWA, one of the two sacred books of the Yazidis [q.v.], which with the Mashafrash contains the fundamentals of their religion. As the religious language of the Yazidis is Kurdish and all the prayers of the Yazidis known to us are in Rurdish (for example, the chief prayer, the morning prayer, the formulae used at baptism and circumcision, the proclamation at the assembly of the sandjak, and God Himself in the apocryphal comtinuation of the Maskaf-rask speaks Kurdish), it is rather remarkable that their two sacred books, the existence of which has long been known and of which copies of the originals have come into the possession of Europeans, should be in Arabic, namely the Kitāb al-Diilwa (Kitāb-i Didlwa), the "Book of Revelation" (the form Dialito which Sharaf al-Din gives from the manuscripts available to him, to be silp on the part of the copyist), and the Mashaf-rash, the "black book"; "black" obviously means something sacred: for example God descends upon the "Black Mountain" (Maskaf, xvi), The explanation of the name from the forbidden words. said to be covered over with black wax, is wrong, as in this case the Kur'an is substituted as the sacred book of the Yazidis.

Father Anastase Marie of Baghdad was the first to succeed in getting exact tracings of the alleged original parchment copies of the two sacred books by bribing the keeper of the books of the Sindlar in 1004-6; they were written in Kurdish in a simple transposition eigher. The text written in this cipher shows clearly that it was copied from an original written in Arabic script. The possibility of a fraud was, however, not excluded especially as, stimulated by interest of European scholars in Yazidi beliefs, sharp guarantors in Mawsil were always endeavouring to discover new texts. Mingana endeavoured to show that a former Nestorian monk of the Alkosh monastery, named Shammas Eremia Shamir of the diocese of Kirkük, who died in 1906, forged all texts published by Chabot, Giamil, Isya Joseph and Browne, but the authenticity of the liurdish text was accepted in Bittner's monograph. Die heiligen Bücher der Texiden oder Teufelsanbeter, with Nachtrag, in the Denkschriften d. Wiener Ah. d. Wiss., lv, Vienna 1913. The syntax of the text is, according to Edmonds, basically that of the present-day dialect of Sulaymani Kurdish, Both Bittner and Edmonds agree that the Kurdish version I not I original, but must be a translation from the Arabic, - some linguistic peculiarities suggest (plays words which unintelligible in Kurdish).

The Kitab-i Dialust might nevertheless conceivably have been originally written in Kurdish, as the Kurdish text in in many passages more lucid and coherent than the Arabic, while in the Maskaf-vāsh, the Arabic text is better than the Kurdish. According to Sharaf al-Din, the Kitab al-Dilusa in its present form could not have been written by an Arab, as the language is modern; there are a number of expressions which are either not used in classical Arabic only into use very late. In places also the construction is un-Arabic. These considerations could, of course, be arguments in favour of a recent forgery. The Arabic of Maskaf-vāsh is more modern, as it shows undeniably the influence of the spirit of Ottoman Turkish.

So far, we know of at least four versions of the two sacred books: one in the possession of O. Parry in 1895; one in the hands of Isya Joseph, who possessed two versions in addition to the published in AJSL, xxv; two procured by Father Anastase Marie, one of which, the so-called Singlar version, was copied in 1899 by a Singlar Yazidi for a Yazidi apostate, while the other was copied in 1904 by Anastase himself from the original in the possession of a Mawsill.

The Kitab-i Distinct (also Ktab-i Disture, Disture, Disture), the original of which according to Joseph was in 1892 still in the house of Molla Haydar in Ba'adriyya and was taken twice we year to the tomb of Shaykh 'Adl, is quite short. In book form we share 8 pages and has 109 lines. It is ascribed to the reputed founder of the religion, Shaykh 'Adl (d. 555/1160 we 537/1162; we 'Adl a, musifire) who is said to have dictated it to Shaykh Fakhr al-Dia.

The fact that the Kilāh al-Dilwa is not mentioned in the Radd 'ala 'l-Rāfida wa-Yasīdiyya al-makhālifin li 'l-milla al-islāmiyya al-makhammadiyya written li 725/1325 by the well-informed Ibn Diamii (Abū Firks 'Ubayd Allāh) who belonged to the Euphrates district, wer in al-Makrīzī in connection with his description of the destruction and burning of the tomb and bones of Shaykh 'Adī in 817/1414, makes Sharaf al-Dīn think its date of composition cannot be put earlier than 725/1325 or 817/1414. As Ewilyā Celebī does not mention the work, this would bring the date even farther down, II 1655.

The above facts seem rather to indicate, however,

that the Yazidis have been able to maintain the secret of the book with success. In spite of the advantages which might have accrued them as ablal-kitab, they have preferred deny their possession of sacred books. Only in the Catechism of the Shaykh Miran Isma'il Bek 'Abdl Bek Oghlu Nazli Rahani Yazid for the Russian Yazidis is there a reference to "the glorious Dilloa", Gyliasim, as a source of the tradition.

The contents of the Kildb-i Dialod, the form and text of which are in keeping with its high purpose, are as follows: Melek Tawas who existed before all creatures sent 'Abțăwûs (= 'Abd Tāwūs - Shaykb 'Adl into the world in order to guide rightly his chosen people, the Yazidis, by oral instruction and later by means of the Kitab-i Dialud which no outsider may read (preface). He then speaks in the first person of his pre-existence and eternality, his omnipotence over all other creators and gods (not "creatures" as in the Arabic, of his omnipresence and providence, the erroneousness of other sacred books and the clear perceptibility of good and svil, his rule over the world and his inscrutable decree, to which in every age we owe the sending of a great man upon earth (ch. z). Further, he deals with his power of rewarding and punishing, which also allows those who do not deserve it to receive benefits; with the dying of a true Yazidi and the migration of souls (ch. 2); he says that he alone has power to dispose of the creatures and things of the world (ch. 3). He warms against strange doctrines, in far as they contradict ill own ones, and against three unnamed things, and promises his followers his powerful protection if they keep together (ch. 4). He asks that his cult and the orders of himself and his servants should be followed (ch. 5).

The Majhaf-raid is more comprehensive. The Yazidi Kurdish original is in the form of rolls and contains 152 lines in cipher. It is much mundane and hanal and less coherent than the Kitāb Didlad. It is full of contradictions and breaks off abruptly. According to tradition, it was composed about 200 years after Shaykh 'Adi (cs. 743/1342) by the great blasan al-Başti [q.v.]. The original was said to have been at one time in the house of the Kahāya 'Ali in Kaşt 'Azz al-Din near Semali on the Tigris, but it mow to be in Sindjār like the Kitāb-i Didlata.

Cosmogony, In a very confused fashion, without divisions into chapters, the Mashaf-rain deals with the creation of the world in three contradictory versions. According to what seems to be the more original story of the creation, God completed the creation alone. He made a white pearl which he put on the back of a bird Anfar (in many manuscripts, Anghar) created by him and was enthroned on it for 40,000 years. He then created the seven angels of God who are identified with the mystic shapely.

On the Sunday, God created 'Azra'il (Azazil, Zaza'il) = Melek Tawbs, who is supreme over everything; on the Monday Melek Darda'il = Shaykh Hasan (al-Başri). The Yazidi pronunciation is Shekhiisin, as the invocation in the chief Yazidi prayer shows (Sydjadin Shekhisin = Sadidjad al-Din Shaykh Hasan) (the conclusions which have been drawn from an alleged Shaykh Sism who is compared with the moon god Sin, e.g. by Massignon, Essai zar les origines du lexique technique', Paris 1954, 200 u. 2, are quite wrong); = Tuesday he created Melek Isrāfa'il (Isrāfil) = Shaykh Shams (al-Din); on Wednesday Melek Mikâ'il = Shaykh Shams (al-Din);

on Thursday Melek Djibrā'il — Sa<u>dldi</u>ādīn (Si<u>di</u>ādīn, Sa<u>dldi</u>ād al-Din); un Friday Melek <u>Sh</u>amnā'il (<u>Sh</u>atmā'il, Samansā'il) — Nāṣir al-Din; on Saturday Melek Tūrā'il (Nūrā'il) — Fakhr al-Din.

Then he created the seven heavens, the earth, sun, and moon, whereupon the last-named angel of God Fakhr al-Din took over the rest of the work of creation and created man and the animals.

God now came out of the pearl with the angels and caused it to burst into four pieces with a loud cry. On the sea which was formed by the water rushing out of the pearl, God sailed for 30,000 years in a ship created by him. Djibra'll, created in the form of a bird, created from the pieces the pearl sun, moon and stars, the mountains, plants, fruittrees and the heavens (cf. at the rôle of the pearl, Mokri, Le symbole de la perie dans a folklose persan at ches les Kurdes fidiles de vérité (Ahl-e Happ), in JA [1960], 463-61).

Parallel with this is the rather different conception of the seven deities, who arising through emanation, are light of the light of God just = light is lit from light, and among them the supreme god, [Chudā,

only appears as primies inter pares.

The statements regarding the creation of the religious community of 'Azrā'll (= Melek Tāwūs) i.e. the Yazīdīs, to whom God sent Shaykh 'Adī from Shām (Syria) to Lāliah [q.v.], = fragmentary, = are the statements regarding the descendants of Shahr b. Safar, the son of Adam and Eve, the ancestors of mankind. After God had been worshipped for 40,000 years by the 30,000 newly-created angels, he created Adam out of the four elements with the active assistance of Dibrā'll and put him in Paradise, ordering him to eat of all the fruits of the earth, except wheat (according to one Yazīdī legend, the prohibition concarned grapes).

When, after xoo years, Melek Tāwūs reminded God that there could be no increase in Adam's rare, God gave him permission to do what he thought fit. Melek Tāwūs induced Adam in eat of the forbidden wheat, whereupon Adam who had as yet no opening in his bowels was driven out ill Paradise by Melek Tāwūs and suffered great discomfort until God sent a bird to pick in orifice ill him. After another too years, God sent Djibrā'il to create Eve from the

lower part of Adam's left armpit.

Another story of the creation in the Maskaf-saiss says that God, who was salling about on the man as ship created by Him, created a pearl but crushed it after 40 years; from its cry of psin arose min mountains, from min noise the hilk and from its vapour the heavens. God then created six other deities by emanation from His light. Each of these deities in their turn then created something: the first the heavens, the second became the sun, the third the moon, the fourth created the horizons, the fifth the morning-star and the sixth the atmosphere.

There me further a few confused statements regarding the very early history of the Yazkiis in the Mashaf, which include me few features worth noting: after Melek Tāwiis had given Eve to Adam a companion, he descended to earth to the Yazkiis who, me descendants of Adam alone, had nothing in common with the rest of mankind. He appointed for them as for the Assyrians, who had been mexistence from the earliest times, rulers namely: Nashruk (Nascukh, Assyr, Nisroch) — Nāṣir al-Din; Djambūṣh (Kāmūṣḥ — Kamos) — Melek Fakhr al-Din and Artērnuṣh (Artīmūṣ — Artemis) — Melek Shams al-Dīn. After them Shābūr (Shāpūr) I and II reigned

for 150 years. From him, all their notables descended, especially the family of the Yazidi princes. The Yazidis had four rulers not definitely named. One of their kings, Ahāb, ordered names of their own to be given to them (which names is not stated). Ilah Ahāb (i.e. Ba'lzab@b) in now called Pirbūb. Among other Yazidi rulers were Bukhtnaşar (Nebucchadnezzar) in Babel, Akhashwarosh (Akhashperosh) in Persia and Aghrinkāl@s (Aghrilyal@s) in Constantinople.

The Maskaf further contains prohibitions. The forbidden foods include lettuce (Yaz. kāks, Arab. kāass, which is prohibited on account of the resemblance of the remain to that of the prophetess (Ibāsis); beans (Iobās); fish (māsi = māhi, == account of the prophet Yūnān = Yūnus); gazelles (āseh); for the shaykā and his disciples, the flesh of poultry (hālāshis)

and gourds (htilaks) - forbidden.

As among the Sabians, the colour dark blue is prohibited. The following are also expressly forbidden: to micturate standing, to dress while sitting down, to use a closet and to wash in a bathroom (bath and closet are regarded in the abode of evil spirits). It is forbidden to pronounce the following words: Mayfan ("the name of their god"): kayfan (noose); shaff (stream); sharr (evil); mal'an (accursed); la'na (curse) and na'l (horseshoe).

Not mentioned in the Maskaf, but traditionally regarded forbidden, are words beginning with skin: also saradin ("crab"); hildn ("hedges"); buttlin ("wegetable garden"); but ("duck"); nah ("jump") and others; reading and writing, shaving and complete removal of the moustache are also forbidden, as are the for or or or or or others, taking wood from sacred forests, the rearing of bastards and drinking from gurgling vessels.

KITĀBA (see Supplement). KITĀBĀT (a.), inscriptions,

g. Islamic epigraphy in general.

The study of Arabic inscriptions today constitutes a science full of promise, an auxiliary science to be sure, but science indispensable to the scholarly exploitation of a whole category of authentic texts capable of throwing light on the civilisation in the context of which they were written. From a very early period, seeing that the first dated Arabic inscription available to us goes back to the year 31/652 and that we are aware of previous inscriptions and graffiti known as "proto-Arabic", there appeared in Islamic circles the practice of engraving, on stone mother hard material, in more or less skilful fashion, the symbols then used in so-called archaic Arabic writing [see KRATT]. This practice subsequently spread, benefiting from the prestige soon to be enjoyed by a writing capable of giving material embodiment to and preserving the very letter of the Kur'anic revelation while responding to the needs of the new society born simultaneously with the Arab-Islamic empire and state. This corpus of inscriptions drawn up in the Arabic language, disseminated and preserved up to present day throughout a particularly vast geographical region, that of the Muslim countries, where Arabic writing was practised, may today be suitably considered in its entirety, in spite of the difficulties inherent in the massive scale of the regions in question and in the inadequacies of the researches hitherto undertaken.

In its capacity as an original discipline, Arable epigraphy, in common with the subsidiary sciences which it more | less borders on, like numismatics, glyptic or diplomatic for example, or even those which it partially overlaps, like palaeography stricto sensu, among the disciplines subjected to specific study, at the end of the 19th century, by enthusiastic Western scholars curious about Oriental civilisations. Its methods, inspired principally by those of classical epigraphy, and the first attempts at their application, were owed to their zeal. It enabled various Western Arabist and Islamic scholars to obtain historical and archaeological results which guaranteed its vigour. It was not however until several decades later that it came to be recognised as a science by Arabicspeakers themselves, in regions where the traditional taste for calligraphy had hitherto reigned unchallenged but had **seem** taken the form of the searching out or the study of texts of this type decorating the walls of buildings or the surfaces of pieces of furniture; it is in fact no accident that the early Arab sources, anxious to describe the stages in the development of writing and to give the names of its eminent exponents, mention only the names of copyists or scribes distinguished in their use of the pen, while remaining silent on the issue of so-called lapidary writing and refer only exceptionally to the existence of the monumental graphic compositions that so remarkable.

A modern science therefore by its very definition, Arabic epigraphy saw some of its rules codified in result of in personal efforts of the Swiss orientalist Max van Berchem. The attention which this passionate enquirer threfessly brought to bear on the remains of Arabic inscriptions preserved in Egypt and in Syria was in fact accompanied by a detailed consideration on his part of the fundamental principles according to which their study should best be conducted; some spectacular initial progress was marked in his lifetime and under his inspiration by the establishment of the first corpora of Arabic inscriptions.

This progress went far beyond anything that had been previously attempted. They should not, however, condemn to oblivion those earlier efforts which can mi set back as far as the 18th century with reference to Tychsen, but which owed most of all, at the beginning of the 19th century, to the personality of J. J. Marcel, the French palaeographer, a member of Bonaparte's expedition to Egypt, who devoted his energies to deciphering, reproducing and annotating in tentative fashion some Küfic inscriptions of Cairo with the aim of gaining insights into the evolution of ancient Arabic writing. His studies, like the works of other pioneers upon whom there is no space to expatiate here (see J. Sourdel-Thomine, Qualques stapes et perspectives de l'épigraphic arabe, in SI, xvii [1962], 5-22, also the references to epigraphy in the detailed historical chapter entitled Die Entwicklung der arabischen Paldographie im Abendlande, in A. Grohmann, Arabische Paläographie, i, Graz-Vienna-Cologne 1967. 32-65), gave clear indications of what was to follow.

They even gave birth, alongside the ambitious and fruitless efforts of Lanci for example, to works that remain, even today, as indispensable for reference purposes as is the catalogue of inscriptions on objets d'art drawn up by Reinaud in connection with an important collection of his time (Reinaud, Monnments arabes, persans et turcs du cabinet de M. le Due de Blacas, 2 vols., Paris 1828). The quality of the results obtained emphasised even at this early stage the difficulties of a sphere where the best-conceived programmes—and this was the case with J. J. Marcel's programme at the dawn of the 19th century-most often came into confrontation with insurmountable obstacles of material order and where the enthusiastic work of numerous specialists failed we every occasion to satisfy requirements, the importance of which they themselves had understood and asserted.

In fact, it was not at that time solely a case of showing that Arabic inscriptions deserved to be collected in the way way Greek and Latin inscriptions. There was also a need to work apidly in the field of new research, where the volume of exploitable documentation was remarkably copious. The initiative was taken by Max van Berchem when, having produced a large number of manifestos in commendation of Arabic epigraphy, he published, in the early years of the 20th century, the first volume of his Mattriaux pour un Corpus Inscriptionum Arabicarum. But his ambitious and authoritative project of publishing systematically, region by region and monument by monument, a corpus of hitherto neglected epigraphic material soon had to be abandoned. The exemplary collections of inscriptions which ill himself accomplished or supervised with regard to Cairo (M. van Berchem, CIA Egypt i, Cairo 1894-1903, M&m. mission arch. fr., xix), Tripoli (M. Sobemheim, CIA Syris du Nord i, Cairo 1909, MIFAO, xxv), Siwäs and Diwrigi (M. van Berchem and H. Edhem, CIA Asia mineurs, I, Cairo 1910-17, MIFAO, xxix) and finally Jerusalem (M. van Berchem, CIA Syrie du Sud, Cairo 1920-1, MIFAO, xliii-xiv), were followed, after his death in 1921, only by a later supplement on Cairo (G. Wiet, CIA Egypte, ii, Cairo 1929-30, MIFAO, iii) and the publication is later, in the form of posthumous work taken over by other hands, of the results of survey of Aleppo begun by Moritz Sobernheim, in the lifetime of Max - Berchem, and subsequently resumed by Ernst Herzfeld and Etienne Comba (Syrie du Nord, ii, Cairo 1954-6, MIFAO, laxvi-(ixxvii).

The terrain prospected me this basis remains, at present, minimal in comparison with that approached by less complete studies. Certainly there mm other works of broad scope, undertaken in ■ different spirit, which also deserve mention. These have striven for example to with the question in their own way with regard to countries where Arabic inscriptions attracted attention at a very early stage: the inventories of Michele Amarl for Sicily (La apigrafi arabiche di Sicilia, Iscrisione adili, Palermo 1875, Iscrizione sepolerali, 1879-81, Iscrisions mobili a domestiche, 1885, re-edited by F. Gabrieli, Palermo 1971) or of E. Lévi-Provençal for Spain (Inscriptions arabes d'Espagne, Leiden 1931), not to mention the various fascicules published in Calcutta under the title Epigraphia Indo-Moslemica. But beside these, of far greater number are studies that are currently out of date, such as the Corpus des inscriptions arabes et turques de l'Algérie (G. Colin, Département d'Alger, Faris 1901, and G. Mercier,

Département de Constantine, Paris 1902), works that have quite recently been supplemented by the various published fascicules of the Corpus des inscriptions arabes de Tunisie (1st part: S. M. Zbiss, Inscriptions de Tunis et de m bantieue, Tunis 1955, Inscriptions du Gorjani, Tunis 1962; Inscriptions de Monastir, Tunis 1962), or the volumes devoted to various epigraphic collections of the Iberian region (M. Ocaha Jimenez, Repertorio de inscripciones ásabes de Almeria, Madrid-Granada, 1964; G. Rosselo-Bordoy, Corpus balear de epigrafia drabe, Mallorca 1975; F. Valderrama Martines, Inscriptiones draber de Teinan, Madrid 1975). Moreover, there are numerous tentative works which we still at the project stage, although more than ever there is an awareness of the fundamental need for studies conducted on a regional basis, taking advantage of opportunities for verification in the spot (see in this context, the remarks of Sourdel-Thomine, Perspectives nouvelles dans le domaine de l'épigraphie, in Boletin de la asociatión espanola de Orientalistas, y [1969], 183-90, and M. Sharon, Un nouveau corpus des inscriptions arabes de Palestine, in REI, xlii [1974], 185-91).

As a consequence, the uneven quality of results obtained and their partial insufficiency remain the principal defects of collections made up to the present day. This assertion, banal though it may be, cannot be passed over in silence, even if the reasons for it are easily explained in a world stretching from India to the Pyrenees and from Anatolia to Black Africa, covering an immense territory that is little-known from an archaeological point of view and of which certain parts are particularly difficult of access, and which in any case considerably oversteps the limits assigned today to the Arab world as strictly defined. It is not only that Azabic inscriptions are dotted throughout areas that have since reverted to a desert state and that some provinces islamised at a late stage, like Anatolia, are not the least rich in hitherto unsuspected treasures; but there is also the fact that these inscriptions that have remained so long outside the canon of research also distinguished by their diversity of appearance according to the regions, as witnesses to a society where writing, spread broadly throughout all areas, was subject to stylistic variations (see KRATT). The difficulties of decipherment are thus magnified by the effect of these local practices, and the traits and qualities peculiar to Arabic writing itself from the time of its appearance, which have subsequently conditioned its development, continue to be partially responsible for the shortcomings of a discipline where scientific progress is confronted by uncertain readings and by problematic interpretation of scripts, with there are numerous instances where letters are easily confused and uncertainties are further multiplied and complicated by a for ornamentation, which in most cases takes priority over legibility (cf. R. Ettinghausen, Arabic spigraphy: communication or symbolic affirmation, in Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles, ed. D. K. Kouymjian, Beirut 1974, 297-317).

Such conditions were hardly favourable to the intensive and systematic publication of documents in the series of Malériaux pour un Corpus inaugusated by van Berchem. They were no more favourable the establishment of the other fundamental study-apparatus envisaged a little later by Extenne Combe, Jean Sauvaget and Gaston Wiet in the form of a Repertoira chronologique d'épigraphia arabe which had the object of assembling, year-by-year and in

an approximately geographical order, the texts of Arabic inscriptions already published, accompanied by their French translation and indispensable bibliographical information. To be sure, sixteen successive volumes of this Repertoise (Caire, PIFAO, 1931 (f.) have so far appeared and more than six thousand inscriptions have been edited covering the first eight centuries of the Muslim era. But since 1931, the date at which the enterprise was begun, the rhythm of discoveries has been more rapid than the rhythm at which the inventory has been assembled; the latter remains incomplete we today it swarms with inaccuracies in its most ancient tions, making it a vahicle for defective copies and sometimes of duplications. Even moonsult it, in its present state of incompleteness, is me encounter difficulties which are barely alleviated by the publication of the Index geographique to its first six volumes, quite recently brought about through the good offices of the Centre d'Épigraphie Arabe of the École Pratique IIII Hautes Études IVe section of Paris. Even if it may be hoped that forthcoming volumes (vol. avii prepared by L. Kahis, in press), profiting from experience acquired and designed to respond to precise critical objectives in an where our knowledge of Arabic inscriptions has considerably developed, will avoid some of these defects, they will continue to be in less restricted by the inadequacies of the previous publications which they cannot help being based.

The Répertoirs chronologique d'épigraphie arabe is, in any case, the only existing attempt at systematic grouping of inscriptions, in sphere where the means employed are, to this day, seldom sufficient for the extent of the tasks to be accomplished. Also to be asserted is the almost total absence of studies of Arabic epigraphy constructed on the principle of the series, the non-existence of functional corpora, organised according to material and category for example, the only means permitting a thorough investigation of the limited types of documents which inscriptions are, by definition. It is appropriate to mention in this connection, insofar as concerns the signatures of craftsmen, the inventories, designed to form a Corpus of Muslim artists, with which L. A. Mayer hoped to bring about m re-evaluation of our knowledge concerning the artistic schools as well as the functioning of their influences, and the publication of which was, also, interrupted after the death of the inaugurator of the collection (see Mayer, Islamic architects and their works, Geneva 1956; Islamic astrolabists and their works, Geneva 1958; Islamic metalworkers and their works, Geneva 1939; Islamic armourers and their works, Geneva 1962).

The bibliographical guides and the synthesised surveys and also inadequate a enable a confident orientation in a mass of studies that are too often indebted to fortuitous discoveries and consequently scattered through the most diverse of volumes, ranging from "epigraphic appendices" accompanying reports of explorations, accounts of journeys or archaeological publications to manuscript catalogues or monographs dealing with themes such as Islamology, history, palaeography we even aesthetics. Such in fact is the variety of subjects covered by Arabic inscriptions of an equally varied interest. Such also is the slow progress of research, which has been principally concerned with a copious proliferation of notes, correspondences and brief articles of ununfortunately uneven quality.

Nor do we have at our disposal, it should finally

he made clear, manuals providing an introduction to Arabic enteraphy and guiding the efforts of those who wish to become conversant with it; familiarity with the works of their predecessors, especially with the articles of Max van Berchem, loaded with methodology (Notes d'archéologie arabe, i and ii, in IA [1891], i, 411-495, and [1892], i, 377-407; Recherohes archiologiques on Syrie, in IA [1805], ii, 489-515; in particular, Inscriptions arabes de Syrie, in Mem. de l'Inst. devotion, ili, 417-520), with the volumes already mentioned of the Materiaux pour un Corpus and the specimen publications of subtly-deciphered and annotated inscriptions offered by some articles of 1. Sauvaget (such as his publication of the Décrets mantelouks de Sprie, in BEO, il [1012], 1-52, iil [1953], 1-29, and xii [1947-8], 5-60, as well as his Quates décrets seljouhides) remains for the aspiring student the only possible path to follow, apart from various items of specific information provided here or there. More regrettable, however, is the fact that aspects are to be distinguished in a body of inscriptions influenced simultaneously by regional practices and by the disparities between schools marked by the proliferation of dynastic centres. We know in fact that diverse currents presided. according to places and periods, over the drafting of inscriptions, the text of which evolved in parallel with the development and stylistic ramifications of so-called lapidary writing (which has in fact applied to various materials), a writing the history of which is an important chapter of the history of Arabic writing [see gHaff]. Influences of every kind were manifested here equally in the form of politico-social transformations and historical events which it would be impossible to evoke in this article in the context appropriate to each, geographically distinct, group of inscriptions.

But this continually-renewed variety should not cause one to forget certain traits characteristic of Arabic inscriptions which may be underlined here, in regard to their nature and customary content, and which will enable in to be the value of the conclusions to which their atudy leads.

One important feature to be emphasised is the frequency and significance of religious inscriptions. which have sometimes tended to me overlooked in cases where they are not accompanied by documents judged to be of historical interest and which, for this reason, do not figure in their own right in the Rebertoirs and are only briefly mentioned in the Materiaux pour un Corput. These are sometimes isolated inscriptions expable of supplying an ornamental function on buildings, tembstones or even household objects, sometimes elements belonging to texts where spite of the profane purpose there is an inevitable collection of pious expressions and customary doctrinal preoccupations. Here me shall assemble in particular examples of Kur'anic quotations, professions of faith, isolated or linked to the texts of epitaphs, prayers, invocations and blessings.

These religious inscriptions appeared at the very beginning of the Islamic era among the primitive graffiti which covered a large number of the rocks of the desert (see the bibliographic references of Sources-Thomine, Inscriptions at grafitti arabes d'époque umaypade, à propos de queiques publications récentes, in REI [1964], 225-20). But they also early situated in ornamental bands forming an integral part of the architectural decor, actualizably illustrated by the interior of the Kubbat al-Sakhra [19.5]. From this period, their essential theme has been the glorification of the Muslim faith, which

could ill associated with the personal nature of the testimony left behind by each traveller in the course of his wanderings, as much with the majestic impossiveness of epigraphic compositions on a grand scale. It would not be enough, however, to say with Max van Berchem, that the dominating feature here is principally the notion of divine power which is one of the two main concepts of the Muslim spirit. Some of these texts, regarded in the most ancient cases as useful means of access to the delty, coatinge to act as representatives of the dominant religious feeling of the period and their formulae of praise and trust, varied a greater or lesser extent with requests for pardons, blessings and favours, for a long time remained free of the constrictions of a stereotyped vocabulary. But even when they obeyed more rigid rules, they still maintained an authenticity enabling them to share in the expression of genuine religious options, and texts of commonplace appearance thus continued to reflect diverse doctrinal tendencies in the bosom of the Islamic community; allusions to sectarian beliefs. If the form if eulogies of a Shift flavour for example; echoes of theological arguments like references to the created Kur'an professions of faith accompanying Egyptian epitaphs of the 3rd/qth century; maxims bearing the marks of philosophical wisdom and of mystical self-denial observed for example in the inscriptions of Khumartash at Kazwin at the beginning of the 6th/12th century. Even the poetic quotations trequent for instance in later Sicillan texts could concur to the design, and variations in formula came to be accentuated with the fragmentation, of a religious as well as a political nature, which the Islamic world suffered towards the end of the Middle Ages (note the originality of the theological texts which adorned at that time the sanctuaries of the Twelver Shift conducting the prayers on the basis of a cult of imams unknown in other Muslim circles).

A common denominator to all these inscriptions may assuredly be found in the constant use # Kuranic quotations, multiplied to the extent that they sometimes take the place of any other form of devout reflection. But even here the choice of verses copied in whole or in part obeys specific intentions, which are discernible, if not clearly asserted, and their arrangement is sufficient to indicate the theological m judicial implications of texts which have a doctrinal value for anyone who is able to interpret them. References to hadith, the use of extracts from the Kur'an of a recognised propitiatory nature (the "Throne" verse, for example), the insertion of certain types of prayer, also constitute revealing elements (see in this connection, D. Sourdel, A propos des "Dix Elus", in REI, xxxi [1963], 222-24).

It is to be regretted, however, that few Islamic scholars take interest in material that too often continues to be strange to them, while me the other hand there is a vigorous and widespread school of thought seeking, in the light of illuminist doctrines popular in certain circles of initiates, to decipher every ancient inscription as if it were mesoteric riddle, tinted with "traditional" gnostic philosophy both Shift and Iranian, In fact, besides the intentional use of certain formulae that are legible and loaded with meaning beneath the flamboyant style of the writing-such is for example the remarkable stucco composition in "square Kūfic" on the names of the Twelve Imams preserved in the sanctuary of Pir-i Bakrān at Lindiān near Isfahān-one might hesitate to see a hidden **with in** the quasi-mechanical

repetition, on certain monuments, of formulae such as al-mulh ii-llāh "the power is God's", or, on certain pieces of pottery, of expressions of the al-'afiya type sometimes evolving towards pseudo-inscriptions. These formulae, reproduced in the manner of respected graphic combinations, doubtless preserved == theological significance more precise than the successions of appeals, such "fortune, prosperity, blessing ... to him who possesses it' al-yumn we Libbal wa Lbaraka, etc. . . . li sähibiki, which at that time were invariably inscribed on manufactured objects. The connections between sign and signified which may still be legitimately read here, are thus shown to be especially typical of a psychological climate peculiar to Muslim society in the sense of a society marked by religiosity, and correspond the tight liaison that me have already emphasisod between the character, Muslim in tenor and ornamental in appearance, of the majority of the inscriptions in this category: these we works of art endowed in this sense with a fundamental ambiguity as means of expression, both aesthetic and symbolic, of the sensibilities of their period.

A second category of inscriptions that is no less copious is subsequently represented, that of historical texts which have the object of commemorating the individual and his nots, whether the case in question is of a senior government official or of the obscure occupant of a village tomb. To this category we may add construction texts fixing the date of a certain building, title deeds and other documentation of private transactions, foundation texts indicating (according to terminology originating with van Berchem and adopted by RCEA) attestations of pious donations given in perpetuity through the custom of $wakf(q.\nu.)$, funeral **sees** of all kinds and even the straightforward signatures of master craftsmen and artists which will also be considered here. I these texts partially reflect the notion of "absolute political power" wherein van Berchem saw, according III an insufficiently-qualified assertion, the second major concept of the Islamic spirit, and if their principal gravitation is such that the same epigraphist expressed it, evolving around the names of the sovereign, his titles, his major deeds and his continuing praise, they also contain much more; through the evolution that they have undergone in the course of the centuries, they give information on popular beliefs, opinions current among the wealthy or academic classes of society and the functions served in the degree of respect attained, after their death, by certain of their members, as well on the nature of the buildings, utilitarian or decorative, that the latter took pleasure in constructing. Some of this information of obvious value in the reconstruction of the social, economic and intellectual history of the Islamic world, is accompanied also by precise revelations touching such and such a point of circumstantial history or such-and-such an archaeological detail: these amply compensate for the tedium that sometimes emanates from the stereotyped phraseology and the excessive enumeration of titles that me characteristic of documents tending towards a standard official formality rather than towards any personal touch, which iii rarely encountered.

Of all these texts, the most copious category is undoubtedly that of epitaphs, collections of which, either remaining in site in the ancient cemeteries or transferred to museums, mm on such a massive scale as to discourage the most enthusiastic researcher and in consequence have seldom been catalogued in

a systematic way. The specimens published since the unique example of 31/652 and the Egyptian steles of the end of the and/6th century are nevertheless sufficient to give in idea of the progressive transformation, according to places and periods, of fairly simple types of texts, where the significant features have always been religious main and the professions of faith already mentioned (for supplementary details and bibliography, see game). Their references to certain currents of thought deserve in fact to be given more attention than the study of the dates of inscriptions or the genealogies of the deceased where statistics directed towards onomastic and prosopography, according to local perspectives, would alone be capable, in the longer term, of maintaining interest. But neither should one ignore the titulary inscriptions which are to be noted from the 6th/12th century onward, in a period where the devaluation of titles formerly reserved for sovereigns led to the attribution, to "men of religion" and other representatives of the upper urban classes, of honorific phrases, the history of which has not yet been written and which ought to be studied in the same way as the titles of individuals serving in the higher echelons of the administration [see LAKAD].

Besides these epitaphs, marked by a discretion of vocabulary which is maintained up to the time of the royal epitaphs of the Chaznavid Sebüktigin (d. 387/997) - of the Artukid Balak (d. 518/1124), there are other funerary texts which belong more emphatically to the canon of inscriptions intended to celebrate the glory of the sovereign. These are those which, from the 4th/roth century onward, accompany monumental mausolea varying siderably in architectural structure. A greater freedom of composition, already perceptible in the dated and dedicatory epigraphic friezes of the Iranian tower-tombs, is shown when the opportunity offers, notably in the original version of inscriptions specially designed before his death in 607/1210-11 by 'All al-Harawi [q.v.] for the decoration of his tomb. These texts are waluable for the history of monuments as they are for that of the sovereigns, officials or military chiefs who chose them for the commemoration of their graves. Moreover, they become especially significant when the tombs in question are those identified by popular piety as objects of pilgrimage and supplication, whether in Shiff circles where the buildings of imam-zadas [q.v.] were widespread at a very early stage, or to a certain extent throughout the Muslim world from the 6th/rath century, when the practice of ziydra [q.v.] developed to the proportions of a veritable "cult of saints" of pious individuals renowned for their posthumous miracles, m of celebrities from the early periods of Islam commemorated now for the first time by newly-built sanctuaries; only inscriptions of sufficient antiquity may in fact give information about the original period of seem devotions, inaccurately described in the literary sources, while at the same time supplying the names of rulers or wealthy patrons who promoted them. These data are also useful for the reconstruction of the complicated history of the multi-purpose architectural complexes which became numerous around the tombs of saints from the end of the 7th/23th century and which grew up a little later around royal graves, as is proved by well-known Timurid and Mamink examples (see KUBBA, TÜRBZ).

The formulae employed in this particular category in funerary texts also belong partially to that attended by the innumerable construction texts en-

graved on Muslim monuments since the Umayyad period. These latter texts in fact obeyed from the start strict obligations, which imposed the following elements: definition of the work undertaken, name of the initiator responsible, sometimes located between the name of the reigning sovereign and those of the authorities who supervised the progress of the work, and date of the construction or restoration, the whole incorporated within a series of variable additions: variously distributed pious formulae which included Kur'anic quotations appropriate to the nature of the work, but which most of all were requests to God for reward in respect of the work accomplished in his bonour more or less detailed appeals on behalf of the founder and optional complementary notes, including the names of the authorscribe and the architect-mason. This was the constant framework, and the additions made in ensuing centuries were only such as to incorporate subsidiary details affecting in particular the titles of the builder or and of the various authorities on whom he depended: thus one may find, in the 5th/11th and 6th/12th centuries for example, successive mentions of the caliph of Baghdad, of the Saldiuk sultan, of the local sovereign, and the humble figure of the builder is introduced simply as al- abd al-fatte ila rahmati rabbihi "the poor slave imploring the goodwill of his Lord". Furthermore, such rigidity of formulae provides the exact scheme that may be expected of inscriptions of this genre, texts that are easily reconstructed where there | lacunae in the details of ritual etiquette or in the order of succession of the various elements, but of scope limited by the constraints of their subject. Only on two points are we likely sometimes to be agreeably surprised; their archaeological interpretation, on the one hand, when care is taken to note their precise location in the building, to the dating of which they contribute; on the other hand, their richness in titles, from which one sometimes perceives the reality of Islamic government institutions which continue to pose numerous questions to the historian.

Comparable Information is furthermore to be obtained, in the majority of cases, from foundation texts where the list of the titles of the legators obeys the ____ rules of precedence and is often clarified when account is taken of the meet theoretical notions supplied by some Arabic texts dealing with chancellery practices. But the more original data contained in the disposal of these wakfiyyas are of a topographical or toponymical order, on account of the large number of localities and regions listed sources of revenue, or of **e** economic and social order, relating to daily life, sometimes also to urban life in general when the generous benefactor has decided for example to underwrite the excavation of hands [q.v.] or the improvement of mem municipal work. The profoundly Islamic character of these arrangements, well as the attitudes that engendered them, is linked, through the solemn proclamation of the devotional work, to the psychological process according to which the construction of a building took on its true dimension when an inscription text preserved its memory and placed the builder or benefactor in his just position within the Muslim community.

This tendency superimposed on a concern for the glorification of the individual concerned, which appears to a still greater extent in the inscriptions on material objects, which constitute the final category of Arabic commemorative inscriptions. The texts of these most often consist in fact of nothing more than greetings added to the name and titles which enable the owner to be identified, whether it was a case of a caliph ordering the manufacture of a firas [q.o.] in a royal factory or of a Mamlük smir acquiring a bronze or a caramic plate bearing his monogram. The mention that such an object has been manufactured in the orders of a certain powerful dignitary is sometimes the only information to be conveyed, in the form of motif that is both epigraphic and decorative. But the sense of pride of ownership also sometimes finds - echo in the professional pride of the craftsmen who at an early stage adopted the practice of signing their works, even if in the briefest manner possible (see in this connection the writings of L. A. Mayer mentioned above).

It remains to consider, in the third and final place, the group which, while being definitely the least important, is nevertheless extremely rich in information of all kinds, the group constituted by administrative texts. Linked to the functioning of the machinery of power, they are not designed to glorify, except indirectly, the holders of this power, but rather to make certain government decisions known. Represented in early times by inscriptions stamped on coinage, or on weights and measures of glass paste which appeared from the Umayyad period onward, they made way somewhat later for decrees of abolition of taxes. Mamlük specimens are among the best known: these are, once again, valuable documents of economic and social history, comparable with title deeds and records of donation, to the extent that they provide precise and detailed information regarding fiscal policy or give accurate descriptions of bureaucratic procedures. But the quaint symbolic notations that they preserve are shown in their turn to be extremely rich when one attempts, as Sauvaget has done, to glean from them certain data == the spot and to deduce from them, especially in the sphere of topographical studies, elements of assistance in the reconstruction of certain aspects of urban evolution.

So here we find once more this golden rule for the utilisation of Arabic inscriptions, which seems to be always to consider them as concrete documents, which are not to be separated, beyond the official formulae and the pious expressions that characterise them, from the local and monumental context within which their most original significance is expressed. Some such epigraphic commentaries, even when they deal closely with the purport of the various texts the principal tendencies of which we have reviewed above, thus remain subordinate to that which constitutes the prime quality of the documents with which they are concerned that of having been composed to occupy m particular location in lasting fashion and to be integrated into the exterior appearance of the objects or the monuments that they accompany. Nor should one neglect those inscriptions which were capable of being enclosed in the interior of the most varied types of framework (panels, scrolis, friezes of all dimensions, the entire surface of an object or a tightly-limited section), entrusted to the most varied materials according to equally diverse processes (stone engraved or sculpted in depth, stucco elaborately worked on several surfaces, experiments with bricks in relief, mosaic, painting, moulded or incised metal, wood, ivory, ceramic, etc.), sometimes reduced III the subsidiary role of motifs underlining with their shapes the principal lines of the architecture or joining with covering linear décors composed of arabesques and

lattice-work. These details are to be considered with as much attention as the formulae of the inscriptions or as the style as revealed by the idiosyncrasies of the writing. For the reasoned study of this body of facts, with which, in order to be complete, any survey of Islamie epigraphy ought to begin, is the only means that will enable the scholar to put into their just place, for an introduction to the realities of mediaeval Islamic civilisation, the inscriptions which up to the present day scholars have been content to examine in a fashion that is still too incomplete and inevitably superficial.

Bibliography: Given in the article.
(J. Sourcent-Thomas)

2. In the Near East.

It is in the Near East, the cradle of Arabic writing, and more precisely in Syria (Namāra, Zebed, Ḥarrān, Umm Diimāl), that the oldest known inscriptions written in the Arabic language have been discovered. These so-called proto-Arabic inscriptions, sometimes bilingual (Greek-Arabic), have contributed to our understanding of the ancestry of the Arabic characters, which in the final analysis, derive from Syriac characters and not from Nabataean, as was previously believed.

The privileged piace accorded by Islam to writing allowed the latter to undergo a rapid evolution and a rapid diffusion. From the time of the Umayyad era, inscriptions prollferated in all the provinces of the young Islamic empire. Construction texts, religious texts, milestones, epitaphs, and simple graffiti dating from this period have been and still are being discovered in the archaeological sites of Syrla, Lebanon, Palestine, Egypt, and Trâk.

The formula of these inscriptions was probably influenced by that of the Greco-Roman inscriptions, very numerous in these regions. It is simple, sober and varies in tenor according to the function of the text. It was as a prototype for later periods which enrich it, while remaining faithful to its broad outlines. Official texts are generally composed as follows: almost always the basmala, one more Kur'anic verses, religious invocations, the dispositions of the work, the name of the caliph followed by his title amis al-ma'minin, sometimes the name of the overseer responsible for the work, and generally.

The study of these inscriptions reveals the rapidity with which the crude and maindroit writing of the proto-Arabic inscriptions was transformed to the point of attaining, in the monumental inscriptions, a high level of aesthetic perfection. Engraved rock in finely drawn lines of equal breadth, usually incised, very seldom in relief, sometimes executed in mosaic or in painting, Umayyad writing obeys the norms: characters composed of simple geometric elements-verticals, horisontals, obliques, circles or segments of circles-set out on a base line which a strictly horizontal. This horizontal base line plays an essential role in Arabic writing. The latter was in fact conceived, after the pattern of Syrisc characters, as resting on a foundation, opposed to Nabatasan characters, which appear to be suspended from an upper line. This role is such, that in certain types of archaic and crude writing, the base line is itself in integral part of the characters. These latter 🚃 🖹 such cases formed of small simple lines, vertical or oblique, and of rings, resting on the horizontal of the base line, of which the continuity is unbroken (cf. PL. VIII, 1).

In Umayyad epigraphy, the combinations of these

geometric elements give two types of characters; tall letters with vertical strokes and short letters with notches or rings, connected by horizontal segments. This double typology constitutes one of the essential elements of the essential elements of the essential vertical. In fact, it provides the artist with two areas where he can exercise his genius differently: the lower register, the more dense, where the artistic effect obtained results in m simple inter-play of characters, and the upper register where the spaces between the vertical strokes provide m ideal place for the artist to indulge his taste for multiple creations.

In the Umayyad period, this upper register not used, but the stone-masons succeeded, by using the lower register alone, in creating "a harmony once rhythmic and linear" which makes this form of writing a genuine work of art. The rhythm is obtained by the opposition and alternation of high and low characters, while the linear harmony results from the arithmetical reckoning of the proportions. This reckoning answers meed for equilibrium as much in height (the proportion of short characters to long varies generally between 1/3 and 1/2) as in width. It is to satisfy this latter need that the mason does not hesitate to extend his characters in width and to lengthen the joining segments. The standard of calligraphy definitely varies according to the type of Inscription and it is especially in official texts that fine specimens are to be found. We shall mention simply as examples the inscriptions of the caliph 'Abd al-Malik in the Kubbat al-Sakhra in Jerusalem and his milestones (cf. Pt. VIII, and IX, 3).

During the first two centuries of the 'Abbasid régime, the Arabic inscriptions of the Near-East underwent an evolution corresponding to that of the socio-cultural development of the entire ancient Baghdad and that of the palaces of Samarra?. The fact that these were constructed of brick, a perishable material, has deprived us of the monumental inscriptions which probably adorned the official buildings and which disappeared as a result of these destructions. On the other hand, we have dating from this period a large number of epitaphs and inscriptions on movable objects, especially on fabrics. which benefited from the expansion of state factories. (first) supplying the seem of the caliphs and their court. The formula of these inscriptions, often found on 📰 edges of 📟 fabric, is stereotyped. It begins with the basmaia, generally followed by the phrase baraka min Allah li-'Abd Allah followed by the name of the caliph and his title, and the expression of a wish for his long reign, then the name of the individual who ordered the fabric, the name III the workshop where it was made and I date of manufacture. These inscriptions are executed archaic, angular characters whose typology corresponds, in broad outline, to that of the characters of the stone inscriptions.

In this area, undoubtedly the most interesting evidence is provided by the epitaphs, most of them of Egyptian origin, engraved on marble or on sandatone, of which is considerable number of specimens have survived to the present day. The formula of these epitaphs is constituted of different elements of which the combinations vary according to a variety of patterns: the baseals, a verse of the Kur'an, one or more religious invocations, the profession of faith, more or less developed, the dedication of the tomb, the verb introducing the name of the deceased followed by his titles and

profession, the date of his death and an appeal for God's mercy upon him.

These epitaphs provide valuable materials for following the evolution of inscriptions on stone during the first 'Abbasid centuries. The change of dynasty did not immediately change the practices of the stonemasons and the characters of early Abbasid epitaphs are similar in outline to those of Umayyad inscriptions. Nevertheless, differences soon appear in the reckoning of the proportions. The characters diminish in length and correspondingly the joining segments between the letters become shorter. As a result, 'Abbāsid Kūfic presents more cramped and less harmonious aspect appearance than Umayyad Küfic. On the other hand, this evolution is inclined toward a concern for the ornamentation of characters. This is expressed first in the lengthening of the terminal segments in the form of a bevel which tends to grow larger and larger. In the crude types it is sometimes replaced by a small book or even a ring. To the development of the bevel there correspond a thickening of the outlines of the letters and a more frequent adoption of the technique of engraving in champlevé (cf. Pl. (X, 4), which allows two parallel expressions of the evolution of characters, corresponding to the duality of engraving techniques. Thus, in incised inscriptions, the vertical strokes of the letters are decorated with hooks, simple, double in triple, pre-ligaring the palm-leaf (cf. Pr. X, 5), while in inscriptions in relief, the bevels evolve into foils, double foils or triple foils which later open out into leaves, fleurons and palm-leaves, a style of décor much in vogue in the mid-grd/9th century (cf. Pt. X, 6).

Various other processes of ornamentation are encountered in this period: symmetrical indentations in the parallel vertical strokes of the alif and the lam, softening of the lines and the appearance of curves (in the idm-alif, the kaf), transformation of the lower appendices into rising tails, fleurons arising from mouth-shaped letters (mim), the intertwining of contiguous lines, (ci. the knot formed by the alif and the kim of the word Allah, Pt. X, 6, 1). The indentations and we which sometimes adorn the joining segments, especially in the word Allah, roses and fleurons at the end of a word, framing in linear décor (braids, rigrags, mouldings, spirals) in a décor of plant-forms (plant palm-leaves afternated me side and the other by a sinuous line, leaves and symmetrical fleurons), sometimes an even more subtle composition (an arc delineated by a flat moulding with spandrels adorned by an outline in arabesque), combine towards the embellishment of the script.

With the Fatimid conquest of Egypt in 358/969 and its aporadic expansion in Syria-Palestine, new practices are introduced into the inscriptions of the Near East. The formula varies little in its basic elements, but the name of the caliph is almost always followed by mention of Im links with the "Family" in a phrase such as salamid Alláh 'alayhi we-'alā ahā'-ki al-lāki'in, and the name of 'Alī is often mentioned with that of the Prophet (Muhammad vasāl Allāh 'Alī wall Allāh salawāl Allāh 'alay-kimā).

The effort at the embellishment of calligraphy continues, and a real proliferation of types of decorative inacriptions is seen. As characteristic examples, we mention the inscriptions of the 4th/10th century mosque of al-Hākim in Cairo (of. Pt. X, 7) and those of the cenotaph of Pāṭima in Damascus (dated 439/1047, Pt. X1, 8). In the former, the linear element maintains a predominant place. The characters show

a vigour of design which accentuates their relief on the excised base, completely bare in the lower part, decorated in the upper register by an independent, foliated scroll which glides alternatively above and below the vertical strokes and which gives mere run in the empty spaces to the development of spiral designs which open out in flourons (cf. Pt. X. 7).

in the cenotaph of Fâțima, the foliated scroll is sometimes linked to floral elements issuing from the characters and develops in such a fashion as to form

a more dense composition (cf. Pt. XI, 8).

In the Fățimid period, the typology of the characters is considerably enriched. Curvatures, counter-curvatures, knots and indentations manuerous in the interiors of the characters, offering the stone-mason infinite opportunities for improvisation. Purely for the sake of example, let mote the ten different types of lâm-alij in the single inscription of the cenotaph of Fāṭima.

It would of course be wrong to attribute to Fāṭimid artists alone all the epigraphic innovations in the inscriptions of the 5th-6th/xtth-12th century is the Near East. The conquest of Syria by the Saldiūks, who imported with them the techniques and the graphical forms used in the eastern provinces of the Islamic empire, was accompanied by the intrusion of a number of the leatures mentioned in the Fāṭimid inscriptions, such m knots and right-angled bends in the vertical strokes of certain characters. There is probably a phenomenon of osmosis between these various regions where exchanges were frequent.

The inscription the cenotaph of Sukayna in Damascus (end of the 6th/12th century; cf. Pl. X, 9) is an interesting specimen of the evolution of monumental Küfic in the Saldlük period. The inscriptions engraved in the wood of the cenotaph are distributed three levels, in two bands superimposed and separated by a fine braid. The main inscription occupies the full height of the broadest band, while at half-way up, the second is intertwined among the vertical strokes of the first. The third, quite independent, occupies the small upper band. These three bands stand out against a background decorated by a fine network of arabesques which cover all of the part crudely excised.

Among the specifically Saldiuk types of monumental inscription, mention should be made of epigraphic bands with geometric decor where the vertical lines of the characters are extended in the upper sum giving rise to interweaving of stars and polygons. The inscription of Safwat al-Mulk at Damascus is a living illustration of this.

The Saiditit influence is also shown in the evolution of the formulary of inscriptions of small Syrian dynasties of Saiditik allegiance where the titles become swellen with pomposity (cf. for example the titles of the addba sovereigns in the constitution texts of the great mosque of Damascus).

It was in the first half of the 6th/12th century that there was effected the most important transformation regarding the evolution of Arabic script in stone, when Nûr al-Din ordered the adoption of the cursive script in efficial inscriptions, to the detriment of the angular script, which, without disappearing completely, was reduced to repetitions of ancient types. Some fragments of cursive script are mixed, as an intrusion, in the Kūfic inscriptions of the bands of the minaret of the great mosque of Aleppo in 483/1090. There is found also at Busrâ in Syria an inscription dating from 481/1186, where the characters, while still crude, are neatly rounded; but it is not until the first half of the 6th/12th century

KITÄBÄT

that there appears the full flowering of cursive writing expressed in stone, with its full and its slender lines, its supple ligatures and the introduction of points and discritical lines, not used in the inscriptions of angular type. A parallel transformation is effected regarding the base line which loses its rigidity and its horizontal continuity. The listels which delimit the bands of writing are not however climinated, and they continue to compress the lower appendices, the latter being forced to develop below the base line. To remedy this inconvenience, the stone-masons divide the words and engrave the regments thus obtained on different levels, based on an oblique line descending from the centre of the band towards the listel of the base. This procedure permits a freez development in the lower appendices. The base will appears as a discontinuous line reduced g series of oblique overlapping segments (cf. Pr. XII, 10). This procedure is accentuated in the Ayyubid period, and already there appear inscriptions where the words are divided and staggered on two or three levels, almost parallel and superimposed. The word generally begins 🖿 the lower tine and continues above (cf. Pt. XIII, 11).

In the Mamilik period, this technique of engraving reaches its apogee. The characters are so interwoven that their decipherment becomes difficult all the more is she characters used in the majority of the inscriptions of this period are of small dimensions, thick and squat. It is to this type of inscription that belong the Mamilik decrees, engraved in profusion on the walls of official buildings and constituting precious documents regarding the socio-economic life of the Near East in this period (cf. Pr. XIII, rz).

There exists, moreover, a type of Mamlûk mashhi where this dense writing gives way to an elongated graphic style prefiguring the Ottoman script. This last gives the appearance of a transposition in to stone of manuscript writings, in particular the style known as thuisth, in which the Ottoman calligraphers excelled (cf. Pl. XIII, 13).

3. In Muslim Spain,

At the time of the second invasion of the Iberian peninsula (92/712), the h2/I - Khfie script had already existed in the Islamic world, as an official and secred script, for 86 years. It was this script that the conquerors used from the start in their inscriptions. The most ancient evidence that we have of it is constituted by the billingual coinage struck by the governor al-Hurr b. 'Abd al-Rahman al-Thakaft (98/216-17); the uninterrupted continuity of its is confirmed by all the coinages struck by subsequent governors and amirs. From the time of the amirate of 'Abd al-Rahman II, this writing figures in plous foundation texts, in funeral and other inscriptions which corroborate this numismatic evidence, as well as testifying clearly to the development of the usage of the Köfic characters in al-Andalus before the Almohad invasion (542/2247). Following this event, a struggle developed between kuji and naskhi, ending in victory for the latter which subsequently took the status of the official scripts of epigraphy, while the former lost ground and its use became limited to religious or profese inscriptions of little importance and intended for purposes of general ornamentation.

The Küfic features which appear in the oldest Arabic inscriptions of al-Andalus are virtually the same as those which were used during the last decade of the first century A.H. in all the lands conquered by Islam, that is to say, m symbols originating from the city of Küla, with scarcely any evolution in design. This Küfic, on account of its clearly primitive nature, is generally called archaic. It was reproduced, with meet or less finesse over the years, by the traditional craftsmen of Spain who never succeeded in mastering it fully and in consequence introduced no novelty of design by virtue of which it might be considered characteristic of, or exclusive to, al-Andalus. In the last years of the amirate of Muhammad I, a new generation of rather more arabised craftsmen began to turn the extreme features of Küfic script into stylised plantforms. At first, this innovation was used very timidly because ■ applied only to ■ very small number of letters; nevertheless, little by little it found soceptance to the point where it was applied to all the symbols which permitted it. The craftsmen thus succeeded in creating the Hispano-Muslim version of floral Küfic, while it must be admitted that the development of this variant of Küfic never attained, in al-Andalus, the level reached by contemporary KOffic writing in other Muslim territories.

In the reign of the second caliph of Cordova, al-Hakam al-Mustanşir bi 'llāh, the religious puritanism and stern austerity which characterised the conduct of this powerful sovereign at the head of the government of al-Andalus made itself strongly felt, needless to say, in the epigraphy of the period. Decorative floral additions were suppressed and attempts made restore the Kufic letters to their primitive and classical design. But this was not entirely possible, because the letter-forms possessed henceforward a certain elegance which was lacking in them before; this elegance, far from disappearing m a result of this suppression, manifestly increased. Thus there was born a new Kufic with streamlined, elegant shapes, stripped of mornamental addition, commonly called simple Kutic, which flourished until the downfall of the Caliphate of the West. Previous to this important historical event, there certainly existed a consistency in the style of writing Kaffe

in the whole of al-Andalus—as a consequence of the political unity of the region, feebly introduced by the governors and subsequently definitively enforced by the monarchs of the dynasty of the Banu Umayya and a single cultural centre regulating its art, the metropolis of Cordova. After the downfall of the caliphate, a number of schools of design sprang up. for, with the end of the hegemony of Cordova, each province of al-Andalus followed its own political direction and developed its own artistic practices under influences of very diverse origin. Among the schools the most important were those of Seville, Toledo, Saragossa and Almeria, without counting that of Cordova. At Seville, simple Kuffe continued to be used in inscriptions; but the characters developed in height, which made them extremely elegant and distinctive. At Toledo, the craftsmen returned to floral KOfic, with forms excessively overladen with plant-forms afternated with the use of simple Kufic forms. Of these wariants, two distinct versions appeared; one traditional, firmly Cordovan in origin: the other authentically Tolerlan, which consisted in adding to characters carved in relief a central groove, giving them considerable force of expression. The Küfic of Saragossa had a particular importance. It is known today through the inscriptions preserved at the Palace of Aljaferia (al-Dia fariyya), built by the princeling Abu Dia far Ahmad al-Muktadir bi 'llah (438-74/2046-81); I is known that in the building of this monument, originally called Dar al-Surur or House of Rejoicing, the craftsmen experimented with numerous innovations. architectural as well as decorative; and inscriptionsan ornamental element of first importance in Islamic art-were no exception. They stylised Külic characters to an incredible extent, and by sometimes making them slide on a floral base or at other times cleverly interlacing them with geometric motifs, they succeeded in composing epigraphic bands of great beauty and an originality unusual for the period. As for Almeria, principal base of the Umayyad fleet in the Mediterranean, it had been intimately linked with the metropolis of Cordova during the caliphate. Its craftsmen had always represented Kufic according to the model of Cordova, and they did not change their style when the latter lost its political status. They continued to use the simple Küfic which was in at the time of this event; later, this Kufic evolved very slowly and its most billiant period. corresponding to the importance and splendour of this naval base, was reached under the aegis of the Almoravids. From the study of the Arabic inscriptions of Almeria, of which a fine selection survives. it may M deduced that the Almoravid invasion brought no change in the shape of the Külic of al-Andalus. By contrast, as mentioned above, the Almohad invasion had very significant effects on epigraphy. At first, the latter respected the Kuffe script and used it, as is well-known, in the first building that they constructed at Marrakush; but, when they were obliged to put into practice a policy of reconditation of the peoples whom they had subdued by force, they very soon realised that the Kofic script, with its difficulty of interpretation, was not suitable for the development of their policies, and they replaced it with naskly or cursive in all texts relating to new foundations of a public character. For the craftsmen of al-Andalus in particular, this change had the effect of enabling them acquire a thorough knowledge of the Arabic characters and to distinguish, in each wo of them, that which was essential and invariable from that which

was secondary and could legitimately be altered according to the taste of the designer. Thus they to appreciate the true significance of Kulk forms hitherto reproduced more or less mechanically. They were no longer content with drawing their designs according to the good taste of the Almohads. but little by little they transformed the shapes. First of all, with the idea of making them attractive and graceful; then by building up their upper portions with complicated interloops, while increasingly filling up with stylised plant-forms all the interstices not covered by the letters in the lines of inscription. In the end, they created ornamental motifs of a type which, on account of its incontestable decorative worth, was subsequently copied by the Mudéjar craftsmen, including those who worked in the Albambra of Granada, thus undoubtedly conferring upon a long-lasting prosperity. For it is certain that it is by virtue of these copies, made with extreme care and fidelity, that we are acquainted today with the Arabic epigraphy of al-Andalus current in the period of the Almohads, since the original inscriptions of this historical period surviving to the present day are very few in number, and discoveries have not been made on the scale which could have been desired. The motif-types mentioned above were incorporated into Mudéjar decoration without further consequence, and through incessant use over the course of the years they patently degenerated and became a parody of what they had originally been. On the other hand, their inclusion in the ornamentation of the palace of the Banti Nasr had the effect of inspiring the craftsmen of Granada to the creation and the development to hitherto inconceivable limits of the geometric Kūfic which is admired today in the Alhambra and which is, beyond doubt, one of the finest ornamental creations contributed by Andalusian craftsmanship to the art of Islam. It was also in the Alhambra that the nashhi script achieved the highest point of its development within Muslim Spain. In fact, it is known that among the most important elements contributing to the ormanentation of the Nasrid palace there me epigraphic friezes composed in this script and containing the best works of the most prominent poets of the period, Ibn Zamrak and Ibn Diavvāb, which are thereby available 📰 📰 in "the most sumptuous edition in the world", to borrow the apt expression of E. Garcia Gómez.

4. In North Africa.

The oldest inscriptions known to us in North Africa show no originality compared with those of the Near East in the Umayyad and, in particular, the 'Abbaid periods. The evolution of styles in liribing was to follow a convergenceally parallel to that of the styles known in Egypt which to have constituted the natural link in the chain connecting the Muslim East and West. The Maghrib al-Akṣā, by contrast, and especially from the time of the Almoravid period, was influenced by al-

Andalms, which for a long time remained faithful to archaic forms of Küfic but which, under the influence of the 'Abbāsid East, submitted to the prevailing taste. Nevertheless, Muslim Spain was to interpret in its own fashion the styles of writing and their evolution such as were familiar in the Orient in the Fāṭimid period. This piece of the Orient set in Andalusion soil was to influence Morooco, and then with the victory of the Almohads, the whole of North Africa.

The style of monumental inscriptions in the Aghlabid period differs according to whether it is case of carvings in relief, or incised engravings, and stone or wood, or of painting. The Kufic carved in relief on stone may well be compared to that of the Nilometer of Rawda (199/814-15), notably on the marble at al-Kayrawan (the capitals and the interior of the milest). It may equally be compared to Tulunid Kutic, but some of the details characteristic ■ the West appear to be quite original, for example the alif with a horizontal appendage towards the right in the lower part of the letter. The writing, whose essential value lies in the message to be transmitted, tends gradually to become a part of the ornamentation (for example, the inscription painted on wood at the base of the cupola of the Great Mosque of al-Kayrawan where the misshaping of the fays gives a fleuron with three foils while the background is decorated with isolated floral motifs). The fine inscription on the façade of the Mosque of the Three Gutes at al-Kayrawan also provides example of this tendency which is emphasised in the marble plaque of the milesto of the Zaytūna 🖿 Tunis, where the inscription in very fine Kufic characters forms a decorative framework.

The Küfic of the foundation-plaque of the ribtly of Sousse (206/821) appears very archaic in comparison with these inscriptions.

Funerary inscriptions — mostly engraved; the formula varies little, the main element being — tew Kur'anic verses, usually taken from Sura CXII. These inscriptions perpetuate, in the prodjet century, forms which are more emphatically archaet than those of the monumental inscriptions; this is especially notable in epitaphs on pillars, occasionally crudely executed in spite of some fine creations, and in the line funerary inscriptions engraved on marble plaques — tall columns. The similarity between the Aghlabid incised inscriptions and contemporary examples from Egypt and the Sudan is quite striking.

There can be no doubt that the arrival of the Fatimids in Ifriidya and their installation at Mahdiyya, thou at Şabra al-Mansūriyya, accentuated the orientalisation of the country. The evolution of Kufic in the Near East in the 5th/11th century, then in the 6th/rath century, was to be reflected almost immediately in the Maghrib. In the latter in the former, the problem faced by the artist was how to alleviate the difficulties inherent in Arabic writing, very dense in the lower part of the line of inscription, but leaving important gaps in the upper areas. The solutions adopted consisted in the development of the vertical strokes and in their evolution, sometimes their distortion, in the intertwining of letters, and most of all, me made of stylised floral patterns in decorating the background. These inscriptions are often divided | two parts by a rigid horizontal band, the lower part being occupied by the body of letter while the upper register is decorated with a complicated floral design against which the vertical lines stand out. At Stax, from the end of the 4th/20th century, the latter is more to develop, the terminal

chamfer of the vertical strokes opening into floral shapes or curling so as to occupy the empty spaces. The influence of Faținid Egypt is undeniable. The characters in general affect a refined elegance. The bordering strips contribute to the décor of the façades (Sfax, Great Mosque) or to that of the mitrābs (Sfax, Zirid mitrāb), mosque of Sayyida at Monastir (beginning of the 5th/11th century). At Constantine (mitrāb of the Great Mosque, dating from the 6th/12th century), the epigraphic décor reaches a high degree of ornamental quality, recalling that of the finest Fāṭimid mitrābs of Cairo.

Funereal epigraphy also abandoned the archaisms of the Aghlabid period, but after a perceptible delay, incised inscriptions practically disappeared. The form of the tombs evolved towards prismatic marble steles, notably at Monastir and at Tunis (cemetery of the Khūrāsānids). The writing, of refined elegance, recalls, by the development of the letters and by the appearance and proliferation of stylised floral designs, the style of the monumental inscriptions.

As for epigraphy on furniture, we have, in the magnificent macksure of al-Murizz b. Badis, one of the finest examples of floral Kufic, with complex intertwining of letters and a background of plantforms comparable to the Kufic of Aleppo or to that of

Divar Bakr.

In the Maghrib al-Akss and in the western region of the central Maghrib, very few inscriptions are to be noted before the Almoravid period. That of the Karawiyyin, dating from 263/877, is in Küfic of the al-Kayrawān type, but, with the region of 'All b. Yūsul, there appears the Andalusian Kūfic, characterised by well-proportioned letters with long and surved vertical strokes. However, the writing itself is very sober and stands out against a background flowered with arabesques and fleurons and palmicaves with deep and multiple radiating divisions (Karawiyyin, Great Mosque of Tlemcen), or against a background of palms, of pineapples and of half-fleurons divided in two parts horizontally by a straight listel.

The epigraphy on furniture shows, on the contrary, an attachment to the old tradition, whence a surprising conservatism in the Kûfic inscriptions of the minhaes of Nedroma and of Algiera, and in those of

the makeurs of Tiemcen.

But the most important event of this period is the appearance of the cursive script (nath). This style appears in Ifrikiya from 490/1096, in funereal inscriptions where it is presented in m very elaborate form (the characters are fine, large and supple and well-proportioned, framed with a border and standing out against a rich floral background of criental type). It is to be supposed that it was by this oriental route that the new alphabet penetrated to the Maghrib al-Akṣā in the Almoravid period (the inscriptions of Tlemcen and of Karawiyyin) in about 531/1136.7. It is in fact impossible, in the absence of precise documentary evidence, to propose an Andalusian influence, as it seems that cursive writing did not appear in Andalusia until much later.

Whatever the case may be, the victory of the Almohads had as a consequence a certain unification of styles in the whole of North Africa with an inclination towards sober, angular Küfic in the monumental inscriptions and, on the contrary, a preference for cursive in the functual inscriptions. It is worth noting that no foundation inscription appears in this period in the religious buildings, pious works through which the great caliphs of the dynasty were able to bring honour to themselves.

One consequence of the Ottoman domination of Tunisia and Algeria was a new "orientalisation". The inscriptions lose their decorative quality and adhere to the requirements of the message to be transmitted. They are inscribed in frames or in scrolls in cursive characters, often with discritical points, sometimes with vowels, on several lines which may overlap. The execution is rather casual, and the use of the Turkish language is limited.

221

On the other hand, Morocco remained faithful to the Andalusian models and followed their evolution in the period of the Nasrids of Granada. The type of Küfle script which distorts the letters, twisting and stretching them into wreaths and fleurons, is hardly distinguishable from the background, where geometric and floral elements are mixed. The cursive begins to take the place of the Küfle script in the fine framing strips of the mistabs of the Marinid period. After the disappearance of the kingdom of Granada, Morocco tended to withdraw within itself, apparently shut of from outside influences.

At make time did the artists of the early Middle Ages make so much use of Arabic writing as an element of decoration. It appears everywhere, in religious buildings, in lunereal pavilions, in the houses of citizens or in the palaces of kings, on furniture, on table-ware and on the most minor objects of daily life, where the ornamental role is often more important than the meaning of the language. The result is a pseudo-writing without precise meaning, or moonstant repetition of m word or part of a phrase, in ornamental friezes, where ease and routine take the place of refinement and, above all, of faith.

5. In West Africa.

Proof is still awaited that any system of writing in use among the Negro civilisations of West Africa before the introduction of written Arabic. An animal drawing on a sherd found by F. Willet at Old Oyo in Western Nigeria was considered representational rather than pictographic, whilst K. Hau's search for linguistic interpretations of recurrent motifs in the art of Benin proved inconclusive. Gold-weights from Ashanti and neighbouring districts to represent a preliterate stage, some of the designa symbolising proverbs and injunctions and others perhaps conveying metrological data. Inscriptions in Punic, Greek, Latin or similar Classical languages have not yet been reported from tropical West Africa.

The Saharan Berbers (Tuareg, "People of the Veil") derived their tifinagh alphabet from the Libyan script used in North Africa during the second century B.C. and subsequently (see removed vi). Graffiti in tifinagh are known to extend from Tibesti and Djado westwards to the Niger bend, and even into Mauretania, Mauny (1954) providing the most convenient survey of the literature. A complication in the reading of these inscriptions is the problem of determining their direction. They may run from left

or right, too me bottom, but within each inscription the direction remains uniform, and clues to the orientation are provided by the alinement of certain asymmetrical characters, and the stereotyped opening phrases. In academic usage texts are conventionally arranged to read from the right.

Two main varieties of sifinagh script me generally recognised. The older (called variously "liftingsiarchalque"; "Saharien ancien" and "Libyco-berbère") renders by bars certain characters (# zh. A) which in the modern script are represented by dots (zk, h)). The older script also lacks several characters. A number of the older graffiti were interpreted by Marcy (1937). They contain recurrent formulae, commencing with such words as # @ O useroph usered, "I require...", # 1 such "I need...", and often accompanied by a drawing to illustrate fulfilment of the wish, all designed to have magical influence. A group of modern inscriptions commences with the word it with neak "I . . . ", followed by the writer's name, and a statement of his purpose or wish. Another group, still known only from modern examples, consists of formulae inscribed on the typical Tuareg stone armiets (ahaber), and shields. These were presented to a departing lover to preserve his fidelity. Manifestly Islamic personal names in later inscriptions show that they are relatively modern, but much work has still to be done in the chronology, linguistics, and collection

of the older graffiti. Of Arabic inscriptions from West Africa, at once the cliest and the most important is the tembetone from Gao reported by Sauvaget. It records the decease on I Muharram 494/6 November 1100 of personage designated al-malik al-adsir li-dia Allah il-mutowakkil 'ald Allah, Abu 'Abd Allah Muhammad b. 'Abd Allah b. Zaght. The Kufic calligraphy of this monument closely resembles tombstones from Almeria (reported by E. Lévy-Provençal, Inscriptions arabes d'Espagne, Pl. XXVII-XXX), and it is carved from similar marble. There is a strong implication that the monument may have been made at Almeria (a part of Spain then subject to rule by the Almoravid Murabit dynasty) for transport across the Sahara to Gao. This situation would present a new aspect of Almoravid connexions in the Southern Sahara. The inscription seems also to confirm the remark attributed to the Kadi Mahmud b. al-Hadidi al-Mutawakkil Ku't (Kati), that the Islamisation Gao took place between 471 475/1078-9 and 1082-3 (Kati, Ta'rith al-Sildin, tr. O. Houdas, 332); also the reference of Ibn Khurradadbih, 80 (cf. Hudûd al-'dlam, tr. Minorsky, 165, 476) to a ruler in West Africa named Zaghi b. Zaghi. The exalted tit'es appearing in the inscription may imply that the deceased person was himself Sultan of Songhay, but if so, his names are absent from the list given in the literary sources. Other inscriptions from Gao o. a Queen Swa (502/1108-9), of al-malik al-nasir li-din Alläh al-mıdewahkil 'ala Allah Abu Bake b. Abl Kuhāfa (503/1109-20), of 'A'isha daughter of al-malik Küri (511/1117-fl), and of another possible Sultin Māmā b. Kmā b. (Z)āghi (514/1120-1). Further inscribed tombstones from the area of the Niger bend have subsequently been published by Mrs. Vire, including a specimen of the year 496/1102-3 from Gao, and other from al-Sak (504/1110-11), Bentia (Kukiya, a former Songhay capital on the Niger above Niyameh) bearing the date 800/1397-8, and El-Kreib in Mauretania, a place thought to represent the ancient site of Aretenna.

Later Atabic rock-graffiti are known from the

Saharan zone, but other inscriptions on stone have not yet been reported outside the area of the Niger bend. The well-known inscribed swords carried by amirs in Hausaland, being apparently imported, bear conventional Arabic inscriptions not characteristically local. Many West African vernacular languages have, however, been written in Arabic script. A Bornu dialect, apparently Kanembu, occurs in Kurbinic glosses at least as early as 1080/1660. Kanuri, Hausa, Fulani, Nune and Yoruba all occur at slightly later dates—Hausa for example being found in glosses ascribed to 'Abd Allah b. Fudi (co. 1762-1828) in a manuscript of of-Muchingar owned by Abû Bakr Ghummi at Kano; the inscription on an iron panel at Kofar Waika, a gate of Kano city, though of uncertain date, contains several sentences in Hausa. The situation for the languages of the Upper Niger, Songhay, Malinke etc. is however Clear.

Arabic inscriptions in two cryptographic alphabets, called Suryaniyya and Ibraniyya, were described by Monod and Mauny. Talismanic inscriptions and magic squares are known all over the area, often written in carbon ink on wooden writing-boards (Ar. lawk), or iron replicas of these boards; also on earthenware bowls, shords, bones, human skulis and polished stone axebeads, bosides everyday examples

on paper sheets or serolls.

For an understanding of the masic squares (week, pl. aw/48), the most informative study is probably that of Camman, who traces them back to the Chinese origins. In Nigeria and other West African countries, the work on this subject of Muhyi al-Din Abu 'l-'Abbas Ahmad B. 'Abd Aliah al-Buni (d. 622/1223 (q.v. in Suppl.)), Shame al-ma'drif wa-latd'if al-'audrif, is widely utilised. A Nigerian scholar of some renown, Mubammad b. Muhammad al-Fulant al-Kashinawi (of Katsina, in Hausaland), friend of the Egyptian historian Hasan al-Diabactl, compiled a treatise on the subject entitled Bandial al-didk wa-iddh al-labs wa 'l-ighldh fl 'ilm al-huruf wa bewide. Answeti's description of charms - paper from Mail gives a full bibliography of Arabic talkand magical symbols. Cryptographic alphabets had a long history in the Near East, and became especially prevalent in North and West Africa, A standard treatment in Arabic is that of Ahmad b. Abb Bakr b. Wahshiyya, Shawk al-mutanam fi ma'rifat rumuz al-aklam (ed. and tr. J. Hammer, Ancient alphabets and hieroglyphic characters, London 1806), though commentators have found these explanations obscure. One of these alphabets known as ai-Yánini (and conceivably therefore associated with the spiritual leader of M Almoravids, 'Abd Aliah b. Yasin) was shown by Daiby to have influenced two of the modern indigenous scripts of West Africa, so that knowledge of it may have lingered from earlier centuries along the Senegal, The oldest of the scripts in question is the Vai syllabary of Liberia (212 characters: invented 1833); the other is the Mende syllabary of Sierra Leone (195 characters: invented 1921). Five other syllabaries and two alphabets, of differing structure and inspiration, designed for the expression of various African languages, are included in his account, but the currency of each is very restricted. Another item from the Islamic mystical reportoire, the sabiat khawatim or "seven seals (of Solomon)" 6日川门川井文 have been recorded amongst the Haua, amongst the Yoruba inscribed above the doorway of a building at Oyo, and in the Ivory Coast.

(A. D. H. BIVAR)

6. In eastern Africa.

So far some 250 inscriptions have been repowed from the eastern coast of Airica lying between Mogadishu, in Somalia, and the mouth of the R. Zambezi, - Mozambique, as - from the offshore islands, including also the Comoros [see KUMR] and Madagascar. The principal sites of most of the coast have been surveyed and some partly excavated; but very much remains to m done, and quite likely more inscriptions will come to light. Especially is this the case in Mozambique and the Kerimba Islands close to its coast, whose Islamic historical archaeology is still virtually unknown, albeit that the existence of mosques and widespread adherence to Islam is attested by 16th century Portuguese writers. Other than those of the present century, no inscriptions have been reported inland. Only one inscription is known completely in Swahili, even though some Swahili words occur in Arabic inscriptions of the 17th to the 19th centuries of the epitaphs of the petty Sultans of Kunduchi, 17 miles north of Dar es Salaam. With these exceptions and a group of 15th and 17th century Portuguese inscriptions in Fort Jesus, Mombasa, with m solitary one in Zanzibar, all the inscriptions are in Arabic.

The two earliest known inscriptions are an epitaph the Friday Mosque at Barawa reported by Carulli, dated 498/1104-5, and a Kutic dedicatory inscription in the Friday Mosque III Kizimkazi, Zanzibar, dated 500/1106-7, which, if not carved in Sirat itself, would appear to have been the work of a Siráfi craftsman Zanzibar [see MIZIMKAZI]. Apart from these, 2 small number of inscriptions in Kufic or floriate scripts have been found in small numbers in or near Mogadishu, and at Walindi, Mnarani and Mombasa in Kenya. The remaining inscriptions are all in assahi or cursive scripts. No comprehensive attempt has so far been made to identify or classify their style or provenence so far as it men not local, but at Kilwa certain decorative inscriptions have been thought to have Fatimid affinities. On these subjects it would probably be wisest to reserve judgment until more is known of the inscriptions of the Yemon and of the Hadramawi. The greatest number of inscriptions found in eastern Africa are epitaphs, very many of them of persons otherwise unknown. Quite exceptional are sixteen dedicatory inscriptions commemorating the foundation of mosques in Lamu between the 14th and the 19th century, which demonstrate the stages of growth of the town [see LAHU]. At Mornbasa a number of inscriptions, mostly funerary, illustrate and provide a solid dating for the varying fortunes of the Mazar2i family, of whom ■ number of members served - wali under the suzarainty of 'Uman from ea. 1734 until 1837. At Kilwa there are a number of inscriptions in the Great Palace known as Husuni (Swa. from Ar. hips), but all undated, and m whose date agreement has not yet been reached. A curiosity is a carved ivory state horn (mbiu) with in inscription in Swahili, which has been ascribed to the 19th century; but a reforence in the traditional Swahili History of Pate, from which town it came, would suggest, however, that its approximate date of manufacture was ca. 1050/1650.

Cerulll, Somalia, scriptionari editi ed inediti, Rome 1957, 37; Freeman-Grenville, The East African coast: select focuments, 1975 edn. 260; N. Chittick, Kilwa: an Islamic trading city on the East African coast, 1974, ii, 259-64; J. Kirkman, Fort Jasus: a Portuguese fortress = the East African coast, 1974, 38-40, 61 (Arabic); 14-15, 17-18, 46, 51, 59 (Portuguese).

(G. S. P. FREEMAN-GRENVILLE)

2. In Turkey.

The Muslim epigraphy of Turkey has not yet been all object of methodical research. It is true that there exist a large number of editions, but most of these are isolated undertakings.

The history of Muslim monumental epigraphy in Turkey does not in fact begin until the middle of the 6th/12th century. There had been building activity in Anatolia before, in the Turcoman states of the Dānishmandids, the Artukids, the Saltukids and the Mengūdlekids, but most of the constructions of that time were destroyed as a result of the continuous fighting in the area.

Muslim epigraphy in Turkey can be divided essentially into three categories: commemorative inscriptions, pious inscriptions, and epitaphs. The most important of these, both from the historical and the KITÄBÄT

artistic point of view, is the former, which includes inscriptions commemorating the constructions or restorations chiefly of foundations for the public good-mosques, fountains, sabils, etc.-and, in later times, also of government buildings (offices, hospitals, schools, barracks, etc.). The pious inscriptions either contain only the names of God, Muhammad or the four edshidin caliphs, or consist of hadiths or citations from the Kur'an that suit the purpose served by the object which they decorate. Thus in mosques one may find such Kur'anic verses as IV, 104 or XV, 46; on fountains LXXVI, 18 and 21 or the words seen al-man kulls shapn hayy, from XXI, 31; and on libraries the words find kutub kayyima (XCVIII, 2). Pious texts may also serve as motioes over commentorative inscriptions. Hence in foundation inscriptions of mosques one may find such sayings of the Prophet as "Whoever builds for God a mosque, even if only like the nest of a sand grouse, for him God builds a house in paradise". The number of inscriptions surviving on tombstones is very large. Especfally in Istanbul very fine ones can still be seen. Unfortunately, the amount of research done in epitaphs is still less than that done in the other Muslim epigraphy of Turkey (see also KABE).

The typical Muslim inscription, including that in Turkey, is a rectangular slab with one more lines of text, which are separated by narrow lines, the whole being enclosed in a narrow frame. In the Şaldiük and early Ottoman periods the inscriptions were often also in the form of bands along the borders of porches, or, inside mosques, of miledes. Some inscriptions from this time consist of one line in diali theist with elongated shafts through which runs a second line in Kuff, these together against a background of spiral arabesques. In the Ottoman period the lines (in verse texts, the hemistichs) of most inscriptions are enclosed in cartouches with the left and right extremities elaborated in different manners; these inscriptions are sometimes decorated with such motifs = flowers (either separate or in vases), fruits, arabesques, rosettes and, especially in later times, tughres and exescent-and-stars. In the relief inscriptions the (raised) letters and decorations may be gilded, and the (sunken) backgrounds paintedmostly green or blue; it ill uncertain whether these colours were used in the older inscriptions too, because the original paint of these has mostly worn off.

On the tile inscriptions, it is not the relief but the colours that present the necessary contrast between the text and the background. Inscriptions of this kind are mostly of pious content and undated. They found in buildings from very early times; after the 11th/17th century their number diminishes. Very line examples of this kind of inscription in found inside the Selimiye Mosque (completed 952/1574-5) in Edirne and in the Bagdat Köşkü (11th/17th century) in the Topkapı Palace in Istanbul.

Since, under the Great Şaidjüks, Kūfic was very much used for inscriptions in Iran, it was also in the early Muslim epigraphy of Anatolia. This script, which was employed, roughly, in the period and of the above-mentioned Turcoman states, was, under the Rûm Saldiûks, largely replaced in inscriptions by dieli thuluth, although it continued be used for mere decorative purposes by them and by the Ottomans up to the reign of Mebemmed II (855-86/1451-81). Nastalith, which was brought to Turkey by Persian calligraphers in the period of Mahammed II, became specially in the commemorative inscriptions and epitaphs made

after the middle of the 11th/17th century. (The earliest inscription written in this script is perhaps that of the Mosque of Seldilik Khātūn (dated 860) 1455-6) in Ediron (Dijkema, No. 16)). This script became so popular because (a) by this time most of these inscriptions will in Turkish verse, which (as is demonstrated in the manuscript displays) it was traditional to write in nariality; and (b), since this script men far less different auxiliary signs than does giall thuluth, it is much simpler to handle for the stone carver. Such scripts as muhahhah, diali muhahkak and ordinary theleth are very rare in inscriptions. Ruk's was used occasionally in the last period of the Ottoman empire, mostly on buildings of secondary importance.

Little is known about the calligraphers who designed the inscriptions in the Saldiuk and early Ottoman periods. Later, the more reputed calligraphers used to sign their works, with such stereotyped formulas as hatabahu 'l-'abd al-da'lf ... or katabahu 'I-'abd al-da'i They might omit their signatures, however, if on the same building there another inscription written by one of the sultans (as is the case, for instance, in the inscriptions on the front of the two fountains of Sultan Ahmad III in istanbul).

Under the Rûm Şaldiûks and the early Ottomans, the general Muslim tradition was followed of writing inscriptions in Arabic. The earliest inscription in Turkish is perhaps that of the madrata of Yaskub Celebi (dated 814/1411) in Kütahya (I. H. Uşunçarşılı, Kütahya şahri, İstanbul 1932, 79); later, especially from the end of the zoth/zoth century, this came to be the language of most of the commemorative inscriptions and epitaphs, the cause of this rather radical change being probably an increase of the prestige of Turkish vis-à-vis Arabic following the Ottoman occupation of the Arab lands in the 16th and early 17th centuries. The Arabic inscriptions are mostly prose, the Turkish ones usually verse. The wording of the Arabic prose inscriptions closely follows the models of the Mamilik and earlier Arabic epigraphy of Egypt and Syria. In most commemorative miss inscriptions, both those in Arabic and those in Turkish, the dates of the events commemorated are not expressed in figures or words but hidden in chronograms (see \$18AB AL-DIUMMAL). There do exist also Persian inscriptions, but they are very rare.

The reductors and calligraphers of the Muslim inscriptions in Turkey seem to have had a special liking for mystifying the reader-mostly in such a manner, however, that with adequate knowledge one can discover the true meanings of the texts. Not only is there the chronogram and, in verse texts, the often intricate language, but, for instance, in the inscription commemorating the 1282/1865-6 restoration of the Eski Cami (Dijkema, No. 126) in Edime, some words written phonetically. Calligraphers might me the intricacy of inscriptions, often already sufficiently difficult to read through the interlacing of the letters, by several mesns: the inscription of the Mucadiye Mosque (dated 839) 1435-6) (shidem, No. 7) in Edirne, for instance, contains unusual ligatures of letters; in the inscription of the Mosque of Sitt Khatun (dated 889/1484) (ibidem, No. 23), in the same town, some letters are written mirror-wise; and in the inscription of the Karila Most (dated 876/1471) (ed. by P. Wittek in Byzantion, xviii [1946-8], 327, tt. 2) near Küstendil [q.v.] in Bulgaria, letters and words are arranged in

an unnatural manner.

Damaged or lost inscriptions often replaced by copies. The student of Ottoman epigraphy can mostly recognise these easily, for they are generally in a better state than originals dated in the same period. Also, the wording may give a hint. Knowledge of the history of callgraphy and decorative art may provide a means ascertain the period when a copy made. (The foundation inscription of the Darilhadis Mosque in Edirne, dated 838/1433 (Dijkema, No. 6), for instance, in written in a nastatik of a kind not used in Turkish epigraphy until the middle of the 11th/17th century.)

Bibliography: For a general appreciation of the significance of Turkish epigraphy. R. Mantran, Bilan et perspectives de l'épig aphie lurque pour les périodes pré-attomane et atomane, in Revue d'histoire maghrébins iv (1975), 217-20. editions of Ottoman inscriptions, see the works of G. Colin, M. van Berchem, Khalil Edhem, J. H. Mordtmann, F. Taeschner, P. Wittek, Ismail Hakkı Uzunçarsti, Mübärek Ghalib, H. B. Kunter, M. Mujezinović, A. P. Vekilov, A. Zajączkowski, P. Miyatev, R. Mantran and F. Th. Dijkema (bibliographical details in F. Th. Dijkema, The Ottoman historical monumental inscriptions in Edirne, Leiden 1977, Introd., § i); some of their editions include also pre-Ottoman inscriptions. Among the editions containing more specifically pre-Ottoman inscriptions, there should be mentioned: Cl. Huart, Épigraphie arabe de l'Asie Mineure, in Revue semilique, il (1894) and ill (1895); J. H. Löytved, Konia: Inschriften der seldschukischen Bauten, Berlin 1907; the numerous articles of Ahmed Tewhld in TOEM, esp. those in Nos. 29 (1330), 83 (1340), 86 and 87 (both 1341); P. Wittek, Inscriptions, in R. M. Riefstahl, Turkish architecture in southwestern Anatolia, Cambridge (Mass.) 1931, 77-116; J. Sauvaget, Inscriptions arabes, in A. Gabriel, Voyages archéologiques dans la Turquie orientale, i, Paris 1940, 287-356; W. Hinz. Steuerinschriften aus dem mittelalterlichen Orient, in Belleten, xiii (1949), 745-69. The voluminous studies which I. H. Konyalı has devoted to the monuments and inscriptions of a number of towns in (mainly western) Anatolia are unmethodical and possess little or no value for opigraphical research. See further the RCEA; the sections VIIIc in the different parts of J. D. Pearson's Index Islamicus, Cambridge (later London) 1958- ; H.-J. Kornrumpt, Osmanische Bibliographie mit besonderer Berücksichtigung der Türksi in Europa, Leiden 1973, 1183-6; the bibliographies of the articles devoted in this encyclopaedia to towns of the Ottoman empire and to dynasties and important families in the Finally, many local histories of towns formerly under Ottoman domination contain records of inscription texts, even though this may not always be indicated in the titles.

(F. TH. DIJKEMA and A. ALPARSLAN)

8. In South-Rast Asia.

Islamic epigraphy is distributed very unequally in South-East Asia, it being understood that islamisation, although it did take place, was not accomplished everywhere at the same time or with the same intensity. The survey which follows can give only an idea — the importance of documents from Indonesia (Republik Indonesia) and from the Federation of Maleysia (Persakutuan Tanak Maleyu). We shall have only a few words to say about the other regions.

A. Indonesia and the Federation of Malaysia

The majority of epigraphic documents consist of tombstone inscriptions. Next in number are charters and related texts, and finally there are some brief legendary pieces warious subjects.

These three groups will be subdivided into four geographical regions, although the exigencies of history will not always allow a rigid separation: (a) Java (b) Sumatra (c) Malaysian Peninsula (d) Eastern Indonesia.

Regarding the Javanese year, since the introduction of the purely lumar calendar in 1633 A.D., it should be noted that the fatter does not always correspond in the so-called "Arabic" system, because of a different distribution of "full" years of 355 days, and also as a result of local variations which are not all known to us. On this typically Javanese chronology (abbreviated Sākā Jav. or S.J.) and the theoretical conversion of its dates to the Gregorian system, reference should be made to the article Tijdretening, in ENII, v (= Suppl. 1), 73-9, which is accompanied by tables. For the pre-Islamic chronology (atill in use in Bali) which consists of lunar-solar years, we shall use the term Sākā (abbr. S.).

1. Tomb inscriptions.

(a) Java. It is on this island that the oldest known Muslim tomb in Indonesia has been found. It is the burial-place of a girl whose personal is uncertain or is not indicated, but who is called Bint Maymun. Without recalling here the arguments concerning the year of her death (there is an error in the writing of the word denoting tens), let us say that it was be read as 475 A.H. or is December 1082. This tomb stone is at Leran in eastern Java.

Eastern Java possesses | large number of tombs, among which | shall mention those of the cemetery at Trālāyā (usual orth. Trolojo). Here there are found, besides | number of undated or uninscribed tombs, ten dated inscriptions ranging from 1298 to 1513 \$848, that is 1376 to 1611 A.D. It is seen that here the \$848 chronology is still used for Muslim tombs, except in one case where we have | hiding date expressed in Arabic numerals. Moreover, some of these tombs have a purely Javanese type of ornamentation and symbols which seem to link the interred persons to the court of Majapahit.

It is also in the east of Java that there is found the tomb of an individual reckened by tradition to be one of the nine Walls responsible for the spreading of Islam to Java. His name is Malik Ibrāhim, but his title cannot be established with certainty. The date is \$22/10 April 1410.

In the cemetery of Trawulan (usual orth. Trownlan) a few kilometres from Tralaya, is the famous tomb said to be that of the Putri Campa (a title interpreted as meaning Princess of Campa), a figure well-known in legand, but the date, inscribed on the tomb in old Javanese numerals is 1370 Saka = 1488-9 A.D. which does not correspond to the year of her death given by the literary texts. The same cemetery contains a very simple tomb dated 1290 Saka = 1368-9 A.D., which is therefore more ancient and dates back to the glorious period of Majapahit.

There is furthermore in the Sendang Duwur complex, still in the east of Java, an inscribed wooden pole bearing the date 1407 S. (not 1507 m read by Stutterheim), again in old Javanese numerals. In another cemetery at Gondang Lor (in the region of Tulung Agung) there is a tomb bearing the date 1470 S = 1548-9 A.D. In these two latter cases, the numerals are to be read from right to left, a mode of writing numbers unknown to epigraphy in the Arab lands but found in a number of cases in Indonesia (though rare in Sumatra), which doubtless arises from the system current in 1111 Hindu period of expressing dates through chronograms.

Finally, in concluding this brief survey of the principal Muslim monuments of Java, let us note that in the burial complex of the famous Queen of Japara (usual orth. Djapara), Ratu Kali Nyamat, is a chronogram giving the date 1481 S = 1539-50 A.D.

(b) Sumaira. As a result of a systematic survey carried out between 1912 and 1917 in the region of the aucient kingdom of Samudra-Pasai and in the extreme north of the island, in Atcheb to be precise, the Archeological Service of Indonesia possesses a rich collection of photographs and casts of epitaphs, most of which however offer us nothing more than plous texts without historical value. Of the sixty dated inscriptions, wholly or partly legible, which we have been able to examine from Samudra-Pasai, the majority (more than thirty) are from the 9th/: 5th century; ten are from the zoth/z6th century; four date from the 8th/14th century; and only one from the closing years of the 7th/13th century. Among these tombs, of which about half belong to women. a dozen or less are of persons of royal or princely rank. Only a few of these epitaphs have been published, and systematic study has yet to be made.

We may mention among the historically more important, that of the first sultan of Samudra, Sulfan Malik al-Salih who died in 696/1297, and that of his me al-Sultan b. al-Sultan al-Malik al-Zähir Shams al-Dunyā wa 'l-Din Muhammad b. al-Malik al-Salih, which is of a completely different style and dates from 726/1326. Among the other tombs, we may mention those of a descendant of the penultimate caliph of Baghdad, named 'Abd Allah b. Muhammad b. 'Abd al-Kädir, who died at Samudra in 809/1406; that of a queen of Samudra, greatgranddaughter of the first sultan of the kingdom, dating from 831/1428; the epitaph of a princess with a Persian name, Mihr Shah, daughter of Khôdja Ahmad al-Sultan al-'Adil; and finally, the tombs of two individuals, **ee** named Rā<u>di</u>a <u>Khān</u> dating from 834/1430 and the other, his son, Khôdia Rādia Khan b. Radia Khan, buried in 865/1460-1.

One tomb, of unique type, is that of a person named Nā'ina Husām al-Din b. Nā'inā Amin. As well = conventional texts, the tomb bears a poem by Sa'dl and dates from \$23/1420.

Of two particularly interesting inscriptions apparently belonging to the meet tomb, the one gives us a text in Old Melay written in pelaco-Sumatran characters, the epitaph of a queen whose name is uncertain but who died in 781/1380; the other stone bears an epitaph in Arabic of a princess, with a date almost identical to that of the former, the same day of the week, the same day of the month, the month, but ten years later, 791/3 December 1398. It is probable that there is an error in the dating of one of the two inscriptions. In may case, the text in palaeo-Sumatran characters is very important, since it gives us evidence of the most this script, which belongs to the pre-Muslim period, in the Islamic era and in the 8th/14th century, a hundred years after the islamisation of the region.

(c) Federation of Malaysia. Among the tembs discovered here are that of the sixth sovereign of

Malaka, Sultan Massur Shah b. Mutaffar Shah, who died in 882/1477, and that of the first sultan of Pahang, Sultan Muhammed Shah, son of Sultan Mansur Shah the conqueror of Pahang, who was the son of Muraffar Shah, 🚃 of Muhammed Shah. The latter tomb is dated 880/1475, and it is noticeable that the genealogy here goes back further than in the previous example. The vast majority of tomb inscriptions are in Arabic, but one case is known where the epitaph proper is in Malay. It is that of a step-daughter of Sultan Ahmad, the second sovereign of Pahang; she was in fact the daughter of the seventh sovereign of Malaka and sister of the seventh and last, who was forced to flee before the Portuguese invasion. There are various other royal tombs of the different sultanates, as well as those of eminent individuals dating from the 9th and 10th/15th and 26th centuries.

At Brunei, two tombs from the 15th century A.D. have been discovered. They are totally different from those of the Peninsular as regards the form and the

style of the inscription.

(d) Eastern Indonesia. The Island of Ball, where there is a small minority of Muslims in the north, has not hitherto yielded a single ancient inscription. There is one, however, on the island of Lombok, of which roughly half the population is Muslim. This inscription is bilingual: the phahāda in Arabic and a chronogram in Balinesa script. The latter has been interpreted by Stutterheim as representing x142/1727.

II. Charters and related documents.

(a) and (b) Jove and Sumatra. On a minbar from the east of Java, of which me have only a facsimile, there is the date 1487 Såkå/1365-6 A.D. inscribed in palaco-Javanese numerals; but me chronogram which accompanies it causes difficulty. A small stoke on at the centre of the ilsand, in Javanese, is dated 1624 S.J./1700-1 A.D. There are mumber of texts in existence which me related to charters. They are written in Javanese and in Javanese characters, sometimes in Arabic characters (pagon).

In western Java (the Sundanese country), we have eleven charters dating from the 17th and 18th centuries A.D. (they are dated according to the

Javanese Šáká chronology).

From Bantan there are similar texts using both types of script, but dated according to the hidjes system. They date from the same centuries and are twelve in number.

Finally, from Palembang (southern Sumatra) there are various documents of which most me dated by the Javanese Saka chronology. They are written in Javanese language and characters and date from the 17th to the 19th century.

The appointment of a chief of the Badouy (the as yet Mindu population of the Sundaness country) dates from 1124/1712-13. This document is furthermore endorsed by the seal of a suitan of Bantan (the "Bantam" of the maps) which gives the date of the accession of this sovereign as 1102/1690. There are mumber of other documents existing from the Lampung country, some written on bark, one on cattlehorn.

At Atcheh, documents of various kinds but generally authenticated by a seal, are called sarakata. None of those which have been preserved is very old.

(c) Federation of Malaysia. The most important document from this region is an inscription, unfortunately incomplete, of a type totally different and unique in this part of the world. The text includes a proclamation of Islam, tollowed by a list of ten infractions, with the penalties laid down for each. The date is unfortunately incomplete but we at least be sure that it belongs to the Stb/r4th century. In this text there are very few Arabic words, and the name of Allāh is rendered by an expression Hindu in origin, Deceale Mulya Raya.

(d) Eastern Indonesia. Especially interesting in this region are texts written in Arabic script but in the language of Ternate, emanating from the sultanate of the same name. They we all recent (19th century), but give valuable evidence concerning this language, which is not part of the Indonesian linguistic family (which henceforward may usefully be called Nousantarian), but which alongside Malay played the role of a lingua franca in the eastern parts of the Indonesian archipelago.

111. Inscriptions on various objects,

1. Cannons.

(a), (b), (c). Indonesia and the Federation of Malaysia. Cannons of diverse origin have been found (of French, Dutch or Indonesian manufacture) bearing inscriptions in Malay or in Arabic. They date from the 17th and 18th centuries. On of these is inscribed the name Yahertra (variant of Djakarta) written in Javanese letters. It also bears a date, which is, however, problematical.

(d) Eastern Indonesia. A cannon of Indonesian manufacture, duting from the start of the 18th century, has been found at Soulawest. It bears the name La Patau, the nephew of the famous Sultan of Boné. Aru Patakka.

ol Boné, Aru Palakka 1. Other objects.

(a) Java. There are various brief inscriptions on mortars and on carved wooden panels, all of them from the roth century.

(c) Federation of Malaysia. From this region there are a number of gantang (measures for rice) bearing the name of the sultan of the period. They are mainly from the 19th century, and one of them even dates from the beginning of the 20th.

B. Thailand

From this country we have only one inscription, which is now in the museum of Sukbothai. It consists of five lines in Arabic (the name of the four archangels and the <u>Makada</u>) as well as two lines in Urdu. It is dated 1338/1919 and has therefore no historical value, but it bears interesting witness to the behaviour of an Indian Muslim in a Buddhist country.

C. Cambodia

One inscription only has been found in the area of Pnom Penh. The first three lines consist only of pious texts and the fourth, which perhaps contains more interesting details, unfortunately cannot be deciphered.

D. Campa

Two tombstone inscriptions have been found at Campa, M Arabic with Küfic characters. One is from 432/2039. The other is undated, but judging by the palaeography, is of roughly the same age as the first.

Bibliography: For convenience, the sources have been divided in the same way as in the text the article, sc. in three groups: I. Tomb insurlptions; II. Charters and related documents; and III. Inscriptions on various objects. Each of these groups is subdivided also according to the article proper into (a) Java, (b) Sumatra, (c)

Federation of Malaysia (including British Borneo) and (d) Fastern Indonesia. In general, only books and articles discussing the epigraphic data are listed here.

Tomb Inscriptions.

s. Java. For the inscription - Malik Ibrahim's torab at Gresik, see TBG, index 1910-13, under the name of Ph. S. van Ronkel, Th. Juynboll, J. P. Moquette and H. [L. Ch. Damais]

o. Iran and Transoxiana.

Before the advent of Islam, the regions of Iran and Transoxiana had long-established traditions of KITABĀT

literacy. On the one hand, use was made | various scripts derived from the Imperial Aramaic of the Achaemenid chanceries during the 5th and 4th centuries B.C. These employed a largely historical spelling for Iranian words, and combined with this, ideographic writing-elements formed from Semitic roots, but with added Iranian terminations (known as phonetic complements) to indicate the inflexious. On the other hand, in the regions of Balkh, Tukharistan and Rukhkhadi, there had been current the cursive Bactrian script, a slightly modified form of the Greek alphabet, which like its parent employed for this Iranian dialect straightforward phonetic spellings. This survived on the so-called Arab-Repathalite coins until the coming of Islam. Here and there, among the Buddhist communities, Indian Kharosthi and even Brahml scripts had formerly been known; but with these, as with Runic Turkish of Eastern Turkistan, and the undeciphered Kushan linear script of Dasht-l Navor, we are not here concerned.

To the first group, the descendents of Aramaic, belonged Parthian, Sogdian and Khwarazmian, besides a little-known variant of the same type used in Māzandarān. Sogdian and Khwārazmian lingered on, again on coins, well down into Islamic times. More prominent, however, with (Sasanian) Pahlavi, which, in its cursive form known as Book-Pahlavi, co-existed with Islam for conturies m a vehicle of Zoroastriau scriptures. It is found beside Azable in bilingual Islamic inscriptions of the Caspian region at Rādkāa (Neka), Lādilm and Rasgit (Resget), and perhaps was the only method of writing the Persian language in the earlier Islamic period. Until the time of al-Hadidiadi in 76/695-6, Pahlavi had been the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Kalkashandi, Subb al-a'sha, i, 423) converted the chancery of al-Trak, and ultimately of the Iranian east, to Arabic script and language. In 84/703-4, Book-Pahlavi and Cursive Bactrian occur together with Arabic on a coin of the Güzgân district in Afghânistân issued by Yazīd b. al-Muhailab. Sogdian and Khwarazmian script continue to occur on coins of Bukhārā and Kh vararm, and Book-Pahlavi - the issues of Tabaristan, well into 'Abbasid times. Otherwise, the language of the Umayyad "Reformed coinage", and succeeding Muslim issues, is uniformly Atabic, apart from the Marw issue of 79/698-9, which has the cityin Pahlavi.

The four earliest varieties of the Arabic script, according to Ibn al-Nadim, al-Fibrist (ed. Flügel, 8) were makki, madani, basri and Aufi. The implied differences between these forms still clude modern commentators, who today use the term Kûlic (as opposed to kuff in Ibn al-Nadim's sense) with general application to all varieties of monumental, angular, and (usually) unpointed Arabic script, employed for the writing of Kur'ans, in lapidary inscriptions, and in coin-legends. It can be observed that the Umayyad "Reformed coinage" actually shows five distinct styles of script: that of Damascus with its related mints; that of the eartiest issues from franian cities; that of Wasit, with the developed Iranian issues; that of Sidilstan, a curiously awkward script with "thorny" letter-terminals; and the thin and delicate script of the closing Umayyad, and revolutionary "Abbāsid coinages.

Apart from inscriptions on the coins, dated Arabic inscriptions of Iran, as at present known, begin surprisingly late. The earliest still unpublished series at Bahmandiz, near the border of

Fars and Islahan Provinces. The clearest text reads 'amarahi Khasim b. Muhammad b. Didba (?)/sanat khams sittle wa-mi'ateye. Another records the birth of Muhammad b. Yusuf b. Khāzim on Monday, 27 Shathan 300. The same site has one poorly preserved Book-Pahlavi inscription, and many other short in Arabic. A substantial list of the known Arabic inscriptions of Iran to 600/1203-6 was compiled by Miles. The carliest of consequence are the famous texts of the Bayid 'Adud al-Dawla Fana-Khusraw (q.e.) in the Tachara at Persepolis, recording the defeat of Muhammad b. Mākān in Şafar 344/ May-June 955 and the 'Amir's interest in the decipherment of inscriptions. One of the texts has been shown to contain several Persian words (R. N. Frye, The heritage of Persia, London 1962, 251, 290, with fig. 63). Nearby is the inscription of Baha? al-Dawia [q.v. in Suppl.] dated 392/2001-2. Earlier in fact than any known Arabic inscription of Iran or Afghānistān is the enigmatic text from the Tochi Valley in Waziristan, now in the Peshawar Museum, which is dated Djumādā I 243/August 857. This seems to contain mention of "the land of "Uman", which, with the early date, could imply a connexion with the Kharidjite amirate at Gardiz [q.v.], since judging by the Ta'rikk-i Sistán, caliphal control could not then have extended in far east.

229

Decorative varieties of Arabic script equally slow to appear in the Islamic East. The texts of Adud al-Dawia show no more than occasional barbed terminations, and characters linked by small loops beneath the base-line. Foliation of letterterminals seems to have developed first Egypt, and to have been guickly followed there by Floriation (by which is here understood the use of attached, but extended, leaf-decoration, as well as that of circular flowers, either attached or separate). Such features, as Grohmann showed, were known in Egypt us early as 218/833-4, and must have travelled thence to the East; not, as Van Berchem maintained, on the evidence of a restored inscription at Tashkent, from Central Asia westwards. In Iran, strongly Foliated Kufic often tending to floriation i found in undated (probably 4th/10th century) inscriptions of the Masdjid-i Djami' at Nayin. The earliest deted examples of floriation appear to be the inscriptions of Badr b. Hasanewayh, a Kurdish ruler in Luristan: one at each end of the Pul-I Mamulan Khurramābād, alike dated 374/984-5, and enother from the Pul-i Kashkan completed in 199/1008-9, which all record the building of the bridges. Very line specimens of Floriated Kufic are those of the minaret of the Pa-yi Minar mosque at Zawara [461/1058-9], and the temb-tower of Hormizdyer at Rasgit (Resget). From a reading of its date that was uncertain, Godard sought to ascribe the latter to the 5th/xxth century, but its thick, heavy script and florid decorations more comparable with the legends of the Khwarazm-Shahl coins of the 6th/12th century; and in any event, the closing words can hardly be taken for a date. In fact, the principality of Khwarasm had been slow to develop an ornate calligraphy. That region during the 5th/11th century had adopted an austere and elegant style, unusual only for the sweeping curves of the 42m, hd' and ALA', which is exemplified by the foundation-text of Ma'mun b. Ma'mun (dated 401/1010-11), in lead, from a minaret at Urgandi, or Gurgandi (q.v.), 🚃 at Tashkent. With this may magnetage of the silver tray of the unidentified prince Tādi al-Umma wa-Sirādi al-Milla Khwārazm-Shāh b. Ibrāhīm, reproduced by Smirnov, Further to the west in the Ziyarid kingdom,

230 KITÁBÁT

the inscription of the Gunbad-i Kābūs (395/2004-5) is in a magisterially simple, yet wholly undecorated script. Such austere forms were well-adapted to rendering in the brickwork of the many minarets and domes erected under the Salginia in Iran: such, for example, as the plain and elongated lettering of the founder's inscription of the minister Nizām al-Mulk in the sanctuary of the Djāmi' at Islahān (AMI, vii, 2-3, 83) in that in the name in the Suitan Muhammad b. Malik Shāh in Gulpāyagān.

More adventurous calligraphic developments had meanwhile been taking place in the Saminid territories of Transoxania and Khurasan, no doubt stimulated by the introduction of paper-manufacture from China, and the stimulus consequently given to penmen. On the slip-pointed "Nishāpur" pottery, magnificient lettering is found in black or chocolate over a pale ground, and plaited or interlaced letterforms become widespread. In the absence of dated specimens, chronology of the pottery depends on examples in other media. Interlaced letters appear on a dindr of Nasr b. Ahmad dated 324/935-6 from al-Muhammadiyya (Rayy), and similar forms are found frequently on subsequent Buyld coins of North Iranian mints. Thus Plaited Kufic seems ■ have been diffused from east ■ west across the Islamic world, in the opposite direction to floriation. In Iran, the classic example of the plaited style is the epigraphic frieze of Abū Djaffar Mubammad b. Wandarin on his tomb-tower at Rādkān in Māzandarks, commenced in 407/rot6-17 and completed in 411/1020-1. The outstanding specimen to combine floriation with pialted decoration is the script at the tomb of Yahya b. Zayd (known as Imam-i Khurd), at Sar i Pul in Afghanistan. Undated, it mentions one Abû 'Abd Allah Muhammad b. Shadan, evidently a relative of Abu Ali Ahmad, wasir of the Saldjilk Caghri Beg, and m should be several decades later than the Saldjuk occupation of Balkh around 433/1041-2. Plaited script appears also == the celebrated arch of Bust in southern Afghanistan, which though ascribed by commentators to the 6th/12th century, bas greater affinities, both architectural and epigraphic, with the Ghaznavid period. In view of this last fact, its fragmentary date could suitably be restored merely as arbaimi'a (400/1009-10), which would thus be the earliest specimen of Plaited Kufic in the Ghaznavid area, and belonging consequently to the reign of Mahmild I.

More typical of the lettering of the Ghurid period, in contrast to the previous examples, is a Bordered Kufic which descends from that of the later Chaznavid minarets, those of Mas ad III (492-508/ 1099-1115) and Bahram Shah (511-52/1117-57) at Ghazna. Here the decorative border is independent of the actual lettering, though both stand on a floral background. A forerunner of this convention may be the so-called shrine of Baba Hatim or Salar Khalil, near Andkhoy, which may even predate the Saldius occupation there, and has bordered decoration of a simple kind. This monuments of the mature Gharid period (late 6th/12th century) show m great variety of scripts, which include a stiff, archaising Kuffe, and a flowing Naskhi (Thulth, see below). The most characteristic, however, and Cisht, and in particular at Shah-i Mashhad, is a form with broad decorative borders developed into complex genmetrical forms. Further to the west, under successors of the Saldjüks in Iran, Bordered Küfic is seen resembling that of the minarets at Ghazna on that Nigar in Kirman province. Enhanced with sparse turquoise tiling, it is presumed to date from 615/1218-19.

The Kufic inscriptions so far discussed are all couched in Arabic. The small number of Persian epigraphs known which were written in this character were discussed by Bombaci in his examination of the long and fragmentary Persian verse-inscription on marble slabs, found in the palace of Mastod III at Ghazna (built in 505/1111-12). He notes Persian verses also on the tomb of an unknown person at Chazna. However, the earliest example of such a text is 🚃 🥅 portal-arch of Ribāt-i Malik near Bukhārā (Pope, Survey of Pertian art, Pl. 272B), ascribed to the Karakhanid Shams al-Mulk Nasr b. Tamghac Khan Ibrahim (471/1078-9). Other monumental Persian inscriptions are at the tomb of Mu'mina Khaton III Nakhtivan (N. Khanikoff, Memoire sur les inscriptions musulmanes du Caucase, in JA [1862], 113-15); and especially that at the mausoleum of the later Karakhanid Djelal al-Din ai-Husayn b. al-Hasan b. 'All at Uzgend (547/1152), where the Persian foundation-text is in sinuous Naskhl, and the largely Turkish protocol of the ruler, below, in m rigorously geometrical Bordered Kofic. In unpointed script Persian has always been found extremely difficult to read, and it was only with the advent of fully-pointed Naskhi that the monumental use of Persian became extensive.

In any event, by the close of the 5th/11th century, decorated Kutic was passing out of favour, both by of its difficult legibility, and perhaps on account of associations with the Fatimid dynasty, considered hostile by the Salditiks. Cursive handwritings, the rounded Naskhi, and the flowing and ligatured chancery hands, had always co-existed with the angular script, and now emerged with full monumental status. A Naskhl text on the tombstone of Mahmad I at Ghazna contains the date 421/1030, but is often considered a later addition, as are the Kufic inscriptions on the wooden doors from that tomb. Nevertheless, Ghazna played a leading part in the innovation, for the specimen there on a marble panel naming the Sultan Ibrahlm b. Mas'ad is unlikely m be later than his death in 491/1099, in view of its wording. At Dandaukan [q.v. in Suppl.], a Naskhi text is placed before 494/1100. A small panel in Naskhl appears on the Čihii Dukhtaran minaret at Isfahan (dated 501/1107-9), = also on that of Muhammad b. Malik Shah at Sava (504/1110-11). where the main text is Kufic. The minaret at Dawlatabad near Balkh is ascribed to the year 502/2108-9. Besides a band of Kofic it has a fine epigraphic frieze of Naskhi type (of a style which designate Thulth). At the Imam-i Kalan shrine at Sar-I Pul nearby, the entrance inscription is in sprawling Naskhi, but unhappily only the units figure of the date is legible (--9). Thereafter, the historical inscriptions of Muslim monuments were regularly in the rounded script, as at the Imam-zada Karrar at Buzun (528/1133-4), which provided Hersfeld with the occasion to prepare a list of Küfic and Naskhi inscriptions noted in his time. Recent discoveries enable us to add to his list the madrasa of Shah-i Mashhad already mentioned, and the mausoleum of Qorveh (Kurwa) near Kazwin, ascribed to 575/1179-80. Atabic manuals of calligraphy, followed by several recent commentators, apply special terms (thuith, muhabhah, rayhani, rub'a and so on) to varieties of Naskhl script. Yet since the application of these in succeeding periods is inconsistent, and the categories appearing on monuments do not always correspond, it is safer to use only the general term. From the second half of the 6th/12th century, Naskhi inscriptions exist in substantial

numbers in Iran. The best general study, | longer. of course, up-to-date, is that of Kratchkovskava (in Pone, Survey of Persian art, iv. 1770-84). Often the Naskhi characters stand, without attachment, on an overall background of vegetable scrolis, a convention found also in the latest phase of Kofic. In the period of the fikhāns and later, wide variations are found in the forms of script under the Nasithi "label". As outstanding specimens, mention must be made of the militab of Oldleytii in the Diami' of Islahan, and the minber of the Muzaffarid Ahmad at Sirdian, with its massed verticals typical of the jughta style. Yet the fashion for Naskhi. mumerous forms and varieties, with increasing use of diacritical points and signs, persists down to the time of the Safawids and still more recently. In later centuries, monumental inscriptions stand closer to the traditions of the manuscript copyists. Besides foundation-texts, they often include the detailed provisions of walf-endowments. However, from the point of view of script, they hardly make the same call as the examples of the Kufic period for separate treatment.

10. India.

The Indian sub-continent is very rich in Muslim inscriptions, the study of which affords valuable information not only to the archaeologist and historian but also to the geographer, the economist, the student of religions, the linguist, and of course the calligrapher. Most of them me found me religious buildings (tombs, mosques, 'idgāhs, imāmbāfās, madrasas) and military works (forts, gates, bastions, cavallers, towers), or on works of public utility (bridges, tanks, bā blis, dams, sluices, sarā is); are also found on palaces, gardens, pavilions, etc.; and another class is found on movable objects such gung and swords, ornamental metalwork including ware [see sidan], and on crystal and jade [see BILLAWS and VASIEN]. The greatest part of the public inscriptions is carved on stone; often of a stone identical to that of the main building material, but not infrequently a specially selected fine-grained stone is used for the inscription and cemented into the structure.

Here the question of authenticity must be considered. An inscription may indeed be exactly contemporary with the building m which it appears, But it may also be earlier, preserved through the reverence accorded to the written word = through the ascription to it of permispecial sanctity, and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission in the sanctity and permission into a later unrelated building; or **and later, marking** say the completion of a building project essentially constructed perhaps half-a-century earlier, as at the Djāmi' masdild of Bidlāpur (q.v.), a late 'Ādil Shābī building whose inscription records its completion by Awrangzib; or recording a restoration (as in many works in Dihli of Firitz b. Radjab, whose inscriptions have to be studied in connexion with the problems of interpretation in his own accounts of his restorations in the Futable-i Firex-Shalk: - pract. Monuments); or it may be fictitious-not necessarily mischievously: for example, the Persian inscription the Masdiid Kuwwat al-Islâm at Dihli is probably a pia fraus of sixty or seventy years after the conquest.

The technique of carving stone inscriptions in Arabic, Persian or Urdu is conspicuously different #32 KITĀBĀT

from that of inscriptions in other Indian languages, where the characters - engraved into the surface of the stone; in the Muslim inscriptions the outline of the letters is first written on the stone, and the ground between the letters then chiselled away leaving the inscription level with the original surface, A similar technique may be applied to inscriptions on crystal and jade, and also to the larger metal pieces, although me any of these fields the letters may be incised and the grooves filled with another material to leave an inscription flush with the surface; in the see of Bidri see this is regularly of silver bar laid into the base metal. Inscriptions in ceramics may be either of letters in a contrasting colour fired integrally in a regularty-shaped tile (haft-rangi: IIII KHARAR), or consist of the individual letter-shapes let late a contrasting ground by mosaic technique. The former ceramic technique is more commonly employed for simple repetitive motifs (e.g. the names Allah or Muhammad), sometimes combined with a moulded base on which the lettershapes are raised, as an the merions of Rukn-i 'Alam's tomb in Multan; mosaic tile inscriptions, which do not appear until the rath/17th century, best exemplified in the Mughal buildings of Lahore ([see LAHAWR]).

The language of the earliest inscriptions is invariably Arabic. There me no inscriptional records of the 'Abbasid presence in Sindh, although a few were engendered by the Muslim communities which lingered on in Sindh and the Pandjab, with their necasional offshoots to Kacch and the north coast of Kāfhīāwāf [see Gunjanāt], to which were added the small communities which grew up around the abdentates of individual \$0ft saints who drifted in to India before the Ghurld conquest, especially in the Pandjab and the Ganges valley. After the Gharid conquest of Dihli, dating inscriptions remain in Arabic regularly until towards the end of the 7th/ 13th century, when they - replaced by Persian; non-historical epigraphs tend III remain in Arabic somewhat longer, and of course Arabic persists up to the present day for Kur'anic quotations on mosque and tomb toscriptions. This does not, however, apply in the sultanates of Bengal, where the preferred language of dating inscriptions remains in Arabic natil Mughal times. In late Mughel times, in north india Urdū inscriptions appear beside Persian. Away from Dihll, there many bilingual and trilingual inscriptions, especially in the Doccan, (Persian/Sanskrit, Persian/Marathi, Persian/Kannada, etc.); there are a few inscriptions in the Deccan regions in Dakhni (q.v.). Not infrequently the date is written in Arabic words in a Persian inscription; and often the Arabic, and to a less extent the Persian, is grammatically incorrect. The date in north Indian inscriptions is regularly expressed in Hidjel years, except for a few inscriptions of the time of Akbar and Diahangir which use the Din-i Hahl [q.v.] system, or are dated by regnal years. In the Deccan, various solar calendars - occasionally used, especially the Shuker can (well studied by Marie Martin, in an unpublished M.A. thesis of the University of Colorado) in the 'Adil Shahl suitanate of Bidjapur, and a Faşli san in Golkonda and under the Nizams of Haydarabad. In Mysore under Haydar 'Ali and Tipu Sultan, the Mawdudi mm I used. For these eras, see TA'RIKH.

The scripts in use are the common Kufic, saskin, thath, and masta'llt. Kufic is seen only in the earliest dating inscriptions, and retained long after its period of active use in Kur'anic quotations. Nath

and thuith are in common use for both Arabic and Persian inscriptions all over India, with some regional modifications. Nastatilk is regularly used for Fersian inscriptions in and after the Mughal period, and for inscriptions in Urdu. Of the regional styles, the most striking is that of Bengal, where the vertical strokes of adif, half and dam are much clongated and spaced evenly across the length of the inscription, leaving the significant parts of the remainder of the letters to occupy the lowest quarter or third of the band; sometimes the talls of final or detached man or ya" are so disposed in the top part of the inscription to produce the "bow and arrow" effect. A similar style is soon also on some of the coins of Djawupur. Elaborate sughras fall = in the domain of farmans and other such documents rather than in public epigraphs, although they are certainly known in ceramic tile inlay and in pietra dure in Mughal buildings; but simpler sugares, in the square scal-script, and not uncommon, consisting usually of repetitions of the names Muhammad or 'All, or both, or the halima. None of these seal-script inscriptions approaches the complexity of the Iranian examples. Simple dating inscriptions are usually unaderned; but many mosque inscriptions, starting with the maksura arches of the first stage of the Masdiid Kuwwat al-Islam in Dihli, are engraved against an arabesque [q.p.] pattern also carried in relief on the ground. The finest example of this, however, is a dating inscription of the governor Tughril from a jost building at Bihar Sharts, Similar arabesque patterns may also set off inscriptions in tilework **m** painted plaster, and OCCUP also me coins of the Mughal period [see SIKKA]. Many inscriptions are of a high order of calligraphic excellence, and the names of many calligraphers in many regions of India me recorded.

The information which the inscriptions provide for the historian is sometimes very valuable; at times, they furnish the only sources for doubtful points of dynastic chronology; they supply missing details from the literary histories, or enable confusing points to be resolved where the other documents are in conflict; they enable more complete lists to be made of rulers' families, of the local nobility or court and town officials; and they are a valuable source of information on the history of the buildings on which they are found (subject to the reservation on their authenticity referred to above), Indirectly, too, their location enables the political status of border regions at certain confused times to be determined, such as the regions in dispute between the Malwa and Diawnpur sultanates [q.vv.], = the Raycur 46'ab [see HIND. History]; in many cases, im inscription is the only evidence for a fort or stronghold having been occupied by a particular power at any time. Even when rulers and governors - known from chronicles, the inscriptions often provide essential information on details of their careers, their promotions and postings, their achievements, even on their families, Tomb-inscriptions frequently mention their subject's birthplace, and thereby provide evidence for the extent of immigration and for the settlement pattern of foreign groups.

Administrative and economic details contained in or implied by the inscriptions can also be invaluable: information on details of departments, names of offices, and designations of office-holders; on the imposition or remission of taxes, and their varied application to certain classes or trades; on the nature and conditions of grants of land, both to

holders of an idta [a.v.] and to charitable institutions such mosque or madrasa m welf $\{q.v.\}$; on land cultivation or irrigation (well inscriptions, or records of repairs to tanks and dams, often refer to the amount of land intended to be irrigated); on regional boundaries; on markets. Records on works of public utility may include a schedule of expeases or the wages to m paid to employees. Geographical details, including distances, occur in inscriptions relating to roads and bridges, which also provide information on their builders—besides recording the correct forms of place-names, which seem singularly liable to corruption by copylsts of the chronicles. Building inscriptions often indicate the cost of construction as well me details of the architects; an unusual inscription in the tomb of Hüshang Shah at Mandu [4.0.] records a tribute by visiting Mughal architects of the family of master-builders who were later responsible for the Tadi Mabail. Gun inscriptions, as well as prescribing essential instructions on the quantity of charge and shot required, frequently provide information on gun founding and the gunfounders-often Turks or Europeans-involved in the industry.

The literary contribution of the inscriptions must not be overlooked. Many inscriptions are in verses composed and hoe, were of considerable beauty and skill; but it must be admitted that the verse of a lot of inscriptions is no better than doggerel. This is especially the case with verses containing a chronogram, where taste is often sacrified in favour of ingenuity. There are occasional quotations from well-known Persian poets, but frequently the authors are local poets not otherwise recorded. Specimens of Dakhni poetry are preserved in Deccan inscriptions. Some prose inscriptions also evince literary merit, and may contain traditions not found in the usual collections of ahadith, such as the saying ascribed to Jesus in the Diami' masglid of Fathpur Sikri (Persian), or the variations on a tradition (Arabic) in the mosque inscriptions of Bengal, basically: "The Prophet, God's peace be upon him, said 'He who builds a mosque to God, for him God builds a base in Paradise". Sentiments expressed range from strict and self-conscious rectitude through quietist mysticism III wistful nostalgia.

There is also the linguistic contribution of inscriptions. The occurrence of local words (Hindi, Bengali, Marāfhi, Gudjarātī, Urdū and Dakhai in particular) is useful in reconstructing the history (and social conditions of use) of Indian languages. Bilingual inscriptions provide evidence on the extent of use of local languages and their place in communication of official instructions to the public, and the status of m particular local language in a border area; this is especially the case in the Decam, where Muslim inscriptions in Kannada, Marāfhi and Telugu are not uncommon besides the usual Perslan and Dakhai.

The Indian sub-continent has been fortunate in the attention which has been paid to Muslim inscriptions for well over a century. Hundreds are recorded in orientalist publications, besides those in specialist journals devoted to epigraphy alone; and India has been well served by highly competent Government Epigraphists appointed specially to oversee Arabic and Persian inscriptions, of whom Ghulam Yazdani and Ziauddin Desal pre-eminent. The work of exploration, interpretation and publication is still active.

Bibliography: A complete bibliography would be enormous in view of the great corpus of Indian Muslim epigraphs published | far. Inscriptions which relate to particular regions of India are listed under regional articles - History. In the 19th century epigraphs meetly published, usually with translations and notes, in IASB. From 1907 the invaluable Epigrophia Indo-Moslemica appeared, which continued until the independence of India and Pakistan. Pre-EIM inscriptions are listed in J. Horovits, I list of the published Mokamedan inscriptions of India, in EIM (1909-10). Since the cessation of EIM, Muslim inscriptions of India have appeared in Epigraphia Indica Arabic and Persian Supplement, and valuable comments appear also in Annual Report on Indian Epigraphy. Articles and studies are recorded in Creswell, Bibliography, and its Supplement, and in Pearson and Supplements. Many of the earlier EIM articles collect the epigraphs of individual sultans, but recent discoveries have rendered many of these out-of-date. V. S. Bendrey, Studies in Muslim inscriptions, Bombay 1944, extracts some historical information from epigraphs published in EIM to that date, but since the author knew no Arabic or Persian many significant details were not appreciated, and the work suffers from the limitation of its corpus. There is waluable chapter on Arabic and Persian epigraphy in the Deccan by Z. A. Desai in H. K. Sherwani and P. M. Joshi (eds.), History of medieval Deccan, ii, Hyderabad (I. BURTON-PAGE)

KITÄBKHÄNA [see maktaba] KITÄMIYYA [see shadhiliyya]

KITFIR, one of the most common names for the biblical Potiphar in Islamic tradition. It is probably a corruption of Figir, based upon an early scribal error. Other forms of the name based on confusions of similar letters in Arabic script are Kittin, Kittin, and Kittin. The form Kittir is frequently corrupted further to Ittir (so generally in Tabari, Tha labi, Zamakhshari, Baydawi, and others), and in manuscripts Ittin. He is given the patronymic Ibn Ruhayb (also Ibn Ruhayb and Ibn Rühlt minss.). There is considerable confusion regarding his name, and Tabari, for example, uses several forms. Kisa't alone calls him Kütifar, which is closest to the original Hebrew. In the Kur'an, he is mosely referred to by his title al-'Aziz (KH, 30, 51).

Eiffir was the treasurer of Egypt. Because he immediately discerned Yüsur's [q.v.] fine qualities, he is considered one of the three most insightful individuals (afras al-nās) in the judging of men, along with Shu'ayb's daughter, who asked her father to hire Mūsā, and Abū Bakr, who chose 'Umar = his successor (Tabarī, Iha'labī, Zamakhsharī, Baydawī). Several reflections of the Haggadic Potiphar are

Several reflections of the Haggadic Potiphar are found in Muslim legends. Kitfir dies after Yūsuf's release from prison. Yūsuf in most Muslim sources marries Kitfir's wife and finds her a virgin. This is never explained by the fact that Kitfir was meunuch, as is common in the Judaeo-Christian tradition (based on a later interpretation of Bibli. Hob. sdris), but rather that he was a homosexual as in some Jowish midrashim (comp. Tabarl, i, 396, with Sofa, 13b, and Gonesis Rabba, lxxxiii, 3). According to Kish'i, Kitfir had been unable to have sexual relations with his wife because he was me alcoholic (Sanabb). Yūsuf's marrying Kitfir's wife probably reflects the association of Potiphar with Potiphera (Gen. xli, 45) in the midrash.

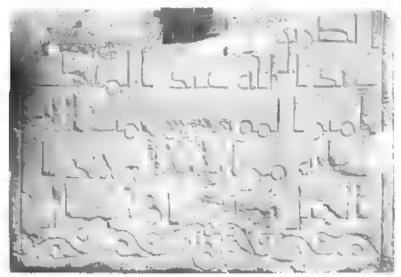

Kitfir is a minor character about whom little is related in Islamic tradition.

(B. HELLER - N. A. STILLWAY)

KITHARA, KITARA, a musical instrument of the lyre family. It first appears in Arabic literature on music in the 3rd/9th century to denote a Byzantine or Greek instrument of this type. It was made up of a richly-decorated rectangular sound box, two vertical struts fastened together by a yoke and strings which were left free at their greatest width. Ibn Khurradadhbih in his K. al-Lake (ed. I. A. Khalifé, Beirut 1969, 19) and in his account appearing in the Muradi al-dhakab of al-Masfudi (viii, 91 = § 3216) says concerning the kithdra: "They (so, the Byzantines) have the lifts which is a rabab (sc. viol), which is made from wood and has live strings; they also have the kithers with twelve strings". Al-Khwarazoul in his Mafatth al-culum writes that "the life (lyes) is the sand; (harp) in Greek; the bitara is one of their instruments, and resembles the funbur (lute with | long neck)". The approximation of the two instruments in the sources corresponds indeed to reality, because the lard and hithere were two variations of the same instrument type in vogue since classical times and up to the first centuries of Islam. The lard was a smaller instrument played by beginners and by amateurs. whereas the kuhdra was the instrument for professionals who towards the Islamic period used it to show off a virtuosity frequently displayed freely. It is possibly to this that a musical aphorism alludes, this figuring inter alia . the Adab al-faldsifa of Hunayn b. Ishāk, the Ritāla fi adjai' khabariyyat al-musiki of al-Kindi, the K. al-Lahm of Ibn Khurradadhbih and the Risito fi 'I-musiki of the Ikhwin al-Şafā); "A philosopher (Orpheus, according to lbn Khurradādhbih), having heard mi sounds of a hithern, said to his disciple, 'Take malong to this musician, and possibly he will give us the benefit of a noble image'. But when they came upon him, they heard a unmetrical rhythm and a defective tune. So the philosopher then said to his disciple, 'The sooth-sayers assert that the raven's voice portends a man's death; if this is true, then the sound from this atusician portends the raven's death'".

It seems that, at m later period, the term is used to denote m different instrument, the guitar, since this is the state of mifairs in the K. al-Imid^{*} we "I-initifd*, where the kildr is one of the 32 instruments described in the second chapter (ms. Madrid, Res. 246). In the same realm of Ideas, we believe that the name of the North African lute, the kwita, derives from the interpretation of the kildra evolved by the authors of the 3rd/9th century who compared it to the tunbur (lute with a long neck) or to the marebba* (lute with a quadrangular sound box).

(А. Ѕнідоліі)

KITMĀN (see <u>khāridi</u>ites; taķivya) KITMĪR (see aṣṇāb al-kahi). ALEIYA AL-HARRASI, SHAMS AL-ISLAM 'IMAD AD-DIN ABU 'L-HASAN 'ALI B. MUHAMMAD II 'ALI AT-TABARI, known especially III al-Kiya, jurisconsult of IIII Shāfi'i school and Ash'an' theologian, a dialectician known in his days as one of the best practitioners of the art of disputation. (The siste al-Harrasi — "a preparer III the food called karisa", wheat and meat pounded together and cooked.) A class-mate of al-Ghazāli and of the IIIII age (they were born in 450/1058), al-Harrasi died in 504/1010-11, one year before al-Ghazālī.

He first studied in Tabaristan, which he left the age of twenty to study under the direction of the Imam al-Haramayn al-Diuwaynt [g.v.] in Nishabur; he was not his most successful disciples and became of the most able repetitors (mu'ld). He excelled in the field of law, both positive law (fish) as well as its theory and methodology (usul al-fikk). From Nishābūr, al-Kivā went to Bayhak where he taught Shafi'l fish; this was very likely after the death of his teacher Diuwayni in 478/1085. His class-mate al-Ghazali had gone to Tus to the court of the Saldiuk vizier Nizam al-Mulk. From Bayhak, al-Kiya went to Baghdad to assume the chair of law in the Shafi'l Madrasa Nizamiyya, a position which he kept until his death in 504/1110tr. He also taught hadlih, and one of his pupils in this field was the famous tradition-expert al-Silaff (d. 576/1180-1).

Al-Kiya was accused of Isma'ill sympathies and was in danger of losing his life, but was saved by a petition signed by notable scholars of Baghdad, among whom his older colleague and sparring mate in disputations, the Hanball jurisconsult and theo-

logian Ibn 'Akil [q.v.].

Among his works, biographers cite the Shifd's al-murshidin, considered by Tadj al-Din al-Subki as one of the most excellent works in the field of khildi: and the Nakd mulradat al-Imam Ahmad, points of law on which he differs from Ahmad b. Hanbal. Al-Kiya in turn criticised by the Hanball Shams al-Din Muhammad b. Kudama ai-Makdisi (704-44/1304-43), in his al-Radd 'ald 'l-Kiya al-Harrast, well as by the Kads 'l-Kudat al-Hasan b. 'Abd Allah, a student of Ibn Taymiyya (see Ibn Radiab, Dhayl, ii 438 (i. 14) and 454 (il. 3-4), respectively). Biographers also attribute to him a work on usul al-figh, and this is borne out by a discovery made by G. Makdisi of a manuscript in the library of the University of Ankara, several years ago, during a search for works on usul al-fish. indications on the title page show that this work of al-Kiya had three recensions; great, medium and small, the extant copy being the medium recension. The title is given . Taille fi usul al-field, and appears to be the work by the same title cited by Suyûtî in his Muzhir, i, 23. It is not to be confused with his work on usul al-din m suggested in Brockelmann, GAL, S I, 674 (l. rr), a manuscript of which is in the National Library in Cairo, for the work is definitely must al-fish.

(G. MAKDISI)

KIYAFA (A.), the science of physiognomancy and the examination of traces on the ground. In their concern for the purity of me and the

correctness of genealogical lines, the ancient Arabs perfected a technique which permitted them to verify, and, where necessary, to research into, lines of parentage. This technique consisted partly in experience and partly in divinatory intuition. In primitive times, a specialised personnel maintained the practice: but the progressive decline, in pre-Islamic Arabia, of personnel skilled in cultic and divinatory matters led to the accumulation of numerous mantic disciplines in the repertoire of the Addin [a.r.]. But there were individuals skilled in this sphere of activity who were not necessarily kähins (cf., for example, Ibn Hisham, 115): certain tribes were noted for their practice of this art (the Band Mudlid), Khath'am and Khuza'a).

Kiyāfa, ancestor of the Islamic fivāsa [q.v.].

comprised two branches:

(l) Kiyāfat al-bashar, "physiognomancy", which has the object of disclosing the lines of parentage between the child of an unknown father and his presumed father, with a view to his legitimisation. Thus by virtue of traditional hivefa, Mu'awiya was obliged to recognise, as his consanguineous brother, Zivad b. Abihi [q.v.]. The principle on which kiyafa is based is the pocessary resemblance between the infant and his father. Certain parts of the body serve as points of reference, notably the sole of the foot, because, in most cases, the child has the same foot in his father (al-Mas'odf, Murildi, ill, 338 = § 1221). But these points of resemblances are not always evident; discovery of them requires a faculty of perception and perfect memory (al-Răzi, Firăsa, 13). The acute eye for detail possessed by the Bedouin contributed greatly to the perfection attained by the Arabs in this art.

(ii) Kiyājat al-athat, the faculty of minute observation which the Arab displays, most notably in the course of everyday life. The examination of footprints permits him to find a stray animal, a fugitive chief, a lost path, etc.; he distinguishes the footprints of man from those of woman, those of a young man from those of an old men, those of a white man from those of a negro and these of a stranger from those of a local resident. He can even tell if the

woman is a virgin or not.

This astonishing faculty of observation and deduction extended to the behaviour of animals. The legend of the sons of Nizar, interpreting, in each case according to a particular point, the traces of a camel, on their road, and the origin of the honey, the roast meat and the wine offered to them by their host (Mas'ūdī, op. cit., iii, 228 ff. = § 1092 ff.), is a perfect illustration of the minuteness with which the ka'if dissected the most insignificant

As a spiritual faculty surpassing human intelligence, kiydfa possessed, = early = the pre-Islamic period, a sacred character which ensured its survival. as a judicial proof, in legal concerned with establishing the paternity of a child born of a slave (Ibn Kayyim al-Djawziyya, al-Turuk al-kikamiyya, 208, 195-213). Shurayh, the famous hādī, was a ha)if; al-Shafi'l wrote a Risala fi 'ilm al-hivafa (Hādidil Khalifa, i, 452; ms. Süleymaniyye, Mihrimah Sultan, 185, 4, in Turkish).

A product of nomadism and the milieu of the desert where it was applied under many different circumstances, hiydfar al-athar rather lost some of its raison d'thre in the Islamic city, where it was to be eclipsed by firasa, which evolved 🖿 totally different principles.

KIYAMA (a.), the action of raising oneself, of rising, and of resurrection. The man k-w-m is employed very frequently in the language of the Kur'an. Kiyama occurs there seventy times, always in the expression yourn al-hiyams "the day of resurrection". The resurrection of bodies follows the annihilation of all creatures (al-jana? al-mulat). and precedes the "judgment" (dis), the "day of judgement" (yours ai-dis). This will in the Last Hour (al-să'a). Al-să'a, yaum al-kivama and yaum al-din, taken as a whole constitute of the "necessary beliefs" which determine the content of the Muslim faith. It may be noted that the word mushur is an

equivalent (in the Kur'an) of kiyama.

The works of 'ilm al-halam and of falsala deal with the whole subject of eschatology under the general title of al-mo'ad "the return", a word which appears only once in the Kurlan (XXVIII. 85) in the localised sense of "the place to which me returns". Hence very often, in learned discussions. the idea of resurrection will be expressed by "return". We may add that it would be inappropriate to deal with judgement as such and its modalities. or with restibution, under the term kiyama. In this respect, the present article needs to be supplemented by the articles reserved for al-kisab, "the reckoning" al-ma'dd, al-sd'a and yourm al-din (q.w.). We shall confine ourselves here to considering (1) the succession of eschatological events which precede and accompany resurrection; (2) the Kur'anic arguments which demonstrate its possibility; and (3) the setting in perspective of the philosophico-theological problems which arise as a result.

I. The succession of eschatological events.

(a) Prophetic signs. Resurrection will be preceded by the end of the world, by "annihilation". The Meccan sūras are insistent - this. "Signs" will foretell the end; "the earth will be shaken with its earthquake" and will "vield up its burdens" (Kur'an, XLIX, z-2); the sky will crack, the planets will be dispersed, the seas "poured forth", the graves overturned (C, 9; LXXXII, 1-4; cf. LXXXI, 1-14; especially LVI, 1-6, etc.); the mountains (will fly) like "tufts of carded wool" (CI, s), etc. The Sakik of Muslim (viii, 179) gives a systematic list of these "signs". Al-Nasafi, in his "Akt"id, lists five of them, and the Tafstr of al-Taftazani enumerates ten "major signs" (see the list in L. Gardet, Les grands problèmes de la théologie musulmane-Dieu et la destinée de

l'hoixme, Paris 1967, 262, n. 6). (b) The annihilation. On that day "the Sound shall ring out, and a second shall follow it" (Kur'an, LXXIX, 6-7). Tris "sound" will be the "sound of the trumpet" (LXXIV, 8), which according to tradition will be blown by the angel Israfil. Then there will not be, it is sometimes said, a single living being that does not die-"every soul shall taste death" (XXIX, 57). This is the final annihilation, where God alone remains in His absolute power, for "all shall perish save His countenance" (XXVIII, 88). In the course of time, this vision of an absolute fand' came to be modified. From commentary to commentary, the number grows of the beings who shall escape annihilation; not because they are endowed with natural immortality, but == account of "principle of permanence" (hukm al-bah4") which the will of God shall concede to them (list

in L. Gardet, op. cit., 264-6).

KIYĀMA

(c) The resurrection. When the "second blast of the Trumphet" has sounded, the whole of mankind, long dead an annihilated in the "great fand", will be revived in body, soul and spirit. "The day when the crier shall cry out from a nearby place, the day when they shall in all truth hear the cry, that will be the day of resurrection" (L, 41-2). Stress is always laid on the suddenness of this "return" to life. Resurrection is a rising up, the immediate passage, without reference to time, from non-life to life.

(d) The gathering (haghe). God "shall gather" (L. 44; LIX, 2). He shall gather men together "as if they had stayed (in their tombs) only one hour of the day" (X, 45). He will gather the believers (XIX, 85). He will gather the impious {XX, 102; XXV, 17; etc.). He will gather men and gines (VI, 130), men and demons (XIX, 68). He will gather the angels (XXXIV, 40). This is the universal gathering. Also taking part in this, it is decided at a later stage, will it those protected from fand' by divine mercy; and even, according to al-Nawawl, pack-animals and wild animals. This will be the "standing" (al-mawhif) in waiting for judgement. Some traditions maintain that the first who will "rise" and arrive at the place of assembly (al-mahshar) will be the Prophet of islam. According to the most widespread beliefs, the prophets, the angels and the virtuous will be spared the terrors of waiting. But bumanity in general "will sweat with agony"; they will be drenched in their sweat (al-tarat), which will "bridle" them, in the bit bridles the horse (cf. al-Ghazālī, Ihya' 'ulum al-din, Cairo 1352/1933, iv, 436-7).

The Kur'anic texts are abundantly glossed by hadiths (al-Bukhart, ix, 46-61; Muslim, viii, 165-210, etc.). A whole didactic literature is grafted to this stem. For example, in al-Ghazall, ibid., the last book of the fourth volume, entitled Philir al-mass wa-ma backsha, 181 ff., in particular on the yawn al-kiyama, 437-9; and the text attributed the same author (wrongly, it appears), al-Durra al-fikhiva (ed. Cairo 1347/1928). See on this subject, as indicated in EI¹. Hughes, Dictionary of Islam, 539 ff., taking up the "Preliminary discourse" of Sale, section 4, 73-103 of the 1734 edition (the latter itself being based on Edward Pococke, Porta Mosis, il, 235-313 of the Oxford 1654-5 edition, which deals the length with Arabic passages and expressions).

Popular imagery abounds with descriptive details and continually builds on the foundations of tradition. But such imagery is irrelevant in faith. On the other hand, the very fact of the resurrection of the body is a cardinal element of the Muslim faith. A meta-historical and unique fact, linked, as if to an "opposite correlative" (muhābal), to the fact, also

meta-historical, of creation.

We may further note that the Shift beliefs refer to m first "return" which will precede the universal resourcetion and gathering; only the virtuous take part in it under the guidance of the Mahdi of the last times. This is the radiia ("return to life"), a kind of millenarianism. The Raifidis, in the early centuries of Islam, insisted in this. It continues to be one of the perspectives of Imamism, linked to the "return" of the 12th Imaim, Muhammad al-Mahdi, the "vanished one" (al-ghā'ib), who, with this "first return", will be al-Kā'im, "the riser". The Ismā'll "hidden sense" has more than once transposed the foretold parousis on a gnostic and extratemporal basis.

The Mu'tazills opposed the Raiidls and declared this first resurrection to be "vain". Al-Khayyat returns to it in his refutation of Ibn al-Rāwandī (cf. al-Khayyāt, Imijār, ed. Nyberg, French tr. A. Nader, Beirut 1952, passim, in particular 95-92/118-20}. The Ash'ari reaction no longer held the idea of radi'a. Sunni thought as a whole denies or ignores the expectation of a preliminary "return" of the virtuous, a golden age mearth preceding the day of judgement. For Sunnism, the only "return" is that of the last hour which will follow the "great fand", so, that of the resurrection (kiyāma) and of the gathering (kaskī).

II. Kur'ănic arguments. As suggested by D. Masson (Kur'ân tr., Paris 1967, index, under "Resurrection"), these arguments may be grouped around three

themes:

(a) A constant comparison of the creation (Rhalb) with the resurrection, which then appears to be a "new creation" (Kur'an, XVII, 49; cf. XVIII, 46; XXI, 104; XXVII, 64) or "the second creation" (LIIII, 47). It is the creative power of God which is invoked in reply to the man who would doubt the resurrection (XXII, 5); and to produce a second creation is "easy" for God (XXIX, 19; XXX, 27). He has created man and "formed him harmoniously" (LXXV, 38): "Is He who has done these things not able to bring the dead miffe?" (LXXV, 40; cf. LXXXVI, 5-8).

(b) A second "sign" of the resurrection is the analogy of the production of vegetables and of fruits, and the revivification of the soil by water (XLI, 39; LXIII, 11). "Thus we restore life to the earth after its death. Observe how resurrection (masker) comes about" (XXXV, 9; cf. L, 11). "God... brings forth the living from the dead and the dead from the living" (VI, 95; X, 31; XXX, 19); "thus we shall cause the dead to arise" (VII, 57). And resurrection after death is compared to the

day that follows the night (XXV, 47).

(c) Finally, the example of miracles with reference to a dead man revived by God (II, 72-3 and 259). R. Blachère compares this last with the Ethiopic version of the Book of Baruck. It should be noted that the Kur'an does not speak here. It the Book of Baruck, of a waking after a miraculous sleep (cf. "the Seven Sleepers"), but of a new life after death.

III. Problems posed. The most diverse "professions of faith" ('aba'id') steadfastly proclaim the resurrection of the body. But very soon problems of a philosophico-theological nature arise. The influence of the falasifa iii predominant. Not only the Tabaffat of al-Ghazāli, but every Kitāb al-Ma'ād of the major treatises of 'iim al-kalām has the intention of refuting them, and, for this very reason, to a large extent adopts their methods of examining problems, and sometimes their vocabulary.

(a) The "punishment of the tomb" ('adhib al-labr [q.v.]). First question: I there I survival of the soul or of the spirit? Will the predicted resusrection be of the body alone, or of the whole man, body, soul and spirit? The Kur'an does not talk explicitly of a survival of the soul of the spirit after death, Man dies, then is recalled to life on the day of resurrection. Three texts, however (XL, 45-6; XL, 11; III, 169-70), are advanced by the mulakallimin mevidence for the "punishment of the tomb"; at a later stage, "the pleasures of the tomb" reserved for the virtuous. In conjunction with these texts, there we many hadiths, recognised as authentic (solif), which are quoted, such as "I take refuge with You against the punishment of the tomb" (cf. further, al-Bukhāri, xxiii, 87; ixxx, 37-9). The

KIYĀMA

punishment of the tomb and the interrogation that precedes it, the formulation thereby of a "first judgment" are mentioned in the majority of professions of faith. The Agh'arts accuse the Mu'lazilis of denying them. 'Abd al-Djabbår, on the contrary, affirms them; he locates them, however, not immediately after the "first death", but between the "two blasts in the Trumpet" (of annihilation, and of resurrection) that will sound at the last Hour. And his arguments in support of the punishment of the tomb in very close to the arguments habitually propounded by the Ash'aris (cf. 'Abd al-Djabbår, Shark al-usul al-khamsa, ed. 'Abd al-Karim 'Uthmän, Cairo 1384/1965, 732-31.

But what is at issue here is not the survival of a separate soul, by nature immortal. What is being discussed is a first and transitory resuscitation, at once corporeal and spiritual, which is not a true resurrection. It is not necessary, say some authors, that the entire body should revive; it is enough that some fundamental part or other, heart, kidney, etc., be animated afresh. Moreover, if the body has been completely devoured or reduced to ashes, it will not be difficult for God to reassemble it and restore to life a sufficient quantity of matter (cf. al-Ghazáli, Istizad, Cairo n.d., 88-9). Besides, this survival of the tomb is brief. After being thus examined and punished (or rewarded), the man experiences "the second death". For a resume of question, al-Diurdiant, Shark al-Mawakif, ed. Cairo 1325/1907. viii, 3x8. It is also declared that the prophets and the shuhada? who have died fighting for God are excused from the interrogation and from the punishment of the tomb.

Under various influences (Mazdaean? Christian? The falásifa?), or through a simple endogenous development, the belief in a survival of the soul or the spirit is developed: whether in the tomb, with, according the circumstances, appropriate punishments or rewards; in other places; in even in Paradise for the spirits of the prophets, of the ghwhada' and, according to some, of the Muslim children who have died before the age of reason. These spirits, in Paradise, are provided with a temporary body symbolised by "the gizzards of green birds". Furthermore, an exegesis that has come to be accepted of Kur'an, XVII, 84 "the spirit proceeds from the commandment of your Lord", points to the directly divine origin of the spirit. hence to its immortality (cl. al-Ghazall, al-Risals al-laduniyya, the second of the short treatises linked together under the title al-Disvdkir al-ghawdit, ed. Cairo 1353/1934).

We have here m brief revival (body and soul), prolonged or not by a survival of soul or spirit, and what is at issue is, in any case, only a transitory state. The eschatological hour of the years al-hipāna and that hour slone, retains its absolute quality.

(b) The folds if a. The "punishment of the tomb" could hardly be accepted in anything other than a metaphorical sense in the view of the falistifa in general. In their habitual concern to integrate all the articles of faith, they refrain from rejecting it, but interpret it according to the major frameworks of their anthropology. For them, in accordance with their Hellenistic sources, the reasoning soul, a spiritual substance, is by nature incorruptible; it belongs by nature to the sphere of separate substances. It is thus that Ibn Sha, describing the lot of souls after death, speaks of pleasures, or of purifications, or of intellectual punishments; with this explicit statement that the souls which, on earth, have taken

pleasure only in physical enjoyments are now found to be irremediably deprived of them; they will be eternally m grips with tormenting and insatiable desires of lust and anger, and will draw from the celestial bodies the view within their imaginations of their terments (cf. Nadjatt, Cairo 1357/1938, 297). Their "hell" is to be barred from joining the higher angelic world-which we may take to be the world of separate substances-"where are found supreme happiness and accomplished splendom" (Shark R. Uthalidiiyd, published by A. Badawi, in Aristo 'ind al-'Arab, Cairo 1947, 43). It is true, the 'humble of spirit" (buld), who have sought after good to the best of their ability, will enjoy a happiness that is subjectively absolute, objectively relative: an imaginative, not purely intellectual happiness, and the celestial bodies, here too, will supply them as if with m additional body. Thus, according to Ibn Sina, for the mass of humanity, what should hold is that which is said in | prophetic revelation about the judgment of the tomb, about punishments and potential rewards (cf. Nadjäl, 198; parallel texts in the Shipa's.

Are these spiritual torments and joys of the life to come connected with the yawm al-hiyāma, the day of resurrection of the body foretold by the Book? Resurrection is an article of faith too central to Islam to be explicitly and overtiy dismissed by the falāsifa. Their position is nonetheless highly ambignous.

It mappropriate to set aside Abit Yusuf Ya'kub al-Kindi, "the philosopher of the Araba". He is the only faylassif who explicitly maintained that philosophical research could be and should be strengthened and guided by prophetic revelation. Consequently, he professes, from a specifically philosophical point of view, the fact of the creation in time, and the possibility of the resurrection of the body; the latter is possible, he says, since that is what the creation was-thus he adopts the major Kur'anic argument (cf. Rasā'il al-Kindī, ed. Abū Rīda, Caixo 1369/1950, i, 372 ff.). In works aimed at the "simple philosophers" (see Manjik al-mashrikiyyin, ed. Cairo 13:8) 1910, 3), Ibn Sīnā contines himself to affirming belief in the resurrection on the basis of Kur'anic testimony: "The revealed law (ghar') maintains, and reason does not deny, that the body also will enjoy pleasures" (or will be plunged into misery and suffering); cf. Tist rasa'il, Cairo 1326, 174-6; analogous texts in the Shifa? and Nadjat. Such is, moreover, approximately the position of Ibn Rushd. It is for the sake of his respect for prophecy and the revealed law that he opposes with such vehemence the accusations of the Tahāful al-falāsifa (Tahāful al-tahāful, ed. Bouyges, Beirut 1930, 580-6; see translation by S. Van den Bergh, London 1954, notes on vol. ii., 203-5).

But in fact, Ibn Rushd confines himself to a statement of principle, without replying to the arguments and objections of al-Ghazálf. Now it seems probable that the latter was familiar with the esoteric treatise of Ibn Sinā, al-Risala al-adhaneiyya fl saw al-ma'sal, which the translated into Latin (Liber Mahad) by Andre Alpago (Venice 1546) and has been treently Arabic by Sulaymān Dunyā (Cairo 1368/1949). In this work, Ibn Sinā attempts to demonstrate explicitly that the resurrection of the body, which he does not mean to deny, should be understood as a symbol or an allegory which has the object of inducing the mass of humanity to persist in virtuous behaviour. In reality "it is known that the true well-being of man is

opposed by the very existence of the soul in his body. and that physical pleasures - other than true pleasures, and that the fact of the soul returning to the body would be punishment for the soul" (Risāla adhawiyya, 53). We understand how al-Charall was able to accuse the falasila of not admitting in its explicit sense, and according to all its demands, the teaching of the Kur'an concerning resurrection: this is the 20th question of the Takafut

al-falāsifa, Beirut 1927, 334 fi.). (c) Responses and attempts at explanation of the Mutakallimün. Later haldm was to judge the falasifa much more by the esoteric treatise of Ibn Sinā than by their statements of respect towards the religious law. When al-Djurdiani lists the various attitudes which were or could be adopted (op. cit., viii, 297; cf. Fakhr al-Din al-Razi, Muhassal, Cairo n.d., 169), he seems to assimilate the falásifa to those "deistic philosophers" who only accept "spiritual return", the rudiat, in the me found in the pseudographic Theology of Aristotle; while the man "with certainty of truth" (muhakkikun), like al-Halimi or al-Chazali for example, profess a ma'ed that is both spiritual and corporal. It is in this sense that developments of kalam will tend to prove the rational possibility of the "return", then of the "gathering", and to study its conditions. We cannot follow in detail the whole series of discussions, arguments, objections and responses in all their intricacy and multiplicity (cf. L. Gardet, op. cit., 266-9, and refs.). Nevertheless, we make some comments:

(1) Curiously enough, Fakhr al-Din al-Razi (Muhassal, 170) declares that all the earlier prophets preached only the "spiritual return" and that it is the Kur'an that proclaims the return of the body. His opponent, the Imami Shiq Naşîr al-Din Tasl (in the margin of the Muhassal, ibid.) states furthermore that the Gospel does not preach the resurrection of the body, and quotes Matthew, xxii, 30 "they are like the angels in heaven". Ibn Rushd (Tahāfut, 580) seems to have had a better know-

ledge of Indaism and of Christianity.

(2) In his Toheful al-falásifa (loc. sil.), al-(ihazālī, under the heading of a third hypothesis, and in the form of an argument ad hominem, concedes to his opponents that the soul may be of a wholly spiritual nature and that in it alone the human personality may reside (in the Ikiisid, 88, he declared that this opinion "does was accord with what we believe"). Even in this case, he says, the resurrection of the body is still possible, and it will take place, were the religious law foretells it. Also, he replies meticulously to three objections of a philosophical order (for the details of this debate, L. Gardet, La pentte religieuse d'Avicenne, Paris 1951, 87 B. 3).

(3) Numerous explanations of the "return of the body" are proposed by the 'lim al-halam. The Mu'tazilis seem to have professed the "annihilation" then the "return" of substances and of "durable" accidents (real accidents) which mecessarily linked to them (see summary in al-Diuwayni, leshed, ed. and tr. Luciani, Paris 1938, 211/316). Al-Djuwayni himself (ibid., 213/318) and al-Ghazali (Illisad, 87) envisage either the "annihilation" of substances (and therefore of accidents which could not alone remain in the being), and their "return"; or the "annihilation" of accidents, then their "return", the substances remaining. For al-Ghazall, either hypothesis is possible (mumkin). According to the followers of Ash arism as finally evolved, such as al-Razi (Muhassal, 171) and al-Djurdjuni (op. cit., viii, 297), either God brings back to life (i'ada) on "annihilated" (ma'dum) and the "return" is thus preceded by me reduction to non-existence ('adam), or else the return follows a total dispersion (tafrik).

Discussion of these last two hypotheses led to developments concerning the relationship between substances and accidents, concerning an atomistic or non-atomistic view of the world, and concerning notions of being and of non-being. Three terms are constantly being repeated by the pen of the scholars: the being according to its first existence (mubda?), to the "annihilated" (ma'dum) and to the "similar" (mith!). For it is not a "similar" being that returns on the day of resurrection, it is the being itself, the same one that was "annihilated". No difference between the first creation (ibdd?) and the "return" (i'ada) is spoken of by al-Ghazall (Ihtipad, 87-8), al-Razi (Muhasial, 169-70) and al-Diurdiani (Shark al-Mattakif, vili, 292, 294). Henceforward, declares al-Djurdjani (ibid., 293-4), the subject of the first creation and the subject of the return are not at all to be distinguished in terms of their ensemble of determining characteristics (mahiyya), but only in terms of the essence (huwiyya) which places them within the being. There is between these two "subjects", that is between the thing and itself having "returned", an "interference" (takholist) of nonexistence, which al-Ghazali and no doubt al-Razi on the one hand, and al-Diurdiani = the other would explain rather differently. But the consensus continues to rest on the return we existence of the same being that was aunihilated.

This dialectic, subtly conducted, and originally devised as a reply to the faldsifa, is characteristic of the procedure of the "modern" mutahalliman (in the sense used by Ibn Khaldun, Muhaddima, Cairo n.d., 326-7, tr. de Siane, iii, 60, 62), and of the type of problems that they study. Also to be noted in their extreme sobriety in regard to traditional and descriptive data. We have, thus, in Sunn! Islam, as it were two lines of development: an expression of popular faith, employed to a large extent in the mount of preachers and of a type to strike the imagination; and an explanatory effort at rational justification. Elementary manuals of a later period take inspiration from both one and the other, To this could be added various "hidden meanings" of Shift traditions. But in opposition to the Risale adhauriyys of Ibn Sinā | his allegorising theses, the existential reality of the basic fact of the resurrection of the body has not ceased to III vigorously main tained.

Bibliography: Given in the article.

(L. GARDET)

KIYAS (At.), reasoning by analogy, the fourth source of Muslim law.

t. In law.

This word is derived from the Hebraic term hikkish, infinitive hekkesh and from the Aramaic root n-k-sh which signifies "to beat together". It is canployed with reference to (a) the juxtaposition of two subjects in the Bible and the demonstration that they should be treated in the same manner; (b) the action of the exegete who applies the comparison suggested by the text; and (c) the conclusion of the reasoning by analogy which relies on the existence of a common characteristic in the "basic case" and the "analogous case" (J. Schacht, Origins, 99).

In a broad sense, highs can indicate inductive reasoning (istidial), and even deduction (istinbaf, istikhrādi al-habb). It is thus that in halden, biyda KIYÄS

al-ghā'ib 'ala 'l-shāhid (Madimū', i, 333) indicates the syllogistic procedure which consists in induction from the known to the unknown; it is the kiyas Sagis that in inspired by Greek syllogism. While the Mu^ctazili Abū Hā<u>sh</u>im al-Djubbā'i retains this meaning for the Kiyás shar's, his disciple Abu 'l-Husayu al-Basti rejects it (Multamad, ii, 697). In the terminology of figh, kinds is "judicial reasoning by analogy". It is the method adopted by the Muslim jurisconsults to define a rule which has not been the object of an explicit formulation: a verse of the Kur'an, a hadith of the Prophet or iginal. It is kiyds fishi or shar's, different from the former in the that it "has its own structure and its own complexity" (R. Brunschvig, Valeur et fondement du raisonnement juridique, 61). This specific structure results from the particular nature of the mode of reasoning by analogy; the absence of a middle term in the primitive form of kinds, then definition of an explanatory principle ('itta) which is not a logical norm, but the prescription of a rule (huken) established by God or His Prophet, this is the judicioreligious norm. The complexity of kinds shark results from the diversity of cases to be taken into consideration and from the detailed reflections of the usulis on the different procedures that may be adopted in the execution of kiyas shart. The elaboration of the major treatises concerning usul al-field [q.v.] develops the notion of biyas in a systematic manner, conferring upon it wery strict and elaborate form. This work leads in the work of an author like al-Ghazāli (d. 505/1111) to a muchexpanded concept of the fourth source of law, embracing the perspective of "Greek logic and traditional exegetical method" among the Muslims (R. Brunschvig, op. cit., 57).

The problem. The establishment of gives a new judicial source responds to the need to find solutions not foreseen in the texts and to define rules applicable to new situations. The problem of gives comes therefore to consist in determining "grounds of procedure" (barrā it) which respect the spirit of rules dictated by the text. The putting into effect of gives shar i must, in consequence, appeal to principles of analogical deduction which enable the discovery in the rule of the derived case (far) of the grounds which determine the rule of the

basis (agl). Like idima" [q.v.], kipas was instituted after the demise of the Prophet. With the death of Muhammad, the community of the faithful was deprived of the "organ of revelation" and of its political and religious chief. Idima' was born of the need to ensure the coherence of the nascent doctrine of Islam, in the face of the dispersion of the believers and the proliferation of sayings attributed to the Prophet. The institution of idina' had the purpose of preserving the social and doctrinal unity of the parentcommunity (umma). In origin and in its "summary and primitive" form, kiyās in 'Irāk was employed as a means of giving the force of law to certain hadilys attributed to 'All which had not met with (Schacht, Origins, 106-7); the extension of this practice may be considered not so much a factor of unity as of divergence. The putting into effect of kipas would appear more and more to respond to a need for diversification and clarification of the divine law. Also, the risk of divergence (ikhtildf) was the essential motivation of the Shift opposition to the use of kiyas. The partisans of the Shif's do not accept the rule which considers that every muditahid speaks the truth (musib), a rule

implied by the practical application of hiyas. Nevertheless, the continuing crop of new cases (hawādith) that the believer is obliged to cope with justifies in the view of the mudiahid recourse to personal reflection, the practice of which is encouraged by the Kur'an and the Sunna (Kur'an, XIII, 3; XVI, 11, 67; XXX, 21; XXXIX, 41; XLV, 12; cf. Abmad b. Hasan Pazdawi, Usal, iii, 995). The Prophet said: "The study of knowledge (falab al-film) is mutty (fastēa) incumbent upon every Muslim; and the knowledge that must be studied is that of the rules which shed light upon the divine law" (sharfypāl; Mughal, xvii, 278). Kiyās is one of the means whereby reflection leading to this awareness may be exercised.

Development. The practice of Rights thus comes to be established as a means of establishing a judicial ruling not provided for in the texts. However, reasoning by analogy is, in the view of the faithful, to be treated with caution, for the simple reason that it is exercised by a fallible being who is liable to error. Idind' must therefore intervene to ensure the credibility and the cohesiveness of the opinions of the muditakids. Only the information provided by the Kur'an and the prophetic tradition is a source of integral truth (i/hdfa). Such is the view of al-Shafif (d. 204/820), who may be regarded as the first of the usulfs. The ruling that consists in be-Heving that every muditahid speaks the truth (musto: Risala, ed. Shakir, | 1330; Mughni, xvii, 277) will authorise the specialist to make a decision according to that which conforms most closely to the divine intention. By means of kiyds, a search must be made, not for certainty (yakin) but the proof which will permit the deduction of a peremptory ruling (hukm kaf4). Kiyās must be a determinant in practical sense (mūdjib li 'l-'amal; al-Sarakhsl, Usul, Beirut 1973, il, 159; Mughai, xvii, 291-2). There is thus a need to elaborate a theory of kiyas sufficiently precise for its use to confer upon the specialist's decision the greatest possible integrity, In the practice of the Hanafi, Maliki and Shafiq echools, \$iyās sigar's cannot provide certain knowledge, it amounts only to a "strong putative probability" (ghālib el-zamt; al-Āmidī, Ihkām, iii, 256; al-Sarakhsi, Usul, ii, 140; Mughni, 1vii, 277).

It was at a very early stage that kiyas shar's began to be practised. As early as the 2nd century A.H., Hammad b. Sulayman b. Rabifa, master of Abû Hanifa and ibo Abi Layla, and judge at Başra, inaugurated its use. But the first to employ it systematically was Abū Henlfa (d. 150/767), for which reason the practitioners of his school are known as those who use reason (askab al-ra'y) to distinguish them from pure traditionists (askáb al-hadīth). The latter do not accept kiyds except = a last resort; according to them, analogy is like carrion, to be eaten only when no other food is available" (L. Milliot, 135). Dawiid al-Zähiri (d. 270/884) avoided wherever possible reasoning by analogy, preferring the literal content of the Kur'an and of hadith. In the same way that he restricts the notion of idima", he imposes limits on recourse to analogy, without however rejecting it absolutely. According to him, must bow the head before the inexorable law that the finite cannot contain the infinite and admit analogy in some cases (L. Milliot, op. cit., 135; al-Sarakhsi, Usul, ii, 118; al-Şaymari, Masa'il al-hhilaf, f. 48a-b). With Ibn Hazm (d. 456/1064), the Zāhiri school replaces kiyas with the implicit sense of the text (majhūm); according to this last, the action of analogy is vague and arbitrary. Kiyas is

44ō KIYÅS

rejected by the Hanbal's and the Shi'ls, but adopted by the other schools of law. In practice, it is the

Hanafi doctrine which prevails. In his Risala on the foundations of law, al-Shafi'l provides the first stage in systematisation of the theory of hiyas. Having established precisely the role of the Kurlan, of the Sunna and of idima", he neatly defines that of reasoning by analogy. It is to him that is owed the fundamental distinction between hiyas 'ille or me'nd and hiyas shabah. The first bases analogy on an explanatory principle (fills). This form of kiyds considers a thing according to its original meaning (ast). In this case, there is no need for disagreement. Kiyas shabab considers the thing in its similarity (shabes) to others; those who employ it may disagree (al-Shafi'l, Risdle, § 2334). Al-Āmidī (d. 632/2233), ■ Ḥanbalī uṣūlī who went over to Shāficism, is at pains not to confuse the ruling of the basic same (asi), with that of the derived case (far'). The ruling of the former is given by the text of the Kur'an m of hadith or by idind"; it is certain. The ruling of the latter is deduced [thamara nātiējo); it is putatīve (al-ķiyās lā yufidu ghayr al-sann; Ihhām, ili, 264). For this reason, the conclusions of ki was cannot in their turn provide deductive principles (suku; op. cit., 277). Analogy on the basis of analogy is not acceptable. Such is not the opinion of the Mu'tazili 'Abd al-Diabbar, who adopts the Shaff'l teaching and enlarges it. According to him, "there is no difference between the raling of the basic which is known through explicit evidence (bi-dirdr) and that which is known through discussion (istidial); in fact, it is possible to extract a new ruling from the latter when there is a similarity between the reasons for which each of them is adopted. So there is not, in regard to knowledge (51m), a need to take account of the different means whereby the ruling III the basic must is established. That which is known in an explicit manner may, in fact, he assimilated to that which is known through acquisition (al-darwri fi-hi he 'I-muktasab). The explanatory principle (Silla) is fruitful; aithough dissociated from the basic case which has inspired it, it may be taken m operative, for it finds its own guarantee within itself. Thus, God (IV, 25) lays down that the punishment inflicted upon a slave woman should be half that applied to the free woman. As soon as we are aware that the reason for the existence of this bukes is the fact of slavery (rikk), may apply this ruling to the male slave. Similarly when we know that the second for the prohibition (Kur'an, II, 219; V, 90) of all fermented drink (hhamr) in the existence of wine (nabidh), we shall forbid the consumption of wine. For the Muttazili 'Abd al-Diabbar, kiyds, when applied to scriptural or rational material, is dependent on a similar process, that of intellectual effort (idilikad). Here the role attributed to the action of the subject in interpretation of the Shari's is predominant.

Foundation. The various objections raised to the practice of hirds which me known to us through the different treatises of usul al-fifth divide into two types of argument: an argument of fact and me

argument of law.

(a) The verses of the Kur'an and of prophetic tradition which forbid recourse to reasoning by analogy are numerous: "We have presented to you the Book to make all things clear" (XVI, 89), "We have neglected nothing in the Book" (VI, 38), "Your Master is not forgetful" (XIX, 64). Recourse to personal opinion (ra'y) to extract a ruling from it amounts to imputing inadequacy to the Holy

Book. The Prophet, in his turn, accuses of aberration and error those who deduce a non-existent rule from an existing rule (Pazdawi, U+il, iii, 992; al-

Sarakhst, Uşül, ii, 120).

(b) The argument of law consists in denying that legal status (Anhm) may be founded m reason. The "raison d'être of law" ('illa) is attained through its erroneously convincing nature (skubbs fi 'l-ast). The text (mass) has never determined explicitly the 'properties" (swiaf) which might provide a foundation for legal precepts. The latter are obligatory on the grounds that they result from divine decision (al-Sarakhal, Usul, ii, 121; Abu 'l-Hasan Pazdawi, Usul, iii, 992). Reason has no competence to exact that which only the All-Powerful is entitled to impose. The object of law is beyond The content of a number of divine precepts cannot be subject to personal opinion; these added have no foundation other than divine decision; such 📕 the with regard to ritual ordinances ("bådd). The practice of kiyas, in substance, far from providing a guarantee of rectitude, can lead only to a misunderstanding of rules (djahālāt; al-Sarakhst, Usāt, ii, 122). In the argument of authority there is no place for personal assessment.

According to the Mu'tazifi al-Nazzām, the process of kiyas is far from always respecting the rational model. It is not compatible with reason to impose fasting on the menstruating woman and to excuse her from prayer, when she is better able to pray than to fast. The same applies to the prohibition laid upon the man against gazing at an aged free woman, with repulsive features, while he | permitted to look at an attractive young slave. It is contrary to good sense to cut off the hand of a petty criminal (strik al-kalti), while the judicial rule spares the man who rohs on a large scale (ghásib al-kathir; al-Amidi, lakam, iv, 9; Mu'tamad, il, 746). In other words, in ethical questions, analogy 🖩 inoperative. It 📰 the effect of linking together dissimilar cases and dissociating similar cases, which preludes passing from the basic case (asl) to the derived | (far'); ct. al-Şaymari, K. Masa'il al-Mildf, f. 48n. It is interesting to observe that the Hazmian objection to the principle of similitude in religious questions (Ibn Hazm, Ifikam, vit. 82) is the same in that of al-Nazzam. Such is the criticism of Asyas raised by these two authors. Classical Muftazilism, as represented by the had! 'Abd al-Djabbar, replies to the objection of ancient Mu^ctazilism in declaring that "neither gives nor ifma" should, in the last resort to reason or to 'agl, figure in the arsenal of judicialreligious thought ... as regards giyds, there is the need to detach, among the elements of basic prescription, the invariants on the basis of which giyds will be legitimate, if account is taken of the indication (amāra) which specifies them" (R. Brunschvig, Retionabile et tradition cher 'Abd al-Gabbar, 214). The convincing validity (hudidityya) of hiyas is, like that of idima", based on a text; reason only intervenes in order to put the analogical deduction into affect.

The Shiff criticism of biyes is directed against the diversity of opinion which is liable to result from it. The Kur'an condemns divergence of opinion in many places (IV, 82; XLII, 13; VIII, 46; XXX, 32; III, 105). A number of badtin attack those who profess divergent doctrines (al-Amidi, Ihham, iv, 10).

To these objections, the scholars of sixes reply in their turn with scriptural and rational arguments in favour of judicial analogy. (a) God said: "Learn from this, we you who clear-sighted" (LIX, z). To learn a lesson with a secondate with the "hornologue" (napis); such is the process of hipsis. "If you are capable of interpreting dreams ..." (XII, 3); hipsis does nothing other than interpret the rule. "These verses are addressed to thinking people" (XII, 3; X, 24; cf. Abu "Hasan Pazdawi, op. cil., 995); what is more, the Kur'an (IV, 146) employs analogy in authorising ablution with sand (layanmum) when water is lacking.

It is well-known that the Companions of the Prophet employed highs and dialectical discussions [munajardi] and that they practised judicial consultations (mushiwasat). In a general fashion, the partisans of kiyds appeal to the hadith where it is related that when the Prophet sent Mu'adh b. Diabal to the Yemen as kadi, the former asked: "How will you reach a judgement when a question arises?"; Mu'adh replied: "According to the Word of God" .- "And if you find no solution in the Word of God?"-"Then, according to the susua of the Messenger of God" .- "And It you find no solution in the suggest of the Messenger of God, nor in the Word?"-"Then I shall take a decision according to my own opinion (aditakidu ra'yi)". Then the Prophet of God struck Mu'adh on the chest with his hand and said: "Praise be to God who has led the Messenger of God to a solution that pleases him" (Abu Dawud, Akdiya, b. 11; al-Tirmidhi, Akkam, b. 3; al-Darimi, Sunan, Introduction; A. J. Wensinck, KIVAS, in Eff).

(b) The person endowed with reason, the mukaliaf, is naturally inclined to assess the invisible (ghā'ib) on the basis of the perceptible tokens of experience (hddir). Cracks in a wall foretell its collapse, a cloudy sky and fresh wind are signs of rain, etc. (al-Amidi, Ihkâm, iv, 5). Similarly, in matters of religious law, hiyâs puts into effect "the cause-norm association" (villa-bukm) to assist the exercise of reflection two similar cases, the second not being defined by this association.

The nature of \$6yds. According to al-Shaff's, hipds and iditihid [q.v.] are two terms expressing a single notion; when the rule concerning a specific case is not dictated by a particular indication (dalāla), this indication must be sought by a means conforming to truth with the aid M iditiadd. Now iditihad is kiyds (Risala, | 1323). The specific nature of kinds is not yet detached, it is subjective opinion $(r\hat{a}^3y)$. With the elaboration of the science of the usal ai-fick, the concepts are defined and fixed. Kiyds can then be defined = the method which consists in assimilating the derived case (for') to the basic case (asi) in virtue of their similarity with regard to the raison d'lire (file) of the norm (hukm). Kiyds is thus | form of reasoning which proceeds from particular to particular, linking a new case to an old case: "It oannot . . . be considered as inductive reasoning, since it does not aim at applying to all cases of the kind the observations made concerning one of them". [C. Chehata, Logique juridique et droit musulman, 20). Such is the character of the reasoning which concludes that in a case of fornication, a confession repeated four times on the part of the guilty party may be considered a sufficient proof of the offence. The basic case is defined by a Kur'lale text which prescribes the execution by stoning of the guilty party in the presence of the four witnesses. This assimilation (tashbh) of ancient origin belongs to a still simplistic concept of alla. With the development of the theory of hiyds, "illo takes on a more logical quality. Whence the penalty that reduces by half the punishment applied to female slaves as compared with free women (iV, 25); the 'illo of the reduction in penalty a slavery. By analogy, this reduction will be applied to make slaves as compared with free men. Of the same type is the hipds that prohibits the lending of dry dates or raisins at interest (ribd), on the basis of the prohibition of lending grain (wheat, barley), with the demand of eleven measures against ten. The reason for the prohibition is that usury is forbidden.

For kivas to be effective, four elements sary: (1) the appearance of a new case which causes a problem; (2) a basic case (ast) governed by a hulm defined by a text; (3) a raison d'atre of the law (fills) which can provide the line (ma'na drami') justifying the assimilation of the derived case with the basic This raison d'are is "sign" ('alama) which permits the knowledge that the ruling from ■ text may be applied to m case not envisaged in these terms. Once this will is known, the jurist, proceeding by analogy, applies the law thus motivated to the case in which he sees a similar reason to pronounce judgment. This is the to Wil (L. Milliot, op. cit., 138); (4) finally, a result which is MI bulm applied to the derived case. Such is the prohibition against striking one's parents drawn from the prohibition against saying to them "fiel" (XVII, 24). As regards the third condition, "the Hanafis only recognise 'illa as endowed with a "transitivity" (taidiya), that is, susceptible to being put into effect in a derived case on the basis of a basic case (al-Sarakhsi, Usal, ii, 161). The Shati'ls, - the contrary, accept that an 'ilia may be intransitive (kasira), intransmissible to a derived case". In reality, the apposition between these two doctrines depends on the different manner in which the 'illa is conceived in relation to Aukm. According to the Shaft's, on the contrary the 4do is that which confers upon the kukm its "validity of origin". According to the Hanafls, the 'illa of the basic case justifies itself by the derived case (R. Brunschvig, Valeur et fondement a raisonnement juridique, 79-80).

From the point of view of modality, several types of hipsis are distinguished: (a) hipsis silla or hipsis al-dalila (al-Amkil separates these two) which consists in associating (dism') the basic case with the derived case with the aid of the indication of the filla and the qualifications which the latter entails (cf. 15n Kayyim, I'lam, i, 138-9). An example is the association of wine (nablah) with alcoholic drink (hams), giving as "middle term" the faculty of upsetting good behaviour.

(b) Kiyas shabah is an analogy by "simple similarity" which requires no intervention of motive or of common indication (min ghayri dalli didme"; I'ldm, i, 148). An example is the similarity established between the slave and the free can for the assessment of the diya [q.v.] when the slave is the responsible for the offence, and that which assimilates his compensation when he is the victim (Mw'tamad, ii, 692).

(c) Kiyas al-tard is a co-extensive biyas al-tilla and its contrary is biyas al-taks ■ "reversibility", "reverting to non-wasf → non-bukm" (R. Brunschvig, op. cit., 8x; al-Anidi, lbkam, iil, 261). Kiyas shard would thus appear with igimat to be ■ decisive criterion for the interpretation of Islamic law. It permits the establishment of new rules. But in the extent to which it is a process of reasoning which excludes the possibility of having ■ to a purely logical

norm, kiyas shar's belonging definitively to personal opinion (10°1). It is for this reason limited in range. From this results the need to resort in certain cases to other methods of reasoning: istikain [q.v.] or benignilas and istikaih [q.v.] or utilitas publica.

In the modern period, the theory of hives is generally applied in the different schools which adopt it in the spirit of the Hanafi doctrine. Because of the major role accorded to personal effort by the Hanafi madhkab, the modern muditahid is generally eager to draw from this the norms enabling him deduce new rulings; historically, the importance accorded to Hanafism results from the fact that the Ottoman empire followed the Saldink sovereigns in imposing it as an official doctrine. This ascendancy, which prevailed over a large proportion of the Muslim world, had the effect of conferring upon the Hanafi madhhab an official status in a number of countries "where | majority of the native Muslim population follows another school, e.g. in Egypt, Sudan, Jordan, Israel, Lebanon and Syria" (J. Schacht, RANAFIVYA, in EI", ili, 163).

2. In Grammar.

In grammar, the word siyas indicates the "norm". meaning the instrument which enables the grammarian to "regulate" (kāsa) the morphological or syntactical behaviour of a word, where this is not known through transmission (nobi) = audition (sama"), on the basis of the known behaviour of another word, by means of a certain kind of analogy; it is synonymous with mikyds (pl. makdyls). The term is well attested in the Kitab of Sibawayhi [cf. G. Troupeau, Lexique-index, 179); Sibawayhi does not define it but he says that it may be had (rad?), kabih), constant (mulla'ibb, mustamir), flowing (djari), stable (mulamakkin) and that it is indispensable (idrim); he insists that one does not "regulate" a thing on the basis of that which is rare (kalil) or exceptional (shādhdh), but that one "regulates" it on the basis of that which is in frequent use (kothir). The expression fala 'l-biyds, which he often uses, indicates "according to the norm, normally".

It is the Mutazill grammarian al-Rummani [d. 384/994] who supplies the first definition of the

term, in the K. al-Hudud (ed. M. Diawad, 50); "hiyds is the combination (gjam') of two things, whence results necessarily their combination in principle (huhm)".

Ibn Dinni (d. 392/1002) devotes to siyas five chapters in the K. al-Khasalis (ed. M. A. al-Nadkliär, i, 109-33, 357-69, 391-9}. He asserts that the Arabs love affinity (tadjanus) and resemblance (tashābuh) and that this leads them to assimilate things that are close to one another, and to trace (hami) - secondary thing (far') to a primary thing (ast); he comments that this penchant of the Arabs for assimilation (taploth) sometimes leads them to trace a primary thing from a secondary thing, and that a rare thing can be the "norm", while a more common thing is not. Ill regards Ill links between the "norm" and audition and usage (istismal), he distinguishes four (I) that which is generalised (muttarid) according to the norm and according to usage; this the optimum: (2) that which is generalised according to the norm, but exceptional according to usage; one adopts the word of most frequent usages; (1) that which is generalised according to usage, but exceptional according to the norm: adopts that which is commonly heard (marmil'), but does not "regulate" anything else according to it; and (4) that which is exceptional according to the norm and to usage; this is faulty (mardhall) and should be rejected (muttares). Finally, he observes that the grammarians considered that that which is "regulated" according to the language of the Arabs, constitutes a part of their language, even if the Arabs have not used it in speech.

in the K. Luma' al-adille ft usul al-nahu. Ibn ai-Anbari (d. 577/1181) subjects kiyas m a lengthy examination (ed. A. Amer, 44-86). He considers that It is impossible to do without it in grammar, since the latter may be defined as being the science of "norms" (makhyis) drawn (musianbaja) from exhaustive study (istièra") of the Arabic language. He defines it as the tracing of a secondary thing from a primary thing, by virtue of a cause ('illa) which demands the application of the principle of the primary thing to the secondary thing. He distinguishes three kinds of kiyas, according to its basis upon (x) a cause to which the principle attached; (2) a resemblance (shabak) other than the cause to which the principle is attached; and (3) a generalisation (fard) of principle. Where the assumption (ikhāla) of the cause is lacking in this case, only the two former kinds are utilised by the grammarians.

Al-Suyūti (d. 911/1305), in the third chapter of the K. al-Iṣtirāḥ /ī uṣāl al-naḥw, classifies all the data concerning hiyās supplied by previous grammarians (ed. Haydarābād, 38-72). He divides his study into three parts: (t) the primary thing, on the basis of which me "regulates" (makis 'alaykis') (2) the secondary thing, which one "regulates" (makis); (3) the principle; and (4) the cause that unites them (djāmi'a).

Finally, it should noted that, in the K. al-Radd 'sia 'l-muhāt, the Zāhirī grammarian Ibn Madā al-Kurţubl (d. 592/1195) objects to the use of kiyās in grammar and calis for its abrogation (ed. Sh. Payf, 156).

Bibliography: given in the text of the article.
(G. TROUPEAU)

BIZ (r.), basically "girl, unmarried female", but often used with the more restricted meanings of "daughter, slave girl, concubine". It is already found in the Orkhon inscriptions in the phrase \$1s ogh# "daughter", as opposed to not ogh# "son", and subsequently appears in most Turkish languages, Through Türkmen forms it passed into Iranian languages like Kurdish and Ossetian, and through Ottoman usage into Balkan languages like Serbian and Bulgarian, often via the Ottoman technical expression (for which see below) kisian aghasi (see Radloff, Varsuch eines Wörterbuches der Türk-Dialecte, ii. 818-9; G. Doerfer, Türkische und Mongolische Elemente im Neupersische. iii. Türkische Elemente im Neupersische. 116-70, 569-70, No. 1601; Claupon, An etymological dictionary of pre-thisteenth century Turkisk, 670-80].

In mediaeval Islamic usage, one of its denotations was "Christian woman", doubtless influenced by the meanings "slave girl, concubine"; Djuwayni, tr. Boyle, i, 257, calls the Georgian King David IV "the see of Kiz-Malik", i.e. son of the Queen Rusudani. Under the Ottomans, the term Klaine Aghasi "Aghs of the maidens" was generally used to denote the chief of the black cunuchs in the Imperial Palace, more correctly entitled Dor al-Saladat Aghast "Agha of the House of Felicity". This officer was in charge of the sultan's harem, and was in practice the principal officer of the whole palace. From the last years of the 10th/16th century onwards, he enjoyed the prestige of vizierial rank, as a pashs of three fughs, with the title of Mushir, coming in order of precedence only after the Grand Vizier and the Shaykh al-Islam. After 995/1587 he also displaced the Chief of the White Eunuchs from his control of the swiaf or pious endowments of the Haramayn, Mecca and Medina (see N. M. Penzer, The Hardm," London 1965, 128 ff.; I. H. Uzunçarşılı, Osmanlı devletinin saray teşkilân, Ankara 1945, 172 ff. and index; Gibb and Bowen, Islamic society and the west, i/1, Oxford 1950, 76-7, 329-31).

The element Air also occurs in two well-known topographical features in the city of Islanbul and vicinity. First, there is the Kir-tashi "Maiden's stone", the column of the Emperor Marcian (450-7), in the Patib quarter, so-called from its alleged power to distinguish virgins (in fact, the genuine "virgin's column's man near the Church of the Holy Apostles was incorporated in the Sülaymäniyye Mosque, which was on that church's site after 1456); was E. Mamboury, The tourists's Istanbul, Istanbul 1953, 339-40, 42, and Baedeker, Konstautinopel, Balkanstaaten, Kleinasien, Archipel, Cypern', Leipzig 1914, 880. Second, there is the Kiz-külesi "Maiden's tower", the signal station and lighthouse built on a rock in the Bosphorus just south of Uskiidar in the entrance to the Bosphorus, popularly called "Leander's tower", referring to Leander's death by drowning when trying to reach his beloved Hero (though this occurrence is usually located in the Dardanelles between Cestus and Abydos). The classical name for this rock was Damalis (from the wife of the Athenian general Chares), but the Turkish name is connected with the story of Mehemmed II's daughter, allegedly shut up there in a fruitless attempt to preserve her from death by snakebite (see Mamboury, op. cit., 496-7, and Murray's kandbook for travellers in Canstantinople, Brusa and the Troad, London 1893, 107).

For the social status of women in Turkey, see MAR'A. (C. E. Boswortu)

KÍZÍL AHMADLÍ (see ISPENDIVÁR OGRLU). KÍZÍL ARSLAN (see ILDEGIRIDS).

KIZIL-BASH (r. "Red-head"). The word is used in both a general and a specific sense. In general, it is used loosely to denote a wide variety of extremist ShIQ sects [see CHULAT], which flourished in

Anatolia and Kurdistân from the late 7th/13th century onwards, including such the the Alexis ('Alawis; see A. S. Tritton, Islam: belief and practices, London 1951, 83).

The 'Alawis closely connected with the Nuşayrıs [q.v.] of northern Syria and Cicilia, and the taktacis (takhtadjis [q.v.]), in order to protect themselves from persecution by the Ottoman government as schismatics, later "gained the right of asylum under the all-embracing and tolerant umbrella of the Bektashl organization" (J. Spencer Trimingham, The Sufi orders in Islam, Oxford 1971. 83; see also BERTASHIYVA). The Atell-bash did not constitute a Suff order = such, but rather a religious sect (Abdülbāk! Gölpinarlı, IA art. Kenl-bas). The common characteristics of all those designated as hisli-bash was the wearing of red headgear. Gölpinarit, op. cit., sees the hiell-bash in this respect m the spiritual descendants of early Shi'l ghuldi groups such as the Khurramis [q.s.], who were also known as the Muhammira from their practice of wearing red hats and robes, and even of pre-Islamic beretical sects of the Sāsānki period, especially that of Mazdak (see also Browne, LHP, i, 310-13). In its specific sense, the word kixil-bash was a term of opprobrium (often kirli-bask-i awbāsh, "scoundrelly kirli-bask", etc.) applied by the Ottoman Turks to the supporters of the Safawid house [see SAFAWIDS], and adopted by the latter as a mark of pride.

In Safawid usage, the term derived from the distinctive scarlet or orimson hat (tage) with twelve gores (fork) commemorating the twelve Imams of the Ithna Ashari Shi'is, worn by the disciples (murids) of the Safawid stayths. According to Safawid tradition, in 893/1487 Shaykh Haydar [q.v.], instructed in a dream by the Imam 'All, devised this headgear (British Museum MS, Or. 3248, ff. 41a-b). When Haydar first showed this "Suft tildi", it became known, to the Ak Koyunlu ruler Uzun Hasan, the latter kissed it and put it on his head (if the date 893/1487-8 is correct, this story is clearly apocryphal, because Uzun Hasan died in 882/1478). His son Yackub, however, refused to wear it, and this was the origin of the enmity between Hayder and Ya'kūb which resulted in the breakdown of the Şafawid-Ak Koyuniu alllance. After the death of Haydar, Va'kub not only forbade his subjects to wear the kisil-bash tadi, but also tried to prevent the Sulis of the Safawid fariba from wearing it (R. M. Savory, The struggle for supremacy in Persia ofter the death of Timur, in Isl., xl (1964), 34 fl.).

Strictly speaking (as noted by Chardin; see V. Minorsky, Tadhhirat al-mulah, London 1943, 188 and n. 5), the term elsil-bash should be applied only to those Turcoman tribes inhabiting eastern. Anatolia, northern Syrla and the Armenian highlands which converted by the Safawid dastra and became the disciples of the Salawid shaybbs at Ardabil. However, the term was also loosely applied to certain non-Turkish-speaking Iranian tribes which supported the Safawids, for instance the tribes of Talish and Karadia-dagh (Siyah-kuh), and Kurds and Lurs. The great hiell-bash tribes (oymāh) were subdivided into as many as eight or nine clans (the in Minorsky, op. cit., 16-17, is by no complete). The most important cymdes included the Ustādilūs, Rūmiūs, Shāmlūs, Dulghadirs (arabice: "I-Keders), Takkalūs, Alshārs and Kādjārs; other tribes, such as the Turkmans, Warsaks and Bahārhīs, and occasionally listed among the great oymāks. During the reign of Shah Isma'll [q.v.],

the Shamits were the most powerful of the bish-bash

oymilis. The provenance of some of the great oymilis is clearly indicated by the some of the tribe: for instance, the names Shāmlū, Rūmlū and Bahārlū consist of a place-name with the addition of the possessive particle -10; others, such as Afshār, Warsāk, and Dulghadir, are the names of old Oghuz tribes. The origin of some names, such as Ustādilū, is still obscure.

From the middle of the 9th/15th century, Ardabli was the of an extensive organisation designed to keep the Safawid leadership in close touch with its Mail-bash murids in eastern Anatolia, Syria and elsewhere. This organisation was controlled through the office of kkelifat al-kkulafa'l, felicitously called by Minorsky (op. cit., 225) "the special secretariat for Suff affairs". The khalifut al-khulafa?, who mee necessarily a blail-bash and usually a Turcoman, appointed representatives termed Abalifa in the region in which the Safawid defee was active, and the khall/as in their turn had subordinutes termed pies. The presence of large numbers of kialibask Şafawid supporters in eastern Anatolia constituted a serious threat to the Ottomans. In 907/ 1502, Sultān Bāyazid II transferred large numbers of Shi'lls from Asia Minor to the Morea, yet in 917/ 1511 there was another serious \$1111-bdsk revolt Tekke [see BAYAZID II], and Sultan Selim I, before invading Iran in 920/1514, massacred 40,000 of them in order to secure his rear (see Savory, The consolidation of Safawid power in Persia, in Isl., xli (1965), B6-7).

The hielf-bagh, as the murids of the Salawid shayehs, owed implicit obedience to their leader in his capacity as their murshid-i hāmii ("supreme spiritual director"). After the establishment of the Şafawid state, the Şafawid shahs transferred this oir-muridi relationship from the religious to the political plane, since they were now not only their followers' murshid-i kāmil but their king (pādithāh) as well. As a consequence, what had formerly been act of disobedience in the part of a Suff against the orders of his spiritual director now became an act of treason against the king m a crime against the state, and as such, punishable by death. The term safigari, "proper conduct for a Sali", and extended to mean, "conduct becoming to a sixu-bask officer"; the converse, na safigari, came to mean "failure to obey orders; rebellious or treasonable conduct". As late as 1023/1614-15, for instance, when Shah 'Abbās put to death some klall-blish who had defacted to the Ottomans, the charge was nd-suffgari (Savory, The office of hhaliful al-khulafd under the Şafawids, İn JAOS, Ixxxv (1965), 501). A passage in the Taribh-i Alam-ded-yi Abbasi, Tehran 1334/ 1955, i, 68, where an officer is described mard-i soft wa yahdiikat wa dawlat<u>kh</u>wah, makes it clear that being a \$4fl and # #fril-beck was considered to be tantamount to being loyal to the shah and the régime.

When the Şafawid state established in 907/1501, the kinl-bāṣḥ constituted the military aristocracy. Since they had been largely responsible for bringing the Şafawids to power, they considered it only right and proper that they should both fill the principal offices of state in the central administration and also hold the most important provincial governorships. The use of such terms to describe the Şafawid empire as kalamsaw-i kiril-bāṭḥ ("the kiril-bāṭḥ traim") (Tār-iḥḥ-1 'Alam-ārā-yi 'Abbāṭ, i, 206); dewlat-i bitl bāṭḥ ("the kiril-bāṭḥ state") (bid., i, 152); and manikas-i bitl-bāṭḥ ("the kiril-bāṭḥ kingdom") (ibid., i, 523), makes it clear that, in the

view of the siell-bays, the Tādik or Persian elements me not count for much in the new order of things. Similarly, the shah is commonly referred to as pādishāh-i blell-bāsh, again a term which appears to ignore the existence of the Tādjiks altogether.

Initially, the two principal offices of the central administration, that of the wikilat and that of the amir al-umara'i, were both held by the same hirilbásk officer. Under Tahmasp I [q.u.], the office of amir al-umera's declined in importance, and was superseded by the office of hurdi-bight [see wead], which was also a hiell-bash prerogative. The government of the provinces of the Şafawid empire during the early period was allotted almost exclusively to biell-bigh amirs, who ruled m petty princes in their provinces. The provincial governors had courts which were replicas of the royal court, and the system of provincial administration in many respects resembled that of the central administration. These provincial governorships were assigned to the blall-bash amles as fiels known as tival [q.v.]. The governors, in return for the obligation to provide the king with a stated number of fully-equipped troops when required, allowed to consume locally the greater part of the revenues collected in the provinces under their jurisdiction; such provinces were known 🖿 mandisk or "state" provinces,

After the conquest of Khurasan in 916/1510, Shah Ismā'll made Harāt the second city of the Safawid empire, and it became the seat of one of the Safawid princes and frequently of the heir apparent. The royal prince placed in charge of the hisl-bag governor-general of Khurasan who, in his capacity is lake or stabes ("guardian") of the prince, was responsible for the moral and physical welfare of his ward. It was his duty to see that the prince trained in archery, horsemanship and the like, and also to see that he received his apprenticeship in statecraft.

Since the high-bish were "no party to the national Persian tradition" (Minorsky, op. cit., 188), their assumption that the principal offices of state would automatically fail to their lot led to immediate friction with the Persian elements in the administration. The Persians, "Taditks" the kisil-bash contemptuously called them, were the "men of the pen" who had traditionally filled the ranks of the bureaucracy in Iran and had provided administrative continuity under a succession of foreign rulers, Arabs, Turks, Mongols, Tatars and Turcomans. In the Persian view, the kirli-bish were "men of the sword", and were not expected to have any knowledge of statecraft. On the other hand, in the bishbash view, "Tagifks" were tit only "to look after the accounts and disease business. They had no right ... either to maintain private bodyguards or to command troops in the field. If &intl-bash were to serve under a Persian officer, they consider it a dishonour" (Savory, The quilbash, education and the arts, in Turcica, vi (1975), 169). Isma'll I attempted to maintain a balance between these two forces by appointing Persians to the ali-important office of wall, but this merely aggravated the tension between them, and the Mail-hdgh brought about the death of three of the five Persians appointed to that office under lunifi I (see Savory, The significance of M political murder of Mirra Salman, in Islamic Studies, Juni. of the Central Institute of Islamic Research, Karacki, ili (1964), 181-91).

When Shah Tahmasp succeeded his father in 930/1524, at the age of ten-and-a-half, IIII kiril-bash took advantage of his youth to assume control of the

state. Their mystical belief in the quasi-divine nature of Isma'll I m their murshid-i hamil had been shattered by the latter's disastrous defeat at Caldiran last, and they now reverted to their primary lovalty to their tribe. This led to almost a decade of civil war as the great Airil-bash symals fought for political supremacy, and between 932/1526 and 940/1533 either individual ktrif-bash tribes or coalitions of tribes ruled the state. In 037/1330-1 the Takkalûs attempted to seize the person of the shah, but the other great oymaks railied to his defence and, in the ensuing fighting, large numbers of Takkalûs were killed. The survivors fled to 'Irak-i 'Arab: some of them subsequently entered Ottoman service. and one of their chiefs, the renegade Ulama (Ulama), was involved in the rebellion of Alkas Mirea [q.v.]. These events virtually ended the political influence of the Takkalū ovmāk.

In oxoleses Shah Tahmasp managed to reassert the authority of the crown, and for some forty years remained in control of affairs, but in 982/1574, when he fell ill, there was immediately a recrudescence of dissension among the klast-bash. The political situation, however, was very different from the situation obtaining in 932/1526, at the outbreak of the civil war between the bislibash tribes. The new factor was the introduction of a "third force" to the political scene in the form of Armenians, Georgians and Circassians, who became ghulaman-i khassa-yi sharifa, "slaves of the royal household". These men, many of whom had been taken prisoner in Tahmāsp's campaigns in Georgia between 947/1540-1 and 961/ 1553-4, or were the offspring of woman brought to Iran at that time, adopted Islam, and were given special training to fit them for service either in some branch of the administration of the royal household, in in and of the newly-constituted ghulam regiments. The ghuldms, instead of being paid ... quasi-foudal basis like the klall-bash. paid direct from the royal treasury, and their primary loyalty was therefore to the shah and not to any tribal unit. When therefore there was a fresh outbreak of factionalism in 982/1374, "it was no longer a struggle to determine which tribe could outstrip its rivals in a state in which the Oisilbask tribes as a whole enjoyed a dominant and privileged position, but whether the Oisilbásh tribes as a whole could maintain their privileged position against the threat from the new elements in Persian society, the Georgians and Circassians" (Savory, Safavid Persia, in Cambridge History of Islam, 1, 407-8). This struggle was not resolved during the remainder of Tahmasp's lifetime, or under his successors Isma'll II and Sultan Muhammad Shāh (99.v.).

When 'Abbas I [q.v.] was placed on the throne in 996/1588 by the powerful hisli-bask amir Murshid Kull Khān Ustādihu, he realised that not only his personal future but the continued survival of the Safawid state depended on his being able to establish his authority over the histl-bash as rapidly as possible. The Ottomans, taking advantage of kisil-bisk factionalism, had made large inroads into Persian territory in the west, as had also the Ozbegs in the east. 'Abbas's solution of curbing the power of the Mail-bash and increasing that of the ghulams, though successful in the short term, ultimately seriously weakened the military and political effectiveness of the Safawid state. The eleli-bash regarded the gholdens with contempt, and dubbed them sandoghia, "sons of black slaves". The ghalams, though some great commanders emerged from their ranks, not have a fighting élan comparable to that of

the kisk-bisk, the only troops in the Islamic world who had earned the grudging respect of the Ottoman janissaries. Essentially heavy cavalry, the kixil-bish carried a formidable arsenal of weapons-bow, lance. sword, dagger and battle-axe; in action, the tadi was replaced by melmet with mail cheek-pieces (Minorsky, op. cla., 32); as they charged, they set up a rhythmic chant of "Aliah! Aliah!" (Taribhis 'Alam-dra-vi 'Abbasi, ii, 600). The basis of their fighting spirit, however, was their fierce tribal loyalty (ta'assub-i cymakiyyat; ta'assub-i kisilbashiyyati. Shah 'Abbas I was well aware of this and, in pursuance of his policy of curtailing the power of the kiall-bask, not only reduced the strength of the kisil-bisk regiments but also deliberately weakened the all-important attachment of the kisil-básh soldier to his tribe. He did this in w variety of ways; he placed an officer in charge of a tribe who was not himself a member of that tribe: in certain cases, alleging that a particular tribe did not possess an officer worthy of holding the rank of amir, he appointed a ghulam as smir of the tribe; he transferred groups of men from one tribe to a district belonging to another tribe. The continuance of these policies by his successors ultimately undermined the military strength of the Salawid empire.

In Afghanistan, there exists a substantial Shtq. minority group III kiell-bash, living mainly at Kabul and in the high valleys of Foladi me the western. edge of the Hazaradiat [g.v.]. These people are the descendants of garrison troops left behind by Nādir Shāh [q.v.] in 1150/1738 during his Indian campaign. The Alati-bash hold clerical posts in government offices, engage in trade - craftsmen; in short. they constitute an important and politically-influential element in the population. Estimates of their total number vary from 60,000 to 200,000 (see H. W. Bellew, The of Afghanistan, Calcutta 1880, 107; D. N. Wilber, Afghanistan, New Haven, Conn., 1962, 49:50; and V. Gregorian, The emergence of modern Afghanistan, Stanford 1969, Index s.v. (lizil-Bash).

As recently 1945, the fact that the 1948 Mill-bass still had an emotive power in Adharbaydian, the nerve-centre of the Safawid organisation in earlier times, was demonstrated by the choice of this name for the regular troops recruited by the short-lived autonomous republic of Adharbaydian.

Bibliography: Given in the text. For a detailed description of the rites and ceremonies of the Anatolian httl-bash, see article Kunibas, in IA. For additional textual references, see G. Doerfer, Türkische und Mongolische Elemente im Neupersischen, ili, Türkische Elemente im Neupersischen, Wiesbaden 1967, 470-2.

(R. M. SAYORY) Kizil-Blma (or Kizil-Alma), "Red Apple" is an expression which occurs in written sources from the 16th century onwards; it also occurs in Turkish oral traditions from Anatolia and Adharbaydian as well as in modern Greek, Bulgarian and Rumanian folklore, current to this day. It refers to a legendary city which was to be the ultimate goal of Turko-Muslim conquests, and were versions explain the seem from the resemblance between a red apple and the golden dome of a building-in this latter case it refers to a large church situated in the In Ottoman period Kizil-Elma tended to identified with the large cities associated with Christianity-Constantinople, Budapest, Vlenna and Rome - which the armies of the Pddishdh were hoping

to conquer (see J. Deny, Les pseudo-prophéties concernant les Tures = XYI siècle, in REI, x/2 (1936), 201-20; E. Rossi, La legenda turco-bizantina del Pomo Rosso, in Actes du V° Congrès international des études byzantines, Rome 1936, 542-53).

Another tradition, which must have developed before the Ottoman one, identifies Kizli-Alma with Daghistan, beyond Demir Kapu. It has been supposed that this legend originated from the ceremony for enthroting the Shamkhal of Daghistan, in which the claimant to the throne is involved in throwing a "golden ball"; because of this ball, Dāghistān was called "The land of Kizil-Alma" (see Fahreddin Celik, Kanl-Almanin yerleri, in Constalts, Jan. and March 1942; Bamçiçek Kırzınglu, Kars ili ve pewesindehilere göre Kuzul-Alma, in Türk folklor araştırmaları, No. 181, Aug. 1964). The idea of Kizll-Alma being situated in Daghistan in the furthest point of Muslim expansion has persisted in the oral tradition of Eastern Anatolia among the residents of Kars, Ardahan, Kağızman and both parts of Adharbaydjan. The legendary place is mentioned in the 18th century by two poets from the fringes of the Caucasus. The one, 'Ashik Saft, speaks of it in a song composed to celebrate an expedition of Nadir Shah (1736-47) against the Russians in Daghistan (see F. Celik, op. sit.). But drawing on information given by a certain Bahram of Damascus in his geographical work which was translated from Latin (Nur-i Othmanlyye Library, === 2996), Çelik suggests that the country of the Khazars was called Kizil-Alma since the 4th/10th century.

A popular legend, which probably rose in the oral tradition of the Janissaries, has survived in written recensions. One version is dated 13 Shachan 1084/23 November 1673 and is found in the National Library at Ankara ("conk" collection, No. 72). A second, dated 15 Djurnādā II 1179/29 November 1765 is in a collection of folk narratives from manuscripts brought together by P. N. Borotav. The narrative Is written in the form of a letter and it combines the motif of "Klzil-Alma, the ultimate goal of the Ottoman conquests" with that of a Christian king who, having been vanquished and wounded by 'All b. Abl Talib, was plunged into a deep sleep, and is waiting for a favourable day to revive and to take his revenge on the Muslims. In this version of the legend, an attempt can be seen at an identification and a localisation, which has ended in contradiction and anachronism. The Christian king is called Rum Papa "The Pope of Rome", . Kiali-Alma is thus being identified with Rome. But the narrative also locates the same legendary place at Bec (Vienna), and links this legend with the account of the Ottoman raid carried will during the reign of Süleymän II in 1532 by the historical person Kaslm Voyvoda (see P. N. Borotav, in Annuaire de l'École Pratique des Hautes Etudes, IVª section, 2966-7, 163-4). The motif of the resurrection of a king is certainly Christian and probably Byzantine. It is linked with the cycle of pseudo-prophecies at the end of the period of Turkish domination (Deny, op, cut.), but later on it must have been integrated into Turkish tradition.

Oral versions of this narrative are still being told today. The present writer has recorded five versions in Turkish folklore (t) Ispartali Hakki, Köyümden geliyorum, Ankara 1971, 34-5 (the material in this book dates from 1916); (2) H. I. Erginol, in Gediz, No. 33 (1944)—cf. P. N. Borotav, in Journal de la Societé des Africanistes, xxvili (1958), 16; (3) Kurt Bittel, Legenden vom Karkenes-Dağ (Kapadokien), in

Oriens, xiii-xiv (1960), 33; (4) wersion noted by Boratav in the villages of Han Köy and Ak-Dere (Afyon province) In 1930; and (5) a version noted by Oğus Tansel in the village of Meyre (near Bozkir, Konya province). The two last versions are part of Borotav's own manuscript collection and are ununpublished. A Greek version from Asia Minor has also been recorded; it comes from a village in the region of Ephesus (see Dido Sotiriou, D'un jardin d'Anatolic, a novel translated from Modern Greek, Paris 1965, 22). For Arabic version, see Yakouh Artin Pacha, Seise haddouts, contes populaires racoutés an Caire, Cairo 1903, 11-12.

Bibliography: A full bibliography is provided by J. Deny EM E. Rossi in their articles. Apart from works cited in the article, — for the motif of the Kizil-Elma Elmas Yılmaz, Kessi-Elma efsansti El Türk folklor araştırmaları, No. 146, Sept. 1961. (P. N. Boratav)

KIZIL IRMAK (r. "Red Rivor"), the ancient Halys ("Alug) or Alys ("Alug), the largest river in Asia Minor. It rises in the mountains which separate the wildyet of Siwas from that of Ercerum, waters the towns of Zarra (4,530 feet high) and Siwas (4,160 feet high), then enters the province of Ankara where it mosts the mountain of Ardilah and the Kodja Dagh range which force it to make an immense detour of over 160 miles. Its course is at first southeast, then it turns northwards, and finally it reaches the Black Sea below Bafra in the middle of marshes. It is nearly 600 miles long. Its waters, of a dark yellow colour when they are in flood, diminish enormously in the summer; its bed is wide and its banks high. Its principal right-bank tributaries are the Khān-sūyu and the Delidie-Cay; those on the left are the Saramsak-Cay which flows by Kaysariyye, the Dewrek-Cay from Tosya, the Gök-Irmak which comes from the lunaz-Dagh (the ancient Olgassus) and waters the town of Kastamûni [g.v.]. According to Strabo (xii, 56r), the river Halys ('Αλύς) took its from the mines of rocksalt, the product of which was exported in the form of large blocks; these mines thirty miles to the north of Yûzghād (Yozgat) near the village of Şirl-Kāmish, are worked among the red sandstone, covered with clay and marl of m reddish colour; this soll washed down by the heavy rains gives 🔤 river a reddish colour, whence its name.

In ancient times, this river marked the boundary between the autochthonous peoples of Asia and those who had come from Europe to colonise the country. Herodotos (i, 72) makes it a frontier between Lydia and Medla. It seems to have been known to the Arabs by its ancient name, if it is this river that is referred to by the name Alis in a verse of Abu '1-'Ala' al-Ma'arri (S. de Sacy, Chrestomathic araba'', iii, text, 45, tr. 109, gives by mistake "Alous", an error reproduced by Defrémery, Mémoires d'histoire orientale, ii, 221).

Kizit-KUM (r. "Red sand"), a desert between the Sir-Darya and Amū-Darya rivers[qq. v., and also KARĀ-RUM], falling within the modern Uzbekistan and Kazakhstan SSRs. The country is less uniform, especially in the central part, than in the Karā-Kum; the sand desert is crossed by several ranges of bills, and in some places is rocky. The Kidi-

Kum becomes more and more inhospitable as goes southwards. The region called Adam-Kirlighan ("where man perishes") between the Amū-Darya and the cultivated region of Bukhārā, consisting of sandhills (bar Man), a considered especially uninviting and dangerous. In summer, there is absolutely no life in the desert; in the winter, there is vegetation, such as the saksawi shrub, and a few springs and wells are visited by Kazakh nomads. Schuyler noted that "Kirghia" (sc. Kazakh) nemads crossed into the Kizil-Kum from north of the Sir-Darya on the river ice and returned in the spring when there still ice floes II the river. Moreover, the mediaeval Islamic sources show that the winter, when the desert was carpeted with snow, we normally the time for military and other movements across the Kizil-Kum. Thus the Ghaznawid historian Bayhaki noted that it was the absence of snow which prevented Oghuz ruler of Diand, Shah Malik, from restraining the rebel in Khwarazm Hārun and his Saldjūk allies from invading Khurāsān in spring 426/1035 (Taribh-i Mas'adl, ed. Chanl and Fayyad, 683-4); and in the 6th/12th century the raids of the Kh "arazm-Shahs to Djand and against the Kipcak were always made in winter [see plane in Suppl.]. At the south-eastern extremity of the Klall-Kum lay the Katwan Steppe, to the north of the Samarkand-Khudland road, where in 536/1141 Sultan Sandjar was defeated by the Kara-Khitay [q.w.]. In recent times, the desert sands have encroached on the cultivated fringes, and in the later 19th century several villages on the lower more of the Zaraishan river became buried in the sands.

(W. BARTHOLD - C. E. BOSWORTH)

KIZH-UZEN (in Azerl Turkish "Red River"), the ancient Amardus, a river which flows through Adharbaydian and enters the Caspian Sea forty miles east of Seffd Rud, "White River", at its junction with the river Shah-Rud at Mendil. Its source lies in the province of Ardilan, and it begins by crossing Irak 'Adjam! to the north; its rightbank tributary is the Zandian, me the left it receives the Kara got at Mivane, then it runs along the southern slopes of Elburz, describing a great arc \$25 miles long and crosses this range through the defile of Rudbar and the narrow vailey of Rustamabad, a kind of couloir through which rush violent winds from the south in winter and from the Caspian in summer. It was known to the Arabs - Nahr al-Abyad "White River" (tr. of the Persian Seftd-Rad) (cf. Dimashki, Cosmography, tc. Mehren, 145); at one time the Turks called it the Hulan (Hadidi) Khālifa, Diihān-memā, 304).

KIZIMKAZI, in full, KIZIMKAZI-DIMBANI, a. small hamlet in south-west Zanzibar situated in lat. 6° 261 S, which possesses the earliest datable mosque in East Airica. Its mibrib has a dedicatory Kafic inscription recording its foundation by Shaykh Abb 'Imran Mūsā ai-Hasan Muhammad in 500/ 1106-7. This is flauked by Kur'anic and two inscriptions in roundels, all of great elegance. The nearest analogy is with a grave cover found at Straf: the ensemble was either imported from there or executed in Zanzibar by a Straff mason. This Persian connection accords with traditions of trading relations attested by inscriptions in Somalia and by the Kilwa histories. Otherwise, the mosque is an undistinguished rectangular structure. H. N. Chittick excavated it and the adjacent site in 1960. The hutted settlement dates from the rith century or earlier: a ruined stone house and defensive enclosures are probably em century, when, as a commemorated by another inscription dated \$284/1772-3, the mosque and mikrab me largely rebuilt, the earlier inscriptions being incorporated into the fresh structure. An oral tradition claims that it was the capital of Bakari, a 17th century Swahili ruler of southern Zangibar, but this seemingly contradicts the archaeological evidence; the fortified residence and the rebuilding of the mosque are more congruent with the 18th century development of the eastern African slave trade.

(G. S. P. FREEMAN-GRENVILLE)

KIZKÁHÁN (see KILÁT). KIZLAR AGHASI [see Kls],

KOC HISAR, a name of several towns and villages in Asia Minor, derived from Kodiahisar; compare such names as Koc Hisari, Koyun Hisarl, Koyul Hisarl, Keci Hisarl and Toklu Hisarl. Confusion is often prevented by the addition of the name of the nearby provincial capital or of another word, e.g. Cankiri Koc-Hişari, Sherefli Koc Hişar. For the same reason, the toponyms of places with this name have been changed in recent times.

 Sherepli Koć Hişāni (in modern usage Şerefli) Kophisam, centre of an ilee (previously hadan) formerly called Esb-keshān, in central Anatolia nowadaya within the if (wildyst) of Ankara (formerly of Konya), 8 km east of the northeastern shores of the Tue Gölü [q.v.]. The town is situated on the road connecting Ankara with Adana via Aksaray, nowadays major line of communication. The countryside around it is watered by a mountain stream and yields a varied agricultural produce; there is also sheep-raising. Since ancient times salt has been produced at Kaldurm on the take. In 1950 Sereflikuchisar town had a population of 4,458 and the

iles (then called a haze) mm of 46,300, the latter including within its boundaries 97 villages.

Bibliography: B. Darkot art. s.v. in IA; F. Taeschner, Das anatolische Wegennste, Laipzig 1924-6, i, Table 6*; Ankara il yıllığı, Ankara 1967; I. H. Konyalı, Şereflikoçhisar tarihi, 1971.

II. CANKIRI Koć Hisari, in modern usage Çankırı Koc Hisar, since m 1923 centre of an iles (hada') in the il (wildys) of Cankier (Cankiel [g.v.], Kanghel before 1925) in central Anatolis, nowadays called Ilgas. In the 19th contury it am a making in the sandial of Känghri, in the wildyet of Anadolu, and since 1864 in that of Kastamonu. Situated in the valley of the River Devrez (- Devrek) on the southern slopes of the Ilgaz Mountains at an altitude of 905m, the town is an agricultural market centre, lying near the crossroads of the routes from Ankara to Kastamonu via Cankur and of that from Istanbul via Bolu and Tosya to Erzurum and the east. Islamisation came after the conquest by the Dānishmend amirs in == 468/1075. Afterwards the region became part of the dominions of the [stendiyaroghlu [q.v.] or Djandårid dynasty of Kastamonu (Kastamūri [q.v.]). The Ottoman Sultan Bayarid I took it in 795/1393. After the invasion and restoration of the amirates in Anatolia by Timbr (after 804/1402), Koć Hişār definitively became Ottoman territory in \$55/1451. It then became an important haiting-stage in the Ottoman network of routes of the so-called "left wing" (sol kol) of Anatolia. In 1950 the town of Ilgaz Itself had a population of 1,783, and the ilgs (then called a haza) one of 24,800, the latter including in its boundaries 76 villages.

III. Kočetska (Sivas) nowadays Hafik, centre of an figs in the province of Sivas situated — the main road and caravan route from Sivas to Erzindjan [q.w.] and the East 37 km. N.E. of Sivas — the right bank of the Kizh-Irmak at an altitude of 1340 m. The population of the town in 1970 numbered 3,156. Nearby is Lake Todurgha (Tödürge, now Kaz Gölü or Demiryurt Gölü). Kočhişar is identical with Hāfik Kal'esi (Hāwik), a stronghold of some importance during the amirate of Sivas of Kādī Burhān al-Din [q.w.]. In the 19th century the town had a mixed Armenian and Turkish population.

Bibliography: V. Cuinet, La Turquie d'Asie, Paris 1892, i, 695; ■ Darkot, art. Siuas in IA, with list of older sources; H. W. Duda, ed. and tr., Die Seltschukengeschichte des Ibn Bibl. Copenhagen 1959, 248 and n.b.; F. Taeschner, Wegennetz, ii, 2f., 17 n. 1, 3, table 36; Y. Yücel, Kade Burhaneddin Ahmed vs dwichi (1344-1398), Ankara

1970, 32 f., 45 f., 52, 73.

IV. Kocupan (Mardin) nowadays called Kimitepe, the centre of an iles of the province of Mardin in southeastern Turkey (Distira) in the Zerkan Suyn, a tributary of the Khābūr, to the south-west of the city of Mārdin [q.v.]. Its population numbered 16,375 in 1970. In early Islamic times this, Kochişar was called Dunaysir (Dunaysar) [q.v.]. During the rule of the Artulgids [q.v.], the town was an important caravan centre, and a medical school existed here.

The present ruins of the Ulu Djämif are a monument of that period (co. 60x/1204-5). At the self of Sultan Selfm I's campaigns against the Safawids, an Ottoman army commanded by Blylidi Mehmed Pasha, beglerbegi of Diyar Bakr, defeated a Persian force under Karakhan Ustadjala near the town in 92x/1516. Afterwards the whole region came under Ottoman rule, with Märdin as a sandjab (limā) of the new sydlet (beglerbegilih) of Diyar Bakr [q.v.]. Kočhisar was a part of the kadd of Märdin in 92x/1518 and remained a subdivision of that district, being a sabiye of the sandjab of Märdin during the 19th and 20th centuries and a kadd of the wildyet of Märdin since the Republic was founded.

In 1766 the well known traveller Carsten Niebuhr visited Kochisär ("Kods]e hissar" in Arabic "Gunässar" or "Dunässar"], finding five minarets still standing (cf. Reise naar Arabis, Amsterdam-Utrecht 1776-

80, il, 366-7).

V. Kocyuşār also Konja Hisān, identical with the Byzantine fortress of Trikokkia in the Sakarya region to the south-east of Iznīk [q.v.]. This place was conquered by Sultan Orkhān [q.v.] in 708/1308

(713/1313).

KOĆI BEG, also called Göntmunt Koma Mustasi Bug, Ottoman writer of treatises

on statecraft.

Roci Beg was a native of Göridje (Gorca, Korytra) in Macedonia. He entered the Palace service as a desshirms [q.v.] during the reign of Ahmed I and served under successive sultans until his retirement to his native place in the early years of Mehemmed IV's reign. He seems naves to have served in any capacity outside the Palace. He gained the especial confidence of Murad IV and Ibrahim, and it is for his memoranda to these sultans that he is famous. He was also tutor in the historian Natura [q.v.] (for a full biographical account see M. Çağatay Uluçay, IA art. Koçi Beg).

Koči Beg's best-known work is his Risalis, presented to Murad IV in 1040/1630, where he analyses the causes of Ottoman decline and suggests remedies. There we several printed editions of the work: Ahmed Vefik Pasha (ed.), Roti big risalisi, London 1279/1862-3, Istanbul 1303/1885-6; A. K. Aksüt, Roti big risalisi (in Latin script), Istanbul 1393; German translation by W. F. A. Behrnhauer, in ZDMG, xv (1861), 272 ff., with comments by Fleischer in ZDMG, xv (1862), 271. The work is summarised in J. von Hammer, GOR, v, 291. A second risalis attributed to Koči Beg was apparently compiled from memoranda submitted to Sultan Ibrahim on that Sultan's order. There is no critical edition of the work. The first published version is an incomplete but fairly full

KOČI BEG

German translation by Behrahauer, entitled Des Nasthatedone, in ZDMG, xviii (1861), 600 ft., based on manuscripts now in the Nationalolbliothek. Vienna (Mix. 427, A. P. 188, Hist, Osman, 150). The translator states that the author is anonymous. The second published edition is in A. K. Aksut, op. ed., 78 ff. (in Latin script), based on a manuscript in Millet Library, Istanbul, no. 474. In a third published edition, based on a manuscript in Nuruosmaniye Library, no. 4950, the editor attributes the risále to the Grand Vizier Kemänkesh Kara Mustafá Pagha (F. R. Unat, Sadrasam Kemanke; Musiafe Paga Mythasi, in TV, II, = 6, 443 ff.). There are divergences between the published versions and between them and other existing mss. (for details and discussion, see M. Cakatay Ulucay, Koci Bey'in Sultan Ibrahim's tahdim ettiği risale ve arzlar, in Z. V. Togan'a armagan, Istanbul 1950-5, 177 ft.).

The contents of Koči Beg's risale presented to Murad IV resemble those of an earlier analysis of Ottoman decline, the anonymous Kitāb-i mūsiejāb, (ed. Yaşar Yücel, Ankara 1974) and are entirely conservative in outlook. The spread of corruption, he argued, had brought about a decline in the old institutions and bred disrespect for the sharifu and old laws (\$dmin [q.v.]). Remove corruption, restore respect for the sharks and hansin, and the Empire would return to its former glory. In the old days before the reign of Süleymän I, the sultan had attended the Dimin personally. Süleymän had abandoned this practice. Before the year 982/1574-5 the Grand Vizier had been independent, with intermediary between him and the sultan. The sultan's favourites (nüdemä') had never interfered in affairs of state. Bribery was unknown and begs were never unjustly dismissed. There was strict control over the emoluments of Palace officials and they never received lands whose rightful use was timars 🖿 ze^zämets (qq.v.).

After 982/1574-5 Palace officials and Sultan's favourites able engineer the dismissal of Grand Viziers, beglerbegis and sandjak begis and acquire lands rightfully allocated in timariots, as freeholdings (tamilth) or fief-holdings (pashmakith, arpails). As a result, the state lost its worthjest officers and no longer had the timariots available for war. A similar decline occurred in the silmivus hierarchy. After 1003/1504-5 shevkhillisiams, kādī faskers and kadis [qq.v.] frequently suffered wrongful dismissal. Mulasemets and \$4di-ships were offered for sale, allowing ignorant men to enter the profession. Promotion, too, had come to depend on age, rather than ability. In the old days, the 'ulend' had been upright men. Because they had feared God, the people had feared them, and the integrity of the sharifa had been preserved.

The timer-system had underlain the Empire's former military strength. In 992/2584-5, however, Ozdemir-oghli 'Othman Pasha had allocated timers to deserving rackyd. After him, the principle was extended, and unworthy re'dyd and Palace nominees had received timers. These made bad and rebellious troops. Few bothered to present themselves for campaigns. Many had contradictory berdis [q.e.], giving rise | disputes and a decline in the respect due to the sultan's decrees. Finally, the abolition of the yuruks and musellems, who had acted as a pioneer corps on campaigns, meant that the timariots, the picked troops of Islam, now had to perform menial tasks. The Janissaries and other hapibulu corps [see onnu] had also become corrupt. It was again Özdemir-oghli 'Othman Pasha who, in 992/ 1584, had admitted suitable non-buls into these corps, and after 1003/1594-5 this had become a flood. The desphires system broke down; tradesmen and others secured posts lawfully due only to buls, and admitted their relatives to the corps. The number of so-called buls increased enormously, many of them retiring early without performing their military of other duties, and consequently they became of heavy burden on the treasury. Previously, they had resided only in Istanbul, Edirne and intermediate villages. They now resided throughout the empire, often exercising dictatorial powers of a region.

The swollen number of buls, together with a decline in blass, humayan lands [see KEASSA], which had either passed to enemies or else been allocated as paskmakill, walf wire's blass, meant a vastly increased burden of taxation to the re'aya. The sale of tax-collecting rights exacerbated the situation. Excessive taxation had impoverished the re'aya and this, in turn, led to insufficient treasury revenue. This led to military weakness which undermined the authority of the sultan. The result internal dissension and military defeat.

Koci Beg's remedy for the was as servative as his analysis of its causes: a return to the imagined perfections of the era before Sulayman 1. Bribery should be removed by restoring the independence of the Grand Vizier and neutralising the influence of Palace favourites in affairs of state; by keeping begs in their posts without fear of unjust dismissal; by dismissing ignorant 'ulema' and replacing them with learned men; by distributing timars only to men worthy to receive them, and ceasing the practice of distributing timer-lands as pashmabilb, wast or other form of tenure. Only beglerbegis should appoint timariots. They should make a roll-call (voklama) of present incumbents in their provinces (eydlet), renewing the berais of qualified timariots and removing the unqualified. Kuls with high pay should receive sefenses, thus creating a warrior's fief (\$446) and removing burden from the treasury. Able-bodied timariots should serve = campaigns with the number of retainers (diebela) which the old admins specify. This would produce 400,000 to 500,000 troops and provide a counterbalance to the influence of the saplaulus. Similarly, all innovations (bid'at) in the lanissary and other kabikulu corps which contravene the old handes should be abolished. There should be a graduation (films) from the Palace once in every seven years, and at these times the captionia corps should receive only enough recruits to replace dead members. Officers (dabit) of these corps should never be unjustly deposed.

Koči Beg's second risale is a straightforward description of various state institutions and governmental practices, interspersed with political maxims. Its purpose was to guide the and totally inexperienced sultan, Ibrahim, and its language, accordance with that ruler's mental capacities, is extremely simple (see M. Tayylb Gökbügin, IA, art. Ibrahim, are insimile).

KODJA ELI, modern Turkish Kocaeli: a region between the Black Sea and the Sea of Marmara. covering a part of ancient Bithynia with its centre Izmid [a.v.] (ancient Nicomedia), and the name of a sandiak of the Ottoman empire. Nowadays it is the name of province (il) of Turkey (population 385,408 in 1970), with Izmit as its capital. In 1954 the eastern part of the province Kocaell was sepatated to form the Sakarya (Sakarya) province with its capital Adapasan. Since this administrative reform, Kocaell has comprised the itess (formerly tada's) of (famit-) Merkez, Gebze, Kandıra, Gölçük (before 1936, Degirmendere) and Karamürsel. The province is traversed by the main route of communication between Istanbul and Ankara and the East, nowadays by the Anatolian railway (since 1873) and the motorway No. r/Es. Modern industries have been founded along the Gulf of Izmit (Izmit Körlezi) in the Republican period, complementing the already existing ones (e.g. the Imperial Ottoman tertile and carpet factory at Hereke). Thanks the large forests prevailing in the region (in 1970) 42,1 % of the was still considered as forestland), the province became a more for shipbuilding already in ancient times (cf. the mediaeval type of (rowing- and sailing) transport vestel, Caramusali, Turkish Karamürzel, called after mil port of Kayamürsell.

The Gulf of Izmit was a base area of the Ottoman navy from the 10th/16th century onwards. A dockyard and nava! establishment existed at Izmit till World War I. Since 1926 Gölcük has been one of the main bases of the modern Turkish navy.

Kodia Eli was one of the earliest Ottoman sandjaks, formed during the raign of Orkhan in the years 1327-38. Its name is derived from that of see of the ghari leaders of the first two Ottoman rulers Akéakodja, who with Kara Mürsel and Konur Alp first raided this then Byzantine region, and was buried Baba Tepe near Kandira in 728/1327. During the Ottoman interregnum 1402-13 the Byzantines were able to regain their territory, but in 1419 Timurtashoghlu Umur Beg reconquered Kodia Eli definitively for the Ottoman Sultan. Before the end of the roth/r6th century, the sandjak became part of the endlet of the kapudan pasks and its sandiak-begi a commander of a naval squadron. In 1867, within the framework of the new system of provincial administration, Kodja Eli was incorporated in the wildyes of Khudawendigar [q.v.]. From 1888 till the end of the Ottoman period it became the independent sandjak (mutasarrifilk) of izmld, with the 5 hada's of Adapazari, Kandita, Geyve, Karamursel and Izmid-Merkez. In co. 1890, V. Crinet (La Tuequie d'Asie, Paris 1894, iv. 303 ff., 371) estimated the population of the rangial at 223,000, of which 129,000 Muslims, 49,000 Armenians, 41,000 Greeks and 2,500 Jews.

ECHAT (v., "mountains"), a directly-administered District of what was the North West Frontier Province of British India and of Pakistan till 1955, covering 2,694 sq. miles and with its administrative centre at the town of Köhät. The District is bounded by the Khyber Agency [see KHAYBAR Pass] on the north, by the Kurram and North Wāziristām Agencies in the west, by the Bannū District [q.v.] on the south, and by the Indua River and the 'Isā Khāt laḥṣtl of the Pandiāb the east.

The terrain of the District is that of a rugged tableland lying at an average of 2,000 ft., with low ranges of arid hills which rise to 3,000-4,000 ft., and with more fertile valley bottoms in which sericulture. sometimes by irrigation, is possible; the climate shows considerable variations in temperature and rainfall averages only 15 inches per annum. The region is connected with the Kabul River valley and the Khyber region by the Köhât Pass, called locally the Darra (2,866 ff.), whose control was in British times much disputed by the local Afridi tribesmen; the area round the Pass, a strip of unadministered territory, has for long been the site of a flourishing Afridi gun-making factory. An important commodity of the Teri village neighbourhood of Köhät has always been rock salt, of which there are extensive deposits at Bahadur Khēl; until recent years, these were owned by the Names it titular head of the Khatak tribes. The Government of India's increase of the tax on Köhāt salt in 1896 to m level with that on cis-ladus salt was one of the pretexts for the tribal rising along the Frontier in 1897.

The population of the District is essentially Pathan, mainly of the Bangash in the western parts, the Ehatak [q.c.] in the eastern tracts down to the Indus shores, the Orakzay and Adam Khči Afridis in the northern parts, and the Nilkels along the Indus in the south of the district; of these, the Bangash speak the northeastern = "hard" variety of Pashto, and the Khatak and Nilkel the southwestern or "soft" one [see argal**, lii. The Pashto language).

The Khatak seem to have moved into Köhät from the west in the 8th/14th century, whilst the Bangash entered the district in the following century as allies of the Khatak against the Crakzay. The Mughal adventurer Bäbur [q.v.] made his first foray into India in 910/1505 down the Kabul River valley to Peshāwar, then into Köhät and Bannū and through the Deradjāat to the Indus; he scattered the local Pathans, and built towers of skulls of the slain in Köhāt (Bābus-ndsuz, tr. A. S. Beveridge, 230-2). In 1029/1630 the Mughal Emperor Diahāngār's general Mahābat Khān [q.v.] campaigned in Köhāt against the Rōshaniyya sectaries [q.v.] amengst the local Pathans.

In the early 19th century, Peghäwar, Köhät, Bannü and the Deradiät came under the centrol of the Sikh ruler of the Pandiäb, Randiit Singh, although Sikh authority was contested by the local tribes. The British envoy Mountstuart Elphinstone passed through Köhät in early 1809 on his way to the Durräni court in Käbul, and waxed lyrical about the green valleys and the fruits of "Cohaut" (As account of the kingdom of Caubul", London 1842, i, 49 ff., ii, 30-1). After the downfall of the Sikh empire

and the annexation of the Pandidb | 1840, the British penetrated through the low Knatak hills and Köhat to the Kurram River valley at Thal. The regions of Peshawar, Köhāt and Hazāra then briefly placed directly under the Board of Administration for the Pandjab. In 1876 these three northern regions of the Frontier were formed into the Commissionership of Peshawar. Then after the frontier tribal wars of the late 1890s and in the Vicerovalty of Lord Curson, the North West Frontier Province was formed in 1902 as an administrative unit separate from the Pandiab, with Köhat as one of its four trans-Indus districts: Köhät District itself comprised the three taksils of Köhät, Terl and Hangu, A road was made in 1901-2 connecting Peshawar and Köhat via the Pass, and a narrowgauge railway was also begun to connect Khushhalgach on the Indus with Kohat town, Hangu and Thal, thereby stimulating local trade with Tīrāh and Kābul. Kohāt town had already become an important garrison centre from which control was exercised over the turbulent Pathan tribes, and Sir Louis Cavagnari, who for more than a decade had been Deputy Commissioner in Köhät, had built himself a fine official residence there.

During the inter-war period, Köhåt was, with Peshawar, Banno and other parts of the Frontier, the scene of disturbances caused by the political movement of the Khidmatgårån or "Redshirts" of Abd al-Ghaffar Khan. The postpartition position has not been greatly altered since British days. The District continues to be divided into three tabsils, with the names Köhat, Hangu and Karak; Köhat town is an important military base for the Pakistan Army and there is also a military airfield. A plan for a barrage across the Toi River, the "Banda Tanda Dam", in order to harness flood waters, has long been mooted. The 1961 census enumerated a total population for the District, including the attached tribal areas in the north, of 627,795, a 45 % increase since 1951, with a population for Köhät town and cantonment of 75,000.

(C. E. Bosworth) AL-KÖHEN AL-'ATTÄR, ARU 'L-MURÂ (DÂWÛD) B. ABI NASR B. HAFFÄZ AL-ISRÄTLI AL-HÄRÖNI, Jewish pharmacist who in 658/1260 wrote in Cairo "for himself and his son" a pharmacopoeia under the title (changing slightly in the manuscripts) Minhādi al dukhān wa-dustur al-a'yān fi tarkib aladwiya al-nafi'a li'l-abdan, which became very widely spread. About his life almost nothing is known, and his relation to Abu Mansur Sulayman b. Haffaz al-Köhen, the author of a muntakhab from which al-Köhen al-'Attar quotes, is uncertain (see Steinschneider, Die arabische Literatur der Juden, 233 f.; M. Plessner, in Oriens xxiii-xxiv [1970-1], 454. The Minhadi has the following 25 chapters: 1. The duties of the pharmacist. 2. Drinks (ca. 2/6 of the whole work). 3. Concentrated fruit-syrups, 4. Preserved fruits. 5. Pastes, 6. Electuaries. 7. Powder, 8. Lozenges. 9. Remedies to be sucked. 10. Pills. 11. "Hallowed substances" (iváradjál). 12. Eyepowder. 13. Eye-salves. 14. Pomades. 15. Oils, etc. 16. Plaster. 17. Tooth-powder. 18. Suppositories. 19. Compresses, settings, sternutatories. 20. Substitutive drugs. 21. List of simple drugs. 22. Apothecaries' measures and weights. 23. Admonitions for a sensible way of living. 24. Professional instructions. 25. Test of the usefulness of the simple and the composite drugs. At the end, the author promises a monograph mi generally-known simple drugs, which was probably not written.

Thus the work is a typical dispensatorium (akrābādain, from Greek youghboy via Syriac graphidain), in which, after the Galenic example, the composite drugs (al-aduiya al-merakkaba) are grouped according to classes (xxrà yévn). In the present work, the simple drugs (al-admiva al-admiva al-mufrada). usually dealt with in separate works, have equally been treated from certain view-points in chapters 21, 24 and 25. The recipes are partly of the author himself, but the majority from sources mentioned by name. Most conspicious among the latter are the Duniar al-bimaristani of Ibn Abi 'l-Bayan (q.v.), teacher and somewhat older contemporary of al-Köhen al-'Attar, and the Irihad of Ibn Djumay' al-Isra'll, another pupil of Ibn Abi 'l-Bayan, In the introduction, al-Köhen claims to be the first to compose an extended pharmacopeia especially for chemists; the earlier ones, Ibn Abi 'l-Bayan's book included, and said to have been written for physicians in the traditional manner. This specialisation has possibly been one of the reasons for the wide dissemination of the work, a second one apparently being the very conveniently arranged survey of the current measures and weights (ch. 22), which must have met a generally feit need. For m officiallyregulated standard did not exist, and the units of measures, so countlessly varying, we overseen with more or less was by the multant only. A third reason for the popularity of the work may have been its useful indications for the chemist's profession (purchase, efficient storage, cleaning, protection of the drugs against blight etc., chapter 24). Finally, the abundant use of popular Arabo-Egyptian names of drugs made the work easily accessible to every

KONARRY (usual orthography, Conakry), capi-

tal of the Republic of Guinea.

With its site fixed in the tables of latitudes of Ptolemy, Konskry has only been regularly inhabited since the second half of the 18th century. It is situated on the west coast of Africa in lat. 9° 31' N. and long, 13° 43° W., and occupies three distinct natural sites: part of the Kaloum peninsula, the island of Tumbo and the archipelago of Loos. Manga Damba, chief of the Susu people, founded Kaporo there in 1780, after having subjugated the Baga and the Mandenyi. The Loos islands, originally occupied by the Portuguese (Los Idolhos), were occupied by Britain in 1848. After the "Mulatto War" of x865-70, there were four villages, sc. Kaporo, Bulbinet, Tumbo and Camayonno, which were placed together the time of the first French post's foundation, when the corvette "Goëland" passed there on s6 January 1887. On 1 August 1889, Conakry became the capital of the colony of the Rivières du Sud and Dependencies, and then in 1890 of French Guines, of which Ballay was the first governor.

It became the departure-point for roads into the interior after 1895, and then for the Conskry-Niger railway completed in 1914, and the town and its port enjoyed a rapid development facilitated by the filling-in of the Tumbo channel. Its vitality was shown by the of population: 13,000 in 1899, 28,000 in 1958 and 250,000 in 1975. The Loos islands were attached to it in 1904, and also the convict settlement of Potoba, where the Wali of Gumba, Tierno Aliou, leader of the revolt of the Houndons, died in 1912.

It became a Commune Mixte in 1913, with full powers in 1953, and then on 2 October 1958 Conakry became the capital of the Republic of Guinea. It has 1.853 m. of docks, to bectares of platforms, a volume of traffic amounting to a 1/2 million tonnes and an airport with a 3,300 m. runway; it is thus a lively industrial centre. Despite the ending to the mining of Kaloum's iron deposits in 1966 and the slackening of the exploitation of the bauxite of Kassa, it remains the main outlet of the Fria Company, and also possesses many factories, including for tobacco and matches, furniture, tanning, shoes, plastics, brewing, fruit juice, etc. Since 1963 Conskry has had the Gamal Abdel Nasser Polytechnic Institute, with seven faculties, including one for medicine, and it also has several Écoles Nationales (Arts and Crafts, Meteorology, etc.).

The majority of the population is Muslim (71 % in 1955). The conversion III the Baga and Susu was achieved in the beginning of the 19th century by the Yattara family, the Diulas. Christianity came with the Anglican mission at Fotoba in 1864, and Catholic mission, which built the cathedral of St. Mary, in 1890. On 18 October 1897 Conskry became an Apostolic prefecture, on 18 April 1920 an Apostolic vicariate, and on 15 September 1955 an Archidiocea. The diocese contained 13,400 Roman Catholics in 1965, two-thirds of these in the capital. The strength M Islam is easily discernible from these figures. The main faribe there remains that of the Kādiriyya, which resisted the penetration of the Tidianiyya in the 19th century under the double influence of the sawing of Touba and of the Seneguiese auxiliary troops of the French who adopted Muridism. These last built a mosque on the Island of Tumbo, still called the Senegalese mosque.

Despite the efforts of Malinka scholars, Wahhabiam has remained only embryonic. One should further note a certain persistent strain of animism among the Baga population, characterised till 1963 by the oult of the tree of Bassicole, on the isthmus of Turubo, cut down then to allow the building of the People's Palace at the expense of the People's

Republic of China.

(J. P. ALATA) KONG, corruption of Kpon, more of a place in the northern part of the Ivory Coast me to the watershed between the basins of the Comoé and that of the Nzi which flows into the Bandama. Kpon me founded in a very ancient period by the Senoulo of the Falafala trike who to this day have retained their predominant rights over the land, while playing now only an unobtrusive role.

Kong is an illustration of the advance of the Malinka towards the south and towards the regions producing gold and kola. This immigration took place in the period following the 16th century and these Dioula who supposedly came from Macha founded Bobo Dioulasso on their way. Having established themselves in Kong they were reinforced at the beginning of the 18th century by contingents of Schondji Malinka pagans, with whose help they able to police the trade-routes. There can be no doubt that it was at the end of the 18th century that a Malinka chief, Sekou Ouattara, whose family was linked with the inhabitants of Boron on the Bandama, united a group of Malinka families coming from the north, From Macina he passed through Dé Bandiagara, Téwélé near Bobo Dionlasso, then Teninguera near Kong where he ousted a red-baired chieftain named Lassiré Gombélé, taking his place and establishing Islam. Lassiré Gombélé would no doubt have been # Mandé, ruling over the autochthonous Falsfala and the Paralha (Koulango).

Sekou Ouattara established his twelve firmly in the villages that when his brother Famarha attempted to gain power, the resistance offered by the men ferced him to leave and esettle in Bobo Dioulasso, opening a long series of quarrels between the two cities.

From the city of Kong the power of this Diouls. aristocracy spread throughout the neighbouring country, largely as a result of the superiority of their cavairy. To assure themselves of a supply of remounts, they founded on the Bani the village of So fara (stallions).

While the children of Sekou Ouattara various appanages, the sixth son, Sambakari, attempted to conquer Lobi and spent several years fighting interminable campaigns against the Léa, the Teguessié and the Dian. The authority of the Dioula over the land of Lobi seems to have been purely nominal.

Among campaigns involving external powers, one was repulsed by the Tondion of Biton Kouloubali in 1725. Also, the Athanti army which, according to Bowdich, had reached as far as Kong, was defeated there and its leader injured by a lance-blow at a place which is still pointed out in the vicinity of the town.

Abo (1720-45), the ruler of the Abron, was pursued by the Ashanti king Opokou Quaré and took refuge in Kong, where the sovereign's mother handed him over to the Ashanti who put him to death.

With its control over the gold and kola routes, in city of Kong took on greater and greater importance, and the authority of the sovereigns extended over the whole of the land from the Comoé to the Marahoué and, towards the Djimini in the south, where the Djoula had constructed terraced dwellings in the Sudanese style. Five mosques with twin pyramid-shaped minarets dominated the quarters of the city.

The military power of Kong depended contingents of pagan soldiers. But commercial prosperity induced the more gifted elements to turn away from military pursuits, to such an extent that when the Pallaka pagans rabelled and closed their territory to caravan traffic, the punitive expeditions mounted by Kong came to nothing.

Although Mungo Park had heard tell of Kong, it was Binger who, on 20 February 1888, arrived in the town and stayed there until the 14th March. In December of the same year, Treich-Laplène made the sovereign of that time, Karamoko Oule Wattara, sign a treaty placing Kong under French protection. This treaty was signed on 10 January 1889 in the presence of Binger, who had occasion to return to Kong in 1892.

Two years later, Kong was visited by Captain Marchand, Kpaki Bo {= "feller of the forest"), who had heard of the threats made by Samori against Kong. It was then that Lt.-Colonel Monteil recalled to the area; he had been preparing to attempt a regrouping of forces on IIII Upper Nile. Mustering at Grand Bassam in August 1894, the column encountered the utmost difficulties in making progress. Joining battle with the armies of Samori in March 1895, it was forced to retreat and on 15 May 1897, Samori razed the city to the ground and massacred those of the inhabitants who had not succeeded in escaping towards Bobo-Dioulasso. Only the houses of the Falsiala were spared.

In January 1898, a French detachment established a post there, which was soon laid under siege but was relieved by Commandant Caudreller. With Samori captured, and peacore-established, the French administration invited the refugees to return. Some accepted, but the majority remained in Bobo Dioulusso. Kong was never to regain Its former eminence. It was to remain a mere regional capital with some 3,000 inhabitants, and an important centre of Muslim proselytism.

(R. Cornevin)

KONYA (Arabic and Turkish orthography, Kuniya), known in antiquity as Iconium, important town lying in the edge of the Anatolian plateau, on a diagonal line connecting the Dardanelles with the Taurus passes leading into Syrie.

z. History.

Konya was, during we centuries of Arab invasion, a Byzantine military base which the attackers seem for this reason to have more or less deliberately avoided and circumvented, in preference either for Tarsus [see TARSUS] to the south or especially for Cappadocia by the northern routes; this would to explain the fact that the town is seldom mentioned in military histories. It is probable, however, that Konya, like other towns, had suffered previously in the Persian invasion, and that it occupied only a section of its former territory. It is difficult to describe with certainty its history in a period for which no archaeological investigation has been performed, but the common and widespread re-use of older materials. in the Saldjük monuments would seem to indicate that many buildings were in rulas and the town only partially reconstructed. It reappears, however, in m better light at the time of the Turkish invasions of the 5th/11th century and at the time of the Crusaders who passed that away in 1007. The latter found serviceable fortifications there, but able to derive benefit from the gardens in the vicinity of the town.

It was the Saiditk regime which marked the zenith of the history of Konya. The site, well irrigated in contrast to the neighbouring desert, commanded the southern route at a time when the Dānishmendids [q.v.] denied the Saldjüks access to the northern route to the Dardanelles, and it must have found favour with the new masters when they became aware of the need for a secure political and military base as a focus for their still semi-nomadic peoples. The real development of the town dates from the reign of Mas'ud (512-50/2128-55), who resolving to make Konya a capital, built a mosque there and other monuments which his must have completed. It was already a city of note when in 1190 the German army raised in Cologne by Frederick Barbarossa passed through it. The progressive unification of Turkish Asia Minor under the rule of the Saldioles evidently contributed to the prosperity of the capital. Besides the principal mosque, from about 1190 onwards the city possessed a number of smaller ones, as well as madrasas, khānkāhs (q.rv.), flourishing markets and reconstructed ramparts. The development of the power of the sultans in the first half of the 7th/12th century was also reflected in the town, where apparently social hierarchy judged by importance and height of houses rather than by the allocation of separate quarters to the various ethnic groups. In Konya there were evidently Greeks (with their monastery, reputedly dedicated to Plato), Armenians and some Jews; the records make few references to Turks, a term reserved in this context for the Turcomans of the plains, but rather speak of Muslims, a designation normally embracing both indigenous Turks, who In a town of this kind were largely Iranised, and Iranian immigrants, arriving especially in the period following the Kh sarasmian and Mongol invasions. who, besides their involvement in craftsmanahip, were sometimes promoted to the most important clvif posts of the regime. Three social groups deserve special attention, ideish, the akkis and the 454 KONYA

Suffs or dervishes. The ideish were a kind of militia recruited among the half-breed sons of indigenous fathers converted to Islam and married to Turkish women: the abhis [a.v.] were a Turkish form of the Muslim futures [a.v.], and were to play an important role especially in the period of the Mongols and their immediate successors; as for the Sufia, there were a number of different orders, but, from the middle of the 7th/13th century the prestige of Dialal al-Dia Rumi must have drawn numerous disciples to him. although this was not an organised order (that of the Mevlevis or Mawlawiyya, from Mevlana/Mawlana) until the 8th/14th century. Naturally, Konya also had a military garrison, composed to a large extent of slaves of Byzantine stock captured on the northwestern marches of the kingdom. The sultans lived in the palaces which they had built in Konva and the surrounding area. The ramparts of the town had been extended and strengthened in the time of the sultan 'Ala' al-Din Kay Kubad [q.v.] with the compulsory co-operation ill the senior amirs of the region. The buildings erected in this period are studied below, but the abundance and importance of the mosques, madruses, Addnedds, hospitals, hhans/caravanserals, etc. testify to the considerable development of the Saldiuk capital, which the present-day remains continue to evoke, in moriginal and compelling style.

The progressive establishment of Mongol protectorate over Saldick Anatolia in the second half of the 7th/13th century was naturally prejudicial in the importance of Konya, although in a slow and partial fashion. The rivalry between the brother sultans 'Izz al-Din Kayka'6s and Rukn al-Din Kilidi Arsian represented in fact the struggle between the partisans of collaboration with the Mongols, the naturally dominant force in eastern Asia Minor beyond Kayseri, and the partisans of resistance, whose headquarters was at Konya and who relied to a large extent me the Turcomans of the southern and western frontiers. The decline of central authority was accompanied by a boost to the prestige of peripheral Turcoman principalities in such a way that centres of political activity, etc. were transferred to new regions, to the detriment of Konya in particular. The episode which marked this evolution for the first time was the temporary occupation of Konya in 675-7/1277-8 by the Karamanids [see KARAMÁN-OGHULLARI] of the western Taurus, who installed there a bogus Saldiük known by the name of Djimri. Their independent government survived however until 713/1313; but in that year it was definitively annexed, although the Karamanida did not me their capital, henceforward to be situated at Laranda/Karaman [see LARANDA]. The cultural and religious importance of the town and the relative importance of its population ensured, however, that it retained a certain vitality, as is attested by a number of buildings and pious foundations erected by Karamanid princes and dignitaries. Once occupied by Bayezid Yildirim, the town definitively angexed to the Ottoman state, together with the remainder of the Karamanid state, in 860/ 1475, and Ottoman documentary archives give evidence that wash and Saldjük III Karamanid institutions were in general maintained there. Naturally in this vast empire, far removed from III the important areas, Konya could no longer be more than a provincial centre. The fact that it was under its walls that the Ottoman army of Reshid Pasha was crushed by the Egyptian army of Ibrahim Pasha, the of Muhammad 'AE, at the end of 1832, proves that the town could still occasionally play a strategic role.

A number of travellers have visited and briefly described Konya. One of the most valuable accounts is that of Henri de Laborde, who has left us plans of the town as it was in 1828, a period in which many buildings today in ruins were still standing. The population of the town, which in the time of Culnet (end of the 19th century), was about 50,000, passed the 100,000 mark in the middle of this century [119,841 in 1960] and has continued to increase slowly since then.

Bibliography: An exhaustive bibliography of the geographers, travellers and historians was given in 1954 by Besim Darkot in his IA art. a.v. The most recent works include especially those of Ismail Hakki Konyah, Konya tariha, Konya 1963, and Mehmet Ünder, Meviana sahri Konya, Konya 1971. See also Ci. Cahen. Pra-Ottoman Turkey, London 1968; Osman Turan, Selçaklular zamanında Türkiye, 1971; S. Vryunis Jr., The decline of medicul Hellenism in Asia Minor, Berkeley and Los Angeles 1971; E. Elckhoff, Priederick Barbarossa im Orieni, 1977; Faruk Sümer, art. Karamán-oghullant. (Cl., Camen)

a. Monuments.

There some eighty monuments surviving in Konya, but many heavily restored that only fragments decoration survive of the first foundation. An example is the Hoca Hasan Mescid, ca. 1200. Major buildings lost but recorded include the bedesten. The number of houses and honais dating from the 18th to the 20th centuries is declining rapidly, but the private Koyunoğlu Museum survives. A study of relative documents made by f. H. Konyalı, Konya tarihi, Konya 1963, and of caranics by M. Meinecke, Fayencelekorationen seldschukischer Sahralbauten in Kleinassen, Tübingen 1976. His datings me here accepted unless otherwise stated, while an asterisk indicates buildings dated by inscriptions.

Walls and palaces. The walls were destroyed within living memory. C. Texier, Asia Mineura. Paris 1882, and others recorded the wealth of antique and Saldjök decoration theorporated in them, especially in the vicinity of the 108 towers, including fabulous beasts, a decapitated Hercules and extensive verses, all of which were gilded. The grandeur of the city is confirmed by the rumed kiosk of Killgi Antian II (1155-92), which was once square chamber clad in ceramics with balconies carried on large consoles above a vaulted ball. Illustrated in F. Sarre, Der Kiosk von Konya, Berlin 1936, it is situated in the citadel area which has yet to be excavated in depth and where such remains of the kale menist are attributed by Konyah to 618/1221, although it was founded in 569/1273.

Masques and complexes. Adjacent is the Alaeddin Cami begun by Kaykā'ūs I [q.v.]. The consequences of frequent repairs are as important as the damage they mask. The area immediately round the misrdb is the oldest dated by the inscription to Sultān Mas'ūd on the outstanding misrdb, co. 1155. The mass half of the prayer hall was completed in 617/1220° and the east pillared hall was added in 1235 when the misrdb (its heart mutilated irreparably) in 100 typical Anatolia ceramic manner was added. Among inscribed names are those of Ustād kiādidīl Mengubirti (reading provisional) al-Khilātī (on 100 misbor), Muḥammad b. Khawlān of Damascus, an overseer, and of Atabeg Ayāz, the official in charge of work 1219-20.

KONYA 255

Contiguous with the enlarged mosque and raw entered from it is the duodecagonal there named after Kilidi Arslan and dated 626-17/1219-22g. The canotaphs are covered in white inscriptions — deep cobalt blue grounds. Except for Kaykā'ūs I, buried at Sivas, from 1292 cowards this —— the mausoleum

of the dynasty.

Externally, the courtyard wall is monumental. with two marble portals in a style developed from that of 12th century Zangid Damascus. The Iplikci Cami, 1220-10, was first rebuilt in 713/1112*, but the milerdo survived. The central aisle has three domes, and the three on each side are vaulted. The mosque is now the museum. The Larende or Sahin Ata Cami, 656/1258*, has lost its second brick minaret in the Iranian or Central Asian style. The stelactite porch, incorporating detritus from Christian monuments, is 13th century workmanship at its apogee. which was increasingly heavy and flamboyant. The fine falence militab and semi-domed issin survived rebuilding. It is united with the khanagah (of the four-inda type retaining some original decoration) by the family tomb in a manner suggestive of ancestor worship. This mausoleum is of the domed town type with a crypt, where the cenotaphs retain some of their faiencework. The inscription on the mosque to the master Kalûk b. 'Abd Allah (reading provisional) makes this his only dated building. The Sadreddin Konevi Caml, 673/1274-5*, has lost two deeply-carved shutters to the Tark ve Islam Eserleri Museum, Istanbul.

Kaykubád I [q.v.], as patron of Djalál al-Din Rum! [q.v.], created Konya's greatest spiritual memorial, which is expressed materially as the Mevlevi complex and museum, to which the mosque of Sellm II is related. The takks criginated in 628/1211 (Meinecke, 342; Konyah, 630), but the earliest iman which contains the cenotaph of the poet is dated 672/1273-4. Its scalloped dome was-recovered in Kutahya tiles externally in 1818, 1909 and 1949 (Konyali, 654) and the wooden cenotaph, 674/1277, completely covered in inscriptions, in hidden under the gold embroidered velvet cloth donated by 'Abd Hamid II. A second dome was built over the tombs of the successors of the Mewlana, but the complex is largely 16th century in date. Bayazid II restored the mausoleums and added three domed units together with a typical Ottoman minaret in 910/1504. while Sellm I installed the garden fountain, or8/1512. Süleyman I rebuilt the mardied and samá-kidna, 973/1565, and Selim II the 'imard, now destroyed. The cells of Murad III were transformed in the 19th century. Important repairs mee effected by Murid IV, 1044/1634 and 1048/1650, and by Mehemmed IV, 1060/1650. Four typical Ottoman turbes in the garden court are dated #934/2527, Khürrem Pasha; 981-2/1573-4, Sinan Pasha; 994/1585, daughters of Kucuk Murad Pasha; 1006/1597, Shaykh Khalif. The museum houses textiles and other treasures of the order which is active again. The Selimiye Cami, begun by Süleyman I and completed by Selim II, has a seven-domed portion carried on six Byzantine limestone columns. Its plan is based on that of the Fatili mosque in Istanbul, but without a milirab apse. Erroneously attributed to Sinan, it is typical of the stark style that preceded his appointment as mi'mdr bush!. Beside the mosque is the library of Yusuf Agha, 1209/1794. Pir Paşa Cami, ca. 926/1519. is a typical Ottoman mosque, but with a turbe incorporated into a corner of the portico. Serefeddin Cami me founded 1220-30, rebuilt by the Karamanoghlu fbråhim II, 848/2445, and transformed in

roa6/1636 into an imitation of Killdi 'All Pasha mosque, Tophane, Istanbul. Fragments of 13th century ceramic is be seen in the mortar, and there is patches of brickwork amid the ashlar. Heavily restored, 1299/1881, the interior painting is in the 19th century fairground manner and includes a typical folk art representation of the Süleymaniye Cami, Istanbul, over the mibrāb. Kapi Cami, 1060/1650 (Konyah, 429), its light, open style to the repairs in 1226/1812. Abdillaziz Cami, minbar 1293/1876; also replaces is older building, and its florid École des Beaux-Arts appearance is likely to be the work of Sarkis Balyan of the 19th century dynasty of court architects.

Colleges or medicases. The Sircali Medicase, 640/1242-3, is a partially-ruined two-funit type. The outstanding faience militable is set in an luda which retains a quantity of its decor. The carving of the portal is also notable. Inscriptions include those to the founder Badr al-Din Muslib and the master Mulam-

mad b. Muhammad b. 'Uthman al-Tüst.

The Karatay Medrese, 649/1251-2", ruined, but retaining its famous marble portal, which was an Anatolian variant of the Damascus style (see Alaeddin Cami), and also the starscape dome with coulus over the pool of the court-hall supported by deep fan-shaped tiled pendentives. This monument aow houses a collection of Saldjük ceramics. Only the feels remains of the Kücük Karatay Medrese nearby, 646/1248-9.

The Ince Minareli Medrese, co. 663/1264-5, built by Katilk (Költig) b. 'Abd Allah, heavily-restored, lost two-thirds of its brick minaret in 1317/2899. It was a foil to the portal's giant inscriptive bands developed out of simple established decorative forms more appropriate to wood. Overweighted decoration which masks structure was the Achillem hasf of

later Saldiük architecture.

Masgiids. These include Besarebey Mescid, 6x0/2223 (inscription disputed), and Abdülaziz Mescid, 622/ 1214-5, both rebuilt with fragments of original ceramics remaining, as with Sekerfurus Mescid. 617/1220*. The Tas (Stone) or Haci Ferruh Mescid. 612/1215 (Konyali, 164), has an inscription to the master Ramadán and idiosyncratic carved stone porch and mikráb. The Hatuniye Mescid, 627/2229-30°, retains most of its thick Guduk Minarct, built of glazed brick. The Bulgur Tekke Mescid 1240-50, still has its plain, hexagonal dado tiles, - does the Karatay Mescid, 646/1248-9, but the Sircali Mescid of the same date retains its brick minaret and its renowned mihrab. The milerab of the Beybekim Mescid, 1270-80, is now in the Steatliche Museum (Islamische Museum, Cat. No. 81), Berlin, Both the Kararslan and the Tahir III Zühre Mescids, ca. 1280. have restored mikraba.

Of many later examples, the Kadi Mitrsel Mescid, \$12/1409, has lost its dependencies which once were distinctively Karamanid in style, including the miletab.

Lesser monuments. The Hasbey Darülhutian, 824/ 1421° built by Karamānoghlu Mehmed Bey, has m traditional ceramic mihrāb. The marble panels have fallen from the façade below the sixteen-ribbed dome. A rare, extant namazadh is the Musalla, 948/1541.

Among several, a typical twos type files is the Gömec Hatun, 674-84/1275-85, built of brick above ashlar with an ornamental tile façade and crenellations. It has two triangular buttresses and double stairs raised over the sepulchral vault. Fakidede Türbe, 824-66/1471-56, built of stone is transitional in style.

Of the fountains, Kapu Çeşme rebuilt in Ottoman times has claim to Saldjok origins. A standard Ottoman example is the Akçeşme, 936/1555*. The Ceşme incorporates a Byzantine plaque depicting two fishes.

Monuments in the vicinity. The large, pillared mosque at Meram of Karamānoghiu Mehmed Bey, 805/ 1402*, stands beside the kammām of Ibrāhim Bey, 837/1424*, which is fed by the time springs.

Local mid-13th century caravanserais each with portal, court and hall and all partially ruined, are Kandeznir (Vazzōnū) Han, 603/1206°; Kızıl Ören Han, cs. 604/1207; Dokuzun Han, 607/1210°; Altunba (Altunapa) Han, early 13th century. The Zazadin (Sadaddin) Han, 633/1233-6°, is in better repair and noteworthy for the extensive re-use of classical material and early Christian tombstones.

(G. GOODWIN)

KOPAK [see sikka]. KOPRÜ [see vezir köprü].

KOPRU HIŞARÎ "fortress of the bridge", a village in the Ottoman province of Khudāwendigār [q.s.] in northwestern Anatolia, and situated in the Curük Şū river near Yelishehir. It owes its historical fame to its being the site of a Byzantine fortress taken in 688/1289 by 'Othmān b. Ertoghrul, chief of the 'Othmānil group of Türkmenn based on Eskishehir, after the previous capture of Biledjik and during the course of the extension of Ottoman influence within the province towards Bursa [q.o.]: cf. H. A. Gibbons, The foundation of the Ostoman suppire, Oxford 1916, 32-3.

Bibliography: Sāmi Bey, Kāmās al-a'lām, v. 3906; Von Hammer, Histoire, i, 87-9; Huart, Konia, la ville des derriches tourneurs, Pacis 1897, 18 (illustr. of bridge). (CL. HUART)

KOPRULU, a family of Ottoman viziers who rose to prominence in the latter half of the rith/
zyth century and dominated Ottoman life for much of that period, bringing a halt for some time to the decline of the empire, instituting internal reforms and gaining new conquests. The name derives from the close association of the founder of the family, Köprülu Mehmed Pasha, with the town of Köprüly, it (then in the sangles) of Amasya), which, in turn, was later called Vestr-Köprü through its as-

sociation with the family (and to distinguish it from the near-by Tash Köprü). That Mehmed Pasha was born in Albania, however, is clearly shown by his eabfaya, drawn up in Edirne in Radiab 1070/March 1660, in his own lifetime, in which it is stated that his homeland was the village called Rudnik, attached to the hadd? of Arnawut Belgrade (Berat). His first visit to Köprü appears to have occurred only when he departed the palace service to go there a siphil, but he thereafter settled there, marrying and establishing a home to which he repaired when out of office.

The leading members of the Köprülü family are

the following:

 Köprülü Mehmed Pasha (?986-1072/?1578-1661), the Ottoman Grand Vizier who gave his name to the family. If, as his contemporary, Findikilli Mehmed Agha asserts (Silāḥdār, To'righ, Istanbul 1928, i, 226), he died at the per of 86, he must have been born in ca. 986/1578 (for other estimates of Mehmed Pasha's age, Defterdar Şari Mehmed Pasha, Zubdat al-wakābis al-sOthmaniyya, Süleymaniye-Esad Efendi 2382; Rāshid, Ta'rikk, Istanbul 1282/1865, i, 6; 'Ata', Ta'ribb, Istanbul 1291-3/ 1874-5, ii, II9; Ahmed Refly, Koprülüler, Intanbul 1331/1914, 19; Uzunçarşılı, Osmanlı tarihi, iii/1, Ankara 1951, 410) in Albania (see above). Brought to Istanbul in his youth, he was taken into the palace and by 1623 was a cook in the palace kitchens. He secured the backing of Khosrew Agha [see EHOSREW PASHA, BOSNIAK], then in the Midsy-ode [q.r.], and entered first the buyuk ode, then hhazine-odust. His quarrelsomeness and disobedience led to the termination of his career within the palace, and he went out to the provinces in a ripdhi: it was thus that he first went to the town of Köpril in Anatolia where he settled and married "A" isha Khānim, the daughter of the valvode of Köprli, Yosuf Agha, from the Kayadilk diffick in Havza. During Khosrew Agha's tenure - agha of the Janissaries, Köprülü again entered his service, and when Khosrew became Grand Vizier (1037/1628) Köprillü became his treasurer (kharineder). Following Khosrew's execution (1041/1632), Köprülü served in certain provincial posts, waivode or agha, probably in or near Köprů: according to Hisseyn Husam al-Din, for example, he was sandjuly begi of Amasya for some eight months in 1044/1634-5 (Amarya ta'ribbi, iv, Istanbul 1928, 61). He subsequently came again to Istanbul where he held a variety of posts such as those of Inspector of the Guilds (Ihtisab aghasi), Inspector of the Assenal (Topkhane nastri), Commander of the Sipakin (of the alti bölük: Sipäkiler aghasi) and Commander of the Armourers (Diebedji-bashi). Taking part as sandiak begi of Corum in the siege of Baghdad (1048/1638), in which he was wounded, be became attached to the Grand Vizier Kemänkesh Kara Mustafā Pasha and was appointed Kapidillarkathadasi and, later, Mit-dhhūr. In 1053/1643-4 be held the post of sandjak-begs of Amasya a second time, for some five months. Kara Mustafa Pasha's successor, Sultan-záde Mehmed Pasha, gave Kôprůlů the governorship of Trabson with two tughs. How long he remained in that post is unknown, but he later resided for a time in Köprü and then, in 1057/ 1647, became mutesellim for the eyalet of Damasons when that province was given to the seventh kháspeki m a bashmakiik by Sultan Ibrāhim (Na'imā, Ta'rikā, lstanbul 1281-3/1864-7, iv, 243; Silābdār, i, 225). While in this post, he was ordered to campaign, acting as begierbers of Karaman, against the rebellious

will of Sivas, Warwar 'All Pasha, who was advancing on Istanbul. Having fallen prisoner to 'All Pasha in the battle which ensued near Cankirl, he was rescued by Ipshir Muştafă Pasha [q.v.], who had also been deputed to deal with 'All Pasha (1058/1648; cf. Ewliya Celebi, Seyāhat-nāme, Istanbul 1314-8/1896-1900, ii, 452). The following year Köprillii was sent against Boynu-Yarall (Boynu-Fgri) Mehmed Pasha, for whose execution an imperial rescript had been issued because of his oppression of the peasants. Köprillii avoided bloodshed by sending him a letter recommending that he immediately seek pardon from the Wâlide Sultân, which advice Boynu-Yarall Mehmed Pasha took and thus was forgiven and spared (Naºimā, iv, 459-60).

During the Grand Vizierate of Gurdin Mehmed Pasha (1061-2/1651-2), the architect Kasim Agha [q.v.], kethhuda to the Wallde Sultan, knowing of her dissatisfaction with **III** Grand Vizier, recommended Köprüit to her, but the initiative led only to Kaprillu's holding the office of hubbe all vizier for a week or so before the jealous Grand Vizler brought about his virtual banishment = sandiah begi of Köstendil (Kara Celebi-zāde 'Abd al-'Azīz, Raugat al-abras dhayli, Istanbul University TY 3272, fol. 63: Nacima, v. 178). He me later dismissed and, according to Silähdär (i, 225-6), scraped a living during this period in minor posts, suffering imprisonment for debt. While spending some time in Köprü, he met in Kütahya (February 1655) with lpshir Pasha, who was me his way to take up his appointment as Grand Vizier and who appointed him governor of Tarabulüs al-Sham. Before Köprülü could take up his post, however, Ipshir had fallen; and Köprülü, dismissed, returned to Köprü (Nafimā, vi, 22, 125). Although Käsim Agha advised the Grand Visier Süleymän Pasha to seek Köprülü's help (February 1656), Süleymän Pasha did not heed the recommendation (Nashna, vi, 142), Köprülü 📖 with the newly-appointed Grand Vizier Boynu-Yarali Mehmed Pasha in Eskishehir a few months later and with him to Istanbul; time afterward he was once more appointed governor of Tarabulus al-Sham. But as the result of efforts made his behalf with the Wälide Sultan by such as Kāsim Agha and the se'is al-hidiāb Shāmil-sāde Mehmed Efendi, Köprülil was himself proposed for the Grand Vizierate, which post he agreed to accept four conditions, which were such as to guarantee him absolute independence and freedom from interterence. The Walide Sultan accepted these conditions on oath, and the sultan appointed him the next day (a6 Dhu 'l-Ka'da 1066/15 September 1656).

Köprülü's appointment to the Grand Viziorate aroused great astonishment at first, since his career thus far had not been characterised by any great success (Mehmed Khalife, Tabrikh i Chilmdel, ed. A. Refik TOEM, supp. [1340], 44), but before long his considerable abilities came to be widely recognised. Among his first acts was to deal with the Kadi-zadeler, who, since the time of Murad IV, had been engaging in troublesome sectorian quarrels in Istanbul and who attempted to provoke such a quarrel after Köprülü had been in office only eight days. Having tried persuasion, Köprülü caused their ringleaders to be banished to Cyprus (see Katib Celebi, The balance of truth, tr. G. L. Lewis, London 1957, 132-4; NaImā, vi, 227 ff.; Silābdār, i, 57-9). Köprülü continued his efforts III bring peace and order III Istanbul. Along with causing the executions of certain individuals, among them Ablza Ahmed Pasha, accused of laxity in the defence of Bozdiv-ada which he was surrendered to the Venetlans, and the Orthodox Patriarch Partheolus III. who was accused of seditious activities, he succeeded in quelling a rebellion of the sipthi dissidents (sorbas) and purging their number (18 Rabi' I 1067/4 January 1657: for details, see Ta'rich' Ghilmani, 44; Na'ma, vi, 246 ff.; Silahdar, 4, 62 ff.).

Köprilli then set about preparations for a campaign to end the Venetian threat to the Straits and in particular mecover Bozdia-ada and Limnos. Having sent the flect out first, under the Kapudan Pasha Topal Mehmed Pasha, he himself set out, as commander-in-chief, on r Ramadan 1067/13 June 1657. The Ottomans fared badly if first in the clashes at sea, but their fortunes changed when, 19 July, a ball fired from the Anatolian shore struck the powder magazine of the flagship of the Venetian. admiral Mocenigo, destroying it and throwing the Venetian fieet into confusion (Ta'rikh-i Ghitment, 44 fl.; Nacima, vi, 279 ff.; P. Rycaut, The history of the Turkish empire from the year 1677, London t680, 54 [Mehemmed IV]. Köprülü rewarded the successful gunner and others who had fought bravely but executed mamber of high-ranking commanders held responsible for the earlier fallures. This action disquieted even his supporters in Istanbul and led to agitation for Köprillü's removal by Kara Hasanzāde Huseyn Agha, m influential member of the Janissary corps: his efforts will in vain, however (Nafimā, vi, 295 ff.). The Grand Vizier meanwhile continued his efforts to take Bozdia-ada, which goal his forces achieved on 21 Dhu 'l-Kasda 1067/ 31 August 1657 (for a letter sent by Köprülü to the Kiziar-aghasi Mehmed Agha, - Tairith-i Ghilmani, 47; for other details, - Natima, vi, 289 ff.; Silähdär, i, 69 ff.), we event which caused great joy in Istanbul. In an imperial rescript sent to Köprülü, the sultan ordered him to remain until Limnos was taken, and Köprülü's existing forces were strengthened by timariots from Bursa and other sandjaks. Having repaired, supplied and garrisoned Bozdia ada, Köprülü dispatched Topal Mehmed Pasha to Limnos. After a 60-day siege from both sea and land, the defenders surrendered the fortress on | Safar 1068/15 November 1657 on condition that in the fortress in allowed to leave with their goods.

Having countered me danger to the state by opening the Straits and recovering the two islands lost to the Venetians in his predecessor's time, Köprülü went to Edirne (25 November 1657) where he had been summoned by the sultan on account of pressing problems | Transylvania [see ERDEL]. The ambitious George Rakoczy II, prince of Transylvania since 1648, had, as a result of m agreement made with the King of Sweden in December 1656, marched against Poland with Transylvanian forces; and when III incited the begs of Wallachia and Moldavia to act with him, in defiance of the Ottomans, the imperial disks felt it necessary to take measures against him, deciding that a campaign should be undertaken, first by the Khan of the Crimea, and later under the command of the Grand Vizier (for details, 🚃 Szilágyi Sándor, Erdőly as 🚃 essakkeleti kábará, Budapest 1891, ii, 244 ff.). The begs of Wallachia and Moldavia were also replaced (N. lorga, Histoire des Romains et de la romanité orientale, Bucharest 1940, vi, 226 f.; Nacima, vi, 321 ff.). Köprülü left Edirne on 22 Ramadan 1068/ 23 June 1658 and went to Belgrade. His army strengthened by Crimean and Cossack forces, by the provincial forces from Buda and Silistria, and

by a force of 12,000 men sent by the King of Poland. Entering Transylvania, he moved first against Yanova (Kis Jenö), a key point taken in Känüni Stillcyman's time but subsequently lost, and received the surrender of the fortress = 3x August, Rákoczy, who, under Ottoman pressure, had been replaced at the end of 1657, had returned and driven out the Ottoman-backed prince and re-established himself (see Szilády Áron and Szilágyi Sándor, Tórok-Magyarkori állam-okmánytár, Pest 1870, iii. 442 fl.; Homan Balint and Szekfü Gyula, Magyar történet, Budapest 1935-6, iv. 80; Decel-Gökbilgin, 1A art. Erdely, After the taking of Yanova, Köprülü caused the Crimean and Cossack forces to plunder Erdel Belgrad (Fehérvár), the centre of government, in order to seize Rákoczy, but the latter understood to have escaped to a fortress on the Austrian frontier. Köprülü's desire to pursue him was thwarted by a summons from the sultan because of a revolt in Anatolia. He therefore appointed Akos Baresay as prince condition that he pay kharadi and that he hand over the areas (mulhabit) of the fortresses of Sebes and Lugoj, together with the cannon and munitions within them; and at the same time he charged the beglerbegi I Buda, Ken'an Panha, with the oversight of that were (for the appointment of Alcos Barcsay, see Uzunçarşılı, Ekoş Barçkay'ın Erdel krallığına tayini kokkunda bir kac vesika, in Belleten, vii [1943]; idem, Borcsay Akos'un Erdel hiraligina did basi orijinal vezikalar, in Tarih Dargisi, iv [1952-3]; Na Ima, vi, 354 ff.; Silahdar, i, 126 (f.).

For seem time a revolt of serious proportions had been building up in Anatolia. To the long-standing causes of unrest there were added the uncertainty and fear inspired in many sipshis and commanders by Köprülü's harsh behaviour. The leader of the dissidents was IIII beglerbegi of Aleppo, Abaza Hasan Pasha [q.v.], who realised that his past actions constituted a cause for the sort of punishment which Köprülü had meted out to the zorbas in the capital. With him, in Konya, gathered a number of commanders, among them the wall of Damasous, the visier Tayyar Pasha-zade Ahmed Pasha; the begierbegi of Anatolia; and some lifteen other active or retired beglerbegis who, fearing for their fates, sought to replace Köprülü with Tayyar Pasha-zade Ahmed Pasha. At first replying to the summonses from the capital to join the Transylvanian campaign with excuses, they subsequently openly declared their rebellion, saying man they could not join . campaign with Köprülü, who had caused the deaths of so many Janissaries and sipakis (Na Ima, vi. 344 ff.). Ignoring m imperial command that they should either disperse to their several places or engage in the defence of Baghdad, the rebels came a far the vicinity of Bursa. Summoned by the sultan, Köprülü arrived in Edirne on 14 Muharram 2069/12 October 1658 and was present at an ayes diedni three days later in the sultan's presence at which the fated given by the Skayth al-Islam for the punishment of Abaza Hasan === read out. Though a punitive force under the beglerbegi of Diyar Bakr, Murtada Pashu, we already in the field, it was decided that Köprüki himself should campaign; and, accompanied by the sultan, he crossed to Uskudar on 13 November 1658. Abaza Hasan, meanwhile, using the pretext of the distribution of pay to the meet in Istanbul, dispatched some 5000 sipähis to Üsküdat, ostensibly to collect their but in fact to assassinate Kiiprūlū. The latter, however, apprised of the plot, removed the of 7000 sipalis from the rolls and executed about 1000 who were caught. The unrest caused in the army by this fresh show of force led him to abandon the campaign and loave the matter to Murtadā Pasha. Although Abaza Hasan defeated the latter near Hgin (15 Rabit I 1060/11 December 1658), he mutompelled to winter in 'Ayntib. Murtadā Pasha, having received reinforcements, pressed the rebels closely from Aleppo, depriving and of provisions and other necessaries. When Abaza Hasan's forces began gradually to desert Murtada Pasha, the rebel leaders went to Aleppo to submit to the government, only to be deceived and executed (13 Djumādā I 1069/16 February 1659: Ta'rish-i Ghilvedni, 54 ff.; Na'mā, vi., 378 ff.; Silāhdār, i, 132 ff.).

Following this outcome, Keprülü busied himself with the solution of internal problems like the local and soldiery in Damascus who had been acting disruptively for some time, whom he struck from the rolls and replaced with five odes of garrison Janissaries from Istanbul; and the revolts of Certos. Mehmed Beg in Egypt and of Mustain Pasha, known as Kör Beg, in Antalya. Coming - Bursa with the sultan (19 July 1659), Köprülü instituted a sweeping attempt to bring order to Anatolia by summoning Isma'll Pasha, who had been left as &d'im-makém in Istanbul, and charging him with carrying out investigations (fa/fish) throughout Anatolia, "from Oskūdar to 'Arabistān'', specifically to seize and punish any whom he found to have been involved in the Dialalt revolts [see DIALALT in Suppl.], whatever their rank or station; to restore to redyd status those falsely claiming to be 'askeri; to deprive those unable to prove their claim to be sayyids of their distinctive turbans; and to seize and send to the imperial arsenal any arms or weapons found in the possession of the religion (Na Ima, vi. 415-6). But during these years he was also milty of certain Injustices such is bringing about the execution of the famous Deli Hüseyn Pasha [see HUSAYN PASHA DELI]. in spite of the opposition of the Shaykh al-Isidm, by concecting false complaints (Rable II zo69/December 1658); and of Seydi Ahmed Pasha (1071/1660-1). long in state service and most recently active in the continuing struggle in Transylvania (for the defeat and death of Rakoczy in this period and for the conquest of Oradea by Köse 'Ali Pasha (Dhu 'l-Histidla 1070/August 1660), see IA, art. Erdel).

Roprula divided the remaining months of his life between Edirne, to which he returned with the sultan in November 1659, and Istanbul. Age and illuess greatly weakened him, and while journeying with Mehemmed IV to Edirae in July 1661, Köprülü recommended, and the sultan agreed, that his son, Fâdil Ahmed Pasha, should succeed him on his death. Ahmed (Köprülü-zäde) was immediately brought from Damasous and made \$600m-ma\$6m in Istanbul. When his father's condition worsened, he was summoned to Edirno and acted as \$65 int-mailden for his father for 48 days until Köprülü's death on 7 Rahi^c I 1072/31 October 1661. His body was brought to Istanbul and buried in the mausoleum near the dar ol-hadith which he had built wer Cenberli Tash (Sliabdar, i, 219 ff.).

During his five years in power, in a period when confusion reigned in all the institutious of state, Köprülü succeeded in crushing the prevailing spirit of rebellion and disorder through harsh and merciless acts. On this latter count, certain historians have characterised him as cruel and blood thirsty (Silähdär, 1, 226; "Othmän-zäde Ta'lb, Hadikai al-musara", Istanbul 1271/1854, 166); but while was not

guiltless of unjust acts, such judgements must be tempered by the recognition of the disabling turnoil which had afflicted the state since the death of Murad IV and of the great services which he performed in office ('Ata', ii, 69 ff.). In fact, historians like Mehmed Khalife, 'Abdi Pasha, Natima and Rashid are united in praising Köprülü. When Köprülü came to the Grand Vizierate, he sald to those around him that the state expected service, not show from him, and he remained true to this principle to the end of his life (cf. the relation of Durmush Etendi, the kātib of the Dar al-sa'ada aghast, in Rashid, i. 18).

Köprülü caused the straits at Canak-kale ii be strongly fortified [see canagegat's sognazi]. His benefactions, estates, and endowments are to be found in a great many places; for example, a mosque, a school and shops in Yanova; a mosque and school in Rudnik; and a mosque and a school in the town III Tarakil in the sandjak of Bolu (see further the listing in IA, art. Koprülüler (Gökbilgin), vi, 897b). His sons-in-law, Kibleli Mustafa Pasha, Kaplan Mustafa Pasha, Kara Mustafa Pasha (Merzifonlu) [g.v.] and Siyawush Pasha, all held high positions during his own and his son's Grand Vizierate.

II. Fádil Abmed Pasha (Abu 'l-'Abbas) (2045-87/1635-76), the eider son and successor III Köprülü Mehmed Pasha, was born in Köprü in 1625. Brought to Islanbul at the age of 7 by his father, he studied under the leading learned men of the period. first under Othman Efendl, later under Kara Celebi-zade 'Abd al-'Azīz Efendi [see KARA-CELEBIzant (4)]. Through the influence of his father he was, while only 16, appointed a milderris, first at Aldridg, then at dakhil level. Now known as Pashaside, his lessons proved popular, and in 1657 he was raised to the Sahn-i thaman. Shortly after, however, upset by gossip amongst the 'ulama', he abandoned the learned profession and took up administrative post. In 1069/1659 he was, at the request of his father, appointed to the governorship of the exalet of Erzurum with a vizierate. One year later he was transferred to Damascus. There he won great popularity by causing an imperial rescript to be issued removing will taxes, called dashisha and kariba. which me predecessors had levied on the people of Damascus and which had sometimes risen as high as 3-4 million aktos. Under orders from the central government he moved against the Duruz [q.v.] and defeated the Masnids and Shihabids, thereby securing the payment of a tribute of 500 purses and the abandonment of the brigandage in which they had been engaging for some time. He also caused to be made into a begierbegilik the region where the Marnids and Shihabids lived together with the areas of Sayda, Bayrot and Safad which till then had been governed by a valvode (1660: for details, DiamAhir al-taudrikh der ahudi-i Fadii Ahmed Paska, Silleymaniye-Esad Elendi 2242, fol. 4; Silāhdār, i, 214-16). Although he was later appointed begierbegi of Aleppo. he was summoned to Istanbul as karem-makam before he could take up the post and subsequently succeeded his father - Grand Vizier (see above).

Amongst the new Grand Vizier's first concerns the continuing unsettled situation in Transylvania. Some measure of order - established there, however, without Köprülü-zäde's direct intervention. by the victory in January 1662, near Sighlsoara, of the beglerbegi of Yanova over Rakoczy's successor. János Kemény, which ensured the control of the Ottoman-supported Mihály Apafi. Though a campaign against Venice was mooted for 1663, this

abandoned in favour of a campaign against Austria. which had constantly been attacking Ottoman frontier forts and outposts and which was men in the dangerous enemy. The army moved out from Edirne on Ramadan 1073/13 April 1663. During discussions Belgrade and Osilek with Austrian ambassadors. Köprülü-zäde demanded the destruction of a newly-built Austrian fortress (Zerinvár) facing Nagykanirsa | Hungary: the withdrawai of Austrian troops from Transylvania; and restoration of the annual 20,000 florin tribute which the Austrians had paid from the time of Süleymän I until 2506 (later, in Buda, modified to a demand for a single 100,000 ghurush payment like that agreed at Zsitva-Torok in 1606). The Austrians were unable to accept the last of these conditions. and Köprülü-zåde set off from Buda against the fortress of Nové Zámky (24 <u>Dhu</u> 'l-Hididia 1073/ 30 July 1663; sm Kötib Mustafa Zuhdi, *Ta²rikh-i* Uyuar, Istanbul University TY2488; Rashid, I. 25 fl.; Diawahir al-tawarikh), to which he laid siere on 17 August and which finally surrendered terms on 21 Safar 1074/24 September 1663 (22 September in Montecuculi, Mémoires de Montecuculi, Paris 1712, 332 ff.). Having deputed subordinates to take several near-by fortresses, among them Neggrad. and Nitra, Köprülü-zāde returned with the army to winter quarters in Belgrade, intending to move out from there against the Austrians in the spring. The campaign by the Hungarian commander Zrinyi and General Hohenlohe in January 1664, during which Berzence, Babocsa and Pecs was occupied (Magyar loridus), iv. 168), will the Grand Vizier to move toward Osilek; but on hearing that the local commanders had gained control of the situation. he returned to Belgrade (21 February 1664).

The fall of Nové Zámky, regarded as the last major block to the Turkish advance into Europe. had aroused great anxiety in Europe and led to contributions of men and money to the Habsburg cause from the Papacy, Spain, some of the German princes and even France and to the formation of a sizeable force under the command of Montecuculi, A Christian force laid siege to Nagykanizsa, in response to which Köprülü-zade advanced on that fortress. The siege having been lefted at his advance, he took and destroyed Zerinvár (6 Dhu 'l-Hididia 2074/30 June 2664), the building of which had been one of the estensible causes of the present campaigns, and then moved northward, his forces taking Kiskomárora (14 July), Egersog, Egervár and Kemendvár (Djawakir al-tawarikh, fols. 82 (f.) and advancing to the river Raba (Raab). Here, we the village of St. Gotthard, they came face to face with the imperial forces under Montecuculi. Though Köprülgsade was actively engaged in peace negotiations with the Austrian ambassador, he to to to river and engage the enemy. The bridge proved inadequate, however, and only a part of the Oftoman forces got across. In the battle which ensued (8 Muharram 1073/1 August 1664), these at first had some success but were ultimately driven back, both sides suffering beavy losses (for details, see Montocuculi, 416; Hammer-Purgstall, Histoire, xi, 18x ff .: Ahmed Mukhtar, Sen Golar da Olhmanii orduru,

Islanbul 1326/1908).

This defeat, though by means decisive, forced defensive policy on MI Ottoman army, which had previously moved as it willed (Diaudhir ai-tandrikh, fols. 90 ff.). But within ten days the two sides had signed the Treaty of Vasvar (17 Muharram 2075) to August 1664) which largely satisfied Ottoman

sims and, in particular, left them in possession of Nové Zámky and assured their influence in Transylvania (for a Hungarian view of the treaty, see Magyar torténet, iv, 169; for the treaty, see Baron de Testa, Recueil des traités de la Porte Ottoman, ix, Paris 1898, 50 ff.; Ta'rikh-i Ghilmani, 90 ff.; Silahdar, i, 361; Rāsphid, i, 78 ff.). After advancing in the sum of Nové Zámky, which he had heard was to be busieged, Köprülü-zāde received there the confirmed copy of the peace treaty from Vienna and therefore returned to Belgrade where he wintered in order to the implementation of the treaty. He treated to Edirne only in July 1665, and from them in Istanbul, inspecting the fortifications of the Dardanelles in company with the sultan in the way.

At a consultative assembly in December 1665, Köprülü-zäde proposed a major effort to take Kandiva [g.v.] in Crete, the sieze of which had for years been the cause of heavy losses; and it was agreed that preparations for such a campaign should be put in hand. Departing from Edirne in Dhu 'l-Ka'da 1076/ May 1666, Köprülü-zade crossed from Monemvasia, chosen as the mainland base for the campaign, to Canea in early November. The fleet was strengthened during the course of the winter and spring, and on I Dhu 'l-Hididia 2077/25 Nay 1667 Köprülü-zide convened an assembly of the leading commanders in which the plans for the conduct of the siege were laid (Djaudhir al-taudrikh, fol. 112; Defterdat Şarl Mehmed Pagha, Zubdat al-wald'if, Süleymaniye-Baud Rfendi 2382, fols. 4 ff.; Righid, i, 164 ff.). The siege was pressed vigorously, with varying fortunes, until mid-November when Köprülü-zāde, who had lived in the trenches from the beginning of the siege in order to encourage the troops, suspended operations for the winter. During this period Köpreliu-sade received Venetian commissioners and was in correspondence with both the Doge of Venice and the Venetian captain-general Morosini with regard to negotiations about the fate of the fortress (Diaudhir al-taudrikk, Köprillit Fazi) Ahmet Pask, 831; Rashid, i, 183 ft.). Both sides gathered remforcements in the spring and, with Köprülü-zade entering the trenches once more on 12 Muharram 2079/22 June 1668, the issue was again hotly contested through the summer (for details, we Djandhir ai-tandriff; Rishid, i, 208 ff.; Hammer-Purgstall, Histoire, 11, 311 (f.). Knowing that Köprülü-zade would accept only the surrender of Kandiya, the Venetians approached the sultan, then in Yehishehir (Larissa), in Thesealy, for more favourable terms, as a result of which Mehemmed IV demanded to know of the Grand Visier the situation, warning that it would be impossible to raise men and supplies were the siege to last another year. At an assembly convened by Köprülü-zäde = 8 Radiab 1079/ 12 December 1668, it was agreed that the fall of Kandiya limit close in hand, and arrangements made to winter in the trenches (Righid, I, ar8 ff.). Friction amongst the Venetions and their allies led to the withdrawal of the allied fleet at the end of August 1559, which act left the Venetians little choice but to surrender. After six days of discussion, terms were agreed on Rabic II roso/ 5 September 1669 (see Rashid, I, 240 ff.; Mulahadai Medima asl, ii, 141 ff.; Noradounghian, Recouil d'actes internationaux de l'empire Ottoman, i, Paris 1897, 132 fl.). Köprülü-sade received the 80 keys of the evacuated city and fortress of Kandiya on 27 September. He remained through the winter to repair the fortress and to have a new land survey (takrir) made in the Mediterranean islands. He also pacified the Mainotes with a letter which he seat, and he forgave their outstanding taxes (for details, Disadkir of-tanosrikk, fols. 122 ff.; Köprülü-Mehmed Asım Bey 724, fols. 232-6; Başvekalet arpivi, tahrir defterleri; Ewliya Čelebi, Sayakar-admı, vili 498 ff.; Siläbdarı i, 538). Returning by way of Tekirdarı, arrived in Edirne in mid-Şafar 1081/early July 1670 and surrendered seates.

(For diplomatic relations with France in the early 1670s, leading to ■ renewal of the capitulations on ■ June 1673 [19 Salar 1084], ■■ J. Chardin, Vayages on Parse et autres lieux de l'Orient, Paris 1822, i; A. Vandal, L'odytée d'un ambassadene. Les voyages du Marquis de Noentel (1670-80), Paris 1900; Saint-Priest (ed. Schefer), Mémoises sur l'ambassade de France en Turquie, Paris 1877; A. Galland, Journal d'A. Galland pendant 100 séjour à Constantinople (1679-1673), Paris 1881; L. d'Arvinux, Mémoises du chevalier d'Arvisux, Paris 1735, iv; Hammer-Purgatall, Histoire, xi, 341 ff. See also intivivizit ii, The Ottoman empire, esp. at p. 1185a).

In 2672 a campaign was undertaken against Poland on bahalf of Peter Doroshenko, hetman of a group of Ukrainian Cossucks, who had accepted Ottoman suzerainty in 1669; and on 7 Safar 1083/4 June 1674, Köprülü-zade left Edirne with the army, accompanied by Mehemmed IV, who was to take an active interest in the campaign (for correspondence between Köpriliù-sade and the King of Poland in May 1672, see Rashid, i, 261 ft.). The principal object of the campaign, the fortress of Kamenets Podolskiy (see KAMĀNIČA), was taken = 3 Djumādā I 1083/27 August 1672 after m nine-day siege (Nabl Yusuf, Tarihh-i Kamanica, Istanbul University (HAdidff) (Alt, TY2418: al-Hadidi Ta'rish-i Komanica, Suleymaniye-Lala Ismail Efendi 308; Abdi Pasha, Waka's name, Suleymaniye-Halet Efendi 615, Topkapı Sarayı-Bağdat köşkü 217). The rapid Ottoman advance in Poland, and particularly the siege of Lwow, compelled the Polish King, Michael Wisnowiecki, to me for peace; and terms were agreed at the recently-taken fort (palanka) of Buchach (18 October 1672; 'Abdi Pasha; Rāshid, i. 284 ff.; Noradounghian, i, 52). The harsh terms of the treaty, which included the loss of Podolia and the Ukraine and the payment of tribute, made it unacceptable to the Polish Diet. Their refusal to ratify it and implement its terms led to further Ortoman campaigns in the following years, of which Köprülü-zäde, once again accompanied by Mebentmed IV, directed those in 1673 and 1674. In the main action of the former year, Köprülü-zāde man appointed commander to save Khotin [q.u.] from the attack of John Sobleski, but the fortress seem lost before he could arrive. The latter year saw a successful campaign into the Ukraine (Khotin having been retaken by the Khan of the Crimea) in response to Russian incursions. Köprülü-zade, now in poor health, returned to Edirne with the sultan on 22 Shaban to85/21 November 1674 (see Rashid, i, 317 ff.), and the campaigns of 1675 and 1676 against the Poles were left to others.

In his last years, Köprülü-zāde's illness wersaned through his addiction to drink. Although he followed the sultan when the latter left Istanbul for Edirne with the army in early Shaban 1087/ind-October 1676, he was too iil to get even as far as Edirne and died on the Kara Biber Giftik, near Ergene köprüsü (between Corlu and Kartahthran), m. 26 Shaban 1087/3 November 1676 at the age of 4x ('Abdi Pasha), his death resulting from acute

251

dropsy brought on by drink (Silāhdár, i, 659). Inbody was brought to Istanbul and buried in his father's mausoleum —— Čenberli Tash.

Köprülü-zäde's tenure in the Grand Vizierate was one of the two or three longest in Ottoman history. Tall and stout, with a round face and large eyes, he is described as dignified and inspiring respect. Especially significant is the high praise accorded his virtues by Silabdar (i, 659) in view of that historian's harsh judgements on Köprülü Mehmed Pasha. Köprülü-zäde saw to the completion of pious foundations begun by his father, such as a half-finished khān and mosque in Rumeii, and also III foundations in Cenberli Tash in Istanbul (Diswithir al-lawfrith, fol. 14); and, as evidence of the great value which he himself placed on learning, one may elte the library which he established near his residence (formerly that of Aligha Sultan, daughter of Sultan Ibrahim and wife of Ipshir Pasha) in the vicinity of Aya Sofya (Uzunçarsılı, Osmandı tarihi, ili/1, 438) and which he eariched with many very valuable books acquired both while mulderris and in later times. The walfiggs for the library, which was drawn up two years after his death, in 1089/1678, and which makes provision for students and the teaching of certain subjects there, is now in the Köprülü library (no. 4 of the wakfiyyas of the Köprilli family; M. Gökmen, Külüphanderimisden notice, Istanbul 1952, 52; Shaykhi, Waka'is' al-fudald', Istanbul University TY81, fol. 691). His other foundations include a mosque in Kandiya (for a copy of the imperial grant of the land (mulkname) given him in Kandiya, dated Rabic II 1081/ August-September 1670, as well as other documents demarcating boundaries, me the above collection of wakfiyyas in the Köprülü library); mosques 🖦 Nové Zámky and Kamenets; and an uncompleted khān (later completed) in Izmir (Silāhdār, i, 659).

Pādil Ahmed Pasha was also the patron of a number of men of tearning and the arts, among them his private secretary (mithūrddr), Hasan Agha, author of the Diaudhir al-taudrikh, which is based on the documents committed in charge (there exists in the Nationalbibliothek, Vienna, a Latin translation of this work, made in 1680 and entitled Annalium gemma, authors Hasanaga . . . Cf. A. Galland, Journal, tr. N. S. Örik, Hatraiar, Ankara 1949, 197, n; Babinger, 216-17); Mazāķi, who with him throughout is siege of Kandiya; Nābi; Zuhdi, the author of the Ta'rith-i Uyvar; the ra'ls al-kutab Tālib Ahmed Fiendi; the poet Fenni; and Euseyn Hezārienn [g.o.] (cf. Safā'ī, Tadhkira, Istanbul University TY3215, jols. 189 ff., 242 ff.; 242 ff.;

Shaykhi, fols. 680-786).

III. Fādil Muştafā Pagha (1047-1102/1637-91). Ottoman Grand Vizier, the younger brother of Fädil Ahmed Pasha. Born in Köprü in 1047/1637, he began medress education together with his elder brother. Whether he received a medeste appointment is not known, but in 2070/2659 he is more to have received a selfmed and to have entered the ranks of the sultan's guards as a mateferrika (Usunçarmlı, Osmanlı tarihi, jii/2, Ankara 1954, 431). İn view of the facts that he was in Crete, together with his mother, for the whole of the final siege of Kandiya (1667-9), that he was at Fadil Ahmed's side when the latter died and that he bore the Grand Vizier's algoet ring to the sultan (for the berat granting him a widmel at this time, see Bagvekalet argivi, Ali Emiri tasn'ii, period of Mehemmed IV, 229), one may suppose that he spent most of his time with his elder brother, on campaign. On x Ditmada Li 2090/ June I'm he became seventh visier at the instigation of his brother-in-law, the Grand Vizier Merzifonia Kara Mustafa Pasha [see hara mustapa pasha, MERZIPONLU]. In November of the same year he served as guard (muhāfis) to the Walkie Sultān and the princes Silleyman and Ahmed when they went to Edirne; and performed the same function the following year, now as sixth vizier, when they remained in Edirne after the departure of the army for Istanbul (Rabi' I 1092/March 1681) following the conclusion of peace with Russia. At the time of the army's departure in the Austrian campaign of 1683 (Rabit II 1094/April 1683) he remained in Edirne as guard to the Wallde Sultan, with the posts of fifth vision and \$4'im-masam of Edime. He was later appointed to the governorship of the evalet of Silistria with the addition of Nicopolis (i.e. the Özü muḥā/īṣlighi) and became commander at Babadaghi [q.v.], With Kara Mustafa Pasha's dismissal and execution [December 1683] following the failure of the second siege of Vienna, and on the report that John Sobieski, King of Poland, was making preparations against Kamenets and Moldavia, it was decided to replace Fadil Mustala with a more experienced commander: he summoned to the capital as kubbe alid visier, but kept the estates (khā;s) he then possessed (Rahif II roos/March-April 1684; Silahdar, ii, 127). Reaching Edirne in mid-May, Fädfi Mustafa occupied the position of will vizier in the dimin; but before long he chose retirement, no doubt grieved by the enmity of the new Grand Vizier toward the Köprülü family. One year later, as the war with the Venetians in the Morea Intensified, he see appointed commander (mx/dfig) of Chios (according to Silähdär, ii, 222, transferred there from the command of Boghaz [Hisarl] - Sedd al-bohr), subsequently being transferred to the command of Boghaz Hisarl on Rabit II 1097/ February 1686 (Silāhdār, ii, 230).

On 30 Dhu 'l-Ka'da rog8/7 October 1687, shortly after a rebellious army had made his brother-in-law, Siyawush Pasha, Grand Vizier and begun march on the capital, Fadil Mustafa summoned to Istanbul as second vizier and \$47 im-makim. Though Mohemmed IV had hope that Fadil Mustafa might help him save his throne, past slights by the sultan made Fädli Muştafā unsympathetic, and the latter was | fact closely involved in the deposition of Mehemmed IV (2 Muharram 1000/8 November 1687). He may fell out of favour with the army, instruments of the deposition, however, through resisting their demands for donatives and attempting to establish discipline; and though his position was once saved by the new sultan, Süleyman II, he was subsequently effectively exiled by being appointed again to the command of Boghaz Hisari (7 Rabi' II 2099/10 February 1688: Silâhdār, ii, 318 ff.; Zubdat al-wehabit, fols. 87 ff.; Rachid, ii, 25). He was spared worse fate by the refusal of the Shayen al-Islam to sanction his execution. A little later he was moved to the command of Canea, then to that of Kandiya, then, in Safar 2200/December 1688, to that of Chics.

With the war against the Holy League going badly for the Ottomans in 1688-9, particularly the Austrian front, it was agreed by the "uland" to recommend to the sultan the appointment of Fädil Muştafa Paşha to the Grand Vizierate, and he was accordingly summoned to Edirne (21 Musharam 1101/25 October 1689). His first act was to issue m declaration (beydin-ndms) designed to restore morale and to encourage the willing performance of military service. He also took steps to ease the lot of the tax-paying

subjects (refdud) by removing a number of onerous extraordinary taxes such as the serm-i kharmy or arak, a recently-imposed tax on drink which had led many Christian subjects in Rumell to make common cause with the enemy (cf. Zubdat al-walk!);5 tol. 122). During the winter he me engaged in preparations for a campaign which he himself was to lead; and on 6 Shawwal 1101/13 July 1600 he left Edirne. He succeeded in recovering Pirot (10 August), the fort (palanka) of Musa Pasha, and, after a 23-day siege, the important stronghold of Nigh (9 September). Despite the lateness of the season and the opposition of commanders, Facili Mustafa determined to march to Belgrade, Semendria fell after a three-day siege, on 23 Dhu 'l-Hididja 1101/27 September 1690, and Belgrade after an eight-day siege, on a Muharram 2102/8 October 1600 (Silahdar, ii. 501 ff.; Zubdat al-wahabie, fols. 169, 171. 174; Rāshid, li. 123 ff.; cf. l. H. Danismend, Isakle Osmanlı tarihi kronolofisi, İstanbul 1947-55, iii, 470). Detachments sent out from Belgrade succeeded in taking Boghur-delen (Sabac) and re-establishing control over the Danube at Orsova but falled to recover Osijek. Having to the repairing and supplying of Belgrade, Fadil Mustafa set out for Istanbul (4 November 1600). During his return be mindful of the reliava, sending prisoners to their bomes at the treasury's expense and also restoring lands and goods and providing the means of agriculture to those who had lived between Nish and Belgrade but had been moved across the Danube by the Austrians and now wished to return. He spent the winter of 1690-1 dealing with matters such as uprisings in Egypt (by Ibn Wani) and Cyprus (Zubdat al-wake'i', tol. 182) and instituting reforms in the Janissary Corps, the imperial stables and the imperial farcier whereby expediture was cut (SUBbdar, II, 450-60).

Though Fadil Mustafa proposed that he remain in Istanbul in 1601 m order to oversee all fromts during the year and that another commander be sent to Hungary, it was thought best that he was the campaign. By the time the army was ready to move (Sha'ban 1102/May 1601), Süleymän II was near death, and a faction opposed to Fadii Mustafa was making efforts to restore Mehammed IV to the throne. Having taken measures to forestall these, Fädfl Mustafä left strict Instructions, m departing from Edirne (18 Ramadan/15 June), that, in the event of sultan's death, his brother, Ahmed, should be placed on the throne. When, on 25 Ramadän 1102/22 June 1691, Süleymän II died, Ahmed II ascended the throne without incident and confirmed Fädil Mustala Pasha in the Grand Vizierate.

Having reached Belgrade on 23 Shawwal/20 July, Fadil Mustafa bridged the river Sava; and when the Austrians, encamped at Varadin (Petrovaradin), advanced and then retreated, the Grand Vizier set off in pursuit, overriding the advice of his commanders that he should await the arrival of the Crimean Tatars and the provincial forces. When the Ottomans took up a position before the fort of Slankamen, the Austrian commander, his road to Varadin threatened and fearing being caught between the Ottomans and the Tatars, engaged the Ottomans in battle [24 Dhu 'l-Ka'da 1202/19 August 1691). The Ottoman right wing having been broken, FId9 Mustafa himself led the attack to restore the position; but just as this was about to be achieved, he was struck in the forehead by a bullet and killed: the confusion consequent on his death led to the defeat and withdrawal of the Ottoman forces. The

battle of Stankamen thus saw not only merions military reverse but also the death of an able Grand Vizier from whom much might have been expected. Despite a thorough search, Fädil Mustafä's body mot found. (For details, see Sitäbdar, ii, \$83 ff.; Zwbdat al-wakā's', fols. 184 ft.; Rāshid, il, 161 ff.; Hammer-Purgstall, Histoire, xii, 310 ff.).

Fädil Mustafå Pasha, though Grand Vizier for less than two years, grasped the true needs of the state and demonstrated the ability to implement necessary reforms. He appreciated the political necessity of countering European hopes of defections from amongst the Christian subjects by taking account of their interests and by making reforms in connection with the dizze and other obligations laid upon them [for the effects of the dirrys reforms, however, cf. pilzya ii-Ottoman, especially 464bl. To easure the independence of the Grand Vizierate. he took steps to limit the number and influence of the aubbs alti viziers. The practice of giving gifts ("divya) to the sultans at bayrams by state officials was ended. In every provincial city he created councils of notables (medilis-i alyda), modelled on the imperial dissis, me prevent the growth of local despotisms and to check abuses by keeping m eye on the judgements and procedures of kadis and ma ibs. In Istanbul, however, his failure to enforce the narks, or fixed prices, on the grounds that the practice was not justified in the skart and that trade should rest on the consent of the two parties, resulted in an increase in profiteering in his time of office. His learning, particularly in the fields of hadith and lexicography, his devotion to the ther, his dignity and his some of justice are widely attested. He had three sons: Nu'man, 'Abd Allah and Es'ad (Silahdar, ii, 186, 187 ff.; Zubdat al-wahan, fols. 187 ff.; Rashid, i, 530; li, 215, 148 ff.; Hammer-Purgstall, Histoirs, xii, 307; Saint-Priest, Mimoires, 242 ff.; Shaykhi, ii, 3216 ff.; Amasya ta'ribbi, iv, 212 ff.; U. Heyd (ed. Ménage), Studies in old Ottoman criminal law, Oxford 1973, 155).

IV. 'Amdia-zāde Husayn Pagha (nephew of Köprülü Mehmed Pagha)—see 'Amüdia-Zāde BUSAYN PAGBA.

V. Nu'man Pasha (?1081-1131/?1670-1719). Ottoman Grand Vizier, the eldest son of Fadil Muştafê Paşha. Bom in İstanbul, he studied under Demir-Kapili Fadil Süleyman and Kayserili Hafiz al-Sayyid Ahmed Elendi, among others, and became mutamaili of the Köprülü awkif after his father's death. While Mustafa II was preparing for his second campaign against III Austrians, in 1696, he decreed Will Nutman, like the administrators of other rich foundations, should take part in the campaign, providing 150 infantry. In Muharram 1112/ July 2700, Nu man Beg became sixth vizier and was betrothed to 'A'isha Sultan, a daughter of Mustafa II (Silahade dhayli). He became beglerbegi of Erzurum in Ramadan 1112/March 1701 and then, in Djumada I 1114/October 1702, of Anatolia. His matriage to Aligha Sultan, set for the spring of 1703, was delayed in the confusion surrounding the uprising known in the Ediras mak'asi which led to the deposition of Mustafa II (9 Rabif II 1115/22 August 1703), who mee replaced by Ahmed III. Following this event, Numan Pasha am appointed commander (muhāfis) of Eğribez (Euboea), and by June 1704 he had become emplais of Crete, being charged with making a land survey (tabrie) of the fiels on the island (Rāshid, ili, 137). Transferred to the command of Boghaz Hisari on 26 Shawwill 1117/10 February 1706, he was shortly after returned again to Crets. Though

the marriage ceremony with 'Ā'Isha Sultan celebrated in Muharram 1120/April 1708, it mustill to be several years before the marriage was consummated.

Appointed again to Egribos in Diumādā II 1121/ August 1700, was summoned to Istanbul four months later (Ramadan 1121/December 1709) to consummate his matriage (Rāshid, iii, 311-2; cf. ibid., iii, 317-8, however, where the consummation is said to have occurred in Muharram 1122/March 1710). He was made beglerbegi of Bosnia on I Shawwal 1121/tr December 1709 but was then appointed to the command of Belgrade on 3 Dhu 'l-Ka'da 1121/ 4 January 1710 (Rashid, iii, 313; of. Usunçarph, Osmanls tarihi, iv/2, Ankara 1959, 291, who dates this appointment in 17 Rabit I x122/26 May 1770). On 18 Rabi^c II 1122/16 June 1710, Nu^cman Pasha was elevated to the Grand Vizierate in the hope that he would be more resolute against the Russians and better able to handle the problem of the suppliant Swedish king, Charles XII, than his predecessor, Corlulu 'All Pasha, had been (see 'all Pasha Cor-LULU; Akdes Nimet Kurat, Isveç Karalı Karl XII.'ın Türkiye'de kalışı ..., İstanbul 1943, 227, 229); his appointment was met with general satisfaction. Despite a strong movement in the government to concentrate attention in the Black Sea and the Polish question, Numan Pasha, trying to maintain peace with Russia, contented himself with announcing simply that a large army would see the Swedish king to his own country in the spring (see Rashid, iii, 327; Ahmed Refik, Momalik-i Othmaniyye'do Demirbash Sharl, Istanbul 1332/1913-14, 30 ff.; A. N. Kurat, op. cit., 232 ff.; idem, XVIII. yits yilbasi Avrupa umumi harbinde Türkiye'nin tarafsiehge, in Belleten, vii, 1943, 268 ff.; Saint-Priest, Mémoires, 120-1).

Disappointed in his handling of both external and internal affairs, Ahmed III removed Nu'man Pasha from the Grand Vizierate on 21 Djumādā II 1122/17 August 1710; he was subsequently appointed muhāfis of Eğriboz (Silāhdāv dhayli; Rāshid, lii, 330-1. For a relation concerning his wish to resign from the Grand Vizierate, see Behdietl, Ta'rikh-i stilaie-i Köprilii). In the nine years before his death he held administrative and military positions continuously in various parts of the empire. He became mukāfis of Canca in Shawwai 1122/December 1710, and of Kandiya in Dhu 'l-Ka'da 1123/December 1711, while on 19 Shawwal 1125/8 November 1713 he was given the sandisk of Yanya (Ioánnina) as an arpalik (Silahdar ghayli). The next year he was given the eyellet of Bosnia together with the military command of the Karadagh [q.v.] area. While in this post he moved against the rebels of Karadagh, who were receiving aid from the Venetians, hunted them down and drove those who escaped to take refuge with the Venetians (Shawwal 1126/October 1714: Rashid, iv, 22-3. For the decree sent to him about this problem, see Başvekalet arşivi, Ibnülemin, dåhiliye, 2411).

Following this success, he was moved to the command of Belgrade (January 1715: Siláháte áhapti), where affairs were at a delicate stage; but under him, as in his predecessor's time, disorder in this frontier fortress increased, as did desertions from the local levies and the kapthulu soldiery. Dismissed because of this in Rabit II 1127/April 1715, he was transferred to the governorship (mutaparrifik) of the sampless of Itil and Menteche and given the task of following the activities of the bandits who were profiting from the absence on

campaign of the viziers and beglerbegis of Anatolia (Rāshid, iv, 237, 240 ff.). In Shawwal 1128/September 1716 he was made beglerbegi and muhāfiş of Cyprus (Silāhdār dhayli); and three months later he became commander (serddr) in Bosoia while retaining the governorship of Cyprus (for part of the firman of appointment, see Uzunçaralı, Osmanlı tarihi, iv/2, 294, n. t). During the period when the Austrians gained Beigrade (Ramadan 1129/August 1717), Nu'man Pasha beat back the enemy attack on Bosnia and forced the raising of the siege of Izvornik (October 1717). He remained active in the defense of Bosnia until after the signing of the Treaty of Passarowitz (22 Sha'ban 1130/21 July 1718) (see Rashid, iv. 383; and for a copy of a decree sent to him in mid-Ramadan 1130/August 1718, == Başvekalet arşivi, İbnülemin, dâhiliye, 2436) and was then transferred at his own request to the governorship of Crete in Ramadan 1130/August 1718. Falling ill as soon as he reached the island, however, he died in Kandiya on 16 Rabl' I 1131/6 February 1719 and was buried beside the mosque of Fadil Ahmed Pasha.

Nu'man Pasha was accounted an honest and pious man of whom author remarks that be would have been better suited to the office of Shayld al-Islam than to that of Grand Vizier (Charles de Ferriol, Correspondance du Marquis de Ferriol, Antwerp 1870, 120). He is said to have taking nothing from the estates attached to the various offices he held, but rather to have met his expenses exclusively from the income of the estates which he had inherited from his father (Behdjeti).

Both his younger brothers and, of his sons, particularly Hāfi; Ahmed Pasha (d. 2283/2769) made a mark in public life, m have other descendents of the family down to the present day [see körnölő MEHMED FUAD].

Bibliography: For further details and a more complete hibliography, especially of archival materials, see IA art. Köprülüler, by M. Tayylb Gökbilgin, on which this article is largely based.

(M. Tayvib Gökbilgin - R. C. Repp) KÖPRÜLÜ, MEHMED FUAD, until 1934 KÖPRÜLÜ-ZADE MEHMED Fulko (1890-1966), prominent Turkish scholar and the pioneer of Turkish studies in the modern sense in Turkey. Born in Istanbul, be was the son of Isma'll Fa'iz Bey, a civil servant, a descendant of the sister of the famous Ottoman grand vizier Köprülü Mehmed Pasha [q.v.] who married Kibleli Mustafa Pasha, one-time vizier of Meḥemmed IV. His mother Khadīdja Khānlm = the daughter of 'Arif Hikmet Efendi, a member of the 'alama' of Islimye in Rumeli (Sliven in present day Bulgaria). He was educated at Ayaspasha junior high school (ruskdiyye) and at Merdjan high school (i'dadi) in Istanbul. Later, for two years he attended the School of Law (Mekteb-i Huhuh), which he left in 1909, but he was mainly self-taught. After teaching in various schools, he was appointed in 1913, with Diya' [Ziya] Gökalp's support, to the chair of Turkish literature in the University of Istanbul, vacant upon the resignation of Khālid Diyā' [q.v.], \blacksquare position which he kept until 1939. He also taught at the School (later Faculty) of Political Science (Siyasal Bilgiler) and in the Ankara Faculty of Arts (Dil = Tarih-Colsafya Fahiiliesi) (where he covered Ottoman history and institutions). He served for eight months under-secretary at the Ministery of Education in 1924 and was elected deputy from Kars in 1936. After 1939 he settled in Ankara and joined political life. In January 1946 he became we of the four

founders of the Democratic Party [see Dimotrat Part]. Following the 1950 elections ***

Foreign Minister (1950-5) and Minister of State in 1955, but resigned from the party on account of a rift with the other leaders. Following the revolution of 27 May 1950, he was arrested and briefly detained ***

Wassada (in the Sea of Marmara) where all Democratic Party leaders *** being tried, but he was acquitted on all charges. In 1962 he founded the abort-lived Veni Demokrat Parti ("The New Democratic Party") and soon afterwards retired from political life. He died in Istanbul *** 28 June 1966 as *** consequence of *** earlier traffic accident in Ankara.

Fu³ād Köprülü started his career as a post and literary critic. His name began to appear towards the end of 1908 in various papers and periodicals particularly in the Thermal-i Funda [q.c.]. As = poet he belonged to the Fedjr-i Ati group [q.v.], an extension of the Therwal-i Fanan school. In 1912 he mainly contributed to the daily Hakk and its literary supplement. He gradually switched to research and in 1913 he published | Bilgi Medima'ast (i, 3-52) his "Method in the history of Turkish literature" (Türk edebiyydti ta'rikhinde usiil). Like many young talents of his generation he came under the impact of Diya? (Ziya) Gökalp [q.v.] and of the Turkist movement which he led [see TURKCOLUR, and contributed many articles to Tark yardu (1913), the organ of the movement and to the daily Ikdam where he serialised a study on folk poetry (February-June 1914). In 1915 he founded 📖 journal Milli tetebbü'ler megimü'asi ("Journal ill National Research"), where he published some of his early important study on Wishik poetry (i, 5-46). In July 1917 Diya? Gökalp founded the famous Yesis Medima's ("the New Review") which gathered together all the leading young writers of the period and where Fu'ad Köprülü published his new-style poems (in spoken Turkish, syllabic metre and on "national" topics required by the new Milli adebiyydt trend) and his articles of literary criticism and research. After the publication in 1918 of his epoch-making monograph on "Early mystics in Turkish literature" i.e. Ahmed Yesewi and Yunus Emre (Türk odebiyyāilnda ilk miileşawælflar) and of the first two parts of his history of Turkish literature (Tark adebiyyddi ta'rikhi, i, 1920 and ii, 1921), Köprülü concentrated his research on the origins and development of classical Turkish literature and culture in Anatolia: the evolution of Turkish Islam and Ottoman institutions; the Turkish legal system; and the development of Turkish literature in other literary dialects e.g. Azerf and Chaghatay. His work shed new light on the formative period of Turkish literature in Anatolia; very little research had been carried out in this field before him. But his greatest contribution is to have treated the evolution of the many branches of Turkish literature and culture ... unit and to have studied its development as whole. In 1924 he founded in Istanbul University the Institute of Turcology (Türkiyyāi Enstüüsü) and its organ the Türkiyyöt Madimu'asıl. Apart from his many articles (some of which are independent monographs) published in various scholarly journals, particularly Hayet, Türkiyyat Medjmil'asi, Edebiyyat Fakültesi Medimü'asi, Belleten, Türk kuhuk ve shisat tarihi mecmuan, and the Turkish edition of the Encyclopaedia of Isiam (Isiam Ansiklopedisi), Köprüfü is the author of the following major works: Türkiyye Te'rikki, i ("History of Turkey"), İstanbul 1923 (covers the period up to me settlement of the Turks in Anatolia); Bugünkü edebiyyet ("Literature of today"), Istanbul 1924 (collection of early articles on literary criticism and book reviews); Türk edebiyyeti ta'rikki, i, Istanbul 1926 (revised and enlarged edition of the two parts published in 1920-1); Milli edebiyyet djereyentelik ilk methethelirleri ... ("Forerunners of the national literature movement"), Istanbul 1928 (contains selections from the 10th/16th century poet Edirneli Nazmi who experimented with "pure Turkish"); Türk dili we adebiyeti üserinde anatternelar, Istanbul 1924 (a collection of research articles and book reviews); Les origines de l'empire ottoman, Paris 1935; and Türk sat şaieleri", in 3 volumes, the lirat of which is published for the first time (Istanbul 1962).

KORA or KORA DJAHANABAD, an ancient town of northern India in the Khadjuha saasti of Fathpur District in the former British United Provinces, now Uttar Pradesh. It lies in lat. 26° 7′ N. and long. 80° 22′ E. on the Rind River some 12 miles/20 km. from the Diamož (Jumna) River between Kanpur (Cawnpore) and Fathpur.

In early times it was apparently were by the Rādiput line of the Rādiās of Argal, and the fortress may have been their ancestral centre. Under the Mughals, Körä (sometimes spelt in Marāthi and Persian Kurrah, and to be distinguished from Kārā Manikpūr, an adjacent but separate sarkár) formed a sarkár or district of Alláhábád saba or province, with a revenue of 17,400,000 dams (Abu 'l-Fadl, A'Vn-i Abbari, il, tr. Jarrett and Sarkar, Calcutta 1949, 178). The great Mughal highway connecting Allahabad with Agra can through Kôra, and a bridge was built in ca. 1770 to carry the road over the Rind. During the lighting of the middle decades of the 18th century between the Maratha invaders and the troops of the titular Mughal emperors and the Nawwab-Wazirs of Awadh or Oudh, Kôfa played a considerable role. A copper coin of Akbar's is known from the Köfä mint, and it was a mint town of the later Mughals from Shams al-Din Raff al-Daradiat (1131/1719) onwards.

During the 19th century, the population of both Köra proper and of Diahanabad, the township adjoining it to the north-west declined (populations of 2,806 and 4,379 respectively on 1901, the proportion of Muslim to Hindus being then 44% and 27%.

KORCA, modern Turkish Korge, Greek Korytsa, Ottoman Görridje, all from the Slavic toponym "Gorica."), the only urban centre of importance in southeastern Albania, situated at the edge of the homonymous plain at the foot of the Morave Mountains, which constitute the natural barrier KORČA

265

between the Korča plain and Macedonia. Korča was on of the most important towns founded by the Ottomans in Albania. Throughout the Ottoman period (late 14th century till 1912), Korča was n local administrative centre (nāķiya, hādillē), and latterly the capital of a sandjaķ in the vidyal of Manastir (Bitola) and a small Islamic centre.

The Ottomans annexed the eastern part of the present-day Albania in the last decade of the 8th/14th century and established their regular administration there, with the castles of "Göridje" and Premedi (Përmet) as bases. A terminus ad quem for the conquest, not recorded it seems by | Ottoman chroniclers ('Ashlkpashazāde, Orūč, Anonymus-Giese, Neshrl, Sa'd al-Din), is the church of the village of Mborje 3 km. east of Korča on the first spur of the Moravě, which church was, according to its wellpreserved inscription, built by Bishop Niphon in the year 1390. Throughout the entire 15th century the name "Göridje" seems to have been used for a castle on the spur or the Moravo between the village of Mborje and the place where the town of Korda lies today. The Ottoman documents from the early period use "Enborye" (from Emporion) and "Görklie" indiscriminately. A fragment of a timar register from Şafar 886/April 1481 mentions a fimile of an "Ishāk the Albanian" situated in the "nabive of Göridje" This #mar included eight small villages (mostly with Slavic names), of which one numbered six Muslim households and two households of Christians. (Sofia, National Library, Orient. Dep., No D 649, p. 26). The document is an indication for the early start of the Islamisation of the district of Korća, an Islamisation which was not solely restricted to members of the old native nobility. The castle of Göridje was maintained throughout the 15th and the first half of the 16th century. When it disappeared is apparently not recorded. A topu defter (Başbakanlık arşivi [== BBA] T. D 70, p. 257) from 925/1519 (mentions a dismates of Christian musclems of the castle. The village of "Enborye, dependent on Göridje" numbered, according to the same document, 18 households of Muslims, 7 Muslim bachelors, and III households of Christians as well as to Christian bachelors and 11 widows. According to a lapse defler of 936/1529-30, the same village numbered 15 Muslim households, 4 Muslim bachelors, 4 people with a berat, 1 sipahiadde, and 101 Christian households and 25 Christian bachelors (BBA, T. D. 167, p. 172). The same document states that there was a diemasat of Christian misellems in the castle of Göridje consisting of 22 households and 9 bachelors. These musellens were freed from ispenic, 'awarid and tehalifut in exchange for the fulfillment of the duties of repair and maintenance of the castle. Besides these privileged Christians, there was a diemidat of 5 Christian families in the castle who had to deliver yearly 1,500 arrows. for which service the state freed them from paying the 'amirid and the various tekalifats, but they had to pay 'othe, distry and ispende. The dhimmi Aydin, son of Dimitri, thus a recent convert, was freed from tharddi, ispence, 'awarid and tekalifal-1 'orfsyye for the service of keeping the water supply of the castle in good order.

The actual town of Koréa is an Ottoman foundation, intentionally founded in order to form a Muslim urban centre in the district. The history of the foundation of Koréa can be reconstructed with help of some Ottoman documents. In 891/1486 the Master of the imperial Stables (Mirákhor), Ityās Beg, received from Bâyezid II the village of Bosotinče (Bobodtice, 7 km. south of Koréa), dependent on Göriče, as full possession (Gökbilgin, Edirne ne Paşa linds, 426). In ont/1195-6 the same person constructed a mosque and some other buildings in the village | Piskopiye near Göridie. In 910/1504-5 Hyās Beg drew up the makif-name for his mosque in Istanbul, (the former Studion Basilica Ween Yedi Kule) and for his foundations in Piskopiye: a mosque, an 'smaret (in the sense of a building for the distribution of and to the poor), and a mu'allimbhane. For the upkeep of these foundations, he allotted the tax revenue of tour villages in the district of Koréa (including Bosotinče and Piskopiye), the revenue of a village near Premedi, a hammam and seven shops in Istanbul, and another homman and a mill in Jannina (Yanya) in Epirus (extract of the wak/syye by Gökbilgin, Paşa liváss, 427-8). The full extent of the foundations of Ilyas are not known, with certainty. According to ■ late 18th-century source, the Hadibat al-diewamis, Istanbul 1281/1864-5, i, 196, Ilyas Beg founded "benevolent works like an "imdred, a mosque, a medrese, and a makish" in Korca. The Kamus al-alam, (v. 3919) mentions: "a blessed mosque, a medrese, an 'imaret and a tokke." Local tradition also attributes a hammam to llyks Beg. The Kamus states explicitly that the Beg "laid the foundations of the town" by building the above-mentioned objects. It is possible that Ilyas Beg, or his sons, added to the foundations of 910/2504-5 at a later date.

The Kamas further states that Ilyas was one of the dignitaries of the time of Mohemmed Fatih and tutor and mirdhhor of Dayezid II. The Hadikat noted that he was an Albanian by birth and that he was buried in Göridje. In a wakfiyye of 915/1509-10 (see Gökbilgin, Paşa livdər, li, 212), hu styles himself "Ilyas Beg b. 'Abd Allah". He was thus of local Christian origin. Hyas Beg was married = the Ottoman princess Hundl Khatun, daughter of Murad H and Umm Kulthum Khatun. The place where he crected his buildings, Piskopiye, explicitly styled a "village" in the 910 makfiyye, must have well the seat of a local bishopric in pre-Ottoman times. The Kāmās states that Ilyas Beg constructed his buildings on the site of a destroyed old monastery. The name "Güridie", sc. Koréa, came to be used for the new urban settlement which developed around the nucleus formed by Hyas's buildings. In the Istanbul Takeir of 953/1546, edited by Barkan and Ayverdi (Istanbul 1970, 375), the huildings of flyas are situated in the "basaba of Göridie." The new settlement thus supplanted the old one and probably absorbed its population, as it did with that of Mborje or Enborye 3 km, away from the new centre. The latter sank down to a hamlet of a few houses around the preserved Byzantine church of 1300.

The development of Korèa in the 16th and 17th centuries cannot have been a spectacular one. Hädidil Khalifa (tr. Von Hammer, Rumeli und Hosna, 141) mentions it in the first half of the 17th century as an administrative subdivision of the sandia of Ohrid. Ottoman lists of the hädilies of Rumeli from 1078/1667-8 and 1203/1788 mention Göridie as the seat of a hädilie of one of the lowest orders (Özergin in Usunçarşılı armağan, Ankara 1976, 265, 300). Neither Muhammed-i 'Ashik nor Ewliya Celebi describes Korèa, nor does Mario Bizzi or other travellers, without doubt because it lies almost 60 km. off the Via Egnatia, the main road through the country.

In the second half of the 18th century, the development of the town received a strong impetus from the immigration of inhabitants of the Walachian trade metropolis of Voskopoje (Moschopolis), 20 km. due west in the mountains. Between 1768 and 1779 this

large urban settlement fell prey to the disorder which at that time reigned supreme. The French consul of Thessaloniki, Félix Beaujour, and the British traveller Colonel Leake, both writing In the first decade of the 19th century, describe Korca m a place with 450 houses and a population of 3,000 souls. After that time the development of the town increased in speed. J. G. von Hahn (Albanische Studien, Jena 1854, 55) spoke of "dem rasch aufblühenden Gjortscha." Other sources mention 10,000 inhabitants. in 1859. In the eighties of the last century, Sami Bey describes the town in his Kamas al-a'lam as a place with 18,000 feliabitants, 757 shops, 23 hides, two mosques, one modrese, one tekke, one 'imárei, two sammans, a clock tower and four churches. At the end of the century the town was burnt down in a general conflagration. It was rebuilt under Ahmed Eyyüb Pasha according to a new and modern plan with wide and straight streets which crossed III # right angle, a plan which still characterises the place. Between 1887 and 1902 Koréa possessed a special Albanian school, the very first school where lessons were given in the Albanian language. As such, the place played a role of first importance in the development of Albanian nationalism.

From the sixties of the 19th century, Korča the capital of a sizeable sandiol which comprised much of south-eastern Albania and a part of present day Greek Macedonia. Around 1900, Heinrich Gelzer numbered 2,027 houses in Koréa, of which 1,420 were inhabited by Albanian Orthodox Christians, www.by Vlachs and 505 by Muslim Albanians (Vom Heiligen Berge und aus Makedonien, Leipzig 2904, 200). Other sources also mention population two-thirds Christian and one-third Muslim. During the upheavals of the Balkan Wars (1912-13), the town suffered particularly from the struggle between pro-Grock Albanianspeaking Christians and Albanian nationalists, both Muslim and Orthodox. During the French occupation, in 1916, a short lived "Republic of Korča" was proclaimed. After the First World War, Korta remained within the frontiers of the new Albanian state. According to a French census of 1916 it numbered 22-23,000 inhabitants, of whom 17,779 were Orthodox and 5,464 were Muslim, all Albanianspeaking (Justin Godart, L'Albanie en 1921, Paris 1922, 94). The total number in the district of Korta was 39,533 Muslims and 17,671 others. At present, the number of inhabitants of the town has passed the 50,000 mark.

Korĉa is the native town of the "Ottoman Montesquieu", Koĉi Beg [q.v.]. His family lies buried in the yard of the Mirākhor Mosque. The famous man himself rests, according to Bursali Mehmed Ţāhir's "Othmānit mu'ritifleri, in the graveyard along the Manastir Road, but according to Babinger (Gaschichtschreiber, 183), in the yard of the Korča mosque itself. The family of the famous viceroy of Egypt, Muhammad 'Ali [q.v.] alto came from Korča.

Koréa is today a modern industrial centre, manufacturing textiles. The mosque of Mirákhor Ilyàs Beg remains standing and is, together with the thete of the Beg, an officially-recognised Monument of Culture. It lost its tall minaret during the fury of the Albanian Cultural Revolution of the spring of 1967. The mosque is one of the best examples of early classical Ottoman architecture in the country, a building which contributed considerably to the formation of Islamic architectural forms in Albania in the succeeding centuries.

(M. Kiel)

EORDOFÁN (Kurdufán) a region of the Democratic Republic of the Sudan lying west of the White Nile roughly between lats. 16° and 10° N. and longs. 32° and 27° E.; it is now divided into two provinces, Northern and Southern Kordofán, with a population of 3,103,000 (1973 census). The name, often pronounced locally and earlier written as Kordofál, is said ■ come from a small hill some ten miles south-east of al-Ubayyid (lat. 13° 17' N., long. 30° 14′ E.); before the present century ■ name referred to the central settled area rather than ■ the whole region.

1. GEOGRAPHY AND RTHHOLOGY

A vast (about 147,000 square miles) open plain, forming a segment of Africa's Sudanic Belt, Kordolän may be divided into a number of ecological zones; the semi-desert in the north, a central for (stabilised sand dune) zone and the Nuba Mountains of the south-east. The mean annual rainfall ranges from less than roo mm. In the far north to between to 800 miles in the south; the human ecology reflects this transition from camel and sheep normalism in the northern miles which itself merges into the Hayida Desert, mixed hoe agriculture and pastoralism in the central zone and cattle normalism in the south. Only in the Khayran depression north of Bāra is irrigated agriculture practised.

The ethnography of Kordofan is complex, being historically the result of an Arab or Arabised component immigrating and intermingling with a discrete indigenous population; Arab nomads and seminomeds, predominantly Kababish, Dar Hamid, Hamar and Bidayriyya live in the north and centre, while in the south the cattle nomads (Beckles), Mistriyya, Humr and Hawazma, form but a part of the "Bakkara belt" that stretches west to Lake Chad and east across the White Nile. The towns, established in the 18th century mainly by Discallyyan and Danākla immigrants from the Nile Valley, we found in the central zone, ai-Ubayyid, Bāra, Umm Ruwāba and al-Rahad, 🔤 area of rain-fed agriculture which produces Kordofân's main export, gum arabic from the haghab tree (Acadia senegal). The Nuba Mountains are inhabited by mimedley of ethnic groups, whose generic name, Nuba, conceals a linguistic and ethnic diversity which defies generalisations; at least thirty languages belonging m several different language groups are spoken, in the 20th century, partly because of colonial policies, the Nuba have increasingly moved their settlements down from the mountains onto the plains below.

2. HISTORY

Neither the name nor any certain information about the region appear in the mediaeval Arabic geographical literature; nor can anything very certain be said of the early peopling of Kordofán or of the course or chrocology of the Arab immigration. A letter from the ruler of Bornů dated 794/1391 to Sultan al-Zāhir Barkůk of Egypt may imply the penetration of Djudhām and other Arab nomads through Kordofán and beyond to the Lake Chad region (al-Kalkashandi, Subh al-a'sha, viii, 116-18; Vůsuí Fadl Hasan, The drabs and the Sudan, 163), but of the two possible directions from which the original Arab nuclei of the modern Bakkāra tribes might have come, North Africa seems more likely than the Nile. The Bakkāra tribes in their present formation probably do not

back beyond the 17th century. Oral traditions remember the existence of an Arab nomad confederation, the Fazăra, in Northern Kordofân in the rotherth/f6th-17th centuries; recent research has discovered references to Egyptian merchants trading with merchants from bare al-addin fazăra ca. 1510. The Kâbablah of Kordofân and the Zayyādiyya of Dār Fūr [g.v.] appear to have emerged out of the débris of this confederation. In sum, it would appear that the earliest Arab penetration cannot be dated much before the 8th/14th century, probably following the collapse of the Christian Nubian kingdoms of the Nile Valley.

Fundi, Musabba'at and Für rule. Following the emergence of the Islamised Fundi [a.v.] sultanate of Slanar at the beginning of the roth/roth century. Kordofan experienced a secondary wave of Arabisation and Islamisation through commercial and political influences from the Nile Valley and the missionary activities of Itinerant fahiles. The spread of Islam among the indigenous inhabitants | illustrated by the emergence of Takali, a small Islamised kingdom, whose foundation at least as a Muslim state in traditionally apprihed to Muhammad al-Dia all, a fakik who came from the north in about 036/2530. Occasional glimpses of this spread of Islam may be found in the biographical dictionary of Wad Dayf Allah; in the early txth/17th century Tadi al-Din al Baharl from Baghdad visited Takali. Later in the century the fakih Ibn al-Kaddal visited Kordofān; he taught a local fakib. Diawdat Allāh, whose son Mukhtar was killed by Diankal (see below) (Muhammad al-Nur b. Dayf Allah, Kitāb al-Tabakāt, ed. Yüsuf Fadl Hasan, Khartoum 1971, 127-9, 87-8, 130, 345-5).

In historic times Kordofan became a "buffer territory, now the prey of its eastern, now of its western neighbours" (MacMichael, Kordofán, 5), that is, between Sinnār and the rising Dār Fûr sultanate (established os. 2550). Bādl II of Sinnār (1034-92/1644-5 to 1681) invaded and subdued Takall, and Sinnār and occasionally recruited Núba as mercenaries. Thereafter Sinnār exercised an informal hegemany over central and eastern Kordofán through their protégés, the Chudiyyāt, living to the south of al-Ubayyid, some of whose chiefs appear in Fundi documents with the title shaybh Kurdufán.

Sinnar's overlordship was disputed in the late 17th and 18th centuries by three generations of Musabba'at (sing, Musabba'av) chiefs, who attempted to carve out a kingdom for themselves in Kordofan. By origin from Dar Für, Diankal, 'Isawi and Häshim, grandfather, father 2001 mm attempted to play off Sinnar and Dar Für against each other.

Although the Musabba'āt suoceeded in ousting the Fundi, in about 1200/1785-6 Hāṣhim's activities provoked invasion by Suitan Muhammad Tayrāb (2a. 1166-1200/1752-3 to 1785-6) from Dār Fūr. Thereafter, despite Hāṣhim's attempts at resistance, Kordofān was ruled by Dār Fūr. Among Dār Fūr's governors [maḥdām pl. maḥdām) in Kordofān, Muhammad Kurra and Musalim al-Tardjāwī succuraged trade in gum, ostrich feathers and slaves, granted land to faḥtās and others around al-Ubayyid and Bārā, and curbed the nomads.

Turco-Egyptian rule 1821-85. In 1821, as part of wider invasion of the Northern Sudan, Muhammad 'All Pasha [q.v.], will of Egypt, sent mexpedition of 5 to 4,000 troops and an artillery battery under his son-in-law, the daftardar Muhammad Bey Khusraw, to conquer Dir For and Kordofan (al-Djuberti, 'Adja'ib al-Sihar, iv. 318). After success-

fully crossing the desert, the dafiardar's army destroyed the Dar For garrison and the mandam Musallim at Bara on 20 August 1821; Khusraw was prevented from invading Dar For by siftere revolt along the Nile. Al-Ubayyid continued the capital of what the now a province of the Turo-Reyptian Sudan, although the actual administrative arrangements fluctuated greatly (the governors are listed in R. L. Hill, Ruters of Sudan, 1820-1885, in Sudan Notes and Records, xxxiift [1951], 85-95).

Muhammad 'All had conquered the Northern Sudan to obtain slaves and gold; Kordofan yielded both, some alluvial gold from Diabal Shavbun in the Nubs Mountains and slaves from those owned within Kordofán or captured by Bakkára raids upon the Nüba and other southern peoples. As in other parts of the Sudan, the authorities themselves organised slave raids to the south: Rustum Bey (governor 1828-33) on raid in 1810 seized 1,400 captives. Despite prospecting by W. P. E. S. Rüppell, J. von Russegger and others, the hopes me substantial gold deposits proved largely chimerical. For most of the Turco-Egyptian period neither the Bakkara nor the Nübs were ever brought under an effective administration; Diabal Takali put up a particularly prolonged resistance.

The Mahdiyya 1885-98. Kordofan was the of the first and final acts of the Mahdiyya (see REALIPA. iv. In the Sudanese Mandiyya]. Although its history belongs to the wider history of the Mahdist Sudan, events in Kordofán contributed decisively to the success of the Mahdist Revolution. Thus, among the Dia aliyyun settled in the province, a bitter conflict had developed between two factions led by Ilyas Pasha Umm Birayr and Ahmad Bey Dafa' Allah al-'Awadi. The former was appointed Governor of Kordofan by C. G. Gordon, but was distnissed following = revolt by the Ghudiyyat instiguted by his rivals. It was with Ilyas and others, embittered with the Turco-Egyptian régime, that Muhammad Ahmad, the future Mahdi, made contact on a visit to al-Ubayyid, probably in 1879.

Following his manifestation (subur) on 29 June 1881 and initial successes against the Turco-Egyptian authorities, the Mahdi, following prophetic precedent, made his withdrawal (bidira) into Kordofan to Djabal Kadir in the Nuba Mountains. It was in Kordofan that the Mahdi found the support and the victories that firmly established his rule; on 19 January 1883 at-Ubayyid finally capitulated and the destruction of the Hicks Pasha relief expedition at Shaykan, south of al-Ubayyid, on November 1883 gave the Mahdi complete control over Kordofan. In the context of these victories, Gordon's proposal that the Mahdi be made "Sultan of Kordofan" was derisory.

During the Mahdist period, Kordofán was basically administered from al-Ubayyid by a deputy-governor (wakil), but for most of the period was combined with Dår Für to form one great province of west ('imālat al-gharb) under 'Uthmān Ādam (1888-91) and Mahmūd Ahmad (1893-96). Not everyone in Kordofán accepted the Mahdiyya; the Kabābish under their Shaykh, Sālib Faqi Alkh Sālim, who was in touch with the Anglo-Egyptian authorities, resisted until he was killed in May 1887. A revolt of a different nature the mutlny of the dishādiyya, slave troops armed with rifles, al-Ubayyid in 1885; they marched off to the Nuba Mountains killing the provincial governor, Mabmūd 'Abd al-Kādir, when he attempted to stop them.

In late 1896, under the threat of the Anglo-Egyp-

tian advance, the Khalifa 'Abdallahi ordered Mahmüd Abmad to march east with www bulk of the forces of Kordofan and Dar Für. After the defeat at Karrari (Omdurman) on a September 1898, the Khalifa withdrew into eastern Kordolân to Shirkayla; he was hunted down and killed at Umm Dibaykarat, near Koeti, on 24 November 1899.

Condominium rule 1898-1956 and independence. At the outset of Anglo-Egyptian Condominium rule in the Sudan, Kordofán was in a state of chaos; bands of Mahdist supporters roamed unchecked and the tribal order had largely disintegrated both as a result of the deliberate policy of the Khalifa and through the loss of herds and slaves. Order was gradually imposed by punitive patrols, 📟 Nüba under their makks (chiefs) and kudjürs (ritual experts) forming particularly strong pockets of resistance until the 1920s. By 1911 the railway joined al-Ubayyid to Khartoum and the gum trade was revived.

In the 1920s direct military administration gave way to "Indirect rule", and local administration came to be largely committed to the tribal chiefs. Tribes like the Kababish under a strong leader, Sir 'Ali al-Tum Fadi Aliah Salim (1874-1938), prospered; others, such in the Hamar, were re-assembled from the fragments left by the Mahdiyya. Al-Ubayyid grew rapidly as the centre for the gum trade.

Since independence (1 January 1956) Kordofán has been one of the most prosperous and peaceful regions of the Sudan, although the rapid encroachment of the desert has become a major threat. Provincial and local government reorgansiation in the early 1970s has largely transferred power from the tribal leadership to the administrators and locally-elected committees of the Sudanese Socialist Union.

(R. S. O'FARRY) KORDOS, the Ottoman Turkish name of the ancient Greek city of Corinth in 📟 Mores [q.u.]. It has a naturally fortified citadel ('Axpoxópsv9oc) overlooking m fertile plain (whose main product is currents) and dominating the isthmus between continental Greece and the Moreot peninsula - well m the two adjacent ports on either side. Corinth remained under Byzantine rule up to 1220, when It was conquered by the Crusaders; it passed to the Fforentine family of the Acclaimoli (1358), to the Greek despot of the Morea (1395), to the Hospitaliers of Rhodes (1400) and again to the Greeks (1404). The region of Corinth was attacked by the Turks of Aydin in 1327, and in 1361 it is reported have deserted owing to Turkish raids. The city attacked by the Ottomans under Ewrenos in 1395 and conquered after a siege by Mehemmed 11 in 1458. In 1488-9 Corinth | a Christian population of approximately 18,000; after 1400 the existence of Albanian settlements was alguabled for the region. According to Ewliya Celebi, it formed a sandjak of the eyalet of the Morea (Seyahat-name, i, 185). In 1614 it was temporarily conquered by the Hospitalters of Rhodes; in 1682 it passed to the Venetians and again to the Ottomans in 1715. Finally, in 1822 (the second year of the Greek War of Independence) it meet taken by the Greeks.

KÖRFÜZ, KÖRFÜS (the first spelling in e.g. Piri Re'ls and Rashid, the second in Pecewi), the Turkish name for the island of Corfu off the coast of Epirus. Pirl Re'ls gives a full account of the island, together with a map, in his Bahriyya (ed. Kable, Berlin and Leipzig 1926-7, i, 113-16, No. 54). The Ottomans never succeeded in dislodging from Corfu the Venetians, who controlled it from the opening of the 15th century until 1797, but there were two major Turkish attempts to occupy the island.

The first took place in Rahle I 944/August #537 ■ the reign of Süleymän the Magnificent. The flee: assembled in spring of that year at Awlonya under the great corsair captain Khayr al-Din Barbarossa and Lutfi Fasha, then third vizier [q.oo.], with the sukan in charge of the land forces. The town of Corfu was besieged for 43 days, but with the approach of winter, the Turks withdrew, sultan returning to Edirae whilst the fleet attacked and plundered Cephalonia (see Pečewi, Ta'rith, Istanbul 128 j/1866-7, i, 194-200; Hādidil Khalifa, Tuhfat al-hibār, tr.]. Mitchell, History of the maritime mine of the Turks, London 1831, 55-8, drawing in the Ghazaudi-ndma of Sayyid Murád, we Bibl. Memaye Al-Din Pasha, narrakossa). The second and last attempt took place in 1128/1716 under Ahmed III, towards the end of the Ottoman reconquest of the Morea [q.v.] from Venica, when the attack was led from the land by the Ser'asker Kara Mustaia Pasha and from the sea by the Kapudan-i Deryā Mehmed Pasha, and was again unsuccessful (Rāshid, Ta'rīkh), Istanbul 1262/1865-6, iv. 186, 189, 240).

KORITZA [see KORČA].

KORKUD B. BÄYAZID, AND 'L-KHAYR MURAN-MAD (874-919/1470-1513), Ottoman prince and eldest of the eight sons of Sultan Bayazid II [q.s.]. He was born in Amasya where his father was governor (Latifi, Tadhkira, 66; Nishandil Mehmed Pasha, Ta'rīkk, 181; Cf. Kemāl-pasha-zāde, Tawārikk-i āl-i Othman, Millet ms. 32, f. 23 etc., and Hüseyin Hüsameddin, Amasya tarihi, iii, 226). He spent his childhood and had his early education in the Old Palace at Istanbul in the care of his grandfather Mehemmed II, after whose death in 886/1481 he was briefly placed on the throne, for some 17 days, by the Janissaries until his father returned from Amasya to assume power. Later, Korkud returned to Amasya and in 896/1491 was appointed governor of Sarukhān. His request to have the governorship of Bergama instead of Manisa was refused by his father, and perhaps upon the suggestion of his brother Ahmad, governor of Amasya now, he was transferred to the governorship of Tekke and Antelya in 907/1302. Shortly afterwards, the sandiak of Hamid with a thass of \$43,363 after and the setamet of Lazkiyye, amounting to 200, 722 akees, were added in his personal khass of \$37,091 akles (see the ferman of Dhu 'l-Ka'da 908/May 1503 in Topkapu Saray arsivi E. 6356).

The fact that his father and the leading state dignitaries, headed by the Grand Vizier Khādim 'All Pasha, favoured Ahmad as heir to the throne offended Korkud, and cause him to withdraw into seclusion on Antalyan coast (Muharram 914/May 1508; see 'Alf. Kunh al-akkbas, Istanbul Univ. Libr., Tkish. ms. 5959, ii, f. 152), despite his his high being increased to 2,502,755 after (for the fermin dated 5 Shaban 914) 29 November 1508 and sent to Korfrud, see TKSA E. 6357). He obtained permission to go on the Pilgrimage, and left for Egypt with 50 men and 87 slaves in Muharram 915/May 1509, sailing with five ships under the Ralis Ak-bash. He landed at Damietta after five days and arrived in Cairc on 9 Safar/29 May (for details, see 'All, f. 153), but did me feel that he was wholly wolcome (details in TKSA, various letters in dossier No. 6684). However, it is clear from the Namiùk sultan's letters III Bâyazîd II that he was pleased to welcome Korkud, but after a month was able to convince the latter to return, to the light of "a son's obedience due to his father". Korkud received the promise of restoration to his governorship, and me sail back to Turkey.

Despite an attack by the Knights of Rhodes on his Egyptian escort off the shores of Tekke at the end of 916/beginning of 511. Korkud was able to get through to Antalya and to send a warning letter to Sayyidi Yūnus, who was coming on later from Egypt with baggage, to postpone sailing in order to avoid attacks by the Knights (TiCSA, letter in dossier No. 6584). It is recorded that his health deteriorated me his return and that he asked for treatment from the physician 'Alâ' al-Din (letter to the Visiers in ibid.). Meanwhile, he was dismayed to hear of the appointment of his younger full brother Selim to Sarukhān (TKSA E 5587 in ibid.), and he immediately left Antalya for that province (Dhu,'I-Riddigia 916/March 1511). His sudden departure from Tekke brought about the outbreak of m Shiff-inspired rising under Shāh Kuli in that province, and the Grand Vizter Khādlim 'Alī Paṣḥa had to be sent to suppress It.

Meanwhile, Korkud was being informed of Selim's movements, and sent a letter to the latter adjuring him not to act precipitately (TKSA dossier 6684). At the same time, he was aware of Ahmad's ambitions for the throne. Certain of the court officials, aware of Bayazid's intention to proclaim Selim the heir, invited Korkud to the capital. He travelled to Istanbul in disguise and went to the mosque of the Janksaries, seeking their support in middle for the throne. Although they held him in respect, they considered him less capable as a potential ruler than Selim. Selim arrived at Istanbul on 22 Muharram 918/ 19 April 1512 in order to forestall Ahmad [for details, see mayazio nj, and ascended the throne on the abdication of his father. He then gave Korkud the governorship of the Island of Midill, together with Sarukhān again (Sa'd al-Din, Tādi al-tawārikh, il 204). But Korkud also demanded the sandjaks of Aydin, Manisa and Tekke, so that Selim, considering him a threat to the throne's stability, marched secretly to Manisa and surrounded Korkud's palace there. Korkud managed to escape with his confidant Piyale, disguised, but was betrayed by the governor of Tekke Käsim Beg and caught Antalya. He was strangled in his sleep by the Kapidil-bashi Sinan Beg's at Egrigoz on the way back to Bursa, and was buried near Orkhan Ghazi's tomb in Burna (Muharram 919/March 1513; Sa'd al-Din, ii, 230 ff.).

Korkud man highly educated, and skilled as a poet and musician, being able to play many types of musical instrument (Sohl, Tadhkira, 18). His verses, written under the pen-name or takhallus of Harlmi, were collected into a diadn. He wrote several works in Arabic, including commentaries and hashiyes. His extant works include: (1) Waşilat al-abbāb (dated 15 Şafar 915/4 June 1509, autograph in Aya Sofya 3529); (2) Ḥali ishkāi al-afkār fī hili amudi al-kuffar (Aya Solya 1142); (3) Dafwal al-nafe al-láltha ila 'l-a'māl al-şāliķa or Kilāb al-Harimi fi 'l-laşamwuf (thus in the ma, copy of R. Yelkenci; in Aya Sofye, 1763, this is simply called Kitto fo 'i-tasawwef); (4) Sharh alfäs kuft = Häfis al-insän fan läfis alayında (Aya Sofya 2289); (5) Korkudiyya or Faténdyi Korkudkhāniyya (see Kashf al-zunun, ii, 1228); and (6) Diwan (Millet roa).

KORKUD DEDE [see BORKUD].

KÖROGHLU, a rebel of the Anatolian Dielali movement [q.v. in Suppl.] in the 10th/16th century and the hero of a popular romance. The real Köroghlu came from the region of Bolu, and is probably the person as the soldier-bard of that who is said to have taken part in the campaigns in the Caucasus and Adharbaydian of Ozdamiroghlu Pasha in the years 902-3/1558-5.

Until fairly times, Köroghiu remained a legendary personality, whose exploits that chanted by bards and story-teilers in Anatolia, Agherbaydjan, Turkmenistän and Uzbekistän. Manuscript versions, and later on, lithographs and prints, circulated in Turkish-speaking lands, and more is ess extensive episodes of this great epic-romantic cycle even passed into the story-teiling repertoire of peripheral Turkish-speaking communities like the Kirgiz, the Kazaks and the Tatars of Tobol, as into that of non-Turkish peoples like the Armenians, Kurds, Georgians and Tädilks.

The historicity of the figure of Köroghlu was pevertheless asserted by writers as far back as the zzth/z7th century. Ewilya Celebi speaks of himwithout giving precise date—as m honourable bandit whose exploits were still remembered in the mountainous parts of northwestern Anatolia; and Arakel of Tabriz cites him as a Dielalt chief whose adventures, together with those of his companions, formed the core around the early 11th/17th century of a "romance" chanted by the ministrels of the lands bordering on the Ottoman empire and Persia. Towards the end of the 19th century and at the beginning of the present one several attempts at identifying him were made, some people basing themselves on contradictory local traditions, and others putting forth hypotheses about the hero's historical prototype or about the origin of some feature or other or some legendary motif III the romance concerning him.

The discovery in 1942 | Ottoman archival documents has firstly confirmed Ewliya Celebi's information, and secondly allowed us to date his exploits as a Dielāli rebel. We have here a series of imperial orders from the years 988-90/2580-2 addressed to the Bey of Bolu and the sadt of Gerede concerning a Djeläll called Köroghlu Rüshen. Now Rüshen is also the forename of Köroghlu in several oral versions, Anatolian and Adharbaydjanl, of the legend of our hero. Moreover, and in the cultural environments most distant from Ottoman territory, tradition has retained, in versions deformed in varying degrees, the name of Bolu Beyl as one of the hero's opponents, as well as allusions to the Ottoman sultan. Finally, several of Köroghlu's companions mentioned with the same names in the Ottoman archival documents as in the different versions of the romance.

The ideas evoked by the name Kör-oghlu "son of the blind one" have contributed to the attracting around the genuine exploits of the bandit-hero legends of diverse origin, some of them going back to mlong way in time, on the theme of the "hero, son of m blind father", who rises up against the masters who mutilated his father.

(P. N. BORATAV) KORON (Ottoman Turkish Koron; Venetian Coron; in modern Greek Kopthyn), a fortress in the south-west Peloponnesus (see worms) and ____ the west coast of the gulf of Koron, situated 15 miles by land from the fortress of Modon [q.o.; modern Greek McCovn], with which, in the period of Venetian and Ottoman rule, its history was linked and which, to some degree, overshadowed it. The Byzantine fortress of Koroz, "un luogo di maggior difesa . . . di forma triangolare, posta in mezzo d'una lingua di terre" (P. Garzoni, Istoria della Repubblica di Venezia in tempo della Sacra Lega, Venice 1705, 100-1) passed, with much of the Morea, under Frankish rule in 1204, but was seized by Venice two years later and me coded to her in 1209. Koron remained a Venetian colony for nearly two centuries. serving ma vital provisioning station for the Venetian fleet and becoming, with Modon, "the chief eyes of the Republic" (W. Miller, The Latins in the Levent, London 1908, 59, 152).

As sarly as 1428 Koron and attacked from the man and pilitaged by the Ottomans, and after 1469, when Mehemmed II completed the conquest of the Greek principalities of the Morea, its tecritories were contigueus with those of the sultan. It me not, however, until the Ottoman-Venetian war of 905/1499 to 909/1503 that Koron fell - the Ottomans; in 906/1500, after Modon had been taken by storm and its defenders massacred, Koron and Navarino "yeelded themselves by composition"-i.e. vive ileto Bayasid II (Knolles, Generall Historie of the Turkes), London 1603, 460). This event took place on 15 August 2300; 17 August according to Bayazid II's feth-name for Modon and Koron, addressed to the inhabitants of Chios, and written at Koron on 22 August (M. Sanuto, I diarri, ili, Venice 1880, 827-8). Bayazid Il installed in Koron a garrison of 500 Janissaries and men 'asab troops (ibid., 810-1).

In 938/1532 Koron was retaken by the Genoese admiral Andrea Doria while Sulayman I was engaged in the Guns campaign. In the spring of 939/1533 Koron was besieged by the Ottomans by land and sea, but without success, and was once more relieved by Doria. It was this setback which precipitated the sultan's suramoning the North African corsair chief Khayr al-Din Barbarosus [q.v.] to Istanbul, from where, having kissed the hand of the sultan and received an appointment as derya beglerbegi, he was sent with a naval force against Koron in mid-Dhu'l-Ka'da 940 (Lutil Pasha, Tomiribh-i dl-i'Othmdn, Istanbul 1341, 343-4). Khayr al-Din Pasha's approach, an outbreak of plague amongst the defenders, and the hardships of the winter of 1533-4, all caused the Spanish garrison under Mendosa, which Dorla had installed there, to abandon the fortress and withdraw to Naples; Koron, accordingly, more reoccupied in an uncontested way by the Ottomans (cf. further me the events of 1532-4, Panlo Giovio, Historiae sui temporie, 11553, ii, 114v. ff., pasnim).

In the reign of Sulayman I, according to a labrir defleri utilised by M. T. Gökbligin (Belleton, KK. 280, 327), Korun was the seat of a kddt with a revenue of 150 aktes per annum, in the sandjak of Modon, hind of Mora. The fortress and its dependent territories formed an imperial fief (khdss-i htimayūn) which yielded 162,081 aktes of revenue per annum: these revenues, according to Th. Spandugino, Commentarii, 78, were bestowed with those of Modon by Bayazid II on Mecca.

Later in the 11th/16th century (by 991/1582: cf. Gökbligin, loc. cit.) the kadā' of Koron was annexed to the kandjak of Mezestre (Mistra). At this time the town contained 300 Christian and to Jewish households; the entire Muslim population of garrison officials and some 300 kal's neferâl must have been what it appears to have remained in succeeding centuries (cf. the testimony of Evliyā Čelebī for the late 17th century and Leake for the early 19th), i.e. of 'askerā status.

Western travellers apart, Koron was visited in roso/r630-1 by the Ottoman historian Petewi (Tä²rléh, Istanbul 1283, i, 172) who recalls the events of a century previously, and, later in the century (1668) by Ewliya Celebi, who has left a description of the fortress and its inhabitants (Seydhat-nāme, Istanbul 1314/1896-7 to 1938, viii, 326-33; cf. Ulrich Wolfart. Die Reison des Evliya Celebi durch die Morea, Inaug.-Disa., Munich 1970, 59-66).

In the Sacra Liga War of 1095/1684 ■ 1110/1699, Koron was the first fortified place to fall to Venice in the course of her reconquest of the Morea, despite a vigorous defence and attempts ■ relieve the garrison by land. (Diumādā 'l-ākhir 1086/25 June to 7 August 1685; cf. Silahdār, 1371-ihh, Istanbul 1928, ii. 218 ff.; Pietro Garzoni, op. cit., 101, 107-17; Alessandro Locatelli, Racconto kistorico della Vencia guerra in Levania... 1684-1690, Colonia 1691, 124-38, 158.

Koron was recovered for the Ottomans by the Grand Vizier Cortulu 'All Paşha in Sha'bān 1227/August 1725. In this last phase, the town and its trade insensibly declined. Leaks, in 1805, found that the export of silk and olive-oil, which down to the 1770s had supported four Prench merchant houses, was me longer flourishing: the harbour, blocked and ruinous already at the time of Bernard Randolph's visit in the late 17th century, offered only an insecure anchorage, while the town itself was much affected by the depredations of the "Janissaries of Koroni" [W. M. Leake, Traveis in the Morea, London 1830, i, 485). Koron finally passed from Ottoman, and Islamic, rule in the course of the Greek War of Independence.

Bibliography (spart from works already cited in the text): Plans and perspective views of the fortress and town of Koron as it appeared at the time of the Venetian reconquest (1685) = given by P. M. Coronelli, Memorie istoriographiche de' Regni della Morea, Venice n.d., 56-77; cf. O. Dapper, Nauscheurige Beschryving - Mores, Amsterdam 1688, 23-30. The most accessible recent description of the fortress is by Kevin Andrews, Casiles of the Morea, Princeton, N.J. 1955 (= Gennadeion Monographs, iv), 11-23, with extensive further bibliography of western sources. Cf. also Plat Rolls, Kitāb-i Bahriyye, Istanbul 1935, 300-6; Silāhdār Findīķilli Mehmed Agha, Nüşretnāme, ed. Parmaksizoğlu, İstanbul 1960-9, ii/2, 334; Rāshid, Tarikh, Istanbul 1282/1865, iv, 126-7. (C. J. HEYWOOD)

KORYUREE, Ests Bantol, modern Turkish

orthography Buts Baule Konverse, Turkish poet (1891-1949). Born in Istanbul, the son of m army doctor, he attended schools in Salonica, Uskiib (Skopje) and Istanbul and graduated from the School of Political Science (Mekieb-i mülkiyye) in 1913. He served as a diplomat in Bucarest (1915) and Budapest (1916-22) and m a civil servant in various ministries. He died in Ankara = 18 October 1949. Like ==== poets of his generation, Enls Behidi wrote poems in the style and more of the Therwel-i filesis school [q.v.] and of its extension, the Fedir-i dif [q.v.] one, in farild metre and with an artificial language loaded with Arabic and Persian elements, and published them mainly in the periodical Shekbal (1912-14) until he man under the influence of Diya' (Ziya) Gökalp [q.v.], who was leading the "national literature" trend (Mills edebiyyát djereyént). Under Gökalp's guidance, he switched to syllabic metro (Asdie werni), spokou Turkish and "national" themes, and soon became one of the five leading young exponents of syllabic metre known as hedienish besh shotiri (the others being Khalid Fakhri (Ozansoy), Orkhan Seyli (Orhon), Yüsuf Diya' (Ortac) and Farak Nafidh (Cambbel)). Korytirek was particularly successful, with an original approach and style, in his epic poems (e.g. Milli neshide, Sumdriler) and in his evocative tales of the exploits of Turkish seamen in the Mediterranean (e.g. Gemidiiler, Wenedikis horsan bint, Ughursut baskin). He published his collected poems in Mirath ("The legacy", Istanbul 1927). His Gilnesin ölümül ("The death of the sun"), containing his later, less interesting, poems, posthumously published, with a new edition of Mirath, by F. Tevetoglu as Enis Behie Korylirek'ten, Miras ve Güneşin ölümül, Ankara 1971. During the last years of his life he was subject to depression and wrote old style pseudomystic poems of mediocre quality supposedly inspired by a 11th/17th century sheyth, Varidat i Silleyman, Ankara 1049.

(FARIR IZ)

KÖSE DA<u>GH</u>, a land-corridor some 50 miles/ km. to the north-west of SIwas where there took place in 641/1243, probably m | Shawwal/26 June, the decisive battle which opened up Asia Minor to Mongols and sounded knell for the Saldjük sultanate of Rûm. The first contacts of the Mongols and Saldjüks went back to 🔤 last years of 'Ala' al-Din Kaykubād I [q.v.], but at that time Anatolia. was too well-protected in relation to the conquests aiready effected by the Mongols for the latter really to have any plans for conquering it. It was only under Kaykhusraw II [q.v.] that the threat took definite shape, without one being able to ascertain how far the invaders intended to advance. However, after the Great Khan Ögedey's death, the Mongol head of the Caucasian region, Baydju, seized Erzerum im midst of the winter of 1242, and thus opened up the way into Asia Minor for the following

The sources give few details about the campaign and the battle. Kaykhusraw seems only very late have fully realised the seriousness and imminence of the danger. He summoned forces together, comprising his affice or vassals, even including Armenians, Greeks and "Frankr", ending up with what certainly a force numerically superior to Baydiu's.

But the impatience of his young commanders prevented him from awaiting the complete grouping of the Saldjük forces. The Mongols, aknost all cavalrymen, had recourse to their customary and invariably successful tactic of a simulated flight and then an unforeseen return to the attack against disorganised pursuers. The sultan lost his head and fled, and only the initiative of his vizier Muhadhahaba flow, combined probably with the Mongols' own prudence, allowed him to keep his throne as a vassal. In reality, the process now began which led to a de facto Mongol protectorate.

The weaknesses of the Saldjük state at the time have often been stressed, this was true, but the Mongols, partly by the terror which they inspired, had overcome many other powers. It is hard to maintain that, even without these weaknesses, the course of history would have been any different.

(CL CAREN)

KÖSE MİKHÂL (see minkaloghlu).

KÖSEM WÄLIDE or KÖSEM SULTAN, called MARPAYRAR (cs. 1589-1651), wife of the Ottom an sultan Ahmad and mother of the sultans Murâd IV and Ibrahim I [q.eu.]. She are Greek by birth, achieved power in the first place through the harem, exercising a decisive influence in the state during the reigns of her two sons and of her grandson Mehammed IV.

The views put forward concerning her origin and her first name-Nasya being derived from Anastasia (Ahmed Refik, Kadinlar saljanati, Istanbul 1332, 47-8, deriving information from Guer, Maurs et usages des Turcs, Paris 1747, ii. 474, see also Pétis de la Croix, Abrégé chronologique de l'empire ottomane, Paris 1768, ii, 74)-do not seem to be reliable. According to Pietro della Valle, l'oyages, Rouen 1645, I. us. she was given the nickname Kösem because of her smooth and hairless skin (hose - "hairless, beardless"). However, the epithet közem/közemen could also have been given to her on account of her ability = | leader and virtual ruler (for the meanings of Adsem in Ottoman, see Hüseyin Kazim, Türk lagali, Istanbul 1940; iv, 181; B. Kerestedjian, Quelques maiériaux pour un dictionnaire etymologique de la langue turque, London 1912, s.v. heusemen and heusen: Radiofi, Versuch eines Worterbuches der Türkdialecte, ii/2, 1294: "ram, bell-wether, leader; free, without a care, independent").

Through her beauty and intelligence, Kösem Wälids was especially attractive to Ahmad I, and drew ahead of more senior wives in the palace. She bore the sultan four sons—Murad, Sulayman, Ibrahlm and Käsim—and three daughters—'A'igha, Fājima and Djawharkhān (Von Hammer, GOR; cf. Na'mā, Ta'riāh, Istanbul 1280, ili, 67 ff.). These daughters she subsequently used to consolidate her political influence by strategic marriages to different wisions.

After Ahmad I's death on 22 Dhu 'l-Ka'da 1026/ 23 November 1617, she supported the succession of his brother Mustafa I, under whose feeble rule she was able to exercise effective power in the state. Mustafa's deposition more months later was a setback for her, and she was relegated to the Old Palace (Eaki Sarāy) at Bayezid under Ahmad's young son 'Othman II, but she came to the fore again when 'Othman was deposed and executed and Mustafa briefly restored (9 Radjab 1031/20 May 1622). Her

full influence now became apparent when her minor Murad IV ascended the throne in 1032/1623 and she thus became officially the Wallde Sultan, ruling as regent for five years till her son was old enough to take up the reins of power himself (Katib Celebi. Fedhlehe, Istanbul 1287, ii, 220; Von Hammer, GOR. quoting . Venetian report). Even thereafter, Murad greatly respected his mother's opinions, and she took a close interest in state affairs when he was away from the capital. Thus the Shaykh al-Islam Akhizade Hüsayn Efendi's disapproval of Murad's hanging the side of Isnik was communicated by her to the sultan, then on his way to Bursa; he immediately returned to Istanbul and hanged Akhi-sade Hüsaynan which had taken place only three times in Ottoman history (Kätib Celebi, op. cit., ii, 160; Na'imā, iii, 183). She saved the Ottoman dynasty from extinction by preventing Murad, who had executed his other brothers, including Sillayman and Käsim, from killing Ibrahlm also (Sagredo, Histoire de l'empire ottoman, Arnsterdam 1732, vi. 417: Vanel. Abrègé nouveque Il l'histoire générale des Turcs, Paris 1689, ii, 545; Histoire des grands vixirs, Paris 1676, 34; Du Loir, Voyages, Paris 1654, 117; - Hammer, GORY

Together with the Grand Vizier Kara Mustafa Pasha (q.v.) she became most active in affairs when Ibrahim succeeded to the throne after Murad's death on 16 Shawwal 1049/9 February 1640 (Nafima, III. 420), especially as her son gradually became more and more involved with his concubines, the expenditure involved having disastrous repercussions on the treasury (Kātib Čelebi, op. cit., il. 300 ff.). He subsequently came under the influence of other Palace women, and Kösem Wälide therefore lost her ascendancy and left the Sardy-i Diedid-i Amire to live in a summer house outside Topkapl. When Ibrahim learnt that his mother was plotting with the Grand Vizier Sälih Pasha do dethrone him, he moved her to the Iskanda Celebi garden in Florya and hanged Salih (Wedithi, Tabrich, Istanbul Univ. Library Turkish ms. 2543, fols. 29b, 32b). Ibrahim's weak rule caused a deterioration in affairs, whilst the Cretan war and dragging on and creating feeling against him. The chiefs of IIII Janissary corps, under Kara Murad Agha, Muslib al-Din and Bektash Agha, killed the Grand Vizier Ahmad Pasha Hazarpare and decided to depose Ibrahim. The new Grand Vizier, Sofu (or Kodia) Mehmed Pasha and the Shayah al-Islam 'Abd al-Rahlm Elendi, together with other leading officials, obtained Kösem Walide's consent after a meeting with her at Topkapi, dethroned Ibrahim and put in his place his eldest son, the sevenyears old prince Mehemmed on 18 Radjab 1058/ ē August 1648 (Na¶mā, iv. 314, 319; Kara Čelebi-zāde 'Abd al-'Aziz Efendi, Ramdat al-abrar dhayli, Istanbul Univ. Library Tunkish ms. 2635, pp. ■ ff.; Mehmed Khallie, Tavihh-i-Ghilmoni, Istanbul 1340, 21 ff.; Murad Bey, Tabih-i-Abu 'l-Farah, Istanbul 1329, iv, 48). Ten days later, Ibrahim was strangled by the executioner Kara Alt, for fear that m partisans might attempt a restoration, with the consent of his mother and with a fation from the Shayhh al-Islam (Kara Čelebi-záde, op. cit., 27-30, 57 ff.).

With Mehammed IV's accession, Kosem Wällide's power started to revive, and she was given exalted titles (like Böyük Wälide "Grandmother of the Sultan", Wälide-yi Mu'azzama, Umm al-Mu'minn, Sāhinat al-Maḥām, Wālide-yi 'Atlika, etc. (see Wedithl, fol. 44b; Kātib Čelebi, il, 367, 376; Na'mā, iv, 279, 290, 315, 317-19, 415, 418, 450, v, 108]. However, her influence me not unbounded. The

authority is the Janissary aghas was wrong, and Turkhan Sultan, Mehemmed's mother and Ibrahim's widow, became her rival; this rivalry, and misunderstandings between the state officials and the Janlesaries (Na9må, v. ?), caused disturbances in Istanbul and Anatolia. Kösem Wälide and her supporters decided to replace Mehammed with his brother Sülayman, whose mother Dilaghub Sultan was regarded as unlikely to interfere in state matters. But Turkhan Sultin learnt of these intentions (Na ma, v, 108), took the initiative, and had Kösem Wâlide strangled with a curtain-string by the Palace Janissaries (Na?mā, v. 222; her executioner was someone called Kücük or Kushcu Mehmed, sea Rycaut, Histoire 20 l'état présent de l'empire offomane, Paris 1670, 63; Na Ima, v. 109, 112, 137; von Hammer, GOR). Her body was taken from Topkapi to the Eski Saray and then buried in the mausoleum of her husband Ahmad I (Wedith!, fol. 45a).

Kösem Wälide had exercised power in public affairs for nearly 30 years. She left much wealth and estates (Na Imā, v. 112; Kara Celebi-zāde, 20), and much of her income was devoted to charitable and other humanitarian works, such as a Friday mosque at Uskūdar, completed in 1060/1650 (Ayvānsarāyi Husayu, Hadikai al-djaudmi', letanbul 1281, ii, 184-5) and the Walide Khan in Istanbul, built in 1056/1646 (Ewilya' Celebi, Seydhat-ndine, Istanbul 1314, i, 325; Thévenot, Relation d'un voyage fait Levant, Paris 1664, 49) (this latter building collapsed in March 1926). Also from these revenues she financed firigation works in Egypt and provided relief for the poor in Mecca. In fact, she left behind in the popular Turkish mind a reputation for magnanimity, generosity and high intelligence.

Bibliography: Largely given in the article, but see the general histories of Von Hammer and Zinkeisen, which utilise both Turkish and European sources, e.g. the reports of the Venetian bails; Uningarph, Osmanli tarihs; S. J. Shaw, History of the Ottoman empire and modern Turkey, Cambridge 1976, \(\frac{1}{2}\), 290 ff. There is a detailed article in 1.1 by M. Cavid Baysun, of which the above is a shortened version. See also Mücieba lügürel, Kösem Sultanın bir unhfiyasi, in Tarih Dergisi, xvifzi (1966), 83-94.

(M. Cavid Baysun)

KOSH-BEGI, preserable to Kush-Baos, title of high officials in the Central Asian khanates in the 16th to 19th centuries. There are two different etymologies and explanations of the term: (1) from Turkish bush "bird" and beg [q.v.], thus bush-begi mesning, presumably, "commander of falconers"; (2) from Turkish host "detachment of nomads or troops, esp. on the march", "nomedic and military camp" (cf. Radloff, Worterbuch, il, 635b), thus koshbegi meaning "commander of the [royal] camp" "quartermaster". The first explanation is found in an administrative manual Madima' al-aream compiled in Bukhārā in 1212/1798, where it is stated that the hush-begi-yi kalan (see below) in Bukhara chief of the royal hunt (see facsimile in Purmennlys pamyalniki vesteka 1968, Moscow 1970, 56). The stymology, however, remains dubious, because in this case one should rather expect aughti-begi (or aughtibashi), from &ushči "falconer" (the latter post actually existed at the Central Asian courts, as well as in Iran, but the chief of the hunt had the title mir-phikar). Significantly, Iskandar Mungh! [q.v.] in his Ta'rith-i 'ālam-ārā-yi 'Abbāsī (ed. I. Afshār, i, 486) mentions the post of bosh-begi (mansab-i bosh-begi-gari) and, in another place (ii, 1040), the post of m falconer (Akidmat-t sughti-gard), who became later ill head of the royal hunt (ba-mansab-i mis-shikāri sas-afrās shud) On the other hand, many historical references to host-bagis in the Urbek period show them as high military commanders, mentioned among the most high-ranking Urbek amirs, which, apparently, makes the second etymology and explanation of the term more plausible. The European Turkologiats who visited Central Asia in the middle of the 19th century also transcribe the term in host-begi and explain it, in the first place, as "Chef dee Dieners oder dee Beamtenzirkels der Fürsten" (H. Vamberi, Cagataische Sprachstudien, Leipzig 1867, 318), or "Lord of the household" (R. B. Shaw, A shalch of the Turki language in spoken in Eastern Turkislan, Calcutta 1878, 156); see also Radlolf, loc. cit.

The title kosh-begi in not attested in the Golden Horde and its immediate in Eurasian stoppes in the 15th contury. The Bdbur-name (ed. Beveridge, 174b) mentions a Turkish amir as a bosh-begi of Sultan Husayn Mirza [q.v.], but nothing is said about his duties. Frequent references to hosibegis in historical sources appear only in the late 16th century. The 'Abd Allah-nama (MS of the Loningrad Branch of the Institute of Oriental Studies, # 88, ff. 322a, 336a, 339b, 340b etc.) mentions a bosh-begiamong the chief commanders of the army of Bukhārā. In the 17th century hosh-begis did not apparently play an important role in the khanate of Bukhara. The Bekr al-asedr by Mahmod b. Wall (second quarter of the 17th century), In a description of the ceremonial at the court of the Ashtarkhanids, only mentions the bosk-begs among the servants closest to the khan, and his place was the second after that of hurci-bashi, commander III the body-guards (see V. V. Bartol'd, Sociaeniza, ii/1, 391, 396). The rise of power of the kosk-begi in Bukhārā took place at the beginning of the 18th century, with the decline of the Ashtarkhanids. In 1121/1709 Ubayd Allah Khān established the rank of "the great hosh-begi" (hosh-begi-yi hull), who became first minister. Kesh-begi remained the head of the Bukhara administration also under the Mangits (q.v.], when his official title was hall-i doshbegi (sic), or bosh-begi-yi bild "the upper K.", because he had to live in the residence of the amir, the ark (citadel), situated on a hilltop; there was also "the lower K.", hogh-bogi-yi phydn, whose residence men at the foot of the ark and who held the post of zakálči-yi kalán (head of the collectors of sakál [q.v.]). The "great kosh-begis" under the late Ashtarkhanids and the Mangits were usually of mean origin, mostly former Kalmuk and Persian slaves. Besides the general supervision of the state affairs and, especially, the administration of finance, they also governors of me more willyses (provinces), especially that of Bukhārā itself.

Different development took place in Khiwa [q.v.], where the local historian Mu'nis (early 19th century) mentions for III first time the title kold-begi, without defining his duties, when he tells about the administrative reforms of Abu 'l-Ghazi Khan (died in 1074/1664 [q.v.]). It seems, however, that both-begin did not play any important role in Khiwa in the 17th century. Only under IIII Kungrat [q.v.] dynasty (from the last wird of the 18th century) did the kosk-begi become one of the highest officials in the khanate, but he shared power with the mehter (Pers. mistar) [q.v.]. The latter was the head of the civil administration, had the title mastri at pass and belonged to the hereditary bureaucracy recruited from among the Sarts [q.e.], while the kosh-beg: always belonged to the Uzbek nobility, the amirs (and sometimes was a relative of the khān), and was in charge.

mainly, of military affairs. Besides that, the gogk-begi governed the northern part 🖬 the khānate of Khiwa inhabited by nomadic and semi-nomadic Uzbeks, Karakalpaks and Turkmens (that is, he mainly supervised the collection of in this region), while the makter governed the southern part inhabited by sedentary Sarts. This division of authority seems to III a continuation of the administrative practice of Timurid period.

In the khanate of khokand [q.v.] in the 19th century, the title toth begi is also attested by the local sources, but evidence about his duties is still unavailable; in any case, he had a lower status than in Bukhārā (the highest official in Khokand in the 19th century was the ming-backi); according to V. V. Vel'yaminov-Zernov (in Trudi Voziočnogo Otdoloniya Imp. Russkogo Arkkeologičeskogo Obskerstva, ii [1856], 331), toth-begi was here a honorary title given to the governors of main towns and provinces. In the Cachatlyid state of Eastern Turkestan, at least in the 17th century, the kosk-begi was supreme military commander or commander of the right wing (wiff-i burdngade), and will the rank of the senior amir (amir ol-umara"), but 📰 civil administration, apparently, was in the hands of a waste (see Shah Mahmud b. Mirza Fadil Curas, Tavida, ed. O. F. Akimushkin, Moscow 1976, text, 24, 32, 53, 70, Russian tr. 170, 178, 200, 218). Thus this system was probably similar to that which existed in Khiwa.

BREGEL) persischen, ili, 363, No. 1361.

KOSHK, from Pers. kushk, a pavillon in a pleasance which could be merely a modest shelter or have several rooms. The disusses of the rulers of Samarra were much larger, and were country houses in the manner of the honzies of Austolia and the Balkans. The word &asis (kess) could be synonymous, but came also | castle and always implied more than ____ chamber, whereas hough rarely suggested a substantial building, and in naval terminology was even the more given to the after-deck or poop cabin.

Although the Ottomans developed the AdiAA as a pavilion consisting of a single hall, it did occasionally take the form of a suite of rooms. Mehemmad II Pātih modelled the Čisili Köshk in the outer court of Topkapharayl on Timurid pavilions. It included two floors of apartments for himself and his officers, for it served as a lodging when he did not wish to return to his residence in the centre of the city. It was m hoshk in the sense ill being a pied-a-terre. Later examples such as the Sand Pavilion Edirne (Kum Kaşir) were designated kaşir. But the essential characteristic which governed the transliteration of hoshe into English : "kiosk" was that of a chamber under a dome with three sofas and a booded open grate, forming the four arms of a cross with a balcony or terrace overlooking a garden and a pool or other expanse of water. There a day might be passed at any season of the year, enjoying a partly-indoor and a partly-outdoor life. The pavition was, in a sense, a permanent tent and its portico the uplifted awning on poles common to somadic life. However, a royal hoght was tiled, its woodwork gilded, ceilings elabborately painted, doors inlaid with ivery and motherof-pearl and the sofas covered with silks and velvat rocades, the floor with rugs. In this form, they were ideal and intimate drawing rooms, the antithesis of the Napoleonic concept of the Piazza at Venice.

They also served as hunting lodges, like that of Siyawush outside the walls of Islanbul, which is elevated above its own pool in a park. Originally it was a single domed chamber with a vestibule and closet. Similar köghés or kasírs were built as royal retiring-rooms from which access could be gained to the mosque or diami. Less wealthy citizens built examples so modest that they were little than bowers with shutters that served m walls in winter but which could III dismantled in the spring. These, rather than the ornate kosiks of the rich, inspired newspaper stands and the like in 19th century Paris

and other cities in Western Europe.

Bibliogenphy: References to kiosks appear in the descriptive works of travellers, more particularly of Topkapisarayl, by pages who escaped from there. Among these are D. Hierosolimitano, Harley mss. 3408, British Museum; O. Bon mss., Biblioteca. Marciana, Venice, Ct. vii, cod. 578, 923; (the last in English by R. Withers, ed. Greaves, A description of the Grand Signor's scrattio, London 1650); also in R. G. Clavijo, Embassy M Tamerlaine, 1463-6, tr. G. Le Strange, London 1918. Engravings of examples are illustrated in R. Walsh and T. Allom, Constantinopia, London 1838 and J. Pardoe, The city of the suitan, 3 vols., London 1838. (G. GOODWIN)

KOSHMA is originally a general term for poetry among the Turkish peoples. In the later usage of word, it am applied to the native Turkish popular poetry, in contrast to the cinssical poetry taken from the Persian and based on the laws of the Arabic 'artid [q.v.]. The term corresponding in Eastern Turki to the Western Turki

kozhma is ko<u>sh</u>nk or ko<u>sk</u>nek.

In the oldest source, e.g. in the Kuledzhu bilik (composed in 462/1069-70 [see y 0sur KEASS HADIIB]), hosbuk still has the quite general meaning of "poem. verse", e.g. in Radloff's edition, St. Petersburg 1801. 1. l. 2 from below; by kitabni koshukul aymish "has composed this book, this poem"; ibid., 5, 1, 4, bu türkéd koskuklar türditim saña "I have polished (i.e. composed) these Turkish verses for thee". In Mahmud al-Käshghari [a.v.] also, Diwan tughāt al-turk (begun in 464/1072), ed. Kilisli Riffat Bey, i, 314, koshugh is equated with the Arabic shir, radiaz and kaid'id. The Persian musician and scholar 'Abd al-Kädir of Maragha (8th-9th/14th-15th centuries, cf. E. G. Browne, Literary history of Persia, iii, Cambridge 1940, index s.v.), in his work entitled Makasid alalhan does not yet discriminate between kashuk and the quantitative quatrain tuyugh (see Ra'uf Yekta, Eski türk musikisina däbir tetebbilbler, in Milli tetebbifler medimu'ast, i, 461). On the other hand, in werse by All Sher Nawa'l (d. 906/1501 [q.v.]) quoted in Payet de Courteille, Dictionnaire Turc-Oriental, 432, 3.v., and in Radloff, Versuch sines Worterbucks der Türk-Dialecte, it, col. 640, the heshuk is definitely contrasted with the tuyuh.

Later, we find poems and songs composed according to the rules of Turkish popular poetry expressly called koshma, koshuk. The characteristic features of this poetry are the following: 1. Strophic structure. The strophes usually quatrains. The boshma poems contain at least two strophes, 2, Syltable or accented syliable rhythm, i.e. the lines of the stroope have the same number of syllables and the value of the syllables as regards stress in either a matter of indifference or stronger and weaker syllables follow another in definite order, which is repeated. In the latter case, after a definite number of syllables, always have of necessity a caesura in the middle of the line. In the later koskma strophes the most popular lines are hendecasyllabic divided into 6-5 with one caesura or 4-4-3 (with two caesuras). 3. There is thyme or assonance of at least two endings in the strophe. The thyme is usually grammatical and may extend to several final syllables according to its nature. It usually arises as a result of strict parallelism in the syntactical structure of the two balves of the verse. The rhyming in the hoshme strophe is usually abel or auba, 4. Alliteration of the initial syllables of the lines is not maintained among all Turkish people (cf. T. Kowalski, Études sur la forme de la poésie des peuples turcs, in Mémoires de la Comm. Orient. de l'Acad. Polonaise, No. 5, Cracow 1922: in Polish with a French resume. 157 ff.).

In earlier times, the kospus songs were usually sung by the bards (#20#) to the accompaniment of musical instrument, especially by the \$00xx beloved of the Turks, at court festivities in the camp of the army. The costma poetry was always industriously cultivated among the people, in spite of the increasing popularity of the classical quantitative postry. The popular forms like kaya baski, dayish, ergi, ie, türkü, warraghi and türkmüni, cultivated among the Adharbaydian and some among the Ottoman Turks, all belong to the koshma. The songs of popular mystics called ilahi and nefes from the time of Yunus Emre (7th-8th/13th-14th centuries) are composed according to the rules of the sosama (see Köprülüzâde Mehmed Fu²ad, Türk edebiyyätinda ilk miliaşawwifiar, İstanbul 1918, 334-6). The besima popular poetry, which sometimes produces really beautiful lyrics, was mainly cultivated by wandering singers ('á<u>sh</u>iệ, also called sár <u>sk</u>áliri 🚃 čöyür<u>di</u>ü). Many of them, like 'Ashik 'Omer, 'Ashik Keram, 'Ashik Gharib, Dardli and Djewheri, attained great fame, and the collections of their songs or life stories among the most popular books among the Turks (cf. Köprülüzäde Mehmed Fu'ad, Türk edebiyyetinde 'äshik parsintä menske' we-tohämilli, m Milli tetebbil'ler medimä'asi, i; idem, 'Ashik Djewheriyye 'à'id iki wethika in the periodical Yeñi Medimä'a, No. 84; G. Jacob, Türkische Volksliteratur, Berlin 1901, 17-18). There man even singer's of popular songs in the corps of Janissaries: ct.]. Deny, Chansons des Janissaires turcs d'Alger, in Mélanges René Basset, Paris 1925, if. 33-175.

The term kosisms (but not the kind of poetry to which it was applied) to have fallen out of ase. and if the Adharbaydian; poet Diawad, who med in the first decades of this century, called his collection of songs Koshma, this is probably simply to be explained by an archaicising popular movement in modern literature. The name has survived in the form kośoń (koskoń) among the Altai Turks (Tatars). The Altai kotoñ (on them, cf. W. Radloff, Uber die Formen der gebundenen Rede bei den altaischen Tataren, in Zeitschr. f. Völkerpsychologie und Sprachwissenschaft [1866], iv. 85-114, and Kowalski, Etudes, etc., 140-51) are very important in so far as from their structure and we can make a definite deduction regarding the original meaning of the words koshma, koshuk, etc. They are pairs of strophes connected by a close parallelism between the two in form and content. From this we see that koloff, from kosh- "to join together", kożo "two and two", etc., refers to the paraflelism in thought and syntactical structure. which originally formed the essential feature of Turkish popular poetry.

The koskwa poetry has not been without influence more artistic forms of literature. The modern Turkish poets, for example, have taken many of their forms from popular poetry.

Finally, one should note that the tarm somewas applies also to a folk-musical form, which varies in different parts of Anatolia and Adharbaydlan, but which contains typically instrumental introduction, followed by a vocal recitative and melody. This would be the normal setting for the baying a literary form.

Bibliography: (dealing particularly with koshma): Köprüzäde Mehmed Fu'ad, Koshma jarsi, a comprehensive article in Yeni Medima'a, No. 78, 1923 (with references to the literature); ldem, Türkiyye ta'rikbi, İstanbul 1923, I. 51-2; idem, Türk edebiyyasi ta'rikhi, (stanbul 1920, l. 93; Kowalski in the above-quoted Études, etc., 140; Tähir-ul Mevlevi, Edebiyat lugati, Istanbul 1973. 89-90; P. N. Boratav, IA art. Kosma (with many details about the regional forms of the hothers), R. R. Arat, Eski türk şiiri, Ankara 1965, Introd.; Hikmet Dizdaroğlu, Halk şiirinde türler, Ankara 1969. On the rhythmic structure of Turkish popular poetry, cf. Th. Kork, Dreunicyskiy narodniy stikk tweekikh plemies, in ZVOIRAO, xix/2-3 (1909), (T. KOWALSEI) 139-67.

KOSOWA, KOSOVO, the name of an upland plain of the Balkans, in upper Macedonia or southern Serbia, and the scene of two significant battles in the struggles of the Ottomans and the Christian powers of the Balkans for begemony there. In the last quarter of the roth century, it also became the

The South Slavonic expression Kosovo polic means "plain of the blackbirds" from Acc "blackbird" in Old Slavonic, Czech and Bulgar. Ottoman Turkish

give various less convincing etymologies. For those sources which derive the Kosowa from Turkish hose of Koso one "bare, treeless plain", etc., am "Ali Haydar, Kosowa maydan maddrebesi, istanbul 1328, Bursall Mehmed Tähir's preface. The is spelt as Kosowasi in "Ashlepashazāde, Ta'rikh, Istanbul 1332, 62, T34, Neshri, Djihānnāmd, ed. F. Taeschner, Leipzig 1951, 70, 139, 174, and Sa'd al-Din, Tādi al-tanārikh, i, 117, and as Kās opsal in "Orodi b. 'Adil, Tamārikh-i āl-i "Othman, Hanover 1925, 25. Sa'd al-Din's explanation that the name means "plain of the kettle-drums" is, of course, yet another etymology.

The Kosowa plain lies at an altitude of some 500-500 km., and is 14 km. wide and 84 km. long, covering an area of 502 km. It is surrounded by high mountains, and has a north-west to south-east orientation. From this region, streams flow westwards to the Adriatic via the Drina, southwards to the Aegean via the Vardar, and northwards to the Danube via the Ibar and Morava. During mediaeval times, it sum a meeting-point of several trade routes; today it forms part of the Novo Brdo-Kopavulk mining region

of Yugoslavia.

The Kosowa plain originally formed part of the Byzantine dominions, and Slav peoples with settled there at the beginning of the 7th century. During the roth century it changed hands between Serbs, Byzantines and Bulgars (for the names of the Serbian have who were active in the Kosowa region, see V. Radovanović, Kesove Polje, in Narodna Enc. Srpske-Hrvatsko-Slovenacha, Zagreb 1926, ii, 434-8). After the victory gained over the Byzantines in 1168 by Stephen Nemanja, prince of eastern Serbia, Kosowa passed under Serbian control, and the name became applied to the whole plains region. It now remained within the resurgent Serbian empire, with its zenith under Stephen Dushan (d. 1355), but Serbian grasp on the region became relaxed under his weaker son and successor Urush V (1355-71), and thereafter, the Serbian princes were unable to offer any united opposition to mincreasing Ottoman Turkish pressure.

The deleat of Serbia at the hands of the Ottomans at Kosowa took place according to the Serbian and the western sources on 15 June 1389 and according to the Ottoman ones, on a Ramadan 791/27 August 1389. The Turkish army was commanded by Sultan Murad I b. Orkhan, and included his two Bayesid from Kütahya and Va'küb from Karasi end coatingents from the vassal begs of Sārūkhān, Menteshe, Aydin and Hamid. They were opposed by the Serbian prince Lazar Gresljanović, with contingents from the Bosnian King Tvrtko I. On the dawn of the battle, a Serbian noble, Milosh Kobilië, Lazar's son-in-law, gained access to the Ottoman camp by posing m m deserter and stabbed Murad m death. But Bayerid immediately assumed command, and in the ensuing fighting—the details 🔣 which 🚥 little known—the Turks gained the eventual victory. Lazar was taken prisoner and executed after the battle; a mausoleum was built on the spot where Murad me died, but me body was buried at Buna. The death of Murad and the withdrawal of the Turkish army immediately after its victory caused false rumours to spread in Christian Europe of a Serbian victory; in fact, the consequence of the battle was that Serbia became an Ottoman vassal state, and Lazar's successor, his see Stephan Lazarević, had to pay tribute and supply an army tinder his personal command to the Ottomans. Koşowa also gave rise to a great cycle of popular ballads among the Serbs, expressive of national feeling. For the Turkish sources in the battle, see Sa'd al-Din, i, rt3; 'Oridi, 25; 'All Haydar, 27-32; 'Ashlkpashazade, 63; Neghri, 82 ff.; Solskzade, 50; and also Von Hammer, GOR, i. After this first battle of Koşowa, Bayestd I appointed Yight Fasha as udi bugi of Usktip/Skopje and the southern district of Koşowa, and this region was now settled by Turks from Menemen and Tatars from Anatolie.

The second battle of Kosowa took place on 17-19 October 1448, when a Hungarian army under John Hunyadi, and including also Wallachians and German Bohemian arquebusiers, met an Ottoman army under Muråd II; the struggle was at first indecisive, but gained by the Turks through the treachery of the Wallachians and the flight of the Hungarian king. During the reign of Mehemmed the Conqueror, the northern part of the Kosowa plain also under Ottoman control. In the 10th/16th century the town of Yuditra became the administrative centre of the sandiak of Kosowa in the sydlet of Rumeli. When Ewllyà Celebi passed through the Kosowa plain in 1070/1659-60, 🖿 found that Vuciten had a Turkish and Albanian population and contained 2,000 households (Seyājas-nāme, Istanbul 1315, v. 550). In 1688-9 the region was invaded by an Austrian army under Piccolomini, but driven out in the following year by Kodia Khalii Pasha and Selim Girty Khan (Findiklili Mehmed Agha, Silahdar ta'rikki, Istanbul 1928, ii, 269-70, 351-2, 423 ff.; Rāshid, Ta'rīkā, Istanbul 2282, ii, 95-112; V. Corović, art. Kosovo, in Narodna Enc.

Srptko-Hrvatsko-Slovenacka, ii, 433-4).

During the last quarter of the 18th century and the first decades of the 19th, the Kosowa district men involved in various attempts by local governors, such as the Bushatl! governors of Scutari or Ishkodra, Mehmed Pasha and his son Kara Mahmild Pasha, to break away from control by the Porte; the region was only firmly reattached to Istanbul after the defeat of the last Bushatil, Mustata Pasha, by Mahmud II's western-style army [see ARANAWUTLU, 5. History). After the Russo-Turkish War of 1877 . wildyst, called specifically that of Kosowa, was formed consisting of the regions of Nigh and Prighting and with Soils as its centre (see Sami Bey, Kamar al-a'lām, Istanbul 1314, v. 3746-8; 'All Haydar, Midhat Paska, Istanbul 1325, 13-24). In Hill its centre was moved to Usküb/Skopje, and in 1895 its boundaries widened to include six sendjobs, sc. Usklib, Prightina, Sonitsa, Ipek, Tashlidja/Plevile and Prizren (see M. Rüshdi and M. Eshref, Mühemmel me mufașsal ațias, Istanbul 1325, 21-4; Sălnăme-yi wildyst-i Kosowa, year 1314). The region was meanwhile considerably disturbed, for in x878 a congress had been formed to protect the rights of the Albanians and to establish an autonomous wildyst of Kosowa, with its centre at Monastir. Albanian volunteers under the leadership of Süleyman Vokahi captured Osküb, Prishtina and Mitrovitsa early in 1881, but in April of that year, were defeated by an army and out from Istanbul under Derwish Pasha. However, the Albanians subsequently took advantage of the erratic policies of repression alternating with indulgence practised by 'Abd al-Hamid II, and gradually captured all the villages extending up to the Kosowa plain, until the restoration of the Constitution in 1908. Eventually, a Serbian army under General Janković captured Lab during the Balkan War of 1912, and by 23 October of that year the whole of the Kosowa region passed into Serbian hands permanently, a state of affairs confirmed by the Treaty of London of 30 May 1913 which ended the war. It was estimated that the population of the province at that time was one million, three-quarters of this being Muslim Turks and Albanians, and the

rest Christian Serbs and Bulgars.

After the First World War, the region came of course within the new Yugoslavian state, and a policy of slavicisation was followed, in that the Muslim population shrank with the exodus to Atbania and to Turkey. Today it is an autonomous unit of the Yugoslavian People's Republic under the name of Kosovo-Metohija in with its centre at Prightina.

Huart, and for the first battle of Kosowa, The Cambridgo Mediacoul History. iv. The Byzanine Empire. Part 1, Cambridge 1966, 550-1. (M. MONIR AKTEPE)

KÖSTENDJE (in Rumanian, Constanța), a port the Rumanian shore of the Black Sea, situated on the rains of the Milesian colony of Tomes (Ovid, Tristia, I, 10, 41; iii, 9, 5) founded at the beginning of the 6th century B.C., and the place of exile of the Roman poet Ovid (9-x8 A.D.). Mentioned in 260 A.D. (Memnon, Fragmenta historicorum gratcorum, ed. C. Muller, ili, Paris 1849, 537), Tomes enjoyed great prosperity in the Greek and Roman period and earned, under the Antonines, the title of metropolis of Western Pontus (μητρόπολις τοῦ Εθωνύμου Πόντου). Under the later Roman Empire, Tomis became the capital of Scythia Minor, being designated in the epigraphic and literary sources by the Constantia or Constantiana after the emperor Constantine II (337-61 A.D.), who contributed to its development. Sacked by the Huns (456 A.D.), the town was fortified by the Byzantine emperors Anastasus (491-518) and Justinian (527-65) (Procopius, De aedificiis, Bonn, iii/2, 307) and resisted attacks by the Avars. In 679 it was destroyed by the Bulghars of the khan Asparukh,

The fishing station set on the rulus of the ancient city continued to bear the name Kovovavria, in the writings of Byzantine authors of the 9th and roth centuries, while the map drawn up in 548/1154 by al-Idrisi [q.v.] calls it Tamtana (P. A. Joubert, Geographie d'Edrisi, il, Paris 1840, 382). In the 14th century, Italian nautical maps give the name Costanza-derived from the Rumanian Constants, Turkish Köstendje-to the Genoan trading mission a harbour by Genoese ships. When Dobrudia was joined to Wallachla (Effak) by Mircea the Old (1386-1418), the town followed the same destiny as the rest of the province. According to Ewliya Celebi, Köstendie was reportedly conquered by Bāyazid I [g.v.], who ordered the dismantling of its walfs. This event seems to have taken place during the reign of Vlad the Usurper (1394-6) in the province of Walluchia. Taking advantage of the fact that Bâyazid detained in Anatolia, Mirčea recaptured Köstendie, which he retained after the Ottoman defeat of Ankara (28 July 1402) under the reigns of the amir Süleymän (1403-10) and of his protégé Mûsî Čelebi (1410-13) in Thrace and Macedonia. But in the course ill the expediton of Mahemmed I (1413-21) dated by N. Iorga to \$20/1417 (GOR, i, 375), and more plausibly by H. insluik to Szziz4z9 (Ibn Hacer'de Osmanlilara dair kabseler, in AUDTCF Dergisi vi, 525; O. Turan, Tarihi lakvimler, Ankara 1954, 20, 56), the town was once again captured by the Ottomans. Its annexation did not become definitive until after 1445, since the captain of the Burgundlan fleet, Walerand Wavrin, met no Ottomans at Mangalya, on the coast of the Black Sea to the south of Köstendje, when he landed there. In the 16th century, it was a fairly prosperous town, leased to a subschi and with a harbour and a market which, dealing in the major products of Dohrudja (Ankara, Tapu a Kadastro collection, 483, 30-31), played an important role in the supplying of cereals, fish and timber to Istanbul. The harbour was also used for the experting of Wallachian products (hides, wax, honey, salt) which much in demand by the merchants of Ragusa and Ancona.

At the beginning of **III** 17th century, Köstendje suffered devastation at the hands of Polish cossacks (1602, 1616). Although this port was not included in the list of towns (M. Tayyib Gökbilgin, Kanuni Sultan Süleyman devri başlarında Rumeli eyaleti, livaları, şehir ve kasabaları, in Belieten, xx. (1956), 254-5, 266-7), the Ragusan traveller Paolo Giorgi regarded it as such. According to Ewliya Celebi, it was a town of small prosperity belonging to the cyclei of Silistria (Istanbul, Başbakanlık Arşivi D-BMK-SLM, Silistre ve Rusqu' mukataasi), comprising in hundred and fifty houses, between forty and fifty granaries, some shops, a 🚧 🛲 🛍 a mosque, and serving as the residence of a kddi. Though possessing the status of a gadd', in the 18th century Köstendie had the appearance of a large market-town whose shisab aghasi (i.e. muhterib) was in charge of the supplying of grain to Istanbul. Devastated and depopulated during the Russo-Turkish wars (1711, 1718-39, 1768-74 and 1787-92), Köstendje was fortified by the Ottomans, who considered its port one of the most important in Dobeudia for the purpose of supplying their capital with cereals, cattle, sheep, hides and wool.

During the Russo-Turkish war of 1806-12, Köstendje was captured by the Cossacks (1809), who destroyed the fortress and the town, reducing it to the status of a village. Returned to the Ottoman Empire by the Treaty of Bucharest (1812), Köstendje was surrounded by a line of fortifications. In 1820 the town surrendered to the Russlans without a struggle and its defences were dismantled. During the Crimean War the French troops of General Canrobert, in alliance with the Ottomans, disembarked at Köstendie (July 1854) but remained there only for a short time. In 1857, m British company, The Danube and Black Sea Railways Company, obtained from the Ottoman government a concession for the reconstruction and development of the port and of a men railway linking Boğaz-köy (Cernavoda) with Köstendie, which as a result of this enjoyed a me period of prosperity. In 1877 the troops of the Russian general Orlov Denisov occupied the town, which was ceded to Rumania on 23 March 1878. At this time it was a hadd' of the milayet of Tuna, created in 1281/1864. The Treaty of Berlin (13 Radjab 1295/13 July 1878) recognised this union. Köstendje then possessed two diami's: the Mahmūdiyya (1822) and the 'Azīziyya (1822). It was at Constanta that the first newspaper of the Dobrudia. was published, the Dobrudja gautesi (1888-94), as well as the newspapers Dobrudia (1901) and Dobrudia sadasi (1910-14) published by Mehmed Niyasi.

(MARIE M. ALEXANDRESCU-DERSCA BULGARU) KOTA KOTA, An Arabic corruption of the Chi-Hiyan place-name Ngotangots, a town in East Africa, situated in let. 14° S. on the west side of Lake Malawi (Lake Nyasa). It was the seat of four Jumbes, or Walis, subject to Zanzibar between ca. 1845 and 1895. The first Jumbe, Salim b. 'Abd Allah, came to Lake Malawi via the Arab settlement of Tabora in the present Tanzania, and built up an lyory and slave-trading state, and at the same time made Kota Kota an effective centre for the dissemination of Islam. He was succeeded by another Swahili, Mwinyi Mguzo (? Nguzo), who ruled from after 1860 m ca. 1875-6. Under his successor, Mwinyi Kisutu, member "of a good Zanzibar family", the town was visited by H. B. Cotterill in 1876, It had many handsome square houses and numerous oil palms; the Zanzibar flag flew over 📖 Jumbe's house. Although a slave-trader, when the British took power in Nyasaland in 1891, he co-operated with them until his death in 1894. His successor, Mwinyi Kheiri, the son of his predecessor, ruled from 7 September 1894 until May 1895, when he was deposed for conspiring to overthrow the British administration. Kota Kota remains an important Islamic centre in Malawi.

Bibliography: H. B. Cotterill, On the Nyassa and pourney from the north end to Zanzibar, in Procs. Royal Geogr. Soc. London, xxii (1878); G. Shepperson, The Jumbe of Reta Kota and some aspects of the history of Islam in British Central Africa, in I. M. Lewis, ed., Islam in Tropical Africa, 1966, 193-207, gives a detailed bibliography and references to public records.

(G. S. P. PRESMAN-GRENVILLE)

KOTOKO, a people of Black Africa. The Kotoko live south of Lake Chad on the lower Shari and Logone rivers. Most of their territory is presently the Republic of Cameroun, but there are villages the Kotoko also in Chad to the east and in Nigeria to the west.

The Kotoko (whose number was estimated at 50,000 in 1950) are a minority in their own territory. They are outnumbered by the Shuwa Arabs, who penetrated into these lands since the 18th century. Smaller groups of Kanuri, Fulbe and Hausa moved in later. Each of these ethnic groups, however, lives exparately in homogeneous villages. The Kotoko live on fishing and hunting, supplemented by agriculture. The grassland between the rivers is left for the Arab pasteralists.

The etymological origin of the name Kotoko is obscure. Some authors referred to them m Makari,

which is in fact the name of morthern group of Kotoko, first known to visitors coming from Bornu. Makari is the most important dialect among the northern Kotoko, - Lagwans (often spelled Logone) dialect is in the south. The linguistic diversity of the Rotoko reflects their political division, as the extent of each dialect is almost identical with the area of one principality. The particularism of each group is so strong that even under modern conditions - one dialect prevails, and almost all the Kotoke now speak the Arabic dialect of the Shuwa. The Kotoko dialects belong to the central sub-group of the Chadian languages. They are distantly related to Hausa, which is classified in the western sub-group of the Chadian languages (J. H. Greenberg, Studies in African linguistic classification, New Haven 1955. 43-62).

The Kotoko are considered direct descendants 🕍 the Sao or So people, to whom the historical traditions of Kanem [q.v.] and Bornu [q.v.] reier as the early inhabitants of the area around Lake Chad. Those Sao who had not been assimilated or enterminated by the Kanembus and the Kanuris sought refuge in the less accessible flooding area of the Shari and Logone rivers, where they gave rise to the Kotoko. In the second half of the 16th century, Bornu under Idris Alūma expanded to the south. The northern Kotoko principalities, Makari and Afade. were brought within the political ambit of Bornu and under the cultural and Islamic influence of the Kanuri. Because of the imperial and dynastic connections with Bornu, islamination among the Kotoko began chiefly in the courts. The southern Kotoko had been for a long period subject to the harassment of Bagirmi [q.v.]. Towards the end of the 18th century, the south was consolidated under the authority of the ruler of Logone-Birni, who was converted to Islam at about that period. Logone was visited by Major Denham in 1814 and by H. Barth in 1852. In between these two dates, probably sa. 1830, Logone became = tributary of Bornu. The Kotoko often saw their territory invaded by their more powerful neighbours. It was the battleground for Bornu's wars with its rivals Waday [q.v.] and Bagirmi. Between 1893 and 2900 it was overrun by Rabih [q.v.] and his warriors.

The authority of the Kotoko chiefs circumscribed by a council of high officials will by Bornu's representative, the alifa (from Ar. khallfa). The chiefs were also bound by pre-Islamic taboos and by the obligation to consult "the protecting animals" through their priests. The Kotoko chiefs, referred by the colonial administration = sulfans, are Muslims but they must respect old traditions. Muslim imains live in their courts with traditional priests. Mosques were built near traditional shrines, whereas pre-Islamic customs and rituals - performed during Muslim festivals. Most of the Kotoko are now considered Muslims, and the number of those more fully committed to Islam grows steadily. Thousands of Kotoko == 12 be found in the towns of Chad and in the Sudan along the coutes to Mecca. The Kotoko, who had emerged me people in refuge, away from the Muslim states of the Central Sudan, are gradually becoming integrated into the world of Islam.

(N. LEVIZION)

EOTONOU or Cotenou, capital of the People's Republic of Benin (formerly Dahomey). It had long been the economic capital and rival of the administrative one Porto Novo, and since independence Cotonou has established itself definitively in the capital of the republic, even if certain services still remain at Porto Novo.

The village founded by the Airo of Allada was called Donukpa ("near the hole", i.e. "near the largoon"). An envey from Abomey was struck by the reddish colour of the trees growing along this lagoon and thought that this was the result of blood. It was then believed by the Fon of Abomey that the spirits of the dead war down to Ouems towards the lagoon and the sea; each dead person crossing the lagoon left behind a little blood which reddened the tree bark, whence the name of Ku Tonu (ku "dead person", tons "lagoon") given to the village. However, the passage of armies from Dahomey in the 18th century led to the evacuation of this latter village. It was Yekpé Zinsou, a slave dealer, who found this spot favourable for loading up slaves away from the eyes of European control shipping, and with the help of a half-breed Portuguese interpreter Sangronio he founded this Fon village. Once he had become Jévogan of the king of Dahomey (i.e. the minister charged with relations with the white men). Yekpé settled there with his lamily. The place became prosperous through the trade in palm oil and through anchorage rights (payable in cowrie shells and in goods) which the Europeans had to pay. A Brazilian half-breed, Domingo Martins, settled now at Cotonou and developed the cultivation and trade in palm oil. It developed further during Glélé's reign and at the time of the French appearance there (treaties of 1868 and 1878). But Béhanzin refused France any rights over Cotonou, and two attacks on the 23 February and 4 March 1878 were repelled by the French garrison. A wharf was built between 1801 and 1899, bringing about a growth in trade, and the town's importance grew. In 1905 the population comprised 75 Europeans (including seven women and ■ child) and 1,100 Africans. It became ■ commune mixts in 1912 and grow especially in importance after 1928.

In the 1920s it had 8,500 inhabitants, including 300 Muslims, who were distributed in the following manner. There were 100 or so Senegalese who had come as infantrymen, officials and above all as railway workers; 100 or so Hauss from northern Nigeria, functioning butchers or as traders in cloth and beasts; and 100 or so Nago (Yoruba), mainly coming originally from Porto Novo and working in the trading houses.

The first imdm of Cotonou was Moussé Col Popo of

Aroue, born in ea. 1844 and initiated into the Kādirī order by Scidou Collou of Nigeria, Being worn-out and hardly capable of delivering the Abutha in Arabic, he was replaced in October 1020 by Scaltou Mamadou, born at Lages in co. 1870 and living in Cotonou since the French occupation. Since he had received the Kadiri wird from Shaykh Ismailia of Zaria, it seems that he was an adherent of the mystical path of the Fulbe of Sokoto. After having given the khutba in literary Arabic, he himself translated into Hausa this sermon; then his haile or deputy translated it into Nago. After these two Yoruba imāms, there followed a Sarakolé, al-Hādidi Sakaba, born at Bakel in 1874, an educated and likeable trader who had made the Pilgrimage to Mecca in 1906 via Lagos, Las Palmas and Marseilles. He had connections with the Arab booksetter of Algiers, Kaddow Roudouci (Kaddūz Rudusl). He was succeeded by # Hausa, Malam Bako, but after the latter's death there was a division between the two main Muslim communities, the Yoruba and the Hausa, with the latter reproaching Yoruba for retaining animistic practices, of drinking alcohol. having more than four wives and of not fasting at the same time as other people. On 31 August 1966 the Muslim Union of Dahomey was formed, bringing about the pre-eminence of the Muslim community of Porto Novo; the President of the Union was in fact al-Hadidi 'All Paraiso. If the meetings of the Muslim community of Benin take place at Cotonou, it is nevertheless the Islamic north and Porto Novo who have benefited from these arrangements and from aid coming from the Arab world's communities.

Bibliography: P. Marty, Études sur l'Islam au Dahomey, Paris 1926, 98-104; J. Lombard, Études Dahoméennes, x, 184-5. (R. CORNEVIH)

ROTWAL (Persian orthography, k.w.kedi), commander of a fortress, town, etc. The word in used throughout mediaeval times in the Iranian, Central Asian and Muslim Indian worlds, and has spread westwards into the regions of 'Irak and the Persian Gulf, where we find it, for instance, as a component of place names like Kût al-'Amára [q.v.], and given an Arabic-pattern diminutive form in

al-Kuwavt [e.c.].

Although the word appears from the Mongol period onwards in Turkish, including Caghatay, in such versions as keloul, killdill, etc., so that many native authorities (and following them, western linguists and lexicographers such as A. Vámbery, Pavet de Courteille and W. Radloff) assumed that it Turkish or even a Mongol word, G. Doerfer is undoubtedly right in tracing it back to an Indian origin, from kôl "fortress", whence kôheôló "castellan, keeper of a stronghold", and frequent north Indian place names like Nagarkôf, Lohkôf, etc. The earliest attestations of the word in Islamic sources are all in an Indo-Muslim context, e.g. Mahmud of Ghazna's bestowal of the kôfeôli of Nandana in the Pandiab on one of his commanders in 405/1015 (Gardizi Zays al-ahhbar, ed. Nazim, 72, ed. Habibi, r8r), and the frequent appearance in Bayhald's Ta'rikh-i Mas'üdi ol a commander Bü 'All Kötwäl, the local governor of the capital Ghazna. On the other hand, it does not appear in Kashghari. Gradually, the word became general throughout the eastern Islamic world, passing into Turkic languages, into Pashto, and into Indian vernaculars like Pandiabl. Bengali and Urdu. In Persia of the Mongol, Timbrid and Salawid periods it was the term used for the local governor of a town or citadel, as is attested by western travellers like du Mans (1660). Cf. Doerier,

Tärhische und mongolische Elemente im Neupersischen, iii. 628-22. No. 1648.

The term kólwál was especially used in Muslim India under the Mughals and, after the collapse of their empire in the mid-18th century, in British India for approximately a century more. But in fact, this office, in the sense of "official responsible for public order, the maintenance of public services etc., in a town' (something like the Sahib al-Shuria io.v.) of the earlier caliphate), existed before the Murbals. e.g. in the territories of the Dihli sultanate and in the provincial sultanates which arose in South India and eastern India during the post-Tughlukid period. cf. I. H. Oureshi. The administration of the sultanuts of Delhi'. Karachi 1038, 273-4, and Majumdar, ed., The history and culture of the Indian people, vi. The Delhi sultanate, Bombay 1060, index s.v. The accounts of Portuguese adventurers in India, from Vasco da Gama onwards, speak of encounters with the Catual or royal representative in the towns where they disembarked (thus also in Camoens, The Lusiads [completed 1572], vii, viii, passim).

In the A'in-i Akbari of Abu 'l-Fadl 'Allami (a.v.). we find a classic exposition of the duties of the köfmäl. His multifarious responsibilities included the maintenance of law and order, with the pursuance of eriminals and robbers (for the recovery of whose depredations the kölwäl was personally responsible); the keeping of a register of houses and streets; maintaining an intelligence system in the town, including observations of the incomes and life-styles of the populace, the results of which espionage to be reported to the central government; the enforcement of a curfew; the supervision of weights and measures and fair market practices; the uphokling of the standard of coinage and the calling-in of bad coins for re-minting; the oversight of public water supplies; the appropriation for the state of intestate properties; the care that widows did not make the sacrifice of sali against their wills; the affocation of separate quarters in the town for noisome and despised trades like those of butchers, corpse-washers [see BIAZZÁR and GHASSÁL M Suppl.) and sweepers; etc. One notes the correspondence of many of these duties with those of the classical Islamic multasib, whose office was certainly known in pre-Mughal India under the Dibli sultans and their epigoni [see gisua. iv. The Indian subcontinent]; it seems that the purely secular, semi-military kôfedi now largely replaced the multissid. But in many ways, the wide range of the kölerdi's responsibilities is an echo of those of the asgaraks or Town Prefect of Mauryan times; cf. Kaulilya's Arthasastra, ch. xxxvi. Abu 'l-Fadi's whole exposition has, however, a somewhat theoretical cast, and should probably be interpreted as a blue-print for the ideal administrative system for Akbar, rather than a delineation of actual practice; amongst other duties of the killed mentioned in responsibility for seeing that the festivals of Akbar's Din-i Ildhi and the new Iläki era [see AKBAR] www observed (A*in-i Akbael, il, tr. H. S. Jarrette, Calcutta 1949, 43-5; cf. also Mirza Muhammad Hasan, Mirat-i Ahmadi, ed. Syed Nawab Ali, Baroda 1947-8, i, 163 ff. [compiled in Gudjarat, 1175/1761), section on the duties of officials charged with the safety and good governance of the state).

More definitely in accordance with contemporary Mughal practice are the reports of European travellers within India III this time. Thus F. Bernier speaks of the Cotolial or "grand Prevost de in campagne" as sending soldiers all through his town when the Mughal court passed through it, and these blew

trumpets in order to scare away majefactors (Travels in the Mocul empire A.D. 16x6-1668, tr. A. Constable 18q1, repr. Deihi 1072, 188, 360). N. Manucci's personal observations are especially valuable. Describing the situation in the latter part of Awrangath's reign, he tells how the kanad strayped the illicit distilling of arrack and spirits, and the practice of prostitution, and how he sent intelligence reports to the court based in the information gathered in private bouses by the scavengers, alacor (= haldi-Abort. He also saw that ferry tolls, abolished by the Emperor, were not illegally exacted. At his disposal, be had a force of cavairy and infantry, with detachments for each quarter of the town. In the administration of justice, on the other hand, he was under the orders of the kddl, and carried out his written orders. such m sentence of death (Storie do Mogor, or Mogul India, 1657-1708, tr. W. Irvine 1007-8, repr. Calcutta 2005-7, li, 420-r). In fact, we know that towards the end of Awrangalb's reign, kölwäis in the newlyconquered, peripheral regions like South India. managed to achieve considerable freedom of action, away from the central government's control; this was the case with the köhedi and famdidde [q.v.] of Havdarābād, the most important city of the eastern Deccan. J. F. Richards, Mughal administration in Geleonda. Oxford 1075, Ba-5,

When a new police system was introduced into British India after 1861, and office of hobbatl disappeared from most of the subcontinent, and his duties were taken over by Inspectors or Sub-Inspectors. In the North-West Frontier Province, however, the term continued in an to designate the chief police officer of the larger towns and cantonments.

(C. E. BOSWORTH)

EGUANDE, at present a regional capital of the People's Republic of Benin, was founded by a clan of Bariba hunters, the Tosso, specialists in the hunting of elephants, who provided a tribute of ivory tusks to the sovereign of Nikki. This sottlement of hunters must have been ancient (perhaps in the roth century), but a prolonged dynastic quarrel at Nikki hrought to Kouandé considerable numbers of young warriers who must have used this city, every dry season, as a raiding-base.

The prince Chabl Gada of Nikki, having killed one of his pregnant wives, was expelled and took refuge at Birno Maro at the court of the Tossowow (chief of the Tosso) who offered him in marriage his eldest daughter. Gnon Birsi (in about 1762). Accepting succession to the throne of his father-in-law, he renounced all allegiance with regard to Nikki. He had, moreover, carried off with him some of the ritual objects that were the property of king: six keketi (trumpets), silver and bronze stirrups, ceremonial salves and lances, harness and bridle-bita as well as the ritual scissors which were used to cut the hair of young princes on the day of ceremony of Gaoa Kogwi, which marked the passage from childhood to adolescence.

The death of Gada (in about 1789) led to mutarrel over the throne between Ouacro Ouari, known maked Tabouroufa ("wearer of the ear-ring"), m prince born at Nikki, and Oucrou Kpassi, son of Guon Birsi, princess of Birsi. The latter was victorious and took

the title of Tossowson while Ouaron Ouari moved from Rimi to Kouandé.

The foundation of Kouandé. With army sixty-six horsemen Ouarou Ouari arrived in the region of Kouandé where the Barlta Seko had been installed for several generations. Ouarou Ouari well received by the Kouandé Soumon, who gave him a vast area of land at the foot of the hill and died soon afterwards. A few days later are received the regalia brought from Nikki by Gada, and the following Friday, to the sound of the six royal trumpets, he accepted the homage of the Barlta and Somba chiefs. He took the title of Bangana ("huffalo") and appointed another Kouandé Soumon as his colleague and chief minister, and extended his authority over Birni, Pably, the region of Ouassa (Tobré and Péhounco), an arms some 10,000 km².

On his death, his brother Simé Verima succeeded him, taking the name Ouron Souron ("the Saint"). He took the young princes to task, demanding that they abandon their extortions "at once", thereby acquiring the nickname of Babs Tantame ("Papa at once"). To provide m diversion for the troublesome young princes, he mounted expeditions against the Berbs, the Taneka, Pila-Pila, Somba, etc.

Daffa, eldest son of Ouorou Ouoari took the Sorou ("the mortar that receives the blows of the pestle without being affected"). Tradition is reticent concerning his reign. All that is known is that the king authorised volunteers from his kingdom to take part in the campaign against the Peuls of Ilorin (1830). After these contingents were defeated and returned in disarray, king Sorou died as the result of being bitten by a dog; his sister, princess Ganigui, saw in this a conspiracy on the part of the successor and on the day of his coronation predicted an early death for him. In fact the Bangana Bio Dike ruled for only three months.

Sero, the eldest son of Baba Tantamé, was elected king (1833) and took the name Bouke Ya Dari ("stormy cloud"). He was obliged to suppress the intrigues of his younger brother Mora N'Gobi, who after two attempts on the throne, with the aid of the Natimba, was defeated. He obtained pardon for himself but not for Sinkossi, king of the Natimba, who, on coming to pay homage on the day of the Gass, and thrown into a ditch and crushed under a heap of stones, whence the king's nickname Guinimoussikou ("he who buries alive"). This king mounted expeditions against his neighbours the Berba, the Akpénou, the Cotokoli and the Aniagan of the valley of the Anié.

The Bangana Sèké (1852-83) continued in similar circumstances the campaign against the Cotokoll of Kirikri (1866-8) and against Bafilo. He also obliged to deal with civil wars.

Outrou Ouari II (1883-97) was removed from office by Commandant Ganier in 1897 after the revolt of the Bariba. He withdrew to the village of Doh (30 km. to the east of Kouandé) and poisoned himself as not to survive the surrender of the tembs of his ancestors. Since then the traditional sovereigns have been confined to their roles as regional chiefs.

Rules of investiture. Theoretically Islamised, the Bariba observe strict rules of investiture. After the funeral ceremonies which last three months, the council of ministers choose a new king. The choice having been made, the princes who are candidates for the throne kneel and the chief minister, Baba Agban, passes a white loincloth (bikon Kpikouron) over the heads of the candidates.

In passing along the line for the third time, Baba

Agban stops in front of the prince who has already been chosen in it held by an invisible force, then unfolding the behow Kpekourou, he wraps it round the body of the newly-appointed king. All those present kneel before the new king to wish him well, while the trumpets sound.

The festival of the Gani which takes place throughout the land of the Bariba is the occasion where imprinces is sentor officials assemble in the presence of the king to the sound of the ritual drums. At Kouandé, the Gani includes a special rite. The Bangana goes to the tree on the path where his ancestor used to rest. This it is at the southern end of the village of Kouandé and is called Bouros ("good luck"). The king dismounts from his horse, leans against the throne and appeals to his for aid and protection.

A superstition holds that the man who picks up the pebbles under the tree will have his wish granted the pebbles of even number.

The Islamisation of Kouandé, at the beginning of the century, was very supericial. Only the community of foreign merchants was Muslim. Alfa Sabi, known as Aloula, who was born in Kouandé in about 1863, supervised a Kur'an school attended by mumber of pupils. Since then, the influence of the Tidiant order has developed considerably.
